Enter Meeting ID: 871 7448 7419
Passcode: **323310**

Your phone number is captured by the zoom software and is subject to the Public Records Act unless you first dial "*67" before dialing the number as shown above to remain anonymous.

For Zoom comments, notify meeting host by raising your virtual hand (see hand icon located in the "Reactions" button at bottom of screen) and you will be invited to speak. *The time limit for comments is five (5) minutes per person. Before speaking to the Commission, please state: your name and residence or the organization you represent. Please respect the time limits.*

Members of the public may also provide comments electronically by sending an email to the following address prior to the start of the meeting: planning@elsegundo.org. ***Please include the meeting date and any applicable item number in the subject line***. If you would like to request that your emailed comment be read into the record, please include that request at the top of your email, limit your comments to 150 words or less, and email your comments at least 30 minutes prior to the start of the meeting. Depending on the volume of communications, the emails may be read to Commission at the appropriate time. Please note that all emailed comments are public records subject to disclosure under the Public Records Act.

Additional Information:

Unless otherwise noted in the agenda, the public can only comment on City-related business that is within the jurisdiction of the Planning Commission and/or items listed on the agenda during the public communications portions of the meeting. Additionally, the public can comment on any public hearing item on the agenda during the public hearing portion of such item. The time limit for comments is five (5) minutes per person.
Before speaking to the Planning Commission, please state your name and residence and the organization you represent, if desired. Please respect the time limits.

DATE:	Thursday, February 10, 2022
TIME:	5:30 p.m.
ONLINE ACCESS:	Teleconference/Videoconference
VIDEO ACCESS:	El Segundo Cable Channel 3 (Live). Replayed Friday following Thursday's meeting at 1:00 pm and 7:00 pm on Channel 3. (Schedule subject to change)

All files related to this agenda are available for public review by appointment in the Planning Division office, Monday through Thursday 7:00 am to 5:00 pm and on Fridays until 4:00 pm, beginning at 7:00 am on the Monday prior to the Planning Commission meeting.

The Planning Commission, with certain statutory exceptions, can only take action upon properly posted and listed agenda items.

Unless otherwise noted in the agenda, the public can only comment on City-related business that is within the subject-matter jurisdiction of the Planning Commission and items listed on the Agenda during the public communications portion of the meeting. Additionally, the public can comment on any public hearing item on the Agenda during the public hearing portion of such item. The time limit for comments is generally five minutes per person.

Playing of video tapes or use of visual aids may be permitted during meetings if they are submitted to the Planning and Building Safety Director a minimum of two working days before the meeting and they do not exceed five minutes in length. Written materials distributed to the Planning Commission within 72 hours of the Planning Commission meeting are available for public inspection immediately upon distribution in the City Clerk's office and on the City's website, www.elsegundo.org.

In compliance with the Americans with Disabilities Act, if you need assistance to participate in this meeting, please contact City Clerk, (310) 524-2307. Notification 48 hours prior to the meeting will enable the City to make reasonable arrangements to ensure accessibility to this meeting.

A. Call to Order

B. Pledge of Allegiance

C. Roll Call

D. Public Communications (Related to City Business only and for which the Planning Commission is responsible—5 minutes per person; 30 minutes total). Individuals who received value of $50 or more to communicate to the Planning Commission on another's behalf, and employees speaking on their employer's behalf, must so identify themselves before addressing the Commission. Failure to do so is a misdemeanor. While all comments are welcome, the Brown Act does not allow the Commission to take action on any item not on the agenda. The Commission may respond to comments after public communications is closed.

E. Written Communications (other than what is included in Agenda packets)

F. Consent Calendar

All items are to be adopted by one motion without discussion. If a request for discussion of an item is made, the items should be considered individually under the next Agenda heading.

1. Authorize teleconferencing meetings pursuant to Assembly Bill 361 (JV)

Project Description: Pursuant to Assembly Bill No. 361, the City Council directed all City legislative bodies to consider continuing authorization for the use of teleconferenced meetings pursuant to Government Code § 54953(e).

Environmental Determination: N/A.

RECOMMENDED ACTION: Adopt Resolution No. 2916, making specified findings and authorizing the continued use of teleconferenced meetings pursuant to Government Code section 54953(e).

2. Approval of the Planning Commission Meeting Minutes:

- September 30, 2021 (Special Meeting)
- October 18, 2021 (Regular Meeting)
- November 18, 2021 (Special Meeting)
- December 13, 2021 (Special Meeting)

RECOMMENDED ACTION: Approve the Minutes.

G. Continued Business – Public Hearing

3. Proposed Smoky Hollow Specific Plan Amendment, Tier II Community Benefits Plans, Site Plan Review, Master Sign Program, and Offsite Parking Covenant for the construction of substantial additions to the existing buildings locate at 1475 East El Segundo Boulevard and 1320-1330 East Franklin Street. (BM/ES)

- **Environmental Assessment Nos. EA-1281 and EA-1282**
- **Community Benefit Plan No. 19-02 and 19-03**
- **Site Plan Review Nos. SPR 21-02 and SPR 21-03**
- **Specific Plan Amendment No. 21-01**
- **Master Sign Program No. 21-01**

Project Location: The Project North Site is located on the south side of East Franklin Street, mid-block and east of 136 Oregon Street, the building located at the southeast corner of Oregon and East Franklin Street. The Project South Site is located at the northwest corner of Kansas Street and East El Segundo Boulevard. The projects sites are bound by the Chevron Refinery to the south across East El Segundo Boulevard, and by light industrial and creative office space uses to the north, east, and west within the Smoky Hollow area.

Project Description: The proposed Specific Plan Amendment (SPA) would modify the Height Development Standards for Community Benefit Plan (CBP) Tier II applicable projects in a designated 30-acre subarea of the Smoky Hollow Specific Plan (SHSP) with a max. building height deviation up to 60 feet.

The proposed Project also involves the redevelopment of two adjacent sites within the SHSP, the South Site (aka Parcel A [EA No. 1281]) and the North Site (aka Parcel E [EA No. 1282]). On the 1.01-acre South Site the Project would develop a 44,604-square foot addition to the existing 19,311 sf, one-story brick building that would be structurally preserved in place. This site would have a total building area of 63,915 square feet (FAR = 1.45) and a new building height of 59' 6".

The proposed Project for the North Site would develop a 1.07-acre portion of a 4.34-acre property with two buildings, one research and development and office building and a coffee pavilion building. The existing 19,493 square foot (sf), one-story brick building would be preserved and two new floors with 44,802 square feet would be added above it. This would result in a total building area of 65,061 square feet (FAR = 0.95) and a new building height of 59' 6". The new coffee pavilion will have 766 square feet with a maximum height of 23' 8". This site would also include construction of a new 5,000-square foot public outdoor park with park seating, picnic tables, shade trees and landscaping.

In accordance with the State of California Public Resources Code Section 21092, Sections 15063 and 15072 of Title 14 of the California Code of Regulations Guidelines pertaining to the California Environmental Quality Act, and the El Segundo Municipal Code, an Initial Study/Mitigated Negative Declaration of environmental impacts has been prepared for the proposed project.

RECOMMENDED ACTION:

1) Adopt Resolution No. 2912, recommending the City Council adopt an Initial Study/Mitigate Negative Declaration (IS/MND);

2) Adopt Resolution No. 2913, recommending the City Council approve an Amendment to the Smoky Hollow Specific Plan (SP) No. 21-02;

3) Adopt Resolution No. 2914 recommending the City Council approve Environmental Assessment (EA) No. 1281, Community Benefit Plan (CBP) No. 19-02, Master Sign Program (MSP) 21-01 and Site Plan Review (SPR) No. 21-03 for a 44, 604 square foot addition at 1475 East El Segundo Boulevard, resulting in a 63,915 square foot, three-story building with a maximum height of 59'-6" as measured from average grade to the top of the building; and,

4) Adopt Resolution No. 2915 recommending the City Council approve Environmental Assessment (EA) No. 1282, Community Benefit Plan (CBP) No. 19-03, Master Sign Program (MSP) 21-01, and Site Plan Review (SPR) No. 21-04, a 44,802 square foot

addition and a new pavilion building to serve the neighborhood with a café and gathering point at the entry of a new public park accessible by the public at 1320-1330 East Franklin Avenue, resulting in a 65,061 square foot, three-story building with a maximum height of 59'-6" as measured from average grade to the top of the building.

H. New Public Hearings

4. Pacific Coast Commons Project - Street dedication waiver notice [IS "NOTICE" NECESSARY HERE?]. (PS)

Applicant: Nick Browne, representing BRE EL SEGUNDO HOLDCO LLC

Address: 475-629 North Pacific Coast Highway

Project Description: The Project site is currently occupied by surface parking lots, the Fairfield Inn and Suites Hotel, and the Aloft Hotel. The Project would allow for the redevelopment of the existing surface parking lots and a portion of the Fairfield Inn and Suites Hotel property within the Project site through the adoption of a Specific Plan. The adoption of a Specific Plan would allow for (1) the continued operation of the Fairfield Inn and Suites Hotel and Aloft Hotel, which contain 596 rooms within 288,767 square feet of hotel development; (2) 327,021 square feet of residential development for 263 new housing units, including 257 multi-family apartments and six condominium/townhomes; (3) 11,252 square feet of new commercial/retail uses; and (4) three new parking structures containing approximately 792 parking stalls. The Project site is bound by Palm Avenue on the north, PCH on the east, Holly Avenue on the south, and Indiana Street on the west. Mariposa Avenue bisects the Project site. The Project is required to dedicate portions of the project property frontage as public street in compliance with the Circulation Element requirements. The Applicant has requested the following waivers of street dedication:

- A 3-foot waiver of the 7-foot dedication along the eastern side of Indiana Street only along the project frontage of Lot 1 of Vesting Tentative Map. No. 82806 resulting in a required 4-foot dedication.
- A 3-foot waiver of the 7-foot dedication along the eastern side of Indiana Street only along the project frontage of Lot 4 of Vesting Tentative Map No. 82806 resulting in a required 4-foot dedication.
- A 7-foot waiver of the 7-foot dedication along the eastern side of Indiana Street only along the project frontage of Lots 2 and 3 of Vesting Tentative Map No. 82806 resulting in a 0-foot dedication.

A 3-foot waiver of the 7-foot dedication on the south side of Mariposa Avenue along the project frontage of Lot 4 of Vesting Tentative Map. No. 82806 resulting in a minimum dedication of 4 feet near Indiana Street to a maximum dedication of 12 feet near Pacific Coast Highway to accommodate the proposed 10-foot wide right-turn only lane and 2-foot widening and reconfiguration of the two existing lanes in compliance with the Circulation Element requirements.

RECOMMENDED ACTION:

1) Adopt Resolution No. 2905, recommending the City Council certify the EIR for the Pacific Coast Commons Specific Plan and Development Project;

2) Adopt Resolution No. 2905, recommending that the City Council approve General Plan Amendment No. GPA 19-01, Subdivision No. SUB 19-03 (Vesting Tentative

Tract Map), Site Plan Review No. 19-01, Parking Demand Study, and Waiver of public right-of-way dedications for the Pacific Coast Commons Specific Plan and mixed-use development project; and,

3) Adopt Resolution No. 2905, recommending that the City Council adopt an Ordinance adopting the Pacific Coast Commons Specific Plan (SP 19-01), approving a zone change (ZC 19-01), a zone text amendment (ZTA 19-08), and a Development Agreement (DA 19-02);

4) Adopt Resolution No. 2906, recommending that the City Council approve modifications to Conditional Use Permit No. 14-01 for the Aloft Hotel;

5) Adopt Resolution No. 2907, recommending that the City Council approve modifications to Conditional Use Permit No. 14-02 for the Fairfield Inn and Suites Hotel.

L. Planning Commissioners' Comments

M. Adjournment—next regular scheduled meeting for February 24, 2022, at 5:30 pm.

POSTED: *Venus Wesson* (Signature) *February 3, 2022/ 7:26pm* (Date and time)

CITY OF EL SEGUNDO

Planning Commission Agenda Statement

Meeting Date: February 10, 2022
Agenda Heading: Consent

TITLE:

Authorize teleconferencing meetings pursuant to Assembly Bill 361.

RECOMMENDATION:

Adopt Resolution No. 2916, making specified findings and authorizing the continued use of teleconferenced meetings pursuant to Government Code section 54953(e).

BACKGROUND AND DISCUSSION:

On September 16, 2021, Assembly Bill No. 361 ("AB 361") took effect. Among other things, AB 361 amended certain provisions of the Ralph M. Brown Act governing open meetings to allow teleconferencing, including internet-based video conferencing, in a manner similar to previously-issued gubernatorial executive orders. AB 361 allows a legislative body to continue utilizing teleconferencing to conduct public meetings under certain circumstances, provided it makes certain findings.

On October 5, 2021, the City Council adopted Resolution No. 5275 prohibiting other City legislative bodies from meeting exclusively in person, except as determined by the City Manager or until the City Council provides further direction, and directed all legislative bodies of the City to consider the adoption of a resolution authorizing the use of teleconferenced meetings pursuant to Government Code § 54953(e).

Thus, in accordance with City Council direction, the Planning Commission adopted PC Resolution Nos. 2901, 2908 and 2910 authorizing the use of teleconferenced Planning Commission meetings. Since Planning Commission meetings have recently been conducted only via teleconferencing or in a "hybrid" manner of in-person and teleconferencing, and since Federal, State and Local mandates change, staff recommends that the Planning Commission adopt PC Resolution No. 2916, thereby authorizing the continued use of teleconferenced meetings pursuant to Government Code Section 54953(e).

PREPARED BY: Eduardo Schonborn, AICP, Planning Manager

REVIEWED BY: Joaquin Vazquez, Assistant City Attorney

APPROVED BY: Michael Allen, AICP, Development Services Director

ATTACHED SUPPORTING DOCUMENTS:

PC Resolution No. 2916

RESOLUTION NO. 2916

A RESOLUTION OF THE PLANNING COMMISSION FINDING THAT CERTAIN CONDITIONS EXIST TO CONTINUE CONDUCTING PUBLIC MEETINGS VIA TELECONFERENCING PURSUANT TO GOVERNMENT CODE SECTION 54953(e)

The Planning Commission of the City of El Segundo hereby resolves as follows:

SECTION 1: The Planning Commission finds as follows:

A. On March 4, 2020, Governor Gavin Newsom proclaimed a State of Emergency in California due to the threat of the COVID-19 pandemic. This gubernatorial proclamation, among other things, suspended local government emergency declaration, reporting, and extension requirements of Government Code § 8630 for the duration of the COVID-19 pandemic.

B. On September 16, 2021, Assembly Bill No. 361 ("AB 361") took effect. Among other things, AB 361 amended certain provisions of the Ralph M. Brown Act governing open meetings to allow teleconferencing, including internet-based video conferencing, in a manner similar to previously-issued gubernatorial executive orders.

C. During a proclaimed state of emergency, AB 361 allows a legislative body to continue utilizing teleconferencing to conduct public meetings under certain circumstances, provided the legislative body makes certain findings.

D. After an initial meeting in which certain findings are made, to continue meeting pursuant to AB 361, the legislative body must, every 30 days thereafter, declare that it has reconsidered the circumstances of the state of emergency and either: (1) the state of emergency continues to directly impact the ability of the members to meet safely in person; or (2) state or local officials continue to impose or recommend measures to promote social distancing.

E. On October 5, 2021, the City Council adopted Resolution No. 5275 prohibiting other City legislative bodies from meeting exclusively in person, except as determined by the City Manager or until the City Council provides further direction. The City Council Resolution directed all legislative bodies of the City to consider the adoption of a resolution authorizing the use of teleconferenced meetings pursuant to Government Code § 54953(e).

F. On October 28, 2021, the Planning Commission adopted Resolution No. 2901 to initially authorizing the use of teleconferenced meetings pursuant to Government Code § 54953(e).

G. Effective November 10, 2021, the Governor extended the statewide COVID-19 emergency until March 31, 2022 (via Executive Order N-21-21).

H. Government Code § 54953(e) allows the City to continue utilizing teleconferencing (which includes internet based video conferencing) to conduct public meetings under certain circumstances.

I. On December 9, 2021, the Planning Commission adopted Resolution No. 2908 authorizing the continued use of teleconferenced meetings pursuant to Government Code § 54953(e).

J. On January 13, 2022, the Planning Commission adopted Resolution No. 2910 authorizing the continued use of teleconferenced meetings pursuant to Government Code § 54953(e).

SECTION 2: *Teleconferencing*. Pursuant to Government Code § 54953(e), the Planning Commission finds as follows:

A. The state of California continues to be in a declared state of emergency pursuant to Government Code § 8625 (the California Emergency Services Act; *see* Government Code § 54953(e)(3); *see also* Governor's Proclamation dated March 4, 2020 and and Executive Order N-21-21 dated November 10, 2021);

B. Based upon the most recent Order of the Health Officer for the County of Los Angeles Department of Public, masks and social distancing continue to be necessary to curb the spread of COVID-19 (Government Code § 54953(e)(3)(B)(ii));

C. The circumstances continue to directly impact the ability of the members of the Planning Commission to meet safely in person;

D. Accordingly, to protect public health, the Planning Commission finds that it is in the public interest to conduct its public meetings via teleconference as defined by Government Code § 54953;

E. The Planning Commission will adhere to all requirements of Government Code § 54953(e) governing teleconferencing during the emergency.

SECTION 3: *Reporting.* Every 30 days following adoption of this Resolution, the Planning Commission will reconsider the extension of the teleconferencing method of public meetings in accordance with Government Code § 54953(e)(3). Such

determinations may take the form of a minute order and be placed on the consent calendar.

SECTION 4: *Electronic Signatures*. This Resolution may be executed with electronic signatures in accordance with Government Code §16.5. Such electronic signatures will be treated in all respects as having the same effect as an original signature.

SECTION 5: *Recordation*. The Chairperson is authorized to sign this Resolution signifying its adoption by the Planning Commission of the City of El Segundo and the City Clerk, or her duly appointed deputy, may attest thereto.

SECTION 6: *Effective Date.* This Resolution will become effective immediately upon adoption and will remain effective unless repealed or superseded.

PASSED AND ADOPTED this 10th day of February, 2022.

G. New Business:

1. **Presentation of the Draft 2021-2029 Housing Element Update (PS)**

Principal Planner Paul Samaras introduced Veronica Tam from Veronica Tam & Associates, the consultant currently assisting the City with preparation of the housing element.

Veronica Tam provided a PowerPoint presentation, including the requirement to prepare and update the Housing Element, and an overview of the El Segundo Housing Element Update covering the following:

- Housing Element as one of seven required General Plan Elements
- Citywide goals, objectives, and policies, and identifying housing conditions and needs for the city
- It provides an assessment and plan to accommodate the City's current and future housing needs
- A plan for meeting the City's "fair share" of the region's housing needs

- Deadlines for the preparation and submittal of the Housing Element Must be updated every 8 years October 15, 2021 statutory deadline (with 120-day grace period)
- What the State Department of Housing and Community Development (HCD) looks for when reviewing Housing Elements
- Legally required plan for where housing units may be built, and a sites inventory list
- How most affordable housing is constructed by private sector entities that using government incentives
- City may use funds, policies, and programs as incentives to meet housing needs
- City "sets the stage" for housing developers to build projects in line with the City's General Plan, zoning ordinance and other planning documents
- Discussed El Segundo's regional housing needs allocation (RHNA) for 2021-2029
- Brief discussion regarding the various housing programs and status in the current Housing Element

Ms. Tam provided the Commission with the following timeline in the Housing Element process:

June 2021	Initiated Mitigated Negative Declaration (MND)
September 2021	Finalize Sites Inventory & Draft Housing Element
October 2021	Submit Draft Housing Element to HCD for Review
December 2021	Finalize Housing Element
January 13, 2022	Planning Commission Recommends Housing Element
February 1, 2022	City Council Adopts Housing Element & Submits to HCD for Final Certification

Discussion ensued between Commission, staff and Ms. Tam regarding the sites inventory list, how and why certain properties were selected, implications for not have a certified Housing Element, and implications for not building the number of units identified as El Segundo's RHNA.

Motion to Receive and File, with direction to amend the Draft Housing Element prior to submitting to HCD.

H. Report from Director of Development Services or designee

Development Services Director Michael Allen reported that next month, staff will be facilitating in-person planning meetings for committee members only, provided everyone adheres to current LA County health guidelines and wears a mask while in chambers together.

I. Report from the City Attorney's office

None.

J. Planning Commissioner's Comments

Commissioner Maggay stated he is looking forward to having the planning meetings in person.

I. New Business:
1. Authorize teleconferencing meetings pursuant to Assembly Bill 361. (GK)

City Attorney Joaquin Vazquez made a comment that the teleconferencing had been enabled through the governor's executive orders, and AB-361 took on those orders and implemented them through state law with the approval of the Bill in September. AB-361, however, requires the legislative body to make certain findings to allow use of teleconferencing meeting.

Vice Chair Newman moved to adopt resolution number 2901, making specified findings and authorizing the use of teleconferenced meetings; Commissioner Maggay seconded that motion. Motion to approve 4-0.

2. Update on Accessory Dwelling Units (MB/ES) - Report from staff regarding the number of ADU applications and permits issued since November 1, 2020

Assistant Planner Baldenegro provided a PowerPoint presentation of the 2021 annual report for ADU applications and permits issued and discussed the City's current ADU regulations. She commenced by stating that the City's current ADU regulations continued to be consistent with stat law; ADUs are allowed in all residential zoning districts by right; and they are allowed as new construction and as converting existing structures, such as converting a garage. She highlighted that between November 1, 2020 through the end of September 2021, 31 applications were submitted for ADU, where 17 applications were for new ADUs and 14 applications were to convert existing structures to ADUs. During that same period, a total of 12 permits were issued, where 5 permits were issued for new ADUs and 7 permits were issued for conversions. Ms. Baldenegro also informed the Commission of various reasons homeowners decide to build ADUs. Based upon what staff hears from applicants at the counter, homeowners decide to building ADUs for extra income; to provide housing for family members; they become empty nesters and elect to downsize to a smaller home and rent the main house. She also noted some of the concerns raised by residents that are conveyed to staff, which include density; traffic; loss of street parking; noise; changes to neighborhood character; privacy Infringement; and proximity.

Chair Baldino proposed motion to Receive and File. Motion passed, 4-0.

3. Water and Sewer Infrastructure age (PW)

City Engineer Lifan Xu spoke on the water and sewer infrastructure and reported that most of the City's water infrastructure was built before 1950 will be replaced; sewer pipes are cleaned annually and are mostly in very good condition; major video inspections are conducted every 10 years to identify if there are any problems with the pipe; and the conditions of the infrastructure is comparable with those in neighboring cities.

After Commission discussion, Public Works Director Elias Sassoon commented that when it comes to water quality, water samples are taken at many locations and very often, and those samples are tested in laboratories to ensure it is safe and meets the required state standards.

Chair Baldino approved motion to Receive and File. Motion passed, 4-0.

4. Update on new affordable housing consultant, Many Mansions (ES/MA)

Rick Schrader, President of Many Mansions, stated that Many Mansions is an affordable housing and service provider that will be working closely with city staff and city council. Mr. Schrader expressed that his plan is to go through the housing element; view the policies and programs in the forthcoming housing element; review existing projects and potential projects to prepare a strategic plan to see where more affordable housing can be developed within the City.

Chairman Baldino and the Planning Commission thanked Rick for his services.

J. Report from Director of Development Services or designee

Development Services Director Michael Allen stated that John Kaliski, Architect/Land Use Specialist will be coming to the Planning Commission with his team in December, to present his observations and findings from his own site visits and development patterns within El Segundo. Director Allen also stated that John Kaliski will put a recommendation together that will come before the planning commission to consider any potential text amendments that result out of the study session, which is being done in response to Senate Bill 9, which will go into effect on January 1, 2022. He stated the goal is to present an Ordinance to Commission in January and to City Council shortly thereafter.

Planning Manager Eduardo Schonborn informed the Commission that the City's Home Share pilot program started on October 1. He encouraged the Commission and public to visit the City's webpage for additional information regarding the program, including applications and guidelines. Lastly, Planning Manager Schonborn noted that the pilot program is a test run that will continue through the end of 2022, and staff will report back to Planning Commission and City Council in late 2022.

K. Report from the City Attorney's office
None.

L. Planning Commissioner's Comments

Vice Chair Newman reminded everyone that the Halloween Frolic will take place on Saturday along Main street and hopes everyone comes out to enjoy the festivities.

Commissioner Keldorf stated she was going to put in a pitch to read and sign the neighbors of Hyperion petition asking the South Coast Air Quality Management District to install fence-line monitoring and an emissions station in El Segundo.

Commissioner Maggay asked if the catalyst project was delayed or if that is something that is coming up. Planning Manager Schonborn confirmed that although there has not been any recent movement due to the applicant exploring some options, he foresees it coming back to Commission as early as the first quarter of next year.

M. Adjournment – Meeting adjourned at 7:00 pm. Since the next regular scheduled meeting of November 11, 2021, the next Planning Commission meeting will be a special meeting on November 18, 2021 at 5:30 pm

D. Public Communications

Byron Washam, a resident of El Segundo indicated he wanted to provide comment regarding the PCC project in advance of the next meeting scheduled on December 9th. He indicated there was a statement in the notice regarding a request to waive the dedication on Mariposa, as well as other items dealing with Palm. In reviewing the environmental impact statement, he could not find any reference to that request. Mr. Washam requested it be noted as to what they mean by that statement, prior to December 9th.

H. New Public Hearings

1. Pacific Coast Commons Specific Plan and Environmental Impact Report (JW / PS)

Project Address: 475-629 North Pacific Coast Highway
Applicant: Nick Browne, representing BRE EL SEGUNDO HOLDCO LLC

Item was scheduled to be heard at tonight's meeting; however, applicant has requested item be continued to the December 9th meeting. Motion to open the public hearing and continue the item to December 9th passed, 5-0.

2. **Professional Sports Headquarters and Training Facility (BM/ES)**
   Address: 2000 East El Segundo Blvd, El Segundo, CA
   Applicant: Lionel Uhry (Representing CDC-MAR and Emily Murray, Esq., representing Raytheon)

Contract Planner Brad Meisner provided a PowerPoint presentation regarding the proposed project. He also highlighted that an errata to the Raytheon and Chargers resolutions had been provided on November 17, 2021.

Bob Tarnovsky, Senior Vice President of Real Estate at Continental Development: Clarified entitlement issues and indicated that they do have a blanket entitlement covering the south campus where the Chargers development is envisioned. Mr. Tarnovsky believes that the entitlements within the specific plan area are transferable, so that any development not being used on the south campus can be transferred to the north campus.

Richard Lundquist, Owner of Continental Development: Stated that he not only believes they able to transfer entitlements to the north portion, but that additional acreage purchased from Raytheon can be used to build more on their campus. In closing, Mr. Lundquist highlighted that El Segundo will be the only City in America to house a professional football, basketball, and hockey team.

Fred Mass, Chief of Staff & Counselor to LA Chargers: Thanked everyone participating in the development of the LA Charger's new facility.

Ron Turner: Mr. Turner gave a detailed overview of the LA Charger's building facility.

Craig Garrett, urged LA Chargers to employ their union carpenters

Raphael Pimentel, Union Carpenter - Solicited the Planning Commissions support to approve the LA Charger's project

There were 9 speakers who expressed support for the LA Charger's project

The Planning Commission closed the public hearing and discussion ensued regarding the proposed project, including discussion on the proposed netting, landscaping, the Development Agreement, the first amendment to the DA and the proposed second amendment to the DA. Chair Baldino proposed to approve as written, but include a condition requiring Raytheon to decide if they will choose to implement section 9.2 of the first amendment of the DA or section 9.3, or indicate on the vesting map where that park will be located. After further consideration, Planning Commission moved to approve the project, but include a condition of approval in the Raytheon resolution requiring that prior to issuance of a building permit for Raytheon's Butler building, the applicant enter into an agreement with the city committing to effectuate either section 9.2 or section 9.3 of the first amendment of the DA regarding the recreation and open space area. Motion made by Commissioner Keldorf seconded by Commissioner Hoeschler. Motion passed and approved, 5-0.

I. New Business:
None.

J. Report from Director of Development Services or designee
Michael Allen reminded the Commission that the other item that was on the agenda was continued to the December 9th Planning Commission meeting. He also informed the Commission that staff is making preparations for the SB9 study session with the Commission, and staff will be reaching out to survey the Commission on their availability for a special meeting either the second or third week of December.

K. Report from the City Attorney's office
None.

L. Planning Commissioner's Comments
Commissioner Maggay informed the Commission that he met with resident Cheryl Smith, who is an administrator of a Facebook group that is interested and concerned with the catalyst project. He will also be meeting with the project applicant this week and will report back at the next meeting.

M. Adjournment – meeting adjourned at 8:30 pm.
Next regular scheduled meeting for December 9, 2021 at 5:30 pm

I. New Business:

1. Receive and File the Single Family (R1) Residential Existing Conditions, Findings, and Considerations Report; and Study Session Regarding Multi-Unit Options and Recommendations to address the requirements of Senate Bill 9 (SB9). (MA/ES)

Development Service Department Director Michael Allen introduced John Kaliski, a consulting architect assisting the City with implementing the provisions of Senate

Bill No. 9 which will be going into effect on January 1, 2022. Mr. Allen is looking for the Commission to provide feedback and ideas and design input to minimize impacts on single family neighborhood from SB 9.

John Kaliski presented a PowerPoint presentation of his findings while assessing the City's single-family neighborhoods, how opportunities exist with lots that have alley access, 25-foot wide lots, and the age of the housing stock. He also provided a detailed account of SB 9, its requirements to allow development and allow for subdivisions in R1 zones of the City.

Chair Baldino opened public communication.
Lewis Hill – 127 W. Palm had concerns about longer term impact to the width of the street and potential increase of traffic.

Chair Baldino closed public communication.

Planning Commissioner comments and concerns.

- Chair Baldino inquired what can be done about the traffic impact and school impact of the R-1 zone. Mr. Kaliski stated they have not looked at the street widths with this study. Although it is something that could be studied, results of that would not prevent implementation of SB 9.
- Chair Baldino asked what kind of feedback staff is seeking, is it standards for development or standards for dividing a single-family lot into two. Mr. Allen stated that staff is looking for feedback on built forms on single family homes.
- Commissioner Hoeschler asked about curb cuts
- Commissioner Keldorf asked if there had been a financial side provided to understand more what the value is on subdividing lots and construction of 800 square feet. Mr. Kaliski responded that it would require an economic evaluation of land costs and values.
- Mr. Hoeschler inquired if SB9 allows the owner to sell half of their lot. Mr. Kaliski stated that an owner could subdivide and sell, but there are provisions in SB9 that prevents investors to buy, subdivide and sell. City Attorney Joaquin Vazquez added that requirements of SB9 lot split include owner occupancy where the property owner is required to sign an affidavit that they intend to occupy the unit on the newly created lot for a period of three years. He also provided the owner occupancy requirement for duplexes.
- Mr. Baldino confirmed his understanding that one of the requirements if you take a R-1 unit and add a duplex that one unit becomes affordable housing unit. Mr. Kaliski confirmed that was correct.
- Mr. Baldino inquired how the affordability requirement would work. Mr. Vazquez stated that the requirement would be through recordation of a covenant.
- Commissioner Maggay provided a list of key elements he would like to see considered in the design element: 1) adequate parking; 2) vehicle access from the alley for the second unit on 25-foot wide lots, as illustrated in slide 50 of the power point of a 25' wide lot; 3) setback for existing versus new construction; 4) lot coverage; 5) entries in back houses include visible entryways.

- Mr. Baldino expressed his concerns with the massing from the front, and that without a porch to provide relief, then one only sees boxes. He would like to see if second stories can be setback or be smaller, minimum building separation, and limit the heights to minimize impacts to our street view caused by maximizing the interior space of the new residences. Mr. Baldino stated that the side yard view must protect privacy of the homes around the divided lots.

J. Report from Director of Development Services or designee

Michael Allen reminded the Commission that the next regular Planning Commission meeting will be next year, on January 13, 2022.

K. Report from the City Attorney's office

None.

L. Planning Commissioner's Comments

Chair Baldino wished everyone Happy Holiday.

M. Adjournment – meeting adjourned at 7:38 pm.

Next regular scheduled special meeting for January 13, 2022 at 5:30 pm

_____ _____

Michael Allen, Director of Development Services Ryan Baldino, Planning Commission

TITLE:

Proposed Smoky Hollow Specific Plan Amendment, Tier II Community Benefits Plans, Site Plan Review, Master Sign Program, and Offsite Parking Covenant for the Construction of Substantial Additions to the Existing Buildings Located at 1475 East El Segundo Boulevard and 1320 East Franklin Street.

RECOMMENDATION:

It is recommended that Planning Commission:

1) Adopt Resolution No. 2912, recommending the City Council adopt an Initial Study/Mitigate Negative Declaration (IS/MND);

2) Adopt Resolution No. 2913, recommending the City Council approve an Amendment to the Smoky Hollow Specific Plan (SP) No. 21-02

3) Adopt Resolution No. 2914 recommending the City Council approve Environmental Assessment (EA) No. 1281, Community Benefit Plan (CBP) No. 19-02, Master Sign Program (MSP) 21-01 and Site Plan Review (SPR) No. 21-03 for a 44, 604 square foot addition at 1475 East El Segundo Boulevard, resulting in a 63,915 square foot, three-story building with a maximum height of 59'-6" as measured from average grade to the top of the building.

4) Adopt Resolution No. 2915 recommending the City Council approve Environmental Assessment (EA) No. 1282, Community Benefit Plan (CBP) No. 19-03, Master Sign Program (MSP) 21-01, and Site Plan Review (SPR) No. 21-04, a 44,802 square foot addition and a new pavilion building to serve the neighborhood with a café and gathering point at the entry of a new public park accessible by the public at 1320-1330 East Franklin Avenue, resulting in a 65,061 square foot, three-story building with a maximum height of 59'-6" as measured from average grade to the top of the building.

BACKGROUND

The Smoky Hollow Specific Plan (SHSP) was adopted in 1986. On October 2, 2018 the SHSP was updated with the intent of transforming the post war, industrial buildings and uses within the 120-acre area illustrated in Figure 1 below, centrally located in the City, west of Pacific Coast Highway and bordering the northern boundaries of the Chevron Oil Refinery.

The 2018 SHSP Update included an Environmental Impact Report, certified by the City in October 2018 (State Clearinghouse No. 2017031071 (EIR, SHSP EIR)).

SITE DESCRIPTION

The SHSP covers approximately 120 acres in the northwest quadrant of El Segundo, west of Pacific Coast Highway (PCH) and North of El Segundo Boulevard. The specific plan area is bounded by Grand Avenue to the north, PCH to the east, E. El Segundo Blvd to the south, and Main Street to the west. The Smoky Hollow Specific Plan area and the associated Zoning Districts are illustrated in Figure 1 below.

Figure 1: *Smoky Hollow Specific Plan Map and Zoning District Boundaries*

The applicant is requesting entitlements for substantial additions at two adjacent sites located within the specific plan area. These sites are part of the "Standard Works" development project, generally bounded by E. Franklin Ave to the north, Kansas St. to the east, E. El Segundo Blvd to the south, and Oregon St. to the west.

The Project Sites are presently developed with commercial and light industrial land uses. The Chevron Oil Refinery is located just south of the SHSP, the Los Angeles International

Airport (LAX) is a mile to the north, and the Pacific Ocean is approximately two miles to the west. Figure 2 illustrates the project site location in proximity to the SHSP area.

Figure 2: North and South Sites

South Site (1475 E. El Segundo Blvd):

The South Site is a 1.01-acre parcel (44,604 square feet) presently developed with a 19,311 square foot building. The applicant proposes to preserve the existing structure and add 44,604 square feet, for a total of 63,915 square feet. The total parcel floor area ratio (FAR) will be 1.45, in compliance with the maximum FAR of 1.5 for Tier II Community Benefits Plan projects. The site, and uses within the surrounding area, were originally designed as supporting uses for the oil and gas industry (Standard Oil). The entire lot outside of the building is paved with asphalt and used for surface parking. There is a slope across the property down from the northwest to the southeast. The site conditions are shown in Figure 3 below.

Figure 3: South Site 1475 E. El Segundo Blvd

North Site (1320-1330 E. El Segundo Blvd):

The North Site is a 4.4-acre parcel and includes 1325 East El Segundo, 140 Oregon, and 1320-1330 East Franklin Street. The subject lot is 1320-1330 E. Franklin Ave, which is a 1.07-acre parcel (19,493 square feet). Adjacent sites include a 19,493 square foot building at 1325 East El Segundo Boulevard, and the recently approved project at 140 Oregon (currently under construction), permitted for 86,921 square feet. With the proposed 65,061 square feet on the subject lot, the combined total floor area for the north site is 179,615 square feet. The total parcel FAR is 0.94, which is compliant with both the by-right FAR maximum of 1.0 for Tier 1 Community Benefits Plan projects and the maximum FAR of 1.5 for Tier II Community Benefits Plan projects. The site and surrounding sites were originally designed as supporting uses for the oil and gas industry (Standard Oil). The lot outside of the building is paved with asphalt and used for surface

parking. There is a recently completed four-story 398-car garage just south of the building. The site is flat with no slope across the property. The site conditions are shown in Figure 4 below.

Figure 4: North Site (1320-1330 E. Franklin Ave)

PROJECT DESCRIPTION

Requested Entitlements

1. Specific Plan Amendment SPA 21-02: Proposed modification to the height development standards for CBP Tier II qualifying projects in proposed Sub-area of the Smoky Hollow East (SH-E) and Public Facilities (PF) zoning districts within the SHSP Area. The proposed amendment will allow a maximum height of 60 feet where, presently, a deviation is permitted up to 50 feet for qualifying Tier II Community Benefit Plan projects. The proposed amendment to allow an additional 10 feet in height will apply to 30 of the 120 total acres of the SHSP area.

The applicant also requests a Specific Plan Amendment to create a Smoky Hollow Sub-area 1 (SPA Sub-area) located within the Smoky Hollow East (SH-E) and Public Facility (PF) zoning districts, bounded on the west by Center St, E. Franklin Ave to the north, Pacific Coast Highway (PCH) [formerly Sepulveda Blvd.] to the east, and E. El Segundo Blvd. to the south, as shown in Figure 5 below. The Development Sites are within the SH-E zoning district and the proposed SPA Sub-area.

Figure 5: SHSP Zoning Districts and Sub-Area

2. Tier II Community Benefit Plans (CBP) No. 19-02 for 1475 E. El Segundo Blvd & CBP 19-03 for 1320-1330 E. Franklin Ave: As set forth in the Specific Plan, a Community Benefits Plan is required to allow permit deviations from height and floor area ratio (FAR) from base development standards per the Specific Plan.

3. Site Plan Reviews SPR 21-03 & SPR 21-04 for 1475 E. El Segundo Blvd & 1320-1330 E. Franklin Ave: Site Plan Review to ensure that the Project is consistent with the goals, policies, and objectives of the General Plan and the El Segundo Municipal Code (ESMC).

4. Master Sign Program (MSP) 21-1: Proposed Master Sign Program to approve signage for the Standard Works development.

5. Offsite Parking Covenant for 1475 E. El Segundo Blvd: Per ESMC 15-15-3(H)(3), Planning Commission may approve an offsite parking covenant for offsite parking exceeding 20 spots or 20%. The applicant intends to secure an offsite parking covenant with the property located at 1310 E. Franklin Avenue for 123 parking spots.

Development Concept

South Site

The proposed Project for the South Site includes developing the 1.01-acre property located at 1475 E. El Segundo Boulevard within the SHSP. The existing 19,311 sf, one-story brick building will be preserved with two new stories measuring 44,604 square feet above, resulting in a 63,915 square foot (FAR = 1.45) Office and Research and Development (R&D) building. As illustrated in figure 6 below, the proposed project will result in three-story building with a maximum height of 59'-6" as measured from average grade to the rooftop of the building.

Figure 6: El Segundo Blvd Elevation of South Site

North Site
The proposed Project for the North Site includes developing an approximately 1.07-acre portion of the 4.4-acre property located at 1320-1330 E. Franklin Avenue within the SHSP. The existing 19,493 square foot, one-story brick building will be preserved, and two levels would be added above it, for a total of 64,295 square feet for R&D and office use. In addition, a 766 square foot pavilion building is proposed, which includes a public café, resulting in a total of 65,061 square feet of floor area for the North site (FAR = 0.94). Specifically, the proposed project on the North Site includes:

- Construction of a two-story 44,802-square foot addition to the existing building that would be structurally preserved in place, for a total floor area of 65,061 square feet (including the two-story pavilion noted below). The resulting three-story main building will measure 59'-6" in height, as measured from average grade to the rooftop of the building.

- Construction of a new two-story pavilion building to serve the neighborhood with a café and gathering point at the entry of a new public park accessible by the public. The new pavilion will have 766 square feet of floor area and will reach a maximum height of 23 feet and 8 inches. A rendering of the proposed kiosk may be found on page 6 of the proposed plans found in Attachment 5.

- Construction of a new 5,000-square foot passive park with park seating, picnic tables, shade trees and landscaping shown in Figure 7 below. Although on private property, the park will be open to the public. A rendering of the proposed park may be found on page 5 of the proposed plans found in Attachment 5.

Figure 7: North Site Open Space

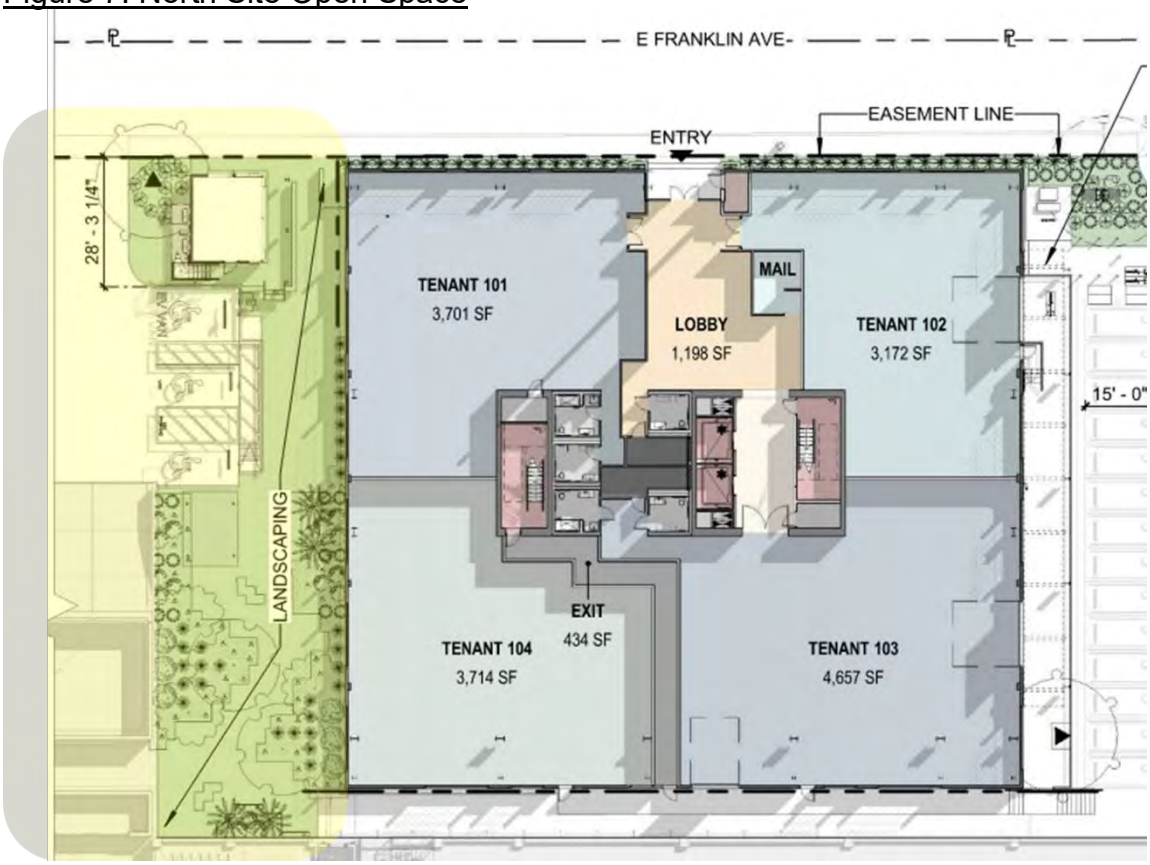

Figure 8: Franklin Ave Elevation (north site)

DISCUSSION:

Specific Plan Amendment

Implementation of the SHSP eventually shifts land uses from industrial to office and other related uses. The SHSP EIR concluded that policies, standards, and regulations outlined in the SHSP were consistent with existing City regulations and will not conflict with existing City General Plan policies.

The SHSP currently allows CBP Tier II level qualifying projects to deviate from maximum building height development standards up to a maximum height of 50 feet as measured to the building parapet, not including elevator equipment or architectural features. The current criteria for CBP Tier II projects are listed in the SHSP Section 2.3.2, “Development Tiers and Community Benefits.” In summary, CBP Tier II projects may allow for:

A. Building Height deviation up to 50 feet;

B. Floor Area Ratio (FAR) > 1.5;

C. Three or more deviations to standards (one of which is height or FAR,) that exceed the minor deviation threshold (10%) allowed by SHSP Section 4.5.1, "Administrative Adjustment".

As analyzed within the Initial Study/Mitigated Negative Declaration for the proposed SHSP amendment and Standard Works project, the proposed Specific Plan Amendment (SPA) will create a new Sub-area within the SHSP area, specifically within the SH-E and PF zoning districts. Further, the proposed SPA will only modify the Height Development Standards for CBP Tier II qualifying projects within the proposed designated Sub-area of the Smoky Hollow East (SH-E) and Public Facilities (PF) Zoning districts of the Specific Plan. The proposed Sub-area (see Figure 5 above) occupies 30 of the 120 acres of the SHSP, and development under the proposed SPA will still be of the same type and overall locations as outlined in the SHSP.

The proposed amendment to Tier II CBP applicable projects in the designated Sub-area of the Smoky Hollow East (SH-E) zoning district will be the following:

A. Building height deviation up to 50 feet *except for the designated Sub-area of the Smoky Hollow East (SH-E) zoning district, which will have a height deviation of up to 60 feet;*

B. Floor Area Ratio (FAR) deviation > 1.5; (**no change to existing text)**

C. Three or more deviations to standards that exceed the minor deviation threshold (10%) allowed by SHSP Section 4.5.1, "Administrative Adjustment". **(no change to existing text)**

As currently permitted by the SHSP, both the South Site and the North Site have a base Floor Area Ratio (FAR) of 1.0 and may exceed the base FAR with approval of a Community Benefits Plan. Under the proposed Project, development of the North Site will result in a total of 65,061 square feet of floor area (FAR=0.94), which is within the permitted base FAR of 1.0. Development of the South Site will result in a total of 63,915 square feet of floor area (FAR=1.45), which is also permitted with the approval of a Community Benefits Plan. Although the development of the South Site would exceed the base FAR, the Project is still within and consistent with the overall growth limits allowed by the SHSP.

Under the SHSP, both the South Site and the North Site have a permitted base building height of 35-feet and may exceed the base building height (up to a maximum of 50-feet) with the approval of a Community Benefits Plan. With the SPA, this height maximum will increase to 60 feet as measured from the average grade to the top of the building for properties within the proposed Sub-area identified in Figure 5 above. Under the Proposed Project, both the South Site and the North Site will be within the proposed Sub-area and will be developed with three story buildings with a maximum height of 59'-6".

Community Benefits Plan

A proposed project that exceeds development standards under the SHSP is required to submit a Community Benefits Plan and is considered through the review process described in SHSP Section 4.5.2: "Community Benefits Plan (CBP) for Tier I and Tier II applicable projects."

A proposed CBP shall outline the request for flexibility from strict interpretation of the development standards and regulations of the SHSP, as well as the proposed public amenities, features, and improvements prioritized in the Specific Plan that will be provided. Examples of potential community benefits include, but are not limited to, publicly accessible open space, publicly accessible parking, enhanced accessibility improvements, and implementation and/or funding of streetscape improvements identified in the Specific Plan.

The design of the building proposed on the North site exceeds the current base standard for building height in the SHSP, and the design of the building proposed on the South site exceeds the current base standards for building height and allowable Gross Floor Area Ratio (FAR). Projects within the SHSP area can request deviations from current development standards with the approval of a Tier I or Tier II CBP. Upon approval of the SPA, the maximum allowable height with a Tier I or Tier II Community Benefits Plan will increase to 60-feet in the designated Sub-area. As such, the Project requests the following deviations with a Tier II CBP:

- **Additional Building Height.** Proposed building heights of up to 59'-6" on both Project sites will exceed the SHSP Base Standard height of 35 feet.

- **Additional Building FAR.** Proposed 1.5 floor area ratio (FAR) (an additional 21,983 square feet) on the South site exceeds the SHSP Base Standard FAR of 1.0.

The SHSP contains 32 design guidelines in five categories: building character, open space, landscaping, connectivity, signage and public art and Public Realm. When reviewing a proposed CBP, the City must consider the project's compliance with these design guidelines. Although compliance with all 32 design guidelines is not required, compliance with at least 17 of the guidelines is required to be considered an exemplary project. The proposed Project incorporates 28 of the 32 design guidelines, far exceeding the minimum threshold for exemplary projects. In exchange for the above deviations allowed by Tier II CBP, the applicant proposes the following community benefits and improvements, at the applicant's expense, pursuant to Smoky Hollow Specific Plan Section 4.5.2.

- **Underground Utilities**. The Project proposes to underground all electric power and low voltage phone and data lines that currently serve the buildings on East

Franklin Ave for the north site, and Kansas Street and E. El Segundo Blvd. for the south site.

- **Public Seating**. Proposed architectural seating will be provided along the sidewalk area within the public right-of-way (ROW) facing E. Franklin Avenue and Kansas Street.

- **Coffee Pavilion/Public Café**. The proposed North Site Project will also include a 276-square foot public café (Coffee Pavilion) and associated outdoor dining area immediately adjacent to the E Franklin sidewalk, in order to active the street and provide a convenient break location for local neighbors. The café is part of the proposed 5,000-square foot public park that will be a landscaped focal point of the Project and of the surrounding area as well.

- **Architecture that enhances building character.**

- **Open space that facilitates gathering.**

- **Landscaping and environmental design.**

In addition, the Development Project will provide the following specific community benefits as summarized from the CBP Tier II application scoring sheets:

Group A – Enhance Building Character

A1. *Build on the quality industrial character:* Project has exposed steel beams and large industrial-style windows.

A2. *Convey a sense of the old and new:* Project will preserve ground floor red brick exterior while adding two setback floors of a modern industrial building

A3. *Build upon existing context:* Project stays within existing footprint but adds 2 floors with roof decks.

A4. *Conserve and retain the character-defining features:* Project preserves ground floor red brick exterior and three historical building entrances.

A5. *Encourage additions that complement the character-defining features:* Project has large industrial windows with exposed steel beams characteristic of mid-century architecture but stacked blond block with exposed aggregate and stain coloring to enhance the industrial appearance.

A6. *Incorporate small, medium, and large scales:* Project includes several interlocking design elements of different scales for visual interest including large to small "nested" windows and balconies to break up the building facade into different sized elements.

A7. *Enhance design at the pedestrian level:* Project will have extensive landscaping along all street frontages with pedestrian scale seating.

A8. *Specify 360º architecture:* Project will have enhanced architecture on all four sides of each building.

A9. *Enhance entry expression:* Project has new landscaping and a double high entry portal at the southwest corner.

A10. *Encourage the use of roll-up doors and sliding walls at street frontage:* Roll-up doors are used in several main entrance locations.

A11. *Orient secondary entries to alleys:* Some secondary access points are oriented toward local alleys.

A12. *Incorporate different materials, colors, and textures:* Project includes a variety of materials, colors, and textures, including red brick, medium grey block, black steel, corten, architectural board formed concrete, and glass.

Group B – Facilitate Gathering

B1. *Form an active street wall:* Project has a new two-story entry portal with enhanced landscaping along street frontages and distinctive entrances.

B3. *Develop outdoor gathering spaces:* Project will have a pocket park with outdoor seating.

B5. *Provide ease of access:* The Project will have multiple pedestrian and vehicular access points and ground floor tenants will have direct access to adjacent streets.

B6. *Enhance surface parking:* Project will have shade coverings for surface parking lots plus stacked parking using current technology.

B7. *Use enduring quality paving materials:* Project will have special paving materials to demarcate pedestrian walkways with integral color and crystal aggregate.

B8. *Provide street furniture:* Project will provide street furniture for seating at the pocket park.

B9. *Use exterior lighting to accentuate safety and design:* Project will provide period lighting on all sides of buildings for pedestrian safety.

Group C – Incorporate Landscaping and Environmental Design

C1. *Design layered and lush landscaping:* Project will have extensive landscaping per landscaping plan.

C2. *Select drought-tolerant and native plants:* Project landscape plan has drought-tolerant and native plants throughout.

C3. *Utilize planters and pots to provide greenery:* Project has planters and pots on Level 2 and 3 decks and balconies and on the rooftop.

C4. *Improve landscaping in parking areas:* Parking areas include landscaping on at least two sides (those facing the buildings).

C5. *Use fences and walls as an extension of the architecture:* Project includes monument signs for both buildings that compliment and extend the building architecture.

C6. *Use natural light:* Project has large windows for 2-story spaces with mezzanines to allow natural light in all interior spaces.

Group D – Encourage Connectivity

D1. *Install bike facilities:* Two bike racks will be installed at each Project building.

Group E – Signage, Way Finding, and Public Art

E1. *Design signs as an integral component:* Project includes integrated tenant signage.

E2. *Incorporate way-finding through integral design:* Project has architecturally integrated signage for both pedestrians and vehicles.

E3. *Encourage public art:* Project will have a large-scale art wall on the west side of the north building.

Public Realm

PR1. *Underground utilities:* The incoming power and low voltage cables for data and phone will be consolidated into one location and undergrounded.

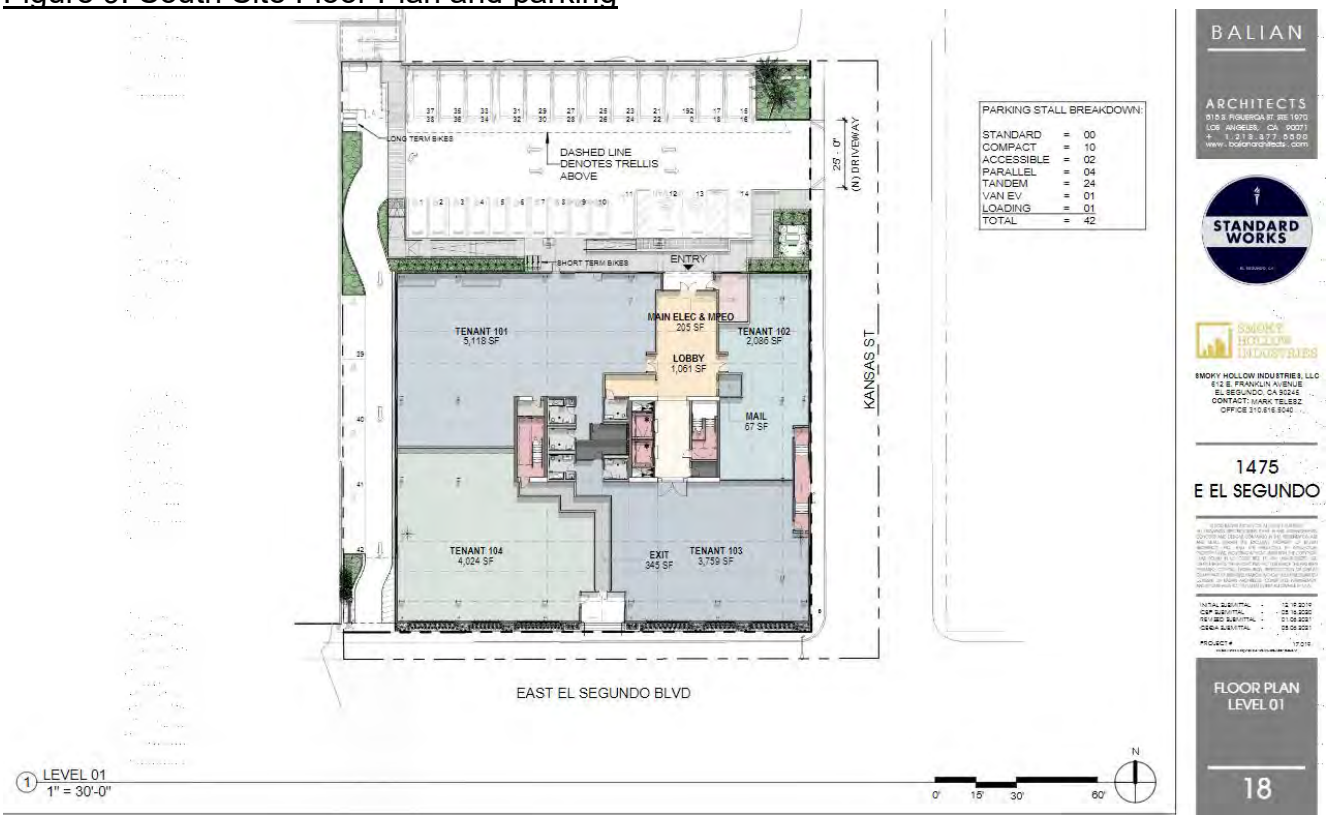
Community Benefit Analysis for CBP No. 19-03 & CBP No. 19.04

Kosmont Companies was retained by City staff to conduct an independent evaluation of the proposed CBP. The Consultant reviewed the Site development application, site plan, floor plans, building design, and preliminary community benefit proposal. It was determined that the combined value of each building component (architectural enhancements, open space that facilitates gathering, landscaping and environmental design, wayfinding & signage, undergrounding utilities, and the addition of a coffee kiosk) will result in a combined marginal cost increase of approximately $4.07 million for the north site, and $3.52 million for the south site. These community benefit items will add value to the Project by making it more attractive to tenants, while also providing exemplary design and services to the larger Smoky Hollow area. The attached Community Benefits Analysis Reports (Attachments 7 & 8) for both sites shows that the Project is expected to generate economic and community benefits in excess of the Projects value as built as a Tier II CBP. Further, the Kosmont report indicates that the Project will provide certain fiscal and economic benefits such as: contributions to the General Fund, an increase in annual taxes, an increase in annual retail sales, and an increase in annual sales and business license taxes.

Site Plan Reviews

Per ESMC 15-30-1, Site Plan Review is required to confirm that the proposed Project is in conformance with the standards of the El Segundo Municipal Code including uses, density, approved FAR, and design guidelines. Both the South Site and the North Site have been evaluated for compliance.

Site Plan Review SPR 21-03– South Site (1475 El Segundo Boulevard)



The proposed project consists of a 44,406 square feet addition to an existing 19,311 square feet of building area, for a total building size of 63,915 square feet. The construction is proposed to be 3 stories and approximate 59’-6” in height.

Architecture/Design: The proposed building incorporates elements that are in keeping with the industrial style of the immediate vicinity and incorporates architectural elements for a 360-degree design. Specifically, the ground floor of the building will retain the existing brick and provide appropriately scaled pedestrian orientation including an easily

identified front entrance, transparent window openings, downward facing light sconce fixtures, and a juxtaposition of building wall planes and materials. The upper floors incorporate CMU block wall treatments along with large window openings, a second-floor wrap around roof deck, and a third-floor balcony along the western half of the third floor, facing El Segundo Boulevard.

Parking: The site includes 165 dedicated parking spaces on-site and complies with the 160 minimum parking spaces required. Specifically, 42 new surface level vehicle parking spaces and 5 bike parking spaces are located on the north side and west side of the building and accessed from Kansas Street. Of the 42 new parking spaces, 24 spaces are within a parking lift system along the north property line of the south site, shown clearly on page 9 of the project plans. Another 118 parking spaces are available in the newly completed parking garage located behind (to the south) of 1320-1330 E. Franklin Avenue. The parking garage contains a total of 398 parking spaces. Per ESMC 15-15-3(H)(3), Planning Commission may approve an offsite parking covenant for offsite parking exceeding 20 spots or 20%. The applicant intends to secure an offsite parking covenant with the property located at 1310 E. Franklin Avenue for 123 parking spots.

Figure 9: South Site Floor Plan and parking

Open Space/Landscaping: The SHSP requires a minimum 10% open space for lots greater than 22,400 square feet. Since the South Site measures 43,966 square feet, a minimum of 4,397 square feet of open space is required. The SHSP allows for open space on building rooftops to be counted towards the minimum requirement, provided that at least 50% of the requisite open space be directly accessible from the existing ground floor elevation. The applicant proposes a total of 10,408 square feet (21%) of open space within the South Site, including 408 square feet of vertical planted landscape (along the west side elevation of the building); 3,120 square feet of at-grade open space; and 6,808 square feet of open space (4,765 square feet) / landscaping (2,043 square feet) on the rooftop, accessible from the ground floor elevation via two stairwells and two separate elevators located in the middle of the structure.

Site Plan Review SPR 21-04–North Site (1320 & 1330 Franklin Avenue)
The Project consists of a 45,568 square foot addition to an existing 19,463 square feet of building area, for a total building size of 65,061 square feet. The Project is proposed to be 3 stories, approximately 59'-6" in height. To the west side of the building and along the Franklin Avenue frontage, the applicant proposes a separate, 766 square foot, two-story kiosk building measuring 23'-8" in height. The ground floor of the kiosk building includes a 295 square foot tenant space for a coffee retailer.

Architecture/Design: The proposed building incorporates elements that are in keeping with the industrial style of the immediate vicinity and incorporates architectural elements for a 360-degree design. Specifically, the ground floor of the building retains the existing brick with 6 larger window openings and a transparent prominent front entrance. The upper floors incorporate CMU block wall treatments along with large window openings as well on all elevations of the building. Overall, the ground floor front elevation provides 43% transparency into the building, which exceeds the minimum 15% requirement. Along the ground floor elevations, eight period wall sconce lighting fixtures are provided wrapping the building and incorporated on all 4 sides of the building as shown on the project plans.

Parking: The site maintains a total of 168 parking spaces on-site, in compliance with the minimum parking requirements. Specifically, 38 surface level parking spaces are located on the west side of the building and accessed from Franklin Street and another 130 parking spaces are available in the newly completed parking garage located to behind (to the south) of 1320-1330 E Franklin Street. This parking garage contains a total of 398 parking spaces.

Open Space/Landscaping: The SHSP requires a minimum of 10% open space for lots greater than 22,400 square feet. This requirement was previously met for the North Site parcel with 19,189 square feet of open space/landscaping for the 191,896 square foot (4.4-acre) site approved via Council Resolution 5205 (for 140 Oregon Street Community Benefits Plan), which satisfies the open space requirement for the North site parcel as a whole. As the North Site proposes development of approximately 1.07-acre portion, the applicant is providing an additional 11,847 square feet of landscaping and open space, in

excess of what is required. The SHSP allows for open space on building rooftops to be counted towards the minimum requirement, provided that at least 50% of the requisite open space be directly accessible from the existing ground floor elevation. The applicant proposes a total of 11,847 square feet (29%) of open space to be incorporated within the North Site, which includes a 5,937 square foot landscaped courtyard/pocket park on the west side of the building with direct ground floor access and accessible from along Franklin Avenue; and 5,910 square feet of open space/ landscaping on the rooftop, which is accessible from the ground floor elevation via a two stairwells and two elevators located in the middle of the structure.

Figure 10: North Site Plan

FINDINGS

In considering the proposed project, the Planning Commission reviews components of each requested application and considers the merits of the project(s) to make a recommendation for City Council's consideration. This will include recommending that the project is consistent with the findings associated with the General Plan, Specific Plan, Community Benefits Plan, and Site Plan Review. The following are the findings in **boldface**, following by staff's analysis in normal type.

Specific Plan Amendment

The proposed amendment is consistent with goals, objectives and policies of the General Plan:

Economic Development Element

The City's Economic Development Element of the General Plan specifies the following:

Objective ED1-2: Center diversification efforts on targeted industries that meet the City's criteria for job creation, growth potential, fiscal impact, and fit with local resources.

Policy ED1-2.1: Seek to expand El Segundo's retail and commercial base so that the diverse needs of the City's business and residential communities are met.

Staff believes the proposed amendment is consistent with the General Plan's Economic Development Element and directly implements and furthers the General Plan objectives and policies above because it promotes economic development, job creation, and improves the City's tax base through inclusion of office, and research and development land uses within the Smoky Hollow Specific Plan area. Further, Kosmont, the City's consulting economic consultant, reviewed the project and determined that it will result in fiscal and economic benefits such as: contributions to the General Fund, an increase in annual taxes, an increase in annual retail sales, and an increase in annual sales and business license taxes.

Land Use Element

The City's Land Use Element of the General Plan specifies the following:

Objective LU4-4: Provide areas where development has the flexibility to mix uses, in an effort to provide synergistic relationships which have the potential to maximize economic benefit, reduce traffic impacts, and encourage pedestrian environments.

Staff believes the proposed amendment is consistent with the General Plan Land Use Element and directly implements and furthers the General Plan objective above because the proposed 10-foot height increase would not detract from or create an impediment to the intent and implementation of the Smoky Hollow Specific Plan. By allowing the additional height, in conjunction with a Community Benefits Plan as required, the additional height will allow more flexibility in the design of new buildings and help promote the retention of the existing buildings to be incorporated into the design of substantial additions. Each new building would be evaluated on its own merit to ensure high quality design and for compatibly with its surroundings. The allowance of the additional height

would also promote new uses and building into the context of the overall Smoky Hollow Specific Plan area and will introduce new architectural styles, enliven the area, and create positive direct and indirect economic impacts consistent with Objective LU4-4. Further, the project incorporates comprehensive features for site layout, building design, architecture, landscape, signs, and lighting, consistent with the General Plan and Specific Plan.

The proposed Specific Plan Amendment will amend the text of the SHSP Tier II Community Benefit Plan to allow buildings up to 60-feet high in a newly created Smoky Hollow Sub-area 1 of the SHSP. The proposed Smoky Hollow Sub-area 1 was identified within the SHSP area to provide a transitional area between residential neighborhoods to the north and the multi-story buildings in the immediate vicinity, including taller buildings farther east of the area along PCH, and the Chevron refinery structures to the south, which features a change in topography.

As the applicant proposes to retain the existing historic building on the first floor, additional height is required to provide the 3-story structure desired. Therefore, the proposed Specific Plan Amendment is necessary and will be entirely consistent with the Smoky Hollow Design Guidelines for enhancing building character such as conveying a sense of old and new, building upon the existing context, conserving and retaining character defining features, encouraging additions that differentiate and are secondary to the bulk and mass of existing buildings, and encouraging 360-degree architecture.

Community Benefits Plan 19-02 and 19-03

A. The proposed additional building height, intensity, or deviation from the development standards would not be detrimental to the public health, safety or welfare, or materially injurious to properties or improvements in the vicinity.

The proposed building height for the project is compatible with the neighborhood in that multi-story buildings, tall petroleum storage drums, and 200-foot-tall distillation columns at the Chevron oil refinery are located in the immediate vicinity. The additional 25-foot building height from base height standard is not anticipated to be detrimental, as staff believes the project will be compatible and consistent with development on abutting sites (such as the recently approved development at 140 Oregon, which is 55 feet in height) and is consistent with the vision for Smoky Hollow to allow for creative and exemplary office space.

Further, the project is located in a developed area that contains all utilities and public infrastructure. Additionally, before the City issues building permits for the project, the applicant will submit detailed plans to the City for review to ensure compliance with all applicable Building and Fire safety codes.

Lastly, as evidenced by the community benefits analyses prepared by Kosmont, the CBP provides open space and public gathering areas, a public coffee kiosk with outdoor

seating, and enhanced architecture to Smoky Hollow. These community benefits will make a positive impact on Smoky Hollow by attracting high-quality businesses and tenants, providing landscaping and open space that will serve the public nearby and will provide an example of the high-quality design desired by the Smoky Hollow Specific Plan. Therefore, staff believes the project will not be detrimental to the public health, safety, or welfare, and this finding can be made.

B. The proposed community benefit provides exemplary project and/or streetscape design.

The Specific Plan contains 32 specific design guidelines in five categories including, building character, open space, landscaping, connectivity, and signage and art. Compliance with at least 17 of the guidelines is required to consider a project exemplary in building and/or streetscape design. Since the proposed project incorporates 28 of the 32 guidelines, the CBP and related project is considered an exemplary project, and this finding can be made.

C. The proposed community benefits directly implements objectives of the Specific Plan.

Part of the proposed community benefit consists of complying with the Smoky Hollow design guidelines. Compliance with the guidelines directly implements the Smoky Hollow Design Objectives in Specific Plan Section 2.4.1 as follows:

a. Preserve Smoky Hollow's existing character through the use of compatible architectural features, materials, and details.

   The project design helps preserve Smoky Hollow's existing character by preserving existing brick materials for both projects and incorporating materials and colors that are consistent with existing buildings in the area and with the neighborhood's industrial character. As such, staff believes the project implements this design objective.

b. Insist upon streetscape and landscape amenities that allow for small-scale, informal gathering, both within sites and along public rights-of-way, especially sidewalks, street corners, and along Franklin Avenue; Encourage active and passive design strategies that conserve natural resources.

   The projects incorporate sidewalk-oriented entries for both projects as well as pedestrian-oriented scale and design features such as lighting, windows, and signage. In addition, the project will make use of drought tolerant plant species in the landscaped areas, which will reduce the use of water for landscaping. As such, staff believes the project implements this design objective.

c. Develop more accessible and street-side open space. Buildings fronting public sidewalks, and specifically buildings fronting along Franklin Avenue, shall provide sidewalk-oriented entries and small-scale gathering opportunities.

   The proposed project includes entries that are directly accessed from the public sidewalk and serves to activate both Franklin Avenue and E. El Segundo Boulevard street frontages, thereby creating a vibrant atmosphere. As such, staff believes the project implements this design objective.

d. Project designs, orientation, and spaces should anticipate and facilitate emerging sidewalk and pedestrian activity, reuse of alleys, and access to all transit modes.

   The proposed community benefit plan implements the goals and objectives of Specific Plan Chapter 3 regarding publicly owned rights-of-way and publicly accessible open spaces. The proposed community benefits plan includes public improvements to utilities in the public right-of-way, landscaping adjacent to the street, and open space, which will in turn help integrate cyclists, pedestrians, and transit users for businesses to flourish. As such, staff believes the project implements this design objective.

D. The value of the proposed community benefits bear a relationship to the value generated by the project.

The City contracted Kosmont and Associates, Inc. (Kosmont) to prepare a comprehensive financial report of the proposed Tier II Community Benefits Plan for the project (attachments 7 and 8). Kosmont evaluated the value of the community benefits being offered and the financial gain to the applicant by allowing additional building height of 10-feet above the Tier II Community Benefit height limit of 50-feet, which is an additional building height of 25 feet above base height standard.

Staff believes the proposed benefits are adequate because the benefits are not exclusively to the benefit of the applicant and future tenants. The proposed benefits will provide additional services to the public and surrounding area, while also providing open space to an area of the City that is underrepresented in this category. Further, the proposed Project will provide an aesthetic improvement along El Segundo Blvd, Kansas Street, and E. Franklin Street by removing unsightly data and power lines. Therefore, since the value of the proposed benefits bear a relationship to the value generated by the project, staff believes this finding can be made.

E. The proposed community benefits do not principally benefit the project occupants of the project, but rather provide a district or area-wide benefit to the larger Smoky Hollow Plan area.

The applicant is providing the following list of improvements intended to benefit the public directly, and not principally the occupants of the project:

1. Public open space – publicly accessible open space provided on the North Site along the West side of the building with a direct connection to the Franklin Avenue sidewalk. The space will be designed with pedestrian scaled elements and will promote public use in connection with a café space within a kiosk building locate at the Franklin Avenue frontage.
2. Transformative projects - significant investment for an architecturally expressive design that rehabilitates the original 1950s mid-century buildings for both the North and South sites, rather than demolishing. The unique striking design will become a landmark for the neighborhood and possibly the city. The cost for striking architectural elements such as exposed structural steel, large scale balconies and exterior decks, massive mid-century like steel windows and other period materials will build upon the character of the smoky hollow neighborhood and inspire equally striking designs by other developers.
3. Preservation and rehabilitation - preservation and rehabilitation of the existing brick facades on both the North and South sites.
4. Streetscape improvements – new landscaping located directly along the frontage of each building on the North and South sites.
5. Utility improvements - removal of existing overhead utility lines along project frontage on East Franklin Avenue (North Site), East El Segundo Boulevard and Kansas Street (South Site) will be removed and placed underground to beautify the streetscape views.
6. Lighting and wayfinding - period appropriate exterior lighting and directional signage for the project will be provided adjacent to the sidewalks facing Franklin Avenue.

This information was provided in support of Finding B in Tier II that requires the evaluation of these values. The proposed benefits are deemed by Staff to be adequate as the benefits provided are not exclusively for the benefit of the applicant and future tenants. The proposed architectural upgrades to the structure will implement the vision of the SHSP. The Project will also have district-wide benefits to the public through provision of a coffee shop and outdoor seating, open space and right of way improvements to Franklin, Kansas, and El Segundo Blvd, and therefore staff believes this finding can be made.

Site Plan Review 21-03 and Site Plan Review 21-04

The El Segundo Municipal Code (ESMC) provides criteria for reviewing and approving Site Plan Review applications. The Municipal Code indicates that the Planning Commission, or City Council on appeal, has the authority to approve a site plan review application if certain findings can be made in support of the projects. Among the criteria for consideration are site and design considerations and zoning standards including, but not limited to, parcel orientation and shape, building height, placement of buildings, setbacks, building materials and design, parking, and signage.

In consideration of these criteria, ESMC Section 15-30-4(D) states that the Commission may approve or conditionally approve a Site Plan if it makes the following three findings (findings in **boldface**, following by staff's analysis in normal type):

Site Plan Review 21-03 and 21-04 Findings pursuant to ESMC Section 15-30.

A. The proposed development is consistent with the goals, policies, and objectives of the El Segundo General Plan, the Smoky Hollow Specific Plan, and the El Segundo Zoning Code.

The proposed Project complies with the approved Smoky Hollow Specific Plan, which has also been found to be consistent with the General Plan. The SHSP permits a mix of office, research and development, light industrial, and warehouse uses. Further, the SHSP sets standards to achieve high quality development, which includes design guidelines and development standards with criteria for site design, architecture, orientation and massing, parking and loading, landscaping, lighting, and connectivity. The proposed development has been evaluated in the context of the goals, policies and objectives from the SHSP. The project design helps preserve Smoky Hollow's existing character by preserving existing brick materials for both projects and incorporating materials and colors that are consistent with existing buildings in the area and with the neighborhood's industrial character. The project incorporates sidewalk-oriented entries for the project as well as pedestrian-oriented scale and design features such as lighting, windows, and signage. The proposed Project implements the goals and objectives of Specific Plan Chapter 3 regarding publicly owned rights-of-way and publicly accessible open spaces by including public improvements to utilities in the public right-of-way, landscaping adjacent to the street, and open space, which will in turn help integrate cyclists, pedestrians, and transit users for businesses to flourish.

General Plan Economic Development Element Goal ED1 outlines the City's objectives to create a strong, healthy economic community in which all diverse stakeholders may benefit.

<u>Economic Development Element</u>

The City's Economic Development Element of the General Plan specifies the following:

Objective ED1-1.1*:* To build support and cooperation among the City of El Segundo and its business and residential communities for the mutual benefits derived from the maintenance and expansion of El Segundo's economic base.

Policy ED1-1.1: Maintain economic development as one of the City's and the business and residential communities' top priorities, diversifying the City's economic base to meet quality of life goals, and results in job creation and growth potential.

Objective ED1-2*:* Center diversification efforts on targeted industries that meet the City's criteria for job creation, growth potential, fiscal impact, and fit with local resources.

Policy ED1-2.1: Seek to expand El Segundo's retail and commercial base so that the diverse needs of the City's business and residential communities are met.

Policy ED1-2.2: Maintain and promote land uses that improve the City's tax base, balancing economic development and quality of life goals.

The proposed project is consistent with the General Plan's Economic Development Element and directly implements and furthers the General Plan's goals, objectives and policies above because the project promotes economic development and improves the City's tax base through inclusion of office, research and development, and retail land uses within the Smoky Hollow Specific Plan area.

General Plan Land Use Element Goal LU2 outlines the City's objectives to preserve and enhance the City's cultural heritage and buildings or sites that are of cultural, historical, or architectural importance.

Land Use Element

The City's Land Use Element of the General Plan specifies the following:

Objective LU2-1: Maintain the distinct character of the existing areas of the City.

The proposed project is consistent with the General Plan's Land Use Element and directly implements and furthers the General Plan's goals, objectives and policies above because the proposed project design preserves the existing red brick building, to maintain the character of the post-war period architecture found within Smoky Hollow.

Circulation Element

The City's Circulation Element of the General Plan specifies the following:

Objective C1-1 Provide a roadway system that accommodates the City's existing and projected land use and circulation needs.

Policy C 1-1.14 Require a full evaluation of potential traffic impacts associated with proposed new developments prior to project approval. Further, require the implementation of appropriate mitigation measures prior to, or in conjunction with, project development.

The proposed project is consistent with the General Plan's Circulation Element and directly implements and furthers the General Plan's goals, objectives, and policies above because the project would not disturb or impact the existing roadway network immediately surrounding the project sites. Access to and from the projects are well established by Franklin Avenue, Kansas Street, Oregon Street, and El Segundo Boulevard. In compliance with SHSP EIR Mitigation Measure 18-1, a Traffic Impact Analysis was conducted to analyze any new impacts to the local street network from the Project, based on LOS standards per the General Plan, and calculate a fair share contribution for project traffic impacts. Based on the traffic impact analysis conducted, the proposed Project will not create traffic impacts greater than those identified in the TIA conducted for the SHSP EIR. The project applicant will be required to pay fair share for the improvements to the roadway network as identified in the SHSP EIR. The policies and objectives provide evidence that the proposed development is consistent with the goals, policies, and objectives of the General Plan, Smoky Hollow Specific Plan, and the El Segundo Zoning Code. Therefore, based upon the analysis above, Staff believes that this finding can be made.

B. The proposed project is functionally compatible with the area in which it is located.

The City of El Segundo has distinctive land use patterns, which are divided into four quadrants by the intersection of Pacific Coast Highway and El Segundo Boulevard. Compatibility of an individual land use is determined mainly by its relationship to other uses within its quadrant. The SHSP area is in the northwestern quadrant of the City of El Segundo which is west of Pacific Coast Highway and north of El Segundo Boulevard. The design and implementation of the Specific Plan relates directly to the goals and objectives of the Specific Plan and would be functionally compatible with other uses within the Specific Plan area. The SHSP includes a range of commercial and industrial uses that will contribute to job creation opportunities and balance growth with local resources and infrastructure capacity.

The proposed building height for the project is compatible with the area in that multi-story buildings, tall petroleum storage drums, and 200-foot-tall distillation columns from the Chevron oil refinery are located in the immediate vicinity. The project is located in a developed area which contains all utilities and public infrastructure.

The project is within the Smoky Hollow East (SH-E) zoning district, which provides a transitional land use area between higher-intensity office uses east of PCH and the smaller, single-parcel industrial and creative businesses of the western portion of Smoky Hollow area. The SH-E zoning district accommodates development of incubator industrial, research, and technology uses; medium-sized light industrial and manufacturing; and creative office activities. The Standard Works development project is compatible and consistent with the types of development desired by the Smoky Hollow Specific Plan within the SH-E zoning district. Therefore, based upon the analysis above,

Staff believes that the proposed project is functionally compatible with the area in which it is located, and this finding can be made.

C. The proposed development will not adversely affect the general welfare of the City.

The SHSP development standards ensure that the Projects are developed in an orderly fashion with high quality architecture, building materials, and urban design. The Project's consistency with these standards, its design, and configuration result in a project that will not adversely affect the general welfare of the City. Before the City issues building permits for the project, the applicant will submit detailed plans to the City to review for compliance with all applicable Building and Fire safety codes. Further, the proposed project will promote the orderly development of property, the preservation of property values and preservation of the distinct character of Smoky Hollow. The project will be consistent with surrounding development and will not adversely affect the value of neighboring properties. Staff believes that the finding can be made, as the proposed project is compatible with the neighborhood, and therefore is not anticipated to be detrimental to the public health, safety, or welfare.

ENVIRONMENTAL REVIEW

In October 2018, a Final Environmental Impact Report was certified by the City for the 2018 Smoky Hollow Specific Plan Update. Although the EIR was prepared as a Program EIR, pursuant to Section 15168 of the California Environmental Quality Act (CEQA) Guidelines, project specific impacts can also be evaluated to determine whether there are any new or unforeseen impacts on the environment consistent with CEQA Guidelines 15168(c), which is intended to evaluate later development activity from the program level EIR.

To evaluate the full potential impacts from the proposed project (SHSP amendment and related development), an Initial Study/ Mitigated Negative Declaration (IS/MND) was prepared. The ISMND concluded that there are some potential impacts from the proposed projects; however, the impacts can be mitigated to a level of less than significant. The mitigation measures adopted for the SHSP would continue to apply to the Project along with additional Project-specific mitigation measures recommended as part of the IS/MND document prepared for the Project.

Traffic Impact Analysis

Based on the traffic impact analysis conducted, the proposed Project will not create traffic impacts greater than those identified in the TIA conducted for the SHSP EIR. In compliance with SHSP EIR Mitigation Measure 18-1, a Traffic Impact Analysis Memo dated January 21, 2022 (Attachment 9) was prepared to analyze any new impacts to the local street network from the Project, based on LOS standards per the General Plan, and calculate a fair share contribution and preliminary cost estimate for the identified

improvements. The analysis concluded that the Project will have no additional new impacts and the project's total fair share contribution will be:

- 4.7% for PCH/Grand Avenue for a new right-turn overlap signal phase on all approaches. The total cost estimate for the improvement is $80,788.00, in which $3,797.04 is the project's fair share contribution.
- 5.3% for PCH/El Segundo Boulevard for a Second eastbound left-turn lane, and new right-turn overlap signal phase at the northbound approach. The total cost estimate for improvements is $2,553,500.00 in which $135,335.50 is the project's fair share contribution.

The City shall have the responsibility of ensuring that the improvements will be constructed at the time the City determines that such improvements are needed to maintain desired service levels. With implementation of the traffic improvements identified as Mitigation Measure 18-1 in the SHSP EIR, traffic impacts of the Project will remain at less than significant based on the General Plan requirements. Conditions of approval have been added to the project draft Resolutions to require the applicant to pay fair share contribution for the project prior to issuance of any Certificate of Occupancy.

RECOMMENDATION

The proposed projects involve new, substantial additions to two separate sites located at 1457 East El Segundo Boulevard and 1320-1330 E. Franklin Avenue. As concluded in the analysis above, the Projects comply with the development standards as set forth in the Smoky Hollow Specific Plan. Furthermore, based on the Initial Study/Mitigated Negative Declaration prepared for this project, the Projects will not create significant adverse impacts on the environment with the incorporation of mitigation measures. Therefore, it is recommended that the Planning Commission adopt Resolution 2912 recommending City Council approve an Initial Study/Mitigated Negative Declaration for projects located at 1457 East El Segundo Boulevard (South Site) and 1320-30 Franklin Street (North Site); adopt Resolution 2913 recommending City Council adopt an Amendment to the Smoky Hollow Specific Plan (SPA); adopt Resolution No. 2914 recommending City Council approval of Environmental Assessment 1281, Community Benefits Plan 19-02, Site Plan Review (SPR) No. 21-03, Master Sign Program MSP 21-01, and Offsite parking covenant for development of a 46,000 square foot addition to the building located at 1475 East El Segundo Boulevard (South Site); and adopt Resolution No. 2915 recommending City Council approval of Environmental Assessment 1282, Community Benefits Plan 19-03, Site Plan Review (SPR) No. 21-04, and Master Sign Program MSP 21-01 for 44,000 square foot addition to the building located at 1320-1330 Franklin Street (North Site).

RESOLUTION NO. 2912

A RESOLUTION OF THE PLANNING COMMISSION RECOMMENDING CITY COUNCIL APPROVAL OF AN INITIAL STUDY/MITIGATED NEGATIVE DECLARATION (EA-1281/EA-1282) AND MITIGATION MONITORING AND REPORTING PROGRAM FOR ENVIRONMENTAL ASSESSMENT NOS. EA-1281 AND EA-1282 REGARDING AN AMENDMENT TO THE SMOKY HOLLOW SPECIFIC PLAN AND THE DEVELOPMENT OF A MULTI-PARCEL OFFICE CAMPUS ON PROPERTY LOCATED AT 1320-1330 E. FRANKLIN AVENUE AND 1475 E. EL SEGUNDO BOULEVARD

The Planning Commission of the City of El Segundo does resolve as follows:

SECTION 1: Recitals.

A. On October 2, 2018, the El Segundo City Council adopted Ordinance No. 1573, certifying a Final Environmental Impact Report (EA-1011) for the Smoky Hollow Specific Plan (State Clearinghouse No. 2017031071) (the "SHSP EIR") and a corresponding Mitigation Monitoring and Reporting Program. The Smoky Hollow Specific Plan area allows for 517,094 square feet of building area for office, commercial, and industrial uses, among other things. The SHSP EIR concluded that there were potential impacts on biological resources, cultural resources, and transportation that would require mitigation in connection with future development projects. Applicable mitigation measures adopted for the SHSP EIR are referenced here and incorporated into Exhibit A.

B. On August 31, 2020, Mark Telesz of Smoky Hollow Industries, LLC filed applications for amendment to the Smoky Hollow Specific Plan (SPA) No. 21-02 ; Community Benefit Plan (CBP) No. 19-02, Site Plan Review (SPR) No. 21-03, and Environmental Assessment (EA) No. 1281 for a Tier II Community Benefits Plan and Site Plan Review of the proposed South Site of the Standard Works project at 1475 E. El Segundo Blvd.; CBP No. 19-03, Site Plan Review (SPR) No. 21-04, and Environmental Assessment (EA) No. 1282 for a Tier II Community Benefits Plan and Site Plan Review of the proposed North Site of the Standard Works project at 1320-1330 E. Franklin Ave.; Master Sign Program (MSP) 21-01; for development a multi-parcel office campus totaling approximately 128,976 square feet, surface parking lots, publicly accessible open space, and a public coffee shop/kiosk on a total 5.35 acres (hereinafter, the "Project" or "Standard Works Project").

C. Approval of the proposed Project is a subsequent discretionary action in furtherance of the SHSP and requires amendments to the SHSP.

D. The applications have been reviewed by the City's Development Services Department for, in part, consistency with the General Plan and conformity with the El Segundo Municipal Code ("ESMC") and the SHSP.

E. The Development Services Department commissioned MIG, Inc. to evaluate the environmental impact of the proposed Standard Works Project and amendments to the SHSP in light of the standards for subsequent environmental review outlined in Public Resources Code section 21166 and California Environmental Quality Act ("CEQA") Guidelines section 15162. Based on MIG's evaluation of the potential environmental impacts of the proposed modifications to the SHSP project, an IS/MND was prepared pursuant to CEQA Guidelines section 15162.

F. The IS/MND was circulated for public review/comment from December 15, 2021 through January 14, 2022. Only one comment letter (Caltrans) was received during the public review period.

G. On January 27, 2022, the Planning Commission continued the project, at the request of the project applicant, to February 10, 2022;

H. On February 10, 2022, the Planning Commission held a duly noticed public hearing to receive public testimony and other evidence regarding the proposed amendments, including, without limitation, information provided to the Planning Commission by City staff and public testimony; and,

I. This Resolution and its findings are made based upon the evidence presented to the Commission at its February 10, 2022, hearing including, without limitation, the staff report submitted by the Development Services Department and the totality of the evidence in the administrative record.

J. This Resolution and its findings are made based upon the totality of the evidence in the administrative record before the Commission at its February 10, 2022 public hearing, including, without limitation, the staff report prepared by the Development Services Department.

SECTION 2: *Factual Findings and Conclusions*. The Commission finds as follows:

A. The IS/MND was presented to and considered by the Planning Commission at a duly-noticed meeting held on February 10, 2022.

B. The Project involves both legislative and quasi-judicial components. The legislative component consists of an amendment to the Smoky Hollow Specific Plan (SHSP) that would increase by ten feet (from 50 feet to 60 feet) the maximum permissible height of structures within a designated subarea of the SHSP Area. The subarea in which the increased height would potentially be available is generally bounded by Center Street on the east, El Segundo Boulevard on the south, Franklin Avenue on the north, and Sepulveda Boulevard on the west. The additional ten feet of building height within the subarea could be allowed only in connection with the approval of a Tier II Community Benefits Plan pursuant to the SHSP. The quasi-judicial components of the Project include Community Benefit Plan (CBP) No. 19-02, Site Plan Review (SPR) No. 21-03, and Environmental Assessment (EA) No. 1281 for a Tier II Community Benefits Plan and Site Plan Review of the proposed

South Site of the Standard Works Project at 1475 E. El Segundo Blvd.; CBP No. 19-03, Site Plan Review (SPR) No. 21-04, and Environmental Assessment (EA) No. 1282 for a Tier II Community Benefits Plan and Site Plan Review of the proposed North Site of the Standard Works Project at 1320-1330 E. Franklin Ave.; and Master Sign Program (MSP) 21-01.

C. The proposed project for the South Site would develop a 1.01-acre property located at 1475 E. El Segundo Boulevard. The existing 19,311 square-foot, one-story brick building on the site would be preserved with two new levels totaling 44,604 square feet added above it. This would result in a total floor area of 63,915 square feet (FAR=1.45) for R&D and office use. The new three-story building would have a maximum height of 59 feet and 6 inches from the average grade to the top of the building.

D. The proposed project for the North Site would develop a 1.07-acrea portion of a 4.34-acre property located at 1320-1330 E. Franklin Avenue. The existing 19,493 square-foot, one-story brick building located at 1330 E. Franklin Avenue would be preserved and two levels totaling 44,802 square feet would be added above it. In addition, a new, two-story pavilion building would be constructed and would include a public café. This would result in a total of 65,061 square feet of floor area for the North Site (FAR=0.95), including 64,295 square feet for R&D and office use and 766 square feet for the pavilion building. The three-story main building would have a maximum height of 59 feet and 6 inches from the average grade to the top of the building. The pavilion building will reach a maximum height of 23 feet and 8 inches. The South Site will also include construction of a new 5,000 square-foot public outdoor park with park searing, picnic tables, shade trees and landscaping.

E. The City of El Segundo is the lead agency for the Project. The IS/MND was prepared for the Project in compliance with the requirements of CEQA and the CEQA Guidelines and is adequate and appropriate for the City's use as the lead agency.

F. The Project will either have no impacts or less than significant impacts in the following areas: Aesthetics, Agriculture and Forestry Resources, Air Quality, Energy, Hydrology/Water Quality, Land Use/Planning, Mineral Resources, Noise, Population/Housing, Public Services, Recreation, Utilities/Service Systems, and Wildfire.

G. Areas of concern were noted as potentially significant if not mitigated. Mitigation measures have been incorporated into the IS/MND and will be imposed of the Project through the City's adoption of a Mitigation Monitoring and Reporting Program ("MMRP") in compliance with CEQA Guideline 15074(d). These mitigation measures, several of which are carried over from the SHSP EIR, are imposed to address potential environmental effects with respect to: Biological Resources, Cultural Resources, Geology/Soils, Greenhouse Gas Emissions, Hazards & Hazardous Materials, Transportation, and Tribal Cultural Resources. With the implementation of this mitigation, all potential environmental effects will be reduced

to a less than significant level. The MMRP is attached to this Resolution as Exhibit B and incorporated herein.

H. The mitigation measures set forth in the MMRP are specific and enforceable. The MMRP adequately describes implementation procedures, monitoring responsibility, reporting actions, compliance schedules, and verification of compliance in order to ensure that the Project complies with the adopted mitigation measures.

I. The mitigation measures contained in the MMRP will also be imposed as enforceable conditions of approval. All mitigation measures are capable of being fully implemented by the Project applicant.

J. All Conditions and Mitigation Measures identified in the SHSP EIR (EA-1011), on file with the State of California (SCH No. 2017031071), remain in full force and effect.

K. Pursuant to CEQA the Planning Commission has independently reviewed the Initial Study/Mitigated Negative Declaration together with all comments received regarding the Mitigated Negative Declaration and, based on the whole record before it, finds that the Mitigated Negative Declaration was prepared in compliance with CEQA and the CEQA Guidelines, that there is no substantial evidence that the Project will have a significant effect on the environment with the incorporation of mitigation, and the Mitigated Negative Declaration reflects the independent judgment and analysis of the Planning Commission. Accordingly, based upon the evidence presented to the Planning Commission, the City need not prepare an environmental impact report for the proposed Project.

SECTION 3: *Recommendation.* Based on the facts and findings hereinabove set forth and the totality of the evidence in the administrative record, the Planning Commission recommends that the City Council approve and adopt the Initial Study/Mitigated Negative Declaration and the MMRP in substantially similar form.

SECTION 4: *Reliance on Record.* Each and every one of the findings and determination in this Resolution are based on the competent and substantial evidence, both oral and written, contained in the entire record relating to the project. The findings and determinations constitute the independent findings and determinations of the Planning Commission in all respects and are fully and completely supported by substantial evidence in the record as a whole.

SECTION 5: The documents and other materials that comprise the record of proceedings in this matter are located in the offices of the Development Services Department, City of El Segundo, 350 Main Street, El Segundo, CA 90245. The custodian of these documents is the Development Services Director, or his/her designee.

SECTION 6: This Resolution will remain effective unless superseded by a subsequent resolution.

SECTION 7: The Commission Secretary is directed to mail a copy of this Resolution to Mark Telesz of Smoky Hollow Industries, LLC, and to any other person requesting a copy.

PASSED, APPROVED AND ADOPTED this 10th DAY of FEBRUARY, 2022.

PLANNING COMMISSION RESOLUTION NO. 2912

Exhibit A

Summary of Mitigation Measures Draft Initial Study/MND

**denotes mitigation measure carried over from the Smoky Hollow Specific Plan EIR*

Biological Resources

BIO MM 7-1* To avoid impacts to nesting birds, construction activities and construction noise should occur outside the avian nesting season (prior to February 1 or after September 1). If construction and construction noise occurs within the avian nesting season (during the period from February 1 to September 1), areas within 100 feet of a development site shall be thoroughly surveyed for the presence of nests by a qualified biologist no more than five days before commencement of any vegetation removal. If it is determined that the Project Site is occupied by nesting birds covered under the Migratory Bird Treaty Act, mitigation measure 7-2 shall apply.

BIO MM 7-2* If pre-construction nesting bird surveys result in the location of active nests, no grading, vegetation removal, or heavy equipment activity shall take place within an appropriate setback from occupied nests as determined by a qualified biologist. Protective measures (e.g., established setbacks) shall be required to ensure compliance with the Migratory Bird Treaty Act and California Fish and Game Code requirements. The qualified biologist shall serve as a construction monitor during those periods when construction activities occur near active nest areas to ensure that no inadvertent impacts occur. A report of the findings, prepared by a qualified biologist, shall be submitted to the CDFW prior to construction-related activities that have the potential to disturb any active nests during the nesting season.

Cultural Resources

CUL MM 8-2*Prior to the commencement of grading or demolition of subsurface structures, a professional archaeologist who meets U.S. Secretary of the Interior's Professional Qualifications and Standards, shall conduct a brief archaeological and paleontological informational session for construction personnel. The training session may consist of an in-person meeting or a written handout describing: (1) how to identify archaeological and paleontological resources that may be encountered during earth-moving activities and (2) the procedures to be followed in such an event, including contact information for the appropriate entities if archaeological or paleontological resources are discovered.

CUL MM 8-3*In the event that archaeological or paleontological resources are unearthed during ground-disturbing activities, the ground-disturbing activities shall be halted or diverted away from the vicinity of the find so that the find can be evaluated. A buffer area of at least 50 feet shall be established around the find, where construction activities will not be allowed to continue until a

qualified archaeologist or paleontologist has examined the newly discovered artifact(s) and has evaluated the area of the find. Work shall be allowed to continue outside the buffer area. If the archaeologist identifies the find as a tribal cultural resource or suspects it to be a tribal cultural resource, the City will contact the Native American Heritage Commission (NAHC) to report the discovery, and will contact local Native American tribal representatives as directed by the NAHC. Should the newly discovered artifact(s) be determined to be a tribal cultural resource, Native American construction monitoring will be initiated. The City shall coordinate with the archaeologist and tribal representative(s) to develop an appropriate treatment plan for the resources.

CUL MM 8-4 If human remains are uncovered during Project grading, work must be halted in the immediate area of the find and the County Coroner notified in accordance with Health and Safety Code Section 7050.5. The Coroner must then determine whether the remains are of forensic interest. If the Coroner, with the aid of a supervising archaeologist, determines that the remains are or appear to be of a Native American, they must contact the Native American Heritage Commission for further investigations and proper recovery of such remains, if necessary. Further, pursuant to Public Resource Code Section 5097.98(b) remains shall be left in place and free from disturbance until a final decision as to the treatment and disposition has been made. If the County Coroner determines the remains to be Native American, the Native American Heritage Commission shall be contacted within the period specified by law (24 hours). Subsequently, the Native American Heritage Commission shall identify the "most likely descendant". The most likely descendant shall then make recommendations and engage in consultation concerning the treatment of the remains as provided in Public Resources Code Section 5097.98. Human remains from other ethnic/cultural groups with recognized historical associations to the area shall also be subject to consultation between appropriate representatives from that group and the local jurisdiction/lead agency involved. This measure shall be implemented to the satisfaction of the City Planning Department.

Geology and Soils

MM GEO-1 Prior to issuance of any grading or building permits, the applicant shall demonstrate that all improvements and construction-related activities comply with the recommendations outlined in the Project geotechnical report (CWI 2017). This measure applies to all potential geologic and soil constraints that could affect one or both sites, including but not limited to seismic ground failure, strong seismic shaking, differential settlement, liquefaction, lateral spreading, and subsidence, and landslides/slope stability as appropriate. This measure shall be implemented to the satisfaction of the City Engineer.

Greenhouse Gas Emissions

EECAP 4.1* *Encourage or Require Energy Efficiency Standards Exceeding Title 24.* This measure will develop City staff to be resources in encouraging and implementing energy efficiency beyond that required by current Title 24 Standards.

EECAP 5.2* *Promote Water Efficiency Standards Exceeding SB X7-7.* In addition to SB X7-7, more actions are being studied or have been taken to exceed water efficiency standards. These efforts include education and outreach practices that could be combined with residential and commercial EECAP actions that emphasize the reuse of recycled/gray water and promote harvesting rainwater.

Hazards and Hazardous Materials

MM HAZ-1 Prior to issuance of a Certificate of Occupancy for the North Site (1330 E. Franklin Street), the applicant shall remove and properly decommission the vertical and lateral well network of the former vapor extraction system including abandonment of any groundwater monitoring wells and semi-permanent vapor probes on the property. This measure shall be implemented to the satisfaction of the City with input and regulatory oversight and written signoff by DTSC.

MM HAZ-2 Prior to issuance of a grading permit for the North Site (1330 E. Franklin Street), the applicant shall prepare and process a Soils Management Plan through the state Department of Toxic Substances Control (DTSC) for review and approval. Prior to issuance of a building permit, the applicant shall provide written confirmation from DTSC to the City that the Soil Management Plan has been implemented as approved.

MM HAZ-3 Prior to issuance of any demolition or building permits for South Site (1475 E. El Segundo Boulevard) or North Site (1330 E. Franklin Street), the applicant shall identify and effectively remediate any asbestos-containing materials (ACMs) associated with the onsite buildings. This remediation may be accomplished by either in-place encapsulation or removal as appropriate. The applicant shall retain a qualified asbestos contractor to conduct this work and shall provide the City with a final report within 45 days of completion of all remediation activities, including appropriate documentation of disposal of any onsite ACMs at an approved landfill. This measure shall be implemented to the satisfaction of the City Planning Department.

Transportation (VMT)

MM VMT-1 **Unbundle Parking Cost.** This measure implements workplace parking pricing and unbundles the cost of parking from the lease. The Project shall include parking in the access-controlled parking structure. The property owner shall include language in the lease agreement which provides reduced lease rates if parking is not required by the tenant. The developer shall implement a monthly cost for parking spaces by charging a parking fee per access card. The range of VMT reduction from this measure is between

2.6% and 13%. **Based on the calculations, a $50 per month/employee parking cost will result in a VMT reduction of 5.1%.**

MM VMT-2 **Parking Management Strategies.** Strategies to encourage efficiency in parking facilities and improve the quality of service to parking users results in reduction of VMT. This includes signage and directions, providing preferential carpool/vanpool parking spaces closer to the building entrance to and from the destination, etc. This encourages carpooling/vanpooling and also reduces the amount of time patrons drive around to find the best parking area to minimize walking. **The maximum reduction from this measure is 3%.**

MM VMT-3 **Mandatory Travel Behavior Change Program, Promotions & Marketing.** This involves the development of a travel behavior change program that targets individuals' attitudes, goals, and travel behaviors, educating participants on the impacts of their travel choices and the opportunities to alter their habits. The project shall provide a web site that allows employees to research other modes of transportation for commuting. If a website is planned for the development, links to Google Transit, and/or local bus operators should be provided on the website. If a website is not planned, QR Codes could be provided in the parking structure and the building lobbies to enable users an easy way to access information about transit routes. **The maximum reduction due to this measure is 1%.**

MM VMT-4 **Implement Commute Trip Reduction Marketing.** This involves the use of marketing and promotional tools to educate and inform travelers about site-specific transportation options and the effects of their travel choices with passive educational and promotional materials. The project shall implement marketing strategies to reduce commute trips. The project will implement marketing strategies to reduce commute trips. Information sharing and marketing are important components to successful commute trip reduction strategies. Implementing commute trip reduction strategies without a complementary marketing strategy will result in lower VMT reductions. Marketing strategies may include new employee orientation of trip reduction and alternative mode options, event promotions, and printed material. CAPCOA states that the range of reduction is between 0.8% to 4%, but states that in some literature, the VMT reduction has been as much as 15%, especially for urban areas. **For this project, a conservative reduction of 3% has been assumed.**

MM VMT-5 **Include Bike Parking in Excess of City Code.** This implements short and long-term bicycle parking to support safe and comfortable bicycle travel by providing parking facilities at destinations. Based on discussion with the applicant, bike parking in excess of City code shall be provided. The City's code requires a minimum of 4 spaces for non-residential buildings up to 15,000 square feet, plus a minimum of 5 percent of the required vehicle spaces for the portion above 15,000 square feet. The maximum number of bicycle parking required under City code is 25 spaces. For the project, the number of bicycle parking spaces required under code is 17 spaces, and

therefore, it is recommended that the project provide at least 18 spaces. **This results in a VMT reduction of 0.625%.**

MM VMT-6 **Include Secure Bike Parking and Showers.** This implements additional end-of-trip bicycle facilities to support safe and comfortable bicycle travel. Based on discussion with the applicant, each building shall include shower facilities and secure bike parking facilities shall be provided. **This results in a VMT reduction of 0.625%.**

Tribal Cultural Resources

MM-TCR-1 **Native American Monitoring.** Prior to the commencement of any ground disturbing activity at the Project site, the Project applicant shall retain a Native American Monitor approved by the Gabrieleño Band of Mission Indians-Kizh Nation and the Gabrielino Tongva Indians of California, the tribes that consulted on this Project pursuant to AB 52 and SB 18 (the "Tribes" or the "Consulting Tribes"). Copies of the executed contracts shall be submitted to the City of El Segundo Development Services Department prior to the issuance of any permit necessary to commence a ground-disturbing activity.

The Tribal monitors shall only be present on-site during the construction phases that involve ground-disturbing activities. Ground disturbing activities are defined by the Tribes as activities that may include, but are not limited to, pavement removal, potholing or auguring, grubbing, tree removals, boring, grading, excavation, drilling, and trenching, within the Project area. The Tribal Monitors shall complete daily monitoring logs that will provide descriptions of the day's grading and related earth-disturbing activities, including type and extent of construction activities, location of work, soil and any cultural materials identified, or other items potentially related to cultural resources. The on-site monitoring shall end when all ground-disturbing activities on the Project site are completed, or when the Tribal Representatives and Tribal Monitors have indicated that all upcoming ground-disturbing activities at the Project site have little to no potential for impacting Tribal Cultural Resources.

Upon discovery of any Tribal Cultural Resources, construction activities shall cease in the immediate vicinity of the find (not less than the surrounding 100 feet) until the find can be assessed. All Tribal Cultural Resources unearthed by Project activities shall be evaluated by the Consulting Tribes approved Tribal monitors. If the resources are Native American in origin, the Consulting Tribes shall retain it/them in the form and/or manner the Tribes deem appropriate, for educational, cultural and/or historic purposes. If human remains and/or grave goods are discovered or recognized at the Project site, all ground disturbance shall immediately cease, and the county coroner shall be notified per Public Resources Code Section 5097.98, and Health & Safety Code Section 7050.5. Human remains and grave/burial goods shall be treated alike per California Public Resources Code section 5097.98(d)(1) and (2). Work may continue on other parts of the Project site while evaluation

and, if necessary, mitigation takes place (CEQA Guidelines Section 15064.5[f]).

Smoky Hollow Specific Plan Amendment (SPA21-01) and Community Benefit Plans for the Standard Works Project at 1320-1330 E. Franklin Avenue (CBP19-03) and 1475 E. El Segundo Boulevard (CBP19-02)

Initial Study

1. Project Title

Smoky Hollow Specific Plan Amendment (SPA21-01) and Community Benefit Plans for the Standard Works Project at 1320-1330 E. Franklin Avenue (CBP19-03) and 1475 E. El Segundo Boulevard (CBP19-02)

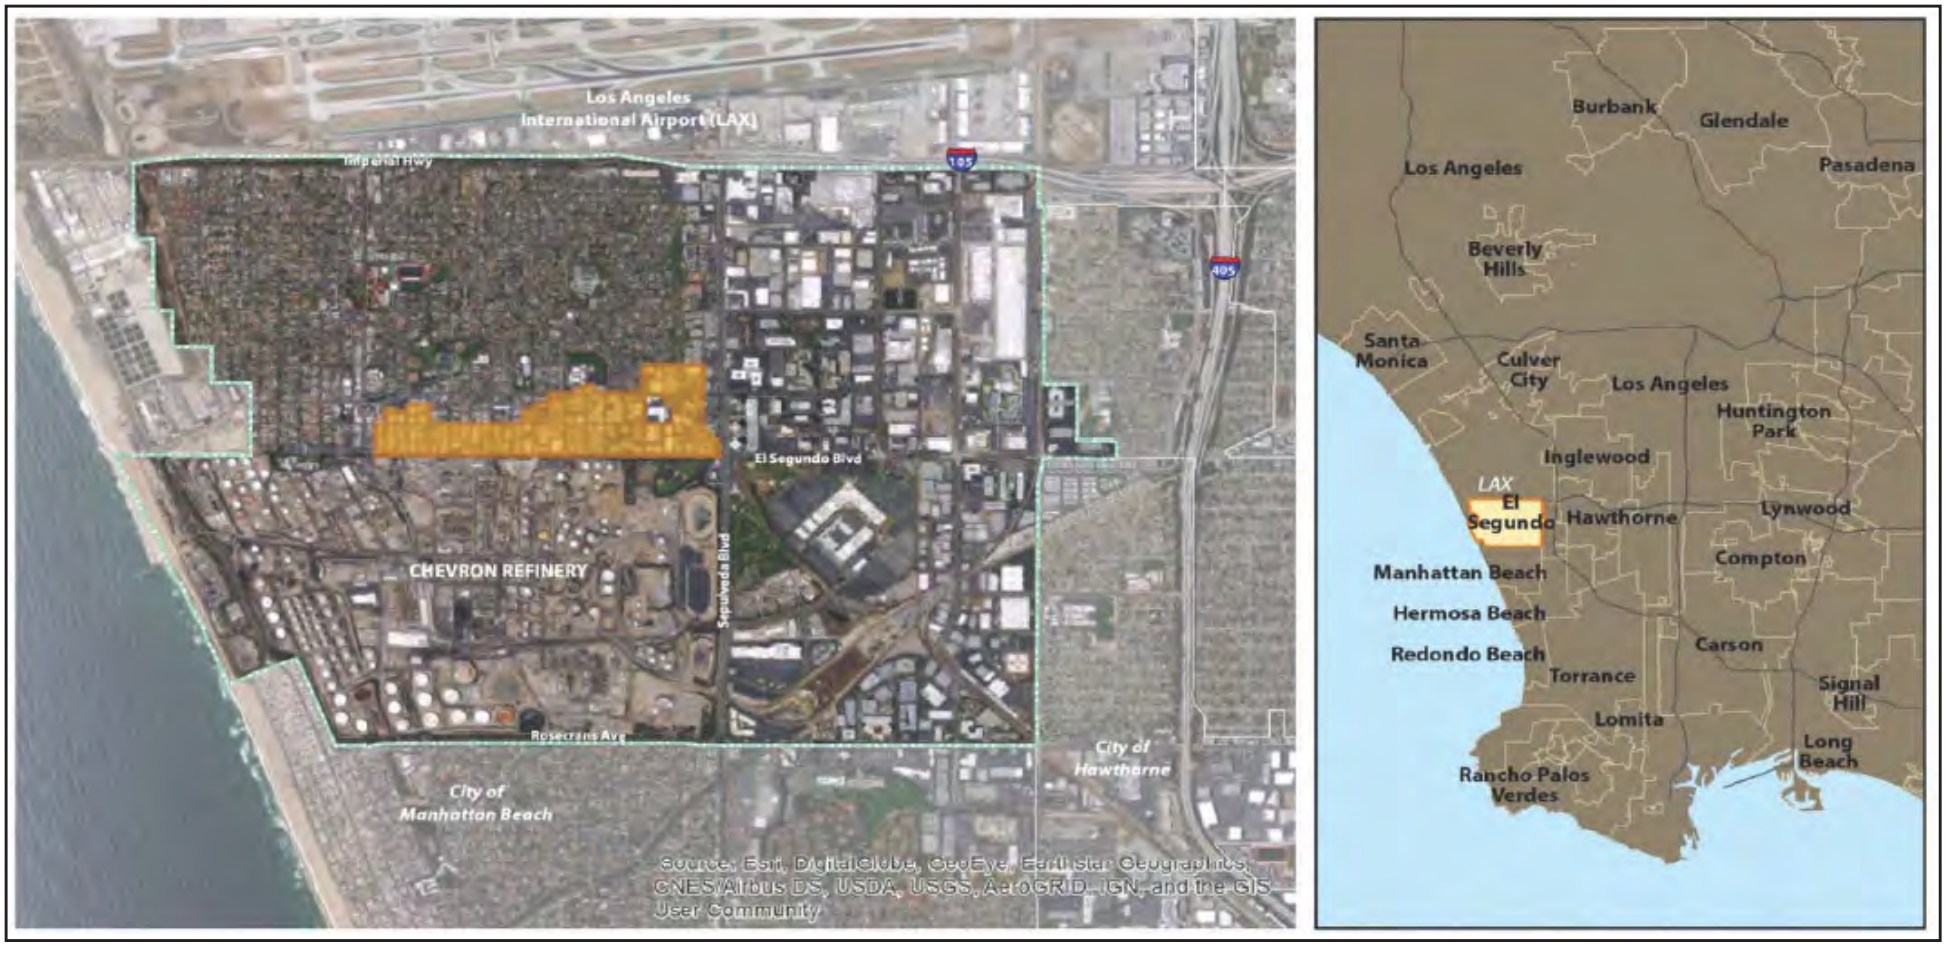
4. Project Location

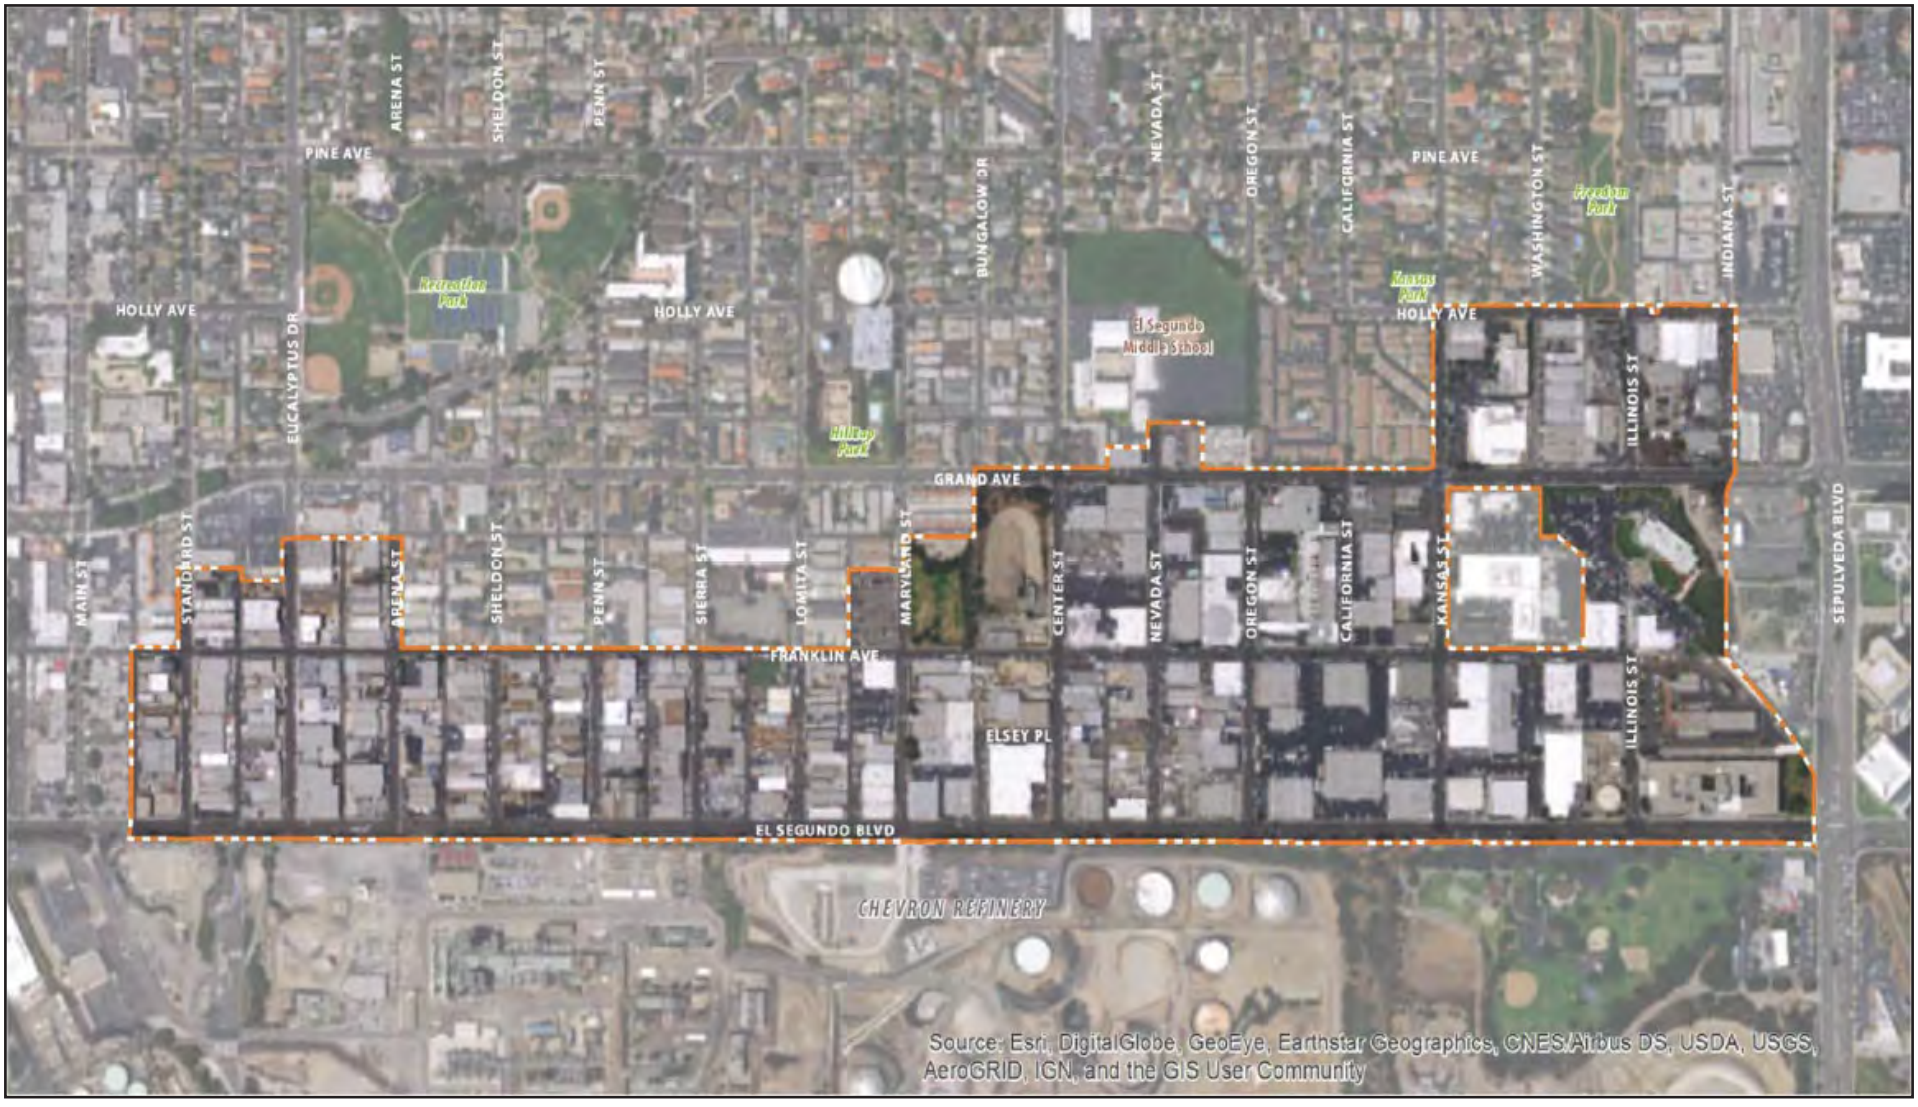
The Standard Works Project ("Project" or "proposed Project") is located within the Smoky Hollow Specific Plan ("SHSP" or "Specific Plan") area, which comprises 120 acres in the southern portion of the City of El Segundo ("City" or "El Segundo"). The SHSP area is situated east of the downtown El Segundo Main Street Corridor and supports a number of well-established commercial, office, and light industrial uses just north of the Chevron Oil refinery (see Exhibit 1, Regional Location).



The SHSP area is oriented east-west and is bounded by Indiana Street and Pacific Coast Highway to the east, downtown El Segundo to the west, the Chevron refinery and El Segundo Boulevard to the south, and commercial/industrial neighborhoods generally north of E. Franklin Avenue (see Exhibit 2, Smoky Hollow Specific Plan Area).

The Project, described in more detail in Section 7, consists of (1) the redevelopment of two sites within the SHSP area (the "Development Sites"), as shown in Exhibit 3, Development Sites Location Map; and, (2) a proposed amendment to the SHSP that would affect a Sub-area of the SHSP (the "Specific Plan Amendment Sub-area" or "SPA Sub-area"), as shown in Exhibit 5, SPA Sub-area. The SPA Sub-area is located in the Smoky Hollow East (SH-E) and Public Facility (PF) zoning districts, and is bounded by Center Street to the west, E. Franklin Avenue to the north, Pacific Coast Highway (PCH) [formerly Sepulveda Blvd.] to the east, and E. El Segundo Blvd. the south, as shown in Exhibit 4, SHSP Zoning Districts.

The Development Sites are in the SH-E zoning district and within the proposed SPA Sub-area.



The Development Sites are located north of East El Segundo Boulevard and south of East Franklin Avenue, between Oregon Street and Kansas Street in the City of El Segundo, California, as shown in Exhibit 6, Standard Works Development Project Sites. The Development Sites are rectangular-shaped parcels that are currently occupied by single-story commercial structures and associated asphalt paved parking.

The Development Sites comprise two specific development areas that are proximate to each other; the South Site (also known as Parcel A) and the North Site (also known as Parcel E) as shown in Exhibit 6, Standard Works Development Project Sites. The Development Sites and the SPA Sub-area, taken together, will be referred to as the "Project Site" in this document.

City of El Segundo, California

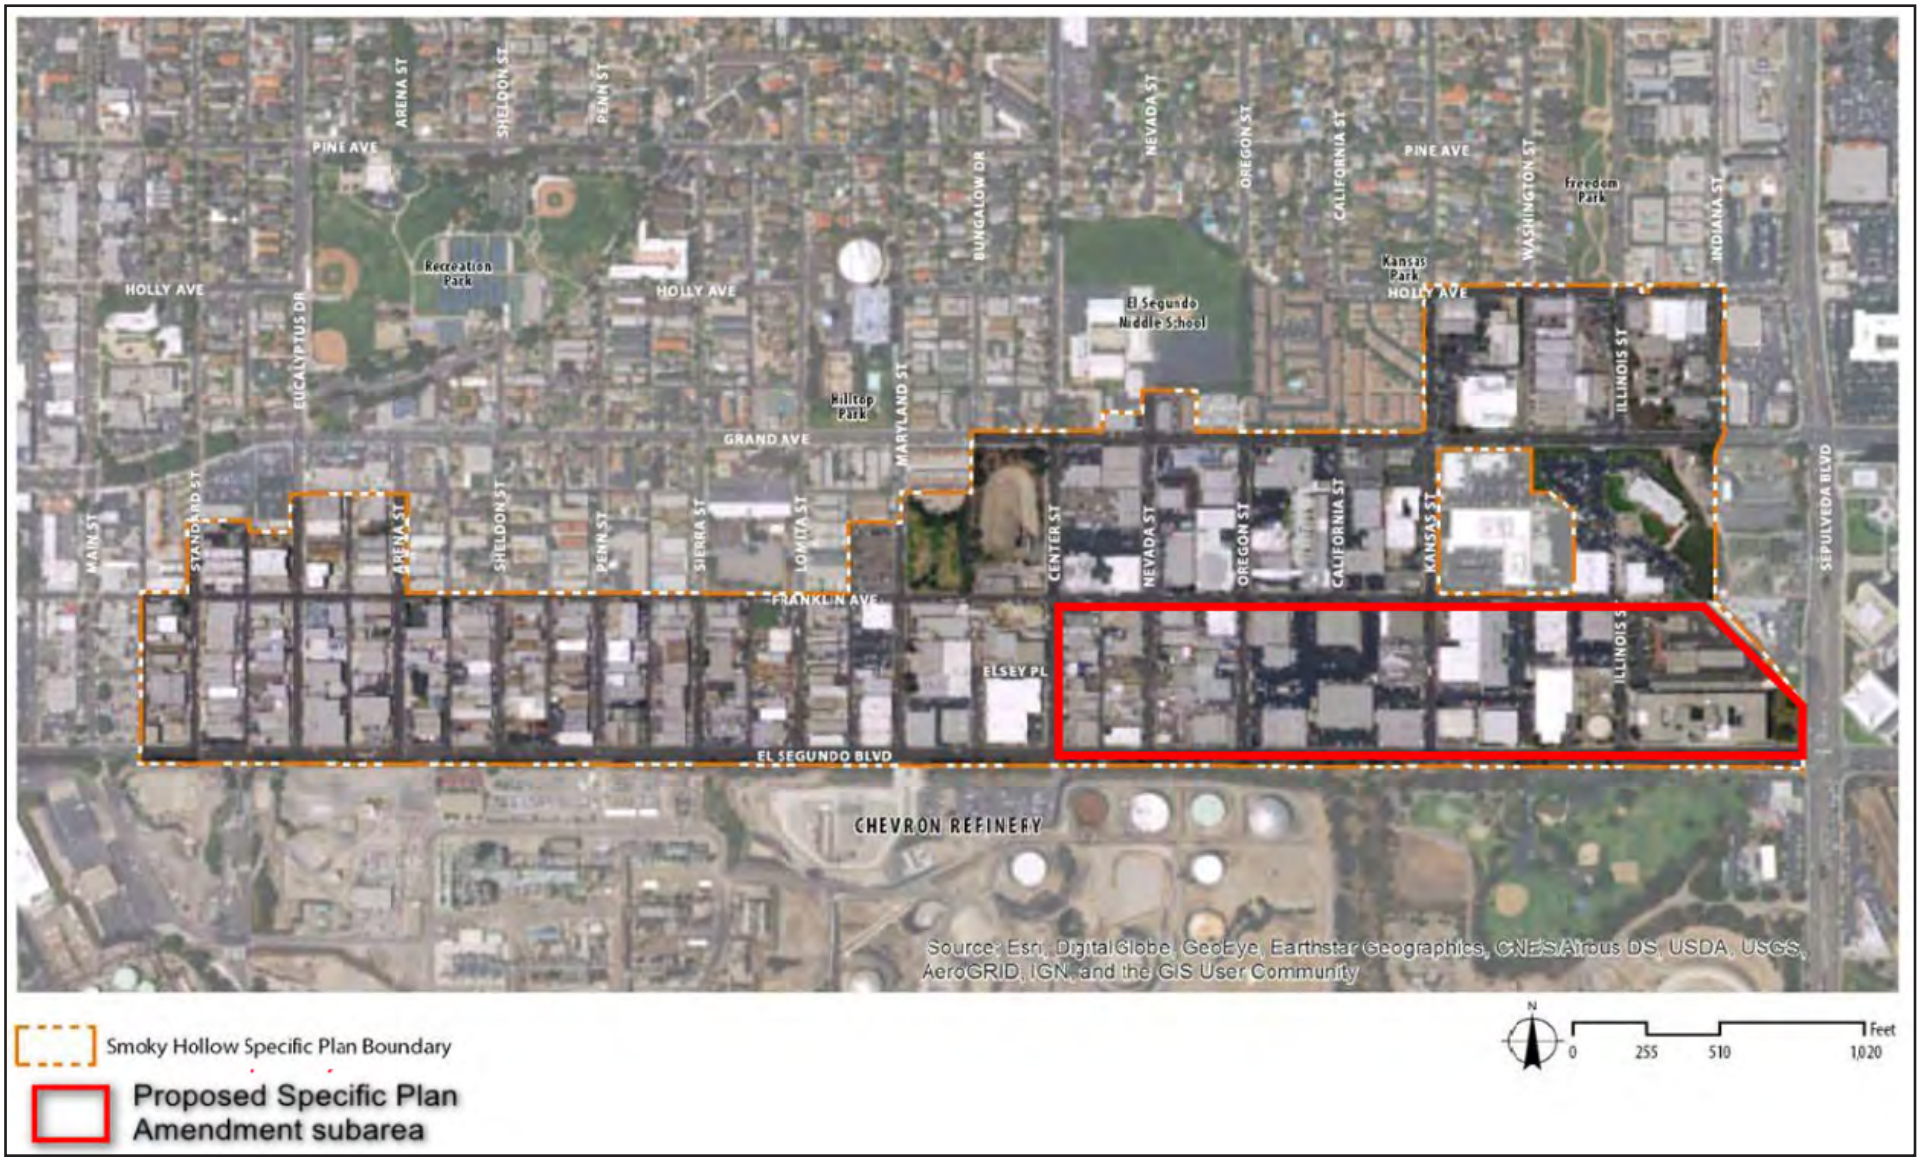
5. General Plan Designation and Zoning

The Project Site has a General Plan land use designation of Smoky Hollow Specific Plan (SHSP). The Development Sites are in the Smoky Hollow East (SH-E) zoning district and the SPA Sub-area includes property in both the SH-E and Public Facility (PF) zoning districts. The SH-E district provides a transitional land use area between higher-intensity office uses east of Sepulveda Boulevard and the smaller, single-parcel industrial and creative businesses of the western portion of the SHSP area. The SH-E zoning district provides for the development of incubator industrial, research, and technological uses; medium-sized light industrial and manufacturing; and creative office uses. The Public Facility (PF) Zoning District is for public land uses necessary to support community needs within the City, including libraries, community facilities, schools, and utilities. Exhibit 4, SHSP Zoning Districts, shows the various zoning districts within the Specific Plan and includes the boundary of the proposed Specific Plan Amendment Area. Exhibit 5, SPA Sub-area, shows the location of the SPA Sub-area covered by the proposed Specific Plan Amendment on an aerial photo base.

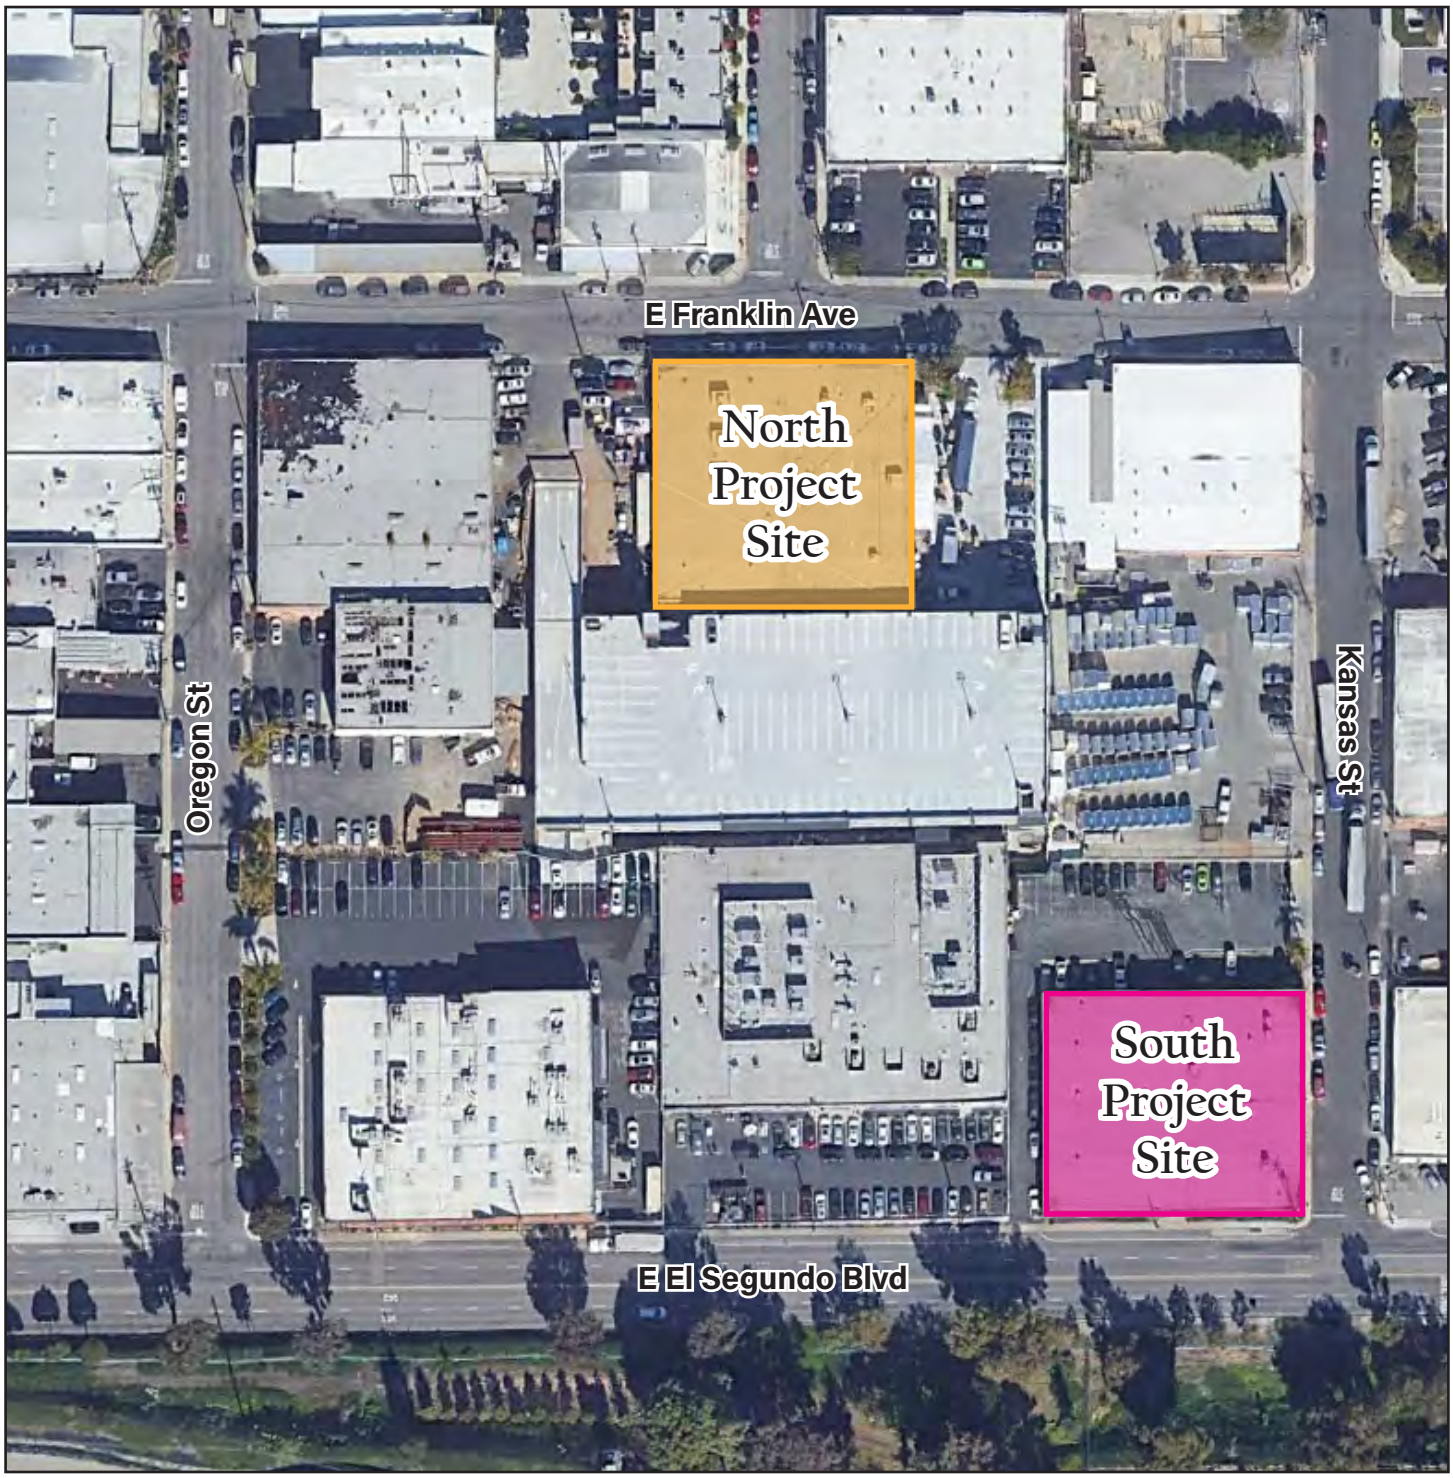
6. Project Setting

The Project Site is developed with various commercial and light industrial land uses. The Chevron Oil Refinery is located just south of the SPA Sub-area, the Los Angeles International Airport (LAX) is a mile to the north, and the Pacific Ocean is approximately two miles to the west. The Development Sites, which include the South Site and the North Site, are shown in Exhibit 6, Standard Works Development Project Sites, on an arial photo base.

South Site - 1475 E. El Segundo Blvd. The South Site is an industrial site originally constructed in the 1950's-60's. It includes a single-story brick building of approximately 19,311 square feet used for industrial/warehouse and office uses. The site and the entire surrounding area uses were originally designed as supporting uses for the oil and gas industry (Standard Oil). The entire lot outside of the building is paved with asphalt and used for surface parking. There is a slope across the property down from the northwest to the southeast.



North Site - 1320-1330 E. Franklin Ave. The North Site is an industrial site originally constructed in the 1950's-60's. It includes a single-story brick industrial building of approximately 19,493 square feet used for industrial/warehouse and office uses. The site and the entire surrounding sites were originally designed as supporting uses for the oil and gas industry (Standard Oil). The entire lot outside of the building is paved with asphalt and used for surface parking. There is a recently completed four-story 400-car garage just south of the building. The site is flat with no slope across the property.



7. Surrounding Land Uses

The Project Site is located in an urbanized and industrial environment situated on gently rolling hills. The Chevron Oil refinery, located just south of the SHSP area, is a large industrial facility with towers, reservoirs, an electrical substation, offices, and other facilities typical of a refinery. The area was developed predominantly in the 1950s when manufacturing and refinery-related businesses were established close to the Chevron refinery, the aerospace industry, and transportation opportunities provided by LAX. After a long period of inactivity, new developments and businesses have begun to move into the Specific Plan area. Demand for development has largely come from technology and creative firms, including architecture, real estate, furniture, manufacturing, and digital advertising

firms. Exhibit 7, Surrounding Land Uses, shows the location of the Development Sites on an aerial base and office and light industrial land uses in the surrounding area.

8. Project Description

The Smoky Hollow Specific Plan (SHSP) provides a planning framework and long-term strategy to guide public and private investment in the 120-acre Smoky Hollow area. The SHSP utilizes a variety of planning tools, including: development standards, design guidelines (including height limits, signage, landscaping, etc.), and other regulatory tools and metrics; public infrastructure improvements; and a comprehensive strategic set of policy, physical, and programmatic implementation actions. The SHSP emphasizes flexibility and creativity to enable new businesses to thrive, and it supports the long-term health and expansion of the many existing businesses. According to the SHSP, it "builds on the eclectic nature of Smoky Hollow, sets policy to create a dynamic public realm, and grounds the regulatory framework in economic reality". For additional information on specific plan requirements, see Section 9, *Regulatory Framework, Smoky Hollow Specific Plan*.

Smoky Hollow Specific Plan Amendment

The SHSP sets forth development standards, including a height standard, for development within the SHSP area. The SHSP also establishes a discretionary process for developing a Community Benefits Plan (CBP)[1] which allows developers to deviate from some of the otherwise applicable development standards in exchange for incorporating specified community benefits into a project proposal.

There are two types or tiers of Community Benefit Plans within the SHSP:

Tier I addresses a FAR deviation up to 1.5 and one or more deviations to standards (neither of which is height or FAR) that exceed the minor deviation threshold (10%) allowed by Section 4.5.1 Administrative Adjustment.

Tier II addresses a building height deviation up to 50 feet, FAR greater than 1.5, or three or more deviations to standards (one of which is height or FAR) that exceed the minor deviation threshold (10%) allowed by Section 4.5.1 Administrative Adjustment.

A CBP Tier 1 application must demonstrate: the proposed additional building height, intensity, or deviation from development standards would not be detrimental to the public health, safety or welfare, or materially injurious to properties or improvements in the vicinity; the proposed community benefit provides exemplary project and/or streetscape design; and the proposed community benefit directly implements objectives of the Specific Plan. A CBP Tier II application must demonstrate these Tier I items plus the value of the community benefits bears a relationship to the value generated by the project; and the community benefits proposed do not principally benefit the project or occupants of the project, but rather provide a district or area-wide benefit to the larger Smoky Hollow Plan area.

[1] Community benefits are based on the principle that in exchange for allowing incremental increases in development intensity, the community should, in return, receive certain benefits, including beneficial design features such as publicly accessible open space and other development requirements that serve the community's core needs.

Projects within the SHSP area are allowed to request deviations from current City development standards with the approval of a Tier I or Tier II CBP. The proposed Development Project (see below) would/seeks to amend the SHSP to allow for an increase in the maximum permissible height for CBP Tier II qualifying projects. Allowable heights would increase to 60 feet from the current Tier II maximum of 50 feet only within a specific sub-area of the SHSP Smoky Hollow East area. Approval of the SPA is required before the Development Sites can be permitted at a maximum height of 59.5 feet.

The Project is proposing an amendment to the text of the SHSP Tier II Community Benefit Plan to allow for taller buildings in a Sub-area of the SHSP. Pursuant to Section 4.7 of the SHSP, "…*modifications to the text or exhibits of this Specific Plan may be warranted in the future to accommodate unforeseen conditions or events. The City will process revisions pursuant to California Government Code Section 65450, et seq. All Specific Plan amendments shall be found consistent with the El Segundo General Plan in compliance with Government Code Section 65454. The Specific Plan may be amended as often as deemed necessary by the City Council in compliance with Government Code Section 65453*."

Tier II Community Benefits Plan

A proposed project that exceeds development standards under the SHSP is required to submit a Community Benefits Plan and is considered through the review process described in Section 4.5.2: Community Benefits Plan (CBP) for Tier I and Tier II applicable projects.

The proposed Specific Plan Amendment (SPA) would modify the Height Development Standards for CBP Tier II qualifying projects only in a designated Sub-area of the Smoky Hollow Specific Plan area shown in Exhibits 4 and 5. The Sub-area occupies 30 of the 120 acres of the SHSP. The SHSP currently allows CBP Tier II level qualifying projects to deviate from maximum building height development standards up to a maximum height of 50 feet (to the building parapet not including elevator equipment or architectural features). Section 2.3.2, Development Tiers and Community Benefits, of the SHSP states **"**The current criteria for CBP Tier II projects are as follows per Table 2-2: Building Intensity and Height Standards by Zoning District and Table 4-1: Community Benefit Plan of the SHSP:

A. Building height deviation up to 50 feet;
B. Floor Area Ratio (FAR) > 1.5;
C. Three or more deviations to standards (one of which is height or FAR) that exceed the minor deviation threshold (10%) allowed by Section 4.5.1 Administrative Adjustment."

The modification to Tier II CBP applicable projects in the designated Sub-area of the Smoky Hollow East (SH-E) zoning district would only be the following:

A. Building height deviation up to 50 feet <u>except for the designated Sub-area of the Smoky Hollow East (SH-E) zoning district which will have a height deviation of up to 60 feet</u>;
B. Floor Area Ratio (FAR) deviation > 1.5;
C. Three or more deviations to standards that exceed the minor deviation threshold (10%) allowed by Section 4.5.1 Administrative Adjustment.

Proposed Development Project

Project Characteristics

The proposed Project also involves the redevelopment of two adjacent sites, South Site, referred to as Parcel A in Project documentation and technical studies, and North Site, referred to as Parcel E in Project documentation and technical studies, as previously shown in Exhibit 6. The Project proposes an office development including construction of two office buildings and a coffee pavilion. Table 1 summarizes the development characteristics of the two Development Sites. The proposed site plans for the two Development Sites are shown in Exhibit 8 (South Site Development Site Plan) and Exhibit 9 (North Site Development Site Plan). Appendix A contains development information relative to the two Development Sites described below.

Caretaker Units. It should be noted the original submitted Standard Works Project included four caretaker units on the top floor of each of the two Project buildings. These units were subsequently removed but the technical studies that were prepared to support the CEQA analysis for the original Project included the caretaker units. Therefore, the technical studies for the revised current Project incrementally overestimate potential Project impacts and, therefore, represent a conservative analysis.

South Site

The proposed Project for the South Site would develop a 1.01-acre property located at 1475 E. El Segundo Boulevard within the SHSP. The existing 19,311 sf, one-story brick building, located at 1475 E. El Segundo Boulevard would be preserved with two new levels added above it. This results in a total floor area of 63,915 square feet for the South Site (FAR = 1.45) for R&D and office use. The proposed construction activities on the South Site would include:

- Construction of a 44,604-square foot addition to the existing building that would be structurally preserved in place for a total building floor area of 63,915 square feet.
- The three-story building would have a maximum height of 59 feet and 6 inches from average grade to the top of the building.

Exhibit Figure 8 illustrates the proposed site plan for the South Site.

North Site

The proposed Project for the North Site would develop a 1.07-acre portion of a 4.34-acre property located at 1320-1330 E. Franklin Avenue within the SHSP. The existing 19,493 square foot, one-story brick building located at 1330 E. Franklin Avenue would be preserved and two levels would be added above it. In addition, a new pavilion building would be constructed and would include a public café. This would result in a total of 65,061 square feet of floor area for the North site (FAR = 0.95), including 64,295 sf for R&D and office use and 766 sf for the pavilion building.

The proposed construction activities on the North Site would include:

- Construction of a two-story 44,802-square foot addition to the existing building that would be structurally preserved in place, for a total floor area of 65,061 square feet (including the two-story pavilion noted below). The three-story main building would have a maximum height of 59 feet and 6 inches, from average grade to the top of the building.

- Construction of a new two-story pavilion building to serve the neighborhood with a café and gathering point at the entry of a new public park accessible by the public. The new pavilion will have 766 square feet of floor area and will reach a maximum height of 23 feet and 8 inches.
- Construction of a new 5,000-square foot public outdoor park with park seating, picnic tables, shade trees and landscaping.

The proposed site plan for the North Site is provided in Exhibit 9.

Table 1 Standard Works Project Summary

Project Site	South	North	Total
Project Site (acres)	1.01	4.34	5.35

Architecture, Open Space, and Landscaping

The Project proposes a contemporary industrial aesthetic design using exposed steel, large steel 1950s mid-Century-like industrial windows, exposed sandblasted custom concrete masonry unit (CMU) block walls, large scale balconies and exterior decks, reused red brick and glulam wooden beams from the same building, and other period materials that will complement the character of the Smoky Hollow neighborhood. Preserving the existing 1950's red brick facade is an objective of the proposed design as well as a goal of the Smoky Hollow Specific Plan. The existing brick walls will be sandblasted to bring their color and vibrancy back to life and the new block walls will be custom fabricated onsite and also have a sandblasted finish to expose the aggregate. The Project is intended to have a "lively and pedestrian-oriented atmosphere which will contribute to the ongoing development in the Smoky Hollow area." Elevations of the Project are shown in Exhibit 10, Project Elevations.

The proposed Project will add 23,587 square feet of new landscaping on both Project Development Sites consisting of drought-tolerant and California native plant species (see Exhibit 7: Landscaping Plan). The Project will provide private open space for office tenants in rooftop patios - 11,731 square feet on South Site and 10,599 square feet on North Site. The Project will also provide approximately 5,000 square feet of public open space including an outdoor pocket park and pedestrian walkways with benches and trees to provide shade. Landscaping for the Project is shown in Exhibit 11, Landscaping Plans.

Site Access and Parking

South Site

This part of the Project will require a total of 165 parking spaces of which 42 on-grade parking spaces will be provided on-site. The remaining required 123 parking spaces will be provided in the recently completed parking garage (on the North Site) through a proposed Off-Site Parking Covenant (per El Segundo Municipal Code Section 15-15-3(H) and SHSP Development Standards Table 2-2(H).)

North Site

This part of the Project will require a total of 168 parking spaces all of which will be provided onsite. It will include 38 on-grade parking spaces and the remaining 130 spaces will be provided in the recently completed parking garage structure on this parcel.

Utilities and Infrastructure Improvements

The Project is located in a portion of the City's developed area where utilities and public infrastructure are already in place. The applicant is proposing to underground all power lines on E. Franklin Ave for the North Site and on Kansas Street for the South Site. The Project design includes low-impact development (LID) and best management practices (BMP) features for stormwater retention on the site, including groundwater infiltration basins. As with the existing development on the Development Sites, the proposed Project would utilize all City public services such as police, fire, and other public institutions.

Standard Works Development Project
City of El Segundo, California

Sustainability Features

1. Level 1 Red Brick Walls – The design reuses the existing red brick exterior walls and is saving considerable material and all of the environmental costs associated with demolishing rather than rebuilding.

2. Level 2 & 3 Block Walls – The design and detailing of the addition to the existing building is not typical. The proposed exterior façade is simply concrete masonry blocks with no interior or exterior finishes – a single building material that acts as interior finish, exterior finish, waterproofing, vapor barrier and structural system all in itself, and is installed by a single trade/person who is already at the jobsite. In comparison, a typical building façade assembly may require multiple layers of materials and trades including paint, drywall, drywall mudding and taping, framing/nailing & insulation, exterior sheathing, waterproofing, the final façade material and associated attachments.

   NOTE: These two Project features will eliminate hundreds of thousands of pounds of waste materials associated with typical building façade assemblies and all the greenhouse gas emissions associated with the production and installation of the walls.

   Exposed Structural Steel - Additionally, in a "typically" designed building, the structure (the actual columns and beams that hold up the building) is typically hidden from view or covered up with even more material. The proposed design exposes the columns and beams and features them as design elements, which uses less materials and results in less pollution.

3. Independent Heating, Ventilating, and Air Conditioning (HVAC) Systems – each suite within the building is designed with its own independent HVAC system, allowing for efficient heating and cooling.

Project Construction

Construction of the North and South sites are anticipated to commence in January/February 2022 and January 2023, respectively. Construction activities on the North site would last approximately 14.5 months, and construction activities on the South site would last approximately 17 months.

Community Benefits Plan

The design of the building proposed on the North site exceeds the current base standard for building height in the SHSP, and the design of the building proposed on the South site exceeds the current base standards for building height and allowable Gross Floor Area Ratio (FAR). Projects within the SHSP area are allowed to request deviations from current City development standards with the approval of a Tier I or Tier II Community Benefits Plan. The proposed project would amend the SHSP to allow for an increase in the maximum permissible height for CBP Tier II qualifying projects. Allowable heights would increase to 60 feet from the current Tier II maximum of 50 feet. Approval of the SPA is required before the Development Sites can be permitted at a maximum height of 59.5 feet. The Project requests the following deviations from the current development standards which requires a Tier II Community Benefits Plan:

Additional Building Height. Proposed building heights of up to 59.5 feet on both Project sites would exceed the SHSP Base Standard height of 35 feet.

Additional Building FAR. Proposed 1.5 floor area ratio (FAR) (an additional 21,983 square feet) on the South site exceeds the SHSP Base Standard FAR of 1.0.

In exchange for the above deviations allowed by Tier II CBP, the applicant is proposing the following community benefits and improvements, at the applicant's expense, pursuant to Smoky Hollow Specific Plan Section 4.5.2. The following Community Benefits are based on objectives and suggestions directly identified as development standards in the SHSP with the objective of benefiting the Smoky Hollow Specific Plan area. Additionally, the Specific Plan contains 32 design guidelines in five categories: building character, open space, landscaping, connectivity, signage and public art and Public Realm. Compliance with at least 17 of the guidelines is required to be considered as an exemplary project; the proposed Project incorporates 29 of the 32 design guidelines, far exceeding the minimum threshold for exemplary projects. A summary of the main the community benefits that are proposed for the Project include the following:

Underground Utilities. The Project proposes to underground all electric power and low voltage phone and data lines that currently serve the buildings on East Franklin Ave and Kansas Street.

Public Seating. Proposed architectural seating will be provided along the sidewalk area within the public right-of-way (ROW) facing E. Franklin Avenue and Kansas Street.

Coffee Pavilion/Public Café. The proposed Project would also include a 276-square foot public café (Coffee Pavilion) and associated outdoor dining area immediately adjacent to the E Franklin sidewalk, in order to active the street and provide a convenient break location for local neighbors. The café is part of the proposed 5,000-square foot public park that will be a landscaped focal point of the Project and of the surrounding area as well.

Architecture that enhances building character. Explained above under "Architecture, Open Space, and Landscaping" and "Resiliency Features".

Open space that facilitates gathering. Explained above under "Architecture, Open Space, and Landscaping" and "Resiliency Features".

Landscaping and environmental design. Explained above under "Architecture, Open Space, and Landscaping" and "Resiliency Features".

In addition, the Development Project will provide the following specific community benefits as summarized from the CBP Tier II application scoring sheets:

Group A – Enhance Building Character

A1. *Build on the quality industrial character:* Project has exposed steel beams and large industrial-style windows.

A2. *Convey a sense of the old and new:* Project will preserve ground floor red brick exterior while adding two setback floors of a modern industrial building

A3. *Build upon existing context:* Project stays within existing footprint but adds 2 floors with roof decks.

A4. *Conserve and retain the character-defining features:* Project preserves ground floor red brick exterior and three historical building entrances.

A5. *Encourage additions that complement the character-defining features:* Project has large industrial windows with exposed steel beams characteristic of mid-century architecture but stacked blond block with exposed aggregate and stain coloring to enhance the industrial appearance.

A6. *Incorporate small, medium, and large scales:* Project includes several interlocking design elements of different scales for visual interest including large to small "nested" windows and balconies to break up the building facade into different sized elements.

A7. *Enhance design at the pedestrian level:* Project will have extensive landscaping along all street frontages with pedestrian scale seating.

A8. *Specify 360^{o} architecture:* Project will have enhanced architecture on all four sides of each building.

A9. *Enhance entry expression:* Project has new landscaping and a double high entry portal at the southwest corner.

A10. *Encourage the use of roll-up doors and sliding walls at street frontage:* Roll-up doors are used in several main entrance locations.

A11. *Orient secondary entries to alleys:* Some secondary access points are oriented toward local alleys.

A12. *Incorporate different materials, colors, and textures:* Project includes a variety of materials, colors, and textures, including red brick, medium grey block, black steel, corten, architectural board formed concrete, and glass.

Group B – Facilitate Gathering

B1. *Form an active street wall:* Project has a new two-story entry portal with enhanced landscaping along street frontages and distinctive entrances.

B3. *Develop outdoor gathering spaces:* Project will have a pocket park with outdoor seating.

B5. *Provide ease of access:* The Project will have multiple pedestrian and vehicular access points and ground floor tenants will have direct access to adjacent streets.

B6. *Enhance surface parking:* Project will have shade coverings for surface parking lots plus stacked parking using current technology.

B7. *Use enduring quality paving materials:* Project will have special paving materials to demarcate pedestrian walkways with integral color and crystal aggregate.

B8. *Provide street furniture:* Project will provide street furniture for seating at the pocket park.

B9. *Use exterior lighting to accentuate safety and design:* Project will provide period lighting on all sides of buildings for pedestrian safety.

Group C – Incorporate Landscaping and Environmental Design

C1. *Design layered and lush landscaping:* Project will have extensive landscaping per landscaping plan.

C2. *Select drought-tolerant and native plants:* Project landscape plan has drought-tolerant and native plants throughout.

C3. *Utilize planters and pots to provide greenery:* Project has planters and pots on Level 2 and 3 decks and balconies and on the rooftop.

C4. *Improve landscaping in parking areas:* Parking areas include landscaping on at least

two sides (those facing the buildings).

C5. *Use fences and walls as an extension of the architecture:* Project includes monument signs for both buildings that compliment and extend the building architecture.

C6. *Use natural light:* Project has large windows for 2-story spaces with mezzanines to allow natural light in all interior spaces.

Group D – Encourage Connectivity

D1. *Install bike facilities:* Two bike racks will be installed at each Project building.

Group E – Signage, Way Finding, and Public Art

E1. *Design signs as an integral component:* Project includes integrated tenant signage.

E2. *Incorporate way-finding through integral design:* Project has architecturally integrated signage for both pedestrians and vehicles.

E3. *Encourage public art:* Project will have a large scale art wall on the west side of the north building.

Public Realm

PR1. *Underground utilities:* The incoming power and low voltage cables for data and phone will be consolidated into one location and undergrounded.

9. Regulatory Setting

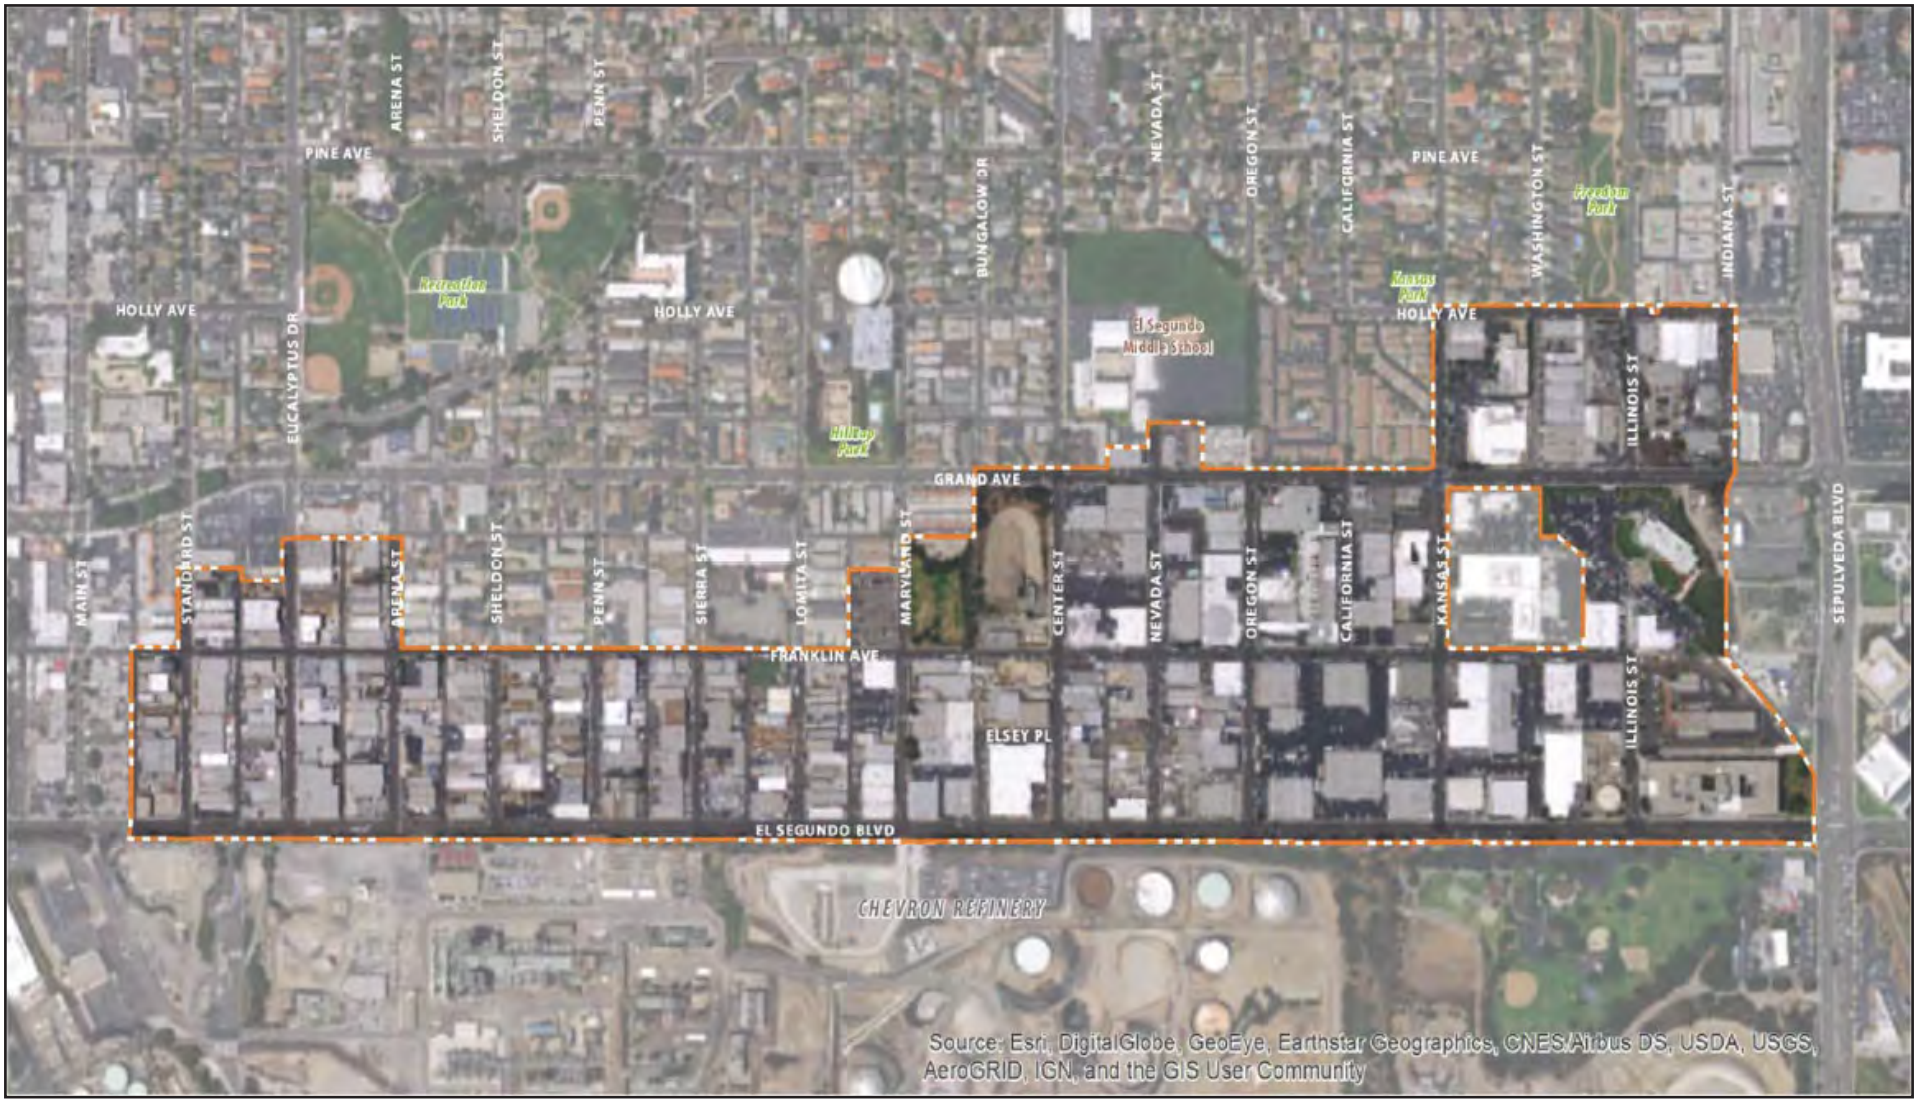
The following presents a discussion of other plans and documents that affect the Project Site.

Smoky Hollow Specific Plan

The Smoky Hollow Specific Plan (SHSP) covers approximately 0.2 square mile (120 acres) with a variety of lot sizes located on small streets. The land use pattern and character of the SHSP area are largely shaped by the original industrial uses that developed during the mid-20th century to serve the Los Angeles International Airport, aerospace/defense, and nearby refinery industries. The location of the SHSP is shown in Exhibit 12.

The SHSP is a “specific plan” under State planning law and is one of several policy and regulatory tools used by the City of El Segundo to implement the City’s General Plan. The SHSP implements the General Plan through the establishment of more detailed policies, regulations, and actions specifically focused on the SHSP area, and generally provides for the reuse and focused redevelopment of properties within the 120-acre plan area, at higher intensities. It also allows for a greater proportion of land uses related to office and research and development compared to the existing light industrial uses. The SHSP also provides for improvements to the circulation system, increased on street parking, streetscape improvements, and enhanced development standards and design guidelines (City of El Segundo 2018a).

SHSP Development and Growth



When it was approved in March 2018, the SHSP contained 329 parcels encompassing 94.3 net acres (not including street rights-of way) and was already developed with approximately 2.46 million square feet of building area mainly for industrial and office land uses (see Table 1: Smoky Hollow Specific Plan Land Uses).

The SHSP estimated a development capacity of up to 2.97 million square feet of office, industrial, and public facility building space through 2040. This represents a net increase of 517,094 square feet of total building area for residential, office, and commercial uses, as shown in Table 1 below. Table 1 indicates the SHSP will result in a net increase of 1,213,751 additional square feet of office space by 2040, with a total increase in building area of 2,973,910 square feet compared to an existing (2018) 2,456,816 square feet. At present there is still approximately 30 acres of developable land left within the SHSP although the proposed Project represents redevelopment of an existing light industrial site.

Table 2: Smoky Hollow Specific Plan Land Uses

Land Use Category	Existing Overall Intensity	2040 Overall Intensity	Difference
Office	330,607	1,544,358	+1,213,751
Research & Development	110,202	514,786	+404,584
Light Industrial	1,901,602	777,900	-1,123,702
Commercial	84,445	106,906	+22,461
Public Facilities	29,060	29,060	0
Parking	900	900	0
Residential[1]	9 units	15 units	+6 units
Total Building Area	**2,456,816**	**2,973,910**	**+517,094**

Smoky Hollow Specific Plan Boundary

Exhibit 12 SHSP Planning Area Map

Standard Works Development Project
City of El Segundo, California

Smoky Hollow Specific Plan Environmental Impact Report

The Final Environmental Impact Report for the Smoky Hollow Specific Plan Update, State Clearinghouse No. 2017031071 (EIR, SHSP EIR) was certified by the City in October 2018 in accordance with Sections 15086, 15088, 15089 and 15132 of the California Environmental Quality Act (CEQA) Guidelines. The SHSP EIR was a "Program EIR" as described in Section 15168 of the CEQA Guidelines, which is an EIR that is prepared on a series of actions that can be characterized as one large project and are related either: (1) geographically, (2) as logical parts in the chain of contemplated actions, (3) in connection with issuance of rules, regulations, plans, or other general criteria to govern the conduct of a continuing program, or (4) as individual activities carried out under the same authorizing statutory or regulatory authority and having generally similar environmental effects which can be mitigated in similar ways. Pursuant to CEQA Guidelines Section 15168(c), later activities in the program must be examined in the light of the Program EIR to determine whether an additional environmental document must be prepared. If a later activity would have effects that were not examined in the program EIR, a new Initial Study would need to be prepared leading to either an EIR or a Negative Declaration. That later analysis may tier from the program EIR as provided in Section 15152 of the CEQA Guidelines. In accordance with Sections 15168(c) and 15152 of the CEQA Guidelines, the analysis contained in this Initial Study tiers from the SHSP EIR.

The SHSP EIR adopted a Mitigation Measure Monitoring and Reporting Program to mitigate any impacts from the implementation of the SHSP (City of El Segundo 2018b). The EIR concluded that there were potential impacts on Biological Resources, Cultural Resources, and Transportation that would require mitigation in connection with future development projects. The mitigation measures adopted for the SHSP that would apply to the Project are listed below in Table 3 and at the end of this document along with all Project-specific measures recommended as part of the environmental evaluation of the Project.

Table 3: Smoky Hollow Specific Plan Mitigation Measures

Identified Impact	Mitigation Measure
Biological Resources	
Potential impacts on special-status species, nesting birds, and migratory birds.	**BIO MM 7-1.** To avoid impacts to nesting birds, construction activities and construction noise should occur outside the avian nesting season (prior to February 1 or after September 1). If construction and construction noise occurs within the avian nesting season (during the period from February 1 to September 1), areas within 100 feet of a development site shall be thoroughly surveyed for the presence of nests by a qualified biologist no more than five days before commencement of any vegetation removal. If it is determined that the Project Site is occupied by nesting birds covered under the Migratory Bird Treaty Act, mitigation measure 7-2 shall apply.
Potential impacts on special-status species, nesting birds, and migratory birds.	**BIO MM 7-2.** If pre-construction nesting bird surveys result in the location of active nests, no grading, vegetation removal, or heavy equipment activity shall take place within an appropriate setback from occupied nests as determined by a qualified biologist. Protective measures (e.g., established setbacks) shall be required to ensure compliance with the Migratory Bird Treaty Act and California Fish and Game Code requirements. The qualified biologist shall serve as a construction monitor during those periods when construction activities occur near active

Identified Impact	Mitigation Measure
	nest areas to ensure that no inadvertent impacts occur. A report of the findings, prepared by a qualified biologist, shall be submitted to the CDFW prior to construction-related activities that have the potential to disturb any active nests during the nesting season.
Cultural Resources, Paleontological Resources, and Tribal Cultural Resources	
Adverse change in the significance of a historic resource	**CULT MM 8-1.** Prior to issuing any permit for demolition or redevelopment of a building in the Specific Plan area that is 50 years old or greater, an assessment of the building must take place by a person who meets the *Secretary of the Interior's Professional Qualifications and Standards* for history, architectural history, architecture, or historic architecture to assess if it meets the criteria for inclusion on a historic register. If a building meets the criteria for inclusion on the California or National registers, the City will have to prepare and file a completed DPR 523 form with the South Central Coastal Information Center and the California Office of Historic Preservation, and the building will be treated as a historic resource under CEQA, subject to all regulations that relate to the treatment of historic resources.
Adverse change in the significance of an archaeological, paleontological or tribal cultural resource	**CULT MM 8-2.** Prior to the commencement of grading or demolition of subsurface structures, a professional archaeologist who meets U.S. Secretary of the Interior's Professional Qualifications and Standards, shall conduct a brief archaeological and paleontological informational session for construction personnel. The training session may consist of an in-person meeting or a written handout describing: (1) how to identify archaeological and paleontological resources that may be encountered during earth-moving activities and (2) the procedures to be followed in such an event, including contact information for the appropriate entities if archaeological or paleontological resources are discovered.
Adverse change in the significance of an archaeological, paleontological or tribal cultural resource	**CULT MM 8-3.** In the event that archaeological or paleontological resources are unearthed during ground-disturbing activities, the ground- disturbing activities shall be halted or diverted away from the vicinity of the find so that the find can be evaluated. A buffer area of at least 50 feet shall be established around the find, where construction activities will not be allowed to continue until a qualified archaeologist or paleontologist has examined the newly discovered artifact(s) and has evaluated the area of the find. Work shall be allowed to continue outside the buffer area. If the archaeologist identifies the find as a tribal cultural resource or suspects it to be a tribal cultural resource, the City will contact the Native American Heritage Commission (NAHC) to report the discovery, and will contact local Native American tribal representatives as directed by the NAHC. Should the newly discovered artifact(s) be determined to be a tribal cultural resource, Native American construction monitoring will be initiated. The City shall coordinate with the archaeologist and tribal representative(s) to develop an appropriate treatment plan.
Greenhouse Gas Emissions	
Conflict with an applicable plan, policy, or regulation adopted for	**EECAP 4-1.** *Encourage or Require Energy Efficiency Standards Exceeding Title 24.* This measure will develop City

Identified Impact	Mitigation Measure
the purpose of reducing the emissions of greenhouse gases	staff to be resources in encouraging and implementing energy efficiency beyond that required by current Title 24 Standards.
Conflict with an applicable plan, policy, or regulation adopted for the purpose of reducing the emissions of greenhouse gases	**EECAP 5-2.** *Promote Water Efficiency Standards Exceeding SB X7-7.* In addition to SB X7-7, more actions are being studied or have been taken to exceed water efficiency standards. These efforts include education and outreach practices that could be combined with residential and commercial EECAP actions that emphasize the reuse of recycled/gray water and promote harvesting rainwater. Approximately 1,873 kWh can be saved for every acre foot (AF) of water use replaced by recycled water.

Source: City of El Segundo 2018b

[1] Transportation MMs from the SHSP were deleted because they were based on Level of Service (LOS) and CEQA documents can no longer recommend LOS mitigation, only mitigation for vehicle miles traveled (VMT).

10. Required Approvals

The City of El Segundo is the Lead Agency for the proposed Project. As the Lead Agency, the City of El Segundo City Council has the ultimate authority to approve or deny the Project. The proposed Project would require the following approvals:

- Specific Plan Amendment (SPA) No. 21-01 to modify the Height development standards for CBP Tier II qualifying projects in a Sub-area of the Smoky Hollow Specific Plan area.
- Tier II Community Benefit Plans (CBP No. 19-02 for 1475 E. El Segundo Blvd; CBP 19-03 for 1320-1330 E. Franklin Ave) to permit deviations from height and floor area ratio (FAR) from base development standards per the Specific Plan.
- Site Plan Review to ensure that the Project is consistent with the goals, policies and objectives of the general plan, the Specific Plan, and the El Segundo Municipal Code (ESMC).
- Master Sign Program (MSP) No. 21-01 for Standard Work campus.

11. Native American Consultation

One tribe has requested to be notified of projects in the City of El Segundo—the Gabrieleño Band of Mission Indians – Kizh Nation. The City of El Segundo initiated consultation with the Gabrieleño Band of Mission Indians – Kizh Nation in June 2021 pursuant to Public Resources Code Section 21080.3 (also known as Assembly Bill [AB] 52) for this Project. Please refer to the Explanation of Checklist Responses for Item **18**. *Tribal Cultural Resources*, for information regarding notification of and consultation with the Gabrieleño Band of Mission Indians – Kizh Nation.

Since the Project includes a Specific Plan Amendment, the Project must comply with Senate Bill (SB) 18, Government Codes Sections 65352.3 and 65352.4. SB 18 requires local governments to consult with California Native American tribes identified by the Native American Heritage Commission for the purpose of avoiding, protecting, and/or mitigating impacts to cultural places when creating or amending General Plans, Specific Plans and Community Plans. SB 18 letters were sent to representatives from the Gabrieleño Band of Mission Indians – Kizh Nation, Gabrielino /Tongva Nation, Gabrielino Tongva Indians of California Tribal Council, Gabrielino-Tongva Tribe, Santa Rosa Band of Cahuilla Indians,

and Soboba Band of Luiseno Indians on July 28, 2021. The tribes have 90 days to request consultation from receipt of the notification. The City has yet to receive a request to consult under SB 18 from any tribe.

Environmental Factors Potentially Affected

This Project would potentially affect the environmental factors checked below, involving at least one impact that is "Potentially Significant" or "Less than Significant with Mitigation Incorporated" as indicated by the checklist on the following pages.

☐	Aesthetics	☐	Agriculture and Forestry Resources	☐	Air Quality
■	Biological Resources	■	Cultural Resources	☐	Energy
■	Geology/Soils	■	Greenhouse Gas Emissions	■	Hazards & Hazardous Materials
☐	Hydrology/Water Quality	☐	Land Use/Planning	☐	Mineral Resources
☐	Noise	☐	Population/Housing	☐	Public Services
☐	Recreation	■	Transportation	■	Tribal Cultural Resources
☐	Utilities/Service Systems	☐	Wildfire	■	Mandatory Findings of Significance

Determination

Based on this initial evaluation:

☐ I find that the proposed project COULD NOT have a significant effect on the environment, and a NEGATIVE DECLARATION will be prepared.

■ I find that although the proposed project could have a significant effect on the environment, there will not be a significant effect in this case because revisions to the project have been made by or agreed to by the project proponent. A MITIGATED NEGATIVE DECLARATION will be prepared.

☐ I find that the proposed project MAY have a significant effect on the environment, and an ENVIRONMENTAL IMPACT REPORT is required.

☐ I find that the proposed project MAY have a "potentially significant impact" or "less than significant with mitigation incorporated" impact on the environment, but at least one effect (1) has been adequately analyzed in an earlier document pursuant to applicable legal standards, and (2) has been addressed by mitigation measures based on the earlier analysis as described on attached sheets. A SUBSEQUENT ENVIRONMENTAL IMPACT REPORT is required, but it must analyze only the effects that remain to be addressed.

☐ I find that although the proposed project could have a significant effect on the environment, because all potential significant effects (a) have been analyzed adequately in an earlier EIR or NEGATIVE DECLARATION pursuant to applicable

standards, and (b) have been avoided or mitigated pursuant to that earlier EIR or NEGATIVE DECLARATION, including revisions or mitigation measures that are imposed upon the proposed project, nothing further is required.

Environmental Checklist

1 Aesthetics

	Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less than Significant Impact	No Impact
Except as provided in Public Resources Code Section 21099, would the project:				
a. Have a substantial adverse effect on a scenic vista?	☐	☐	☐	■
b. Substantially damage scenic resources, including but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?	☐	☐	☐	■
c. In non-urbanized areas, substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from a publicly accessible vantage point). If the project is in an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality?	☐	☐	■	☐
d. Create a new source of substantial light or glare that would adversely affect daytime or nighttime views in the area?	☐	☐	■	☐

The proposed Project includes the SPA and two Development Sites both of which are within the SPA Sub-area. The SPA Sub-area is close to the Pacific Ocean but in a highly urbanized area, and views are mainly of various urban land uses. Views of the ocean to the west or landforms to the southeast are visible from elevated positions (i.e., taller buildings). There are no scenic resources or highways in or adjacent to either the development or SPA portions of the Project area but there are substantial light and glare from adjacent urban uses.

a. Would the project have a substantial adverse effect on a scenic vista?

b. Would the project substantially damage scenic resources, including but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?

(a-b) A scenic vista is generally considered as a publicly accessible, prominent vantage point that provides expansive views of highly valued landscapes or prominent visual elements. As described in the General Plan, the City is located within the urbanized Los Angeles area, and is considered part of the Los Angeles International Airport (LAX)/South Bay subregion at the southwestern edge of the Los Angeles coastal basin. The Project site is not located within a designated state scenic highway and not visible from any designated scenic highways.

The SPA proposes an increase in maximum building height from 50 to 60 feet, within a small Sub-area of the SHSP. The SHSP EIR concluded the SHSP area had no scenic vistas, contained no scenic resources and was not within or visible from a scenic highway so the proposed SPA would have no impact on a scenic vista nor will it damage scenic resources or affect a scenic highway and no programmatic mitigation is required. Further, due to the urbanized character of the surrounding area, approval of the SPA would not degrade the visual character of the site and its surroundings. The SHSP EIR concluded the SHSP would actually improve the visual quality and character of the area by removing dilapidated buildings and older uses. Therefore, visual impacts of the SPA would be less than significant and no programmatic mitigation is required.

The Development Sites are located approximately 1.8 miles east of the coastline but scenic views of the Pacific Ocean are not available from the Project area due to existing development. The closest scenic vista is of the elevated Palos Verdes Estates approximately 8.3 miles southeast of the Development Sites. The Project is within the SHSP which has no designated scenic vistas, so development of the Project will have no impact on a scenic vista, and no mitigation is required.

The Project will develop a small Sub-area of the SHSP which is in an urban area and has no scenic resources. The closest officially designated state scenic highway is State Route 27 located approximately 13.7 miles northwest of the Development Sites. The closest roadway eligible for designation as a state scenic highway is State Route 1 located approximately 6.1 miles northwest of the Development Sites (Caltrans 2021). The Development Sites are not visible from these highways so the Project will not damage scenic resources or affect a scenic highway and no mitigation is required.

NO IMPACT

c. *Would the project, in non-urbanized areas, substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from a publicly accessible vantage point). If the project is in an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality?*

d. *Would the project create a new source of substantial light or glare that would adversely affect daytime or nighttime views in the area?*

(c-d) The Project site is located within an urban area with a variety of urban land uses such as commercial, office, and residential land uses. A project is generally considered to have a significant visual/aesthetic impact if it substantially changes the character of an area such that it becomes visually incompatible or degrades the existing context and quality of the site and its surroundings. Depending on the location of the light source and its proximity to adjacent light-sensitive uses, light introduction may become a nuisance, affecting adjacent areas and diminishing the view of the clear night sky. Light spillage is typically defined as unwanted illumination from light fixtures on adjacent properties.

The SPA proposes a ten-foot increase in maximum permissible building heights for a Sub-area of the SHSP so its effects on visual quality or light and glare will be minimal (i.e., taller buildings and their lighting will be more visible within a limited urbanized area). Slightly taller buildings will also incrementally increase shading and shadows on adjacent non-residential properties to the north, east, and west. However, the overall effect of a ten-foot increase in building heights will not significantly increase shade or shadow impacts on adjacent properties which are all non-residential in nature. With approval of the SPA, future development will be consistent with zoning (i.e., the SHSP) and its design guidelines relative to scenic quality. Consistent with the conclusions of the SHSP EIR, impacts of the SPA related to visual character or quality and lighting and glare will therefore be less than significant and no programmatic mitigation is required.

The Project will develop/redevelop approximately 5.35 acres of the 120-acre SHSP within a highly urbanized area. The Project will modernize the overall appearance of the buildings while maintaining their historical architecture (first floor brick facades).

The Project proposes two buildings with maximum heights of 59’ 6” and lighting from these buildings will be incrementally more visible in the surrounding (highly urbanized) area. With approval of the SPA, the Project will be consistent with design aspects of the SHSP including lighting limitations. Though the proposed Project will create new sources of nighttime light and glare, due to its setting, even the increased heights of the Project buildings over the current SHSP standards will not be significant in terms of lighting and glare impacts due to similar types of buildings in the surrounding area. Views of the taller Project buildings will not create substantial light or glare and will not result in adverse visual impacts during either the day or night. Therefore, the Project will not significantly degrade the visual character of the site and its surroundings, or create a new source of substantial light or glare that will adversely affect daytime or nighttime views in the area. Impacts will be less than significant and no mitigation is required.

LESS THAN SIGNIFICANT IMPACT

Cumulative Impacts. Regarding cumulative impacts, the SPA Sub-area occupies 30 acres or 15% of the 120-acre SHSP area and 0.8% of the 3,495 acres occupied by the City as a whole. The potential increase in overall building height within the SHSHP Sub-area (from 50 to 60 feet), including the proposed height increase of the two Project buildings (to 59.5 feet from 50 feet), would represent an incremental and less than significant cumulative aesthetic impact within the City relative to scenic vistas, scenic resources, scenic highways, or light and glare. No mitigation would be required for the SPA or the Development Project regarding aesthetic impacts.

2 Agriculture and Forestry Resources

	Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less than Significant Impact	No Impact
Would the project:				
a. Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?	☐	☐	☐	■
b. Conflict with existing zoning for agricultural use or a Williamson Act contract?	☐	☐	☐	■
c. Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code Section 12220(g)); timberland (as defined by Public Resources Code Section 4526); or timberland zoned Timberland Production (as defined by Government Code Section 51104(g))?	☐	☐	☐	■
d. Result in the loss of forest land or conversion of forest land to non-forest use?	☐	☐	☐	■
e. Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland to non-agricultural use or conversion of forest land to non-forest use?	☐	☐	☐	■

The State of California considers agriculture an important environmental resource and the California Resources Agency monitors the distribution of agricultural land throughout the state. Forestry is also an important type of agricultural activity in the state which is monitored by the California Department of Forestry and Fire Protection. The Project area is located in the Los Angeles (LA) Basin, which once supported agriculture and forest resources but now is highly urbanized and has very limited agriculture and no identified forest resources.

a. *Would the project convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?*

b. Would the project conflict with existing zoning for agricultural use or a Williamson Act contract?

c. Would the project conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code Section 12220(g)); timberland (as defined by Public Resources Code Section 4526); or timberland zoned Timberland Production (as defined by Government Code Section 51104(g))?

d. Would the project result in the loss of forest land or conversion of forest land to non-forest use?

e. Would the project involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland to non-agricultural use or conversion of forest land to non-forest use?

(a-e) According to the Farmland Mapping and Monitoring Program of the California Resources Agency (FMMP 2021), there are no prime or other important farmland designations, forest land or forest-related zoning within City limits which includes the SHSP. Therefore, the proposed SPA would have no impacts in that regard and no programmatic mitigation is required.

Maps produced by the CalFire Forest and Range Assessment Project (FRAP 2021) indicate the City and SHSP are in an urbanized area with no forest resources. According to the City General Plan Land Use Element and Zoning Map, the City contains no agricultural or forest-related land use or zoning designations. In addition, there is no land in the City under a Williamson Act contract (agricultural preserve). These conclusions are supported by both the GP EIR and the SHSP EIR. Therefore, the proposed development of the Project will have no impacts on any agricultural or forest resources. No mitigation is required.

NO IMPACT

Cumulative Impacts. The SPA Sub-area, including the Project Development Sites, contain any agricultural or forest resources. Therefore, neither the SPA or the Development Sites will have any cumulative impacts relative to agricultural or forest resources.

3 Air Quality

	Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less than Significant Impact	No Impact
Would the project:				
a. Conflict with or obstruct implementation of the applicable air quality plan?	☐	☐	■	☐
b. Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard?	☐	☐	■	☐
c. Expose sensitive receptors to substantial pollutant concentrations?	☐	☐	■	☐
d. Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?	☐	☐	■	☐

Air quality is one of the most serious risks to human health in the South Coast Air Basin (SCAG) which has generally had poor air quality for many decades. Air quality is monitored and managed by both the California Air Resources Board (CARB) and the South Coast Air Quality Management District (SCAQMD). The SCAQMD is required to monitor air pollutant levels to ensure that state and federal air quality standards are met and to meet the standards.

A detailed Air Quality Assessment was prepared for the Project (MIG 2021a)*(*Appendix B*)*. The proposed Project is located within the Los Angeles Basin which is highly urbanized and has generally poor air quality much of the year. Air pollutants are generated by a variety of stationary and mobile sources and air quality is still often unhealthy despite decades of state and regional regulations. New development is evaluated to determine if or to what degree measures should be implemented to reduce air pollution and protect public health.

a. Would the project conflict with or obstruct implementation of the applicable air quality plan?

SCAB is designated as nonattainment for the federal and state 1-hour and 8-hour ozone standards, the state PM_{10} standards, and the federal and state $PM_{2.5}$ standards, and the Los Angeles County portion of SCAB is also designated as nonattainment for federal lead standards. The SCAQMD adopted its most recent Air Quality Management Plan (AQMP) in 2016 which includes strategies for the attainment of state and federal air quality standards.

The SPA requests a ten-foot increase in maximum permissible building heights within in a Sub-area of the SHSP to allow for more architectural flexibility in adapting older industrial

buildings to modern standards. This change in maximum allowed height would not, in and of itself, result in any increase in development potential that was not anticipated in the General Plan or SHSP and its EIR. Therefore, it would have no effect on consistency with the 2016 AQMP which was based on the City's General Plan land uses adopted in 2016. For that reason, the SPA would therefore have no impact relative to the AQMP and no programmatic mitigation is required.

Regarding the proposed Standard Works Project, the SCAQMD concludes a project that conflicts with or obstructs the implementation of the South Coast Air Basin 2016 Air Quality Management Plan (AQMP) if it could hinder implementation of the AQMP, could delay efforts to meet attainment deadlines, and/or interfere with SCAQMD efforts to maintain compliance with, and attainment of, applicable air quality standards. Pursuant to the methodology provided in Chapter 12 of the SCAQMD *CEQA Air Quality Handbook* (SCAQMD 1993), a project is consistent with the AQMP if: (1) it is consistent with the growth assumptions in the AQMP; and (2) it does not increase the frequency or severity of an air quality standards violation or cause a new one.

The proposed Project would not induce population growth because it involves non-residential development, and the employment induced by the Project would be well within that accounted for in the City's General Plan and the Southern California Association of Governments 2016 Regional Transportation Plan / Sustainable Communities Strategy (2016 RTP/SCS), which formed the growth assumptions for the AQMP.[2] Therefore, the proposed Project would not conflict with the first AQMP consistency criterion. As described in the analysis in Section 3.b below, the Project would not exceed the construction or operational air quality thresholds maintained by the SCAQMD. Therefore, the Project would not conflict with or obstruct implementation of the SCAQMD 2016 AQMP (SCAQMD 2017). Impacts are less than significant and no mitigation is required.

LESS THAN SIGNIFICANT IMPACT

b. Would the project result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard?

The following section provides the calculated potential air emissions associated with the construction and operations of the Project and compares the emissions to the SCAQMD CEQA thresholds of significance. As recommended by SCAQMD, the California Emissions Estimation Model (CalEEMod) was used to calculate the Project construction and operational emissions for volatile organic compounds (VOC), oxides of nitrogen (NOx), carbon monoxide (CO), sulfur dioxide (SO_2), large particulates (PM_{10}), and fine particulates ($PM_{2.5}$).

The SPA requests a ten-foot increase in maximum permissible building heights for more architectural flexibility within a Sub-area of the SHSP but no other development changes such as land use or intensity of use (FAR). Any increased building height under the SPA would not result in any additional ground disturbance (i.e., project footprint) and no increase in FAR or overall development, so it will have no demonstrable effect on the emission of small particulate material during construction or operation. Therefore, the SPA would have no effect (i.e., no increase or decrease) of any air pollutant emissions for which the Basin is

[2] The 2016 RTP/SCS accounted for 7,000 new jobs being formed in the City between 2012 and 2040 (SCAG, 2016).

in non-attainment (ozone and $PM_{2.5}$). The SPA would have no impacts in this regard so no programmatic mitigation is required.

An air quality assessment was prepared for the Project by MIG in August 2021 which examined criteria air pollutant emission impacts of Project construction and operation. The proposed Project's potential construction emissions were estimated using the California Emissions Estimator Model (CalEEMod), Version (V.) 2020.4.0. Construction phase and duration and the type and amount of equipment used during construction were generated using CalEEMod default assumptions and modified as necessary to reflect the following Project-specific context, information, and details: the type and length of construction phases for each site, as well as the equipment used in each phase, was modified per information provided by the Project applicant; 600 cubic yards of soil was assumed to be exported from each site; and fugitive dust control measures were incorporated into the model consistent with requirements contained in SCAQMD Rule 403, Fugitive Dust.

The proposed Project's operational emissions from area, energy use, and mobile sources were estimated also using CalEEMod, V. 2020.4.0. The modeling was based on the proposed Project's first full year of operations (assumed to be 2023 for the North Site and 2024 for the South Site), using default data assumptions generated by CalEEMod, modified as necessary to reflect the following Project-specific context, information, and details: Project-specific land use information (i.e., lot acreage, building square footage, etc.) was applied to the model; and CalEEMod default weekday trip generation rates were replaced with the trip generation and vehicle miles travelled information contained in the Focused Traffic Analysis Memorandum (Kimley-Horn, 2021) and VMT memorandum (Translutions, 2021) prepared for the proposed Project.

For the Project, an air quality assessment prepared by MIG in August 2021 indicates its "worst case" daily air pollutant emissions would not exceed standards established by the SCAQMD during either construction or operations, as indicated in Tables 4 and 5 (MIG 2021a).

Table 4: Project Emissions - Construction

Emission Condition	Maximum Pollutant Emissions (pounds per day)					
	ROG	NO_x	CO	SO_2	PM_{10}	$PM_{2.5}$
Highest Daily Emissions[1]	13.0	47.2	50.8	0.1	5.9	3.8
SCAQMD Threshold	75	100	550	150	150	55
Exceeds Threshold?	No	No	No	No	No	No

Source: Table 3, MIG 2021a
[1] unmitigated maximum daily emissions from construction at one or both sites in summer or winter, whichever is highest

Table 5: Project Emissions - Operations

Emission Condition	Maximum Pollutant Emissions (pounds per day)					
	ROG	NO_x	CO	SO_2	PM_{10}	$PM_{2.5}$
Highest Daily Emissions[1]	7.7	4.2	42.9	0.2	8.5	2.1
SCAQMD	55	55	550	150	150	55

Threshold						
Exceeds Threshold?	No	No	No	No	No	No

Source: Table 4, MIG 2021a

[1] unmitigated daily regional emissions from operations (area-wide, energy, and mobile sources) at both sites in summer or winter rates, whichever is highest and minus emissions from existing uses ("worst case")

The air quality assessment utilized the latest SCAQMD software and Project characteristics to estimate both short-term and long-term emissions. Since the worst case emissions were determined to be less than the SCAQMD's established thresholds, the Project would not result in a cumulatively considerable net increase of any criteria pollutant for which the region is non-attainment. Impacts are considered less than significant and no mitigation is required.

LESS THAN SIGNIFICANT IMPACT

c. Would the project expose sensitive receptors to substantial pollutant concentrations?

d. Would the project result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?

(c-d) Some land uses are considered more sensitive to air pollution than others because of the types of population groups or activities involved. Sensitive population groups include children, the elderly, the acutely ill, and the chronically ill, especially those with cardiorespiratory diseases. Residential areas are considered to be sensitive receptors to air pollution because residents (including children and the elderly) tend to be at home for extended periods of time, resulting in sustained exposure to any pollutants present. Children are considered more susceptible to the health effects of air pollution due to their immature immune systems and developing organs. As such, schools are also considered sensitive receptors, as children are present for extended durations and engage in regular outdoor activities. Recreational land uses are considered moderately sensitive to air pollution. Although exposure periods are generally short, exercise places a high demand on respiratory functions, which can be impaired by air pollution.

The SPA requests a ten-foot increase in maximum permissible building heights in a Sub-area of the SHSP but no other development changes that affect land use or intensity of use (FAR). Any increased building height under the SPA would not result in any additional ground disturbance (i.e., project footprint) and no increase in FAR or overall development, so it will have no demonstrable effect on the emission of small particulate material during construction or operation. Therefore, the SPA would have no effect (i.e., no increase or decrease) of any air pollutant emissions for which the Basin is in non-attainment (ozone and $PM_{2.5}$). The SPA would have no impacts in this regard so no programmatic mitigation is required.

The air quality assessment prepared for the Project by MIG in August 2021 also examined localized impacts of Project air pollutant emissions on nearby sensitive receptors (e.g., parks, schools, hospitals and other uses with children, the elderly, sick, etc.). The assessment used the SCAQMD's Local Significance Thresholds (LSTs) that represent the maximum emissions from a project that are expected to cause or contribute to an exceedance of the most stringent applicable federal or state ambient air quality standards, which would result in significant adverse localized air quality impacts. The proposed Project's potential construction emissions were estimated using the California Emissions

Estimator Model (CalEEMod), Version (V.) 2020.4.0. Construction phase and duration and the type and amount of equipment used during construction were generated using CalEEMod default assumptions and modified as necessary to reflect the following Project-specific context, information, and details: the type and length of construction phases for each site, as well as the equipment used in each phase, was modified per information provided by the Project applicant; 600 cubic yards of soil was assumed to be exported from each site; and fugitive dust control measures were incorporated into the model consistent with requirements contained in SCAQMD Rule 403, Fugitive Dust. The proposed Project's maximum daily construction emissions were then compared against the SCAQMD's-recommended LST thresholds.

The air quality assessment indicated the closest potential sensitive air quality receptors to the perimeter of the proposed Project area (i.e., within 1,000 feet) include: (1) the multi-family residential developments on East Grand Ave, approximately 600 feet north of the North Site of the proposed Project area; (2) Chevron Park, approximately 150 feet south of the South Site of the proposed Project area; and (3) Wyle Park, approximately 1,000 feet west of the North and South Sites of the proposed Project area.

The SCAQMD has several ways of determining potential impacts on sensitive receptors. The first is the use of Localized Significance Thresholds (LSTs). Table 6 presents the reasonable worst-case estimate of pollution from Project construction on sensitive receptors based on LSTs. Table 6 demonstrates that Project emissions will not exceed established SCAQMD LST thresholds for short-term emissions during construction.

Table 6: Localized Significance Thresholds - Project Construction

Emission Condition	Maximum Pollutant Emissions (pounds per day)			
	NO_x	CO	PM_{10}	$PM_{2.5}$
Highest Daily Emissions[1]	40.3	47.6	4.8	3.4
SCAQMD LST Threshold	139	2,228	56	21
Exceeds Threshold?	No	No	No	No

Source: Table 5, MIG 2021a

[1] unmitigated maximum daily emissions from construction at one or both sites in summer or winter, whichever is highest ("worst case")

The second way to evaluate sensitive receptors is to examine emissions of Hazardous Air Pollutants (HAPs) or Toxic Air Contaminants (TACs). These pollutants can cause severe health effects at very low concentrations (non-cancer effects), and many are suspected or confirmed carcinogens (i.e., can cause cancer). People exposed to HAPs/TACs at sufficient concentrations and durations may have an increased chance of getting cancer or experiencing other serious health effects. These health effects may include damage to the immune system, as well as neurological, reproductive (e.g., reduced fertility), developmental, respiratory, and/or other health problems.

A portion of the PM_{10} and $PM_{2.5}$ emissions generated during construction of the Project would be diesel particulate matter, or DPM, a known TAC. The proposed Project's construction activities would not expose adjacent residential receptors to substantial levels of DPM and therefore not pose a substantial adverse health risk for several reasons. First, the proposed Project does not involve substantial earthmoving or grading activities that

would require large amounts of heavy-duty equipment associated with the highest DPM emissions. Second, construction activities associated with the Project would be short-term (as estimated in CalEEMod, total Project construction is estimated to last approximately six months). Finally, potential long-term adverse health risks from DPM are evaluated assuming a constant exposure to emissions over a 70-year lifetime, 24 hours a day, seven days a week, with increased risks generally associated with increased proximity to emissions sources. Since construction activities would only generate DPM emissions on an intermittent, short-term basis, DPM emissions from construction activities would be unlikely to result in adverse long-term health effects to existing sensitive receptors that exceed the SCAQMD's significance criteria.[3]

Finally, the SCAQMD CEQA Air Quality Handbook indicates that land uses associated with odor emissions and complaints include agricultural operations, wastewater treatment plants, landfills, and certain industrial operations (such as manufacturing uses that produce chemicals, paper, etc.). Odors are typically associated with industrial projects involving the use of chemicals, solvents, petroleum products, and other strong-smelling elements used in manufacturing processes, as well as sewage treatment facilities and landfills.

Based on this analysis, the Project would not result in other emissions (such as those leading to odors) that would adversely affect a substantial number of people (including sensitive receptors). Impacts would be less than significant and no mitigation is required.

LESS THAN SIGNIFICANT IMPACT

Cumulative Impacts. The SPA will not result in the potential for any increase in overall development (FAR or total square footage) within the Sub-area but only an increase in building heights. These changes would not affect the emission of air pollutants during construction since no additional land would be impacted, and the level of operation of new development would not increase simply due to being housed in a taller building. Therefore, the SPA would not result in any cumulative air quality impacts relative to AQMP consistency, emission of criteria pollutants, emissions affecting sensitive receptors, or odors and other emissions.

The air quality assessment for proposed Development Project determined it would have less than significant impacts related to AQMP consistency, emission of criteria pollutants, emissions affecting sensitive receptors, or odors and other emissions. According to the SCAQMD, a project that is consistent with the AQMP and does not emit air pollutants in excess of its daily regional and localized standards does not have any cumulatively considerable air quality impacts. The air quality assessment determined the proposed Development Project had less than significant air pollutant emissions and was consistent with the AQMP even without any project-level mitigation. Therefore, the Project will not have cumulative air quality impacts.

[3] The SCAQMD has established the following thresholds of significance for projects that generate TAC emissions: Maximum Incremental Cancer Risk ≥ 10 in 1 million; Cancer Burden > 0.5 excess cancer cases (in areas ≥ 1 in 1 million); Chronic & Acute Hazard Index ≥ 1.0 (project increment).

4 Biological Resources

	Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less than Significant Impact	No Impact
Would the project:				
a. Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?	☐	■	☐	☐
b. Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?	☐	☐	☐	■
c. Have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?	☐	☐	☐	■
d. Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?	☐	■	☐	☐
e. Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?	☐	☐	■	☐
f. Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?	☐	☐	☐	■

Biological resources are considered important aspects of the environment in California which are monitored and managed by the California Department of Fish and Wildlife (CDFW) under the State Endangered Species Act and State Fish and Game Codes. The Project area has low biological diversity and ecological sensitivity due to its urban conditions.

The greater Los Angeles region and Project area once supported extensive native vegetation and wildlife but now is highly urbanized and natural habitat is limited despite proximity to the Pacific Ocean. The Project area contains no natural drainages or habitat other than landscaping and street trees. The limited plant and animal species that are present in the surrounding area must be tolerant of human activity.

a. *Would the project have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?*

The Project Site does not contain any natural vegetation, natural communities, or biological resources that could support any sensitive plants or wildlife species. The property is not in an area designated as critical habitat for any sensitive wildlife species, nor is the area subject to any conservation plans, recovery plans, or similar policies and ordinances. There are no wetlands, marshes, surface drainages, ponds, lakes, streams, or any type of water-based habitat or any riparian communities on or near the Project site.

The proposed SPA would allow taller buildings in the future compared to the existing SHSP. However, these development characteristics have no influence on nor are they affected by biological resources, and the SHSP EIR determined the SHSP area contains no significant biological resources. Therefore, the proposed SHSPA will have no impacts on habitats or to listed or otherwise sensitive species, consistent with the conclusions of the SHSP EIR, and no programmatic mitigation is required.

The Project Site contains no native vegetation or habitat for listed, candidate, or otherwise sensitive species, although there are a number of street trees and landscaping at present and proposed as part of development of the Project. Street trees may support nesting or otherwise sensitive bird species. Construction work during the bird nesting season (February 1 to August 31) may impact protected birds, so the proposed Project will be subject to Mitigation Measures 7-1 and 7-2 from the SHSP EIR as outlined below. With implementation of these measures, the Project will have less than significant impacts on any species identified as a candidate, sensitive, or special status species.

Mitigation Measures. The SHSP EIR contains the following mitigation measures (MM) to avoid impacts related to listed or otherwise sensitive biological species:

BIO MM 7-1 To avoid impacts to nesting birds, construction activities and construction noise should occur outside the avian nesting season (prior to February 1 or after September 1). If construction and construction noise occurs within the avian nesting season (during the period from February 1 to September 1), areas within 100 feet of a development site shall be thoroughly surveyed for the presence of nests by a qualified biologist no more than five days before commencement of any vegetation removal. If it is determined that the Project

Site is occupied by nesting birds covered under the Migratory Bird Treaty Act, mitigation measure 7-2 shall apply.

BIO MM 7-2 If pre-construction nesting bird surveys result in the location of active nests, no grading, vegetation removal, or heavy equipment activity shall take place within an appropriate setback from occupied nests as determined by a qualified biologist. Protective measures (e.g., established setbacks) shall be required to ensure compliance with the Migratory Bird Treaty Act and California Fish and Game Code requirements. The qualified biologist shall serve as a construction monitor during those periods when construction activities occur near active nest areas to ensure that no inadvertent impacts occur. A report of the findings, prepared by a qualified biologist, shall be submitted to the CDFW prior to construction-related activities that have the potential to disturb any active nests during the nesting season.

LESS THAN SIGNIFICANT WITH MITIGATION INCORPORATED

b. Would the project have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?

c. Would the project have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?

(b-c) As previously indicated, there are no wetlands, marshes, surface drainages, ponds, lakes, streams, or any type of water-based habitat or any riparian communities on or near the Project site.

The proposed SPA would allow taller buildings in the future compared to the existing SHSP. However, these development characteristics have no influence on nor are they affected by biological resources, and the SHSP EIR determined the SHSP area contains no wetlands or related resources such as riparian habitat or other sensitive natural community. Therefore, the proposed SHSPA will have no impacts regarding these resources and no programmatic mitigation is required.

The Project Site contains no wetlands or related resources such as riparian habitat or other sensitive natural community. This conclusion is consistent with the results of the SPSH EIR. Therefore, the proposed Project will have no impacts regarding these resources and no mitigation is required.

NO IMPACT

d. Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?

There are no wetlands, marshes, surface drainages, ponds, lakes, streams, or any type of water-based habitat or any riparian communities on or near the Project site. No food or water sources are onsite or in the surrounding areas that would support migrating fish or wildlife.

The proposed SPA only affects building height and would have no influence on or be affected by wildlife movement. In addition, the SHSP EIR concluded the SHSP area

contains no wildlife movement or migratory corridors. Therefore, the proposed SHSPA will have no impacts in this regard and no programmatic mitigation is required.

The Development Sites are within the SHSP and also do not contain any natural drainages or channels, and no natural or vacant areas in or adjacent to the Development Sites that could function as a wildlife movement corridor. However, the Development Sites will have landscaping and street trees which may support various species of migratory birds. Therefore, consistent with the SHSP EIR, **Mitigation Measures 7-1 and 7-2** are recommended for the Project development to reduce potential impacts related to migratory birds to less than significant levels (See sub-section 4.a above).

LESS THAN SIGNIFICANT WITH MITIGATION INCORPORATED

e. Would the project conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?

The SHSP would permit new development or activities such as the removal or maintenance of certain street trees protected by the El Segundo Street Tree Ordinance (Municipal Code Title 9, Chapter 3, Street Trees). The EIR stated that public projects would be governed by criteria in the ordinance, and private persons would be required to obtain a permit and replace removed street trees pursuant to the ordinance. The SPA would only change the maximum permissible height of some buildings so it would have no impact regarding conflicts with local policies or ordinances protecting biological resources and no programmatic mitigation is required.

Development of the two Development Sites will remove existing landscaping, mainly shrubs, in the existing planters along the south side of the South Side (facing El Segundo Boulevard) and the north side of the North Site (facing Franklin Avenue). These landscaping materials are covered by the City's Street Tree Ordinance. The proposed Project will replace landscaping materials lost by Project construction and install extensive new landscaping, including a number of new trees in the common areas of the two sites, per the Project landscaping plans and as approved by the City through the development review process. No other City ordinances or regulations are related to biological resources or that affect the Project properties so impacts are less than significant and no mitigation is required.

LESS THAN SIGNIFICANT IMPACT

f. Would the project conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?

The Project site is a disturbed site with no existing natural vegetation. Although there are areas within El Segundo that contain sensitive habitat, they are located in coastal areas such as the coastal habitat for the El Segundo Blue Butterfly (ESBB). As described in the General Plan Conservation Element, the ESBB is listed on the federal endangered species list and is dependent upon native coastal buckwheat plants which are not present in the Project area. At this time, the butterfly occurs only on a 1.96 acre preserve adjacent to and maintained by the Chevron Refinery and in the dune area under the flight path of the Los Angeles International Airport.

Relative to the SPA, the SHSP EIR indicated there were no established Habitat Conservation Plans or Natural Community Conservation Plans within or adjacent to the

SHSP. In addition, none have been approved since the SHSP was approved. Therefore, the proposed SPA would have no impact and no programmatic mitigation was required.

At this time there are no HCPs or NCCPs that affect the Development Sites since they are part of the SHSP, so there are no impacts in this regard and no mitigation required.

NO IMPACT

Cumulative Impacts. The SPA Sub-area, including the Development Project sites, does not contain any significant biological resources, habitat or natural drainages, habitat conservation plans, and does not support any listed or otherwise sensitive species of plants or animals to any significant degree. The SPA would allow for increased maximum building heights within the Sub-area from 50 to 60 feet, which would have no demonstrable effect on biological resources or species. The Development sites similarly contain no biological resources. Therefore, the SPA and the Development Project will not make any significant contributions to cumulatively considerable regional impacts to biological resources.

5 Cultural Resources

	Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less than Significant Impact	No Impact
Would the project:				
a. Cause a substantial adverse change in the significance of a historical resource pursuant to Section 15064.5?	☐	☐	■	☐
b. Cause a substantial adverse change in the significance of an archaeological resource pursuant to Section 15064.5?	☐	■	☐	☐
c. Disturb any human remains, including those interred outside of formal cemeteries?	☐	■	☐	☐

The LA Basin has been inhabited for thousands of years by Native American tribes and for over two hundred years by European settlements. Although highly urbanized, it is still possible that archaeological or historical artifacts or even human remains may be found during excavation in native soils in this area.

a. Would the project cause a substantial adverse change in the significance of a historical resource pursuant to Section 15064.5?

A historical resource is defined in CEQA Guidelines Section 15064.5(a)(3) as any object, building, structure, site, area, place, record, or manuscript determined to be historically significant or significant in the architectural, engineering, scientific, economic, agricultural, educational, social, political, military, or cultural annals of California. Historical resources are further defined as being associated with significant events, important persons, or distinctive characteristics of a type, period, or method of construction; representing the work of an important creative individual; or possessing high artistic values.

The proposed SPA would allow for increased building heights, however, individual projects would still be required to comply with CEQA, federal and state laws regarding historical resources, and the City's development review process which requires further evaluation if potentially significant historic buildings are present. Therefore, the SPA will have less than significant impacts regarding historical buildings and no programmatic mitigation is required.

The SHSP EIR indicated that some buildings within the SHSP area were over 50 years in age and may have the potential to be considered as a historic resource if they meet local, state, or national criteria for inclusion on a historic register. Any work on a building or structure that meets the criteria to be considered a historic resource could result in significant impact under CEQA if proper treatment does not occur.

The SHSP EIR concluded that implementation of Mitigation Measure MM 8-1 would reduce this potential impact to a less than significant level. The SHSP EIR contains Mitigation Measure 8-1 which requires an historical assessment of any buildings 50 years old or greater (see previous Table 3, Smoky Hollow Specific Plan Mitigation Measures).

The two existing buildings on the Development Sites are both over 50 years old. The Project applicant retained GPA Consulting (GPA) to prepare historical assessments of both Development Sites per applicable guidelines and standards (see Appendix E). The South Site was evaluated in September 2020 and updated in June 2021 while the North Site was evaluated in May 2019 as part of a parking structure that has since been built on that property (140 Oregon Street) before a parcel consolidation. That report was updated in June 2021 in conjunction with the current Project application (GPA 2021a+b).

The GPA assessments concluded that none of the buildings on the Development Sites would be eligible for listing in the California Register under Criteria 1, 2, 3, and 4 due to lack of association with a historic context. Additionally, the resources were evaluated in accordance with Section 15064.5(a)(2)–(3) of the CEQA Guidelines using the criteria outlined in Section 5024.1 of California Public Resources Code, and they are not considered historical resources for the purposes of CEQA (GPA 2021a+b). These reports meet the requirements of SHSP EIR Mitigation Measure 8-1. The GPA reports demonstrate that Project impacts to historic resources will be less than significant and no Project-specific mitigation is required.

LESS THAN SIGNIFICANT IMPACT

b. Would the project cause a substantial adverse change in the significance of an archaeological resource pursuant to Section 15064.5?

An archaeological resource is defined in Section 15064.5(c) of the CEQA Guidelines as a site, area, or place determined to be historically significant as defined in Section 15064.5(a) (see definition of historical resource in checklist response 14.a) or as a unique archaeological resource defined in Public Resources Code Section 21083.2 as an artifact, object, or site that contains information needed to answer important scientific research questions of public interest, or that has a special and particular quality such as being the oldest or best example of its type, or that is directly associated with a scientifically recognized important prehistoric or historic event or person.

The proposed SPA would only increase the maximum allowable deviation to building heights. However, future development would still be required to comply with CEQA, federal and state laws regarding archaeological and/or tribal resources, including consultation, and the City's development review process. Therefore, the SPA will have less than significant impacts regarding archaeological resources and no mitigation is required. The SPA will therefore have no impacts on archaeological resources and no programmatic mitigation is required.

The Project will develop two sites (North and South) within the Project area. Although minimal grading is required to redevelop the existing onsite buildings, there is the potential that archeological resources may be found on the Development Sites. Since the SHSP EIR indicated archaeological resources may be present due to the region's long occupation by Native American tribes, there is the potential that archeological resources could be impacted during grading. However, implementation of **Mitigation Measures CUL MM 8-2 and CUL MM 8-3 from the SHSP EIR** (shown below) would reduce potential impacts to

archaeological (and/or paleontological) resources from grading on the Development Sites to less than significant levels:

CUL MM 8-2 Prior to the commencement of grading or demolition of subsurface structures, a professional archaeologist who meets U.S. Secretary of the Interior's Professional Qualifications and Standards, shall conduct a brief archaeological and paleontological informational session for construction personnel. The training session may consist of an in-person meeting or a written handout describing: (1) how to identify archaeological and paleontological resources that may be encountered during earth-moving activities and (2) the procedures to be followed in such an event, including contact information for the appropriate entities if archaeological or paleontological resources are discovered.

CUL MM 8-3 In the event that archaeological or paleontological resources are unearthed during ground-disturbing activities, the ground-disturbing activities shall be halted or diverted away from the vicinity of the find so that the find can be evaluated. A buffer area of at least 50 feet shall be established around the find, where construction activities will not be allowed to continue until a qualified archaeologist or paleontologist has examined the newly discovered artifact(s) and has evaluated the area of the find. Work shall be allowed to continue outside the buffer area. If the archaeologist identifies the find as a tribal cultural resource or suspects it to be a tribal cultural resource, the City will contact the Native American Heritage Commission (NAHC) to report the discovery, and will contact local Native American tribal representatives as directed by the NAHC. Should the newly discovered artifact(s) be determined to be a tribal cultural resource, Native American construction monitoring will be initiated. The City shall coordinate with the archaeologist and tribal representative(s) to develop an appropriate treatment plan for the resources.

Implementation of Mitigation Measures CUL MM 8-2 and CUL MM 8-3 as outlined above will also reduce potential impacts of the Project on archaeological resources to less than significant levels.

LESS THAN SIGNIFICANT WITH MITIGATION INCORPORATED

c. Would the project disturb any human remains, including those interred outside of formal cemeteries?

Based on the fully developed conditions on the site and the extent of disturbance on the entire property and surrounding areas, there is little likelihood that construction would encounter and impact any human remains.

The proposed SPA would increase the maximum allowable building heights. However, future development would still be required to comply with state law (i.e., Health and Safety Code Section 7050.5) regarding human remains if found during grading. With regulatory compliance, the SHSPA will have less than significant impacts regarding human remains and no programmatic mitigation is required.

During grading of the Development Site, it is at least possible human remains could be discovered. In addition to Mitigation Measure CUL MM 8-3, the following measure is recommended to be consistent with state law.

CUL MM 8-4 If human remains are uncovered during Project grading, work must be halted in the immediate area of the find and the County Coroner notified in

accordance with Health and Safety Code Section 7050.5. The Coroner must then determine whether the remains are of forensic interest. If the Coroner, with the aid of a supervising archaeologist, determines that the remains are or appear to be of a Native American, they must contact the Native American Heritage Commission for further investigations and proper recovery of such remains, if necessary. Further, pursuant to Public Resource Code Section 5097.98(b) remains shall be left in place and free from disturbance until a final decision as to the treatment and disposition has been made. If the County Coroner determines the remains to be Native American, the Native American Heritage Commission shall be contacted within the period specified by law (24 hours). Subsequently, the Native American Heritage Commission shall identify the "most likely descendant". The most likely descendant shall then make recommendations and engage in consultation concerning the treatment of the remains as provided in Public Resources Code Section 5097.98. Human remains from other ethnic/cultural groups with recognized historical associations to the area shall also be subject to consultation between appropriate representatives from that group and the local jurisdiction/lead agency involved. This measure shall be implemented to the satisfaction of the City Planning Department.

Human remains that are Native American in origin are protected by a number of federal and state laws, and local tribal representatives must be consulted if such remains are found during grading. While the potential for finding human remains during grading on the Project site is considered low, compliance with Health and Safety Code Section 7050.5 and Public Resources Code Section 5097.98, as specified in Mitigation Measure MM CUL-4, will reduce potential impacts to less than significant levels and no mitigation is required.

LESS THAN SIGNIFICANT WITH MITIGATION INCORPORATED

Cumulative Impacts. The SPA addresses only building heights within the SPA Sub-area and will not increase FAR, new building footprints, or total allowable building area of new development. Therefore, it will have no impact on construction activities that could disturb previously unknown cultural resources. In addition, the Development Project proposes no increase in FAR or overall square footage of development which could disturb cultural resources. Therefore, the SPA and Development Project will not contribute to any cumulative impacts regarding cultural resources, including the discovery of any human remains.

6 Energy

	Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less than Significant Impact	No Impact
Would the project:				
a. Result in a potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?	☐	☐	■	☐
b. Conflict with or obstruct a state or local plan for renewable energy or energy efficiency?	☐	☐	■	☐

The extensive urban uses and people in the LA Basin, including existing uses on the Development Sites, utilize a variety of energy resources for transportation, heating and cooling homes and businesses, and normal daily activities. State laws and regulations require efficient use of energy resources which still largely rely on non-renewable fossil fuels.

a. *Would the project result in a potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?*
b. *Would the project conflict with or obstruct a state or local plan for renewable energy or energy efficiency?*

(a-b) The proposed SPA would allow for a ten-foot increase in maximum permissible building heights within the SPA Sub-area. However, individual projects would still be required to comply with CEQA, federal and state laws regarding energy use and conservation, and the City's development review process. Therefore, the SPA will have less than significant impacts regarding the two energy-related significance thresholds, unnecessary consumption of energy and consistency with energy conservation plans, and no programmatic mitigation is required.

The proposed Project consists of the redevelopment of two existing light industrial buildings and a detailed energy analysis was prepared for the Project (MIG 2021a)(Appendix B). Construction activities associated with the Project would require the use of heavy-duty, off-road equipment and construction-related vehicle trips that would combust fuel, primarily diesel and gasoline. Heavy-duty construction equipment would be required to comply with CARB's airborne toxic control measures which restricts heavy-duty diesel vehicle idling to five minutes, installing particulate filters on older trucks, etc. It is noted that the design of the Project includes several features that reduce GHG emissions compared to typical new construction activities. For example, the proposed exterior façade consists of concrete masonry blocks with no exterior or interior finishes that eliminates the need to use and transport other materials such as drywall, drywall mud and tape, sheathing, etc. The Project

would also incorporate structural features into its design, avoiding the need to manufacture, transport, and install materials intended to hide or cover structural elements.

Once operational, the proposed Project would consume energy for vehicle trips, electricity and natural gas usage, and water and wastewater conveyance. As estimated using CalEEMod, the Project would consume approximately 1,371 million British thermal units (MMBTU) and1,679 megawatt-hours (mWh) per year. In addition, the Project is also estimated to result in a total of approximately three (3) million annual VMT which, based on the average gasoline fuel efficiency in the Los Angeles County basin, would consume approximately 133,694 gallons of gasoline.[4]

Electricity, natural gas, and gasoline fuel consumption are energy sources necessary to operate and maintain the Project in a safe manner. Lighting is essential for safety and security and natural gas consumption is needed for heating and other temperature-controlled activities. Due to energy efficiency standards being improved over time, the new structures would be more efficient in its energy consumption than the existing structures. For mobile sources, the Project includes mitigation to reduce VMT and fuel consumption (see sub-section 17, Transportation). In addition, the SHSP EIR found that the SHSP would not conflict with the California Air Resources Board (CARB) Scoping Plan, the Southern California Association of Governments (SCAG) 2020-2045 Regional Transportation Plan (RTP)/Sustainable Community Strategy (SCS, now called "Connect SoCal"), or the City's EECAP as these plans relate to energy conservation and efficiency.

As a part of the SHSP, the Project would not conflict with or obstruct a state or local plan adopted for the purposes of increasing the amount of renewable energy or energy efficiency. As discussed above, the proposed Project would be built to the latest CALGreen Code and would be more energy efficient than the existing structures at the site and would not conflict with or obstruct a state or local plan for renewable energy. For these reasons, the proposed Project would not result in the wasteful, inefficient, or unnecessary use of energy resources. Impacts would be less than significant and no mitigation is required.

LESS THAN SIGNIFICANT IMPACT

Cumulative Impacts. The SPA affects only building heights within the SPA Sub-area and will not change FAR or total building square footage of new development. Similarly the Development Project does not increase overall development on the Project sites. Development within the SPA, including the proposed Project, will comply with applicable regulations and plans regarding energy conservation. Therefore, the SPA and the Development Project will not contribute to significant cumulative impacts regarding energy.

[4] According to the Board of Equalization (BOE), statewide taxable sales figures indicate a total of 15,365 million gallons of gasoline fuel were sold in 2019 (CEC, 2021). Although exact estimates are not available by County, retail fuel outlet survey data indicates Los Angeles County accounted for approximately 23% of total statewide gasoline sales (CEC, 2020). Based on CARB's EMFAC2017 web database, the overall average fuel economy for all gasoline vehicles in the Basin in year 2020 would be 22.7 miles per gallon.

7 Geology and Soils

	Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less than Significant Impact	No Impact
Would the project:				
a. Directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving:				
1. Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault?	☐	☐	■	☐
2. Strong seismic ground shaking?	☐	■	☐	☐
3. Seismic-related ground failure, including liquefaction?	☐	☐	■	☐
4. Landslides?	☐	☐	■	☐
b. Result in substantial soil erosion or the loss of topsoil?	☐	☐	■	☐
c. Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction, or collapse?	☐	☐	■	☐
d. Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial direct or indirect risks to life or property?	☐	☐	■	☐
e. Have soils incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems where sewers are not available for the disposal of wastewater?	☐	☐	☐	■
f. Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?	☐	■	☐	☐

Southern California contains many earthquake faults as well as localized geologic and soil constraints. New development must be assessed to assure these various earth-related constraints do not affect human health and safety. The area may also contain fossils or other paleontological resources that can be impacted by Project grading in native soils.

a.1. Would the project directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault?

The Alquist-Priolo Earthquake Fault Zoning Act of 1972 serves to mitigate the hazard of surface faulting to structures for human occupancy and is intended to prevent the construction of buildings used for human occupancy on the surface trace of active faults. The Act requires the State Geologist to establish regulatory zones, known as Alquist-Priolo Earthquake Fault Zones, around the surface traces of active faults and to issue maps delineating these zones. If an active fault is found, a structure for human occupancy cannot be placed over the trace of the fault and must be set back from the fault (typically 50 feet). The Act defines active faults as those that have experienced surface displacement or movement during the last 11,000 years. The City is located in a seismically active region in Southern California near several fault systems.

Both the GP EIR and the SHSP EIR indicate there are no active faults beneath or adjacent to the SHSP or the Project Sites. Therefore, there are no impacts and no programmatic mitigation required.

The Development Sites are not underlain by or adjacent to any active faults or fault zones as outlined in the SHSP EIR. The Project is located in the northern portion of the Peninsular Ranges geomorphic province which is characterized by many active, potentially active, and inactive faults, although the site is not within a state-designated Alquist-Priolo Earthquake Fault Zone for surface fault rupture hazards (CGS, 2017). In addition, no active or potentially active faults with the potential for surface fault rupture are known to pass directly beneath the Development Sites. Therefore, there are no impacts and no mitigation is required.

NO IMPACT

a.2. Would the project directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving strong seismic ground shaking?

Ground shaking is the primary cause of structural damage during an earthquake. Magnitude, duration, and vibration frequency from earthquakes would vary greatly, depending on the fault and its distance from the Project Site.

The SPA allows for up to ten feet of additional building height within the SPA Subarea. The SPA Sub-area could experience moderate to strong ground shaking. All future development within the SHSP area must comply with the stringent seismic design provisions of the latest California State Building Code, as adopted by the City and be required to document seismic compliance with a geotechnical study which will addresses specific project design on a specific site. This compliance will help reduce potential programmatic risks of property loss or hazards to occupants relative to the SPA to a less than significant level and no programmatic mitigation is required.

The Development Sites, as part of the SHSP area, could experience strong seismic ground shaking and related effects in the event of an earthquake on one of the identified active or potentially active faults in the region (SHSP DEIR Table 9-1). The Project Site is underlain by Pleistocene age older dune sand deposits, referred to as the El Segundo Sand Hills, which consist primarily of dense, poorly graded sand (p. 4, GWI 2017)(Appendix F). The Project geotech study estimates the Development Sites will be subject to a peak ground acceleration[5] of 0.6g (p. 6, GWI 2017). Due to the risks associated with strong ground shaking, implementation of **Mitigation Measure GEO-1** is recommended.

MM GEO-1 Prior to issuance of any grading or building permits, the applicant shall demonstrate that all improvements and construction-related activities comply with the recommendations outlined in the Project geotechnical report (CWI 2017). This measure applies to all potential geologic and soil constraints that could affect one or both sites, including but not limited to seismic ground failure, strong seismic shaking, differential settlement, liquefaction, lateral spreading, and subsidence, and landslides/slope stability as appropriate. This measure shall be implemented to the satisfaction of the City Engineer.

The Project will implement Mitigation Measure MM GEO-1 to ensure potential risks (impacts) to public health and safety, as well as building structural safety, from strong ground shaking will be reduced to less than significant levels.

LESS THAN SIGNIFICANT WITH MITIGATION INCORPORATED

a.3. Would the project directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving seismic-related ground failure, including liquefaction?

a.4. Would the project directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving landslides?

(a.3 - a.4) Liquefaction is the transformation of a deposit of soil from a solid state to a liquefied state, typically during prolonged ground shaking events such as earthquakes, and the soil particles loose cohesion and allow both horizontal and vertical movement. The Project Site is characterized by relatively flat topography and no unusual geographic features exist on the site or in the vicinity.

Future buildings under the SPA may be up to ten feet taller than currently allowed within the SPA Sub-area. However, any future development would still be subject to the requirements of the SHSP, state building code seismic guidelines, and the City's development review process regarding geologic and soil constraints. Therefore, the proposed SPA would have less than significant impacts relative to ground rupture and strong seismic shaking and no programmatic mitigation is required.

The Project Site is part of the SHSP and new projects must prepare a site-specific geotechnical report to identify potential geologic and soil constraints for proposed development. A geotechnical study for the Development Sites was prepared by Geocon West in 2017 (Appendix F). The report evaluated potential risks from seismic ground failure, strong seismic shaking, differential settlement, liquefaction, lateral spreading, and subsidence, and landslides.

[5] 0.6g = 60% the force of gravity exerted horizontally

The State of California Seismic Hazard Zone Map for the Venice Quadrangle (CDMG 1999), which covers the Project Site, indicates it is not located in an area designated as having a potential for liquefaction. In addition, the County of Los Angeles Seismic Safety Element (Leighton 1990) indicates that the sites are not located in an area having a potential for liquefaction because the area is underlain by dense Pleistocene age dune sand deposits that are not prone to liquefaction. Also, the historic high groundwater levels in the area are greater than 40 feet beneath the ground surface. Based on this information, the Project geotechnical report concluded the potential for liquefaction and associated ground deformation beneath the sites was very low (p. 8, CWI 2017).

According to the County of Los Angeles Safety Element (Leighton 1990), the Development Sites are not within a "Hillside Area" or an area identified as having a potential for slope instability. Additionally, the Project Site is not within an area identified as having a potential for seismic slope instability (CDMG 1999). There are no known landslides near the Development Sites, therefore, the potential for slope stability hazards to adversely affect the proposed development is considered low (p. 8, CWI 2017).

LESS THAN SIGNIFICANT IMPACTLESS THAN SIGNIFICANT IMPACT

b. Would the project result in substantial soil erosion or the loss of topsoil?

Unstable soil conditions could develop if exposed soils experience rain and wind erosion or disturbance by construction equipment. The Project would be subject to the requirements of a municipal National Pollutant Discharge Elimination System (NPDES) Permit implemented through a Standard Urban Stormwater Mitigation Plan (SUSMP) and the City's Municipal Code. Both the Municipal Code and the SUSMP require application of erosion and sedimentation control best management practices (BMPs) during construction for proper water quality management. Erosion control BMPs are designed to prevent erosion, whereas sediment controls are designed to trap sediment before it can travel offsite. The Project is also required to comply with South Coast Air Quality Management District (SCAQMD) Rule 403 which would reduce the potential for wind erosion by requiring dust control measures during construction.

Future buildings under the SHSPA may be up to ten feet taller than currently allowed within the SPA Sub-area. However, any future development would still be subject to state and local water quality and erosion control requirements. Therefore, the proposed SHSPA would have less than significant impacts relative to erosion or loss of topsoil and no programmatic mitigation is required.

For construction of the Development Sites, the Project applicant would be subject to the erosion control requirements of the Municipal NPDES Permit and the City's Municipal Code. Specifically, construction runoff is regulated by the NPDES Construction General Permit which requires identification of a variety of water quality control BMPs to be specified on construction plans and implemented throughout construction. Such BMP requirements may include, but would not be limited to, containing stormwater runoff on-site during rain events, limiting grading during the wet season, covering slopes susceptible to erosion, and retaining non-stormwater runoff, such as runoff from vehicle washing, on site. Through these existing, mandatory regulatory compliance measures, potential water quality impacts during construction would be avoided or reduced to less than significant levels and would avoid conflicts with water quality standards established by the Regional Water Quality Control Board.

In addition, long-term erosion-related impacts could result from operation of the completed Project. While the Project would generate stormwater runoff during Project operation, the proposed increased landscaping and infiltration design would reduce the volume of runoff compared with the existing Project site since the existing site is fully developed with impervious surfaces and minimal landscaping. Further, the Project would be required to have a stormwater management system that is designed to comply with the City's Low Impact Development (LID) requirements which state that the first flush (resulting from the 85th percentile annual rainstorm) which often contains sediment would need to be infiltrated in the soils via infiltration wells, captured in a cistern and treated for on-site re-use, or filtered through bio-retention planters and released. The Project proposes several onsite dry wells to accomplish this runoff treatment requirement.

Like any development within the SHSP, the proposed Project will be required to implement standard erosion control measures (ECMs) during both construction and operation, as documented in the Hydrology and LID studies prepared for the Project by Brandow and Johnston in 2018 and 2020 (Appendix G). To document compliance with various state, regional, and local water quality regulations, the Project is required to document how it will control short-term erosion during construction with a Storm Water Pollution Prevention Plan (SWPPP). In addition, the Project must comply with Municipal Code Section 5-4-9, Construction Activity Stormwater Measures which include BMPs as outlined in the Project water quality studies (Appendix G). Finally, the Project must document how it will control long-term erosion or water pollution during operation through implementation of a Water Quality Management Plan (WQMP). With these actions, the Project will have less than significant impacts related to erosion with implementation of standard regulatory compliance and no mitigation is required.

LESS THAN SIGNIFICANT IMPACT

c. Would the project be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction, or collapse?

The Project Site has a relatively flat topography with no hillsides onsite or in the surrounding area. Further, the Project site is not located on a cliff, mountainside, bluff, or other geographic feature with stability concerns.

Future buildings under the SHSPA may be up to ten feet taller within the SPA Sub-area, but any future development would still be subject to the requirements of the SHSP and the City's development review process regarding geologic and soil constraints. Therefore, the proposed SPA would have less than significant impacts relative to unstable geologic or soil conditions and no programmatic mitigation is required.

The Development Sites are within the SHSP and the SHSP EIR indicated the SHSP would have no constraints relative to unstable geologic units. The site-specific geotechnical report considered the potential risks to the sites from landslides, lateral spreading, subsidence, liquefaction, or collapse to be relatively low (CWI 2017). Therefore, the proposed Project would have less than significant impacts relative to unstable geologic or soil conditions and no mitigation is required.

LESS THAN SIGNIFICANT IMPACT

d. Would the project be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial direct or indirect risks to life or property?

Future buildings under the SHSPA may be up to ten feet taller than currently allowed within the SPA Sub-area. However, any future development would still be subject to the requirements of the Uniform Building Code regarding foundation design and soil stability, and the City's General Plan[6] and development review process regarding geologic and soil constraints. With implementation of regulatory compliance and General Plan Safety Element Goal PS2, future development under the proposed SPA would have less than significant impacts relative to expansive soils and no programmatic mitigation is required.

The Project-specific geotechnical report for the Development Sites stated that…"based on the predominantly granular nature of the soils encountered during site exploration, the soils are considered to be "non-expansive" (p. 13, CWI 2017). Impacts will be less than significant and no mitigation is required.

LESS THAN SIGNIFICANT IMPACT

e. Have soils incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems where sewers are not available for the disposal of wastewater?

Future buildings under the SHSPA may be up to ten feet taller than currently allowed within the SPA Sub-area, but any future development would still be subject to the requirements of the SHSP and the City's development review process regarding geologic and soil constraints. In addition, the SHSP requires all new development to connect to the local sewer system. Therefore, the proposed SHSPA would have no impacts relative to septic or alternative wastewater systems and no programmatic mitigation is required.

The Development Sites will connect to the existing sewer system and so their development would also have no impacts related to septic tanks and soil limitations. The development plans for the Project indicate both sites will be connected to the local sewer system so there are no impacts relative to soil conditions and septic or alternative wastewater systems (Appendix A).

NO IMPACT

f. Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?

The Project Site does not contain any unique geological features or formations and it has been highly disturbed so the potential for finding paleontological resources (fossil materials) is considered low. Future buildings under the SPA may be up to ten feet taller than currently allowed within the SPA Sub-area, but any future development would still be subject to SHSP EIR Mitigation Measures CUL MM 8-2 and CUL MM 8-3 which require monitoring in the event paleontological resources are found during grading. Therefore, the proposed SPA would have no impacts relative to paleontological resources and no mitigation is required.

Regarding the Development Sites, the SHSP EIR stated there were no indications of unique paleontological resources within the SHSP area but it was possible that subsurface native soils could contain fossilized remains. Previous development activity has disturbed soils,

[6] Safety Element Goal PS2 with Program PS-2.1A and Policies PS2-2 and PS2.2A

and only grading that extends deeper than prior disturbance is likely to encounter fossilized resources. Contact with such resources during construction activities could result in significant impacts. The Development Sites are within the SHSP and implementation of Mitigation Measures CUL MM 8-2 and CUL MM 8-3 from the SHSP EIR would reduce potential impacts of any grading associated with developing the Development Sites to less than significant levels (as outlined in sub-section 5.b and as shown below).

CUL MM 8-2 Prior to the commencement of grading or demolition of subsurface structures, a professional archaeologist who meets U.S. Secretary of the Interior's Professional Qualifications and Standards, shall conduct a brief archaeological and paleontological informational session for construction personnel. The training session may consist of an in-person meeting or a written handout describing: (1) how to identify archaeological and paleontological resources that may be encountered during earth-moving activities and (2) the procedures to be followed in such an event, including contact information for the appropriate entities if archaeological or paleontological resources are discovered.

CUL MM 8-3 In the event that archaeological or paleontological resources are unearthed during ground-disturbing activities, the ground-disturbing activities shall be halted or diverted away from the vicinity of the find so that the find can be evaluated. A buffer area of at least 50 feet shall be established around the find, where construction activities will not be allowed to continue until a qualified archaeologist or paleontologist has examined the newly discovered artifact(s) and has evaluated the area of the find. Work shall be allowed to continue outside the buffer area. If the archaeologist identifies the find as a tribal cultural resource or suspects it to be a tribal cultural resource, the City will contact the Native American Heritage Commission (NAHC) to report the discovery, and will contact local Native American tribal representatives as directed by the NAHC. Should the newly discovered artifact(s) be determined to be a tribal cultural resource, Native American construction monitoring will be initiated. The City shall coordinate with the archaeologist and tribal representative(s) to develop an appropriate treatment plan for the resources.

With implementation of EIR Mitigation Measures CUL MM 8-2 and CUL MM 8-3, potential impacts of the Project on paleontological resources will be reduced to less than significant levels.

LESS THAN SIGNIFICANT WITH MITIGATION INCORPORATED

Cumulative Impacts. The SPA only increases building heights and will not increase FAR or the total amount of development expected within the SPA Sub-area, nor will the Development Project increase FAR or the total amount of development on the Project site. The SPA and Development Project would therefore not increase potential risks to new development from geologic or soil constraints. All potential geological and soil-related impacts can be reduced to less than significant levels by careful design and regulatory compliance, and project-specific mitigation when needed similar to that recommended for the Development Project. Therefore, the SPA and the Development Project will not make any significant contributions to cumulatively considerable regional impacts related to geology, soils, or paleontological resources.

8 Greenhouse Gas Emissions

	Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less than Significant Impact	No Impact
Would the project:				
a. Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?	☐	☐	■	☐
b. Conflict with an applicable plan, policy, or regulation adopted for the purpose of reducing the emissions of greenhouse gases?	☐	■	☐	☐

In recent years concerns have been raised about greenhouse gas (GHG) emissions like carbon dioxide and their influence on global warming and climate change. New development must be assessed to determine if its GHG emissions exceed established thresholds and if so what measures must implement to help incrementally reduce its GHG emissions.

a. Would the project generate Greenhouse Gas emissions, either directly or indirectly, that may have a significant impact on the environment?

A detailed GHG assessment was prepared for the Project (MIG 2021b)(Appendix B) in August 2021. The proposed SPA would allow for a ten-foot increase in maximum permissible building heights within the SPA Sub-area. However, individual projects would still be required to comply with CEQA, federal and state laws regarding energy use and conservation (and therefore air quality and GHG), state laws and regional regulations regarding air quality, and the City's development review process. Therefore, the SPA will have less than significant impacts regarding greenhouse gas emissions and no programmatic mitigation is required.

The Project would generate GHG emission from both short-term construction and long-term operational activities. A detailed GHG emissions assessment was prepared for the Project (MIG 2021b)(Appendix B). The assessment used the California Emissions Estimation Model (CalEEMod V. 2020.4.0) program recommended by SCAQMD to estimate construction and operational emissions using the same default assumptions and Project-specific variables applied to the air quality emissions estimates. Construction activities would cease to emit GHG upon completion, unlike operational emissions that would be continuous year after year. The SCAQMD recommends amortizing construction GHG emissions over a 30-year period and including with operational emissions estimates. This normalizes construction emissions so that they can be grouped with operational emissions and compared to appropriate thresholds, plans, etc. Once operational, the proposed Project would generate GHG emissions from area, stationary, mobile, water/wastewater, and solid waste sources.

Construction activities would generate GHG emissions primarily from equipment fuel combustion as well as worker, vendor, and haul trips to and from the Project site during demolition, site preparation, grading, building construction, paving, and architectural coating

activities. Construction activities would cease to emit GHG upon completion, unlike operational emissions that would be continuous year after year. The SCAQMD recommends amortizing construction GHG emissions over a 30-year period and including with operational emissions estimates. This normalizes construction emissions so that they can be combined with operational emissions and compared to appropriate thresholds, plans, etc. Once operational, the Project would generate GHG emissions from area, stationary, mobile, water/wastewater, and solid waste sources. The proposed Project's total operational GHG emissions are estimated to be 1,256 metric tons of CO_2 equivalents ($MTCO_2e$) per year (Table 6, MIG 2021a).

The Project's GHG Emissions Assessment concluded that the potential increase[7] in GHG emissions would be below both of the SCAQMD's recommended GHG emissions thresholds - the Tier 3 general land use threshold of 3,000 $MTCO_2e$ and the Tier 3 commercial use threshold of 1,400 $MTCO_2e$. In addition, the Project's GHG emissions would also be below an adjusted Project-specific GHG emissions goal of 1,800 $MTCO_2e$ per year which takes into account post 2020 GHG emissions targets towards which the state is currently working[8]. This emissions estimate is a "worst case" because it does not take into account any emission reductions associated with VMT mitigation (MM VMT-1 through VMT-6) included in the VMT memorandum prepared for the Project (Translutions 2021) as outlined in sub-section 17, Transportation. With the six recommended VMT mitigation measures, GHG emissions from the North Site (net increase of 556 $MTCO_2e$) and the South Site (net increase of 560 $MTCO_2e$) would total 1,116 $MTCO_2e$, or approximately 8% lower than the worst-case emissions estimate of 1,256 $MTCO_2e$. Therefore, the Project would not generate GHG emissions that exceed SCAQMD CEQA thresholds or otherwise result in a significant impact on the environment. Impacts are less than significant and no mitigation is required.

LESS THAN SIGNIFICANT IMPACT

b. Would the project conflict with an applicable plan, policy, or regulation adopted for the purpose of reducing the emissions of greenhouse gases?

CEQA Guidelines Section 15064(h)(3) allows a lead agency to make a finding of non-significance for GHG emissions if a project complies with a program and/or other regulatory schemes to reduce GHG emissions. The City adopted the City of El Segundo Climate Action Plan (El Segundo CAP) in 2017 to help implement compliance with the City's GHG emissions reduction goals as well as State and federal regulations that include Assembly Bill (AB) 32 (Chapter 488, Statutes of 2006), Senate Bill (SB) 32 (Chapter 249, Statutes of 2016), and the 2017 Climate Change Scoping Plan Update GHG emission reduction goals. The El Segundo CAP was prepared in accordance with Section 15183.5(b) of the State CEQA Guidelines for qualified plans to support tiering for project level analyses, and states "Within the CEQA process, a qualified CAP framework offers the ability to streamline future CEQA greenhouse gas analyses by being able to tier off the climate action plan."

7 Net increase which takes into account "new" emissions from the Project minus emissions from the existing onsite uses

8 The 1,800 $MTCO_2e$ per year goal was developed by taking the SCAQMD's Tier 3 threshold of 3,000 $MTCO_2e$ per year, which was the threshold to reduce emissions back to 1990 levels, and reducing it by 40 percent (3,000 $MTCO_2e$/yr * (1 - 0.4) = 1,800 $MTCO_2e$/yr). This reduction is consistent with the GHG reductions required by year 2025 to meet GHG reductions required under Senate Bill 32 (to reduce GHG emissions to levels 40% below 1990 levels by 2030). This linear reduction approach oversimplifies the threshold development process. The City is not adopting nor proposing to use 1,800 $MTCO_2e$ as a CEQA GHG threshold for general use; rather, it is only intended for to provide additional context and information on the magnitude of this proposed Project's GHG emissions.

The proposed SPA would allow for a ten-foot increase in maximum permissible building heights within the SPA Sub-area. However, individual projects would still be required to comply with CEQA, federal and state laws regarding energy use and conservation (and therefore air quality and GHG), state laws and regional regulations regarding air quality, and the City's development review process. In addition, the SHSP EIR found the SHSP would not conflict with the California Air Resources Board (CARB) Scoping Plan, the Southern California Association of Governments (SCAG) 2020-2045 Regional Transportation Plan (RTP)/Sustainable Community Strategy (SCS), now called "Connect SoCal", or the City's EECAP. Therefore, the SPA will have less than significant impacts regarding consistency with applicable GHG plans and no programmatic mitigation is required.

Since the Project is a part of SHSP, its impacts would also be less than significant with implementation of the following mitigation measures from the EECAP recommended in the SHSP EIR.

EECAP 4.1 *Encourage or Require Energy Efficiency Standards Exceeding Title 24.* This measure will develop City staff to be resources in encouraging and implementing energy efficiency beyond that required by current Title 24 Standards.

EECAP 5.2 *Promote Water Efficiency Standards Exceeding SB X7-7.* In addition to SB X7-7, more actions are being studied or have been taken to exceed water efficiency standards. These efforts include education and outreach practices that could be combined with residential and commercial EECAP actions that emphasize the reuse of recycled/gray water and promote harvesting rainwater.

With implementation of Mitigation Measures EECAP 4.1 and 5.2, the Project is consistent with applicable plans, policies, or regulations adopted for the purpose of reducing the emissions of greenhouse gases. Impacts will be less than significant.

LESS THAN SIGNIFICANT WITH MITIGATION INCORPORATED

Cumulative Impacts. New development will result in the emission of greenhouse gases (GHGs) in the future. However, the SPA only increases building heights within the SPA Sub-area and would not result in increased FAR or total square footage of new development over that planned in the SHSP. In addition, the GHG study for the Development Project indicated it would generate less than significant levels of GHGs due to its type, size, project design and with implementation of GHG mitigation from the SHSP. The study also indicated the Project will be consistent with GHG regulatory plans. Therefore, the SPA and Development Project will not make significant contributions to regional GHG emissions and are consistent with GHG regulatory plans.

9 Hazards and Hazardous Materials

	Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less than Significant Impact	No Impact
Would the project:				
a. Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?	☐	☐	■	☐
b. Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?	☐	■	☐	☐
c. Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within 0.25 mile of an existing or proposed school?	☐	☐	■	☐
d. Be located on a site that is included on a list of hazardous material sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?	☐	■	☐	☐
e. For a project located in an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard or excessive noise for people residing or working in the project area?	☐	☐	☐	■
f. Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?	☐	☐	■	☐
g. Expose people or structures, either directly or indirectly, to a significant risk of loss, injury, or death involving wildland fires?	☐	☐	☐	■

The Project Site is situated in the highly urbanized Los Angeles Basin in which a vast array of hazardous materials are handled, stored, transported, and utilized on a daily basis, especially in medium and heavy industrial processes. New development must be evaluated to determine if it will affect or be affected by a variety of local hazards, including hazardous materials, either onsite or in the surrounding area. If hazards would threaten public health or safety, the development must implement appropriate measures to reduce potential risks.

a. Would the project create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?

In office settings, small amounts of commercially available hazardous materials may be used for regular cleaning and maintenance activities which would neither require the storage, use, or disposal of substantial amounts of hazardous materials, nor generate significant quantities of hazardous waste. This usage would not require the storage, use, transport, or disposal of quantities of hazardous substances that would be subject to any special handling or permitting requirements.

The SHSP does not directly address hazardous materials but the City's CEQA and planning review processes for future development within the SHSP will identify any potential issues regarding hazardous materials and/or contamination and recommend appropriate site- and project-specific mitigation. Therefore, the SPA will have less than significant impacts in this regard and no programmatic mitigation is required with standard regulatory compliance.

The Project is a part of the SHSP and proposes office and commercial-related uses consistent with the SHSP. The Project will likely utilize a range of commercial-grade hazardous materials for routine maintenance, manufacturing, cleaning, etc. These are likely to include paints, cleaning agents, etc. However, local businesses and the transportation of such materials must comply with various Federal and State regulations for the safe management of such materials. Although El Segundo Boulevard just south of the site is a designated truck route in the City, it is unlikely that transportation of hazardous materials along this route would significantly impact uses on the Development Sites. The amount and type of hazardous materials that future uses on these sites would store, transport, or use would be minimal, so impacts involving the routine transport, use, or disposal of hazardous materials would be less than significant and no mitigation needed with standard regulatory compliance.

LESS THAN SIGNIFICANT IMPACT

b. Would the project create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?

Based on the age of the buildings, the prior uses, and proposed construction activities, the Project has the potential to result in accidental releases of hazardous substances which are addressed in the following subsections.

Future buildings under the SHSPA may be up to ten feet taller than currently allowed within the SPA Sub-area, but any future development would still be subject to CEQA and the City's development review process which would identify potential or past contamination on a particular development site and require remediation prior to or in concert with grading and development. Therefore, the proposed SHSPA would have less than significant impacts relative to reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment and no programmatic mitigation is required.

Any grading of the Development Sites may result in "upset conditions" if onsite soils contain hazardous materials. The South Site has been determined to have no past or current issues regarding contamination by hazardous materials. However, the northeastern portion of the North Site had experienced past soil and groundwater contamination by tetrachloroethene (PCE) from offsite sources and a source associated with the historical operations of the Chemical Milling International Corporation (CMIC) from 1959-89 and more recently by International Rectifier (IR) that formerly occupied a site across the street. The North Site has been subject to a variety of testing and remediation procedures for PCE contamination from 2015 to 2021. This site had soil, soil vaper, and groundwater contamination in the past and still contains a monitoring grid that will be removed as part of the proposed Project based on feedback from the State Department of Toxic Substances Control (DTSC).

According to the Technical Memorandum prepared by SCS Engineers in March 2021 (Appendix H), the North Site has been fully characterized for hazardous material contamination and has been fully remediated using Soil Vapor Extraction (SVE). As a result of a "Data Gap Investigation" in 2017-2018, remediation of the southern half of the Property was determined by the state Department of Toxic Substances Control (DTSC) to be complete and indoor air sampling was conducted to assess the potential for vapor intrusion into structures on the northern half of the North Site (SCS 2017). Four rounds of indoor air sampling (two "summer" and two "winter" events) were conducted and there was no evidence of significant vapor intrusion in those buildings (p. 6, SCS 2021).

Local groundwater was also sampled from 2017 to 2019 and the highest concentrations of PCE and its degradation compounds (trichloroethene and cis-1,2-dichloroethene) were consistently detected in an off-site, cross-gradient well installed as part of the Data Gap Investigation and which is located directly downgradient of historical PCE releases from the IR facility (SCS 2019). These releases have contaminated the groundwater beneath the Project site.

A health risk assessment (HRA) was conducted in 2020 and found that contaminants were well within their respective "risk management ranges" and the resulting cancer risk estimates were within the EPA's risk management range (SCS 2020). The North Site is currently zoned commercial/industrial use and the technical memorandum recommended recordation of a Land Use Covenant (LUC) for the property. The applicant and DTSC entered into a LUC dated November 29, 2021 (Appendix H) which specifically restricts uses of and activities that can occur on the property (e.g., no residences or residential occupants, no wells dug, etc.). To further minimize the potential for vapors to migrate from the subsurface into indoor air spaces, the technical memorandum recommended that the vertical and lateral well network for the vapor extraction system be removed and properly decommissioned and the groundwater monitoring wells and semi-permanent vapor probes on the property also be abandoned (p. 8, SCS 2021).

It should be noted that governmental database records indicate there is currently a Cortese site southwest of Grand and Kansas (IRC) but records show it (the Project site) has already been remediated. DTSC recommended several actions that still need to occur relative to the North Site which have been incorporated into **Mitigation Measures HAZ-1 and HAZ-2**.

In June 2021, the applicant contacted DTSC regarding the proposed caretaker units on the North Site in a commercial/industrial zone. In an email dated July 1, 2021, DTSC indicated they had evaluated the potential for human health risks associated with the planned caretaker units. Based on consultation with the DRSC Toxicologist, DTSC approved the

caretaker units. Nonetheless, the caretaker units were subsequently removed from the development application for unrelated reasons. However, the email also asked for a Soils Management Plan (see **MM HAZ-3** below) which would be a final condition of approval from DTSC for the Project Parcel E property (1330 E. Franklin Street).

The Phase I Environmental Site Assessments (ESAs) prepared for both Development Sites determined there may be a potential hazard for asbestos-containing materials (ACMs) which should be fully identified and remediated as appropriate prior to or in conjunction with building construction and reconstruction. The ESAs also recommended that operation and maintenance programs (O&MPs) for ACMs be put in place until demolition or interior reconstruction of the onsite buildings could occur (p. 6, A&W 2014a+b)(Appendix H). The objective of the O&EMPs was to implement a practical management approach to controlling identified ACMs within the subject properties, cleanup existing contamination, minimize future fiber release by controlling disturbance of ACMs, and monitor ACM conditions until they are removed from the two sites (see **MMM HAZ-3** below).

The following measures are recommended to implement the final stages of site characterization and remediation identified in the Data Gap Investigation for the North Site:

MM HAZ-1 Prior to issuance of a Certificate of Occupancy for the North Site (1330 E. Franklin Street), the applicant shall remove and properly decommission the vertical and lateral well network of the former vapor extraction system including abandonment of any groundwater monitoring wells and semi-permanent vapor probes on the property. This measure shall be implemented to the satisfaction of the City with input and regulatory oversight and written signoff by DTSC.

MM HAZ-2 Prior to issuance of a grading permit for the North Site (1330 E. Franklin Street), the applicant shall prepare and process a Soils Management Plan through the state Department of Toxic Substances Control (DTSC) for review and approval. Prior to issuance of a building permit, the applicant shall provide written confirmation from DTSC to the City that the Soil Management Plan has been implemented as approved.

MM HAZ-3 Prior to issuance of any demolition or building permits for South Site (1475 E. El Segundo Boulevard) or North Site (1330 E. Franklin Street), the applicant shall identify and effectively remediate any asbestos-containing materials (ACMs) associated with the onsite buildings. This remediation may be accomplished by either in-place encapsulation or removal as appropriate. The applicant shall retain a qualified asbestos contractor to conduct this work and shall provide the City with a final report within 45 days of completion of all remediation activities, including appropriate documentation of disposal of any onsite ACMs at an approved landfill. This measure shall be implemented to the satisfaction of the City Planning Department.

With implementation of Mitigation Measures HAZ-1 through HAZ-3, the Project's impacts relative to hazards to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment would be reduced to less than significant levels.

LESS THAN SIGNIFICANT WITH MITIGATION INCORPORATED

c. Would the project emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within 0.25 mile of an existing or proposed school?

Prior activities on the Project Site may require clean-up and remediation efforts the during the Project construction period as outlined in Section 9.b above. The potential treatment efforts would be temporary and limited to the Project site premises and therefore the risk of release and public exposure is very limited.

Future buildings under the SHSPA may be up to ten feet taller than currently allowed within the SPA Sub-area, but any future development would still be subject to CEQA and the City's development review process which would identify potential or past contamination on a particular development site within a quarter-mile of the El Segundo Middle School and require remediation prior to or in concert with grading and development. Therefore, the proposed SHSPA would have less than significant impacts relative to hazardous emissions nears schools, and no programmatic mitigation is required.

Both Development Sites are within a quarter mile of El Segundo Middle School which is just north of E. Grand Avenue. on Center Street. The air quality assessment for the Project (MIG 2021a, Appendix B) included a health risk evaluation of Project grading and construction emissions and determined they would be well below the Local Significance Thresholds (LSTs) established by the South Coast Air Quality Management District (SCAQMD). The primary pollutants of concern during grading and any excavation of the site would be particulate matter (i.e., dust or PM) especially fine particulates ($PM_{2.5}$) which due to their small size can travel some distance away from the construction site depending on local conditions. However, standard dust control measures required by the SCAQMD under its Rule 403 are intended to limit the potential dispersion of particulates from construction sites, and the application of standard measures such as watering grading areas, covering trucks hauling soil, etc. will help reduce potential particulate dispersion from the Developments Sites as documented in Section 3, *Air Quality*.

As outlined in Section 9.b above, the North Site has experienced soil contamination in the past and Mitigation Measure HAZ-3 requires the applicant to prepare and process a Soils Management Plan through the state Department of Toxic Substances Control to assure there will be no significant on- or offsite impacts related to release of any hazardous materials during grading of that site.

Compliance with established regulatory requirements regarding remediation of the North Site and the fact the Project is only proposing office and commercial related uses means that the Project will have less than significant impacts related to emitting hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within a quarter mile of school and no mitigation is required.

LESS THAN SIGNIFICANT IMPACT

d. Would the project be located on a site that is included on a list of hazardous material sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?

Future buildings under the SHSPA may be up to ten feet taller than currently allowed within the SPA Sub-area, but any future development would still be subject to CEQA and the City's development review process which would identify potential or past contamination on a particular development site and require remediation prior to or in concert with grading and development. Therefore, the proposed SHSPA would have less than significant impacts relative to being on a list of hazardous material sites compiled pursuant to Government Code Section 65962.5 and no programmatic mitigation is required.

Past contamination on the North Site is described in detail in sub-section 9.b above. In addition to ongoing regulatory compliance, impacts related to listed hazmat sites will be reduced to less than significant levels by implementation of **Mitigation Measures MM HAZ-1 through HAZ-3** as described in sub-section 9.b above.

LESS THAN SIGNIFICANT WITH MITIGATION INCORPORATED

e. For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard or excessive noise for people residing or working in the project area?

In compliance with legislative requirements, the Los Angeles County Airport Land Use Commission (ALUC) prepared the Los Angeles County Airport Land Use Plan (ALUP) last revised on December 1, 2004. The ALUP provides for the orderly expansion of Los Angeles County's public use airports and the areas surrounding them. It is also intended to provide for the adoption of land use measures that minimize the public's exposure to excessive noise and safety hazards. In formulating the ALUP, the Los Angeles County ALUC established provisions for safety, noise insulation, and the regulation of building height in areas adjacent to each of the county's public airports.

The SHSP EIR indicated the SHSP was outside the Airport Influence Area (AIA) for the Los Angeles International Airport (LAX) so the SPA sites are not within the Comprehensive Land Use Plan (CLUP) for LAX. Therefore, the SPA would not interfere with any airport land use plan or otherwise create an airport-related safety hazard and thus there are no impacts and no programmatic mitigation is required.

The Project is part of the SHSP so similarly it would not interfere with any airport land use plans or activities. There will be no impacts and no mitigation is required.

NO IMPACT

f. Would the project impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?

The El Segundo Standardized Emergency Management System (SEMS) Emergency Operations Plan (EOP) addresses the City's planned response to extraordinary emergency situations and incorporates the Emergency Operations Center (EOC), phone systems, and other infrastructure changes that occurred since the first edition of the plan was created. The objective of the EOP is to centralize coordination of all necessary personnel and facilities of the City into an organization capable of responding to any emergency. The EOP addresses the four fundamental elements of comprehensive emergency management: Mitigation; Preparedness; Response; and Recovery.

Future buildings under the SHSPA may be up to ten feet taller than currently allowed within the SPA Sub-area, but the SPA does not change the location of planned uses so access and emergency planning needs of future development would be similar to that under the current SHSP. The SHSP EIR stated that implementation of the SHSP would not interfere with the City's adopted Emergency Operations Plan (EOP) because SHSP projects would be reviewed to ensure that new development would not create barriers to evacuation plans. In addition, the Fire Department and Police Department would be involved in any plans to convert existing two-way roads to one-way roads and implement angled parking to ensure emergency access needs can be met. Therefore, impacts of the SPA would be less than significant and no programmatic mitigation is required.

The Development Sites are located within the SHSP with access off of El Segundo Boulevard (a major arterial) with good access from three secondary streets (Kansas Avenue, E. Franklin Avenue, and Oregon Street). The two site plans indicate they will have adequate emergency access (previous Exhibits 8 and 9). Therefore, the Project will have less than significant impacts related to emergency plans and evacuation and no mitigation is required.

LESS THAN SIGNIFICANT IMPACT

g. Would the project expose people or structures, either directly or indirectly, to a significant risk of loss, injury, or death involving wildland fires?

The Project Site is located in a highly urbanized area where there are no wildlands, so development of the proposed Project would not expose buildings or people to wildland fire hazards. Although this is not a wildfire prone area, the El Segundo Fire Department (ESFD) reviews development project site plans regarding fire protection and emergency access.

Future buildings under the SHSPA may be up to ten feet taller than currently allowed within the SPA Sub-area, but there are no wildland areas in or adjacent to the SHSP. The City is a highly urbanized area and no part lies within a Very High Fire Hazard Severity Zone. Therefore, the SPA will have no impacts to or from future development under the SHSPA related to wildland fires and no programmatic mitigation is required.

The two Development Sites are within the SHSP area and so they are not within a wildland fire risk area or a high or very high fire hazard severity zone, as outlined in the SHSP EIR. The ESFD has already reviewed and approved the site plans regarding fire protection and emergency access assuming compliance with their standard conditions of approval. Therefore, there would be no impacts and no mitigation is required.

NO IMPACT

Cumulative Impacts. The SHSP EIR indicated future development in the SHSP, which includes the SPA Sub-area, would have less than significant impacts relative to hazardous materials (hazmat) with regulatory compliance and remediation if necessary, based on appropriate characterization studies. Such studies on the Development Sites indicate the North Site was contaminated in the past and this Initial Study recommended appropriate mitigation with regulatory oversight from the state as necessary. With implementation of recommended mitigation and continued regulatory compliance, the Development Project will have less than significant impacts relative to hazmat issues. In these ways, the SPA and the Development Project will not make significant contributions to cumulative hazmat impacts.

10 Hydrology and Water Quality

	Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less than Significant Impact	No Impact
Would the project:				
a. Violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water quality?	☐	☐	■	☐
b. Substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin?	☐	☐	■	☐
c. Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would:				
(i) Result in substantial erosion or siltation on- or off-site;	☐	☐	■	☐
(ii) Substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or off-site;	☐	☐	■	☐
(iii) Create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff; or	☐	☐	■	☐
(iv) Impede or redirect flood flows?	☐	☐	■	☐
d. In flood hazard, tsunami, or seiche zones, risk release of pollutants due to project inundation?	☐	☐	■	☐
e. Conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan?	☐	☐	■	☐

The Project Site is near the Pacific Ocean and once contained natural drainages that are now improved and channelized. CEQA requires new development to be evaluated to determine if it would affect the quality or supply of surface or groundwater, natural drainage patterns, would be subject to flooding or erosion (that affects water quality), or be subject to other water-related hazards,

a. Would the project violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water quality?

Section 402 of the federal Clean Water Act requires National Pollutant Discharge Elimination System (NPDES) permits for stormwater discharges from storm drain systems to waters of the United States. The City is a co-permittee of the Los Angeles County storm drain system permit or "municipal permit" (Order No. R4-2012- 0175-A01; NPDES No. CAS004001), which was adopted November 8, 2012, and amended June 16, 2015, by the State Water Resources Control Board (WQ2015-0075). The proposed Project would be subject to the requirements of the Municipal NPDES Permit and the City's Municipal Code, which incorporates by reference the County of Los Angeles Low Impact Development (LID) Ordinance (Ordinance Number 2013- 0044). The Municipal Code requires application of erosion and sedimentation control Best Management Practices (BMPs) during construction for proper water quality management. Erosion control BMPs are designed to prevent erosion, whereas sediment controls are designed to trap sediment once it has been mobilized. BMPs must be designed to prevent erosion and construction pollutants from entering the City's storm drain and receiving waters.

As part of its normal project approval and construction oversight activities, the City monitors compliance with stormwater BMP requirements. The Los Angeles County Municipal Permit also requires that stormwater pollution prevention plans (SWPPPs) be prepared for all construction projects with disturbed areas of one acre or greater. The statewide NPDES Construction General permit maintained by the State Water Resources Control Board also requires a SWPPP for construction projects that involve one or more acres of land disturbance. The SWPPP is required to outline the best management practices that would be incorporated during construction. These BMPs would minimize construction-induced water pollutants by controlling erosion and sediment, establishing waste handling/disposal requirements, and providing non-stormwater management procedures.

Further, the Los Angeles Regional Water Quality Control Board (LARWQCB) prepares and maintains a basin plan which identifies narrative and numerical water quality objectives to protect all beneficial uses of the waters of that region. The basin plan strives to achieve the identified water quality objectives through implementation of Waste Discharge Requirements (WDRs) and by employing three strategies for addressing water quality issues: control of point source pollutants, control of nonpoint source pollutants, and remediation of existing contamination. The Project site is located in the Los Angeles region and is, therefore, covered under the Basin Plan for the Coastal Watersheds of Los Angeles and Ventura Counties (Basin Plan).

Future buildings under the SPA may be up to ten feet taller than currently allowed within the SPA Sub-area, but this will not significantly increase the amount of impervious surfaces that would be constructed within the SHSP area. The City is already a highly urbanized area and new development is subject to various state and local regulations regarding surface and groundwater quality. Therefore, the SPA will have less than significant impacts related to water quality standards, waste discharge requirements, or degradation of surface or groundwater quality and no programmatic mitigation is required.

Development of the proposed Project under the SHSP would be required to comply with the federal and state laws and regulations regarding both short- and long-term water quality of both surface and groundwater sources.

All future development under the SHSP would have to be consistent with the requirements of the Los Angeles Basin Plan and the Municipal Separate Storm Sewer System (MS4) General Permit as administered by the LARWQCB. To achieve consistency with those regional water quality control plans, the City requires implementation of BMPs consistent with the Los Angeles Countywide Stormwater Quality Management Plan (SQMP) standards. Future projects within the SHSP must prepare a Storm Water Pollution Prevention Plan (SWPPP) to control short-term construction-related water quality impacts and a Water Quality Management Plan (WQMP) to control long-term operational water quality impacts.

Projects that disturb one or more acres of soil, like the proposed Project, are required to obtain coverage under the General Construction Permit. Before the City issues grading permits, an applicant must prepare a SWPPP to control common pollutants such as suspended soil in storm water runoff from leaving a project construction area. The SWPPP would include an Erosion Control Plan (ECP) and other appropriate BMPs.

The SHSP EIR concluded that construction of projects within the SHSP would have less than significant short-term impacts on surface water quality and would not significantly impact the beneficial uses of receiving waters as long as they complied with NPDES and City Municipal Code requirements.

The Project proposes office-related uses on the two Development Sites which represent a low potential for additional future contamination or degrade water quality impacts. The Project will also use available piped potable water supplies from the City rather than any direct groundwater use.

SHSP Section 3.6.3 (Stormwater Drainage) states the City will require developers to integrate Low Impact Development (LID) strategies including site designs that maximize permeable surface cover and infiltration potential. Finally, the City's planning review process requires preparation of a Water Quality Management Plan (WQMP) to demonstrate how future development will protect water quality over the long-term. Compliance with these regulatory programs will assure that the SHSP would not violate any water quality standards or waste discharge requirements, or otherwise substantially degrade surface or ground water quality. With implementation of existing regulations and SHSP policies, the Project's impacts related to water quality standards, waste discharge requirements, or degradation of surface water or groundwater quality would be less than significant and no mitigation is required.

LESS THAN SIGNIFICANT IMPACT

b. Would the project substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin?

The Project Site is located within the jurisdiction of the West Basin Municipal Water District (West Basin). West Basin purchases imported water from the Metropolitan Water District of Southern California (MWD) and wholesales the imported water to cities and private companies in southwest Los Angeles County, including El Segundo. Water utility service to the Project site is provided by the El Segundo Public Works Department Water Division.

The groundwater supply is extracted from the West Coast Groundwater Basin, which covers approximately 140 square miles and underlies much of the West Basin service area,

including El Segundo. The average amount of water extracted from the groundwater basin is approximately 36,000 acre-feet per year. Because the basin is adjudicated (i.e., the amount to be extracted each year has been determined by a court decision), the rights to the amount of groundwater extracted each year remain virtually the same. The Water Replenishment District of Southern California (WRD) is responsible for maintaining and replenishing the basin.

Future buildings under the SPA may be up to ten feet taller than currently allowed within the SPA Sub-area. However, this will not significantly increase the amount of surface or groundwater consumed within the SHSP area because the total amount of new development in the SHSP would not increase from its current approved limit. In addition, the City is already a highly urbanized area and water supplies for new development are strictly regulated. Therefore, the SPA will not substantially decrease groundwater supplies or substantially interfere with groundwater recharge or sustainable groundwater management of the basin. Impacts would be less than significant and no programmatic mitigation is required.

The Project Site is located within the West Coast Basin portion of the Los Angeles Coastal Plain groundwater basin. Development of the proposed Project under the SHSP would be required to comply with the many federal and state laws as well as local regulations regarding water supplies. However, the SHSP EIR stated that since groundwater was not used as a water supply source for the City, development under the SHSP would not result in the use of or deplete groundwater supplies or recharge. Based on the most recent groundwater monitoring from October 2019, depth to groundwater beneath the Project Site averages 106 feet below ground surface (bgs) and ranges from 17 to 21 feet above mean sea level (SCS 2021).

The Project proposes a total of 90,172 square feet of new office uses which could generate up to 120 new employees[9] on the two Development Sites. Based on an average consumption of 100 gallons per employee per day, including landscape irrigation, the Project will consume approximately 12,000 gallons per day or 13.4 acre-feet per year of potable water. This incremental additional consumption represents a less than significant impact on local surface or groundwater supplies (see Subsection 19, Utilities-Water).

LESS THAN SIGNIFICANT IMPACT

c. *Would the project substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would:*

(i) result in substantial erosion or siltation on- or off-site?

(ii) substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or off-site?

(iii) create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff?

(iv) impede or redirect flood flows?

[9] Assumes 750 square feet per office employee as a generation rate

The existing site and surrounding area are fully developed with impervious surfaces and minimal landscaping. Development projects would be required to have a stormwater management system that is designed to comply with the City of El Segundo's LID requirements, which state that the first flush (resulting from the 85th percentile annual rainstorm) would need to be infiltrated in the soils via infiltration wells, captured in a cistern and treated for on-site re-use, or filtered through bio-retention planters and released.

Future buildings under the SPA may be up to ten feet taller than currently allowed within the SPA Sub-area, but this will not significantly increase the amount of impervious surfaces that would be constructed within the SHSP area. The City is already a highly urbanized area, there are no drainage channels or other major improvements within the SHSP area, and future development is subject to various state and local regulations regarding runoff, flood control, and short- and long-term surface and groundwater quality. Therefore, the SPA will have less than significant impacts related to alter the existing drainage pattern of the site or area and no programmatic mitigation is required.

The SHSP EIR stated that all new development will occur on properties already developed, including the proposed Project. As a result, storm water and irrigation runoff will continue to drain into the City's existing curb and gutter system. Detailed hydrology/low impact development reports were prepared for both Development Sites by Brandow and Johnston (Appendix G). The proposed development will install subsurface detention basin structures or drywells as outlined below:

South Site. Based on the hydrologic analysis, the total disturbed area post-development stormwater run-off for a 25-year storm event is approximately 0.54 cubic feet per second (cfs) and will produce 4,196 cubic feet (cf) of runoff volume in a 24-hour period. The 85th percentile run-off for a 24-hour storm is approximately 0.066 cfs. This run-off will flow through a storm drain pipe system then flow through drywells (to be installed) and infiltrate down into the soil and/or eventually discharge to the streets. In order to comply with the City and County Low Impact Development (LID) standards, all of the proposed building's roof drainage will be diverted to the proposed "drywells" (B&J 2020)(Appendix G).

North Site. Based on the hydrologic analysis, the total site post-development stormwater run-off for a 25-year storm event is approximately 3.01 cfs and will produce 19,458 cf of runoff volume in a 24-hour period. The 85th percentile run-off for a 24-hour storm is approximately 0.33 cfs. This run-off will flow through a storm drain pipe system then flow through two drywells (to be installed) and infiltrates down into the soil and/or eventually discharge to the streets. In order to comply with the City and County's Low Impact Development (LID) standards, all of the proposed building's roof drainage will be diverted to the proposed drywells (B&J 2018).

The drainage studies and Preliminary WQMP also demonstrate the Project would not create or contribute runoff water which would exceed the capacity of existing or planned storm water drainage systems or provide substantial additional sources of polluted runoff. Compliance with state and local regulations for new development would improve storm water retention and quality.

(i) The Project drainage studies demonstrate that it would not create erosion, siltation, or flooding within or outside of the SHSP.

(ii) The drainage studies demonstrate the Project would not create any new drainage facilities or alter the courses of any existing drainage infrastructure. The SHSP would not create any new drainage facilities or alter the courses of any existing drainage

infrastructure, and the EIR concluded the SHSP would not create or contribute runoff water which would exceed the capacity of existing or planned storm water drainage systems.

The drainage studies for the Development Sites demonstrate the Project will not substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or off-site (pp.2-3, B&J 2018 and pp. 2-3, B&J 2020)(Appendix G).

(iii) The drainage studies demonstrate the Project will not create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems. In addition, the Project is commercial (office) in nature and so would not contribute substantial additional sources of polluted runoff.

(iv) Finally, the Development Sites are not within a 100-year flood hazard area, as documented in the GP EIR and the SHSP EIR, so future development under the SHSP would not place housing or structures within a 100-year flood hazard area. Therefore, the Project would not alter or impede flood flows since it is a part of the SHSP.

Development of the proposed Project within the SHSP would also be required to comply with the many federal and state laws and regulations regarding both short- and long-term water quality so its water quality impacts would also be less than significant and no mitigation is required. As a part of the SHSP, the Project would also not alter existing drainage patterns or infrastructure so impacts would be less than significant and no mitigation is required.

LESS THAN SIGNIFICANT IMPACT

d. In flood hazard, tsunami, or seiche zones, would the project risk release of pollutants due to project inundation?

According to the Los Angeles County Tsunami Inundation Maps10, the Project Site is not located within a tsunami inundation area. There are no bodies of water located on or near the Project site, therefore, inundation caused by a seiche would not occur.

The SPA is part of the SHSP and only addresses building height limits. The SHSP EIR concluded that, due to the location and physical characteristics of the City, the SHSP would have less than significant impacts with respect to seiches, tsunamis, or mudflows. Since there are no impacts, there would be no opportunity for additional polluted runoff from these sources. Therefore, the SPA will have no impacts and no programmatic mitigation is required.

The Development Sites are located approximately 1.5 miles from the Pacific Ocean and the average elevation ranges from 98 to 136 feet above mean sea level. The County of Los Angeles Seismic Safety Element (Leighton 1990) and the State of California Tsunami Inundation Map for Emergency Planning for the Venice Quadrangle (CGS 2009), the site is not located in a tsunami inundation area and the potential for a tsunami-related impacts at the site is considered very low. Seiches are large waves generated in enclosed bodies of water in response to ground shaking. No major water-retaining structures are located immediately up gradient from the Development Sites. Flooding from a seismically-induced seiche is considered unlikely. The site is within an area of minimal flooding (Zone X) as defined by the Federal Emergency Management Agency (FEMA 2017)(LACDPW 2017)(CGS 2009)(p.8, Geocon 2017).

10 California Emergency Management Agency, 2009. Tsunami Inundation Map for Emergency Planning, Venice Quadrangle.

Earthquake-induced flooding is inundation caused by failure of dams or other water-retaining structures due to earthquakes. Based on a review of the Los Angeles County Safety Element (Leighton 1990), the sites are not located within a potential inundation area for an earthquake-induced dam failure. Therefore, the probability of earthquake-induced flooding is considered very low (p. 8, Geocon 2017). Based on available information, these various water-related risks or potential impacts will be less than significant for the Project.

LESS THAN SIGNIFICANT IMPACT

e. Would the project conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan?

The Project is designed to be consistent with the LA Basin Plan, Statewide NPDES General Construction Permit and Municipal Code/LA County LID Standards for water quality control, for both construction and site improvements. As mentioned above, the West Basin Municipal Water District's 2020 Urban Water Management Plan (UWMP) states that the estimated 2020 water supply consists of: 19 percent groundwater; 52 percent imported water; 12 percent recycled water; 17 percent water conservation savings; and less than 1 percent desalinated water. The groundwater supply that serves El Segundo is extracted from the West Coast Groundwater Basin and the Water Replenishment District of Southern California (WRD) is responsible for maintaining and replenishing the basin. Limited natural replenishment of the basin's groundwater supply occurs through the underflow from the Central Groundwater Basin and local precipitation when available.

Future buildings under the SHSPA may be up to ten feet taller than currently allowed within the SPA Sub-area. However, this will not significantly increase the amount of surface or groundwater consumed within the SHSP area because the total amount of new development in the SHSP would not increase from its current approved limit. In addition, the City is already a highly urbanized area and water supplies for new development are strictly regulated. Therefore, the SPA will not substantially decrease surface water or groundwater supplies or interfere with groundwater management of the basin. Impacts are less than significant and no programmatic mitigation is required.

Water Quality Control Plans (surface water). The California legislature has assigned to the State Water Quality Control Board (SWQCB) and its nine Regional Water Quality Control Boards (RWQCBs) the primary responsibility to administer and enforce statutes for the protection and enhancement of water quality, including the Porter–Cologne Act and portions of the Clean Water Act. The SWQCB provides state-level coordination of the water quality control program by establishing statewide policies and plans for implementation of state and federal regulations. The nine RWQCBs throughout California adopt and implement Basin Plans that recognize the unique characteristics of each region with regard to natural water quality, actual and potential beneficial uses, and water quality problems.

The Los Angeles RWQCB is responsible for the protection of the beneficial uses of waters within the coastal watersheds of Los Angeles and Ventura counties, including the Project area. The Water Quality Control Plan Los Angeles Region, Basin Plan for the Coastal Watersheds of Los Angeles and Ventura counties (**Basin Plan**) designates beneficial uses, establishes water quality objectives, and contains implementation programs and policies to achieve those objectives for all waters addressed through the plan (California Water Code Sections 13240–13247). The Los Angeles RWQCB Basin Plan must conform to the policies set forth in the Porter-Cologne Act as established by the SWRCB in its state water policy. The Porter-Cologne Act also provides the RWQCBs with authority to include within their basin plan water discharge prohibitions applicable to particular conditions, areas, or types of

waste. More specifically, the Basin Plan: (i) identifies beneficial uses for surface and ground waters, (ii) includes narrative and numerical water quality objectives that must be attained or maintained to protect the designated beneficial uses and conform to the state's anti-degradation policy, and (iii) describes implementation programs and other actions that are necessary to achieve the water quality objectives established in the Basin Plan. The Basin Plan is continually being updated to include amendments related to implementation of TMDLs of potential pollutants or water quality stressors, revisions of programs and policies within the Los Angeles RWQCB region, and changes to beneficial use designations and associated water quality objectives.

Surface Water. The federal Clean Water Act allows individual states to operate their own NPDES programs provided such programs meet minimum Federal requirements. The Los Angeles Regional Water Quality Control Board (LARWQCB) maintains the Los Angeles Basin Plan and issues the Municipal Stormwater National Pollutant Discharge Elimination System Permit (MS4) to implement the Basin Plan, both of which encompass the City of El Segundo. The objective of Order No. 01-182 is to protect the beneficial uses of receiving waters in Los Angeles County. To meet this objective, the Order requires that the Los Angeles Countywide Stormwater Quality Management Plan (SQMP) specify Best Management Practices (BMPs) that would be implemented to reduce the discharge of pollutants in stormwater to the maximum extent practicable. Further, Permittees are to assure that stormwater discharges from the MS4 shall neither cause nor contribute to the exceedance of water quality, standards and objectives nor create conditions of nuisance in the receiving waters, and that the discharge of non-storm water to the MS4 has been effectively prohibited.

The SHSP EIR indicated that future development under the specific plan would be consistent with the requirements of the Basin Plan and the MS4 Permit. This conclusion applies to the proposed Project as well. To achieve that consistency, the City requires implementation of BMPs consistent with the SQMP standards. The Project must comply with Municipal Code Section 5-4-9, *Construction Activity Stormwater Measures*, which include BMPs as outlined in the Project water quality studies (Appendix G). Future projects within the SHSP must prepare SWPPPs to control short-term construction-related water quality impacts and a Water Quality Management Plan (WQMP) to control long-term operational water quality impacts.

Groundwater Management. The SHSP area is underlain by the West Coast (groundwater) Basin. Groundwater storage and extraction in the West Coast Basin is governed by the basin adjudication with excess production restricted to emergencies. An amended judgment establishing water rights of 64,478 acre-feet (AF) and enjoining excess extractions was filed in 1977 and most recently amended in 1989. Total storage in the West Coast Basin is estimated to be approximately 6.5 million AF. Unused storage space is estimated to be approximately 1.1 million AF. Of the unused storage space, the amount available for groundwater storage is only 120,000 AF because the upper 75 feet cannot be used for groundwater storage due to historical contamination (USDI 2014).

The San Pedro Formation beneath the property includes both the Gage and Silverado Aquifers. Active water injection wells in the area target the lower Silverado Aquifer and are part of the West Coast Basin Seawater Barrier used to control intrusion of salt water in the usable aquifer. The Project property is located west (ocean side) of the barrier system, and shallow groundwater quality located in the Gage Aquifer is poor due to high total dissolved solids (TDS) content as a result of saltwater intrusion. Groundwater in the shallow aquifers in this area has also been impacted by contamination associated with industrial development (i.e., solvent- and/or fuel-related). On November 2, 1998, the Los Angeles

Regional Water Quality Control Board (RWQCB) adopted Resolution No. 98-18, which removed the municipal and domestic (MUN) beneficial use designation for the groundwater located in the El Segundo area due to saltwater intrusion and the groundwater contamination at the nearby Chevron refinery which is located just south of the Development Sites (SCS 2017).

The SHSP EIR stated the majority of the area was currently covered in impervious surfaces, and strategies and LID encouraged by the SHSP will eventually increase the amount of pervious surface area and thus groundwater recharge capabilities. The EIR stated that since groundwater was not used as a water supply source for the City, development under the SHSP would not result in the use of or deplete groundwater supplies or recharge. Therefore, both the SPA and the Project, which are both within the SHSP, would have no impacts on groundwater management planning or plans and no programmatic or project-specific mitigation is required.

Development of the proposed Project under the SHSP and SPA would be required to comply with the many federal and state laws and regulations regarding both short- and long-term water quality that protect both surface and groundwater sources. Additionally, this regulatory compliance would reduce potential water quality impacts of developing the Development Sites to less than significant levels so no programmatic or Project-specific mitigation is required.

LESS THAN SIGNIFICANT IMPACT

Cumulative Impacts. The SPA Sub-area, including the Development Sites, is completely urbanized and contains no natural drainages. The SPA allows increased building heights but it would not change FAR or total development square footage under the SHSP. Future development under the SPA, and the Development Project, would be required to comply with all applicable federal, state, regional, and local regulations regarding water quality, and would be required to demonstrate they would have no significant impacts on downstream properties from runoff. In these ways, the SPA and the Development Project will not contribute to significant cumulative impacts regarding hydrology or water quality.

11 Land Use and Planning

	Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less than Significant Impact	No Impact
Would the project:				
a. Physically divide an established community?	☐	☐	☐	■
b. Cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?	☐	☐	■	☐

The Project area is highly urbanized with a variety of improved land uses, including existing light industrial buildings on the two Development Sites. New development must not disrupt the surrounding community and be consistent with plans established for the safe and efficient use of land within the City and region. The City of El Segundo's General Plan and Zoning Ordinance govern the land use of the Project site and surroundings; there are no other governmental authorities with land use control over this Project.

a. Would the project physically divide an established community?

Development under the proposed SPA would result in some taller buildings but would still be of the same type and overall locations outlined in the SHSP. There would be no displacement of buildings or residential structures Therefore, the SPA would have no impact regarding existing neighborhoods and no programmatic mitigation is required.

The Development Sites are already developed with buildings and surface parking. Development of the two site parcels would not interfere or divide any existing neighborhoods so there would be no impacts and no mitigation is required.

NO IMPACT

b. Would the project cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?

The proposed SPA would allow for a ten-foot increase in maximum permissible building heights within the SPA Sub-area. However, development under the proposed SPA would still be of the same type and overall locations outlined in the SHSP. The SHSP EIR had already evaluated that implementation of the SHSP would eventually shift land uses from industrial to offices and related uses (DEIR Table 13-2). The SHSP EIR concluded that policies, standards, and regulations outlined in the SHSP were consistent with existing City regulations and would not conflict with existing City General Plan policies. SCAG's RTP/SCS outlines goals for guiding the development of local land uses as "smart growth". The EIR explains how the SHSP meets the SCAG goals (DEIR Table 13-3). Therefore, the SHSPA would have less than significant impacts regarding consistency with local and regional land use-related plans and no mitigation is required.

The Project is a part of the office development planned within the approved SHSP. The Project proposes a total of 90,172 square feet of office development compared to the 517,094 total new square feet proposed under the SHSP. Under the current SHSP, both the South Site and the North Site have a permitted base Floor Area Ratio (FAR) of 1.0 and may exceed the base FAR with approval of a Community Benefits Plan. Under the proposed Project, development of the North Site would result in a total of 65,061 square feet of floor area (FAR=0.95), which is within the permitted base FAR of 1.0:1. Development of the South Site would result in a total of 63,915 square feet of floor area (FAR=1.45), which is permitted with the approval of a Community Benefits Plan. Although the development of the South Site would exceed the permitted base FAR, the Project is still within and consistent with the overall growth limits allowed by the SHSP.

Under the SPA, both the South Site and the North Site have a permitted base building height of 35 feet and may exceed the base building height (up to a maximum of 60 feet) with the approval of a Community Benefits Plan. Under the Proposed Project, both the North Site and the South Site would be developed with three story buildings with a maximum height of 59 feet six inches. Therefore, with the approval of the SPA. the Project would be consistent with the SHSP.

The Project is also consistent with the SCAG goals for the reasons discussed in the SHSP EIR. (See Draft EIR, pp. 13-7 through 13-8.) In addition, Subsection 3.a, Air Quality, demonstrates that the Project is consistent with the growth assumptions of the 2016 Air Quality Management Plan (AQMP).

This analysis demonstrates the proposed Project is consistent with applicable regional and local land use plans and goals. Impacts in this regard are therefore less than significant and no mitigation is required.

LESS THAN SIGNIFICANT IMPACT

Cumulative Impacts. The SPA would affect building heights within the SPA Sub-area but would not affect other land use or development characteristics of the SHSP. The Development Project is also consistent with land use and planning guidelines of the SHSP other than building height which is addressed by the SPA. The SPA and Development Project are also consistent with applicable City General Plan goals and policies and the goals of SCAG's regional plans. Therefore, the SPA and the Development Project will have less than significant cumulative impacts related to local and regional land use and planning.

12 Mineral Resources

	Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less than Significant Impact	No Impact
Would the project:				
a. Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?	☐	☐	■	☐
b. Result in the loss of availability of a locally important mineral resource recovery site delineated on a local general plan, specific plan, or other land use plan?	☐	☐	■	☐

As described in the General Plan Conservation Element, the City has been associated with petroleum resource development dating back to its founding in 1911. The City is partially underlain by the El Segundo Oil Field, where over 14 million barrels of oil and condensate were produced locally between 1935 and 1992, but production has steadily declined since 1967. The Project site is not located within the El Segundo Oil Field, which is located on the south side of Mariposa Avenue, as delineated by the California Department of Conservation, Geologic Energy Management Division (CalGEM). The region also contains sand and gravel which is plentiful due to the alluvial nature of the LA Basin in general and the Development Sites in particular. However, extraction of such resources is problematic because the Project area is highly urbanized and such activities can impact surrounding land uses and human activities.

a. Would the project result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?

b. Would the project result in the loss of availability of a locally important mineral resource recovery site delineated on a local general plan, specific plan, or other land use plan?

(a-b) The City of El Segundo General Plan EIR and the SHSP EIR both state that the entire City was once within the El Segundo Oil Field. From 1935 to 1987, 76 wells were drilled in this field, and produced over 13.6 million barrels of oil. While there are several wells still operating in the City, there are no oil wells currently in operation within the SHSP area. The City is also in the San Fernando Valley Production-Consumption Region and is classified as Mineral Resources Zone 3 (MRZ-3). This classification is defined as “areas containing mineral deposits the significance of which cannot be evaluated from available data”. The SHSP EIR noted that the City is already urbanized and does not have other known mineral resources.

The proposed SPA would modify building heights, however, there are no aspects of the SPA that are related to the presence or absence of any mineral resources within the SHSP. Therefore, the proposed SHSPA would have no impacts relative to mineral resources and no programmatic mitigation is required.

As part of the SHSP area, the Development Sites do not contain oil wells or other identified mineral resources of value or recognized at either at a state level or local level that can be reasonably extracted given existing onsite and surrounding land uses. There are also no land use or zoning designations that relate to properties within the SHSP. Therefore, impacts of the Project regarding mineral resources are less than significant and no mitigation is required

LESS THAN SIGNIFICANT IMPACT

Cumulative Impacts. The SHSP EIR concluded that development within the SHSP would have no significant impacts related to mineral resources. The SPA Sub-area, which includes the Development Sites, does not contain any identified mineral resources and are in urban settings which would make new mineral extraction activities problematic. Therefore, the SPA and the Development Project will not make significant contributions to regional cumulative impacts regarding mineral resources.

13 Noise

	Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less than Significant Impact	No Impact
Would the project result in:				
a. Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?	☐	☐	■	☐
b. Generation of excessive groundborne vibration or groundborne noise levels?	☐	☐	■	☐
c. For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?	☐	☐	☐	■

Sound is a disturbance in the air created by a moving or vibrating source and is capable of being detected by the hearing organs. The sound may be thought of as mechanical energy of a moving object transmitted by pressure waves through a medium to a human ear. For traffic or stationary noise, the medium of concern is air. *Noise* is defined as sound that is loud, unpleasant, unexpected, or unwanted. A continuous sound is described by its *frequency* (pitch) and its *amplitude* (loudness). Frequency relates to the number of pressure oscillations per second. Low-frequency sounds are low in pitch (bass sounding) and high-frequency sounds are high in pitch (squeak). These oscillations per second (cycles) are commonly referred to as Hertz (Hz). Sound pressure level (SPL or Lp) is used to describe in logarithmic units the ratio of actual sound pressures to a reference pressure squared. These units are called decibels and abbreviated as dB.

In general, the healthy human ear is most sensitive to sounds between 1,000 Hz and 5,000 Hz, (A-weighted scale) and it perceives a sound within that range as being more intense than a sound with a higher or lower frequency with the same magnitude. The A-scale weighing is typically reported in terms of A-weighted decibel (dBA). Typically, the human ear can barely perceive the change in the noise level of 3 dB. A change in 5 dB is readily perceptible, and a change in 10 dB is perceived as being twice or half as loud. Because decibels are a logarithmic scale, a doubling of sound energy results in a 3 dB increase in sound, which means that a doubling of sound energy (e.g., doubling the volume of traffic on a highway), would result in a barely perceptible change in sound level.

Noise in our daily environment fluctuates over time. Some noise levels occur in regular patterns, others are random. Some noise levels are constant, while others are sporadic. Noise descriptors were created to describe the different time-varying noise levels. The overall noise environment of an area can be characterized by the Community Noise Equivalent Level (CNEL) which carries "penalties" for nighttime noise which is typically considered more intrusive especially in suburban and rural settings*:* The average equivalent A-weighted sound level during a 24-hour day, obtained after addition of five (5) decibels to sound levels in the evening from 7:00 to 10:00 PM and after addition of ten (10) decibels to sound levels in the night before 7:00 AM and after 10:00 PM.

Noise levels associated with traffic depends on a variety of factors: (1) volume of traffic, (2) speed of traffic, (3) auto, medium truck (2 – 6 wheels) and heavy truck percentage (3 axles and greater), and sound propagation conditions. The greater the volume of traffic, higher speeds and truck percentages equate to a louder volume of noise. A doubling of the Average Daily Traffic (ADT) along a roadway will increase noise levels by approximately 3 dB.

Noise impacts are most severe on certain individuals or groups of persons such as the young, the old, and the sick. Land uses that house these sensitive persons are referred to as sensitive receptors (e.g., residential uses, hospitals, day care centers, etc.). Noise assessments typically identify the closest sensitive receptor to a project site and then calculate the maximum noise levels at that location (for both construction and operation) as a "worst case" or conservation assessment of potential noise impacts.

Municipal Code Section 7-2-4, Noise Standards, identifies the City's operational noise threshold for commercial and industrial properties as 8 dBA above the ambient noise level. In addition, Municipal Code Section 7-2-10, Exemptions, indicates that noise from construction activities is considered exempt (i.e., less than significant) as long as construction activities do not take place between the hours of six o'clock (6:00) P.M. and seven o'clock (7:00) A.M. Monday through Saturday, or at any time on Sunday or a Federal holiday, and provided the noise level created by such activities does not exceed the noise standard of sixty five (65) dBA plus the limits specified in subsection 7-2-4C of this Chapter as measured on the receptor residential property line and provided any vibration created does not endanger the public health, welfare and safety.

The Project area is completely urbanized and experiences elevated noise level from a variety of human sources, including traffic, air conditioning units, industrial equipment, aircraft, etc. New development must be evaluated to assure that it will neither increase noise or vibration levels beyond accepted standards to protect human health and building integrity (for vibration), nor that its new occupants will be subject to harmful levels of noise from the existing environment.

a. Would the project result in generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?

The proposed SPA would modify building heights but these changes would not result in any demonstrable increase traffic in and around or activities on individual building sites. This is because the height change[11] would not result in an increase in FAR or overall development

11 increase to 60 feet from the current Tier II maximum of 50 feet only within a specific sub-area of the SHSP Smoky Hollow East area

intensity. Therefore, the overall level of development and therefore overall noise impacts of the SPA would remain equivalent to that of the current SHSP and as identified in the SHSP EIR. Therefore, the proposed SHSPA would have less than significant impacts relative to permanent noise and no programmatic mitigation is required.

A detailed noise assessment was prepared for the proposed Project and the following discussion summarizes the results of that assessment (MIG 2021b). The following sections evaluate the noise sources and levels associated with the temporary construction activities and long-term operations of the proposed Project and compares increased noise levels to the applicable City standards.

Regarding noise thresholds, Section 7-2.10D of the City's Municipal Code indicate that noise and vibration associated with the construction, repair, or remodeling of any real property is exempt from City noise standards provided: 1) Activities do not take place between the hours of 6 PM and 7 AM Monday through Saturday, or any time on Sunday or a Federal holiday; 2) The noise level created by such activities does not exceed 65 dBA as measured at a residential property line (increases in this standard are permitted pursuant to Section 7-2-4C of the Municipal Code); and 3) vibration does not endanger the public health, welfare, and safety. The City's Municipal Code does not establish a specific, numeric noise standard for construction noise at commercial property lines. However, it does establish an "ambient plus 8 dBA standard for commercial/industrial areas. In addition, the City's General Plan Noise Element provides land use compatibility standards for interior and exterior noise. The City's exterior and interior compatibility standard for commercial and industrial activities is 75 DNL

Project – Construction Noise

The proposed Project involves construction activities including demolition, building construction, minor grading and paving, and architectural coating activities in an existing commercial/light industrial area of the City. A detailed noise study was prepared for the Project (MIG 2021b)(Appendix C). Construction activities are anticipated to begin at the North Site in January 2022; from January 2023 to March 2023 at the South Site. Some concurrent activities may include demolition (South Site), building construction (North and South Site), grading (North Site), paving (North Site), and architectural coating (North Site) activities may occur. Total construction activities may last up to 29 months.

Worst case hourly L_{eq} and L_{max} construction equipment noise levels are predicted to be approximately 82 and 85 dBA, respectively, at 50 feet; however, the magnitude of the proposed Project's temporary and periodic increase in ambient noise levels would depend on the nature of the construction activity (i.e., demolition, building construction, grading) and the distance between the construction activity and sensitive receptors/outdoor use areas.

Project construction activities would primarily take place adjacent to Franklin Avenue (North Site), El Segundo Boulevard and Kansas Street (South Site), and at an existing parking garage (both sites). All construction activities would occur at least 600 feet or more from any sensitive residential receptor. At this distance, potential construction noise levels would be less than 65 dBA L_{eq}. Although construction activities could generate noise levels up to approximately 82 dBA at a distance of 50 feet, such noise levels would not disrupt existing light industrial building operations or patronage because these buildings are not considered noise-sensitive and do not include sensitive outdoor use areas. Project construction also would not affect the Chevron Refinery employee park because this park is not considered noise-sensitive since it is within the refinery property and subjected to refinery noise levels. In addition, all anticipated construction will take place during work hour indicated in the Municipal Code (see below).

The proposed Project would not generate construction noise levels that exceed City standards or otherwise result in a substantial temporary increase in ambient noise levels because:

1. Construction activities would be tailored to the proposed building modifications and additions. Building construction activities would not require substantial heavy duty equipment operations, and extensive grading activities are not proposed at either the North Site or the South Site. Worst case noise levels, which would occur during demolition and grading activities, would last approximately two months at each site.
2. Construction equipment contains standard noise suppression devices such as mufflers, engine shields/covers, and engine/mechanical isolators/mounts that typically reduce engine, mechanical, and exhaust noise levels below standard reference noise levels, which are based on older equipment operations.
3. The proposed Project would comply with City of El Segundo Municipal Code Section 7.2.10D, which limits construction activities to the hours of 7 AM to 6 PM Monday through Saturday only. This code requirement generally limits construction activities to daytime hours when people are generally considered to be least sensitive to environmental noise levels.

For the reasons outlined above, the proposed Project's construction activities would not generate a substantial, temporary increase in ambient noise levels at sensitive receptor locations. Impacts would be less than significant and no mitigation is required.

Project – Operational Noise

Once constructed, the proposed Project would generate noise from the same types of sources and activities currently present at the North Site and the South Site, such as on- and off-site vehicle trips, on-site vehicle maneuvering, queueing, and parking, the operation of stationary equipment such as heating, ventilation, and air conditioning (HVAC) equipment, landscaping and maintenance activities, and waste-disposal collection, etc. The North Site also includes a small (less than 800 square feet) coffee kiosk situated next to a small pocket park.

The City's Municipal Code exempts many of these sources from the noise standards described above, including noise levels from real property maintenance, provided the maintenance activities occur between 7 AM and 8 PM Monday through Saturday and 9 AM to 8 PM on Sunday (Municipal Code Section 7-2-10E), and noise levels regulated by state or federal law (e.g., individual motor vehicle noise levels; Municipal Code Section 7-2-10F).

The proposed Project would increase the amount of vehicle trips currently accessing the North and South Site, as well as the adjacent parking garage. On-site vehicle activity would increase by a factor of approximately four (4x) most of which would occur in the existing parking garage. The noise assessment determined the proposed Project would not involve substantial on-site equipment or activities at either the North Site or the South Site that could generate noise levels that exceed City standards or otherwise result in a substantial increase in ambient noise levels.

The proposed Project would also include rooftop-mounted HVAC units that can produce noise levels up to 76 dBA at a distance of 3 feet. Based on distance attenuation, HVAC noise levels would reach 50 dBA at a distance of 60 feet. The noise assessment determined that HVAC equipment would not generate substantial noise levels at adjacent commercial

property line locations or result in more than 1 dBA change in overall ambient noise levels in the vicinity of the Project Site.

Ambient noise levels at and near the North and South Sites are dominated by traffic on E. Franklin Avenue (North Site), E. El Segundo Boulevard (South Site), the Chevron Refinery (South Site), and other local commercial/light industrial buildings (both sites). The proposed Project would generate traffic that would be distributed onto the local roadway system and potentially increase noise levels along local travel routes. Caltrans considers a doubling of total traffic volume to result in a three (3) dBA increase in traffic-related noise levels (Caltrans, 2013). If the proposed Project does not result in a doubling of traffic volumes on the local roadway system, it would not result in a substantial permanent increase in traffic-related noise levels. The proposed Project would generate 490 net new trips from the North Site (on East Franklin Avenue) and 511 net new trips from the South Site (on El Segundo Boulevard), for a total of approximately 1,000 net new trips on a daily basis (Kimley-Horn, 2021). The average daily traffic (ADT) on the segments of East Franklin Avenue and East El Segundo Boulevard that run adjacent to the North and South Site are at least 832 and 20,946, respectively (City of El Segundo, 2018, Table 15-7). The proposed Project's trip generation on East Franklin Avenue (490 net new daily trips) and East El Segundo Boulevard (up to 1,000 new net trips) would be far less than either of those roadway volumes and would result in substantially less than a doubling of daily traffic volumes on roadways used to access the site.

The noise assessment concluded that construction and operation of the proposed Project, including all stationary and mobile sources, would not result in a substantial, permanent increase in noise levels along the roadways used to access the proposed Project as compared to existing (2021) or future conditions. This impact would be less than significant and no mitigation is required.

LESS THAN SIGNIFICANT IMPACT

b. Would the project result in generation of excessive groundborne vibration or groundborne noise levels?

Project construction can generate varying degrees of groundborne vibration, depending on the construction procedure and the equipment used. Operation of construction equipment generates vibrations that spread through the ground and diminish in amplitude with distance from the source. The effect on buildings located in the vicinity of a construction site often varies depending on soil type, ground strata, and construction characteristics of the receiver building(s). The results from vibration can range from no perceptible effects at the lowest vibration levels to low rumbling sounds and perceptible vibration at moderate levels, to slight damage at the highest levels. Groundborne vibrations from construction activities rarely reach levels that damage structures. The types of construction vibration impact include human annoyance and building/property damage. Human annoyance occurs when construction vibration rises significantly above the threshold of human perception for extended periods of time. Building damage can be cosmetic or structural. Ordinary buildings that are not particularly fragile would not experience any cosmetic damage (e.g., plaster cracks) at distances beyond 30 feet. This distance can vary substantially depending on the soil composition and underground geological layer between the vibration source and the receiver. In addition, not all buildings respond similarly to vibration generated by construction equipment. The following analyzes the potential vibration impacts associated with the construction and operations of the proposed Project.

The proposed SPA would modify building heights. These changes may incrementally increase traffic or other activities on individual building sites which may generate vibration. However, the overall vibration from development under the SHSP would be less than significant and no programmatic mitigation is required.

The noise assessment for the Project also included an evaluation of vibration impacts. The proposed Project would not include substantial construction or operational activities that could generate sustained groundborne vibration levels at existing commercial or residential buildings that could result in building damage or sustained human annoyance. The largest equipment operations (during grading) would occur at least 50 feet from the closest structures (parking garage, adjacent light industrial buildings). Standard construction equipment (e.g., bulldozers, trucks, jackhammers, etc.) generally does not cause vibration that could cause structural or cosmetic damage, but may be felt by nearby receptors.

The closest structure is approximately 50 feet away from potential work areas at both the North Site and the South Site. At this distance, equipment would not generate ground-borne vibration that has the potential to damage the structural integrity of any buildings near work areas. For reference, Caltrans recommends a damage threshold for modern industrial and commercial buildings of 0.5 inches/second (Caltrans 2020). The noise assessment determined that the maximum predicted groundborne vibration level at 50 feet for typical equipment is 0.042 inches/second which is substantially less than the Caltrans threshold.

Once operational, the proposed Project would not have any large equipment that would generate vibration.

For the reasons outlined above, the proposed Project would not generate excessive ground-borne vibration or noise levels during either construction or operation, and no mitigation is required.

LESS THAN SIGNIFICANT IMPACT

c. For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people be residing or working in the project area to excessive noise levels?

In compliance with legislative requirements, the Los Angeles County Airport Land Use Commission (ALUC) prepared the Los Angeles County Airport Land Use Plan (ALUP) last revised on December 1, 2004. The ALUP provides for the orderly expansion of Los Angeles County's public use airports and the areas surrounding them. It is also intended to provide for the adoption of land use measures that minimize the public's exposure to excessive noise and safety hazards. In formulating the ALUP, the Los Angeles County ALUC established provisions for safety, noise insulation, and the regulation of building height in areas adjacent to each of the county's public airports.

The SPA could affect building heights within the SHSP. However, the SHSP is outside the LAX Airport Influence Area (AIA) and is not addressed in its CLUP, and there are also no private airstrips within two miles of the SHSP area. Therefore, the SHSPA would not be impacted by airport noise so there are no impacts and no programmatic mitigation is required.

The proposed Project is located approximately 1.2 miles south of LAX. According to the LAX Airport Influence Area Map, the Project is not located within LAX's planning boundaries (LAWA 2021). The next closest airport, Hawthorne Municipal Airport (HMA), is located approximately 3.1 miles to the east. The Project Site is not located within the HMA planning

boundaries (Los Angeles County ALUC, 2003). Thus, the proposed Project would not expose people working in or visiting the Project area to excessive airport-related noise levels. Impacts will be less than significant and no mitigation is required.

LESS THAN SIGNIFICANT IMPACT

Cumulative Impacts. The SPA would only affect building heights in the SPA Sub-area which would increase noise levels from future development. In addition, the noise study for the Development Project concludes it will have less than significant short- and long-term noise impacts. Therefore, the SPA and Development Project will not have significant cumulative noise impacts,

14 Population and Housing

	Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less than Significant Impact	No Impact
Would the project:				
a. Induce substantial unplanned population growth in an area, either directly (e.g., by proposing new homes and businesses) or indirectly (e.g., through extension of roads or other infrastructure)?	☐	☐	■	☐
b. Displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?	☐	☐	■	☐

The Project Site is part of the LA Basin which supports millions of residents and employees in homes and businesses. New development must be evaluated to assure it will not introduce levels of growth that are unplanned and beyond the service capabilities of local jurisdictions.

The proposed Project is consistent with the City of El Segundo General Plan land use policies and the Smoky Hollow Specific Plan which designate the Project site for office uses. No housing units would be developed as part of the Project, and no new or expanded urban infrastructure would be constructed that could foster increased development intensity onsite or at surrounding properties. Similar to other construction projects in the region, the Project construction workers would be expected to be drawn from the large, available regional labor force, who would commute to the Project site during the construction stages.

a. *Would the project induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?*

The SPA only addresses maximum building height and does not allow any additional caretaker units over that currently allowed in the SHSP. Therefore, the SPA would have no influence on population growth in the City. The SPA would be no impacts and no programmatic mitigation is required.

By comparison, the SHSP EIR stated the only new residential dwellings allowed in the SHSP would be a total of up to six new caretaker units which would only generate 18 new residents in the City. This small amount of population growth is readily accommodated under both the SCAG 2040 population and growth projection and City General Plan Buildout forecast. Implementation of the SHSP would also generate an estimated 951 additional jobs which could result in an increase in population within the City and adjoining areas as future employees and their families relocate to areas closer to their jobs. The SHSP EIR examined the potential impacts to the City-wide housing stock and indicated there were sufficient

vacant homes or multi-family units such that the SHSP would not have significant impacts on housing in the City. Since it is not residential in nature, the EIR determined the SHSP would have less than significant impacts on the City's future population and housing growth and no mitigation was required.

The Project proposes the two parcels to be used as offices with no caretaker units so there will be minimal direct growth impacts related to population or housing. The additional 90,172 square feet of office uses and 120 new employees to be developed by the Project is greater than the permitted base FAR under the SHSP (but allowed with approval of a CPB) and may result in some indirect or induced housing and/or population growth to the degree that the estimated 120 new project employees[12] choose to buy a house or rent an apartment and move into the City. The Project is not expected to result in the displacement of any existing City residents (population) or housing by its development. Therefore, potential impacts are considered to be less than significant, and no mitigation is required

LESS THAN SIGNIFICANT IMPACT

b. Would the project displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?

There is no existing housing on the Project site so construction and renovation of the proposed buildings would therefore not displace any people or housing.

Even with the SPA, the SHSP would still only propose non-residential development so it would not have any significant direct impact on population or housing in the City. The increased building height allowed under the SPA may incrementally increase the amount of development on particular sites in the future, but the SPA would not increase the overall amount of development anticipated within the SHSP and would not displace any existing residential units. Therefore, the SHSPA will not displace any existing residents or housing in the City or require the construction of replacement housing. Impacts will be less than significant and no programmatic mitigation is required.

Since the Project is part of the SHSP, and will also not add any residential uses, similar conclusions regarding the lack of displacement of persons or housing would apply as well.

The additional 90,172 square feet of office uses to be developed on the Project parcels may result in some amount of indirect or induced housing and/or population growth to the degree that some 120 new project employees[13] may choose to buy a house or rent an apartment and move into the City from some other jurisdiction. However, the Project is not expected to result in any displacement of existing City residents (population) or housing by its development. Therefore, potential impacts are considered to be less than significant and no mitigation is required.

LESS THAN SIGNIFICANT IMPACT

Cumulative Impacts. The SPA and Development Project deal with non-residential land uses so they will have only less than significant indirect and no direct or cumulative impacts relative to population or housing.

[12] Assumes 750 square feet/office employee (90,172 square feet divided by 750 square feet/employee = 120 employees)
[13] Up to 120 new employees assuming 750 square feet/office employee and 90,172 square feet of new office uses

15 Public Services

	Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less than Significant Impact	No Impact
a. Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, or the need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services:				
1. Fire protection?	☐	☐	■	☐
2. Police protection?	☐	☐	■	☐
3. Schools?	☐	☐	■	☐
4. Parks?	☐	☐	■	☐
5. Other public facilities?	☐	☐	■	☐

The Project Site is part of the larger LA Basin whose residents and employees require a variety of public services including police, fire, schools, parks, etc. New development must be evaluated to assure it is within the service capabilities of local jurisdictions.

*a.1. Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered **fire protection** facilities, or the need for new or physically altered fire protection facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives?*

The SPA would increase the maximum permissible building heights for future development within the SPA Sub-area by ten feet. This could allow more intensive development on certain sites than under the current SHSP. This increased height of development could result in incremental increases in the need for fire protective services or specialized equipment. However, the increased development intensity on individual sites will still not exceed the overall growth expected for buildout within the SHSP. In 2018 the ratio for operational protection/EMS personnel was one fire fighter per 1,026 population. The SHSP EIR concluded the SHSP would increase the population by 18 persons which would cause a 0.1 percent increase in the service ratio. The EIR also concluded that demand for protection/EMS personnel or equipment from the SHSP would not exceed the current CFD

operation standards. The EIR also concluded that demand for protection/EMS personnel or equipment from the SHSP would not exceed the current CFD operation standards.

Similar to the impacts identified in the SHSP EIR, impacts of the SPA related to fire protection would be less than significant and no programmatic mitigation is required.

The additional office space proposed by the Project would increase office square footage and number of employees on the Development Sites and would incrementally increase in fire protection services. The El Segundo Fire Department (ESFD) provides fire protection and emergency medical services to the Project area. The City is divided into two districts (i.e., Stations) for fire response. Station 1 responds to calls west of Pacific Coast Highway and Station 2 responds east of Pacific Coast Highway. Depending on the nature or size of the alarm, units may cross over into the other district and coordinate resources to assist. When an alarm to any address with serious consequences to life or property exists, all units in the City respond (City of El Segundo Fire Department, n.d.). The Project is located in the fire response district for Station 1 which is location at 314 Main Street which is approximately 1.1 mile northwest of the Development Sites (ESFD 2021). At an average speed of 35 miles per hour, the response time from this station for an emergency call would be approximately 1.6 minutes.

The Project would be required to obtain approval from ESFD to verify that the Project complies with the 2019 California Fire Code, local amendments, and El Segundo Fire Department Regulations all applicable Fire Code requirements. In addition, adequate access for emergency vehicles to the proposed multifamily units would be provided by the proposed new road. It should be noted the El Segundo Fire Department (ESFD) has already reviewed the proposed Development Project site plans regarding fire protection and emergency access and approved them subject t to compliance with their standard conditions of approval.

Title 15 Chapter 27A of the ESMC allows for the City to impose Development Impact Fees on applicants seeking to construct development projects. The purpose of these fees is for applicants for development projects to pay their fair share of the costs of providing public services and public facilities, including fire protection services. The amount of each impact fee is calculated based upon the gross square footage of nonresidential development, number of residential dwelling units, type or density or intensity of use, vehicle trip generation, or other appropriate methodology which ensures that the fee is roughly proportional to the impacts of new development on public facilities (ESMC 15-27A-1). Therefore, the Project is not anticipated to affect fire protection demands to the extent that new or physically altered fire facilities would be required and impacts would be less than significant and no mitigation is required.

LESS THAN SIGNIFICANT IMPACT

*a.2. Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered **police protection** facilities, or the need for new or physically altered police protection facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives?*

The SPA would increase the maximum permissible building heights for future development within the SPA Sub-area by ten feet. This increased height of development could result in an incremental increase in the need for police protection within the SHSP. However, the increased development height on individual sites will still not exceed the overall growth

expected for buildout within the SHSP. Similar to the impacts identified in the SHSP EIR, impacts of the SHSPA related to police protection would be less than significant and no programmatic mitigation is required.

In 2018 the ratio for operational protection personnel was one sworn officer per 241 population. The SHSP EIR concluded the SHSP would incrementally increase the population but also increase the number of employees in the City which would incrementally increase in the CPD service ratio. The EIR also concluded that demand for police protection personnel or equipment from the SHSP would not exceed the current CPD operation standards.

The additional office space proposed by the Project would require an incremental increase in police protection services. The El Segundo Police Department (ESPD) provides police protection in the City. The ESPD's headquarters are located at 348 Main Street at the Civic Center Complex, approximately 1.1 mile northwest of the Project site. The City is divided into two geographic areas bisected by Pacific Coast Highway. The area west of Pacific Coast Highway is designated the West Command and the area east of Pacific Coast Highway is designated the East Command. The Project site would be located within the ESPD West Command.

In addition, Title 15 Chapter 27A of the ESMC allows for the City to impose Development Impact Fees on applicants seeking to construct development projects. The purpose of these fees is for applicants for development projects to pay their fair share of the costs of providing public services and public facilities, including law enforcement. The amount of each impact fee is calculated based upon the gross square footage of nonresidential development, number of residential dwelling units, type or density or intensity of use, vehicle trip generation, or other appropriate methodology which ensures that the fee is roughly proportional to the impacts of new development on public facilities (ESMC 15-27A-1). Therefore, the Project is not anticipated to affect police protection demands to the extent that new or physically altered police facilities would be required. Impacts would be less than significant and no mitigation is required.

LESS THAN SIGNIFICANT IMPACT

*a.3. Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered **schools**, or the need for new or physically altered schools, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios or other performance objectives?*

The SPA would increase the maximum permissible building heights within the SPA Sub-area by ten feet. The additional non-residential development that could be built within the SHSP would not be expected to generate any significant number of additional students that would need to be served by the El Segundo Unified School District. There is a potential for new SHSP employees to move into the City who may have children, and state law allows students to attend schools in the districts in which their parents work. However, it is not anticipated that the SHSP would significantly affect existing school services or facilities. Future development within the SHSP would be required to pay applicable school/developer impact fees so impacts would be less than significant and no programmatic mitigation is required.

The additional office space proposed by the Project would not be expected to generate any significant number of additional students that would be served by local schools within the El

Segundo Unified School District. The SHSP EIR noted the SHSP would result in intensified commercial and industrial uses. No schools are located within the Smoky Hollow Specific Plan area boundaries. Residential uses within SHSP area are limited and the only new residential type uses allowed would be caretaker units, permitted as an accessory use only. Under state law, the payment of school impact fees is considered full project mitigation under CEQA. The EIR concluded that construction of new schools or alteration to existing school facilities would not result from with implementation of the SHSP.

The proposed Project does not include the construction of any residential dwelling units, including caretaker units or accessory dwelling units (ADUs). There is a potential for the employees to move within the vicinity of the Projects who may have children, and state law allows students to attend schools within the districts in which their parents work. However, it is not anticipated that the Project would significantly affect existing school services or facilities. The proposed Project would pay all applicable local school developer impact fees. Therefore, impacts would be less than significant and no mitigation is required.

LESS THAN SIGNIFICANT IMPACT

*a.4. Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered **parks**, or the need for new or physically altered parks, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios or other performance objectives?*

The SPA would increase the maximum permissible building heights within the SPS Sub-area by ten feet. The additional non-residential development that could be built within the SHSP under the SPA would not be expected to generate any additional population or residents and thus no increased need for park facilities or programs. Therefore, impacts of the SPA on parks would be less than significant and no programmatic mitigation is required.

The Project will provide a 5,000-square foot public park (0.11-acre) within the North Site along with seating and a coffee café as a community benefit. The Project does not include any residential uses which would typically generate an increased need for additional park facilities and programs.

In addition, Title 15 Chapter 27A of the ESMC allows for the City to impose Development Impact Fees on applicants seeking to construct development projects. The purpose of these fees is for applicants for development projects to pay their fair share of the costs of providing public services and public facilities, including parks. The amount of each impact fee is calculated based upon the gross square footage of non-residential development or other appropriate methodology which ensures that the fee is roughly proportional to the impacts of new development on public facilities (ESMC 15-27A-1). Therefore, the Project is not anticipated to affect park demands to the extent that new or physically altered park facilities would be required. Impacts would be less than significant and no mitigation is required.

LESS THAN SIGNIFICANT IMPACT

*a.5. Would the project result in substantial adverse physical impacts associated with the provision of other new or physically altered **public facilities**, or the need for other new or physically altered public facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives?*

The SPA concerns maximum allowable building heights. The additional non-residential development that could be built under the SHSP, including if the SPA is adopted, would not be expected to generate any significant number of additional population or residents, so there would be no increased need for other public facilities. Therefore, impacts would be less than significant and no programmatic mitigation is required.

The Project does not include any residential uses which would typically generate increased population/residents or additional need for other public facilities. The SHSP EIR did not anticipate significant additional impacts on other public facilities, including the El Segundo Public Library, due to the nature of the SHSP (i.e., non-residential). The eventual adaptive reuse of existing structures and intensifying land uses could eventually lead to an increase in the local daytime (employee) population some of whom may use library services.

It should also be noted that non-residential development is not subject to the City of El Segundo Library Service fees because the fee study prepared to establish the library fee did not find a strong link between non-residential development and library service impacts.

Based on this analysis, impacts of the Project on other public facilities will be less than significant and no mitigation is required.

LESS THAN SIGNIFICANT IMPACT

Cumulative Impacts. The SPA could change building heights but no other design characteristics of new development within the SPA Sub-area. Therefore, the SPA will not affect the provision of public services in the SHSP. With approval of the SPA, the Development Project will be consistent with the SHSP and would not require levels of public services beyond what were anticipated in the SHSP and analyzed in the EIR. Therefore, the SPA and Development Project will not make significant contributions to any cumulative impacts relative to public services in the region.

16 Recreation

	Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less than Significant Impact	No Impact
a. Would the project increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?	☐	☐	■	☐
b. Does the project include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment?	☐	☐	■	☐

Residents and employees in the Project area require park facilities and services for living within an urban area. New development must be evaluated to assure it is within the recreational and parkland service capabilities of local jurisdictions. There are four City parks within a mile of the Development Sites, all to the northwest, including Wyle Park, Hilltop Park, the large El Segundo Parks and Recreation complex, and Library Park, as well as Freedom Park a mile to the northeast.

a. Would the project increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?

The SPA would increase maximum permissible building heights within the SPA Sub-area by ten feet. The additional non-residential development that could be built within the SHSP under the SPA would not be expected to generate any additional population or residents (which are typically associated with new housing/residential development). The SPA addresses only building height and so would not result in an increased need for park facilities or programs. Therefore, impacts would be less than significant and no programmatic mitigation is required.

In addition, Title 15 Chapter 27A of the ESMC allows for the City to impose Development Impact Fees on applicants seeking to construct development projects which represent a project's fair share costs to the City for public services and facilities, including parks. The amount of each impact fee is calculated based upon the gross square footage of non-residential development or other appropriate methodology which ensures that the fee is roughly proportional to the impacts of new development on public facilities (ESMC 15-27A-1).

The Project is part of the SHSP and proposes to construct new office uses which would only result in an incremental increase in the need for regional or local parks and recreational services. The Project will provide a 5,000-square foot public park (0.11-acre) within the North Site along with seating and a coffee café as a community benefit. The Project does not include any residential uses which would typically generate new residents who would

have increased needs for additional park facilities and programs. Therefore, the Project is not anticipated to affect park demands to the extent that new or physically altered park facilities would be required, or that substantial physical deterioration of a recreational facility would occur or be accelerated. Impacts would be less than significant and no mitigation is required

LESS THAN SIGNIFICANT IMPACT

b. Does the project include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment?

The SPA would increase maximum permissible building heights within the SPA Sub-area by ten feet. The additional non-residential development that could be built within the SHSP under the SPA would not be expected to generate any increased need for the construction of park facilities. Therefore, impacts would be less than significant and no programmatic mitigation is required.

Title 15 Chapter 27A of the El Segundo Municipal Code allows the City to impose Development Impact Fees on applicants seeking to construct development projects. The fees represent a project's fair contribution to the City's increased costs for public services and facilities, including parks. The amount of each impact fee is calculated based upon the gross square footage of non-residential development or other appropriate methodology which ensures that the fee is roughly proportional to the impacts of new development on public facilities (ESMC 15-27A-1).

Therefore, the Project will have not require the construction or expansion of new City recreational facilities that could have unanticipated environmental impacts. However, the proposed Project will construct new office uses which would only result in a slight incremental increase in the use of regional or local parks generated by new employees. In addition, the Project will construct a 5,000-square foot (0.11-acre) public park. Therefore, any impacts will be less than significant and no mitigation is required.

LESS THAN SIGNIFICANT IMPACT

Cumulative Impacts. The SPA and Development Project propose non-residential land uses so they will have less than significant direct or cumulative impacts relative to recreation facilities or programs.

17 Transportation

	Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less than Significant Impact	No Impact
Would the project:				
a. Conflict with a program, plan, ordinance or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities?	☐	☐	■	☐
b. Conflict or be inconsistent with CEQA Guidelines Section 15064.3, subdivision (b)?	☐	■	☐	☐
c. Substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible use (e.g., farm equipment)?	☐	☐	■	☐
d. Result in inadequate emergency access?	☐	☐	■	☐

A number of transportation modes are needed as an integral part of living and working in an urban environment. CEQA requires an evaluation of new development to determine if it will contribute to or at least not conflict with the provision of non-vehicular methods of transportation (i.e., pedestrians, bicyclists, transit riders). It must also demonstrate it will not interfere with emergency vehicle access or will create unsafe road or intersection conditions. Finally, new development must be consistent with state and local plans to reduce the number of vehicle miles traveled on a regional basis to improve the quality of life for all residents.

a. Would the project conflict with a program, plan, ordinance or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities?

The SPA concerns maximum building height which would not increase the FAR, overall intensity, or total square footage of development on particular development sites within the SBA Sub-area. As of July 2020, CEQA documents were no longer required to analyze traffic impacts related to Level of Service (LOS) which is a measure of street and intersection congestion but rather impacts based on vehicle miles traveled (VMT). Increased building heights may have a programmatic effect on VMT for specific projects, but the City's development review process requires an assessment of potential VMT impacts for new projects using the City's draft VMT guidelines. This is considered regulatory compliance and not mitigation under CEQA.

It should be noted the SHSP EIR stated that, without the SHSP and any improvements, LOS impacts (i.e., congestion) at two area intersections along Pacific Coast Highway

(previously Sepulveda Boulevard) at both El Segundo Blvd. and Grand Ave. would approach or exceed City standard (LOS D or better during peak periods (DEIR Table 18-8). The SHSP proposed various road improvements to El Segundo Blvd., Franklin Ave., Grand Ave., and a number of roads and alleys to improve overall area circulation. In addition, the traffic study and SHSP EIR recommended Mitigation Measures 18-1 and 18-2 to reduce local traffic congestion impacts. However, LOS is no longer a consideration of traffic impacts under CEQA but can still be considered for planning and engineering purposes (as well as public safety). Therefore, the two "measures" 18-1 and 18-2 are no longer considered "mitigation" and are not carried forward as environmental issues in this CEQA document but will be included as conditions of approval for planning and engineering purposes.

Regarding non-vehicular transportation, the SHSP EIR determined the SHSP would not affect or impede the two transit lines (the Lunchtime Shuttle and Beach Cities Line 109) that traverse Grand Avenue since no physical changes were proposed to Grand Avenue. Additional growth that would result from SHSP implementation would likely increase ridership along these lines over time. In addition, the SHSP includes a system of bike-friendly streets that would link to other bike routes and paths currently proposed in the City as well as provide sidewalk improvements and other enhanced pedestrian facilities. Since the EIR determined impacts in this regard were less than significant for the SHSP, therefore impacts of the SPA would also be less than significant and no programmatic mitigation is required.

Development of the Project would not affect or impede the two transit lines (the Lunchtime Shuttle and Beach Cities Line 109) that traverse Grand Avenue since no physical changes are proposed to Grand Avenue. Additional growth that would result from SHSP implementation, including the proposed Project, would likely increase ridership along these lines over time. In addition, the SHSP includes a system of bike-friendly streets that would ultimately link to other bike routes and paths currently in or proposed in the City, as well as provide sidewalk improvements and other enhanced pedestrian facilities.

Therefore, the Project will not conflict with a program, plan, ordinance or policy addressing the City of SHSP circulation system. Impacts would be less than significant and no mitigation is required.

LESS THAN SIGNIFICANT IMPACT

b. Would the project conflict or be inconsistent with CEQA Guidelines Section 15064.3, subdivision (b)?

SB 743 was approved by the California legislature in September 2013 and requires changes to CEQA to use an alternative metric for transportation impacts. The old metric was based on vehicular "level of service" (LOS) which measures congestion of local intersections and roadways. As of July 2020, the new CEQA metric for transportation projects will be Vehicle Miles Traveled (VMT). The SHSP EIR was adopted in 2018 and did not include a quantitative analysis of the SHSP's potential VMT impacts.

The SPA concerns maximum permissible building height which would not increase the FAR, overall intensity, or total square footage of development on particular development sites within the SPA Sub-area. The SPA may incrementally increase development intensity on certain site within the SPA Sub-area, which would only have indirect or incremental impacts on VMT conditions. The issue of VMT impacts only arises for specific developments

proposed on specific sites. The City's development review process requires an assessment of potential VMT impacts for new (specific) projects using the City's adopted VMT guidelines. This is considered regulatory compliance and not mitigation under CEQA. Therefore, program-level VMT impacts of the SPA itself will be less than significant and no programmatic mitigation is required.

A VMT Analysis was prepared for the proposed Project by Translutions Inc. in August 2021 (Appendix D) based on the Draft SB 743 Implementation Guidelines (City of El Segundo, September 16, 2020). The City recommends using Work VMT per employee for office and employment projects. Based on the Guidelines, the City has set an impact threshold based on 15% below the Southern California Association of Governments (SCAG) regional Work VMT. The 15% reduction is based on the OPR technical advisory. Therefore, a project would result in a significant VMT impact if the project's Work VMT/Employee is greater than 85% of the existing SCAG regional VMT. Therefore, an office project would have a significant impact if the project work VMT per employee is greater than 17.0 VMT/Employee (see Table 7).

The VMT analysis used the 2016 SCAG Regional Transportation Plan (RTP) model with 2020 Socio-Economic Data (SED). This is the latest model available at this time and is the same model used for the City's guidelines. The Development Sites are located in traffic analysis zone (TAZ) 21125100. Consistent with standard modeling practice to isolate project VMT, the existing land uses in the TAZ were moved to the adjacent TAZ (21125200). The Project land uses were converted to employees using a factor of 471 square feet per employee based on the SCAG Employment Densities Study.

Table 7, Project VMT Impacts, demonstrates that the Project VMT/employee is 19.3 miles, which is greater than the threshold of 17.0 miles. Therefore, the Project is required to reduce its VMT/employee to 17.0 (i.e., by 11.7%) to have a less than significant impact.

Table 7: Project VMT Impacts

Base Year Characteristics	Project Characteristics
Total Employment	209
Total Homebased Work VMT	3,910
Project VMT per Employee	**19.3**
City Threshold	**17.0**
Significant Impact?	Yes
Percentage Over Threshold	13.3%
Mitigation Reduction Required	11.7%

Source: Table A, VMT Memorandum, Standard Works Project, Translutions 2021

The VMT Assessment noted the Project's VMT is expected to be up to 35% lower than estimated in the City's model because the Project is significantly more dense than the existing TAZ and the default parameters included in the ITE Trip Generation rates. However, as a worst case condition the assessment gave the Project no "credit" for this reduction due to the Project's design.

The City's guidelines states that if a significant transportation impact is identified, feasible mitigation measures to avoid or reduce the impact must be identified. The Governors' Office of Planning and Research (OPR) provides a list of potential measures to reduce VMT but gives the lead agency full discretion in the selection of mitigation measures. **Mitigation Measures VMT-1 through MM VMT-6** are generally from the California Air Pollution Control Officers Association (CAPCOA) recommendations found in the publication Quantifying Greenhouse Gas Mitigation Measures (2010).

Mitigation Measures. The CAPCOA document provides maximum VMT reductions from various mitigation measures. Mitigation Measures MM VMT-1 through VMT-6 outlined below are recommended for the proposed Project with implementation to be documented prior to receiving a certificate of occupancy:

MM VMT-1 **Unbundle Parking Cost.** This measure implements workplace parking pricing and unbundles the cost of parking from the lease. The Project shall include parking in the access-controlled parking structure. The property owner shall include language in the lease agreement which provides reduced lease rates if parking is not required by the tenant. The developer shall implement a monthly cost for parking spaces by charging a parking fee per access card. The range of VMT reduction from this measure is between 2.6% and 13%. **Based on the calculations, a $50 per month/employee parking cost will result in a VMT reduction of 5.1%.**

MM VMT-2 **Parking Management Strategies.** Strategies to encourage efficiency in parking facilities and improve the quality of service to parking users results in reduction of VMT. This includes signage and directions, providing preferential carpool/vanpool parking spaces closer to the building entrance to and from the destination, etc. This encourages carpooling/vanpooling and also reduces the amount of time patrons drive around to find the best parking area to minimize walking. **The maximum reduction from this measure is 3%.**

MM VMT-3 **Mandatory Travel Behavior Change Program, Promotions & Marketing.** This involves the development of a travel behavior change program that targets individuals' attitudes, goals, and travel behaviors, educating participants on the impacts of their travel choices and the opportunities to alter their habits. The project shall provide a web site that allows employees to research other modes of transportation for commuting. If a website is planned for the development, links to Google Transit, and/or local bus operators should be provided on the website. If a website is not planned, QR Codes could be provided in the parking structure and the building lobbies to enable users an easy way to access information about transit routes. **The maximum reduction due to this measure is 1%.**

MM VMT-4 **Implement Commute Trip Reduction Marketing.** This involves the use of marketing and promotional tools to educate and inform travelers about site-specific transportation options and the effects of their travel choices with passive educational and promotional materials. The project shall implement marketing strategies to reduce commute trips. The project will implement marketing strategies to reduce commute trips. Information sharing and marketing are important components to successful commute trip reduction strategies. Implementing commute trip reduction strategies without a

complementary marketing strategy will result in lower VMT reductions. Marketing strategies may include new employee orientation of trip reduction and alternative mode options, event promotions, and printed material. CAPCOA states that the range of reduction is between 0.8% to 4%, but states that in some literature, the VMT reduction has been as much as 15%, especially for urban areas. **For this project, a conservative reduction of 3% has been assumed.**

MM VMT-5 **Include Bike Parking in Excess of City Code.** This implements short and long-term bicycle parking to support safe and comfortable bicycle travel by providing parking facilities at destinations. Based on discussion with the applicant, bike parking in excess of City code shall be provided. The City's code requires a minimum of 4 spaces for non-residential buildings up to 15,000 square feet, plus a minimum of 5 percent of the required vehicle spaces for the portion above 15,000 square feet. The maximum number of bicycle parking required under City code is 25 spaces. For the project, the number of bicycle parking spaces required under code is 17 spaces, and therefore, it is recommended that the project provide at least 18 spaces. **This results in a VMT reduction of 0.625%.**

MM VMT-6 **Include Secure Bike Parking and Showers.** This implements additional end-of-trip bicycle facilities to support safe and comfortable bicycle travel. Based on discussion with the applicant, each building shall include shower facilities and secure bike parking facilities shall be provided. **This results in a VMT reduction of 0.625%.**

The VMT Assessment determined that implementation of Mitigation Measures MM VMT-1 through MM VMT-6 will reduce Project VMT by 13.35% or to a total of 16.85 miles which is less than the City's threshold of 17.0 miles (Table B, Translutions 2021). With implementation of the recommended mitigation, the Project is consistent with CEQA Guidelines Section 15064.3, subdivision (b) regarding VMT impacts.

LESS THAN SIGNIFICANT WITH MITIGATION INCORPORATED

c. Would the project substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible use (e.g., farm equipment)?

Regarding the SPA, the SHSP has a standard grid pattern of streets with a hierarchy of major, collector, and local streets, and local police and fire facilities are just west of the SHSP area. The SPA addresses building heights and has no effect on street design. The SPA deals only with maximum permissible building heights and would not increase total square footage of development, so it will not increase anticipated traffic from the SPA Sub-area. Therefore, the SPA will have less than significant impacts relative to design hazards or incompatible uses and no programmatic mitigation is required.

The proposed Project is part of the SHSP grid pattern of streets and is located along one major street (El Segundo Boulevard) and three secondary streets (E. Franklin Street, Kansas Street, and Oregon Street). The Project site plans (Exhibits 8 and 9) show the proposes buildings are on major or secondary streets and have immediate and adequate access to those streets. The site plans also show the immediate surrounding area has no identified road or intersection design hazards. In addition, the proposed office uses of the Project are consistent with planned uses under the SHSP and surrounding land uses. The

SHSP EIR stated that future development within the SHSP (like the proposed Project) would not create any localized traffic hazards due to the type and layout of planned land uses within a standard grid street system. All designs and alterations would be performed in accordance with all applicable standards relating to motorized vehicle, bicycle, and pedestrian safety.

Therefore, the Project will have less than significant traffic impacts relative to road, intersection, or site plan design hazards or incompatible uses. Impacts will be less than significant and no mitigation is required.

LESS THAN SIGNIFICANT IMPACT

d. Would the project result in inadequate emergency access?

The SHSP has a standard grid pattern of streets with a hierarchy of major, collector, and local streets, and local police and fire facilities are just west of the SHSP area. The SPA would not increase total square footage of development, so it will not increase anticipated traffic from the SPA Sub-area or change the need for emergency access. Therefore, the SHSPA will have less than significant impacts relative to emergency access and no programmatic mitigation is required.

The SHSP area has a grid pattern of streets with a hierarchy roadways. The proposed Project is part of the SHSP grid pattern of streets and is located along one major street (El Segundo Boulevard) and three secondary streets (E. Franklin Street, Kansas Street, and Oregon Street) which provide emergency access to both of the Development Sites. It should be noted the Project is not changing the overall onsite or offsite access to the Development Sites. The SHSP EIR stated that implementation of future projects under the SHSP (like the proposed Project) would be reviewed to ensure new development would not create barriers to emergency response vehicles. In addition, the proposed Project is not changing any public roadways or overall vehicular access to the two sites, so long-term emergency access to the site will not be affected by Project development. It should be noted the El Segundo Fire Department (ESFD) has already reviewed the proposed Development Project site plans regarding fire protection and emergency access and approved them subject to compliance with their standard conditions of approval.

For these reasons, the Project will have less than significant traffic impacts relative to emergency access and no mitigation is required.

LESS THAN SIGNIFICANT IMPACT

Cumulative Impacts. The SPA would increase building heights within the SPA Sub-area but would not affect FAR or overall building square footages of new development beyond that allowed in the SHSP and evaluated in the SHSP EIR. Therefore, the SPA will not affect VMT of future development projects. The VMT study for the proposed Development Proiect indicates it will have less than significant VMT impacts with implementation of the recommended mitigation. Therefore, the SPA and Development Project will make less than significant contributions to cumulatively considerable regional VMT impacts.

18 Tribal Cultural Resources

	Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less than Significant Impact	No Impact
Would the project cause a substantial adverse change in the significance of a tribal cultural resource, defined in a Public Resources Code Section 21074 as either a site, feature, place, or cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:				
a. Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code Section 5020.1(k)?	☐	■	☐	☐
b. A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1? In applying the criteria set forth in subdivision (c) of Public Resources Code Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe.	☐	■	☐	☐

The LA Basin has been inhabited for thousands of years by various Native American tribes. CEQA requires coordination between the tribes and local governments to assure that tribal cultural resources are not being significantly impacted by new development.

a. *Would the project cause a substantial adverse change in the significance of a tribal cultural resource as defined in Public Resources Code Section 21074 that is listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code Section 5020.1(k)?*

b. *Would the project cause a substantial adverse change in the significance of a tribal cultural resource as defined in Public Resources Code 21074 that is a resource determined by the lead agency, in its discretion and supported by substantial evidence,*

to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1?

(a-b) The proposed SPA would increase the maximum allowable building heights on individual development sites within the SPA Sub-area by ten feet. However, future development would still be required to comply with CEQA, federal and state laws regarding archaeological and/or tribal resources, including consultation, and the City's development review process. Therefore, the SHSPA will have less than significant impacts regarding tribal cultural resources and no programmatic mitigation is required.

The City's General Plan (EIR indicates that the Tongva and Chumash Native American tribes inhabited this area for thousands of years, but it is likely that prior development has likely destroyed any artifacts if they were present. The SHSP EIR indicates the SHSP and surrounding areas have not been identified as containing significant tribal resources or are part of a cultural landscape by any local tribes. However, there is a potential for discovery of Native American tribal resources during grading and contact with such resources during construction activities could result in significant impacts. The SHSP EIR concluded that implementation of **Mitigation Measures CUL MM 8-2 and CUL MM 8-3** (in sub-section 5.b) would reduce these potential impacts to less than significant levels.

Regarding the Development Sites, AB 52 requires consultation with Native American tribes that are traditionally and culturally affiliated to the geographic area where a project is located for any project for which a Notice of Preparation, Notice of Mitigated Negative Declaration or Notice of Negative Declaration is filed on or after July 1, 2015. In order to participate in AB 52 tribal consultation, a tribe must request, in writing, to be notified by lead agencies through formal notification of proposed projects in the geographic area with which the tribe is traditionally and culturally affiliated.

SB 18 requires that, prior to the adoption or amendment of a city or county's general plan, the city or county conduct consultations with California Native American tribes for the purpose of preserving specified places, features, and objects that are located within the city's jurisdiction. SB 18 requires the city to send a letter to each contact on the SB 18 list, extending an invitation for consultation. Native American tribes then have 90 days from receipt of the letter to request consultation. The city must also send a notice to all contacts 45 days prior to adopting an amended General Plan, as well as a third notice 10 days prior to any public hearing regarding a General Plan amendment.

The environmental document for the Project is an IS/MND. In addition, the Project includes an amendment to the SHSP and Site Plan Review. The Project would also require public hearings before both the City of El Segundo Planning Commission and City Council prior to Project approval.

One California Native American tribe, the Gabrieleño Band of Mission Indians–Kizh Nation, has notified the City of El Segundo with a request to be notified of pending projects that are being reviewed in accordance with the City's local CEQA implementation procedures. A formal notification regarding this Project proposal and the City's environmental review process was sent to the Kizh Nation on January 27, 2021, and the Kizh Nation subsequently submitted correspondence requesting further consultation.

On March 24, 2021, the City participated in a conference call with Andy Salas and Matt Teutimez, representatives of the Kizh Nation, to commence the tribal consultation process. Mr. Salas and Mr. Teutimez stated that significant tribal cultural resources have been

previously unearthed in the broader Project area and that this area was historically utilized as significant Native American trade route and community gathering place in the region. The tribal consultation is currently ongoing.

In addition, the City consulted with Robert Dorame, Tribal Chairman of the Gabrielino Tongva Indians of California (GTIC) on September 17, 2021 in compliance with AB-52 and SB-18.

As a result of the consultation with the Kizh Nation and the GTIC, **MM-TCR-1** is being proposed in the event of any discovery of unknown tribal cultural resources during earthwork. This mitigation measure can be updated prior to concluding tribal consultation with the Gabrieleño Band of Mission Indians - Kizh Nation and the Gabrielino Tongva Indians of California as appropriate.

Mitigation Measures. SHSP EIR **CUL MM 8-2 and CUL MM 8-3**, as outlined in sub-section 5.b, Cultural Resources, are applicable to development of the Development Sites, in addition, the following Mitigation Measure TCR-1 addresses impacts related to Tribal Cultural Resources:

MM-TCR-1 **Native American Monitoring.** Prior to the commencement of any ground disturbing activity at the Project site, the Project applicant shall retain Native American Monitors approved by the Gabrieleño Band of Mission Indians-Kizh Nation and the Gabrielino Tongva Indians of California, the tribe that consulted on this Project pursuant to AB 52 and SB 18 (the "Tribes" or the "Consulting Tribes"). Copies of the executed contracts shall be submitted to the City of El Segundo Development Services Department prior to the issuance of any permit necessary to commence a ground-disturbing activity.

The Tribal monitors shall only be present on-site during the construction phases that involve ground-disturbing activities. Ground disturbing activities are defined by the Tribes as activities that may include, but are not limited to, pavement removal, potholing or auguring, grubbing, tree removals, boring, grading, excavation, drilling, and trenching, within the Project area. The Tribal Monitors shall complete daily monitoring logs that will provide descriptions of the day's grading and related earth-disturbing activities, including type and extent of construction activities, location of work, soil and any cultural materials identified, or other items potentially related to cultural resources. The on-site monitoring shall end when all ground-disturbing activities on the Project site are completed, or when the Tribal Representatives and Tribal Monitors have indicated that all upcoming ground-disturbing activities at the Project site have little to no potential for impacting Tribal Cultural Resources.

Upon discovery of any Tribal Cultural Resources, construction activities shall cease in the immediate vicinity of the find (not less than the surrounding 100 feet) until the find can be assessed. All Tribal Cultural Resources unearthed by Project activities shall be evaluated by the Consulting Tribes approved Tribal monitors. If the resources are Native American in origin, the Consulting Tribes will retain it/them in the form and/or manner the Tribes deem appropriate, for educational, cultural and/or historic purposes. If human remains and/or grave goods are discovered or recognized at the Project site, all ground disturbance shall immediately cease, and the county coroner shall be notified per Public Resources Code Section 5097.98, and Health & Safety Code Section 7050.5. Human remains and grave/burial goods shall be treated alike per California Public Resources Code section 5097.98(d)(1) and

(2). Work may continue on other parts of the Project site while evaluation and, if necessary, mitigation takes place (CEQA Guidelines Section 15064.5[f]).

With the implementation of Mitigation Measures CUL MM 8-2, CULMM 8-3, and TCR-1, potential impacts to tribal cultural resources would be reduced to less than significant levels.

LESS THAN SIGNIFICANT WITH MITIGATION INCORPORATED

Cumulative Impacts. The SPA addresses only building heights within the SPA Sub-area and will not increase FAR, new building footprints, or total allowable building area of new development. Therefore, it will have no impact on construction activities that could disturb previously unknown tribal cultural resources. In addition, the Development Project proposes no increase in FAR or overall square footage of development which could disturb tribal cultural resources. Therefore, the SPA and Development Project will not contribute to any cumulative impacts regarding tribal cultural resources, including the discovery of any Native American human remains.

19 Utilities and Service Systems

	Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less than Significant Impact	No Impact
Would the project:				
a. Require or result in the relocation or construction of new or expanded water, wastewater treatment or storm water drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects?	☐	☐	■	☐
b. Have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry and multiple dry years?	☐	☐	■	☐
c. Result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?	☐	☐	■	☐
d. Generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals?	☐	☐	■	☐
e. Comply with federal, state, and local management and reduction statutes and regulations related to solid waste?	☐	☐	■	☐

Residents and employees in the Project area require a variety of utility services including water, sewer, and solid waste. New development must be evaluated to assure it is within the service capabilities of local companies and jurisdictions that provide these utilities.

a. *Would the project require or result in the relocation or construction of new or expanded water, wastewater treatment or storm water drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects?*

The SPA would increase maximum permissible building heights for future development within the SPA Sub-area by ten feet, but would not allow for more intensive development or more total overall square footage than under the current SHSP. This increased height of development would not result in a substantial increase in water consumed and wastewater and solid waste generated in the SHSP. The development on individual sites will still not exceed the overall growth expected for buildout within the SHSP. Impacts would be less than significant and no programmatic mitigation is required.

The Project is part of the SHSP and will construct a net of 90,172 square feet of new office uses within the SHSP area. These uses will generate approximately 120 new employees who will consume additional water and generate additional wastewater and solid waste. Specific estimates for additional water consumed, wastewater generated, and solid waste generated are provided in sub-sections 17.b, 17.c, and 17.d respectively.

The EIR estimated the SHSP would develop over 517,000 square feet of new commercial, industrial, office, and other uses and generate a total of 951 additional employees and up to 18 additional residents (max. 3 persons per caretaker unit). The office development proposed for the Project is well within the growth estimates for the SHSP as a whole, representing 18.1 percent of the new building square footage planned within the SHSP.

Since the proposed Project is part of the SHSP, it is also expected to have less than significant impacts regarding the existing storm drain system. In addition, neither the SHSP or the Project will substantially increase the need or infrastructure to provide electricity, natural gas, or telecommunications. Impacts for all utility systems are expected to be less than significant and no mitigation is required.

LESS THAN SIGNIFICANT IMPACT

b. Would the project have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry and multiple dry years?

The SPA would increase maximum permissible building heights for future development within the SPA Sub-area by ten feet, which would not allow for higher FAR, more intensive development, or more total square footage on sites than under the current SHSP. This increased height of development could result in incremental increases in water consumed in the SHSP. However, the increased development height on individual sites will still not exceed the overall growth expected for buildout within the SHSP. Impacts would be less than significant and no programmatic mitigation is required.

The SHSP EIR indicated the City's projected water supply for 2035 was 17,750 Acre-Feet Per Year (AFY) and the current (then 2018) projected demand for water supply in 2035 during a single dry year was 17,250 AFY, as shown in DEIR Table 19-4. A 500 AFY surplus was anticipated based on the projected water demands for a single dry year in 2035. Projections indicate that supply and demand from 2020 to 2035 vary and the City imports all water supplies to meet its water demands. The SHSP EIR determined the SHSP would result in a net increase in water demand of 118.38 AFY but sufficient water supplies were available to serve buildout of the SHSP area.

The proposed Project is part of the SHSP and will construct a net of 90,172 square feet of new office uses within the SHSP area which will consume approximately 12,000 gallons of water per day or 13.4 acre-feet of water per year. The Project will make connections and improvements as necessary to provide adequate water service for the 120 future Project

employees[14]. By comparison, the SHSP EIR estimated the entire SHSP would develop over 517,000 square feet of new commercial, industrial, office, and other uses and generate a total of 951 additional employees. Therefore, the development proposed for the Project is well within the growth estimates for the SHSP as a whole, representing a maximum of 18.1 percent of the new building square footage planned under the SHSP (90,172 vs. 517,000). The Project will also make connections and improvements as necessary to provide adequate utility service for the future employees.

Future development within the SHSP would have to comply with the City's Municipal Code water conservation measures such as drought-tolerant landscaping, water conservation measures to minimize water consumption, and use of recycled water which would decrease the projected water demand needs for the City. The EIR concluded that implementation of the SHSP would not increase system demands to require new facilities or result in infrastructure improvements beyond those projected by the City Public Works Department.

Based on this analysis, potential impacts of the Project on water supplies will be less than significant and no mitigation is required.

LESS THAN SIGNIFICANT IMPACT

c. Would the project result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?

The SPA would increase maximum permissible building heights for future development within the SPA Sub-area by ten feet, but would not allow for higher FAR, more intensive development, or more total square footage on sites than under the current SHSP. This increased height of development would not result in incremental increases in water consumed and wastewater and solid waste generated in the SHSP. The increased development height on individual sites will still not exceed the overall growth expected for buildout within the SHSP. Impacts would be less than significant and no programmatic mitigation is required.

The Project is part of the SHSP and will construct a net of 90,172 square feet of new office uses within the SHSP area which will generate approximately 6,000 gallons pf wastewater per day. The Project will make connections and improvements as necessary to provide adequate wastewater service for the 120 future Project employees[15].

The SHSP EIR stated that implementation of the SHSP would result in an additional net wastewater generation of 42,951.2 gallons per day, which would remain consistent with the capacity of existing facilities. In 2018 the City's sewer flow was 2.66 million gallons per day (mgd) of which 1.17 mgd was conveyed to the Hyperion Plant with the remaining volume conveyed to other facilities of the Sanitation District of Los Angeles County (SDLAC). The City's capacity was 2.75 mgd so the remaining capacity on the system was 0.9 mgd. Therefore, the EIR concluded that implementation of the SHSP would not result in the need for construction of new water or wastewater facilities, or expansion of existing facilities.

Therefore, impacts with respect to projected wastewater generation and infrastructure needs would be less than significant and no mitigation is required.

---

[14] 90,172 square feet of office uses divided by 750 square feet per office employee equals new 120 employees times 100 gallons per person per day of water consumed equals 12,000 gallons per day of water which equals 13.4 acre-feet.

[15] 90,172 square feet of office uses divided by 750 square feet per office employee equals new 120 employees times 50 gallons per person per day equals 6,000 gallons per day of wastewater.

LESS THAN SIGNIFICANT IMPACT

d. Would the project generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals?

Solid Waste Infrastructure. The EIR estimated the total solid waste generated by occupants (not residents) and employees by implementation of the SHSP would be 2,216.17 cubic yards (CY) per year. Current disposal facilities include the Chiquita Canyon, Scholl Canyon, and Sunshine Canyon landfills which will continue to remain in operation. In 2018, the EIR indicated the Scholl Canyon landfill had a remaining capacity of 9.9 million CY, Sunshine Canyon landfill had a remaining capacity of 96.8 million CY, and the Chiquita Canyon landfill had a remaining capacity of 8.6 million CY. The EIR concluded the landfills serving the SHSP area had sufficient capacity to accommodate the additional solid wastes generated by the SHSP. Therefore, impacts would be less than significant and no mitigation was required assuming compliance with the City's waste reduction programs.

The SPA would increase maximum permissible building heights for future development within the SPA Sub-area by ten feet, but would not allow for higher FAR, more intensive development, or more total square footage on sites than under the current SHSP. This increased height of development would not result in increased solid wastes generated in the SHSP or the ability of the County to dispose of the additional generated wastes. Impacts would be less than significant and no programmatic mitigation is required.

The Project will construct 90,172 square feet of new office uses within the SHSP area which will generate additional solid waste. The additional 120 employees of the Project will generate approximately 1,200 pounds or 0.6 tons of solid waste per day assuming 10 pounds per person per day (CIWMB 2021). By comparison, the SHSP EIR estimated the SHSP would develop over 517,000 square feet of new commercial, industrial, office, and other uses and generate a total of 951 additional employees. The development proposed for the Project is well within the growth estimates for the SHSP as a whole, representing 18.1 percent of the total new building square footage planned under the SHSP.

Based on the preceding analysis, impacts of the Project relative to solid waste disposal will be less than significant and no mitigation is required.

LESS THAN SIGNIFICANT IMPACT

f. Would the project comply with federal, state, and local management and reduction statutes and regulations related to solid waste?

New development on sites within the SHSP would still be required to comply with the City's recycling and source reduction programs. Impacts would be less than significant and no programmatic mitigation is required.

Regarding the Project, Sub-section 19.e above indicates the Project is part of the SHSP and would generate additional solid waste, but it will not create additional non-residential development to the degree that the available landfill capacity would be exceeded. The Project will be required to be consistent with existing solid waste regulations implemented by the City.

The Project would be required to comply with state regulations pertaining to solid waste as managed by the City. Therefore, the Project's impacts with respect to federal, state, and local statutes and regulations related to solid waste would be less than significant and no mitigation is required.

LESS THAN SIGNIFICANT IMPACT

Cumulative Impact. The SPA would increase buildings heights within the SPA Sub-area but would not affect FAR or total building square footage of new development. Therefore, the SPA would not increase utility demand over that identified in the SHSP EIR and would have less than significant impacts on local water, sewer, and other utility systems and services. The Development Project would increase demand for utility services above current levels due to the increased amount of development proposed for the two sites. However, this Initial Study indicates that anticipated utililty demands can be met without significant impacts to utility infrastructure. Therefore, the SPA and Developent Project will incrementally increase the demand for utility services but will not contribute to regionally significant cumulative impacts on utilities or service systems.

20 Wildfire

	Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less than Significant Impact	No Impact
If located in or near state responsibility areas or lands classified as very high fire hazard severity zones, would the project:				
a. Substantially impair an adopted emergency response plan or emergency evacuation plan?	☐	☐	☐	■
b. Due to slope, prevailing winds, and other factors, exacerbate wildfire risks and thereby expose project occupants to pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?	☐	☐	☐	■
c. Require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?	☐	☐	☐	■
d. Expose people or structures to significant risks, including downslopes or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?	☐	☐	☐	■

Due to many physical conditions, the Los Angeles Basin, which includes the proposed Project area, has a significant risk of wildfires in areas with extensive natural vegetation and at the urban/wildland interface. CEQA new requires an assessment of new development to determine if it will exacerbate wildland fire risks or interfere with the ability to provide effective fire protection services to these areas.

a. *If located in or near state responsibility areas or lands classified as very high fire hazard severity zones, would the project substantially impair an adopted emergency response plan or emergency evacuation plan?*

b. *If located in or near state responsibility areas or lands classified as very high fire hazard severity zones, would the project, due to slope, prevailing winds, and other factors, exacerbate wildfire risks and thereby expose project occupants to pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?*

c. *If located in or near state responsibility areas or lands classified as very high fire hazard severity zones, would the project require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?*

d. *If located in or near state responsibility areas or lands classified as very high fire hazard severity zones, would the project expose people or structures to significant risks, including downslopes or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?*

(a-d) The SHSP EIR stated there were no wildland areas in or adjacent to the SHSP. In addition, there are no state responsibility areas in the SHSP or the City. Therefore, there were no impacts to or from future development within the SHSP related to wildland fires (i.e., wildfires) and no programmatic mitigation is required.

Future buildings under the SHSPA may be taller than currently allowed, but there are no wildland areas in or adjacent to the SHSP. The City is a highly urbanized area and no part lies within a Very High Fire Hazard Severity Zone.

The two Development Sites are within the SHSP area and the SHSP EIR indicates the Specific Plan is not within a wildland fire risk area or a high or very high fire hazard severity zone. Therefore, the Project would have no impacts related to high fire zones and no mitigation required.

NO IMPACT

Cumulative Impacts. The SPA Sub-area, which includes the two Development Sites, is in a highly urbanized area with no open space or vacant land or areas of native vegetation nearby. Therefore, both the SPA and the Development Project would not contribute to any regional cumulative impacts related to wildfires.

21 Mandatory Findings of Significance

	Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less than Significant Impact	No Impact
Does the project:				
a. Have the potential to substantially degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory?	☐	■	☐	☐
e. Have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects)?	☐	■	☐	☐
f. Have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly?	☐	■	☐	☐

CEQA requires an evaluation of a number of topics referred to as "mandatory findings" including: (1) impacts to listed or otherwise protected species of plants, animals, or their habitat, or important and irreplaceable historical or archaeological resources; (2) impacts that may be individually limited but significant on a cumulative basis; and (3) impacts that would significantly harm human health or safety.

a. *Does the project have the potential to substantially degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory?*

The SPA concerns maximum building heights within the SPA Sub-area and the preceding analyses (Subsections 4 and 5) determined the SPA would have no or less than significant impacts on cultural or biological resources and no programmatic mitigation was proposed.

The Project is located within a highly urbanized area with no natural habitat. The preceding analyses (Subsections 4 and 5) determined that Project impacts to the natural habitat of a fish or wildlife species will be less than significant with implementation of **Mitigation Measures BIO MM 7-1 and BIO MM 7-2** to protect nesting birds. In addition, potential adverse impacts to archaeological resources, paleontological resources, or human remains will remain less than significant with implementation of **Mitigation Measures CUL MM 8-1 through CUL MM 8-3 and MM TCR-1** to monitor grading for possible cultural or fossil materials. Although the two onsite buildings are over 50 years in age, the Development Sites and their buildings were determined not to have any association with an important example of California's history or prehistory.

LESS THAN SIGNIFICANT WITH MITIGATION INCORPORATED

b. Does the project have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects)?

The SPA concerns maximum building heights within the SPA Sub-area and the preceding analyses (Subsections 1-20) determined the SPA would have no significant individual or ay regional cumulative impacts and no programmatic mitigation is proposed.

The Project is within the SHSP and there are no residential uses or sensitive receptors adjacent to either of the Development Sites. For the Project, the preceding analyses (Subsections 1-20) did identify mitigation measures, either from the SHSP EIR or recommended in this document, for the following potential impact areas:

Biological Resources (**BIO MM 7-1 and 7-2**)

Cultural Resources (**CUL MM 8-1 through 8-3**)

Greenhouse Gas Emissions (**EECAP 4.1 and EECAP 5.2**)

Hazardous and Hazardous Materials (**MM HAZ-1 to HAZ-3**)

Geology and Soils (**MM GEO-1**)

Transportation (**MM VMT-1 to VMT-6**)

Tribal Cultural Resources (**MM TCR-1**).

However, the analyses also determined the Project would not make any significant contributions to cumulatively considerable regional impacts for any of the environmental issues evaluated, including air quality and greenhouse gas emissions, with implementation of these measures.

LESS THAN SIGNIFICANT WITH MITIGATION INCORPORATED

c. Does the project have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly?

The SPA concerns maximum building heights within the SPA Sub-area and the preceding analysis determined the SPA would have no or less than significant impacts related to air quality, health risks, greenhouse gas emissions, hazardous materials or other hazards, or geology or soils and no programmatic mitigation is proposed for the SPA.

The Project is within the SHSP and there are no residential uses or sensitive receptors adjacent to either of the Development Sites. The preceding analyses (Subsections 3, 7-9,13, and 20) addressed the following environmental effects which have the potential to cause substantial adverse effects on human beings, either directly or indirectly:

Air Quality and Health Risks – Subsection 3 – Less Than Significant
Geology (groundshaking) – Subsection 7 – Less Than Significant with Mitigation Measure **MM GEO-1**
Hazards and Hazardous Materials – Subsection 8 – Less Than Significant with Mitigation Measures **MM HAZ-1 through HAZ-3**
Hydrology (flooding) – Sect 9 – Less Than Significant
Noise – Subsection 13- Less Than Significant
Wildfire – Subsection 20 – No Impact

The preceding analyses determined all of these potential impacts could be reduced to less than significant levels with the recommended mitigation measures.

LESS THAN SIGNIFICANT WITH MITIGATION INCORPORATED

List of Preparers

MIG, Inc. prepared this Initial Study under contract to the City of El Segundo. Persons involved in data gathering analysis, project management, and quality control are listed below:

City of El Segundo

Eduardo Schonborn, AICP, Principal Planner, City of El Segundo
Leila Carver, PTP, Contract Planner
Anna Choudhuri, Contract CEQA Planner

CEQA Consultants

MIG, Inc.

Bob Prasse, Env. Services Director
Kent Norton, AICP, REPA, Senior Project Manager
Chris Dugan, Director of Air Quality and Noise Assessments

Translutions, Inc. (Traffic – VMT)

Sandipan Bhattacharjee, President

Summary of Mitigation Measures

* denotes measure is from the Smoky Hollow Specific Plan EIR

Biological Resources

BIO MM 7-1* To avoid impacts to nesting birds, construction activities and construction noise should occur outside the avian nesting season (prior to February 1 or after September 1). If construction and construction noise occurs within the avian nesting season (during the period from February 1 to September 1), areas within 100 feet of a development site shall be thoroughly surveyed for the presence of nests by a qualified biologist no more than five days before commencement of any vegetation removal. If it is determined that the Project Site is occupied by nesting birds covered under the Migratory Bird Treaty Act, mitigation measure 7-2 shall apply.

BIO MM 7-2* If pre-construction nesting bird surveys result in the location of active nests, no grading, vegetation removal, or heavy equipment activity shall take place within an appropriate setback from occupied nests as determined by a qualified biologist. Protective measures (e.g., established setbacks) shall be required to ensure compliance with the Migratory Bird Treaty Act and California Fish and Game Code requirements. The qualified biologist shall serve as a construction monitor during those periods when construction activities occur near active nest areas to ensure that no inadvertent impacts occur. A report of the findings, prepared by a qualified biologist, shall be submitted to the CDFW prior to construction-related activities that have the potential to disturb any active nests during the nesting season.

Cultural Resources

CUL MM 8-2* Prior to the commencement of grading or demolition of subsurface structures, a professional archaeologist who meets U.S. Secretary of the Interior's Professional Qualifications and Standards, shall conduct a brief archaeological and paleontological informational session for construction personnel. The training session may consist of an in-person meeting or a written handout describing: (1) how to identify archaeological and paleontological resources that may be encountered during earth-moving activities and (2) the procedures to be followed in such an event, including

contact information for the appropriate entities if archaeological or paleontological resources are discovered.

CUL MM 8-3* In the event that archaeological or paleontological resources are unearthed during ground-disturbing activities, the ground-disturbing activities shall be halted or diverted away from the vicinity of the find so that the find can be evaluated. A buffer area of at least 50 feet shall be established around the find, where construction activities will not be allowed to continue until a qualified archaeologist or paleontologist has examined the newly discovered artifact(s) and has evaluated the area of the find. Work shall be allowed to continue outside the buffer area. If the archaeologist identifies the find as a tribal cultural resource or suspects it to be a tribal cultural resource, the City will contact the Native American Heritage Commission (NAHC) to report the discovery, and will contact local Native American tribal representatives as directed by the NAHC. Should the newly discovered artifact(s) be determined to be a tribal cultural resource, Native American construction monitoring will be initiated. The City shall coordinate with the archaeologist and tribal representative(s) to develop an appropriate treatment plan for the resources.

CUL MM 8-4 If human remains are uncovered during Project grading, work must be halted in the immediate area of the find and the County Coroner notified in accordance with Health and Safety Code Section 7050.5. The Coroner must then determine whether the remains are of forensic interest. If the Coroner, with the aid of a supervising archaeologist, determines that the remains are or appear to be of a Native American, they must contact the Native American Heritage Commission for further investigations and proper recovery of such remains, if necessary. Further, pursuant to Public Resource Code Section 5097.98(b) remains shall be left in place and free from disturbance until a final decision as to the treatment and disposition has been made. If the County Coroner determines the remains to be Native American, the Native American Heritage Commission shall be contacted within the period specified by law (24 hours). Subsequently, the Native American Heritage Commission shall identify the "most likely descendant". The most likely descendant shall then make recommendations and engage in consultation concerning the treatment of the remains as provided in Public Resources Code Section 5097.98. Human remains from other ethnic/cultural groups with recognized historical associations to the area shall also be subject to consultation between appropriate representatives from that group and the local jurisdiction/lead agency involved. This measure shall be implemented to the satisfaction of the City Planning Department.

Geology and Soils

MM GEO-1 Prior to issuance of any grading or building permits, the applicant shall demonstrate that all improvements and construction-related activities comply with the recommendations outlined in the Project geotechnical report (CWI 2017). This measure applies to all potential geologic and soil constraints that could affect one or both sites, including but not limited to seismic ground failure, strong seismic shaking, differential settlement, liquefaction, lateral spreading, and subsidence, and landslides/slope stability as appropriate. This measure shall be implemented to the satisfaction of the City Engineer.

Greenhouse Gas Emissions

EECAP 4.1* *Encourage or Require Energy Efficiency Standards Exceeding Title 24.* This measure will develop City staff to be resources in encouraging and implementing energy efficiency beyond that required by current Title 24 Standards.

EECAP 5.2* *Promote Water Efficiency Standards Exceeding SB X7-7.* In addition to SB X7-7, more actions are being studied or have been taken to exceed water efficiency standards. These efforts include education and outreach practices that could be combined with residential and commercial EECAP actions that emphasize the reuse of recycled/gray water and promote harvesting rainwater.

Hazards and Hazardous Materials

MM HAZ-1 Prior to issuance of a Certificate of Occupancy for the North Site (1330 E. Franklin Street), the applicant shall remove and properly decommission the vertical and lateral well network of the former vapor extraction system including abandonment of any groundwater monitoring wells and semi-permanent vapor probes on the property. This measure shall be implemented to the satisfaction of the City with input and regulatory oversight and written signoff by DTSC.

MM HAZ-2 Prior to issuance of a grading permit for the North Site (1330 E. Franklin Street), the applicant shall prepare and process a Soils Management Plan through the state Department of Toxic Substances Control (DTSC) for review and approval. Prior to issuance of a building permit, the applicant shall provide written confirmation from DTSC to the City that the Soil Management Plan has been implemented as approved.

MM HAZ-3 Prior to issuance of any demolition or building permits for South Site (1475 E. El Segundo Boulevard) or North Site (1330 E. Franklin Street), the applicant shall identify and effectively remediate any asbestos-containing materials (ACMs) associated with the onsite buildings. This remediation may be accomplished by either in-place encapsulation or removal as appropriate. The applicant shall retain a qualified asbestos contractor to conduct this work and shall provide the City with a final report within 45 days of completion of all remediation activities, including appropriate documentation of disposal of any onsite ACMs at an approved landfill. This measure shall be implemented to the satisfaction of the City Planning Department.

Transportation (VMT)

MM VMT-1 **Unbundle Parking Cost.** This measure implements workplace parking pricing and unbundles the cost of parking from the lease. The Project shall include parking in the access-controlled parking structure. The property owner shall include language in the lease agreement which provides reduced lease rates if parking is not required by the tenant. The developer shall implement a monthly cost for parking spaces by charging a parking fee per access card. The range of VMT reduction from this measure is between 2.6% and 13%. **Based on the calculations, a $50 per month/employee parking cost will result in a VMT reduction of 5.1%.**

MM VMT-2 **Parking Management Strategies.** Strategies to encourage efficiency in parking facilities and improve the quality of service to parking users results in

reduction of VMT. This includes signage and directions, providing preferential carpool/vanpool parking spaces closer to the building entrance to and from the destination, etc. This encourages carpooling/vanpooling and also reduces the amount of time patrons drive around to find the best parking area to minimize walking. **The maximum reduction from this measure is 3%.**

MM VMT-3 **Mandatory Travel Behavior Change Program, Promotions & Marketing.** This involves the development of a travel behavior change program that targets individuals' attitudes, goals, and travel behaviors, educating participants on the impacts of their travel choices and the opportunities to alter their habits. The project shall provide a web site that allows employees to research other modes of transportation for commuting. If a website is planned for the development, links to Google Transit, and/or local bus operators should be provided on the website. If a website is not planned, QR Codes could be provided in the parking structure and the building lobbies to enable users an easy way to access information about transit routes. **The maximum reduction due to this measure is 1%.**

MM VMT-4 **Implement Commute Trip Reduction Marketing.** This involves the use of marketing and promotional tools to educate and inform travelers about site-specific transportation options and the effects of their travel choices with passive educational and promotional materials. The project shall implement marketing strategies to reduce commute trips. The project will implement marketing strategies to reduce commute trips. Information sharing and marketing are important components to successful commute trip reduction strategies. Implementing commute trip reduction strategies without a complementary marketing strategy will result in lower VMT reductions. Marketing strategies may include new employee orientation of trip reduction and alternative mode options, event promotions, and printed material. CAPCOA states that the range of reduction is between 0.8% to 4%, but states that in some literature, the VMT reduction has been as much as 15%, especially for urban areas. **For this project, a conservative reduction of 3% has been assumed.**

MM VMT-5 **Include Bike Parking in Excess of City Code.** This implements short and long-term bicycle parking to support safe and comfortable bicycle travel by providing parking facilities at destinations. Based on discussion with the applicant, bike parking in excess of City code shall be provided. The City's code requires a minimum of 4 spaces for non-residential buildings up to 15,000 square feet, plus a minimum of 5 percent of the required vehicle spaces for the portion above 15,000 square feet. The maximum number of bicycle parking required under City code is 25 spaces. For the project, the number of bicycle parking spaces required under code is 17 spaces, and therefore, it is recommended that the project provide at least 18 spaces. **This results in a VMT reduction of 0.625%.**

MM VMT-6 **Include Secure Bike Parking and Showers.** This implements additional end-of-trip bicycle facilities to support safe and comfortable bicycle travel. Based on discussion with the applicant, each building shall include shower facilities and secure bike parking facilities shall be provided. **This results in a VMT reduction of 0.625%.**

Tribal Cultural Resources

MM-TCR-1 **Native American Monitoring.** Prior to the commencement of any ground disturbing activity at the Project site, the Project applicant shall retain a Native American Monitor approved by the Gabrieleño Band of Mission Indians-Kizh Nation and the Gabrielino Tongva Indians of California, the tribes that consulted on this Project pursuant to AB 52 and SB 18 (the "Tribes" or the "Consulting Tribes"). Copies of the executed contracts shall be submitted to the City of El Segundo Development Services Department prior to the issuance of any permit necessary to commence a ground-disturbing activity.

The Tribal monitors shall only be present on-site during the construction phases that involve ground-disturbing activities. Ground disturbing activities are defined by the Tribes as activities that may include, but are not limited to, pavement removal, potholing or auguring, grubbing, tree removals, boring, grading, excavation, drilling, and trenching, within the Project area. The Tribal Monitors shall complete daily monitoring logs that will provide descriptions of the day's grading and related earth-disturbing activities, including type and extent of construction activities, location of work, soil and any cultural materials identified, or other items potentially related to cultural resources. The on-site monitoring shall end when all ground-disturbing activities on the Project site are completed, or when the Tribal Representatives and Tribal Monitors have indicated that all upcoming ground-disturbing activities at the Project site have little to no potential for impacting Tribal Cultural Resources.

Upon discovery of any Tribal Cultural Resources, construction activities shall cease in the immediate vicinity of the find (not less than the surrounding 100 feet) until the find can be assessed. All Tribal Cultural Resources unearthed by Project activities shall be evaluated by the Consulting Tribes approved Tribal monitors. If the resources are Native American in origin, the Consulting Tribes shall retain it/them in the form and/or manner the Tribes deem appropriate, for educational, cultural and/or historic purposes. If human remains and/or grave goods are discovered or recognized at the Project site, all ground disturbance shall immediately cease, and the county coroner shall be notified per Public Resources Code Section 5097.98, and Health & Safety Code Section 7050.5. Human remains and grave/burial goods shall be treated alike per California Public Resources Code section 5097.98(d)(1) and (2). Work may continue on other parts of the Project site while evaluation and, if necessary, mitigation takes place (CEQA Guidelines Section 15064.5[f]).

RESOLUTION NO. 2913

A RESOLUTION OF THE EL SEGUNDO PLANNING COMMISSION RECOMMENDING THAT THE CITY COUNCIL APPROVE SPECIFIC PLAN AMENDMENT NO. SPA 21-02 TO MODIFY PORTIONS OF THE SMOKY HOLLOW SPECIFIC PLAN TO ALLOW FOR INCREASED BUILDING HEIGHTS WITHIN A DESIGNATED SUBAREA OF THE SMOKY HOLLOW SPECIFIC PLAN AREA SUBJECT TO THE APPROVAL OF A TIER II COMMUNITY BENEFITS PLAN.

The Planning Commission of the City of El Segundo does resolve as follows:

SECTION 1: The Planning Commission finds and declares that:

A. On January 6, 2021, Mark Telesz of Smoky Hollow Industries, LLC., filed an application for amendment to the Smoky Hollow Specific Plan (SPA) 21-02;

B. The City reviewed the project's environmental impacts under the California Environmental Quality Act (Public Resources Code §§ 21000, *et seq.*, "CEQA"), the regulations promulgated thereunder (14 Cal. Code of Regulations §§15000, *et seq.*, the "CEQA Guidelines");

C. An Initial Study / Mitigated Negative Declaration (IS/MND) was prepared pursuant to the requirements of CEQA and the CEQA Guidelines;

D. The Development Services Department completed its review and scheduled a public hearing regarding the application before the Planning Commission for January 27, 2022;

E. On January 27, 2022, the Planning Commission continued the project, at the request of the project applicant, to February 10, 2022;

F. On February 10, 2022, the Planning Commission held a duly noticed public hearing to receive public testimony and other evidence regarding the proposed amendments, including, without limitation, information provided to the Planning Commission by City staff and public testimony; and,

G. This Resolution and its findings are made based upon the evidence presented to the Commission at its February 10, 2022, hearing including, without limitation, the staff report submitted by the Development Services Department and the totality of the evidence in the administrative record.

SECTION 2: *Factual Findings and Conclusions*. The Planning Commission finds as follows:

A. The Smoky Hollow Specific Plan (hereinafter, the "Specific Plan" or "SHSP") covers approximately 120 acres located in the northwest quadrant of the

City, generally bounded by Standard Street to the west, El Segundo Boulevard to the south, Pacific Coast Highway to the east, and Grand Avenue to the north.

B. The proposed amendment to the SHSP would amend the development standards to increase the maximum permissible height of buildings within a designated subarea of the SHSP Area from 50 feet to 60 feet. Specifically, the amendment would modify the height development standard for Tier II Community Benefit Plan qualifying projects within an approximate 30-acre area, to be known as Subarea 1, located in Smoky Hollow East and Public Facility zoning districts bounded by Center Street to the west, East Franklin Avenue to the north, Pacific Coast Highway [formerly Sepulveda Blvd.] to the east, and East El Segundo Boulevard to the south.

SECTION 3: Specific Plan and *General Plan Consistency Findings*. Based on the information in the staff report and in the administrative record as a whole, the Planning Commission hereby finds that the proposed amendment to the Smoky Hollow Specific Plan will further the goals, policies and objectives of the General Plan and will not obstruct their attainment. More specifically:

A. The proposed Specific Plan Amendment would make relatively minor changes to the SHSP, allowing for buildings up to 60 feet (an increase of 10 feet above the current maximum height of 50 feet) within a 30-acre subarea of the SHSP, subject to the approval of a Tier II Community Benefits Plan (a discretionary approval). The proposed Specific Plan Amendment would be consistent with the existing Smoky Hollow Design Guidelines for enhancing building character such as conveying a sense of old and new, building upon the existing context, conserving and retaining character defining features, encouraging additions that differentiate and are secondary to the bulk and mass of existing buildings, and encouraging 360-degree architecture.

B. The Specific Plan Amendment will provide additional flexibility and options for advancing the goals and objectives of the Specific Plan itself, particularly for projects that propose to maintain the existing character of the area by preserve portions of existing buildings.

C. The proposed amendment to the SHSP will directly advance the following objectives and policies of the General Plan:

Economic Development Element

Objective ED1-2: Center diversification efforts on targeted industries that meet the City's criteria for job creation, growth potential, fiscal impact, and fit with local resources.

Policy ED1-2.1: Seek to expand El Segundo's retail and commercial base so that the diverse needs of the City's business and residential communities are met.

The proposed amendment is consistent with the General Plan's Economic Development Element and directly implements and furthers the General Plan's goals, objectives and policies above because it promotes economic development, job creation, and improves the City's tax base through inclusion of office, and research and development land uses within the Smoky Hollow Specific Plan area.

Land Use Element

Objective LU4-4: Provide areas where development has the flexibility to mix uses, in an effort to provide synergistic relationships which have the potential to maximize economic benefit, reduce traffic impacts, and encourage pedestrian environments.

D. The proposed amendment is consistent with the General Plan's Land Use Element and directly implements and furthers the General Plan's goals, objectives and policies above because the proposed 10 feet height increase would not detract from or create an impediment to the intent and implementation of the Smoky Hollow Specific Plan. By allowing the additional height, in conjunction with a Community Benefits Plan as required, the additional height will allow more flexibility in the design of new buildings and help promote the retention of the existing buildings to be incorporated into the design of substantial additions. Each new building would be evaluated on its own merit to ensure high quality design and for compatibly with its surroundings. The allowance of the additional height would also promote new uses and building into the context of the overall Smoky Hollow Specific Plan area and will introduce new architectural styles, enliven the area, and create positive direct and indirect economic impacts consistent with Objective LU4-4.

SECTION 5: *Environmental Assessment*. An Initial Study/Mitigated Negative Declaration (IS/MND) has been prepared to analyze the potential environmental effects of the proposed Specific Plan amendment. The Planning Commission has reviewed and considered the IS/MND and, by way of a separate resolution (Resolution No. 2912), has found that it complies with the California Environmental Quality Act. Accordingly, the Commission has recommended that the City Council approve the IS/MND. The findings and conclusions of Resolution No 2912 are incorporated herein as though fully set forth.

SECTION 6: *Recommendations*. The Planning Commission recommends that the City Council adopt the Ordinance attached as Exhibit A which would implement the Smoky Hollow Specific Plan Amendment.

SECTION 7: *Reliance on Record.* Each and every one of the findings and determination in this Resolution are based on the competent and substantial evidence, both oral and written, contained in the entire record relating to the project. The findings and determinations constitute the independent findings and determinations of the Planning Commission in all respects and are fully and completely supported by substantial evidence in the record as a whole.

SECTION 8: *Limitations*. The Planning Commission's analysis and evaluation of the project is based on information available at the time of the decision. It is inevitable that in evaluating a project that absolute and perfect knowledge of all possible aspects of the project will not exist. In all instances, best efforts have been made to form accurate assumptions.

SECTION 9: This Resolution will remain effective unless and until superseded by a subsequent resolution.

SECTION 10: The Commission secretary is directed to mail a copy of this Resolution to any person requesting a copy.

SECTION 11: This Resolution may be appealed within 10 calendar days after its adoption. All appeals must be in writing and filed with the City Clerk within this time period. Failure to file a timely written appeal will constitute a waiver of any right of appeal.

PLANNING COMMISSION RESOLUTION NO. 2913
EXHIBIT "A"

DRAFT ORDINANCE NO. ____

AN ORDINANCE OF THE CITY COUNCIL OF THE CITY OF EL SEGUNDO APPROVING SPECIFIC PLAN AMENDMENT NO. 21-02 TO MODIFY PORTIONS OF THE SMOKY HOLLOW SPECIFIC PLAN TO ALLOW FOR INCREASED BUILDING HEIGHTS WITHIN A DESIGNATED SUBAREA OF THE SMOKY HOLLOW SPECIFIC PLAN AREA SUBJECT TO THE APPROVAL OF A TIER II COMMUNITY BENEFITS PLAN

The City Council of the city of El Segundo does ordain as follows:

15-23A-2: The Council finds and declares as follows:

A. On August 31, 2020, Mark Telesz of Smoky Hollow Industries, LLC., filed an application for amendment to the Smoky Hollow Specific Plan (SPA) 21-02.

B. The City reviewed the project's environmental impacts under the California Environmental Quality Act (Public Resources Code §§ 21000, *et seq.*, "CEQA"), the regulations promulgated thereunder (14 Cal. Code of Regulations §§15000, *et seq.*, the "CEQA Guidelines");

C. An Initial Study / Mitigated Negative Declaration (IS/MND) was prepared pursuant to the requirements of CEQA and the CEQA Guidelines;

D. The Development Services Department completed its review and scheduled a public hearing regarding the application before the Planning Commission for January 27, 2022

E. On January 27, 2022, the Planning Commission continued the application to it's regularly scheduled meeting on February 10, 2022.

F. On February 10, 2022, the Planning Commission held a public hearing to receive public testimony and other evidence regarding the application including, without limitation, information provided to the Planning Commission by city staff, and adopted Resolution No. 2913 recommending that the City Council approve the proposed Specific Plan Amendment;

G. On _____, 2022, the City Council held a public hearing and considered the information provided by City staff and public testimony regarding this Ordinance; and

H. This Ordinance and its findings are made based upon the entire administrative record including, without limitation, testimony and evidence presented to the City Council at its _____, 2022 hearing and the staff report submitted by the Development Services Department.

SECTION 2*: Factual Findings and Conclusions*. The City Council finds as follows:

A. The Smoky Hollow Specific Plan (hereinafter, the "Specific Plan" or "SHSP") covers approximately 120 acres located in the northwest quadrant of the City, generally bounded by Standard Street to the west, El Segundo Boulevard to the south, Pacific Coast Highway to the east and Grand Avenue to the north;

B. The proposed amendment to the Specific Plan would amend the development standards to increase the maximum permissible height of buildings within a designated subarea of the SHSP Area from 50 feet to 60 feet. Specifically, the amendment would modify the height development standard for Tier II Community Benefit Plan qualifying projects within an approximate 30-acre area located in the Smoky Hollow East and Public Facility zoning districts bounded by Center Street to the west, E. Franklin Avenue to the north, Pacific Coast Highway [formerly Sepulveda Blvd.] to the east, and E. El Segundo Blvd. the south.

SECTION 3: *Specific Plan and General Plan Consistency Findings*. Based on the information in the staff report and in the administrative record as a whole, the City Council hereby finds that the proposed amendment to the Smoky Hollow Specific Plan will further the goals, policies and objectives of the General Plan and will not obstruct their attainment. More specifically:

A. The proposed Specific Plan Amendment would make relatively minor changes to the SHSP, allowing for buildings up to 60 feet (an increase of 10 feet above the current maximum height of 50 feet) within a 30-acre subarea of the SHSP, subject to the approval of a Tier II Community Benefits Plan (a discretionary approval). The proposed Specific Plan Amendment would be consistent with the existing Smoky Hollow Design Guidelines for enhancing building character such as conveying a sense of old and new, building upon the existing context, conserving and retaining character defining features, encouraging additions that differentiate and are secondary to the bulk and mass of existing buildings, and encouraging 360-degree architecture.

B. The Specific Plan Amendment will provide additional flexibility and options for advancing the goals and objectives of the Specific Plan itself, particularly for projects that propose to maintain the existing character of the area by preserve portions of existing buildings.

C. The proposed amendment to the SHSP will directly advance the following objectives and policies of the General Plan:

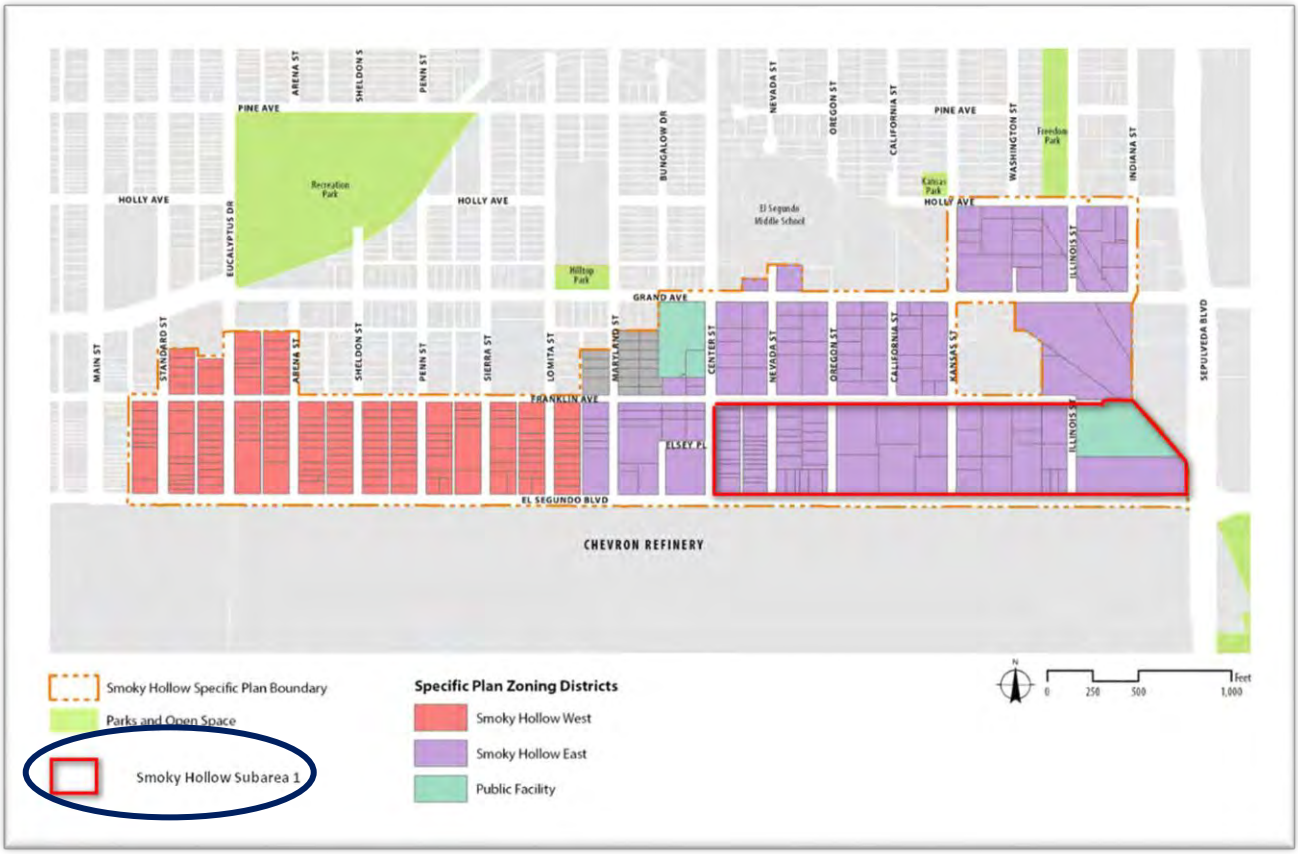
Economic Development Element

Objective ED1-2: Center diversification efforts on targeted industries that meet the City's criteria for job creation, growth potential, fiscal impact, and fit with local resources.

Policy ED1-2.1: Seek to expand El Segundo's retail and commercial base so that the diverse needs of the City's business and residential communities are met.

The proposed amendment is consistent with the General Plan's Economic Development Element and directly implements and furthers the General Plan's goals, objectives and policies above because it promotes economic development, job creation, and improves the City's tax base through inclusion of office, and research and development land uses within the Smoky Hollow Specific Plan area.

Land Use Element



Objective LU4-4: Provide areas where development has the flexibility to mix uses, in an effort to provide synergistic relationships which have the potential to maximize economic benefit, reduce traffic impacts, and encourage pedestrian environments.

D. The proposed amendment is consistent with the General Plan's Land Use Element and directly implements and furthers the General Plan's goals, objectives and policies above because the proposed 10 feet height increase would not detract from or create an impediment to the intent and implementation of the Smoky Hollow Specific Plan. By allowing the additional height, in conjunction with a Community Benefits Plan as required, the additional height will allow more flexibility in the design of new buildings and help promote the retention of the existing buildings to be incorporated into the design of substantial additions. Each new building would be evaluated on its own merit to ensure high quality design and for compatibly with its surroundings. The allowance of the additional height would also promote new uses and building into the context of the overall Smoky Hollow Specific Plan area and will introduce new architectural styles, enliven the area, and create positive direct and indirect economic impacts consistent with Objective LU4-4.

SECTION 4*: Environmental Assessment.* An Initial Study/Mitigated Negative (IS/MND) Declaration has been prepared to analyze the potential environmental effects of the

proposed Specific Plan Amendment. On February 10, 2022, the Planning Commission adopted Resolution No. 2912 recommending that the City Council approve the IS/MND. Prior to taking action on this Ordinance, the City Council adopted Resolution No. ____ approving the IS/MND. The findings and conclusions of Resolution No. ____ are incorporated herein as though fully set forth.

Section 5: Figure 2-1 (Zoning Districts) of the SHSP is superseded and replaced with the revised Figure 2-1 below, which indicates the boundary of the newly-created Smoky Hollow Subarea 1 bounded on the west by Center St, E. Franklin Ave to the north, Pacific Coast Highway (PCH) [formerly Sepulveda Blvd.] to the east, and E. El Segundo Blvd. to the south.

Section 6: The first paragraph of SHSP Section 2.3.2 (Development Tiers and Community Benefits) is hereby amended to delete the final sentence. The resulting paragraph reads as follows:

> "The base development standards listed in Table 2-2 represent the minimum project requirements. New development that proposes to exceed the base standard for height, density, or any other development standard beyond the minor deviation threshold allowed by Section 4.5.1 Administrative Adjustment shall in return provide community benefits that enhance Smoky Hollow's character and experience."

Section 7: Table 2-2 (Building Intensity and Height Standards by Zoning District) is superseded and replaced with the revised Table 2-2 set forth below, which adds development standards for the newly-created Smoky Hollow Subarea 1.

Table 2-2: Building Intensity and Height Standards by Zoning District

Development Standard		Smoky Hollow West	Smoky Hollow East	Smoky Hollow Subarea [4]	Parking
A. FAR Standards					
1. Allowable Gross Floor Area Ratio (FAR) [1]	Base Standard	0.75	1.0		0.15 [2]
	Community Benefits Tier [3]	1.5			N/A
	Community Benefits Tier II [3]	2.5			N/A
B. Height Standards					
1. Maximum Building Height	Base Standard	35 ft			
	Community Benefits Tier II [3]	50 ft		60 ft [4]	50 ft
2. Parapet Height		May exceed maximum building height by 5 ft			

Notes:

sf = square feet; ft = feet

1. FAR shall be calculated using gross floor area of structures, as defined in Appendix A.
2. FAR in the P zone is applicable only to non-parking facility uses.
3. See 4.5.2: Community Benefits Plan.
4. See Figure 2-1: Zoning Districts for Subarea delineation.

Section 8: Table 2-6 (Parking Standards by Zoning District) is superseded and replaced with the revised Table 2-6 below, which replaces the reference to the "2016 California Green Building Standards Code" in subsection H.4 (Bicycle Parking) with a reference to "the most recent California Green Building Code."

Table 2-6: Parking Standards by Zoning District

Development Standard	Smoky Hollow West	Smoky Hollow East	Parking
H. Private Parking Standards			
1. New Construction and Change of Occupancy[1]	2.5 spaces per 1,000 sf gross floor area. Shall be on-site, off-site per covenanted agreement, or addressed through payment of in-lieu fees, per ESMC Section 15-15-6D.		
2. Additions to Buildings	2.5 spaces per 1,000 sf gross floor area (addition only). Shall be on-site, off-site per covenanted agreement, or addressed through payment of in-lieu fees, per ESMC Section 15-15-6D.		
3. Tandem Parking	Tandem spaces shall have a maximum length of 40 feet (parking for 2 vehicles maximum).		
4. Bicycle Parking[2]	Consistent with Section 5.106.4 of the most current California Green Building Standards Code: New projects anticipated to generate visitor traffic shall provide one 2-bike capacity rack for 5% of new visitor motorized vehicle parking spaces being added, with a minimum of one 2-bike capacity rack. Additions or alterations that add 9 or fewer visitor vehicle parking spaces are excluded. New buildings with 10 or more tenant-occupants or additions or alterations that add 10 or more tenant vehicle parking spaces shall provide secure bicycle parking for 5% of the tenant vehicle parking spaces being added, with a minimum of one secure bicycle parking space. Acceptable parking facilities shall be convenient from the street and shall meet one of the following: a. Covered, lockable enclosures with permanently anchored racks for bicycles; b. Lockable bicycle rooms with permanently anchored racks; or c. Lockable, permanently anchored bicycle lockers.		
5. Other Parking Area Development Standards[1]	Refer to ESMC Sections 15-15-1 through 15-15-5.		

Notes:
1. Parking requirements in the Parking Zoning District apply only to non-parking uses.
2. Bicycle parking standards shall apply to new construction, additions, and alterations, but shall not apply to change of occupancy or use.

Section 9: Table 4-1 (Community Benefits Plan) of Section 4.5.2 of SHSP is superseded and replaced with the revised Table 4-1 below, which modifies the "Applicable Projects" and "Findings" columns for Tier II Community Benefits to indicate that a building height deviation of up to 60 feet is available within the newly-added SHSP Subarea 1.

Table 4-1: Community Benefits Plan

Community Benefits Tiers	Review/Approval Authority	Applicable Projects	Findings
Community Benefits Tier I	Planning Commission	Projects that include any of the following components shall be considered under the Tier I review process: **A.** FAR deviation up to 1.5 **B.** One or more deviations to standards that exceed the minor deviation threshold (10%) allowed by Section 4.5.1 Administrative Adjustment	A Community Benefits Plan for Tier I may be approved if the following findings are made: **A.** The proposed additional building intensity or deviation from development standards would not be detrimental to the public health, safety or welfare, or materially injurious to properties or improvements in the vicinity; and **B.** The proposed community benefit provides exemplary project and/or streetscape design; and **C.** The proposed community benefit directly implements objectives of the Specific Plan.
Community Benefits Tier II	City Council	Projects that include any of the following components shall be considered under the Tier II review process: **A.** Building height deviation up to 50 feet (or 60 feet in Subarea as delineated in Figure 2-1, Zoning Districts) **B.** FAR > 1.5 **C.** Three or more deviations to standards that exceed the minor deviation threshold (10%) allowed by Section 4.5.1 Administrative Adjustment	A Community Benefits Plan for Tier II may be approved if the following findings are made: **A.** All findings in Tier I; and **B.** The proposed additional building height, intensity, or deviation from development standards would not be detrimental to the public health, safety or welfare, or materially injurious to properties or improvements in the vicinity; **C.** The value of the community benefits bear a relationship to the value generated by the project; and **D.** The community benefits proposed do not principally benefit the project or occupants of the project, but rather provide a district or area-wide benefit to the larger Smoky Hollow Plan area.

SECTION 10: A complete copy of the Smoky Hollow Specific Plan as amended herein is attached hereto as Exhibit B.

SECTION 11: *CONSTRUCTION*. This Ordinance must be broadly construed in order to achieve the purposes stated in this Ordinance. It is the City Council's intent that the provisions of this Ordinance be interpreted or implemented by the City and others in a manner that facilitates the purposes set forth in this Ordinance.

SECTION 12: *ENFORCEABILITY*. Repeal of any provision of the SHSP does not affect any penalty, forfeiture, or liability incurred before, or preclude prosecution and imposition of penalties for any violation occurring before this Ordinance's effective date. Any such repealed part will remain in full force and effect for sustaining action or prosecuting violations occurring before the effective date of this Ordinance.

SECTION 13: *VALIDITY OF PREVIOUS CODE SECTIONS*. If this entire Ordinance or its application is deemed invalid by a court of competent jurisdiction, any repeal or amendment of the SHSP or other city ordinance by this Ordinance will be rendered void and cause such previous SHSP provision or other the city ordinance to remain in full force and effect for all purposes.

SECTION 14*: SEVERABILITY.* If any part of this Ordinance or its application is deemed invalid by a court of competent jurisdiction, the City Council intends that such invalidity will not affect the effectiveness of the remaining provisions or applications and, to this end, the provisions of this Ordinance are severable.

SECTION 15: The City Clerk is directed to certify the passage and adoption of this Ordinance; cause it to be entered into the City of El Segundo's book of original ordinances; make a note of the passage and adoption in the records of this meeting; and, within fifteen (15) days after the passage and adoption of this Ordinance, cause a summary thereof to be published or posted in accordance with California law.

SECTION 18: This Ordinance shall take effect 30 days after its passage and adoption.

PASSED AND ADOPTED this ___ day of _____, 2022.

RESOLUTION NO. 2914

A RESOLUTION OF THE EL SEGUNDO PLANNING COMMISSION RECOMMENDING CITY COUNCIL APPROVAL OF COMMUNITY BENEFIT PLAN (CBP) NO. 19-02, SITE PLAN REVIEW (SPR) NO. 21-03, MASTER SIGN PROGRAM (MSP) 21-01, ENVIRONMENTAL ASSESSMENT EA-1281, AND OFF-SITE PARKING COVENANT FOR THE SOUTH SITE OF THE STANDARD WORKS PROJECT AT 1475 E. EL SEGUNDO BLVD.

The Planning Commission of the City of El Segundo does resolve as follows:

SECTION 1: Recitals.

A. On August 31, 2020, Mark Telesz, of Smoky Hollow Industries, LLC filed an application for Community Benefit Plan (CBP) No. 19-02, Site Plan Review (SPR) No. 21-03, and Environmental Assessment (EA) No. 1281 for a Tier II Community Benefits Plan and Site Plan Review of the proposed South Site of the Standard Works project at 1475 E. El Segundo Blvd.

B. On January 6, 2021, Mr. Telesz applied for an amendment to the Smoky Hollow Specific Plan which, if approved, would allow for a maximum building height of 60 feet within a designated subarea of the Smoky Hollow Specific Plan ("SHSP"), subject to the approval of a Tier II Community Benefits Plan. On the same date, a Master Sign Program was submitted for review.

C. Approval of the proposed Project is a subsequent discretionary action in furtherance of the SHSP; and

D. The application was reviewed by the City's Development Services Department for, in part, consistency with the General Plan, and conformity with the El Segundo Municipal Code ("ESMC") and the SHSP; and

E. On January 27, 2022, the Planning Commission continued the duly noticed public hearing to February 10, 2022.

F. On February 10, 2022, the Commission held a duly noticed public hearing to receive public testimony and other evidence regarding the application including, without limitation, information set forth in the staff report and information provided by the applicant and the public.

G. At the February 10, 2022 meeting, the Commission recommended that the City Council approve the Smoky Hollow Specific Plan Amendment requested by the applicant.

H. The Commission considered all of the evidence presented at the February 10, 2022 public hearing, together with all other information in the administrative record. This Resolution, and its findings, are made based upon the totality of the evidence in the

administrative record before the Commission at its February 10, 2022 public hearing.

SECTION 2: *Factual Findings and Conclusions*. The Commission finds as follows:

A. The proposed project would develop a 1.01-acre property located at 1475 E. El Segundo Boulevard. The existing 19,311 square-foot, one-story brick building on the site would be preserved with two new levels totaling 44,604 square feet added above it. This would result in a total floor area of 63,915 square feet (FAR=1.45) for R&D and office use. The new three-story building would have a maximum height of 59 feet and 6 inches from the average grade to the top of the building.

B. The project site is located within a subarea of the Smoky Hollow Specific Plan that would be created upon the City Council's approval of the aforementioned Specific Plan Amendment. Said Amendment would allow for a maximum building height of 60 feet on the project site, subject to the approval of a Tier II Community Benefits Plan. The proposed building with a total of 63,915 square feet will be compliant with the Tier II floor area ratio, will be consistent with the Smoky Hollow Specific Plan design guidelines, open space and landscape requirements, will meet parking requirements with a recorded off-site parking agreement, and signage will be compliant with a Master Sign Program. Directional signage is proposed at the site access to provide direction and location for additional parking made available at the off-site parking structure located at 1310 E. Franklin Ave.

C. The subject site has entered into agreement to provide additional 123 off-site parking through an offsite parking covenant with the property at 1310 E. Franklin Avenue. (Exhibit D)

SECTION 3: *Environmental Assessment.* An Initial Study/Mitigated Negative (IS/MND) Declaration has been prepared to analyze the potential environmental effects of the proposed project. The Planning Commission has reviewed and considered the IS/MND and, by way of a separate resolution (Resolution No. 2912), has found that it complies with the California Environmental Quality Act. Accordingly, the Commission has recommended that the City Council approve the IS/MND. The findings and conclusions of Resolution No. 2912 are incorporated herein as though fully set forth.

SECTION 4: *Community Benefits Plan Findings.* Based upon the findings of fact set forth above, and on the evidence in the administrative record as a whole, the Planning Commission finds as follows:

A. **The proposed additional building height, intensity, or deviation from the development standards would not be detrimental to the public health, safety or welfare, or materially injurious to properties or improvements in the vicinity.**

The proposed building height for the project is compatible with the neighborhood in that two-story buildings, tall petroleum storage drums, and 200-foot-tall distillation

columns from the Chevron oil refinery are located in the immediate vicinity. The additional 25-foot building height from base height standard is not anticipated to be detrimental, as the project is consistent with development directly adjacent (for example, the recently approved development at 140 Oregon was approved at 55 feet) and is consistent with the vision for Smoky Hollow to allow for creative and exemplary office space.

The project is located in a developed area which contains all utilities and public infrastructure. Additionally, before the City issues building permits for the project, the applicant will submit detailed plans to the City for review for compliance with all applicable Building and Fire safety codes. Therefore, the project overall is not anticipated to be detrimental to the public health, safety, or welfare.

B. **The proposed community benefit provides exemplary project and/or streetscape design.**

The Specific Plan contains 32 specific design guidelines in five categories including, building character, open space, landscaping, connectivity, and signage and art. Compliance with at least 17 of the guidelines is required to consider a project exemplary in building and/or streetscape design. The proposed project incorporates 28 of the 32 guidelines as indicated and detailed on project plans dated reviewed by Planning Commission on February 10, 2022, incorporated herein by this reference.

C. **The proposed community benefits directly implements objectives of the Specific Plan.**

1. Part of the proposed community benefit consists of compliance with the Smoky Hollow design guidelines. Compliance with the guidelines directly implements the Smoky Hollow Design Objectives in Specific Plan Section 2.4.1 as follows:

    a. The project design helps preserve Smoky Hollow's existing character by preserving existing brick materials for both projects and incorporating materials and colors that are consistent with existing buildings in the area and with the neighborhood's industrial character.

    b. The projects incorporate sidewalk-oriented entries for both projects as well as pedestrian-oriented scale and design features such as lighting, windows, and signage. In addition, the project will make use of drought tolerant plant species in the landscaped areas, which will reduce the use of water for landscaping.

    c. The entries are directly access from the public sidewalk and serves to activate both Franklin Avenue and E. El Segundo Boulevard street frontages and therefore create a vibrant atmosphere.

2. The proposed community benefit plan implements the goals and objectives of Specific Plan Chapter 3 regarding publicly owned rights-of-way and publicly

accessible open spaces. The proposed community benefits plan includes public improvements to utilities in the public right-of-way, landscaping adjacent to the street, and open space, which will in turn help integrate cyclists, pedestrians, and transit users for businesses to flourish.

D. **The value of the proposed community benefits bear a relationship to the value generated by the project.**

The City retained Kosmont and Associates, Inc. (Kosmont) to prepare a comprehensive financial report of the proposed Tier II Community Benefits Plan for the project. The analysis indicates the value of the community benefits being offered and the financial gain by allowing an additional 10 feet of building height above the Tier II Community Benefit height limit of 50 feet. This height increase is an additional 25 feet in height above base standard, or 35 feet in height with the adoption of the Specific Plan Amendment. In compliance with the Smoky Hollow Specific Plan Tier II Community Benefit Plan requirements, the community benefits provided and incorporated into the project plans reviewed by Planning Commission on February 10, 2022, have been evaluated to quantify the total value of all community benefits. In this instance, the total value of the added 10 feet is shown to be $1.77 million while the total of the community benefits are estimated to be $3.52 million. Therefore, the value of the proposed community benefits bear a relationship to the value generated by the project.

E. **The proposed community benefits do not principally benefit the project or the occupants of the project, but rather provide a district or area-wide benefit to the larger Smoky Hollow Plan area.**

1. The project incorporates a range of community benefits in compliance with the prescribed Community Benefit categories of the Smoky Hollow Specific Plan. The following list of items benefit the public and not principally the occupants of the project:
   a. Transformative projects - significant investment for an architecturally expressive design that rehabilitates the original 1950s mid-century buildings for both the North and South sites, rather than demolishing. The unique design incorporates architectural elements such as exposed structural steel, large scale balconies and exterior decks, large mid-century like steel windows, and other period materials. The design will build upon the character of the smoky hollow neighborhood and help promote new designs by other developers.
   b. Preservation and rehabilitation - preservation and rehabilitation of the existing brick facades on both the North and South sites.
   c. Streetscape improvements – new landscaping located directly along the frontage of each building on the North and South sites.
   d. Utility improvements - removal of existing overhead utility lines along project frontage on East El Segundo Boulevard and Kansas Street will be removed and placed underground to beautify the streetscape views.

e. Lighting and wayfinding - period appropriate exterior lighting and directional signage for the project will be provided adjacent to the sidewalks facing Franklin Avenue.

This information was provided in support of Finding B in Tier II that requires the evaluation of these values. The proposed benefits are deemed by Staff to be adequate and therefore it is recommended that the Commission review and consider Finding B in Tier II to be met.

SECTION 5: *Site Plan Review Findings.* Pursuant to ESMC § 15-30 and based upon the findings of fact set forth above, and on the evidence in the administrative record as a whole, the Commission finds as follows:

A. **The proposed development is consistent with the goals, policies, and objectives of the El Segundo General Plan, the Smoky Hollow Specific Plan, and the El Segundo Zoning Code.**

As previously indicated, the applicant has simultaneously applied for an amendment to the Smoky Hollow Specific Plan that would create a new subarea within which the maximum building height would be increased to 60 feet (from 50 feet), subject to the approval of a Tier II Community Benefits Plan. By way of a separate resolution (Resolution No. 2913), the Commission has recommended that the City Council approve the requested amendment to the Specific Plan. The project site is located within that proposed subarea.

The proposed Project complies with the Smoky Hollow Specific Plan as amended. The SHSP permits a mix of office, research and development, light industrial, and warehouse uses. Further, the SHSP sets standards to achieve high quality development, which includes design guidelines and development standards with criteria for site design, architecture, orientation and massing, parking and loading, landscaping, lighting, and connectivity. The proposed development has been evaluated in the context of the goals, policies and objectives from the SHSP. The project design helps preserve Smoky Hollow's existing character by preserving existing brick materials for both projects and incorporating materials and colors that are consistent with existing buildings in the area and with the neighborhood's industrial character. The project incorporates sidewalk-oriented entries for the project as well as pedestrian-oriented scale and design features such as lighting, windows, and signage. The proposed Project implements the goals and objectives of Specific Plan Chapter 3 regarding publicly owned rights-of-way and publicly accessible open spaces. The proposed Project includes public improvements to utilities in the public right-of-way, landscaping adjacent to the street, and open space, which will in turn help integrate cyclists, pedestrians, and transit users for businesses to flourish.

Economic Development Element

General Plan Economic Development Element Goal ED1 outlines the City's objectives to create a strong, healthy economic community in which all diverse stakeholders may benefit.

The City's Economic Development Element of the General Plan specifies the following:

Objective ED1-1.1*:* To build support and cooperation among the City of El Segundo and its business and residential communities for the mutual benefits derived from the maintenance and expansion of El Segundo's economic base.

Policy ED1-1.1: Maintain economic development as one of the City's and the business and residential communities' top priorities, diversifying the City's economic base to meet quality of life goals, and results in job creation and growth potential.

Objective ED1-2*:* Center diversification efforts on targeted industries that meet the City's criteria for job creation, growth potential, fiscal impact, and fit with local resources.

Policy ED1-2.1: Seek to expand El Segundo's retail and commercial base so that the diverse needs of the City's business and residential communities are met.

Policy ED1-2.2: Maintain and promote land uses that improve the City's tax base, balancing economic development and quality of life goals.

The proposed project is consistent with the General Plan's Economic Development Element and directly implements and furthers the General Plan's goals, objectives and policies above because the project promotes economic development and improves the City's tax base through inclusion of office, research and development, and retail land uses within the Smoky Hollow Specific Plan area. The proposed project will not obstruct the attainment of any goal, policy or objective of the General Plan's Economic Development Element.

Land Use Element

General Plan Land Use Element Goal LU2 outlines the City's objectives to preserve and enhance the City's cultural heritage and buildings or sites that are of cultural, historical, or architectural importance.

The City's Land Use Element of the General Plan specifies the following:

> Objective LU2-1: Maintain the distinct character of the existing areas of the City.

The proposed project is consistent with the General Plan's Land Use Element and directly implements and furthers the General Plan's goals, objectives and policies above because the proposed project design preserves the existing red brick building, to maintain the character of the post-war period architecture found within Smoky Hollow. The proposed project will not obstruct the attainment of any goal, policy or objective of the General Plan's Land Use Element.

Circulation Element

The City's Circulation Element of the General Plan specifies the following:

> Objective C1-1: Provide a roadway system that accommodates the City's existing and projected land use and circulation needs.
>
> Policy C 1-1.14: Require a full evaluation of potential traffic impacts associated with proposed new developments prior to project approval. Further, require the implementation of appropriate mitigation measures prior to, or in conjunction with, project development.

The proposed project is consistent with the General Plan's Circulation Element and directly implements and furthers the General Plan's goals, objectives, and policies above because the project would not disturb or impact the existing roadway network immediately surrounding the project sites. Access to and from the projects are well established by Franklin Avenue, Kansas Street, Oregon Street, and El Segundo Boulevard. In compliance with SHSP EIR Mitigation Measure 18-1, a Traffic Impact Analysis was conducted to analyze any new impacts to the local street network from the Project, based on LOS standards per the General Plan, and calculate a fair share contribution for project traffic impacts. Based on the traffic impact analysis conducted, the proposed Project will not create traffic impacts greater than those identified in the TIA conducted for the SHSP EIR. The project applicant will be required to pay fair share for the improvements to the roadway network as identified in the SHSP EIR. The SHSP was adopted in 2018 and was found to be consistent with the City's General Plan. The proposed project will not obstruct the attainment of any goal, policy or objective of the General Plan's Circulation Element. Additionally, the project is consistent with the design and zoning standards as required by the SHSP. Specifically, with the approval of the proposed SHSP amendment to allow 60 feet for projects within Subarea 1, the project would be compliant with all zoning standards including height, floor area ratio, setbacks, design standards, and landscape and open space standards. Parking for the project would be both on-site and located off-site within the adjacent existing 398 space parking garage located at 1310 E. Franklin Avenue. While this parking is technically off-site, the garage is approximately 200 feet away from the project site and a

parking covenant will be recorded with the County of Los Angeles to ensure that the required parking is provide for the life of the project.

B. **The proposed project is functionally compatible with the area in which it is located.**

The City of El Segundo has distinctive land use patterns, which are divided into four quadrants by the intersection of Pacific Coast Highway and El Segundo Boulevard. Compatibility of an individual land use is determined mainly by its relationship to other uses within its quadrant. The SHSP area is located in the northwestern quadrant of the City of El Segundo which is west of Pacific Coast Highway and north of El Segundo Boulevard. The design and implementation of the Specific Plan relates directly to the goals and objectives of the Specific Plan and would be functionally compatible with other uses within the Specific Plan area. The SHSP includes a range of commercial and industrial uses that will contribute to job creation opportunities and balance growth with local resources and infrastructure capacity.

The proposed building height for the project is compatible with the area in that two-story buildings, tall petroleum storage drums, and 200-foot-tall distillation columns from the Chevron oil refinery are located in the immediate vicinity. The project is located in a developed area which contains all utilities and public infrastructure.

The project is within the Smoky Hollow East (SH-E) zoning district, which provides a transitional land use area between higher-intensity office uses east of PCH and the smaller, single-parcel industrial and creative businesses of the western portion of Smoky Hollow area. The SH-E zoning district accommodates development of incubator industrial, research, and technology uses; medium-sized light industrial and manufacturing; and creative office activities. The Standard Works development project is compatible and consistent with the types of development desired by the Smoky Hollow Specific Plan within the SH-E zoning district.

C. **The proposed development will not adversely affect the general welfare of the City.**

The SHSP development standards ensure that the Projects are developed in an orderly fashion with high quality architecture, building materials, and urban design. The Project's consistency with these standards, its design, and configuration result in a project that will not adversely affect the general welfare of the City. Before the City issues building permits for the project, the applicant will submit detailed plans to the City to review for compliance with all applicable Building and Fire safety codes. Further, the proposed project will promote the orderly development of property, the preservation of property values and preservation of the distinct character of Smoky Hollow. The project will be consistent with surrounding development and will not adversely affect the value of neighboring properties. The proposed project is compatible with the neighborhood, and therefore is not anticipated to be detrimental to the public health, safety, or welfare.

SECTION 6: *Master Sign Program Findings*. Pursuant to ESMC § 15-18, a Master Sign Program (MSP) is required for multi-tenant developments of three of more commercial tenants. This MSP:

A. Meets the provisions of the ESZC Chapter 15-18-1 through 8 in all regards including size, type, locations, prohibited signs, exempt signs, general sign standards, applications, permits, nonconforming conditions, substitutions, enforcement and maintenance.
B. Provides all Tenants a guideline for Tenant signage that is architecturally compatible with the campus wide architectural esthetic for the purposes of a unified campus standard in design, installation and otherwise as approved by the authorities having jurisdiction with the original construction of the project.
C. Provides the appropriate process for review, submittal, approval, installation, maintenance and removal of all signage on the Standard Works campus.

SECTION 7: *Recommendation.* Subject to the conditions listed on Exhibit A of this Resolution, the Planning Commission recommends that the City Council approve the Community Benefit Plan (CBP) No. 19-02, Site Plan Review (SPR) No. 21-03, Master Sign Program (MSP) 21-01 and EA 1281 for the development of 1475 E. El Segundo Blvd.

SECTION 8: *Reliance on Record.* Each and every one of the findings and determination in this Resolution are based on the competent and substantial evidence, both oral and written, contained in the entire record relating to the project. The findings and determinations constitute the independent findings and determinations of the Planning Commission in all respects and are fully and completely supported by substantial evidence in the record as a whole.

SECTION 9: This Resolution will remain effective unless superseded by a subsequent resolution.

SECTION 10: The Commission Secretary is directed to mail a copy of this Resolution to Mark Telesz, of Smoky Hollow Industries LLC., and to any other person requesting a copy.

PASSED, APPROVED AND ADOPTED this 10th DAY of FEBRUARY, 2022.

PLANNING COMMISSION RESOLUTION NO. 2914

Exhibit A

CONDITIONS OF APPROVAL

In addition to all applicable provisions of the El Segundo Municipal Code ("ESMC") and all provisions of the Smoky Hollow Specific Plan, Mark Telesz and Smoky Hollow Industries, LLC (the "Applicant" or "Owner") agrees to comply with the following provisions as conditions for the City of El Segundo's approval of Community Benefit Plan CBP 19-03, Site Plan Review (SPR 21-03), and Environmental Assessment (EA) No. 1281 for a Tier II Community Benefits Plan and Site Plan Review of the proposed South Site of the Standard Works project at 1475 E. El Segundo Blvd. ("Project Conditions"):

Zoning Conditions

1. This approval is for the project as shown on the plans presented to and reviewed by the Planning Commission on February 10, 2022 and approved by City Council on _____, and on file with the Development Services Department.

2. Prior to issuance of any permit for the project, the applicant must submit plans, showing that the project substantially complies with the plans and conditions of approval on file with the Development Services Department. The Development Services Director is authorized to approve minor modifications to the approved plans or any of the conditions if such modifications achieve substantially the same results as would strict compliance with said plans and conditions. Any subsequent modification must be referred to the Development Services Director for a determination regarding the need for Planning Commission and/or City Council review and approval of the proposed modification.

3. This approval allows for construction of a new office facility at 1475 E. El Segundo Blvd. Specifically, the approved construction on the north site includes the following:

   a. Construction of a 44,604-square foot addition to the existing building that would be structurally preserved in place, resulting in a total gross floor area of 63,915 square feet.
   b. The maximum height of the resulting three-story building is limited to 59'-6" as measured from average grade to the rooftop of the building. Per the Smoky Hollow Specific Plan, building height does not include additional parapet height of 5', or additional structures allowed per the CBC and ESMC Section 15-2-3.

   A change in uses or changes in the allocation of square footages specified above must be referred to the Development Director for a determination regarding the need for Planning Commission and/or City Council review and approval of the proposed changes.

4. Signs proposed for the project, including monument signs, shall be designed in conformance with the approved Master Sign Program (MSP 21-01), which is included as Exhibit C of this Resolution. Any revisions to the Master Sign Program must be submitted and approved by the Development Services Director or designee prior to final building permit approval.

5. This approval shall not become effective unless and until the City Council adopts an ordinance approving the associated Smoky Hollow Specific Plan Amendment and said ordinance takes effect.

6. Before any building permits are issued, the applicant will be required to pay fair-share contribution to the City of El Segundo in compliance with Smoky Hollow Specific Plan EIR Mitigation Measure 18-1. The fair share contribution has been determined as follows:

   a. 4.7% for PCH/Grand Avenue for a new right-turn overlap signal phase on all approaches. The total cost estimate for the improvement is $80,788.00, in which $3,797.04 is the project's fair share contribution.

   b. 5.3% for PCH/El Segundo Boulevard for a Second eastbound left-turn lane, and new right-turn overlap signal phase at the northbound approach. The total cost estimate for improvements is $2,553,500.00 in which $135,335.50 is the project's fair share contribution.

7. All rooftop mechanical equipment shall be architecturally screened in accordance with ESMC Section 15-2-8(C). Prior to permit final, the equipment shall be adequately screened to the satisfaction of the Development Services Director.

8. All building and drainage gutters, down spouts, vents and other protrusions shall be concealed from view within the exterior walls. Ladders for roof access shall be mounted on the inside of the building.

9. Mandatory solid waste disposal services shall be provided by a City approved waste hauler to all parcels/lots or uses affected by approval of this project.

10. The Applicant shall provide receptacles (bins) for the collection of refuse and recyclable materials, as well as a hose bib for washing collection areas. Prior to the issuance of building permits, the applicant shall provide documentation from a City approved waste hauler stating that the number and size of bins provided for the collection of refuse and recyclable materials generated by the project is adequate.

11. Prior to the issuance of building permits, the Applicant shall provide documentation from a City approved waste hauler stating that the dimensions of the refuse storage enclosure are of adequate size to accommodate containers consistent with the current methods of collection, are designed with a walk-in access component, and located and designed to facilitate trash truck access and pickup.

12. Trash enclosures on the property shall be either fully enclosed within the building or must be adequately screened by a trash enclosure per the ESMC. Further, the gates shall include architectural paneling or finishing that is consistent with the paneling or finishing of the building. Lastly, trash enclosure areas for the project shall have a non-combustible decorative cover that matches the building's architecture.

13. All mitigation measures and conditions of approval must be listed on the plans submitted for plan check and the plans for which a building permit is issued.

Community Benefits Plan

14. The applicant must provide all the community benefits as stated in Exhibit B (Community Benefits Plan). If the project does not provide a benefit or ceases to provide one, the owner must submit a revised CBP including equivalent replacement benefit of an equal value to the Development Services Director for review and approval. The Director may at his discretion refer the revised CBP to the Planning Commission and City Council for review and approval.

15. The applicant must construct the public improvements indicated in the Community Benefits Plan, including, but not limited to, sidewalk, streetscape, landscaping, parking, open space, and other improvements within the public right-of-way.

IS/MND / CEQA

16. Applicant must comply with all mitigation measures identified in the Final Environmental Impact Report prepared for the Smoky Hollow Specific Plan. All mitigation measures and conditions of approval must be listed on the plans submitted for plan check and the plans for which a building permit is issued.

17. Prior to issuance of any demolition, grading or building permit or as otherwise appropriate, a matrix/spreadsheet shall be submitted to the City, as applicable, for review and compliance with:

    a) The SHSP 2018 EIR (EA-1101) Mitigation Monitoring and Reporting Program (MMRP) as adopted by the City Council on October 2, 2018.

    b) The Project IS/MND MMRP as adopted as part of Planning Commission Resolution No. 2912.

    c) All project conditions of approval.

18. Prior to Certificate of Occupancy, the project shall demonstrate compliance with all applicable mitigation measures in the MMRP for the SHSP EIR and project COA. A final mitigation and COA monitoring matrix/spreadsheet shall be submitted to the City.

19. All mitigation measures listed in Mitigation Monitoring and Reporting Program adopted as part of Planning Commission Resolution No. 2912 shall be complied with. This shall include:

*Denotes mitigation measure carried over from the Smoky Hollow Specific Plan EIR

Biological Resources

20. **BIO MM 7-1*** To avoid impacts to nesting birds, construction activities and construction noise should occur outside the avian nesting season (prior to February 1 or after September 1). If construction and construction noise occurs within the avian nesting season (during the period from February 1 to September 1), areas within 100 feet of a development site shall be thoroughly surveyed for the presence of nests by a qualified biologist no more than five days before commencement of any vegetation removal. If it is determined that the Project Site is occupied by nesting birds covered under the Migratory Bird Treaty Act, mitigation measure 7-2 shall apply.

21. **BIO MM 7-2*** If pre-construction nesting bird surveys result in the location of active nests, no grading, vegetation removal, or heavy equipment activity shall take place within an appropriate setback from occupied nests as determined by a qualified biologist. Protective measures (e.g., established setbacks) shall be required to ensure compliance with the Migratory Bird Treaty Act and California Fish and Game Code requirements. The qualified biologist shall serve as a construction monitor during those periods when construction activities occur near active nest areas to ensure that no inadvertent impacts occur. A report of the findings, prepared by a qualified biologist, shall be submitted to the CDFW prior to construction-related activities that have the potential to disturb any active nests during the nesting season.

Cultural Resources

22. **CUL MM 8-2*** Prior to the commencement of grading or demolition of subsurface structures, a professional archaeologist who meets U.S. Secretary of the Interior's Professional Qualifications and Standards, shall conduct a brief archaeological and paleontological informational session for construction personnel. The training session may consist of an in-person meeting or a written handout describing: (1) how to identify archaeological and paleontological resources that may be encountered during earth-moving activities and (2) the procedures to be followed in such an event, including contact information for the appropriate entities if archaeological or paleontological resources are discovered.

23. **CUL MM 8-3*** In the event that archaeological or paleontological resources are unearthed during ground-disturbing activities, the ground-disturbing activities shall be halted or diverted away from the vicinity of the find so that the find can be evaluated. A buffer area of at least 50 feet shall be established around the find, where construction activities will not be allowed to continue until a qualified archaeologist or paleontologist has examined the newly discovered artifact(s) and has evaluated the area of the find. Work shall be allowed to continue outside the buffer area. If the archaeologist identifies

the find as a tribal cultural resource or suspects it to be a tribal cultural resource, the City will contact the Native American Heritage Commission (NAHC) to report the discovery, and will contact local Native American tribal representatives as directed by the NAHC. Should the newly discovered artifact(s) be determined to be a tribal cultural resource, Native American construction monitoring will be initiated. The City shall coordinate with the archaeologist and tribal representative(s) to develop an appropriate treatment plan for the resources.

24. **CUL MM 8-4** If human remains are uncovered during Project grading, work must be halted in the immediate area of the find and the County Coroner notified in accordance with Health and Safety Code Section 7050.5. The Coroner must then determine whether the remains are of forensic interest. If the Coroner, with the aid of a supervising archaeologist, determines that the remains are or appear to be of a Native American, they must contact the Native American Heritage Commission for further investigations and proper recovery of such remains, if necessary. Further, pursuant to Public Resource Code Section 5097.98(b) remains shall be left in place and free from disturbance until a final decision as to the treatment and disposition has been made. If the County Coroner determines the remains to be Native American, the Native American Heritage Commission shall be contacted within the period specified by law (24 hours). Subsequently, the Native American Heritage Commission shall identify the "most likely descendant". The most likely descendant shall then make recommendations and engage in consultation concerning the treatment of the remains as provided in Public Resources Code Section 5097.98. Human remains from other ethnic/cultural groups with recognized historical associations to the area shall also be subject to consultation between appropriate representatives from that group and the local jurisdiction/lead agency involved. This measure shall be implemented to the satisfaction of the City Planning Department.

Geology and Soils

25. **MM GEO-1** Prior to issuance of any grading or building permits, the applicant shall demonstrate that all improvements and construction-related activities comply with the recommendations outlined in the Project geotechnical report (CWI 2017). This measure applies to all potential geologic and soil constraints that could affect one or both sites, including but not limited to seismic ground failure, strong seismic shaking, differential settlement, liquefaction, lateral spreading, and subsidence, and landslides/slope stability as appropriate. This measure shall be implemented to the satisfaction of the City Engineer.

Greenhouse Gas Emissions

26. **EECAP 4.1*** Encourage or Require Energy Efficiency Standards Exceeding Title 24. This measure will develop City staff to be resources in encouraging and implementing energy efficiency beyond that required by current Title 24 Standards.

27. **EECAP 5.2*** Promote Water Efficiency Standards Exceeding SB X7-7. In addition to SB X7-7, more actions are being studied or have been taken to exceed water efficiency standards. These efforts include education and outreach practices that could be combined with residential and commercial EECAP actions that emphasize the reuse of recycled/gray water and promote harvesting rainwater.

Hazards and Hazardous Materials

28. **MM HAZ-3** Prior to issuance of any demolition or building permits for South Site (1475 E. El Segundo Boulevard) or North Site (1330 E. Franklin Street), the applicant shall identify and effectively remediate any asbestos-containing materials (ACMs) associated with the onsite buildings. This remediation may be accomplished by either in-place encapsulation or removal as appropriate. The applicant shall retain a qualified asbestos contractor to conduct this work and shall provide the City with a final report within 45 days of completion of all remediation activities, including appropriate documentation of disposal of any onsite ACMs at an approved landfill. This measure shall be implemented to the satisfaction of the City Planning Department.

Transportation (VMT)

29. **MM VMT-1 Unbundle Parking Cost.** This measure implements workplace parking pricing and unbundles the cost of parking from the lease. The Project shall include parking in the access-controlled parking structure. The property owner shall include language in the lease agreement which provides reduced lease rates if parking is not required by the tenant. The developer shall implement a monthly cost for parking spaces by charging a parking fee per access card. The range of VMT reduction from this measure is between 2.6% and 13%. Based on the calculations, a $50 per month/employee parking cost will result in a VMT reduction of 5.1%.

30. **MM VMT-2 Parking Management Strategies**. Strategies to encourage efficiency in parking facilities and improve the quality of service to parking users results in reduction of VMT. This includes signage and directions, providing preferential carpool/vanpool parking spaces closer to the building entrance to and from the destination, etc. This encourages carpooling/vanpooling and also reduces the amount of time patrons drive around to find the best parking area to minimize walking. The maximum reduction from this measure is 3%.

31. **MM VMT-3 Mandatory Travel Behavior Change Program, Promotions & Marketing.** This involves the development of a travel behavior change program that targets individuals' attitudes, goals, and travel behaviors, educating participants on the impacts of their travel choices and the opportunities to alter their habits. The project shall provide a web site that allows employees to research other modes of transportation for commuting. If a website is planned for the development, links to Google Transit, and/or local bus operators should be provided on the website. If a website is not planned, QR Codes could be provided in the parking structure and the

building lobbies to enable users an easy way to access information about transit routes. The maximum reduction due to this measure is 1%.

32. **MM VMT-4 Implement Commute Trip Reduction Marketing.** This involves the use of marketing and promotional tools to educate and inform travelers about site-specific transportation options and the effects of their travel choices with passive educational and promotional materials. The project shall implement marketing strategies to reduce commute trips. The project will implement marketing strategies to reduce commute trips. Information sharing and marketing are important components to successful commute trip reduction strategies. Implementing commute trip reduction strategies without a complementary marketing strategy will result in lower VMT reductions. Marketing strategies may include new employee orientation of trip reduction and alternative mode options, event promotions, and printed material. CAPCOA states that the range of reduction is between 0.8% to 4%, but states that in some literature, the VMT reduction has been as much as 15%, especially for urban areas. For this project, a conservative reduction of 3% has been assumed.

33. **MM VMT-5 Include Bike Parking in Excess of City Code.** This implements short and long-term bicycle parking to support safe and comfortable bicycle travel by providing parking facilities at destinations. Based on discussion with the applicant, bike parking in excess of City code shall be provided. The City's code requires a minimum of 4 spaces for non-residential buildings up to 15,000 square feet, plus a minimum of 5 percent of the required vehicle spaces for the portion above 15,000 square feet. The maximum number of bicycle parking required under City code is 25 spaces. For the project, the number of bicycle parking spaces required under code is 17 spaces, and therefore, it is recommended that the project provide at least 18 spaces. This results in a VMT reduction of 0.625%.

34. **MM VMT-6 Include Secure Bike Parking and Showers.** This implements additional end-of-trip bicycle facilities to support safe and comfortable bicycle travel. Based on discussion with the applicant, each building shall include shower facilities and secure bike parking facilities shall be provided. This results in a VMT reduction of 0.625%.

<u>Tribal Cultural Resources</u>

35. **MM-TCR-1 Native American Monitoring.** Prior to the commencement of any ground disturbing activity at the Project site, the Project applicant shall retain a Native American Monitor approved by the Gabrieleño Band of Mission Indians-Kizh Nation and the Gabrielino Tongva Indians of California, the tribes that consulted on this Project pursuant to AB 52 and SB 18 (the "Tribes" or the "Consulting Tribes"). Copies of the executed contracts shall be submitted to the City of El Segundo Development Services Department prior to the issuance of any permit necessary to commence a ground-disturbing activity.

    The Tribal monitors shall only be present on-site during the construction phases that involve ground-disturbing activities. Ground disturbing activities are defined by the

Tribes as activities that may include, but are not limited to, pavement removal, potholing or auguring, grubbing, tree removals, boring, grading, excavation, drilling, and trenching, within the Project area. The Tribal Monitors shall complete daily monitoring logs that will provide descriptions of the day's grading and related earth-disturbing activities, including type and extent of construction activities, location of work, soil and any cultural materials identified, or other items potentially related to cultural resources. The on-site monitoring shall end when all ground-disturbing activities on the Project site are completed, or when the Tribal Representatives and Tribal Monitors have indicated that all upcoming ground-disturbing activities at the Project site have little to no potential for impacting Tribal Cultural Resources.

Upon discovery of any Tribal Cultural Resources, construction activities shall cease in the immediate vicinity of the find (not less than the surrounding 100 feet) until the find can be assessed. All Tribal Cultural Resources unearthed by Project activities shall be evaluated by the Consulting Tribes approved Tribal monitors. If the resources are Native American in origin, the Consulting Tribes shall retain it/them in the form and/or manner the Tribes deem appropriate, for educational, cultural and/or historic purposes. If human remains and/or grave goods are discovered or recognized at the Project site, all ground disturbance shall immediately cease, and the county coroner shall be notified per Public Resources Code Section 5097.98, and Health & Safety Code Section 7050.5. Human remains and grave/burial goods shall be treated alike per California Public Resources Code section 5097.98(d)(1) and (2). Work may continue on other parts of the Project site while evaluation and, if necessary, mitigation takes place (CEQA Guidelines Section 15064.5[f]).

General Conditions

36. The project is subject to the Public Art or In-Lieu Fee Requirement (Cultural Development Program) established by City Council Ordinance 1594, which requires placement of public art on-site or payment of in-lieu fees to the Cultural Development Fund. Prior to issuance of a building permit, the applicant shall submit an application to the Community Services Department and shall either: a) enter into an agreement with the City of El Segundo to provide public art onsite; or, b) in-lieu of commissioning public art onsite, pay a fee equal to 1% of the project cost to the City's Cultural Development Fund.

37. A positive balance shall be always maintained in all project Reimbursement Accounts. If the balance of the Reimbursement Account(s) associated with the project becomes negative at any time, all work on the project shall be suspended, including the issuance of permits and project inspections, until such time as the sufficient funds are deposited to return the account(s) to a positive balance.

38. A weatherproof notice/sign to report dust, noise, or other construction-related impacts shall be posted and prominently displayed on the construction fencing clearly visible to the public from along the abutting street(s). The notice/sign shall set forth the name of

the person(s) responsible for the construction site and a phone number(s) to be called in the event that a construction-related impact occurs.

39. Reclaimed water must be utilized for all landscaped areas.

40. Prior to issuance of any permit, landscaping plans must be submitted to the Development Services Department that conform to the City's Water Conservation in Landscaping requirements as set forth in ESMC Chapter 15.

41. All utilities lines installed to serve the new construction shall be placed underground.

42. The developer shall be responsible for the relocation of any existing utility necessary as a result of the development.

43. Pedestrian walkways within the project must include admixture colored concrete and/or design that enhance and complement the project.

44. The project site shall be fenced and screened during construction.

45. All areas within the project site shall be maintained free of trash and debris.

46. Prior to issuance of any permit, an erosion control plan shall be reviewed and approved by the Building Official and the Public Works Director.

47. Water spraying or other approved methods shall be used during grading operations to control fugitive dust. Recycled water shall be used for grading operations whenever available.

48. During the grading phase and as needed during the remainder of the construction phase, the owner or contractor must conduct daily street sweeping along the streets abutting the project site(s).

49. In the event that a Planning, Building, Public Works, Fire Department or Police Department requirement are in conflict, the stricter standard shall apply.

Impact Fee Conditions

50. Pursuant to ESMC §§ 15-27 A-1, et seq., prior to issuance of a building permit for new Building C, the applicant must pay a one-time library services mitigation fee. The fee amount must be based upon the adopted fee at the time the building permit is issued.

51. Pursuant to ESMC §§ 15-27 A-1, et seq., prior to issuance of a building permit for new Building C, the applicant must pay a one-time fire services mitigation fee. The fee amount must be based upon the adopted fee at the time the building permit is issued.

52. Pursuant to ESMC §§ 15-27 A-1, et seq., prior to issuance of a building permit new Building C, the applicant must pay a one-time police services mitigation fee. The fee amount must be based upon the adopted fee at the time the building permit is issued.

53. Pursuant to ESMC §§ 15-27 A-1, et seq., prior to issuance of a building permit for new Building C, the applicant must pay a one-time park services mitigation fee. The fee amount must be based upon the adopted fee at the time the building permit is issued.

54. Pursuant to ESMC §§ 15-27 A-1, et seq., prior to issuance of a building permit for new Building C, the applicant must pay a one-time traffic mitigation fee. The fee amount must be based upon the adopted fee at the time the building permit is issued.

Building Safety Conditions

55. All projects shall comply with the El Segundo Municipal Code, and the California Building Code, California Electrical Code, California Mechanical Code, California Plumbing Code, California Energy Code, and the California Green Building Standards Code in effect at the time of the plan submittal to Building and Safety Division for plan review.

56. All projects shall comply with the El Segundo Municipal Code, and the 2019 editions of the California Building Code, California Electrical Code, California Mechanical Code, California Plumbing Code, California Energy Code, and the California Green Building Standards Code.

57. Construction projects must comply with Best Management Practices for construction and storm-water runoff requirements of the National Pollutant Discharge Elimination System MS4 Permit. Construction activity resulting in a land disturbance of one acre or more, or less than one acre but part of a larger common plan of development or sale must obtain the (SWPPP) Construction Activities Storm Water General Permit.

58. A site-specific soils and geotechnical report must be submitted to Building and Safety Division for review and approval. The report shall comply with the minimum requirements of Chapter 18 of the CBC and shall address the possible sulfate content of the soils.

59. A stamped setback certification by a Licensed Surveyor will be required to certify the location of the new construction in relation to the setbacks prior to the first foundation inspection and stamped setback certification by a Licensed Surveyor will be required to certify the height of the structures prior to issuance of Certificate of Occupancy.

60. The applicant shall obtain a building, grading, mechanical, plumbing, electrical, demolition permit for the project.

61. Plans submitted for plan check must be stamped by a State-licensed architect or engineer and shall include:

a. Complete structural calculations, details, notes and material specifications.

b. Complete Accessibility Plan with a statement from a California Certified Access Specialist (CASp) indicating that a plan review has been performed and that it complies with the requirements of Chapter 11A &11B of the CBC.

c. A stamped and signed Boundary and Topographic survey by a California licensed Land Surveyor.

d. A complete grading and drainage plan showing compliance with the Los Angeles Regional Water Quality Control Board (LARWQCB) Low Impact Development (LID) requirement. The Los Angeles County LID Manual may be used as a guideline for preparing the LID report.

e. Hydrology report along with hydraulic calculations.

f. Complete energy calculations, details, notes, and material specifications.

62. Applicant shall submit a site-wide New Address Issuance request to the Building Division. Approved building addresses to be shown on the submitted plans.

63. Applicant shall pay all development fees, including school district developer fees, prior to issuance of building permits.

Fire Department Conditions

64. The applicant must comply with the applicable requirements of the 2019 California Building and Fire Codes and the 2018 International Fire Code as adopted by the City of El Segundo and El Segundo Fire Department Regulations.

65. The applicant must submit and have approved by the Fire Department a Fire/Life Safety Plan, identifying fire safety precautions during demolition and construction, emergency site access during construction, permanent fire department access, fire hydrant locations and any existing or proposed fire sprinkler systems and fire alarm systems prior to issuance of the building permit.

Public Works Conditions

"City Engineer" = City Engineer or his/her designee throughout this document.

General

66. All work in the City's right-of-way or on City-owned and maintained facilities shall require review and approval of the City Engineer or his/her designee.

67. The applicant shall ensure that encroachment permits are secured from the Public Works Department/Engineering Division before commencing any and all work in the City's public right-of-way (ROW), including lane closures.

68. Construction inspection shall be coordinated with the Public Works Inspector and no construction shall deviate from the approved plans without approval of the City Engineer. If plan deviations are necessary, the applicant shall provide a revised plan or details of the proposed change for review and approval of the City Engineer prior to construction.

69. Prior to issuing of the Certificate of Occupancy, the applicant shall ensure installation of all improvements required by the Public Works Department are inspected and approved by the City Engineer.

70. All construction-related parking shall be accommodated on-site. No construction related parking shall be permitted off-site.

71. A grading and drainage plan shall be provided and stamped by a California (CA) State-licensed civil engineer as part of the Building Permit process.

72. A utility plan shall be provided that shows all existing and proposed utility lines and their sizes (sewer, water, gas, storm drain, electrical, etc.), including easements, within 200 feet of the project site boundary.

73. Easements shall be granted for all public utilities installed outside the public-right-way with 15 ft. wide minimum up to entering the public right-of-way.

Street Improvements & Traffic Control

74. All existing sidewalk, curb & gutter, driveway approaches, and curb ramps that are broken or not in conformance with the latest SPPWC or City standards shall be removed and constructed per the latest SPPWC and City standards.

75. PG-64-10 tack coat and hot mix asphalt shall be used for all slot paving required next to new concrete installations. Slot paving shall be 3 feet wide and 1 foot deep, consisting of 6 inches of asphalt over 6 inches of base.

76. The applicant shall coldmill 2" Asphalt Concrete (AC) pavement surface and overlay with 2" AC PG-64-10 the curb-to-centerline half street width of Kansas Street and El Segundo Boulevard fronting the property. AC mix specification shall conform to Standard Specifications for Public Works Construction (SSPWC) "Greenbook", section 203-1.

77. Once the ROW improvements are accepted by the City Engineer, they are not to be used for staging building construction activities, including but not limited to, storage of construction materials and equipment. The street and sidewalks shall be kept free of

construction debris, mud and other obstacles and shall remain open to traffic at all times. The applicant shall bear the entire cost of replacement or repair to any damage to improvements caused by its use, or its Contractors' and Subcontractors' use, of the improvements after acceptance by the City Engineer.

78. The proposed ingress/egress into the project sit requires a traffic study to be prepared by a State-licensed Traffic Engineer to demonstrate the driveways will be in compliance with the requirements of the General Plan, subject to the review and approval of the Public Works Director or his designee.

Water

79. Any existing water meters, potable water service connections, fire backflow devices and potable water backflow devices must be upgraded to current City Water Division standards. These devices shall be placed or relocated onto private property.

Sewer

80. The proposed improvement will impact the capacity of the existing City owned sewer main lines. The applicant must submit a sewer study to determine if there is a capacity deficiency in the affected sewer main lines and if so, sewer upgrades will be required. The sewer study shall be reviewed and approved by the City Engineer.

81. Prior to issuance of a Certificate of Occupancy, a $60,551.30 sewer connection fee for this project must be paid to the City of El Segundo Public Works Department.

82. Any unused sanitary sewer laterals shall be abandoned and properly capped at the City main. The Contractor is to obtain necessary permits and licenses, and provide traffic control plans and shoring plans.

Storm Drain

83. Hydrologic and hydraulic calculations shall be submitted to size appropriate storm drain facilities to control on-site drainage and mitigate off-site impacts. Refer to the most recent Los Angeles County Hydrology Manual. Instructions and the manual are available at the County website at http://dpw.lacounty.gov/wrd/Publication/index.cfm. Calculations shall be signed by a registered civil engineer.

84. The project shall comply with the National Pollutant Discharge Elimination System (NPDES) requirements and shall provide Best Management Practices (BMPs) for sediment control, construction material control and erosion control.

Miscellaneous Conditions

85. Approval of this permit shall not be construed as a waiver of applicable and appropriate zoning regulations, or any Federal, State, County and/or City laws and regulations. Unless otherwise expressly specified, all other requirements of the ESMC shall apply.

86. Failure to comply with and adhere to all of these conditions of approval may be cause to revoke the approval of the project by the Planning Commission, or City Council, pursuant to the provisions of the ESMC.

87. In the event that any of these conditions conflict with the recommendations and/or requirements of another permitting agency or City Department, the stricter standard shall apply.

88. The applicant and its successors in interest shall indemnify, protect, defend (with legal counsel reasonably acceptable to the City), and hold harmless, the City, and any agency or instrumentality thereof, and its elected and appointed officials, officers, employees, and agents from and against any and all liabilities, claims, actions, causes of action, proceedings, suits, damages, judgments, liens, levies, costs, and expenses of whatever nature, including reasonable attorney's fees and disbursements (collectively "Claims") arising out of or in any way relating this project, any discretionary approvals granted by the City related to the development of the project, or the environmental review conducted under California Environmental Quality Act, Public Resources Code Section 21000 et seq., for the project. If the City Attorney is required to enforce any conditions of approval, all costs, including attorney's fees, shall be paid for by the applicant. The Applicant agrees to defend the City (at the City's request and with counsel satisfactory to the City) and will indemnify the City for any judgment rendered against it or any sums paid out in settlement or otherwise. For purposes of this section "the City" includes the City of El Segundo's elected officials, appointed officials, officers, and employees.

By signing this document, _____, on behalf of Smoky Hollow Industries, LLC, certifies that he/she has read, understands, and agrees to the Project Conditions listed in this document.

PLANNING COMMISSION RESOLUTION NO. 2914

Exhibit B

Community Benefits Plan
1475 E. El Segundo Blvd. and 1320-1330 E. Franklin Ave

Project description:

The development project at 1320-1330 E. Franklin Ave and 1475 E. El Segundo Blvd is subject to the following applications: Community Benefits Plan No. CBP 19-03 and CBP 19-04, Site Plan Review No. SPA 21-03 and SPA 21-04 and Environmental Assessment No. EA 1281 and EA 1282.

The proposed Project for the South Site would develop a 1.01-acre property located at 1475 E. El Segundo Boulevard within the SHSP. The existing 19,311 sf, one-story brick building, located at 1475 E. El Segundo Boulevard would be preserved with two new levels added above it. This results in a total floor area of 63,915 square feet for the South Site (FAR = 1.45) for R&D and office use. The proposed construction activities on the South Site would include:

- Construction of a 44,604-square foot addition to the existing building that would be structurally preserved in place for a total building floor area of 63,915 square feet.
- The three-story building would have a maximum height of 59 feet and 6 inches from average grade to the top of the building.

The development project deviates from the following Smoky Hollow Specific Plan (Specific Plan) development standards in Section 2.3:

1. **Building Height.**
   The permitted building height is 35 feet. The proposed building height is up to 60 feet to the top of the roofline.
2. **Allowable gross floor area ratio (FAR).**
   The permitted FAR is 1.5. The proposed FAR is up to 1.45.

Community benefits:

In exchange for the above deviations, the applicant offers the following community benefits and improvements, at the applicant's expense, as stated in pursuant to Smoky Hollow Specific Plan Section 4.5.2:

Community Benefits Plan

The project is proposed as a campus, with multiple sites to be developed. The design of the building proposed on the North site exceeds the current base standard for building

height in the SHSP, and the design of the building proposed on the South site exceeds the current base standards for building height and allowable Gross Floor Area Ratio (FAR). Projects within the SHSP area are allowed to request deviations from current City development standards with the approval of a Tier I or Tier II Community Benefits Plan. The proposed project would amend the SHSP to allow for an increase in the maximum permissible height for CBP Tier II qualifying projects. Allowable heights would increase to 60 feet from the current Tier II maximum of 50 feet. Approval of the SPA is required before the Development Sites can be permitted at a maximum height of 59.5 feet.

The Project requests the following deviations from the current development standards which require a Tier II Community Benefits Plan:

1. **Additional Building Height.** Proposed building heights of up to 59.5 feet on both Project sites would exceed the SHSP Base Standard height of 35 feet.
2. **Additional Building FAR.** Proposed 1.45 floor area ratio (FAR) (an additional 21,983 square feet) on the South site exceeds the SHSP Base Standard FAR of 1.0.

In exchange for the above deviations allowed by Tier II CBP, the applicant is proposing the following community benefits and improvements, at the applicant's expense, pursuant to Smoky Hollow Specific Plan Section 4.5.2. The following Community Benefits are based on objectives and suggestions directly identified as development standards in the SHSP with the objective of benefiting the Smoky Hollow Specific Plan area. Additionally, the Specific Plan contains 32 design guidelines in five categories: building character, open space, landscaping, connectivity, signage and public art and Public Realm. Compliance with at least 17 of the guidelines is required to be considered as an exemplary project; the proposed Project incorporates 29 of the 32 design guidelines, far exceeding the minimum threshold for exemplary projects. A summary of the main community benefits that are proposed for the Project include the following:

1. **Underground Utilities**. The Project proposes to underground all electric power and low voltage phone and data lines that currently serve the buildings on East El Segundo Blvd and Kansas Street.
2. **Public Seating**. Proposed architectural seating will be provided along the sidewalk area within the public right-of-way (ROW) facing E. Franklin Avenue and Kansas Street.
3. **Coffee Pavilion/Public Café**. The proposed Project would also include a 276-square foot public café (Coffee Pavilion) and associated outdoor dining area immediately adjacent to the E Franklin sidewalk, in order to active the street and provide a convenient break location for local neighbors. The café is part of the proposed 5,000-square foot public park that will be a landscaped focal point of the Project and of the surrounding area as well.
4. **Architecture that enhances building character.** See below under "Group A".
5. **Open space that facilitates gathering.** See below under "Group B".
6. **Landscaping and environmental design. "**See below under "Group C".

In addition, the Development Project will provide the following specific community benefits as summarized from the CBP Tier II application scoring sheets:

Group A – Enhance Building Character

1. *Build on the quality industrial character:* Project has exposed steel beams and large industrial-style windows.
2. *Convey a sense of the old and new:* Project will preserve ground floor red brick exterior while adding two setback floors of a modern industrial building
3. *Build upon existing context:* Project stays within existing footprint but adds 2 floors with roof decks.
4. *Conserve and retain the character-defining features:* Project preserves ground floor red brick exterior and three historical building entrances.
5. *Encourage additions that complement the character-defining features:* Project has large industrial windows with exposed steel beams characteristic of mid-century architecture but stacked blond block with exposed aggregate and stain coloring to enhance the industrial appearance.
6. *Incorporate small, medium, and large scales:* Project includes several interlocking design elements of different scales for visual interest including large to small "nested" windows and balconies to break up the building facade into different sized elements.
7. *Enhance design at the pedestrian level:* Project will have extensive landscaping along all street frontages with pedestrian scale seating.
8. *Specify 360º architecture:* Project will have enhanced architecture on all four sides of each building.
9. *Enhance entry expression:* Project has new landscaping and a double high entry portal at the southwest corner.
10. *Encourage the use of roll-up doors and sliding walls at street frontage:* Roll-up doors are used in several main entrance locations.
11. *Orient secondary entries to alleys:* Some secondary access points are oriented toward local alleys.
12. *Incorporate different materials, colors, and textures:* Project includes a variety of materials, colors, and textures, including red brick, medium grey block, black steel, corten, architectural board formed concrete, and glass.

Group B – Facilitate Gathering

13. *Form an active street wall:* Project has a new two-story entry portal with enhanced landscaping along street frontages and distinctive entrances.
14. *Develop outdoor gathering spaces:* Project will have a pocket park with outdoor seating.
15. *Provide ease of access:* The Project will have multiple pedestrian and vehicular access points and ground floor tenants will have direct access to adjacent streets.
16. *Enhance surface parking:* Project will have shade coverings for surface parking lots plus stacked parking using current technology.
17. *Use enduring quality paving materials:* Project will have special paving materials to demarcate pedestrian walkways with integral color and crystal aggregate.

18. *Provide street furniture:* Project will provide street furniture for seating at the pocket park.
19. *Use exterior lighting to accentuate safety and design:* Project will provide period lighting on all sides of buildings for pedestrian safety.

Group C – Incorporate Landscaping and Environmental Design

20. *Design layered and lush landscaping:* Project will have extensive landscaping per landscaping plan.
21. *Select drought-tolerant and native plants:* Project landscape plan has drought-tolerant and native plants throughout.
22. *Utilize planters and pots to provide greenery:* Project has planters and pots on Level 2 and 3 decks and balconies and on the rooftop.
23. *Improve landscaping in parking areas:* Parking areas include landscaping on at least two sides (those facing the buildings).
24. *Use fences and walls as an extension of the architecture:* Project includes monument signs for both buildings that compliment and extend the building architecture.
25. *Use natural light:* Project has large windows for 2-story spaces with mezzanines to allow natural light in all interior spaces.

Group D – Encourage Connectivity

26. *Install bike facilities:* Two bike racks will be installed at each Project building.

Group E – Signage, Way Finding, and Public Art

27. *Design signs as an integral component:* Project includes integrated tenant signage.
28. *Incorporate way-finding through integral design:* Project has architecturally integrated signage for both pedestrians and vehicles.
29. *Encourage public art:* Project will have a large scale art wall on the west side of the north building.

Public Realm

30. *Underground utilities:* The incoming power and low voltage cables for data and phone will be consolidated into one location and undergrounded.

APRIL 19, 2021

STANDARD WORKS

INTRODUCTION

The Standard Works Master Sign Program's (MSP) intent is to develop a campus wide signage program that:

a. Meets the provisions of the ESZC Chapter 15-18-1 through 8 in all regards including size, type, locations, prohibited signs, exempt signs, general sign standards, applications, permits, nonconforming conditions, substitutions, enforcement and maintenance.
b. Provides all Tenants a guideline for Tenant signage that is architecturally compatible with the campus wide architectural esthetic for the purposes of a unified campus standard in design, installation and otherwise as approved by the authorities having jurisdiction with the original construction of the project.
c. Provides the appropriate process for review, submittal, approval, installation, maintenance and removal of all signage on the Standard Works campus.
d. Clearly provide all Tenants prescribed locations, size and quantities of Tenant signage that is "pre-approved" in concept only (not approved for construction) by the Owner (Smoky Hollow Industries) and the City in the MSP. However the City's standards may vary from those prescribed in the MSP. -If a Tenant proposes signage that is not consistent with the MSP but consistent with the City standards in the zoning code the Owner will review such designs and only with the Owner's written approval the Tenant may submit an alternative design to the City for its approval.

GENERAL ITEMS

a. All proposed Tenant signage shall comply with the provisions in the MSP relating to:
    a. Size
    b. Location
    c. Materiality
    d. Lighting
    e. Font (in some locations/sign types)
    f. Quantity per Tenant
    g. Quantity per building elevation
    h. Any discrepancy of the standards provided in the MSP are subject to Article d above.

PROCESS FOR DESIGN AND REVIEW

All building, directional and campus identification signage shall be designed by the Owner's Architect and Sign Vendor and submitted by the Sign Vendor (that has all the necessary licenses to perform the work) for approval by the jurisdiction having the appropriate authority (planning and building as required by the El Segundo Code of Regulations) and shall be installed at the completion of the primary building construction.

All Tenant identification signage shall either:

1. Be designed in concept by the Tenant's Architect/Sign Vendor and be submitted to the Owner for approval or
2. Be design in concept by the Owner's Architect/Sign Vendor, submitted to the Tenant for approval.
3. The Owner shall provide written approval and or corrections to the conceptual signage and shall request a full set of Shop Drawings to be submitted for the Owner's review and approval. The Shop Drawings shall include general information such as wording/font/size but shall also include attachment methodology, lighting and construction of the signage in detail.

In either case the Sign Vendor shall submit a complete "signage package" to the City for review and approval prior to installation. The signage package prepared by the Sign Vendor shall be formatted on any common size paper (such as 8.5x11 or 11x17 or 24x26 or 30x42 et cetera) and shall include dimensions, material call outs, lighting, installation technique et cetera as normally required for this type of submittal including Tenant's information and vendor's contact.

OWNER'S RIGHTS

a. Prior to City submittal all signage packages prepared by the Tenants forces shall be submitted to the Owner for review and approval. Such approval shall be provided by the Owner in writing.
b. The Owner's period of review shall be a reasonable amount of time and shall not be unreasonably extended.
c. The Owner shall have final authority, along with the City inspectors, to demand Tenant to correct any and all deficiencies with the signage and its associated installation to the satisfaction of the Owner and City officials.
d. The Owner shall also reserve the right to demand the Tenant to correct any deficiencies of the signage as a result of weathering or failure or any other deficiency for the entire length of the tenancy.
e. The Owner has full authority to deny any signage that it deems inappropriate for any reason whatsoever. – The Owner shall not be unreasonable however, lude or inappropriate wording or depictions may cause the Owner to deny proposed signage. The Owner may also deny signage that is incompatible with the campus in design, color et cetera.

TENANTS RESPONSIBILITY

a. It is the responsibility of the Tenant that is proposing the signage to confirm that it's proposed signage is not in violation of any trademark or copyright that it doesn't have Ownership of. For the avoidance of any doubt, it is NOT the responsibility of the Owner to verify Ownership of any trademark or copyright of the Tenant's proposed signage.
b. The Tenant shall be responsible for any and all design, City and permit fees associated with the installation and approval of its proposed signage.
c. Post installation the Owner shall receive a copy of the final City sign off paperwork.

SIGN VENDOR'S RESPONSIBILITY

a. The Sign Vendor shall have all the appropriate business, state and processional licenses (such as a valid C-45 Sign Contractor's license) required for signage production and installation including but not limited to worker's comp and commercial liability insurance.
b. All signs shall be installed with no visible attachments (other than those that are specifically designed in the MSP to be exposed fasteners).
c. All wording and artwork shall be fabricated using quality materials and techniques without any possibility of failure or fading.
d. Signage installed on glazing shall be double sided with no visible method of attachments from the opposite side.

ALTERNATE DESIGNS

a. The proposed signage must meet the Standard Works MSP guidelines including font, materials, lighting et cetera. Alternate designs may be proposed for the Owner's review however it is within the Owner's rights to deny alternate designs it deems incompatible for any reasons, in addition the Owner's approval does not supersede the City's review and approval of the alternate design in relation to City standards (ESZC Chapter 15-18-1 through 8) or the previously approved MSP standards.

MISCELLANEOUS PROVISION

a. All other zoning code standards that may apply shall be enforceable by the City. Compliance with the MSP does not preclude compliance with any other provision of the El Segundo Zoning Code.
b. Signage that is deemed by the Owner or the City officials in any way faulty (weathered, sun damaged, dimensionally unstable et cetera) shall be removed and replaced or repaired as needed at the expense of the Tenant to the satisfaction of the Owner and City officials.
c. Proposed signage shall only depict a business entity's name and or DBA and or logo and shall not include any commercial wording/slogan. Any signage that the Owner deems too controversial may also be denied by the Owner.
d. All signs may be internally or externally illuminated however no visible lighting sources shall be allowed such as wall sconces that are not already installed on the building facades. Proposed lighting shall be micro LED type and a campus wide consistent color temperature of 3500K with any remote drivers completely hidden from view.

"Where the Master Sign Program conflicts with the Zoning Code, the Zoning Code shall control."

RESOLUTION NO. 2915

A RESOLUTION OF THE EL SEGUNDO PLANNING COMMISSION RECOMMENDING CITY COUNCIL APPROVAL OF COMMUNITY BENEFIT PLAN (CBP) NO. 19-03, SITE PLAN REVIEW (SPR) NO. 21-04, MASTER SIGN PROGRAM (MSP) 21-01, ENVIRONMENTAL ASSESSMENT EA-1282, AND OFF-SITE PARKING COVENANT FOR THE NORTH SITE OF THE STANDARD WORKS PROJECT AT 1320-1330 E. FRANKLIN AVENUE.

The Planning Commission of the City of El Segundo does resolve as follows:

SECTION 1: Recitals.

A. On August 31, 2020, Mark Telesz, of Smoky Hollow Industries, LLC filed an application for Community Benefit Plan (CBP) No. 19-03, Site Plan Review (SPR) No. 21-04, and Environmental Assessment (EA) No. 1282 for a Tier II Community Benefits Plan and Site Plan Review of the proposed South Site of the Standard Works project at 1320-1330 E. Franklin Avenue.

B. On January 6, 2021, Mr. Telesz applied for an amendment to the Smoky Hollow Specific Plan which, if approved, would allow for a maximum building height of 60 feet within a designated subarea of the Smoky Hollow Specific Plan ("SHSP"), subject to the approval of a Tier II Community Benefits Plan. On the same date, a Master Sign Program was submitted for review on January 6, 2021.

C. Approval of the proposed Project is a subsequent discretionary action in furtherance of the SHSP; and

D. The application was reviewed by the City's Development Services Department for, in part, consistency with the General Plan, and conformity with the El Segundo Municipal Code ("ESMC") and the SHSP; and

E. On January 27, 2022, the Planning Commission continued the duly noticed public hearing to February 10, 2022.

F. On February 10, 2022, the Commission held a duly noticed public hearing to receive public testimony and other evidence regarding the application including, without limitation, information set forth in the staff report and information provided by the applicant and the public.

G. At the February 10, 2022 meeting, the Commission recommended that the City Council approve the Smoky Hollow Specific Plan Amendment requested by the applicant.

H. The Commission considered all of the evidence presented at the February 10, 2022 public hearing, together with all other information in the administrative record. This Resolution, and its findings, are made based upon the totality of the evidence

in the administrative record before the Commission at its February 10, 2022 public hearing.

SECTION 2: *Factual Findings and Conclusions*. The Commission finds as follows:

A. The project site is a 4.34 acre site developed with 3 separate buildings and a newly constructed 398 space parking structure.

B. The existing building located at 140 Oregon Avenue (the northwest corner of the subject site) was approved (EA-1233) for a two-story addition atop the existing one-story structure, which exceeded height standards for the Smoky Hollow Specific Plan, with a Community Benefit Plan (18-01).

C. The proposed project would develop a 1.07-acre portion of a larger 4.4 acre property located at 1320-1330 E. Franklin Avenue. The existing 19,493 square-foot, one-story brick building on the site would be preserved with two new levels totaling 44,802 square feet added above it. This would result in a total floor area of 64,295 square feet (FAR=0.94) for R&D and office use. The new three-story building would have a maximum height of 59 feet and 6 inches from the average grade to the rooftop of the building.

D. The project site is located within a subarea of the Smoky Hollow Specific Plan that would be created upon the City Council's approval of the aforementioned Specific Plan Amendment. Said Amendment would allow for a maximum building height of 60 feet on the project site, subject to the approval of a Tier II Community Benefits Plan. The proposed building with a total of 64,295 square feet will be compliant with the Tier II floor area ratio, will be consistent with the Smoky Hollow Specific Plan design guidelines, open space and landscape, and parking requirements, and signage will be compliant with a Master Sign Program. The steel and glass structure will retain the existing red brick building on the first floor and proposes to construct a three-story structure. The project will also feature a passive public park and a two-story pavilion building that will house a public coffee shop. The application includes 11,847 square feet of landscaping and open space, divided between the ground level park and on the rooftop. Parking for the site is accessible in the newly constructed parking garage located at 1310 E. Franklin Avenue as a portion of the North site and satisfies the parking requirement of 163 spaces. 38 parking spaces will be provided on grade, with an additional 130 spaces within the parking garage. Further, the application includes a Master Sign Program which details signage provided for the entire Standard Works Campus, which entails the North and South site, as well as the under-construction building at 140 Oregon Street. The program features 15 types of identification sign, including tenant identification, wayfinding, parking, and monument signs to be places across the campus.

SECTION 3: *Environmental Assessment.* An Initial Study/Mitigated Negative (IS/MND) Declaration has been prepared to analyze the potential environmental effects of the proposed project. The Planning Commission has reviewed and considered the IS/MND and, by way of a separate resolution (Resolution No. 2912), has found that it complies with the California Environmental Quality Act. Accordingly, the Commission has recommended that the City Council approve the IS/MND. The findings and conclusions of Resolution No. 2912 are incorporated herein as though fully set forth.

SECTION 4: *Community Benefits Plan Findings.* Based upon the findings of fact set forth above, and on the evidence in the administrative record as a whole, the Planning Commission finds as follows:

A. The proposed additional building height, intensity, or deviation from the development standards would not be detrimental to the public health, safety or welfare, or materially injurious to properties or improvements in the vicinity.

The proposed building height for the project is compatible with the neighborhood in that two-story buildings, tall petroleum storage drums, and 200-foot-tall distillation columns from the Chevron oil refinery are located in the immediate vicinity. The additional 25-foot building height from base height standard is not anticipated to be detrimental, as the project is consistent with development directly adjacent (for example, the recently approved development at 140 Oregon was approved at 55 feet) and is consistent with the vision for Smoky Hollow to allow for creative and exemplary office space.

The project is located in a developed area which contains all utilities and public infrastructure. Additionally, before the City issues building permits for the project, the applicant will submit detailed plans to the City for review for compliance with all applicable Building and Fire safety codes. Therefore, the project overall is not anticipated to be detrimental to the public health, safety, or welfare.

B. The proposed community benefit provides exemplary project and/or streetscape design.

The Specific Plan contains 32 specific design guidelines in five categories including, building character, open space, landscaping, connectivity, and signage and art. Compliance with at least 17 of the guidelines is required to consider a project exemplary in building and/or streetscape design. The proposed project incorporates 28 of the 32 guidelines as indicated and detailed on project plans reviewed by Planning Commission on February 10, 2022, incorporated herein by this reference.

C. The proposed community benefits directly implements objectives of the Specific Plan.

1. Part of the proposed community benefit consists of compliance with the Smoky Hollow design guidelines. Compliance with the guidelines directly implements the Smoky Hollow Design Objectives in Specific Plan Section 2.4.1 as follows:

    a. The project design helps preserve Smoky Hollow's existing character by preserving existing brick materials for both projects and incorporating materials and colors that are consistent with existing buildings in the area and with the neighborhood's industrial character.

    b. The projects incorporate sidewalk-oriented entries for both projects as well as pedestrian-oriented scale and design features such as lighting, windows, and signage. In addition, the project will make use of drought tolerant plant species in the landscaped areas, which will reduce the use of water for landscaping.

    c. The entries are directly accessible from the public sidewalk and serves to activate both Franklin Avenue and E. El Segundo Boulevard Street frontages and therefore create a vibrant atmosphere.

2. The proposed community benefit plan implements the goals and objectives of Specific Plan Chapter 3 regarding publicly owned rights-of-way and publicly accessible open spaces. The proposed community benefits plan includes public improvements to utilities in the public right-of-way, landscaping adjacent to the street, and open space, which will in turn help integrate cyclists, pedestrians, and transit users for businesses to flourish.

D. The value of the proposed community benefits bear a relationship to the value generated by the project.

The City retained Kosmont and Associates, Inc. (Kosmont) to prepare a comprehensive financial report of the proposed Tier II Community Benefits Plan for the project. The analysis indicates the value of the community benefits being offered and the financial gain by allowing an additional 10 feet of building height above the Tier II Community Benefit height limit of 50 feet. This height increase is an additional 25 feet in height above base standard, or 35 feet in height with the adoption of the Specific Plan Amendment. In compliance with the Smoky Hollow Specific Plan Tier II Community Benefit Plan requirements, the community benefits provided and incorporated into the project plans reviewed by Planning Commission on February 10, 2022, have been evaluated to quantify the total value of all community benefits. In this instance, the total value of the added 10 feet is shown to be $1.77 million while the total of the community benefits are estimated to be $4.07 million. Therefore, the value of the proposed community benefits bear a relationship to the value generated by the project.

E. The proposed community benefits do not principally benefit the project or the occupants of the project, but rather provide a district or area-wide benefit to the larger Smoky Hollow Plan area.

1. The project incorporates a range of community benefits in compliance with the prescribed Community Benefit categories of the Smoky Hollow Specific Plan. The following list of items benefit the public and not principally the occupants of the project:

    a. Transformative projects - significant investment for an architecturally expressive design that rehabilitates the original 1950s mid-century buildings for both the North and South sites, rather than demolishing. The unique design incorporates architectural elements such as exposed structural steel, large scale balconies and exterior decks, large mid-century like steel windows, and other period materials. The design will build upon the character of the smoky hollow neighborhood and help promote new designs by other developers.
    b. Preservation and rehabilitation - preservation and rehabilitation of the existing brick facades on both the North and South sites.
    c. Streetscape improvements – new landscaping located directly along the frontage of each building on the North and South sites.
    d. Utility improvements - removal of existing overhead utility lines along project frontage on East El Segundo Boulevard and Kansas Street will be removed and placed underground to beautify the streetscape views.
    e. Lighting and wayfinding - period appropriate exterior lighting and directional signage for the project will be provided adjacent to the sidewalks facing Franklin Avenue.

    The Commission finds that the project provides the aforementioned community benefits that do not principally benefit the occupants of the project, but rather, provide an area-wide benefit to the larger Smoky Hollow Plan area.

SECTION 5: *Site Plan Review Findings.* Pursuant to ESMC § 15-30 and based upon the findings of fact set forth above, and on the evidence in the administrative record as a whole, the Commission finds as follows:

A. The proposed development is consistent with the goals, policies, and objectives of the El Segundo General Plan, the Smoky Hollow Specific Plan, and the El Segundo Zoning Code.

As previously indicated, the applicant has simultaneously applied for an amendment to the Smoky Hollow Specific Plan that would create a new subarea within which the maximum building height would be increased to 60 feet (from 50 feet), subject to the approval of a Tier II Community Benefits Plan. By way of a separate resolution (Resolution No. 2913), the Commission has recommended that the City Council approve the requested amendment to the Specific Plan. The project site is located within that proposed subarea.

The proposed Project complies with the Smoky Hollow Specific Plan as amended. The SHSP permits a mix of office, research and development, light industrial, and warehouse uses. Further, the SHSP sets standards to achieve high quality

development, which includes design guidelines and development standards with criteria for site design, architecture, orientation and massing, parking and loading, landscaping, lighting, and connectivity. The proposed development has been evaluated in the context of the goals, policies and objectives from the SHSP. The project design helps preserve Smoky Hollow's existing character by preserving existing brick materials for both projects and incorporating materials and colors that are consistent with existing buildings in the area and with the neighborhood's industrial character. The project incorporates sidewalk-oriented entries for the project as well as pedestrian-oriented scale and design features such as lighting, windows, and signage. The proposed Project implements the goals and objectives of Specific Plan Chapter 3 regarding publicly owned rights-of-way and publicly accessible open spaces. The proposed Project includes public improvements to utilities in the public right-of-way, landscaping adjacent to the street, and open space, which will in turn help integrate cyclists, pedestrians, and transit users for businesses to flourish.

Economic Development Element

General Plan Economic Development Element Goal ED1 outlines the City's objectives to create a strong, healthy economic community in which all diverse stakeholders may benefit.

The City's Economic Development Element of the General Plan specifies the following:

Objective ED1-1.1*:* To build support and cooperation among the City of El Segundo and its business and residential communities for the mutual benefits derived from the maintenance and expansion of El Segundo's economic base.

Policy ED1-1.1: Maintain economic development as one of the City's and the business and residential communities' top priorities, diversifying the City's economic base to meet quality of life goals, and results in job creation and growth potential.

Objective ED1-2*:* Center diversification efforts on targeted industries that meet the City's criteria for job creation, growth potential, fiscal impact, and fit with local resources.

Policy ED1-2.1: Seek to expand El Segundo's retail and commercial base so that the diverse needs of the City's business and residential communities are met.

Policy ED1-2.2: Maintain and promote land uses that improve the City's tax base, balancing economic development and quality of life goals.

The proposed project is consistent with the General Plan's Economic Development Element and directly implements and furthers the General Plan's goals, objectives and policies above because the project promotes economic development and improves the City's tax base through inclusion of office, research and development, and retail land uses within the Smoky Hollow Specific Plan area. The proposed project will not obstruct the attainment of any goal, policy or objective of the General Plan's Economic Development Element.

Land Use Element

General Plan Land Use Element Goal LU2 outlines the City's objectives to preserve and enhance the City's cultural heritage and buildings or sites that are of cultural, historical, or architectural importance.

The City's Land Use Element of the General Plan specifies the following:

> Objective LU2-1: Maintain the distinct character of the existing areas of the City.

The proposed project is consistent with the General Plan's Land Use Element and directly implements and furthers the General Plan's goals, objectives and policies above because the proposed project design preserves the existing red brick building, to maintain the character of the post-war period architecture found within Smoky Hollow. The proposed project will not obstruct the attainment of any goal, policy or objective of the General Plan's Land Use Element.

Circulation Element

The City's Circulation Element of the General Plan specifies the following:

> Objective C1-1: Provide a roadway system that accommodates the City's existing and projected land use and circulation needs.
>
> Policy C 1-1.14: Require a full evaluation of potential traffic impacts associated with proposed new developments prior to project approval. Further, require the implementation of appropriate mitigation measures prior to, or in conjunction with, project development.

The proposed project is consistent with the General Plan's Circulation Element and directly implements and furthers the General Plan's goals, objectives, and policies above because the project would not disturb or impact the existing roadway network immediately surrounding the project sites. Access to and from the projects are well established by Franklin Avenue, Kansas Street, Oregon Street, and El Segundo Boulevard. In compliance with SHSP EIR Mitigation Measure 18-1, a Traffic Impact Analysis was conducted to analyze any new impacts to the local street network from the Project, based on LOS standards per the General Plan, and calculate a fair share contribution for project traffic impacts. Based on the traffic impact analysis conducted, the proposed Project will not create traffic impacts greater than those identified in the

TIA conducted for the SHSP EIR. The project applicant will be required to pay fair share for the improvements to the roadway network as identified in the SHSP EIR. The SHSP was adopted in 2018 and was found to be consistent with the City's General Plan. The proposed project will not obstruct the attainment of any goal, policy or objective of the General Plan's Circulation Element. Additionally, the project is consistent with the design and zoning standards as required by the SHSP. Specifically, with the approval of the proposed SHSP amendment to allow 60 feet for projects within Subarea 1, the project would be compliant with all zoning standards including height, floor area ratio, setbacks, design standards, and landscape and open space standards. Parking for the project would be both surface parking and located within the on-site existing 398 space parking garage.

B. The proposed project is functionally compatible with the area in which it is located.

The City of El Segundo has distinctive land use patterns, which are divided into four quadrants by the intersection of Pacific Coast Highway and El Segundo Boulevard. Compatibility of an individual land use is determined mainly by its relationship to other uses within its quadrant. The SHSP area is located in the northwestern quadrant of the City of El Segundo which is west of Pacific Coast Highway and north of El Segundo Boulevard. The design and implementation of the Specific Plan relates directly to the goals and objectives of the Specific Plan and would be functionally compatible with other uses within the Specific Plan area. The SHSP includes a range of commercial and industrial uses that will contribute to job creation opportunities and balance growth with local resources and infrastructure capacity.

The proposed building height for the project is compatible with the area in that two-story buildings, tall petroleum storage drums, and 200-foot-tall distillation columns from the Chevron oil refinery are located in the immediate vicinity. The project is located in a developed area which contains all utilities and public infrastructure.

The project is within the Smoky Hollow East (SH-E) zoning district, which provides a transitional land use area between higher-intensity office uses east of PCH and the smaller, single-parcel industrial and creative businesses of the western portion of Smoky Hollow area. The SH-E zoning district accommodates development of incubator industrial, research, and technology uses; medium-sized light industrial and manufacturing; and creative office activities. The Standard Works development project is compatible and consistent with the types of development desired by the Smoky Hollow Specific Plan within the SH-E zoning district.

C. The proposed development will not adversely affect the general welfare of the City.

The SHSP development standards ensure that the Projects are developed in an orderly fashion with high quality architecture, building materials, and urban design. The Project's consistency with these standards, its design, and configuration result in a project that will not adversely affect the general welfare of the City. Before the City issues building permits for the project, the applicant will submit detailed plans to the

City to review for compliance with all applicable Building and Fire safety codes. Further, the proposed project will promote the orderly development of property, the preservation of property values and preservation of the distinct character of Smoky Hollow. The project will be consistent with surrounding development and will not adversely affect the value of neighboring properties. The proposed project is compatible with the neighborhood, and therefore is not anticipated to be detrimental to the public health, safety, or welfare.

SECTION 6: *Master Sign Program Findings*. Pursuant to ESMC Chapter 15-18, a Master Sign Program (MSP) is required for multi-tenant developments of three of more commercial tenants. This MSP:

A. Is consistent with Chapter 15-18 of the ESMC in all regards including size, type, locations, prohibited signs, exempt signs, general sign standards, applications, permits, nonconforming conditions, substitutions, enforcement and maintenance.
B. Provides all Tenants a guideline for Tenant signage that is architecturally compatible with the campus wide architectural esthetic for the purposes of a unified campus standard in design, installation and otherwise as approved by the authorities having jurisdiction with the original construction of the project.
C. Provides the appropriate process for review, submittal, approval, installation, maintenance and removal of all signage on the Standard Works campus.

SECTION 7: *Recommendation.* Subject to the conditions listed on Exhibit A of this Resolution, the Planning Commission recommends that the City Council approve the Community Benefit Plan (CBP) No. 19-03, Site Plan Review (SPR) No. 21-04, Master Sign Program (MSP) 21-01 and EA 1282 for the development of 1320-1330 E. Franklin Avenue.

SECTION 8: *Reliance on Record.* Each and every one of the findings and determination in this Resolution are based on the competent and substantial evidence, both oral and written, contained in the entire record relating to the project. The findings and determinations constitute the independent findings and determinations of the Planning Commission in all respects and are fully and completely supported by substantial evidence in the record as a whole.

SECTION 9: This Resolution will remain effective unless superseded by a subsequent resolution.

SECTION 10: The Commission Secretary is directed to mail a copy of this Resolution to Mark Telesz, of Smoky Hollow Industries LLC., and to any other person requesting a copy.

PASSED, APPROVED AND ADOPTED this 10th DAY of FEBRUARY, 2022.

PLANNING COMMISSION RESOLUTION NO. 2915

Exhibit A

CONDITIONS OF APPROVAL

In addition to all applicable provisions of the El Segundo Municipal Code ("ESMC") and all provisions of the Smoky Hollow Specific Plan, Mark Telesz and Smoky Hollow Industries, LLC (the "Applicant" or "Owner") agrees to comply with the following provisions as conditions for the City of El Segundo's approval of Community Benefit Plan CBP 19-03, Site Plan Review (SPR 21-04), and Environmental Assessment (EA) No. 1282 for a Tier II Community Benefits Plan and Site Plan Review of the proposed South Site of the Standard Works project at 1320-1330 E. Franklin Avenue. ("Project Conditions"):

Zoning Conditions

1. This approval is for the project as shown on the plans presented to and reviewed by the Planning Commission on February 10, 2022 and approved by City Council on _____, and on file with the Development Services Department.

2. Prior to issuance of any permit for the project, the applicant must submit plans, showing that the project substantially complies with the plans and conditions of approval on file with the Development Services Department. The Development Services Director is authorized to approve minor modifications to the approved plans or any of the conditions if such modifications achieve substantially the same results as would strict compliance with said plans and conditions. Any subsequent modification must be referred to the Development Services Director for a determination regarding the need for Planning Commission and/or City Council review and approval of the proposed modification.

3. This approval allows for construction of a new office facility at 1320-1330 E. Franklin Avenue. Specifically, the approved construction on the north site includes the following:

   a. Construction of a 44,802-square foot addition to the existing building that would be structurally preserved in place, resulting in a total gross floor area of 65,061 square feet.
   b. The maximum height of the resulting three-story building is limited to 59'-6" as measured from average grade to the rooftop of the building. Per the Smoky Hollow Specific Plan, building height does not include additional parapet height of 5', or additional structures allowed per the CBC and ESMC Section 15-2-3.

   A change in uses or changes in the allocation of square footages specified above must be referred to the Development Director for a determination regarding the need for Planning Commission and/or City Council review and approval of the proposed changes.

4. Signs proposed for the project, including monument signs, shall be designed in conformance with the approved Master Sign Program (MSP 21-01), which is included as Exhibit C of this Resolution. Any revisions to the Master Sign Program must be submitted and approved by the Development Services Director or designee prior to final building permit approval.

5. This approval shall not become effective unless and until the City Council adopts an ordinance approving the associated Smoky Hollow Specific Plan Amendment and said ordinance takes effect.

6. Before any building permits are issued, the applicant will be required to pay fair-share contribution to the City of El Segundo in compliance with Smoky Hollow Specific Plan EIR Mitigation Measure 18-1. The fair share contribution has been determined as follows:

   a. 4.7% for PCH/Grand Avenue for a new right-turn overlap signal phase on all approaches. The total cost estimate for the improvement is $80,788.00, of which $3,797.04 is the project's fair share contribution.

   b. 5.3% for PCH/El Segundo Boulevard for a Second eastbound left-turn lane, and new right-turn overlap signal phase at the northbound approach. The total cost estimate for improvements is $2,553,500.00 of which the project's fair share contribution is $135,335.50.

7. All rooftop mechanical equipment shall be architecturally screened in accordance with ESMC Section 15-2-8(C). Prior to permit final, the equipment shall be adequately screened to the satisfaction of the Development Services Director.

8. All building and drainage gutters, down spouts, vents and other protrusions shall be concealed from view within the exterior walls. Ladders for roof access shall be mounted on the inside of the building.

9. Mandatory solid waste disposal services shall be provided by a City approved waste hauler to all parcels/lots or uses affected by approval of this project.

10. The Applicant shall provide receptacles (bins) for the collection of refuse and recyclable materials, as well as a hose bib for washing collection areas. Prior to the issuance of building permits, the applicant shall provide documentation from a City approved waste hauler stating that the number and size of bins provided for the collection of refuse and recyclable materials generated by the project is adequate.

11. Prior to the issuance of building permits, the Applicant shall provide documentation from a City approved waste hauler stating that the dimensions of the refuse storage enclosure are of adequate size to accommodate containers consistent with the current methods of collection, are designed with a walk-in access component, and located and designed to facilitate trash truck access and pickup.

12. Trash enclosures on the property shall be either fully enclosed within the building or must be adequately screened by a trash enclosure per the ESMC. Further, the gates shall include architectural paneling or finishing that is consistent with the paneling or finishing of the building. Lastly, trash enclosure areas for the project shall have a non-combustible decorative cover that matches the building's architecture.

13. All mitigation measures and conditions of approval must be listed on the plans submitted for plan check and the plans for which a building permit is issued.

14. The applicant shall submit a Landscape Plan in accordance with ESMC Section 15-15a.

15. At the applicant's expense, the open spaces approved within the project shall be maintained in accordance with the approved Landscape Plan.

Community Benefits Plan

16. The applicant must provide all the community benefits as stated in Exhibit B (Community Benefits Plan). If the project does not provide a benefit or ceases to provide one, the owner must submit a revised CBP including equivalent replacement benefit of an equal value to the Development Services Director for review and approval. The Director may at his discretion refer the revised CBP to the Planning Commission and City Council for review and approval.

17. The applicant must construct the public improvements indicated in the Community Benefits Plan, including, but not limited to, sidewalk, streetscape, landscaping, parking, open space, and other improvements within the public right-of-way.

IS/MND / CEQA

18. Applicant must comply with all applicable mitigation measures identified in the Final Environmental Impact Report prepared for the SHSP. All mitigation measures and conditions of approval must be listed on the plans submitted for plan check and the plans for which a building permit is issued.

19. Prior to issuance of any demolition, grading or building permit or as otherwise appropriate, a matrix/spreadsheet shall be submitted to the City, as applicable, for review and compliance with:

    a) The SHSP 2018 EIR (EA-1101) Mitigation Monitoring and Reporting Program (MMRP) as adopted by the City Council on October 2, 2018.

    b) The Project IS/MND MMRP as adopted as part of Planning Commission Resolution No. 2912.

c) All project conditions of approval.

20. Prior to Certificate of Occupancy, the project shall demonstrate compliance with all applicable mitigation measures in the MMRP for the SHSP EIR and project COA. A final mitigation and COA monitoring matrix/spreadsheet shall be submitted to the City.

21. All mitigation measures listed in Mitigation Monitoring and Reporting Program adopted as part of Planning Commission Resolution No. 2912 shall be complied with. This shall include:

*Denotes mitigation measure carried over from the Smoky Hollow Specific Plan EIR

Biological Resources

22. **BIO MM 7-1*** To avoid impacts to nesting birds, construction activities and construction noise should occur outside the avian nesting season (prior to February 1 or after September 1). If construction and construction noise occurs within the avian nesting season (during the period from February 1 to September 1), areas within 100 feet of a development site shall be thoroughly surveyed for the presence of nests by a qualified biologist no more than five days before commencement of any vegetation removal. If it is determined that the Project Site is occupied by nesting birds covered under the Migratory Bird Treaty Act, mitigation measure 7-2 shall apply.

23. **BIO MM 7-2*** If pre-construction nesting bird surveys result in the location of active nests, no grading, vegetation removal, or heavy equipment activity shall take place within an appropriate setback from occupied nests as determined by a qualified biologist. Protective measures (e.g., established setbacks) shall be required to ensure compliance with the Migratory Bird Treaty Act and California Fish and Game Code requirements. The qualified biologist shall serve as a construction monitor during those periods when construction activities occur near active nest areas to ensure that no inadvertent impacts occur. A report of the findings, prepared by a qualified biologist, shall be submitted to the CDFW prior to construction-related activities that have the potential to disturb any active nests during the nesting season.

Cultural Resources

24. **CUL MM 8-2*** Prior to the commencement of grading or demolition of subsurface structures, a professional archaeologist who meets U.S. Secretary of the Interior's Professional Qualifications and Standards, shall conduct a brief archaeological and paleontological informational session for construction personnel. The training session may consist of an in-person meeting or a written handout describing: (1) how to identify archaeological and paleontological resources that may be encountered during earth-moving activities and (2) the procedures to be followed in such an event, including contact information for the appropriate entities if archaeological or paleontological resources are discovered.

25. **CUL MM 8-3*** In the event that archaeological or paleontological resources are unearthed during ground-disturbing activities, the ground-disturbing activities shall be halted or diverted away from the vicinity of the find so that the find can be evaluated. A buffer area of at least 50 feet shall be established around the find, where construction activities will not be allowed to continue until a qualified archaeologist or paleontologist has examined the newly discovered artifact(s) and has evaluated the area of the find. Work shall be allowed to continue outside the buffer area. If the archaeologist identifies the find as a tribal cultural resource or suspects it to be a tribal cultural resource, the City will contact the Native American Heritage Commission (NAHC) to report the discovery, and will contact local Native American tribal representatives as directed by the NAHC. Should the newly discovered artifact(s) be determined to be a tribal cultural resource, Native American construction monitoring will be initiated. The City shall coordinate with the archaeologist and tribal representative(s) to develop an appropriate treatment plan for the resources.

26. **CUL MM 8-4** If human remains are uncovered during Project grading, work must be halted in the immediate area of the find and the County Coroner notified in accordance with Health and Safety Code Section 7050.5. The Coroner must then determine whether the remains are of forensic interest. If the Coroner, with the aid of a supervising archaeologist, determines that the remains are or appear to be of a Native American, they must contact the Native American Heritage Commission for further investigations and proper recovery of such remains, if necessary. Further, pursuant to Public Resource Code Section 5097.98(b) remains shall be left in place and free from disturbance until a final decision as to the treatment and disposition has been made. If the County Coroner determines the remains to be Native American, the Native American Heritage Commission shall be contacted within the period specified by law (24 hours). Subsequently, the Native American Heritage Commission shall identify the "most likely descendant". The most likely descendant shall then make recommendations and engage in consultation concerning the treatment of the remains as provided in Public Resources Code Section 5097.98. Human remains from other ethnic/cultural groups with recognized historical associations to the area shall also be subject to consultation between appropriate representatives from that group and the local jurisdiction/lead agency involved. This measure shall be implemented to the satisfaction of the City Planning Department.

Geology and Soils

27. **MM GEO-1** Prior to issuance of any grading or building permits, the applicant shall demonstrate that all improvements and construction-related activities comply with the recommendations outlined in the Project geotechnical report (CWI 2017). This measure applies to all potential geologic and soil constraints that could affect one or both sites, including but not limited to seismic ground failure, strong seismic shaking, differential settlement, liquefaction, lateral spreading, and subsidence, and landslides/slope stability as appropriate. This measure shall be implemented to the satisfaction of the City Engineer.

Greenhouse Gas Emissions

28. **EECAP 4.1*** Encourage or Require Energy Efficiency Standards Exceeding Title 24. This measure will develop City staff to be resources in encouraging and implementing energy efficiency beyond that required by current Title 24 Standards.

29. **EECAP 5.2*** Promote Water Efficiency Standards Exceeding SB X7-7. In addition to SB X7-7, more actions are being studied or have been taken to exceed water efficiency standards. These efforts include education and outreach practices that could be combined with residential and commercial EECAP actions that emphasize the reuse of recycled/gray water and promote harvesting rainwater.

Hazards and Hazardous Materials

30. **MM HAZ-3** Prior to issuance of any demolition or building permits for South Site (1475 E. El Segundo Boulevard) or North Site (1320-1330 E. Franklin Avenue), the applicant shall identify and effectively remediate any asbestos-containing materials (ACMs) associated with the onsite buildings. This remediation may be accomplished by either in-place encapsulation or removal as appropriate. The applicant shall retain a qualified asbestos contractor to conduct this work and shall provide the City with a final report within 45 days of completion of all remediation activities, including appropriate documentation of disposal of any onsite ACMs at an approved landfill. This measure shall be implemented to the satisfaction of the City Planning Department.

Transportation (VMT)

31. **MM VMT-1 Unbundle Parking Cost.** This measure implements workplace parking pricing and unbundles the cost of parking from the lease. The Project shall include parking in the access-controlled parking structure. The property owner shall include language in the lease agreement which provides reduced lease rates if parking is not required by the tenant. The developer shall implement a monthly cost for parking spaces by charging a parking fee per access card. The range of VMT reduction from this measure is between 2.6% and 13%. Based on the calculations, a $50 per month/employee parking cost will result in a VMT reduction of 5.1%.

32. **MM VMT-2 Parking Management Strategies**. Strategies to encourage efficiency in parking facilities and improve the quality of service to parking users results in reduction of VMT. This includes signage and directions, providing preferential carpool/vanpool parking spaces closer to the building entrance to and from the destination, etc. This encourages carpooling/vanpooling and also reduces the amount of time patrons drive around to find the best parking area to minimize walking. The maximum reduction from this measure is 3%.

33. **MM VMT-3 Mandatory Travel Behavior Change Program, Promotions & Marketing.** This involves the development of a travel behavior change program that targets individuals' attitudes, goals, and travel behaviors, educating participants on the impacts of their travel choices and the opportunities to alter their habits. The project shall provide a web site that allows employees to research other modes of transportation for commuting. If a website is planned for the development, links to Google Transit, and/or local bus operators should be provided on the website. If a website is not planned, QR Codes could be provided in the parking structure and the building lobbies to enable users an easy way to access information about transit routes. The maximum reduction due to this measure is 1%.

34. **MM VMT-4 Implement Commute Trip Reduction Marketing.** This involves the use of marketing and promotional tools to educate and inform travelers about site-specific transportation options and the effects of their travel choices with passive educational and promotional materials. The project shall implement marketing strategies to reduce commute trips. The project will implement marketing strategies to reduce commute trips. Information sharing and marketing are important components to successful commute trip reduction strategies. Implementing commute trip reduction strategies without a complementary marketing strategy will result in lower VMT reductions. Marketing strategies may include new employee orientation of trip reduction and alternative mode options, event promotions, and printed material. CAPCOA states that the range of reduction is between 0.8% to 4%, but states that in some literature, the VMT reduction has been as much as 15%, especially for urban areas. For this project, a conservative reduction of 3% has been assumed.

35. **MM VMT-5 Include Bike Parking in Excess of City Code.** This implements short and long-term bicycle parking to support safe and comfortable bicycle travel by providing parking facilities at destinations. Based on discussion with the applicant, bike parking in excess of City code shall be provided. The City's code requires a minimum of 4 spaces for non-residential buildings up to 15,000 square feet, plus a minimum of 5 percent of the required vehicle spaces for the portion above 15,000 square feet. The maximum number of bicycle parking required under City code is 25 spaces. For the project, the number of bicycle parking spaces required under code is 17 spaces, and therefore, it is recommended that the project provide at least 18 spaces. This results in a VMT reduction of 0.625%.

36. **MM VMT-6 Include Secure Bike Parking and Showers.** This implements additional end-of-trip bicycle facilities to support safe and comfortable bicycle travel. Based on discussion with the applicant, each building shall include shower facilities and secure bike parking facilities shall be provided. This results in a VMT reduction of 0.625%.

Tribal Cultural Resources

37. **MM-TCR-1 Native American Monitoring.** Prior to the commencement of any ground disturbing activity at the Project site, the Project applicant shall retain a Native American Monitor approved by the Gabrieleño Band of Mission Indians-Kizh Nation

and the Gabrielino Tongva Indians of California, the tribes that consulted on this Project pursuant to AB 52 and SB 18 (the "Tribes" or the "Consulting Tribes"). Copies of the executed contracts shall be submitted to the City of El Segundo Development Services Department prior to the issuance of any permit necessary to commence a ground-disturbing activity.

The Tribal monitors shall only be present on-site during the construction phases that involve ground-disturbing activities. Ground disturbing activities are defined by the Tribes as activities that may include, but are not limited to, pavement removal, potholing or auguring, grubbing, tree removals, boring, grading, excavation, drilling, and trenching, within the Project area. The Tribal Monitors shall complete daily monitoring logs that will provide descriptions of the day's grading and related earth-disturbing activities, including type and extent of construction activities, location of work, soil and any cultural materials identified, or other items potentially related to cultural resources. The on-site monitoring shall end when all ground-disturbing activities on the Project site are completed, or when the Tribal Representatives and Tribal Monitors have indicated that all upcoming ground-disturbing activities at the Project site have little to no potential for impacting Tribal Cultural Resources.

Upon discovery of any Tribal Cultural Resources, construction activities shall cease in the immediate vicinity of the find (not less than the surrounding 100 feet) until the find can be assessed. All Tribal Cultural Resources unearthed by Project activities shall be evaluated by the Consulting Tribes approved Tribal monitors. If the resources are Native American in origin, the Consulting Tribes shall retain it/them in the form and/or manner the Tribes deem appropriate, for educational, cultural and/or historic purposes. If human remains and/or grave goods are discovered or recognized at the Project site, all ground disturbance shall immediately cease, and the county coroner shall be notified per Public Resources Code Section 5097.98, and Health & Safety Code Section 7050.5. Human remains and grave/burial goods shall be treated alike per California Public Resources Code section 5097.98(d)(1) and (2). Work may continue on other parts of the Project site while evaluation and, if necessary, mitigation takes place (CEQA Guidelines Section 15064.5[f]).

General Conditions

38. The project is subject to the Public Art or In-Lieu Fee Requirement (Cultural Development Program) established by City Council Ordinance 1594, which requires placement of public art on-site or payment of in-lieu fees to the Cultural Development Fund. Prior to issuance of a building permit, the applicant shall submit an application to the Community Services Department and shall either: a) enter into an agreement with the City of El Segundo to provide public art onsite; or, b) in-lieu of commissioning public art onsite, pay a fee equal to 1% of the project cost to the City's Cultural Development Fund.

39. A positive balance shall be always maintained in all project Reimbursement Accounts. If the balance of the Reimbursement Account(s) associated with the project becomes

negative at any time, all work on the project shall be suspended, including the issuance of permits and project inspections, until such time as the sufficient funds are deposited to return the account(s) to a positive balance.

40. A weatherproof notice/sign to report dust, noise, or other construction-related impacts shall be posted and prominently displayed on the construction fencing clearly visible to the public from along the abutting street(s). The notice/sign shall set forth the name of the person(s) responsible for the construction site and a phone number(s) to be called in the event that a construction-related impact occurs.

41. Reclaimed water must be utilized for all landscaped areas.

42. Prior to issuance of any permit, landscaping plans must be submitted to the Development Services Department that conform to the City's Water Conservation in Landscaping requirements as set forth in ESMC Chapter 15.

43. All utilities lines installed to serve the new construction shall be placed underground.

44. The developer shall be responsible for the relocation of any existing utility necessary as a result of the development.

45. Pedestrian walkways within the project must include admixture colored concrete and/or design that enhance and complement the project.

46. The project site shall be fenced and screened during construction.

47. All areas within the project site shall be maintained free of trash and debris.

48. Prior to issuance of any permit, an erosion control plan shall be reviewed and approved by the Building Official and the Public Works Director.

49. Water spraying or other approved methods shall be used during grading operations to control fugitive dust. Recycled water shall be used for grading operations whenever available.

50. During the grading phase and as needed during the remainder of the construction phase, the owner or contractor must conduct daily street sweeping along the streets abutting the project site(s).

51. In the event that a Planning, Building, Public Works, Fire Department or Police Department requirement are in conflict, the stricter standard shall apply.

Impact Fee Conditions

52. Pursuant to ESMC §§ 15-27 A-1, et seq., prior to issuance of a building permit for new Building C, the applicant must pay a one-time library services mitigation fee. The fee amount must be based upon the adopted fee at the time the building permit is issued.

53. Pursuant to ESMC §§ 15-27 A-1, et seq., prior to issuance of a building permit for new Building C, the applicant must pay a one-time fire services mitigation fee. The fee amount must be based upon the adopted fee at the time the building permit is issued.

54. Pursuant to ESMC §§ 15-27 A-1, et seq., prior to issuance of a building permit new Building C, the applicant must pay a one-time police services mitigation fee. The fee amount must be based upon the adopted fee at the time the building permit is issued.

55. Pursuant to ESMC §§ 15-27 A-1, et seq., prior to issuance of a building permit for new Building C, the applicant must pay a one-time park services mitigation fee. The fee amount must be based upon the adopted fee at the time the building permit is issued.

56. Pursuant to ESMC §§ 15-27 A-1, et seq., prior to issuance of a building permit for new Building C, the applicant must pay a one-time traffic mitigation fee. The fee amount must be based upon the adopted fee at the time the building permit is issued.

Building Safety Conditions

57. All projects shall comply with the El Segundo Municipal Code, and the California Building Code, California Electrical Code, California Mechanical Code, California Plumbing Code, California Energy Code, and the California Green Building Standards Code in effect at the time of the plan submittal to Building and Safety Division for plan review.

58. All projects shall comply with the El Segundo Municipal Code, and the 2019 editions of the California Building Code, California Electrical Code, California Mechanical Code, California Plumbing Code, California Energy Code, and the California Green Building Standards Code.

59. Construction projects must comply with Best Management Practices for construction and storm-water runoff requirements of the National Pollutant Discharge Elimination System MS4 Permit. Construction activity resulting in a land disturbance of one acre or more, or less than one acre but part of a larger common plan of development or sale must obtain the (SWPPP) Construction Activities Storm Water General Permit.

60. A site-specific soils and geotechnical report must be submitted to Building and Safety Division for review and approval. The report shall comply with the minimum requirements of Chapter 18 of the CBC and shall address the possible sulfate content of the soils.

61. A stamped setback certification by a Licensed Surveyor will be required to certify the location of the new construction in relation to the setbacks prior to the first foundation inspection and stamped setback certification by a Licensed Surveyor will be required to certify the height of the structures prior to issuance of Certificate of Occupancy.

62. The applicant shall obtain a building, grading, mechanical, plumbing, electrical, demolition permit for the project.

63. Plans submitted for plan check must be stamped by a State-licensed architect or engineer and shall include:

    a. Complete structural calculations, details, notes and material specifications.

    b. Complete Accessibility Plan with a statement from a California Certified Access Specialist (CASp) indicating that a plan review has been performed and that it complies with the requirements of Chapter 11A &11B of the CBC.

    c. A stamped and signed Boundary and Topographic survey by a California licensed Land Surveyor.

    d. A complete grading and drainage plan showing compliance with the Los Angeles Regional Water Quality Control Board (LARWQCB) Low Impact Development (LID) requirement. The Los Angeles County LID Manual may be used as a guideline for preparing the LID report.

    e. Hydrology report along with hydraulic calculations.

    f. Complete energy calculations, details, notes, and material specifications.

64. Applicant shall submit a site-wide New Address Issuance request to the Building Division. Approved building addresses to be shown on the submitted plans.

65. Applicant shall pay all development fees, including school district developer fees, prior to issuance of building permits.

Fire Department Conditions

66. The applicant must comply with the applicable requirements of the 2019 California Building and Fire Codes and the 2018 International Fire Code as adopted by the City of El Segundo and El Segundo Fire Department Regulations.

67. The applicant must submit and have approved by the Fire Department a Fire/Life Safety Plan, identifying fire safety precautions during demolition and construction, emergency site access during construction, permanent fire department access, fire hydrant locations and any existing or proposed fire sprinkler systems and fire alarm systems prior to issuance of the building permit.

Public Works Conditions

"City Engineer" = City Engineer or his/her designee throughout this document.

General

68. All work in the City's right-of-way or on City-owned and maintained facilities shall require review and approval of the City Engineer or his/her designee.

69. The applicant shall ensure that encroachment permits are secured from the Public Works Department/Engineering Division before commencing any and all work in the City's public right-of-way (ROW), including lane closures.

70. Construction inspection shall be coordinated with the Public Works Inspector and no construction shall deviate from the approved plans without approval of the City Engineer. If plan deviations are necessary, the applicant shall provide a revised plan or details of the proposed change for review and approval of the City Engineer prior to construction.

71. Prior to issuing of the Certificate of Occupancy, the applicant shall ensure installation of all improvements required by the Public Works Department are inspected and approved by the City Engineer.

72. All construction-related parking shall be accommodated on-site. No construction related parking shall be permitted off-site.

73. A grading and drainage plan shall be provided and stamped by a California (CA) State-licensed civil engineer as part of the Building Permit process.

74. A utility plan shall be provided that shows all existing and proposed utility lines and their sizes (sewer, water, gas, storm drain, electrical, etc.), including easements, within 200 feet of the project site boundary.

75. Easements shall be granted for all public utilities installed outside the public-right-way with 15 ft. wide minimum up to entering the public right-of-way.

Street Improvements & Traffic Control

76. All existing sidewalk, curb & gutter, driveway approaches, and curb ramps that are broken or not in conformance with the latest SPPWC or City standards shall be removed and constructed per the latest SPPWC and City standards.

77. PG-64-10 tack coat and hot mix asphalt shall be used for all slot paving required next to new concrete installations. Slot paving shall be 3 feet wide and 1 foot deep, consisting of 6 inches of asphalt over 6 inches of base.

78. The applicant shall coldmill 2" Asphalt Concrete (AC) pavement surface and overlay with 2" AC PG-64-10 the curb-to-centerline half street width of Kansas Street and El Segundo Boulevard fronting the property. AC mix specification shall conform to Standard Specifications for Public Works Construction (SSPWC) "Greenbook", section 203-1.

79. Once the ROW improvements are accepted by the City Engineer, they are not to be used for staging building construction activities, including but not limited to, storage of construction materials and equipment. The street and sidewalks shall be kept free of construction debris, mud and other obstacles and shall remain open to traffic at all times. The applicant shall bear the entire cost of replacement or repair to any damage to improvements caused by its use, or its Contractors' and Subcontractors' use, of the improvements after acceptance by the City Engineer.

80. The proposed ingress/egress into the project sit requires a traffic study to be prepared by a State-licensed Traffic Engineer to demonstrate the driveways will be in compliance with the requirements of the General Plan, subject to the review and approval of the Public Works Director or his designee.

Water

81. Any existing water meters, potable water service connections, fire backflow devices and potable water backflow devices must be upgraded to current City Water Division standards. These devices shall be placed or relocated onto private property.

Sewer

82. The proposed improvement will impact the capacity of the existing City owned sewer main lines. The applicant must submit a sewer study to determine if there is a capacity deficiency in the affected sewer main lines and if so, sewer upgrades will be required. The sewer study shall be reviewed and approved by the City Engineer.

83. Prior to issuance of a Certificate of Occupancy, a $60,551.30 sewer connection fee for this project must be paid to the City of El Segundo Public Works Department.

84. Any unused sanitary sewer laterals shall be abandoned and properly capped at the City main. The Contractor is to obtain necessary permits and licenses, and provide traffic control plans and shoring plans.

Storm Drain

85. Hydrologic and hydraulic calculations shall be submitted to size appropriate storm drain facilities to control on-site drainage and mitigate off-site impacts. Refer to the most recent Los Angeles County Hydrology Manual. Instructions and the manual are available at the County website at http://dpw.lacounty.gov/wrd/Publication/index.cfm. Calculations shall be signed by a registered civil engineer.

86. The project shall comply with the National Pollutant Discharge Elimination System (NPDES) requirements and shall provide Best Management Practices (BMPs) for sediment control, construction material control and erosion control.

Miscellaneous Conditions

87. Approval of this permit shall not be construed as a waiver of applicable and appropriate zoning regulations, or any Federal, State, County and/or City laws and regulations. Unless otherwise expressly specified, all other requirements of the ESMC shall apply.

88. Failure to comply with and adhere to all of these conditions of approval may be cause to revoke the approval of the project by the Planning Commission, or City Council, pursuant to the provisions of the ESMC.

89. In the event that any of these conditions conflict with the recommendations and/or requirements of another permitting agency or City Department, the stricter standard shall apply.

90. The applicant and its successors in interest shall indemnify, protect, defend (with legal counsel reasonably acceptable to the City), and hold harmless, the City, and any agency or instrumentality thereof, and its elected and appointed officials, officers, employees, and agents from and against any and all liabilities, claims, actions, causes of action, proceedings, suits, damages, judgments, liens, levies, costs, and expenses of whatever nature, including reasonable attorney's fees and disbursements (collectively "Claims") arising out of or in any way relating this project, any discretionary approvals granted by the City related to the development of the project, or the environmental review conducted under California Environmental Quality Act, Public Resources Code Section 21000 et seq., for the project. If the City Attorney is required to enforce any conditions of approval, all costs, including attorney's fees, shall be paid for by the applicant. The Applicant agrees to defend the City (at the City's request and with counsel satisfactory to the City) and will indemnify the City for any judgment rendered against it or any sums paid out in settlement or otherwise. For purposes of this section "the City" includes the City of El Segundo's elected officials, appointed officials, officers, and employees.

By signing this document, _____, on behalf of Smoky Hollow Industries, LLC, certifies that he/she has read, understands, and agrees to the Project Conditions listed in this document.

PLANNING COMMISSION RESOLUTION NO. 2915

Exhibit B

Community Benefits Plan
1475 E. El Segundo Blvd. and 1320-1330 E. Franklin Ave

Project description:

The development project at 1320-1330 E. Franklin Ave and 1475 E. El Segundo Blvd is subject to the following applications: Community Benefits Plan No. CBP 19-03 and CBP 19-04, Site Plan Review No. SPA 21-03 and SPA 21-04 and Environmental Assessment No. EA 1281 and EA 1282.

The proposed Project for the North Site includes developing a 1.07-acre portion of the 4.34-acre property located at 1320-1330 E. Franklin Avenue within the SHSP. The existing 19,493 square foot, one-story brick building will be preserved and two levels would be added above it, for a total of 64,295 square feet for R&D and office use. In addition, a 766 square foot pavilion building is proposed, which includes a public café, resulting in a total of 65,061 square feet of floor area for the North site (FAR = 0.95). Specifically, the proposed project on the North Site includes:

- Construction of a two-story 44,802-square foot addition to the existing building that would be structurally preserved in place, for a total floor area of 65,061 square feet (including the two-story pavilion noted below). The resulting three-story main building will measure 59'-6" in height, as measured from average grade to the rooftop of the building.
- Construction of a new two-story pavilion building to serve the neighborhood with a café and gathering point at the entry of a new public park accessible by the public. The new pavilion will have 766 square feet of floor area and will reach a maximum height of 23 feet and 8 inches.
- Construction of a new 5,000-square foot public outdoor park with park seating, picnic tables, shade trees and landscaping.

The development project deviates from the following Smoky Hollow Specific Plan (Specific Plan) development standards in Section 2.3:

1. **Building Height.**
   The permitted building height is 35 feet. The proposed building height is up to 60 feet to the top of the roofline.
2. **Allowable gross floor area ratio (FAR).**
   The permitted FAR is 1.5. The proposed FAR is up to 1.45.

Community benefits:

In exchange for the above deviations, the applicant offers the following community benefits and improvements, at the applicant's expense, as stated in pursuant to Smoky

Hollow Specific Plan Section 4.5.2:

Community Benefits Plan

The project is proposed as a campus, with multiple sites to be developed. The design of the building proposed on the North site exceeds the current base standard for building height in the SHSP, and the design of the building proposed on the South site exceeds the current base standards for building height and allowable Gross Floor Area Ratio (FAR). Projects within the SHSP area are allowed to request deviations from current City development standards with the approval of a Tier I or Tier II Community Benefits Plan. The proposed project would amend the SHSP to allow for an increase in the maximum permissible height for CBP Tier II qualifying projects. Allowable heights would increase to 60 feet from the current Tier II maximum of 50 feet. Approval of the SPA is required before the Development Sites can be permitted at a maximum height of 59.5 feet.

The Project requests the following deviations from the current development standards which require a Tier II Community Benefits Plan:

1. **Additional Building Height.** Proposed building heights of up to 59.5 feet on both Project sites would exceed the SHSP Base Standard height of 35 feet.
2. **Additional Building FAR.** Proposed 1.45 floor area ratio (FAR) on the South site exceeds the SHSP Base Standard FAR of 1.0. Proposed 0.94 floor area ratio (FAR) on the North site does not exceed the SHSP Base Standard FAR of 1.0.

In exchange for the above deviations allowed by Tier II CBP, the applicant is proposing the following community benefits and improvements, at the applicant's expense, pursuant to Smoky Hollow Specific Plan Section 4.5.2. The following Community Benefits are based on objectives and suggestions directly identified as development standards in the SHSP with the objective of benefiting the Smoky Hollow Specific Plan area. Additionally, the Specific Plan contains 32 design guidelines in five categories: building character, open space, landscaping, connectivity, signage and public art and Public Realm. Compliance with at least 17 of the guidelines is required to be considered as an exemplary project; the proposed Project incorporates 29 of the 32 design guidelines, far exceeding the minimum threshold for exemplary projects. A summary of the main community benefits that are proposed for the Project include the following:

1. **Underground Utilities**. The Project proposes to underground all electric power and low voltage phone and data lines that currently serve the buildings on East El Segundo Blvd and Kansas Street.
2. **Public Seating**. Proposed architectural seating will be provided along the sidewalk area within the public right-of-way (ROW) facing E. Franklin Avenue and Kansas Street.
3. **Coffee Pavilion/Public Café**. The proposed Project would also include a 276-square foot public café (Coffee Pavilion) and associated outdoor dining area immediately adjacent to the E Franklin sidewalk, in order to active the street and provide a convenient break location for local neighbors. The café is part of the

proposed 5,000-square foot public park that will be a landscaped focal point of the Project and of the surrounding area as well.

4. **Architecture that enhances building character.** See below under "Group A".
5. **Open space that facilitates gathering.** See below under "Group B".
6. **Landscaping and environmental design. "**See below under "Group C".

In addition, the Development Project will provide the following specific community benefits as summarized from the CBP Tier II application scoring sheets:

Group A – Enhance Building Character

1. *Build on the quality industrial character:* Project has exposed steel beams and large industrial-style windows.
2. *Convey a sense of the old and new:* Project will preserve ground floor red brick exterior while adding two setback floors of a modern industrial building
3. *Build upon existing context:* Project stays within existing footprint but adds 2 floors with roof decks.
4. *Conserve and retain the character-defining features:* Project preserves ground floor red brick exterior and three historical building entrances.
5. *Encourage additions that complement the character-defining features:* Project has large industrial windows with exposed steel beams characteristic of mid-century architecture but stacked blond block with exposed aggregate and stain coloring to enhance the industrial appearance.
6. *Incorporate small, medium, and large scales:* Project includes several interlocking design elements of different scales for visual interest including large to small "nested" windows and balconies to break up the building facade into different sized elements.
7. *Enhance design at the pedestrian level:* Project will have extensive landscaping along all street frontages with pedestrian scale seating.
8. *Specify 360^{o} architecture:* Project will have enhanced architecture on all four sides of each building.
9. *Enhance entry expression:* Project has new landscaping and a double high entry portal at the southwest corner.
10. *Encourage the use of roll-up doors and sliding walls at street frontage:* Roll-up doors are used in several main entrance locations.
11. *Orient secondary entries to alleys:* Some secondary access points are oriented toward local alleys.
12. *Incorporate different materials, colors, and textures:* Project includes a variety of materials, colors, and textures, including red brick, medium grey block, black steel, corten, architectural board formed concrete, and glass.

Group B – Facilitate Gathering

13. *Form an active street wall:* Project has a new two-story entry portal with enhanced landscaping along street frontages and distinctive entrances.
14. *Develop outdoor gathering spaces:* Project will have a pocket park with outdoor seating.

15. *Provide ease of access:* The Project will have multiple pedestrian and vehicular access points and ground floor tenants will have direct access to adjacent streets.
16. *Enhance surface parking:* Project will have shade coverings for surface parking lots plus stacked parking using current technology.
17. *Use enduring quality paving materials:* Project will have special paving materials to demarcate pedestrian walkways with integral color and crystal aggregate.
18. *Provide street furniture:* Project will provide street furniture for seating at the pocket park.
19. *Use exterior lighting to accentuate safety and design:* Project will provide period lighting on all sides of buildings for pedestrian safety.

Group C – Incorporate Landscaping and Environmental Design

20. *Design layered and lush landscaping:* Project will have extensive landscaping per landscaping plan.
21. *Select drought-tolerant and native plants:* Project landscape plan has drought-tolerant and native plants throughout.
22. *Utilize planters and pots to provide greenery:* Project has planters and pots on Level 2 and 3 decks and balconies and on the rooftop.
23. *Improve landscaping in parking areas:* Parking areas include landscaping on at least two sides (those facing the buildings).
24. *Use fences and walls as an extension of the architecture:* Project includes monument signs for both buildings that compliment and extend the building architecture.
25. *Use natural light:* Project has large windows for 2-story spaces with mezzanines to allow natural light in all interior spaces.

Group D – Encourage Connectivity

26. *Install bike facilities:* Two bike racks will be installed at each Project building.

Group E – Signage, Way Finding, and Public Art

27. *Design signs as an integral component:* Project includes integrated tenant signage.
28. *Incorporate way-finding through integral design:* Project has architecturally integrated signage for both pedestrians and vehicles.
29. *Encourage public art:* Project will have a large scale art wall on the west side of the north building.

Public Realm

30. *Underground utilities:* The incoming power and low voltage cables for data and phone will be consolidated into one location and undergrounded.

EXECUTIVE SUMMARY

GENERAL OVERVIEW AND GRAND VISION
THE "STANDARD WORKS" PROJECT IS A 191,896 SF PARCEL BOUND BY EAST FRANKLIN AVENUE ON THE NORTH, EAST EL SEGUNDO BOULEVARD ON THE SOUTH AND OREGON STREET ON THE WEST ENCOMPASSING 3 BUILDINGS, A NEWELY CONSTRUCTED 4 LEVEL PARKING GARAGE CONTAINING 398 PARKING SPACES AND SEVERAL ON GRADE PARKING AREAS. PRESERVATION OF THE EXISTING 1950'S MID-CENTURY RED BRICK FACADE IS AN OBJECTIVE OF THE PROPOSED DESIGN AND THE SMOKY HOLLOW SPECIFIC PLAN. THE GRAND VISION OF THE DEVELOPMENT IS A DESIGN THAT ENHANCES THE EXISTING INDUSTRIAL AESTHETIC OF THE NEIGHBORHOOD BY PRESERVING ALL MID-CENTURY FACADES AND UTILIZING SIMILAR INDUSTRIAL BUILDING MATERIALS AND TECHNIQUES TO CREATE A COHESIVE ARCHITECTURAL EXPRESSION BETWEEN THE EXISTING AND THE PROPOSED DEVELOPMENTS. THIS MIX OF UNIQUE OLD AND NEW ECLECTIC BUILDINGS IS ENTICING TO PROSPECTIVE CREATIVE AND KNOWLEDGE-BASED BUSINESSES ACROSS MANY INDUSTRIES. THE LIVELY AND PEDESTRIAN FRIENDLY CREATIVE ATMOSPHERE OF STANDARD WORKS WILL CONTRIBUTE TO THE ONGOING SMOKY HOLLOW TRANSFORMATION TO AN INCUBATOR DISTRICT AND MAJOR ECONOMIC FORCE IN THE CITY.

USE
THE CURRENT USES OF THE EXISTING STRUCTURE IS LIGHT INDUSTRIAL WITH ASSOCIATED ACCESSORY GENERAL OFFICE AND WAREHOUSE. THE PROPOSED FLOOR AREA SHALL BE A COMBINATION OF GENERAL OFFICE, LIGHT INDUSTRIAL AND TECHNOLOGICAL USES INCLUDING R&D .

FLOOR AREA
THE PROJECT PROPOSES 45,568 SF IN ADDITION TO THE EXISTING 19,493 SF, FOR A TOTAL OF 65,061 SF. AT THE COMPLETION OF THE PROPOSED PROJECT, THE SITE WILL REMAIN SIGNIFICANTLY UNDERDEVELOPED WITH THE FLOOR AREA RATIO OF 0.95 WHICH IS MUCH LESS THAN THE ALLOWED 1.5 FAR IN THE TIER II COMMUNITY BENEFITS PLAN ALL THE WHILE ACTUALIZING ALL THE GOALS OF THE SPECIFIC PLAN WITHOUT THE NEED FOR REQUESETING ADDITIONAL FLOOR AREA BEYOND THE BY-RIGHT ALLOWED AREA OF 1.0.

PARKING
THE COMPLETED PROJECT WILL REQUIRE A TOTAL OF 168 PARKING SPACES WHICH WILL ALL BE PROVIDED ENTIRELY ON-SITE. THE PROJECT WILL CONTAIN APPROXIMATELY 38 ON GRADE PARKING AND UTILZE 130 SPACES IN THE RECENTLY COMPLETED PARKING GARAGE STRUCTURE.

MISCELLANEOUS
THE HOURS OF OPERATION FOR THE DEVELOPMENT ARE STANDARD BUSINESS HOURS FIVE DAYS A WEEK WITH OCCASIONAL WEEKEND HOURS. THE EXISTING BRICK STRUCTURE of 19,493 SF ON THE NORTH SIDE OF THE PROPERTY SHALL BE ENTIRELY PRESERVED AND REHABILITATED WITH LARGER OPENINGS FOR WINDOWS AND ACCESSIBLE ENTRANCES.

CONCLUSION
THE PROPOSED PROJECT DESIGN IS COMPATIBLE AND INTEGRATED WITH, AND NOT DETRIMENTAL TO, THE EXISTING DEVELOPMENT ON ADJACENT AND SURROUNDING NEIGHBORING PROPERTIES AND FURTHERMORE PAYS HOMAGE TO THE NEIGHBORHOOD'S INDUSTRIAL PAST AND ENCOURAGES LOOKING FORWARD TO THE FUTURE OF WHAT THE NEIGHBORHOOD WILL TRANSFORM INTO IN THE NEAR FUTURE.

TIER II COMMUNITY BENEFIT PLAN (CBP) PER SECTION 4.5.2 AND TABLE 4-1 OF SHSP:
1. BUILDING HEIGHT: REQUEST FOR UP TO 60 FEET

BICYCLE PARKING	CONSISTENT WITH SECTION 5.106.4 OF THE 2019 CALIFORNIA GREEN BUILDING STANDARDS CODE: NEW PROJECTS ANTICIPATED TO GENERATE VISITOR TRAFFIC SHALL PROVIDE ONE 2-BIKE CAPACITY RACK FOR 5% OF NEW VISITOR MOTORIZED VEHICLE PARKING SPACES BEING ADDED, WITH A MINIMUM OF ONE 2-BIKE CAPACITY RACK. ADDITIONS OR ALTERATIONS THAT ADD 9 OR FEWER VISITOR VEHICLE PARKING SPACES ARE EXCLUDED. NEW BUILDINGS WITH 10 OR MORE TENANT-OCCUPANTS OR ADDITIONS OR ALTERATIONS THAT ADD 10 OR MORE TENANT VEHICLE PARKING SPACES SHALL PROVIDE SECURE BICYCLE PARKING FOR 5% OF THE TENANT VEHICLE PARKING SPACES BEING ADDED, WITH A MINIMUM OF ONE SECURE BICYCLE PARKING SPACE. ACCEPTABLE PARKING FACILITIES SHALL BE CONVENIENT FROM THE STREET AND SHALL MEET ONE OF THE FOLLOWING: A. COVERED, LOCKABLE ENCLOSURES WITH PERMANENTLY ANCHORED RACKS FOR BICYCLES; B. LOCKABLE BICYCLE ROOMS WITH PERMANENTLY ANCHORED RACKS; OR C. LOCKABLE, PERMANENTLY ANCHORED BICYCLE LOCKERS.	THE PROPOSED PROJECT HEREIN PROPOSES 38 NEW PARKING SPACES. 38X.05 = 2 SHORT TERM AND 2 LONG TERM PARKING SPACES. SEE LEVEL 01 PLAN  THE PROJECT ALSO REQUIRES 125 SPACES IN THE RECENTLY COMPLETED PARKING GARAGE (B0182-18). THIS GARAGE INCLUDES 398 PARKING SPACES SHARED BETWEEN SEVERAL BUILDINGS. THIS PERMIT INCLUDED SHORT TERM AND LONG TERM BICYCLE PARKING AS REQUIRED BY CGC WHICH IS ALSO 5%. THEREFORE, ALL REQUIRED PARKING SPACES INCLUDE ASSOCIATED SHORT TERM AND LONG TERM BICYCLE PARKING.
5. OTHER PARKING AREA DEVELOPMENT STANDARDS	REFER TO ESMC SECTION 15-15-1 THROUGH 15-15-5.	PROVIDED

(SHSP TABLE 2-5) G. ACCESS, LOADING AND TRASH STANDARDS

	REQUIRED	PROVIDED
1. VEHICULAR ACCESS	A. LOTS ADJOINING AN ALLEY ARE PROHIBITED FROM PROVIDING CURB CUTS ALONG STREET FRONTAGES.	N/A (NO ALLEY)
	B. FOR LOTS NOT ADJOINING AN ALLEY, A MAXIMUM OF 1 CURB CUT IS ALLOWED FOR EACH 150 FT OF LOT FRONTAGE ALONG A PUBLIC STREET.	PROVIDED, SEE SITE PLAN
	C. NEW CURB CUTS ALONG FRANKLIN AVENUE ARE PROHIBITED.	NO NEW CURB CUTS PROPOSED ON FRANKLIN AVENUE
	D. CURB CUTS SHALL NOT BE MORE THAN 25 FT IN WIDTH EXCEPT WHERE REQUIRED BY THE CITY TO BE LARGER FOR SAFETY PURPOSES.	PROVIDED, SEE SITE PLAN
2. LOADING	A. NOT REQUIRED IF GROSS BUILDING AREA < 50,000 SF.	SEE B BELOW
	B. REQUIRED IF GROSS BUILDING AREA ≥ 50,000 SF AND/OR REQUIRED FOR THE FOLLOWING USES WHEN THE USE EXCEEDS 2,500 SF IN SIZE: RESTAURANT OR OTHER FOOD SALES AND SERVICE.	PROVIDED, SEE SITE PLAN SHEET 17
	C. ON-SITE LOADING AREAS SHALL BE AT LEAST 18 FT LONG AND 10 FT WIDE. FOR LOTS ADJOINING AN ALLEY, LOADING AREAS SHALL ADJOIN OR HAVE ACCESS FROM THE ALLEY. LOADING SPACES MAY ENCROACH INTO ANY REQUIRED ALLEY SETBACK.	PROVIDED, SEE SITE PLAN SHEET 17
3. REFUSE COLLECTION	A. REFUSE COLLECTION SERVICE SHALL BE CONTRACTED WITH AN APPROVED LOCAL SERVICE PROVIDER. REFUSE COLLECTION AREAS SHALL BE SCREENED PER ESMC SECTION 15-2-8 D.	FULLY SCREENED 125 SF TRASH & RECYCLING AREA IS CONSTRUCTED AS A PART OF THE GARAGE
	B. ON LOTS ADJOINING AN ALLEY, REFUSE COLLECTION STORAGE AREAS SHALL BE ORIENTED TO AND ACCESSED FROM THE ALLEY.	N/A (NO ALLEY)

BIM 360://1320 E. Franklin Avenue/1320 E FRANKLIN - CLOUD.rvt

KIOSK ELEVATIONS

Group A

		yes	no	n/a	criteria	
Enhance Building Character	A1	1			Build on the quality industrial character	The proposed design is a complimenting contemporary industrial esthetic with the use of exposed steel and large industrial windows and features
	A2	1			Convey a sense of old and new	The proposed design entirely preserves the existing red brick building at the ground level and proposes a complimenting industrial structure that embraces the existing structure and builds out of it above the 2nd floor.
	A3	1			Build upon existing context	The proposed structure stays within the existing footprint and creates accessible decks at the roof level of the existing structure preserving and adding to the original architecture.
	A4	1			Conserve and retain the character-defining features	The proposed design entirely preserves the existing red brick building at the ground level also retaining and enhancing the existing entries and openings on all sides.
	A5	1			Encourage additions that complement (E) character-defining features	The proposed design complements the existing large industrial window openings and entries and is an overall complimenting mid-century architecture above with the use of stacked bond block and other similar materials.
	A6	1			Incorporate small, medium, and large scales	The proposed design includes several interlocking scale elements. The exposed super-structure creates a large grid in which large window openings are located in which smaller window grids are utilized creating a sort of Russian nesting doll effect. Additionally, there are large corner single and double story cut-outs and setbacks on multiple levels with balconies extending forward breaking up the facade in large and small scales.
	A7	1			Emphasize design at the pedestrian level	The proposed design includes new landscaping the entire length of Franlin Ave. Additionally vertical landscaping is proposed at the West and East elevaitons at level 3 balconies. An entirely new public park and café fronting Franklin Avenue creating seating and dining/cafe areas at pedestrian level.
	A8	1			Specify 360° architecture	The proposed architecture is developed at a similar design on all 4 sides creating a 360 degree architectural expression.
	A9	1			Enhance entry expression	The proposed architecture enlarges, frames and emphesizes the existing primary entry on Franklin but both NE and SE corners architecturally emphesize "visual arrival" with recenssed corners.
	A10	1			Encourage the use of roll-up doors & sliding walls at street frontages	The proposed design includes a roll-up door at the east elevation.
	A11	1			Orient secondary entries to alleys	The proposed design includes secondary entries toward the East of the property along a raised deck and the rear of the property. The east and south side are technically not an alley but its certainly a private alley of sorts accessible by pedestrians and vehicles. There should be no destinction between a public alley and private alleys. They are physically the same thing.
	A12	1			Incorporate different materials, colors, and textures	The proposed design includes several differing materials, colors and textures: Red Brick, Medium Gray Block, Black Steel, Corten, Architectural Board Formed Concrete and glass and colorful landscaping
		12				

Group B

		yes	no	n/a	criteria	
Facilitate Gathering	B1	1			Form an active street wall	The proposed design includes landscaping and recessed entry on the north side and a raised shaded deck on the east side. The north side is entirely a public park with landscaping.
	B2			1	Provide street corner plazas	
	B3	1			Develop outdoor gathering spaces	The proposed design includes a large public park on street level, a raised and shaded deck on the east side at street level, accessible deck at level 2 and protruding and recesed balconies on level 3. Additionally the roof includes a large outdoor deck/patio.
	B4			1	Provide alley-facing gathering spaces	
	B5	1			Provide ease of access	The proposed design includes 3 pedestrian entries on 3 sides as well as 2 vehicular entries and a controlled traffic pattern for safety. Additionally the tenants on the ground floor will each have separate entries and exists from Franklin street and the rear and east side of the building
	B6	1			Enhance surface parking	The proposed design includes all new landscaping on the north side of the parking areas along Franklin Ave on both sides. Additionally, providing create stacked parking is another way to enhance surface parking areas with efficient parking solutions that utilize state of the art technology.
	B7		1		Use enduring, quality paving materials	
	B8	1			Provide street furniture	The proposed design includes street furniture at the NE at the public park and seating at the café fronting Franklin Avenue.
	B9	1			Use exterior lighting to accentuate safety and design	The proposed project will include period lighting throughout the site on all sides creating lighting for pedestrians for added safety.
	B10		1		Provide Wi-Fi hotspots	
		6				

Group C

		yes	no	n/a	criteria	
Incorporate Landscape &	C1	1			Design layered and lush landscaping	The proposed landscaping design includes layered and lush planting both horizontally and vertically. See Landscape Sheets.
	C2	1			Select drought-tolerant and native plants	The proposed landscaping includes drought-tolerant and native planting throughout. See Landscape Sheets.
	C3	1			Utilize planters and pots to provide greenery	The proposed landscaping includes pots & planters at level 3 balcony and roof and at the streetside public park.
	C4	1			Improve landscaping in parking areas	The proposed parking area includes landscaping on the north side of both parking isles.
	C5	1			Use fences and walls as an extension of the architecture	The proposed design includes an architecturally complimenting side wall of the café structure with vertical landscaping.
	C6	1			Utilize natural light	The proposed design utilizes large windows for double story spaces with mezzanines pushing natural light from all sides deep into the building.
		6				

Group D

		yes	no	n/a	criteria	
Encourage Connectivity	D1	1			Install bike facilities. If "yes," total bike storage spaces provided:	4
		1			Required:	4
						0

Group E

		yes	no	n/a	criteria	
Signage, Way Finding, & Public	E1	1			Design signs as an integral component	The proposed design includes integrated tenant signage.
	E2	1			Incorporate way-finding through integral design	The proposed design includes architecturally integrated way-finding signage for vehicular and pedestrian traffic.
	E3	1			Encourage public art	Large Scale Public Art
		3				

PUBLIC REALM

		yes	no	n/a	criteria
Public Realm	PR1			1	Undergrounding Utilities
	PR2			1	Approved Public Infrastructure

COVER

01

EXECUTIVE SUMMARY

GENERAL OVERVIEW AND GRAND VISION
THE “STANDARD WORKS” PARCEL A PROJECT IS A 43,966 SF PARCEL BOUND BY EAST EL SEGUNDO BOULEVARD ON THE SOUTH AND KANSAS STREET ON THE EAST. PRESERVATION OF THE EXISTING 1950'S MID-CENTURY RED BRICK FACADE IS AN OBJECTIVE OF THE DESIGN AND THE SMOKY HOLLOW SPECIFIC PLAN. THE GRAND VISION OF THE DEVELOPMENT IS A DESIGN THAT ENHANCES THE EXISTING INDUSTRIAL AESTHETIC OF THE NEIGHBORHOOD BY PRESERVING FACADES AND UTILIZING SIMILAR INDUSTRIAL BUILDING MATERIALS AND TECHNIQUES TO CREATE A COHESIVE ARCHITECTURAL EXPRESSION BETWEEN THE EXISTING AND THE PROPOSED DEVELOPMENTS. THIS MIX OF UNIQUE OLD AND NEW ECLECTIC BUILDINGS IS ENTICING TO PROSPECTIVE CREATIVE AND KNOWLEDGE-BASED BUSINESSES ACROSS MANY INDUSTRIES. THE LIVELY AND PEDESTRIAN FRIENDLY CREATIVE ATMOSPHERE OF STANDARD WORKS WILL CONTRIBUTE TO THE ONGOING SMOKY HOLLOW TRANSFORMATION TO AN INCUBATOR DISTRICT AND MAJOR ECONOMIC FORCE IN THE CITY.

USE
THE CURRENT USES OF THE EXISTING STRUCTURE IS LIGHT INDUSTRIAL WITH ASSOCIATED ACCESSORY GENERAL OFFICE AND WAREHOUSE. THE USE OF THE EXISTING FLOOR AREA (LEVEL 01) WILL BE CONVERTED TO CREATIVE OFFICE. THE PROPOSED NEW FLOOR AREA SHALL BE A COMBINATION OF LIGHT INDUSTRIAL AND TECHNOLOGICAL USES INCLUDING R&D.

FLOOR AREA
THE PROJECT PROPOSES 44,604 SF IN ADDITION TO THE EXISTING 19,311 SF, FOR A TOTAL OF 63,915 SF. AT THE COMPLETION OF THE PROPOSED PROJECT THE SITE WILL HAVE A FLOOR AREA RATIO OF 1.5.

PARKING
THE COMPLETED PROJECT WILL CONTAIN APPROXIMATELY 42 ON GRADE PARKING SPACES AND UTILIZE IT'S REMAINING REQUIRED PARKING COUNT IN THE RECENTLY COMPLETED PARKING GARAGE.

MISCELLANEOUS
THE HOURS OF OPERATION FOR THE DEVELOPMENT ARE STANDARD BUSINESS HOURS FIVE DAYS A WEEK WITH OCCASIONAL WEEKEND HOURS.

THE EXISTING BRICK STRUCTURE OF 19,311 SF SHALL BE ENTIRELY PRESERVED AND REHABILITATED WITH LARGER OPENINGS FOR WINDOWS AND ACCESSIBLE ENTRANCES.

CONCLUSION
THE PROPOSED PROJECT DESIGN IS COMPATIBLE AND INTEGRATED WITH, AND NOT DETRIMENTAL TO, THE EXISTING DEVELOPMENT ON ADJACENT AND SURROUNDING NEIGHBORING PROPERTIES AND FURTHERMORE PAYS HOMAGE TO THE NEIGHBORHOOD'S INDUSTRIAL PAST AND ENCOURAGES LOOKING FORWARD TO THE FUTURE OF WHAT THE NEIGHBORHOOD WILL TRANSFORM INTO IN THE NEAR FUTURE.

TIER II COMMUNITY BENEFIT PLAN (CBP) PER SECTION 4.5.2 AND TABLE 4-1 OF SHSP:
1. BUILDING HEIGHT: REQUEST FOR UP TO 60 FEET
2. FLOOR AREA RATIO (FAR): REQUEST FOR FAR TO 1.5 (65,949 SF).

SHSP DEVELOPMENT STANDARDS AND ESMC SECTION 15-15:
1. OFF-SITE PARKING COVENANT FOR 123 PARKING SPACES “OFF-SITE” IN ADJACENT LOT PARKING STRUCTURE PER ESMC SECTION 15-15-3(H) AND SHSP DEVELOPMENT STANDARDS TABLE 2-2(H).

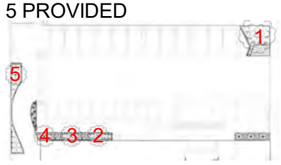
1. MINIMUM LOT AREA	11,200 SF	43,966 SF
2. MINIMUM LOT FRONTAGE	50'	198' - 9 1/64"



(SHSP TABLE 2-3) D. BUILDING DESIGN STANDARDS

	REQUIRED	PROVIDED
1. BUILDING ORIENTATION FRANKLIN AVENUE	LOTS ADJOINING FRANKLIN AVENUE SHALL PROVIDE A MINIMUM OF ONE PRIMARY ENTRY FACING FRANKLIN AVENUE. PRIMARY ENTRY DOORS SHALL BE VISIBLE AND ACCESSIBLE FROM THE PUBLIC SIDEWALK	N/A
2. BUILDING TRANSPARENCY: FRANKLIN AVENUE FRONTAGE	FOR NEW BUILDINGS OR NEW ADDITIONS FRONTING FRANKLIN AVENUE, A MINIMUM **15% FACADE** TRANSPARENCY SHALL BE PROVIDED AT THE GROUND LEVEL OR FIRST 12 FEET OF HEIGHT ABOVE GRADE, WHICHEVER IS LESS, THROUGH THE UTILIZATION OF WINDOWS, ENTRIES, OR SIMILAR OPENINGS.	N/A

(SHSP TABLE 2-3) E. SETBACK STANDARDS

	REQUIRED	PROVIDED
1. FRONT YARD	NONE	3' - 2 1/2"
2. SIDE YARD (WESTERLY)	NONE	18' - 11 3/4"
3. REAR YARD (NORTHERLY)	NONE	77' - 11 3/4"
4. SIDE YARD (KANSAS ST)	NONE	0' - 0" (TO FACE OF CURB)
5. ADJOINING ALLEY	MIN. 10'	N/A
6. ALL STRUCTURES	COMPLY WITH CORNER, DRIVEWAY, & ALLEY VISIBILITY REQUIREMENTS IN ESMC SECTIONS 15-2-6 (CORNER CLEARANCE) & 15-2-11 DRIVEWAY VISIBILITY).	EXISTING NON-CONFORMING

(SHSP TABLE 2-4) F. OPEN SPACE & LANDSCAPING STANDARDS

	REQUIRED	PROVIDED
1. OPEN SPACE, 10% OF LOT, REQUIRED OPEN SPACE MAY BE PROVIDED ON BUILDING ROOFTOPS; HOWEVER, AT LEAST 50% OF REQUIRED OPEN SPACE SHALL HAVE DIRECT ACCESS FROM THE EXISTING GROUND ELEVATION.	43,966 x 0.1 = 4,397 SF 50% = 2,199 SF	1. LANDSCAPING AT GRADE = 3,120 2. VERTICAL LANDCAPING = 480 3. ROOFTOP OPEN SPACE = 4,765 4. ROOFTOP LANDSCAPING = 2,043 **TOTAL = 10,408 SF**
2. SURFACE PARKING LOT LANDSCAPING. ON SITES LARGER THAN 22,400 SF, A MINIMUM OF 1 TREE SHALL BE PROVIDED ON SITE FOR EVERY 4 AT-GRADE, OPEN-TO-THE-SKY SURFACE PARKING SPACES	18 SURFACE PARKING SPACES / 4 = 5	5 PROVIDED 
3. IRRIGATION	ALL LANDSCAPED AREAS, INCLUDING TREES AT SURFACE PARKING LOTS, SHALL BE PROVIDED WITH APPROPRIATE PERMANENT WATERING FACILITIES.	IRRIGATION SHALL BE PROVIDED AS A DEFERRED SUBMITTAL

JURISDICTION:	CITY OF EL SEGUNDO, COUNTY OF LOS ANGELES, STATE OF CALIFORNIA
SPECIFIC PLAN:	SMOKY HOLLOW SPECIFIC PLAN
ZONING:	SH-E (SMOKY HOLLOW EAST)
PREVIOUS USE:	LIGHT INDUSTRIAL
PROPOSED USE:	GENERAL OFFICE / LIGHT INDUSTRIAL / RESEARCH & DEVELOPMENT
OCCUPANCY CLASS:	B (GENERAL OFFICE, R&D)
CHANGE OF USE:	YES (EXISTING FLOOR AREA)

ZONING MAP

Figure 2-1: Zoning Districts

(SHSP TABLE 2-2) A. ALLOWABLE GROSS FLOOR AREA

	ALLOWED	PROVIDED
BASE ALLOWED:	1.0 = 43,966 x 1.0 = 43,966 SF	65,949 (1.5 FAR)

B. HEIGHT STANDARDS

	ALLOWED	PROVIDED
BASE ZONING	35'-0"	
COMMUNITY BENEFITS TIER II	ADDITIONAL 24'-6" = 59'-6"	59'-6"
HEIGHT EXCEPTIONS	ELEVATOR SHAFT HOUSING IS EXEMPT FROM HEIGHT REQUIREMENTS	
PARAPET HEIGHT	MAY EXCEED MAXIMUM BUILDING HEIGHT BY 5'-0"

SMOKY HOLLOW SPECIFIC PLAN ZONING ANALYSIS

ZONING ANALYSIS

(SHSP TABLE 2-6) H. PRIVATE PARKING STANDARDS

	REQUIRED	PROVIDED
1. NEW CONSTRUCTION & CHANGE OF OCCUPANCY	(2.5 / 1,000 GROSS SF) CHANGE OF USE: 19,311 SF / 400 = 48 SPACES	**165 SPACES** NOTE: ALSO SEE PARKING ANALYSIS CHART ON PAGE 2 FOR EXISTING PARKING REQUIREMENTS FOR UNIFIED SITE DEVELOPMENT
2. ADDITIONS TO BUILDINGS	(2.5 / 1,000 GROSS SF) NEW CONSTRUCTION: 44,604 SF 44,604 / 400 = 112	
SUB-TOTAL REQUIRED	48 + 112 = **160 SPACES**	
3. TANDEM PARKING	TANDEM SPACES SHALL HAVE A MAXIMUM LENGTH OF 40 FEET (PARKING FOR 2 VEHICLES MAXIMUM).	24 PROVIDED
4. BICYCLE PARKING ALL LONG TERM AND SHORT TERM BICYCLE PARKING IS PROVIDED IN SECURE AND ACCESSIBLE AREAS IN THE GARAGE PERMITTED SEPARATELY. LONG-TERM PARKING: 41 PARKING SPACES X 0.05 = 2 BIKE STATIONS SHORT-TERM PARKING: 41 PARKING SPACES X 0.05 = 2 BIKE STATIONS	CONSISTENT WITH SECTION 5.106.4 OF THE 2019 CALIFORNIA GREEN BUILDING STANDARDS CODE: NEW PROJECTS ANTICIPATED TO GENERATE VISITOR TRAFFIC SHALL PROVIDE ONE 2-BIKE CAPACITY RACK FOR 5% OF NEW VISITOR MOTORIZED VEHICLE PARKING SPACES BEING ADDED, WITH A MINIMUM OF ONE 2-BIKE CAPACITY RACK. ADDITIONS OR ALTERATIONS THAT ADD 9 OR FEWER VISITOR VEHICLE PARKING SPACES ARE EXCLUDED. NEW BUILDINGS WITH 10 OR MORE TENANT-OCCUPANTS OR ADDITIONS OR ALTERATIONS THAT ADD 10 OR MORE TENANT VEHICLE PARKING SPACES SHALL PROVIDE SECURE BICYCLE PARKING FOR 5% OF THE TENANT VEHICLE PARKING SPACES BEING ADDED, WITH A MINIMUM OF ONE SECURE BICYCLE PARKING SPACE. ACCEPTABLE PARKING FACILITIES SHALL BE CONVENIENT FROM THE STREET AND SHALL MEET ONE OF THE FOLLOWING: A. COVERED, LOCKABLE ENCLOSURES WITH PERMANENTLY ANCHORED RACKS FOR BICYCLES; B. LOCKABLE BICYCLE ROOMS WITH PERMANENTLY ANCHORED RACKS; OR C. LOCKABLE, PERMANENTLY ANCHORED BICYCLE LOCKERS.	THE PROPOSED PROJECT HEREIN PROPOSES 42 NEW PARKING SPACES 42X.05 = 3 SHORT TERM AND 2 LONG TERM PARKING SPACES. SEE LEVEL 01 PLAN  THE PROJECT ALSO REQUIRES 118 SPACES IN THE RECENTLY COMPLETED PARKING GARAGE (B0182-18). THIS GARAGE INCLUDES 398 PARKING SPACES SHARED BETWEEN SEVERAL BUILDINGS. THIS PERMIT INCLUDED SHORT TERM AND LONG TERM BICYCLE PARKING AS REQUIRED BY CGC WHICH IS ALSO 5%. THEREFORE, ALL REQUIRED PARKING SPACES INCLUDE ASSOCIATED SHORT TERM AND LONG TERM BICYCLE PARKING.
5. OTHER PARKING AREA DEVELOPMENT STANDARDS	REFER TO ESMC SECTION 15-15-1 THROUGH 15-15-5.	PROVIDED

(SHSP TABLE 2-5) G. ACCESS, LOADING AND TRASH STANDARDS

	REQUIRED	PROVIDED
1. VEHICULAR ACCESS	A. LOTS ADJOINING AN ALLEY ARE PROHIBITED FROM PROVIDING CURB CUTS ALONG STREET FRONTAGES.	N/A
	B. FOR LOTS NOT ADJOINING AN ALLEY, A MAXIMUM OF 1 CURB CUT IS ALLOWED FOR EACH 150 FT OF LOT FRONTAGE ALONG A PUBLIC STREET.	PROVIDED, SEE SITE PLAN
	C. NEW CURB CUTS ALONG FRANKLIN AVENUE ARE PROHIBITED.	N/A
	D. CURB CUTS SHALL NOT BE MORE THAN 25 FT IN WIDTH EXCEPT WHERE REQUIRED BY THE CITY TO BE LARGER FOR SAFETY PURPOSES.	EXISTING NON CONFORMING
2. LOADING	A. NOT REQUIRED IF GROSS BUILDING AREA < 50,000 SF.	SEE B BELOW
	B. REQUIRED IF GROSS BUILDING AREA ≥ 50,000 SF AND/OR REQUIRED FOR THE FOLLOWING USES WHEN THE USE EXCEEDS 2,500 SF IN SIZE: RESTAURANT OR OTHER FOOD SALES AND SERVICE.	PROVIDED, SEE LEVEL 01
	C. ON-SITE LOADING AREAS SHALL BE AT LEAST 18 FT LONG AND 10 FT WIDE. FOR LOTS ADJOINING AN ALLEY, LOADING AREAS SHALL ADJOIN OR HAVE ACCESS FROM THE ALLEY. LOADING SPACES MAY ENCROACH INTO ANY REQUIRED ALLEY SETBACK.	PROVIDED, SEE LEVEL 01
3. REFUSE COLLECTION	A. REFUSE COLLECTION SERVICE SHALL BE CONTRACTED WITH AN APPROVED LOCAL SERVICE PROVIDER. REFUSE COLLECTION AREAS SHALL BE SCREENED PER ESMC SECTION 15-2-8 D.	FULLY SCREENED 200 SF TRASH & RECYCLING AREA BEING CONSTRUCTED AT THE NORTHWEST CORNER OF THE GROUND FLOOR
	B. ON LOTS ADJOINING AN ALLEY, REFUSE COLLECTION STORAGE AREAS SHALL BE ORIENTED TO AND ACCESSED FROM THE ALLEY.	N/A (NO ALLEY)

SMOKY HOLLOW COMMUNITY BENEFITS TABULATION WORKSHEET

GROUP A

		yes	no	n/a	criteria	
Enhance Building Character	A1	1			Build on the quality industrial character	The proposed design is a complimenting contemporary industrial esthetic with the use of exposed steel and large industrial windows and other industrial characteristic features.
	A2	1			Convey a sense of old and new	The proposed design entirely preserves the existing red brick building at the ground level and proposes a complimenting industrial structure that embraces the existing structure and builds out of it a new 2nd and 3rd floor with a setback on all sides.
	A3	1			Build upon existing context	The proposed structure stays within the existing footprint and creates accessible decks at the roof level of the existing structure preserving and adding to the original architecture.
	A4	1			Conserve and retain the character-defining features	The proposed design entirely preserves the existing red brick building at the ground level and also retains and enhances the existing entries and openings on three sides.
	A5	1			Encourage additions that complement (E) character-defining features	The proposed design complements the existing large industrial window openings and exposed steel and is an overall complimenting mid-century architecture above with the use of stacked bond block with exposed aggregate and stain coloring rather than paint and other similar industrial materials and finishes throughout.
	A6	1			Incorporate small, medium, and large scales	The proposed design includes several interlocking scale elements. The exposed super-structure creates a large grid in which large window openings are located in which smaller window grids are utilized creating a sort of Russian nesting doll architectural effect with scale. Additionally, there are large cut-outs and setbacks on multiple levels with balconies extending forward breaking up the facade in large and small scales.
	A7	1			Emphasize design at the pedestrian level	The proposed design includes new landscaping the entire length of El Segundo Blvd. Additionally vertical landscaping is proposed at the SW corner and West lot line creating a portal experience surrounded on 2 sides with vertical and horizontal landscaping. On Kansas all new landscaping is proposed on both sides of the driveway with seating for the public. Furthermore, existing utility equipment is to be removed on Kansas to provide a wider sidewalk.
	A8	1			Specify 360° architecture	The proposed architecture is developed at a similar design on all four sides creating a 360 degree architectural expression.
	A9	1			Enhance entry expression	The proposed design creates a new landscaped portal on the SW corner of the lot creating a double height entry and exit experience from the street. Additionally, a new larger pedestrian entry is proposed in the middle of the building on Kansas street with a covered setback. The existing entry from the north is also enlarged and enhanced with pedestrian access from the street and landscaping.
	A10	1			Encourage the use of roll-up doors & sliding walls at street frontages	The proposed design includes a roll-up door at the north elevation which is the building's primary frontage and where the primary entry is and where most visitors will arrive.
	A11	1			Orient secondary entries to alleys	The proposed design includes secondary entries toward the north of the property. Although not a public alley the neighborhood includes many "private alleys" such as the ones on the north and west side of this project that are open to vehicular and pedestrian public access. These private alleys should be considered.
	A12	1			Incorporate different materials, colors, and textures	The proposed design includes several differing materials, colors and textures: Red Brick, Medium Gray Block, Black Steel, Corten, Architectural Board Formed Concrete and glass.
		12	Minimum 4 required in this group			

GROUP B

		yes	no	n/a	criteria	
Facilitate Gathering	B1	1			Form an active street wall	The proposed design includes three entries, one on El Segundo Blvd, one on Kansas St and one facing North towards the site's at grade parking in the middle of the building which is the primary building facade wall. The entry on Kansas is recessed and glazed creating a break in the Kansas facade. The entire El Segundo Blvd frontage will include low landscaping and large windows. The double story entry portal with vertical landscaping will also create a very experiential space. Furthermore, on El Segundo Blvd a 3rd story balcony projects forward with sloped V shaped columns creating an interesting overhang to activate the south facade. Finally, at level 2 there is a setback on all sides creating a 360-degree occupied deck separating the existing and new structure.
	B2			1	Provide street corner plazas	No street corner to earn this point.
	B3	1			Develop outdoor gathering spaces	The proposed design includes a pocket park on the property at the NE corner with public seating
	B4			1	Provide alley-facing gathering spaces	No public alley to earn this point.
	B5	1			Provide ease of access	The proposed design includes 3 pedestrian entries on 3 sides as well as 2 vehicular entries and a controlled traffic pattern for safety. Additionally, the tenants on the ground floor will each have separate entries and exists from El Segundo and Kansas elevations.
	B6	1			Enhance surface parking	The proposed design includes all new landscaping on the East and South side of the parking areas as well as an architecturally complimenting shade structure of the parking area. Additionally, providing stacked parking is another way to enhance surface parking areas with efficient parking solutions that utilize state of the art technology.
	B7		1		Use enduring, quality paving materials	
	B8	1			Provide street furniture	The proposed design includes street furniture at the NE pocket park.
	B9	1			Use exterior lighting to accentuate safety and design	The proposed project will include period lighting throughout the site on all sides creating lighting for pedestrians for added safety.
	B10		1		Provide Wi-Fi hotspots	
		6	Minimum 3 required in this group			

GROUP C

		yes	no	n/a	criteria	
Incorporate Landscape & Environmental Design	C1	1			Design layered and lush landscaping	The proposed landscaping design includes layered and lush planting throughout.
	C2	1			Select drought-tolerant and native plants	The proposed landscaping includes drought-tolerant and native planting throughout.
	C3	1			Utilize planters and pots to provide greenery	The proposed landscaping includes pots & planters on level 2 and 3 decks and balconies and on the rooftop.
	C4	1			Improve landscaping in parking areas	The proposed parking area includes landscaping on the east and south sides.
	C5	1			Use fences and walls as an extension of the architecture	The proposed design includes an architecturally complimenting monument/wall for signage an extension of the architectural materiality.
	C6	1			Utilize natural light	The proposed design utilizes large windows for double story spaces with mezzanines pushing natural light from all sides deep into the building.
		6	Minimum 2 required in this group			

GROUP D

		yes	no	n/a	criteria	
Encourage Connectivity	D1	1			Install bike facilities. If "yes," total bike storage spaces provided:	4
		1			Required:	4
					EXTRA	

GROUP E

		yes	no	n/a	criteria	
Signage, Way Finding, & Public Art	E1	1			Design signs as an integral component	The proposed design includes integrated tenant signage.
	E2	1			Incorporate way-finding through integral design	The proposed design includes architecturally integrated way-finding signage for vehicular and pedestrian traffic.
	E3	1			Encourage public art	A large-scale art wall is proposed on the entire west façade of the property.
		3				

PUBLIC REALM

		yes	no	n/a	criteria
Public Realm	PR1			1	Undergrounding Utilities
	PR2			1	Approved Public Infrastructure

Community Benefits Analysis for 1320 E Franklin Ave., prepared by Kosmont, dated November 2021

CITY OF EL SEGUNDO

Community Benefits Analysis
1320 E. Franklin Ave.

Prepared By:

Kosmont Companies
1601 N. Sepulveda Blvd. #382
Manhattan Beach, CA 90266
www.kosmont.com

November, 2021

The analyses, projections, assumptions, rates of return, and any examples presented herein are for illustrative purposes and are not a guarantee of actual and/or future results. Project pro forma and tax analyses are projections only. Actual results may differ from those expressed in this analysis.

Background and Methodology

Kosmont & Associates, Inc. doing business as Kosmont Companies ("Consultant" or "Kosmont"), operating under the master consulting agreement with the City of El Segundo ("City") for Smoky Hollow Community Benefit Analysis is pleased to submit this report on the comprehensive community benefits as required by the Tier 1 and Tier 2 application process for the proposed redevelopment application at 1320 E. Franklin Ave. in El Segundo ("Site")

Kosmont was asked to review the Site development application site plan, floor plan and building design and preliminary community benefit proposal. The proposed project is a 67,200 square foot office building that retains the historic integrity of the existing brick building ("Project").

Kosmont reviewed the City's Smoky Hollow Specific Plan ("Specific Plan") to identify planned district wide public improvements and met with City staff to understand:

1. the City's perspective on how the Project design components address those improvements,
2. what other improvements that the City considered community benefits, as opposed to standard development requirements.

The Project has 67,200 gross building area and remains within the 1.5 FAR limit. However, the design exceeds the Specific Plan height limit of 35 feet by approximately 24 feet 6 inches with a proposed height of 59 feet six inches.

Project Value Add Analysis

Kosmont gathered construction cost data from the Project Applicant. Kosmont performed high level market research to estimate current land value and baseline rent for "as is" use, future market rent for the proposed new tenant spaces, and building valuation assumptions. This will inform a financial pro forma model that Kosmont developed to analyze the incremental development profit above the estimated profit from the "by right" permitted development. For example, an increase in gross building area would require an analysis of the marginal increase in operating income and stabilized investment value. Marginal costs of construction would be deducted to derive the incremental profit.

Community Benefits Analysis

Kosmont **has not yet** reviewed proposed Project components with City staff to confirm project elements that are eligible as a community benefit. Staff will request a complete project description before finalizing the report. The community benefits are based on information provided by the Applicant and some items were adjusted by Kosmont. It is important to recognize that the Applicant will realize some financial benefits from many of these items.

Fiscal/Economic Benefits Analysis

Kosmont also analyzed the proposed Project to estimate construction period jobs, as well as stabilized operation jobs, and incremental City General Fund tax revenues (i.e. increase in property tax, sales tax, business taxes) above current use. In order to estimate the value of economic benefits for comparison to the development profit added, Kosmont used a financial cash flow approach assuming a 25-year life.

The attached report analyzes the increased financial benefits received from exceeding the Specific Plan limits, compared against the estimated the value of proposed community benefits, as well as fiscal/economic benefits. We are available to answer any questions regarding our methodology and conclusions.

Disclaimer

This Analysis is confidential and client privileged and is not to be used for any purpose other than for negotiating an acceptable Community Benefit Agreement. This Analysis is based on estimated figures and Kosmont's professional opinion, using available market and development cost information. Actual results may differ from those expressed in this analysis, as results are difficult to predict as a function of market conditions, natural disasters, pandemics, significant economic impacts, legislation and administrative actions.

Executive Summary

The City Planning Division received an application to allow the construction of a 46,000 square-foot addition on the Site. The Applicant is requesting to exceed the maximum height of 35 feet up to 54 feet 6 inches through the Specific Plan Community Benefit process.

As shown in the following report, the Project is expected to generate economic and community benefits in excess of the Project value added accruing to the Applicant resulting from the requested height variance. Per the City's request Kosmont has illustrated the fiscal and economic benefits from the incremental development, as well as for the entire Project as proposed.

Summary of Value Add / City Benefits

Project Value Added	Proposed Community Benefits	Fiscal Benefits	Economic Benefits Const & Perm Jobs
$964,000	$4,070,000	$902,000	150+190 jobs
Incremental above	35 foot height limit	$293,000	60+70 jobs

Source: Kosmont Companies

Project Value Add

Kosmont has prepared an illustrative development pro forma to show the stabilized value under three scenarios:

1. As Is Building (19,493 Sq. Ft.)
2. As Proposed (65,061 Sq. Ft. – 56,400 Sq. Ft. rentable)
3. As Permitted by Specific Plan (42,900 Sq. Ft. – 36,400 Sq. Ft. rentable)

Based on the estimated land value and development costs, the proforma analysis indicates a Project value add of approximately $0.96 million over a similar building within the allowable 35-foot height.

Community Benefits

Kosmont estimated the marginal cost associated with the following community benefit items to be $4.07 million, with the vast majority coming from the transformative architecture treatments, as summarized below:

- Architecture that enhances building character ($2.8 million)
- Open space that facilitates gathering ($750,000)
- Landscaping and environmental design ($180,000)

- Wayfinding & Signage ($60,000)
- Undergrounding utilities ($150,000)
- Coffee kiosk ($130,000)

It is important to note that many of these items also provide value to the project by making the building more attractive to new tenants.

Fiscal Benefits

The existing 1320 E. Franklin Ave. office/industrial building had a 2019 assessed value of $1,013,000. It houses two different tenants with approximately 30 employees. Following redevelopment, Kosmont estimates the assessed value will increase by $23.5 million based on the construction budget, yielding $14,100 per year to the City General Fund. The incremental assessed value from building above the 35 foot would be $9.4 million, yielding $5,600 in annual taxes.

The new building is expected to house 220 professional office/design employees, for a net increase of 190 employees. These employees are estimated to generate approximately $900,000 in incremental annual retail sales at City establishments. The onsite coffee kiosk is estimated to generate $300,000 in annual sales for a total of $12,000 in annual sales taxes. In addition to retail sales taxes, the Project will generate additional business license taxes from the office tenancy, estimated at almost $34,000 per year for a total annual surplus of $56,800.

Over a 25-year period with 3% inflation, the Project will generate an estimated $1,893,000 in City tax revenue, with a net present value of approximately $903,000. The *incremental* fiscal benefit generated by building above 35-foot height limit is estimated to be $614,000 over the 25-year period with an NPV of approximately $293,000.

Economic Benefits

Development of the new creative office/commercial building will generate an estimated 150 full time equivalent ("FTE") jobs during construction period, including direct, indirect and induced, generating $13 million in labor income. At stabilized occupancy, the Project tenants are expected to employ 220 full time positions, an increase of 190 jobs over current level.

The *incremental* economic benefit generated by building above 35 foot height limit is estimated to be 60 FTE jobs during construction period, providing $5 million in labor income.

The analyses, projections, assumptions, rates of return, and any examples presented herein are for illustrative purposes and are not a guarantee of actual and/or future results. Project pro forma and tax analyses are projections only. Actual results may differ from those expressed in this analysis.

Project Description

The City Planning Division received an application for Environmental Assessment No. EA-1282 and Tier II Community Benefit Plan No. 19-03 to allow the construction of a 46,000 square-foot addition to exceed the maximum permitted building height by approximately 25 feet. The Site is located at 1320 E. Franklin Ave., in the Smoky Hollow East (SHE) zone within the Specific Plan.

The subject 1320 Franklin Site is located within a larger parcel totaling 191,000 square foot (4.4 acres). The Site contains three mid-century Industrial brick buildings. The current building uses at the are light industrial with warehouse, general office, and research and development. The Site was purchased by the current owner in 2015.

Exhibit 1 – Site Plan

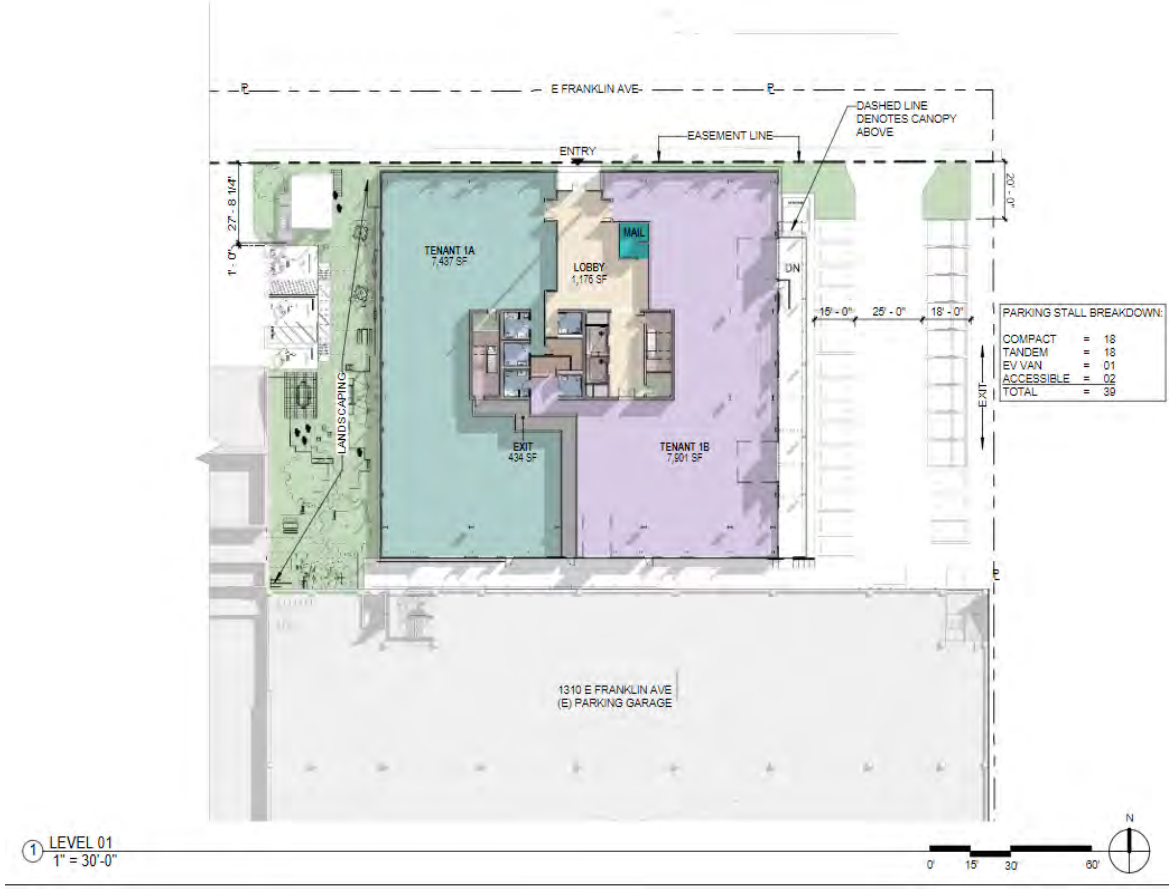
Off-Street Parking

Vehicular access to a new five-story parking structure is provided from a 28-foot wide driveway facing Franklin Avenue. The Specific Plan requires one parking space for every 400 square feet of gross floor area. The completed Project will have 168 spaces, with 34 surface parking spaces and 134 spaces (from the existing 398 space parking structure).allocated to 1320 E. Franklin Ave. The new building's 134 spaces in the structure have an allocated cost of $2.6 million.

Tier II Community Benefits Plan

The Applicant is requesting to exceed the maximum height of 35 feet in the Specific Plan. The Applicant is requesting 25 additional feet (total of 60 feet) in order to build a 3rd story with mezzanine. The Project will not exceed the FAR of 1.5. Projects proposed at a building height must provide a Community Benefits Plan which requires approval from the City Council. In order to approve the project the City Council must find the value of the proposed Tier II Community Benefits adequate in implementing the objectives of the Specific Plan, in exchange for allowing the additional height, and must make the required findings indicated in the Smoky Hollow Specific Plan.

Exhibit 2
Elevation Illustration



Environmental Review

A Historic Resource Evaluation Report was prepared by a qualified professional to assess the building located at 1320 E. Franklin Ave., since the existing one-story industrial brick building was constructed in the 1950's and is greater than 50 years of age. None of the three buildings on the property are listed under the national historic, state or local landmark programs. City Staff concluded that none of the buildings appear eligible for individual listing in any Historic Register or eligible for local designation as a cultural resource.

Floor Plan

The proposed addition to the building is 46,000 square feet for a gross building area of 65,061 square feet. The additional floor area is for creative office uses that engage in research, with some accessory retail, and a coffee kiosk containing a small outdoor seating area. See ground floor plan below. Level 3 floor plan/mezzanine level are illustrated in Exhibit 4 on the following page.

Exhibit 3
Ground Floor Plan

The analyses, projections, assumptions, rates of return, and any examples presented herein are for illustrative purposes and are not a guarantee of actual and/or future results. Project pro forma and tax analyses are projections only. Actual results may differ from those expressed in this analysis.

The City rules for mezzanine space limits total area to less than 50% of the 22,600 square foot main floor area, or 10,000 square feet. However, due to the extensive vertical penetration for stairways, elevators and restrooms the net rentable area is only 7,600 square feet.

Exhibit 4
3rd Floor & Mezzanine

Project Value Add

Capital investment in real estate development is a high-risk private sector venture. In order to obtain financing commitments, developers must be able to demonstrate sufficient financial returns to offset the risks related to construction cost overruns and changes in the local economy during the construction period that could affect market rents and occupancy following construction. The key development cost components include land, site development, building construction, permits and fees, design and other soft costs, and financing costs. The Net Operating Income (NOI) calculation accounts for gross rents, vacancy factor, and all operating expenses.

To estimate the Project value added, as a result of the Specific Plan variance requested, Kosmont developed a financial feasibility simulation model in Excel for this Analysis to provide a reasonable estimate of expected development costs and annual net operating income a project would earn. It also shows the value at completion, which after deducting the total development costs, yields the developer profit.

Kosmont's analysis shows the stabilized value under three scenarios:

- As Is Building (19,493 Sq. Ft.)
- As Proposed (65,061 Sq. Ft. – 56,400 Sq. Ft. rentable)
- As Permitted by Specific Plan (42,900 Sq. Ft. – 36,400 Sq. Ft. rentable)

Key Assumptions

Rental Income
Kosmont surveyed local real estate brokers to estimate market rents for the new creative office space planned. Unimproved mezzanine levels are primarily used as amenity space:

- Monthly rent of $2.85 psf triple net are most likely for high quality office space
- Monthly rent for mezzanine space would be $2.00 psf triple net
- Structured parking for 2.5 employees per 1,000 square feet is included in base rent

To determine potential rental income, we calculated the net rentable area for each level from the detailed floor plans as summarized below:

- Ground floor – 15,300 sq. ft. (excludes lobby and restrooms)
- Level 2 – 13,800 sq. ft. (plus Mezzanine 6,500 sq. ft.)
- Level 3 – 13,500 sq. ft. (plus Mezzanine 6,500 sq. ft.)

Development Costs

Kosmont reviewed development cost estimates provided by Applicant and architect. Total allocated costs for the new building are estimated at $26.1 million broken down as follows:

- $18.7 million for base building plus
- $1.5 million in soft costs plus
- $1.8 million in landscape and hardscape costs plus
- $1.6 million for future tenant improvements plus
- $2.5 million for the 134 allocated parking structure spaces.

Capitalization Rates

Capitalization rate is an economic measure of the average annual return on total costs expected by investors. It varies by type of property and geographic location. In order to estimate value of the new Project at completion, the estimated stabilized net operating income is divided by the capitalization rate. For this analysis the capitalization rate was estimated at 5.0%.

Development Value

As shown in the pro forma in Exhibit 5 on the following page, the As Is value for existing building is estimated at approximately $2.8 million. This establishes the opportunity cost of land for the redevelopment analysis.

The Project "as proposed" has an estimated value of $33.1 million at stabilized occupancy. Reducing that value by the estimated $2.8 million "as is" land value and the total development costs totaling $29 million, yields estimated development profit of $4.13 million, or 14.3% of costs.

A hypothetical project subject to the 35-foot height limit has an estimated value of $21.7 million, reflecting the loss of 24,300 square feet from the 3rd level. The development costs are reduced by $10.5 million, reflecting the loss of rentable area and a reduction in the community benefits, resulting in an estimated development profit of $3.17 million, or 17.1% of costs.

Project Value Add Conclusion

Based on the land value and development costs, the proforma analysis indicates the Project has a value add of approximately $0.96 million over a similar building within the allowable 35-foot height ($4.13 million - $3.17 million).

Disclaimer

This Analysis is confidential and client privileged and is not to be used for any purpose other than for negotiating an acceptable Community Benefit Agreement. This Analysis is based on estimated figures and Kosmont's professional opinion, using available market and development cost information. Actual results may differ from those expressed in this analysis, as results are difficult to predict as a function of market conditions, natural disasters, pandemics, significant economic impacts, legislation and administrative actions.

Source: Kosmont Companies, Applicant

The analyses, projections, assumptions, rates of return, and any examples presented herein are for illustrative purposes and are not a guarantee of actual and/or future results. Project pro forma and tax analyses are projections only. Actual results may differ from those expressed in this analysis.

Community Benefits

The Specific Plan requires new development to provide 3% of the lot as open space and if the lot exceeds 22,400 square feet, a minimum of 10% of the lot. Lots greater than 22,400 square feet must provide a minimum of 1 tree for every 4 at grade surface parking spaces open-to-the-sky and each tree must be a minimum of 24-inch box tree. The proposed front and side yard setbacks contain soft landscaping areas, which complies with the minimum required open space and number of trees.

List of Benefits

As part of the Applicant's submittal package, they identified numerous physical improvements that were considered eligible Community Benefits. Kosmont reviewed with the Applicant to gather data to estimate the marginal cost (i.e. value) of each item.

- Architecture that enhances building character ($2.8 million)
- Open space that facilitates gathering ($750,000)
- Landscaping and environmental design ($180,000)
- Wayfinding & Signage ($60,000)
- Undergrounding utilities ($150,000)
- Coffee kiosk ($150,000)

Architectural Enhancements
The architectural design incorporates 1950's era materials, large scale steel windows, exterior balconies and exposed steel structural systems. Based on Kosmont's review of the plans and discussions with the architect, Kosmont estimates these features represent 15% of the $18.7 million in direct construction costs, or $2.8 million.

Open Space and Public Gathering
The proposed design provides three pedestrian entryways and two vehicular entries. The design includes a large public park and a raised shaded deck area. It also provides street furniture at the public park and near the coffee kiosk. The design includes period lighting on all sides and throughout the site. The applicants estimated cost for these improvement is $1.5 million. Given that some open space/public gathering is required for a basic office building, Kosmont assumed a 50% factor for extraordinary improvements of $750,000.

Landscaping
The design includes horizontal and vertical landscaping with drought tolerant and native plants throughout, including balcony and rooftop and along the parking areas. The estimated cost for these improvement is $180,000.

Wayfinding & Signage

The project design provides integrated tenant signage and architecturally integrated signage for pedestrian and vehicular traffic at an estimated cost of $60,000.

Undergrounding Utilities

Incoming power and data cables will be consolidated into a single location and undergrounded with an estimated cost of $150,000.

Coffee Kiosk

Applicant indicates providing a 770 square foot coffee kiosk with outdoor seating to serve the business community. Kosmont estimates that such space will cost over $600 per square foot to build or a total of $460,000. Assuming a monthly rent of $2.00 per square foot, Kosmont estimates it would yield a capitalized value of $330,000, resulting in a subsidy of $130,000.

Total Value of Community Benefits

Combining the value of each building component listed above, results in a combined marginal cost increase of approximately $4.07 million. It is important to note that many of the community benefit items also add value to the Project by making the building more attractive to tenants.

The analyses, projections, assumptions, rates of return, and any examples presented herein are for illustrative purposes and are not a guarantee of actual and/or future results. Project pro forma and tax analyses are projections only. Actual results may differ from those expressed in this analysis.

Fiscal Benefits

In addition to the Project-specific Community Benefits, the City has requested an analysis of the incremental fiscal revenues expected from the stabilized operation of the Project. In order to quantify the value of economic benefits for comparison to the development profit added, Kosmont used a discounted financial cash flow approach assuming a 25-year life.

This Analysis is based on information provided by the Applicant, the City, Los Angeles County ("County") Property Tax Auditor-Controller's Office, California Department of Finance ("DOF"), California Board of Equalization ("BOE"), U.S. Census, U.S. Bureau of Labor Statistics ("BLS"), and ESRI.

General Assumptions

Unless otherwise noted, the subsequent analysis maintains the following assumptions.

- Dollar amounts are expressed in 2021 dollars.
- Fiscal impacts are estimated at stabilized occupancy.
- Employment figures are permanent FTE jobs.

Fiscal Revenue Analysis

Property Tax

Secured property tax revenues are estimated based on the anticipated assessed value of the Project upon full build-out and the applicable property tax rates for the City. Existing value was not included as part of the analysis, as the subject property is already on the tax rolls.

The City general fund receives an approximate 6% share of the annual 1.0% secured property tax general levy placed by the County on the assessed value of the property ($0.06 of each $1.00 of secured property tax revenue).

Unsecured property taxes are collected based on the assessed value of real property not affixed to the underlying land, such as business fixtures, and some types of vehicles. The rate of taxation and apportionment is generally the same as for secured property taxes.

The 2019 assessed value of the Site was $1.13 million. Market value of the property is significantly higher, but until there is a change in ownership no reassessment is likely to occur. The total development cost for the building and the pro rata allocated cost of the parking structure totals approximately $26.1 million. Assuming a 90% assessed value taxable factor, there will be a $23.5 million increase in assessed value, for which the City would receive approximately $14,100 in additional annual property taxes. (*Incremental* property taxes from the larger building are estimated at $5,600 per year).

If at some point in the future, the Site is sold, the estimated market value would be approximately $33 million in 2021 dollars, increasing the assessed value by approximately $10 million.

Sales Tax (On-Site / Direct)

None of the new business tenants are expected to generate taxable retail sales, except for the approximate 769 square foot coffee kiosk designed to provide takeout food. Based on annual sales of $400 psf, Kosmont estimates annual sales of $300,000, yielding $3,000 in sales taxes to the City General Fund.

Offsite Sales Tax (Indirect)

In addition to onsite sales, employees and business owners will generate off-site / indirect sales. Kosmont utilized ICSC surveys of employee spending near places of work to estimate $5,000 in annual sales per employee. At stabilized occupancy the Project is expected to result in approximately $900,000 in annual offsite taxable sales, which would result in $9,000 in annual sales tax revenues for the City. (*Incremental* offsite sales taxes from the larger building are estimated at $3,000 per year).

Business Taxes

Current business tax rates are assessed based on the number of employees and square footage. The first 10 employees and initial 5,000 SF are charged a flat fee base tax of $104.40. The business is then charged for each additional employee over 10, at a rate of $129.35 per employee. Additionally, the employer is charged $0.25 for each square foot over 5,000 SF. Assuming three different tenants and a total of 225 employees and approximately 65,000 SF for the proposed office use (less existing 30 employees), Kosmont projects an annual increase in business tax of approximately $33,000. (*Incremental* taxes from the larger building are estimated at $11,000 per year).

Incremental General Fund Tax Revenues

In summary the full Project will likely result in a total increase of $55,800 per year above the existing baseline. The *incremental* benefit by building above 35 foot limit is estimated to be $18,100.

Over a 25-year period with 2% inflation, as shown in Exhibit 6, the Project will generate $1,892,000 in revenue, with a net present value of $902,000. The *incremental* fiscal benefit generated by building above 35-foot height limit is estimated to be $614,000 over the 25-year period with an NPV of approximately $293,000.

Exhibit 6

Economic Benefits

Construction Budget

The total development costs for the construction of the approximately 65,000 gross square foot of creative office and the allocated cost for approximately 130 parking spaces within the new parking structure is estimated at $26.1 million, including soft and hard costs.

IMPLAN Modeling

This analysis uses the IMPLAN (IMpact analysis for PLANning) econometric input/output model developed by the IMPLAN Group to quantify the economic impact to the local region from Project construction / renovation and ongoing operations. This proprietary model estimates the economic benefits on the industries in a given geographic area based on known economic inputs, such as construction costs. The model estimates direct, indirect, and induced benefits expressed in terms of increased economic activity, earnings ("labor income"), and job creation.

Direct Economic Benefits: Direct benefits refer to the short-term business activity of general contractors involved in Project construction and the ongoing business activities of Project tenants.

Indirect Economic Benefits: Indirect benefits will result when local firms directly impacted by the Project purchase materials, supplies or services from other firms.

Induced Economic Benefits: Induced benefits relate to the consumption spending of employees of firms that are directly or indirectly affected by the Project. These would include all of the goods and services normally associated with household consumption (e.g. retail purchases, services).

Inputs for the IMPLAN economic benefit analysis include the development budget provided by the Developer and permanent on-site employment information estimated by Kosmont. The permanent full-time employment estimates were derived from similar projects and industry standard per-square-foot employment densities for corresponding land use types.

Construction Related Economic Benefits

During the construction period, the Project is expected to produce approximately 150 Full Time Equivalent jobs and $13 million in labor income across Los Angeles County, including direct, indirect and induced impacts.

The *incremental* economic benefit generated by building above 35 foot height limit is estimated to be 60 FTE jobs during construction period, providing $5 million in labor income

The analyses, projections, assumptions, rates of return, and any examples presented herein are for illustrative purposes and are not a guarantee of actual and/or future results. Project pro forma and tax analyses are projections only. Actual results may differ from those expressed in this analysis.

Community Benefits Analysis for 1475 E El Segundo Blvd., prepared by Kosmont, dated November 2021

CITY OF EL SEGUNDO

Community Benefits Analysis
1475 E. El Segundo Blvd.

November, 2021

The analyses, projections, assumptions, rates of return, and any examples presented herein are for illustrative purposes and are not a guarantee of actual and/or future results. Project pro forma and tax analyses are projections only. Actual results may differ from those expressed in this analysis.

Background and Methodology

Kosmont & Associates, Inc. doing business as Kosmont Companies ("Consultant" or "Kosmont"), operating under the master consulting agreement with the City of El Segundo ("City") for Smoky Hollow Community Benefit Analysis is pleased to submit this report on the comprehensive community benefits as required by the Tier 1 and Tier 2 application process for the proposed redevelopment application at 1475 E. El Segundo Blvd. in El Segundo ("Site")

Kosmont was asked to review the Site development application site plan, floor plan and building design and preliminary community benefit proposal. The proposed project is a 63,900 square foot office building that retains the historic integrity of the existing brick building ("Project").

Kosmont reviewed the City's Smoky Hollow Specific Plan ("Specific Plan") to identify planned district wide public improvements and met with City staff to understand:

1. the City's perspective on how the Project design components address those improvements,
2. what other improvements that the City considered community benefits, as opposed to standard development requirements.

The Project has 63,915 gross building area and remains within the 1.5 FAR limit. However, the design exceeds the Specific Plan height limit of 35 feet by approximately 24 feet 6 inches with a proposed height of 59 feet six inches.

Project Value Add Analysis

Kosmont gathered construction cost data from the Project Applicant. Kosmont performed high level market research to estimate current land value and baseline rent for "as is" use, future market rent for the proposed new tenant spaces, and building valuation assumptions. This will inform a financial pro forma model that Kosmont developed to analyze the incremental development profit above the estimated profit from the "by right" permitted development. For example, an increase in gross building area would require an analysis of the marginal increase in operating income and stabilized investment value. Marginal costs of construction would be deducted to derive the incremental profit.

Community Benefits Analysis

Kosmont **has not yet** reviewed proposed Project components with City staff to confirm project elements that are eligible as a community benefit. The community benefits are based on information provided by the Applicant and some items were adjusted by Kosmont. It is important to recognize that the Applicant will realize some financial benefits from many of these items.

Fiscal/Economic Benefits Analysis

Kosmont also analyzed the proposed Project to estimate construction period jobs, as well as stabilized operation jobs, and incremental City General Fund tax revenues (i.e. increase in property tax, sales tax, business taxes) above current use. In order to estimate the value of economic benefits for comparison to the development profit added, Kosmont used a financial cash flow approach assuming a 25-year life.

The attached report analyzes the increased financial benefits received from exceeding the Specific Plan limits, compared against the estimated the value of proposed community benefits, as well as fiscal/economic benefits. We are available to answer any questions regarding our methodology and conclusions.

Disclaimer

This Analysis is confidential and client privileged and is not to be used for any purpose other than for negotiating an acceptable Community Benefit Agreement. This Analysis is based on estimated figures and Kosmont's professional opinion, using available market and development cost information. Actual results may differ from those expressed in this analysis, as results are difficult to predict as a function of market conditions, natural disasters, pandemics, significant economic impacts, legislation and administrative actions.

Executive Summary

The City Planning Division received an application to allow the construction of a 44,600 square-foot addition on the Site. The Applicant is requesting to exceed the maximum height of 35 feet up to 54 feet 6 inches through the Specific Plan Community Benefit process.

As shown in the following report, the Project is expected to generate economic and community benefits in excess of the Project value added accruing to the Applicant resulting from the requested height variance. Per the City's request Kosmont has illustrated the fiscal and economic benefits from the incremental development, as well as for the entire Project as proposed.

Summary of Value Add / City Benefits

Project Value Added	Proposed Community Benefits	Fiscal Benefits	Economic Benefits Const & Perm Jobs
$1,770,000	$3,520,000	$878,000	145+200 jobs
Incremental above	35 foot height limit	$285,000	60+70 jobs

Source: Kosmont Companies

Project Value Add

Kosmont has prepared an illustrative development pro forma to show the stabilized value under three scenarios:

1. As Is Building (19,311 Sq. Ft.)
2. As Proposed (63,915 Sq. Ft. – 55,000 Sq. Ft. rentable)
3. As Permitted by Specific Plan (42,000 Sq. Ft. – 34,500 Sq. Ft. rentable)

Based on the estimated land value and development costs, the proforma analysis indicates a Project value add of approximately $1.77 million over a similar building within the allowable 35-foot height.

Community Benefits

Kosmont estimated the marginal cost associated with the following community benefit items to be $3.52 million, with the vast majority coming from the transformative architecture treatments, as summarized below:

- Architecture that enhances building character ($2.8 million)
- Open space that facilitates gathering ($400,000)
- Landscaping and environmental design ($160,000)

- Wayfinding & Signage ($50,000)
- Undergrounding utilities ($110,000)

It is important to note that many of these items also provide value to the project by making the building more attractive to new tenants.

Fiscal Benefits

The existing 1475 E. El Segundo Blvd. office/industrial building had a 2019 assessed value of $1,157,000. It houses one tenant with approximately 20 employees. Following redevelopment, Kosmont estimates the assessed value will increase by $22.5 million based on the construction budget, yielding $13,500 per year to the City General Fund. The incremental assessed value from building above the 35 foot would be $9 million, yielding $5,400 in annual taxes.

The new building is expected to house 220 professional office/design employees, for a net increase of 190 employees. These employees are estimated to generate approximately $900,000 in incremental annual retail sales at City establishments. The onsite coffee kiosk is estimated to generate $300,000 in annual sales for a total of $12,000 in annual sales taxes. In addition to retail sales taxes, the Project will generate additional business license taxes from the office tenancy, estimated at almost $34,000 per year for a total annual surplus of $56,800.

Over a 25-year period with 3% inflation, the Project will generate an estimated $1,841,000 in City tax revenue, with a net present value of approximately $878,000. The *incremental* fiscal benefit generated by building above 35-foot height limit is estimated to be $598,000 over the 25-year period with an NPV of approximately $285,000.

Economic Benefits

Development of the new creative office/commercial building will generate an estimated 150 full time equivalent ("FTE") jobs during construction period, including direct, indirect and induced, generating $13 million in labor income. At stabilized occupancy, the Project tenants are expected to employ 220 full time positions, an increase of 190 jobs over current level.

The *incremental* economic benefit generated by building above 35 foot height limit is estimated to be 60 FTE jobs during construction period, providing $5 million in labor income.

Project Description

The City Planning Division received an application for Environmental Assessment No. EA-1281 and Tier II Community Benefits Plan No. 19-02 to allow the construction of a 44,600 square-foot addition to exceed the maximum permitted building height of 35 feet by approximately 25 feet. The Site is located at 1475 E. El Segundo Blvd., in the Smoky Hollow East (SHE) zone within the Specific Plan.

The subject Site is located in a parcel totaling 43,969 square feet. The Site contains mid-century Industrial brick buildings. The current building uses at the are light industrial with warehouse, general office, and research and development. The Site was purchased by the current owner in 2019.

Exhibit 1 – Site Plan

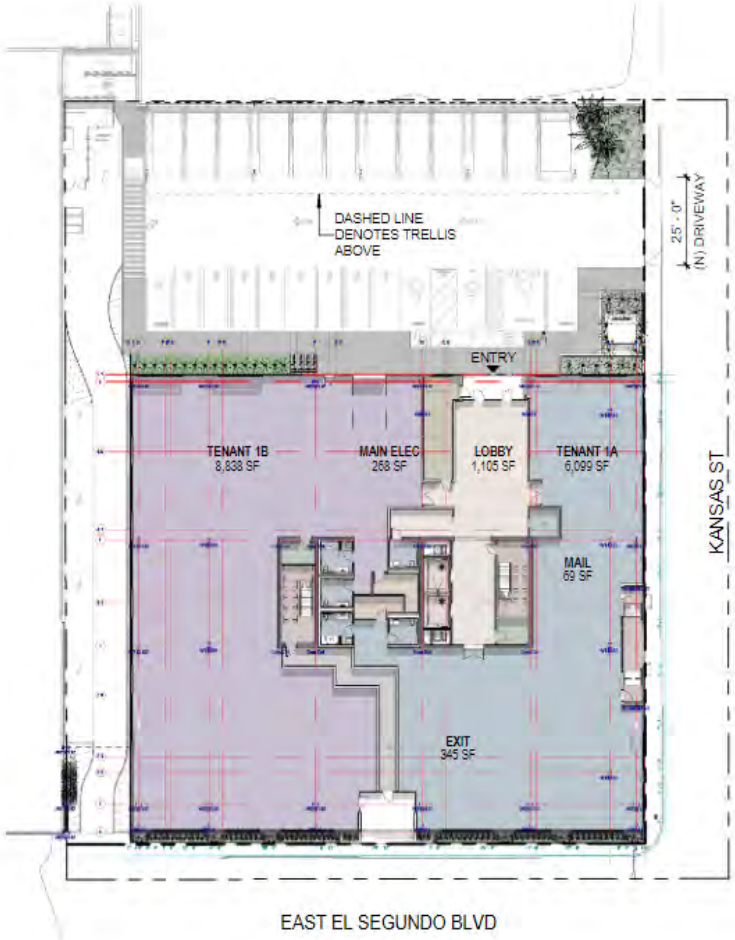
Off-Street Parking

Vehicular access to a new five-story parking structure is provided from a 28-foot wide driveway facing Franklin Avenue. The Specific Plan requires one parking space for every 400 square feet of gross floor area. The completed Project will have 169 spaces, with 41 surface parking spaces and 128 spaces (from the existing 398 space parking structure).allocated to 1475 E. El Segundo Blvd. The new building's 128 spaces in the structure have an allocated cost of $2.4 million.

Tier II Community Benefits Plan

The Applicant is requesting to exceed the maximum height of 35 feet in the Specific Plan. The Applicant is requesting 25 additional feet (total of 60 feet) in order to build a 3rd story with mezzanine. The Project will not exceed the FAR of 1.5. Projects proposed at a building height must provide a Community Benefits Plan which requires approval from the City Council. In order to approve the project the City Council must find the value of the proposed Tier II Community Benefits is adequate in implementing the objectives of the Specific Plan in exchange for allowing the additional height and must make the required findings indicated in the Smoky Hollow Specific Plan

Exhibit 2
Elevation Illustration



Environmental Review

A Historic Resource Evaluation Report was prepared by a qualified professional to assess the building, since the existing one-story industrial brick building was constructed in the 1950's and is greater than 50 years of age. None of the three buildings on the property are listed under the national historic, state or local landmark programs. City Staff concluded that none of the buildings appear eligible for individual listing in any Historic Register or eligible for local designation as a cultural resource.

Floor Plan

The proposed addition to the building is 44,600 square feet for a gross building area of 63,915 square feet. The additional floor area is for creative office uses that engage in research, with some accessory retail, and a coffee kiosk containing a small outdoor seating area. See ground floor plan in Exhibit 3. Level 3 plan and mezzanine are illustrated in Exhibit 4 on the following page.

Exhibit 3
Ground Floor Plan

The City rules for mezzanine space limits total area to less than 50% of the 22,600 square foot main floor area, or 10,000 square feet. However, due to the extensive vertical penetration for stairways, elevators and restrooms the net rentable area is only 7,600 square feet.

Exhibit 4
3rd Floor & Mezzanine

Project Value Add

Capital investment in real estate development is a high-risk private sector venture. In order to obtain financing commitments, developers must be able to demonstrate sufficient financial returns to offset the risks related to construction cost overruns and changes in the local economy during the construction period that could affect market rents and occupancy following construction. The key development cost components include land, site development, building construction, permits and fees, design and other soft costs, and financing costs. The Net Operating Income (NOI) calculation accounts for gross rents, vacancy factor, and all operating expenses.

To estimate the Project value added, as a result of the Specific Plan variance requested, Kosmont developed a financial feasibility simulation model in Excel for this Analysis to provide a reasonable estimate of expected development costs and annual net operating income a project would earn. It also shows the value at completion, which after deducting the total development costs, yields the developer profit.

Kosmont's analysis shows the stabilized value under three scenarios:

1. As Is Building (19,311 Sq. Ft.)
2. As Proposed (63,915 Sq. Ft. – 55,000 Sq. Ft. rentable)
3. As Permitted by Specific Plan (42,000 Sq. Ft. – 34,500 Sq. Ft. rentable)

Key Assumptions

Rental Income
Kosmont surveyed local real estate brokers to estimate market rents for the new creative office space planned. Unimproved mezzanine levels are primarily used as amenity space:

- Monthly rent of $2.85 psf triple net are most likely for high quality office space
- Monthly rent for mezzanine space would be $2.00 psf triple net
- Structured parking for 2.5 employees per 1,000 square feet is included in base rent

To determine potential rental income, we calculated the net rentable area for each level from the detailed floor plans as summarized below:

- Ground floor – 14,900 sq. ft. (excludes lobby and restrooms)
- Level 2 – 13,100 sq. ft. (plus Mezzanine 6,500 sq. ft.)
- Level 3 – 14,000 sq. ft. (plus Mezzanine 6,500 sq. ft.)

Development Costs

Kosmont reviewed development cost estimates provided by Applicant and architect. Total allocated costs for the new building are estimated at $25.0 million broken down as follows:

- $18.4 million for base building plus
- $1.6 million in soft costs plus
- $1.0 million in landscape and hardscape costs plus
- $1.6 million for future tenant improvements plus
- $2.4 million for the 128 allocated parking structure spaces.

Capitalization Rates

Capitalization rate is an economic measure of the average annual return on total costs expected by investors. It varies by type of property and geographic location. In order to estimate value of the new Project at completion, the estimated stabilized net operating income is divided by the capitalization rate. For this analysis the capitalization rate was estimated at 5.0%.

Development Value

As shown in the pro forma in Exhibit 5 on the following page, the As Is value for existing building is estimated at approximately $2.8 million. This establishes the opportunity cost of land for the redevelopment analysis.

The Project "as proposed" has an estimated value of $32.4 million at stabilized occupancy. Reducing that value by the estimated $2.8 million "as is" land value and the total development costs totaling $25.0 million, yields an estimated development profit of $4.6 million, or 16.7% of costs.

A hypothetical project subject to the 35-foot height limit has an estimated value of $20.6 million, reflecting the loss of 24,300 square feet from the 3rd level. The development costs are reduced by $10 million, reflecting the loss of rentable area and a reduction in the community benefits, resulting in an estimated development profit of $2.85 million, or 16.1% of costs.

Project Value Add Conclusion

Based on the land value and development costs, the proforma analysis indicates the Project has a value add of approximately $1.77 million over a similar building within the allowable 35-foot height ($4.62 million - $2.85 million).

Disclaimer

This Analysis is confidential and client privileged and is not to be used for any purpose other than for negotiating an acceptable Community Benefit Agreement. This Analysis is based on estimated figures and Kosmont's professional opinion, using available market and development cost information. Actual results may differ from those expressed in this analysis, as results are difficult to predict as a function of market conditions, natural disasters, pandemics, significant economic impacts, legislation and administrative actions.

The analyses, projections, assumptions, rates of return, and any examples presented herein are for illustrative purposes and are not a guarantee of actual and/or future results. Project pro forma and tax analyses are projections only. Actual results may differ from those expressed in this analysis.

Community Benefits

The Specific Plan requires new development to provide 3% of the lot as open space and if the lot exceeds 22,400 square feet, a minimum of 10% of the lot. Lots greater than 22,400 square feet must provide a minimum of 1 tree for every 4 at grade surface parking spaces open-to-the-sky and each tree must be a minimum of 24-inch box tree. The proposed front and side yard setbacks contain soft landscaping areas, which complies with the minimum required open space and number of trees.

List of Benefits

As part of the Applicant's submittal package, they identified numerous physical improvements that were considered eligible Community Benefits. Kosmont reviewed with the Applicant to gather data to estimate the marginal cost (i.e. value) of each item.

- Architecture that enhances building character ($2.8 million)
- Open space that facilitates gathering ($400,000)
- Landscaping and environmental design ($160,000)
- Wayfinding & Signage (50,000)
- Undergrounding utilities ($110,000)

Architectural Enhancements
The architectural design incorporates 1950's era materials, large scale steel windows, exterior balconies and exposed steel structural systems. Based on Kosmont's review of the plans and discussions with the architect, Kosmont estimates these features represent 15% of the $18.4 million in direct construction costs, or $2.8 million.

Open Space and Public Gathering
The proposed design provides three pedestrian entryways and two vehicular entries. The design includes a pocket park with public seating at the NE corner. The design includes period lighting on all sides and throughout the site. The applicants estimated cost for these improvement is $800,000. Given that some open space/public gathering is required for a basic office building, Kosmont assumed a 50% factor for extraordinary improvements of $400,000.

Landscaping
The design includes horizontal and vertical landscaping with drought tolerant and native plants throughout, including balcony and rooftop and along the parking areas. The design includes an architectural monument wall for signage. The estimated cost for these improvement is $160,000.

kosmont companies
The analyses, projections, assumptions, rates of return, and any examples presented herein are for illustrative purposes and are not a guarantee of actual and/or future results. Project pro forma and tax analyses are projections only. Actual results may differ from those expressed in this analysis.
1601 N. Sepulveda Blvd. #382, Manhattan Beach, CA 90266 | (424) 297-1070 | www.kosmont.com

Wayfinding & Signage

The project design provides integrated tenant signage and architecturally integrated signage for pedestrian and vehicular traffic at an estimated cost of $50,000.

Undergrounding Utilities

Incoming power and data cables will be consolidated into a single location and undergrounded with an estimated cost of $110,000.

Total Value of Community Benefits

Combining the value of each building component listed above, results in a combined marginal cost increase of approximately $3.52 million. It is important to note that many of the community benefit items also add value to the Project by making the building more attractive to tenants.

The analyses, projections, assumptions, rates of return, and any examples presented herein are for illustrative purposes and are not a guarantee of actual and/or future results. Project pro forma and tax analyses are projections only. Actual results may differ from those expressed in this analysis.

Fiscal Benefits

In addition to the Project-specific Community Benefits, the City has requested an analysis of the incremental fiscal revenues expected from the stabilized operation of the Project. In order to quantify the value of economic benefits for comparison to the development profit added, Kosmont used a discounted financial cash flow approach assuming a 25-year life.

This Analysis is based on information provided by the Applicant, the City, Los Angeles County ("County") Property Tax Auditor-Controller's Office, California Department of Finance ("DOF"), California Board of Equalization ("BOE"), U.S. Census, U.S. Bureau of Labor Statistics ("BLS"), and ESRI.

General Assumptions

Unless otherwise noted, the subsequent analysis maintains the following assumptions.

- Dollar amounts are expressed in 2021 dollars.
- Fiscal impacts are estimated at stabilized occupancy.
- Employment figures are permanent FTE jobs.

Fiscal Revenue Analysis

Property Tax

Secured property tax revenues are estimated based on the anticipated assessed value of the Project upon full build-out and the applicable property tax rates for the City. Existing value was not included as part of the analysis, as the subject property is already on the tax rolls.

The City general fund receives an approximate 6% share of the annual 1.0% secured property tax general levy placed by the County on the assessed value of the property ($0.06 of each $1.00 of secured property tax revenue).

Unsecured property taxes are collected based on the assessed value of real property not affixed to the underlying land, such as business fixtures, and some types of vehicles. The rate of taxation and apportionment is generally the same as for secured property taxes.

The 2019 assessed value of the Site was $1.16 million. Market value of the property is significantly higher, but until there is a change in ownership no reassessment is likely to occur. The total development cost for the building and the pro rata allocated cost of the parking structure totals approximately $25.0 million. Assuming a 90% assessed value taxable factor, there will be a $22.5 million increase in assessed value, for which the City would receive approximately $13,500 in additional annual property taxes. (*Incremental* property taxes from the larger building are estimated at $5,400 per year).

The analyses, projections, assumptions, rates of return, and any examples presented herein are for illustrative purposes and are not a guarantee of actual and/or future results. Project pro forma and tax analyses are projections only. Actual results may differ from those expressed in this analysis.

If at some point in the future, the Site is sold, the estimated market value would be approximately $33 million in 2021 dollars, increasing the assessed value by approximately $10 million.

Sales Tax (On-Site / Direct)

None of the new business tenants are expected to generate taxable retail sales.

Offsite Sales Tax (Indirect)

Employees and business owners will generate off-site / indirect sales. Kosmont utilized ICSC surveys of employee spending near places of work to estimate $5,000 in annual sales per employee. At stabilized occupancy the Project is expected to result in approximately $1 million in annual offsite taxable sales, which would result in $10,000 in annual sales tax revenues for the City. (*Incremental* offsite sales taxes from the larger building are estimated at $3,500 per year).

Business Taxes

Current business tax rates are assessed based on the number of employees and square footage. The first 10 employees and initial 5,000 SF are charged a flat fee base tax of $104.40. The business is then charged for each additional employee over 10, at a rate of $129.35 per employee. Additionally, the employer is charged $0.25 for each square foot over 5,000 SF. Assuming three different tenants and a total of 225 employees and 65,000 SF of square footage for the proposed office use (less existing 20 employees), Kosmont projects an annual increase in business tax of approximately $34,000. (*Incremental* taxes from the larger building are estimated at $11,000 per year).

Incremental General Fund Tax Revenues

In summary the full Project will likely result in a total increase of $54,500 per year above the existing baseline. The *incremental* benefit by building above 35 foot is estimated to be $17,700.

Over a 25-year period with 2% inflation, as shown in Exhibit 6, the Project will generate $1,842,000 in revenue, with a net present value of $878,000. The *incremental* fiscal benefit generated by building above 35-foot height limit is estimated to be $598,000 over the 25-year period with an NPV of approximately $285,000.

Economic Benefits

Construction Budget

The total development costs for the construction of the approximately 63,900 gross square foot of creative office and the allocated cost for approximately 128 parking spaces within the new parking structure is estimated at $25.0 million, including soft and hard costs.

IMPLAN Modeling

This analysis uses the IMPLAN (IMpact analysis for PLANning) econometric input/output model developed by the IMPLAN Group to quantify the economic impact to the local region from Project construction / renovation and ongoing operations. This proprietary model estimates the economic benefits on the industries in a given geographic area based on known economic inputs, such as construction costs. The model estimates direct, indirect, and induced benefits expressed in terms of increased economic activity, earnings ("labor income"), and job creation.

Direct Economic Benefits: Direct benefits refer to the short-term business activity of general contractors involved in Project construction and the ongoing business activities of Project tenants.

Indirect Economic Benefits: Indirect benefits will result when local firms directly impacted by the Project purchase materials, supplies or services from other firms.

Induced Economic Benefits: Induced benefits relate to the consumption spending of employees of firms that are directly or indirectly affected by the Project. These would include all of the goods and services normally associated with household consumption (e.g. retail purchases, services).

Inputs for the IMPLAN economic benefit analysis include the development budget provided by the Developer and permanent on-site employment information estimated by Kosmont. The permanent full-time employment estimates were derived from similar projects and industry standard per-square-foot employment densities for corresponding land use types.

Construction Related Economic Benefits

During the construction period, the Project is expected to produce approximately 145 Full Time Equivalent jobs and $12.5 million in labor income across Los Angeles County, including direct, indirect and induced impacts.

The *incremental* economic benefit generated by building above 35 foot height limit is estimated to be 60 FTE jobs during construction period, providing $5 million in labor income

Traffic Memo
dated January 21, 2022

January 21, 2022

Mr. Mark Telesz
Smoky Hollow Industries, LLC
612 E. Franklin Avenue
El Segundo, CA

Subject: *Focused Traffic Analysis Memorandum for 1330 E. Franklin Avenue and 1475 El Segundo Boulevard in the City of El Segundo, CA*

Dear Mr. Telesz:

Kimley-Horn and Associates, Inc. has prepared a Focused Traffic Analysis memorandum, per request from City of El Segundo staff, for the proposed office building expansions located at 1330 E Franklin Avenue (North Site) and 1475 El Segundo Boulevard (South Site). The memorandum has been prepared to evaluate the project-related impacts associated with the proposed project.

EXECUTIVE SUMMARY

- The office building expansion includes the addition of 47,250 square feet to two existing office buildings located at 1330 E Franklin Avenue (North Site) and 1475 El Segundo Boulevard (South Site).
- The entire Standard Works project (North Site and South Site) is estimated to generate 115 total net new trips during the morning peak hour, 114 total net new trips during the evening peak hour, and 1,001 total net new daily trips.
- The project impacts at four (4) study intersections were evaluated for Existing, Horizon Year 2040, and Horizon Year 2040 with Road Diet, including the addition of the project traffic to the Horizon Year scenarios.
- Based on the intersection Level of Service (LOS) analysis, improvements consistent with Smoky Hollow Specific Plan EIR Traffic Study were recommended at the following deficient intersections:
    - #2 – Grand Avenue at Pacific Coast Highway
    - #3 – El Segundo Boulevard at Pacific Coast Highway
- The proposed project would pay a fair-share towards these recommended improvements

.

PROJECT DESCRIPTION

The North and South Sites are generally bounded by Franklin Avenue to the north, Kansas Street to the east, El Segundo Boulevard to the south, and Oregon Street to the west. The project sites are within the boundaries of the Smoky Hollow East Zoning District as defined by the Smoky Hollow Specific Plan. The project site location is shown in its regional setting on Figure 1.

The North Site is located just south of the intersection of Franklin Avenue at California Street and is currently developed with an existing 19,950 square-foot (SF) office building and a surface parking lot. The project applicant proposes to expand the existing building by an additional 47,250 SF, for a total building square footage of 67,200 SF. The North Site would include four single-bed caretaker units. Each caretaker unit would have a maximum square footage of 500 SF. Only staff members that occupy the building with their commercial business would be allowed to live in one of the four caretaker units. It should be noted that a caretaker unit is permitted as an accessory use in the Smoky Hollow Specific Plan at the ratio of one per building site or business establishment.

The South Site is located on the northwest corner of Kansas Street and El Segundo Boulevard and is currently developed with an existing 18,311 SF office building and a surface parking lot. The project applicant proposes to expand the existing office building by an additional 48,425 SF, for a total building square footage of 67,736 SF. The South Site would include four single-bed caretaker units. Only staff members that occupy the building with their commercial business would be allowed to live in one of the four caretaker units. A copy of the project site plans for both the North Site and South Site are provided on Figure 2.

ANALYSIS SCENARIOS AND METHODOLOGY

Analysis Scenarios

This focused traffic analysis provides an evaluation of morning and evening peak hour intersection operations for the following scenarios:

- Existing Conditions
- Horizon Year 2040 with Approved Specific Plan
- Horizon Year 2040 with Approved Specific Plan Plus Project
- Horizon Year 2040 with Approved Specific Plan with Road Diet
- Horizon Year 2040 with Approved Specific Plan with Road Diet – Mitigated
- Horizon Year 2040 with Road Diet Plus Project – Mitigated

Study Locations

This focused traffic analysis includes documentation of existing conditions, analysis of future conditions, and identification of project-related impacts, if any, at the following study intersections:

1. Grand Avenue at Kansas Street
2. Grand Avenue at Pacific Coast Highway
3. El Segundo Boulevard at Pacific Coast Highway
4. El Segundo Boulevard at Kansas Street

The study locations were established in consultation with City staff.

Intersection Analysis

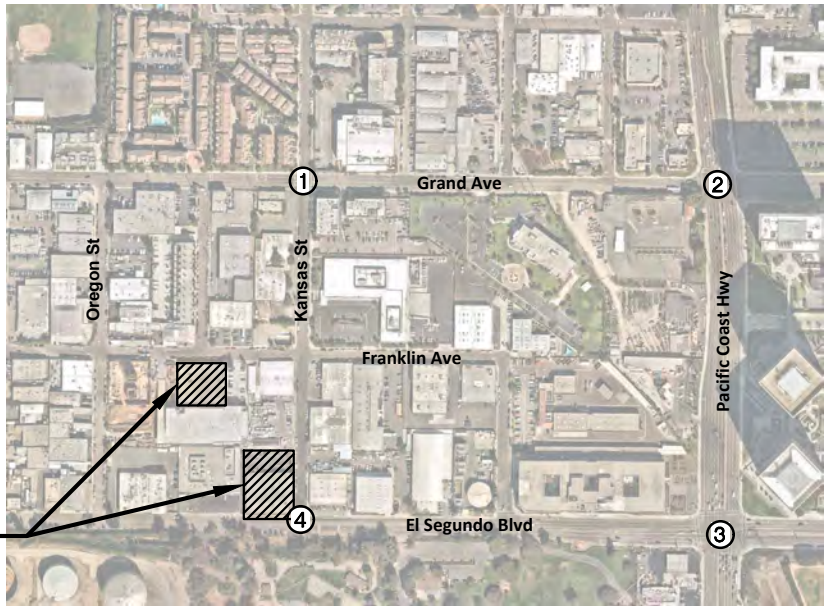
In accordance with direction from the City of El Segundo staff and the Los Angeles County (LA County) Public Works *Transportation Impact Analysis Guidelines* (July 23,2020), peak hour operating conditions were evaluated using the Highway Capacity Manual (HCM) 6th Edition methodology. The HCM methodology estimates the average delay (in seconds per vehicle) for each of the movements through the intersection, depending on a number of factors, including the number of through and turn lanes, volume of traffic, and signal cycle length and timing. The HCM delay forecast translates to a Level of Service designation, ranging from LOS "A" to LOS "F".

Performance Criteria

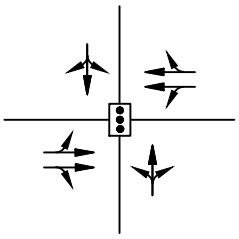
The City of El Segundo and Caltrans Level of Service standard for peak hour intersection operation is Level of Service D.

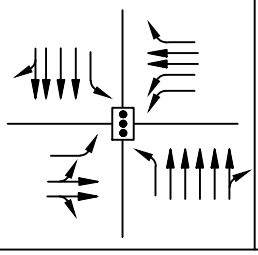
EXISTING CONDITIONS

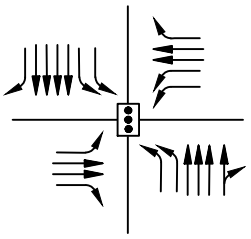
Existing Traffic Volumes

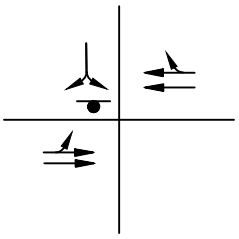


Existing morning and evening peak hour turning movement counts for study intersections #1-3 were used from the Traffic Impact Analysis (TIA) for the Smoky Hollow Specific Plan EIR (2017) and grown to Existing Year 2020 Based on the LA County Congestion Management Program (CMP), the ambient growth rate for Regional Statistical Area (RSA) 18 (South Bay/LAX) would be 0.259% per year. As a conservative approach, an ambient annual growth rate of 1% was applied to develop Existing Year 2020 volumes. For study intersection #4 (El Segundo Boulevard at Kansas Street), new peak hour traffic counts were collected at the study intersection. Due to school and business closures amid the COVID-19 pandemic, an adjustment factor was applied based on a comparison of historical and recent roadway data at Grand Avenue west of Pacific Coast Highway. Based on this data comparison, an adjustment factor of 1.283 was applied to intersection #4 (El Segundo Boulevard at Kansas Street). Existing lane configurations and traffic control for the study intersections are shown on Figure 3. Morning and evening peak hour traffic volumes are shown on Figure 4. Copies of the traffic count data worksheets are provided in *Appendix A*.









Existing Operating Conditions

Intersection Level of Service analysis was conducted for the morning and evening peak hours and is summarized on Table 1. Intersection analysis worksheets are provided in *Appendix B*. Review of the table shows that the following study intersection currently operates at an unacceptable Level of Service:

- #3 – El Segundo Boulevard at Pacific Coast Highway: PM – LOS E

FUTURE CONDITIONS

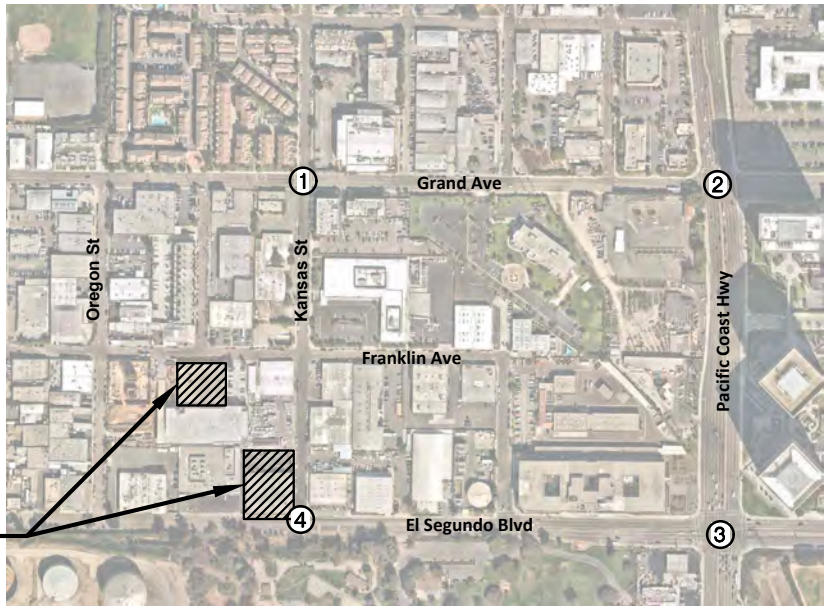
Horizon Year 2040 with Approved Specific Plan

Future year forecasts for Horizon Year 2040 with Approved Specific Plan were based on the future forecasts from the Smoky Hollow Specific Plan EIR Traffic Study. Future year forecasts for the intersection of Kansas Street at El Segundo Boulevard (#4) were approximated based on future year forecasts of adjacent intersections and existing travel patterns. The peak hour volumes are shown on Figure 5.

The results of the Horizon Year with Approved Specific Plan intersection analysis are summarized on Table 2. Intersection analysis worksheets are provided in *Appendix B*. Review of this table shows that, the following study intersections would operate at an unacceptable Level of Service:

- #2 – Grand Avenue at Pacific Coast Highway: PM – LOS E
- #3 – El Segundo Boulevard at Pacific Coast Highway: PM – LOS F

TRIP GENERATION



Proposed Project Trip Generation

Trip generation estimates for the proposed project were estimated using the Institute of Transportation Engineers (ITE) Trip Generation Manual (10th Edition) trip rates for General Office Building (Land Use 710) and Multi-Family Housing (Low-Rise; Land Use 220). The trip rates and estimated trip generation are shown on Table 3. Compared to the existing uses, the North Site is estimated to generate 56 net new trips in the morning peak hour, 56 net new trips in the evening peak hour, and 490 net new daily trips. The South Site is estimated to generate 59 net new trips in the morning peak hour, 58 net new trips in the evening peak hour, and 511 net new daily trips. The entire Standard Works project (North Site and South Site) is estimated to generate 115 total net new trips during the morning peak hour, 114 total net new trips during the evening peak hour, and 1,001 total net new daily trips.

Project Trip Distribution and Assignment

Project trip distribution assumptions for the project site were derived from the Smoky Hollow EIR. Trip distribution and assignment assumptions as well as the new trips to be added to the street system by the proposed project are shown on Figure 6.

[1] *Source:* Institute of Transportation Engineers (ITE) Trip Generation Manual, 10th Edition

[2] Due to the nature of the residential uses for the proposed project (caretaker units), it is anticipated that the residential tripss will be lower than those disclosed in the memorandum. In addition, these trips are unlikely to occur during the peak hours since peak hour traffic for residential uses is generally home-based work trips.

FIGURE 6
TRIP DISTRIBUTION AND PROJECT-RELATED PEAK HOUR TRAFFIC VOLUMES

Horizon Year 2040 Plus Project

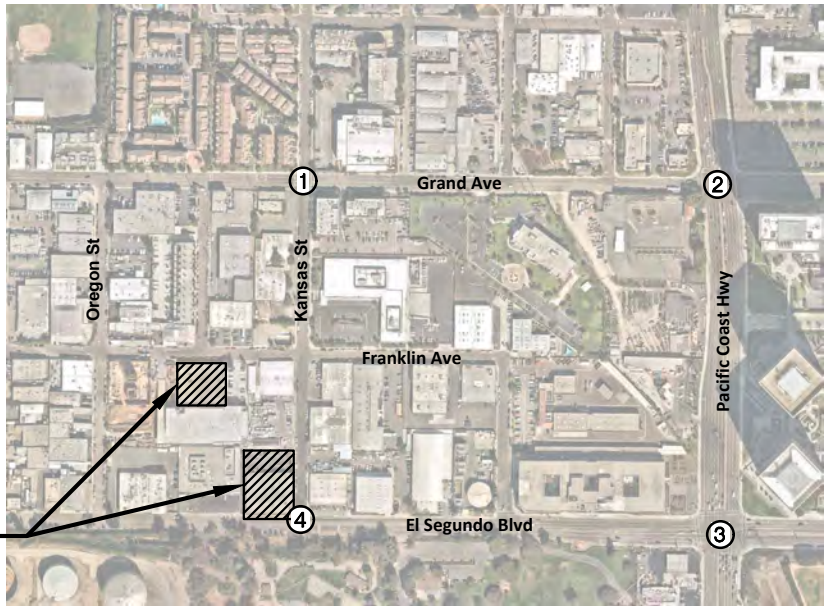
Project-related peak hour traffic volumes for the proposed project were added to the Horizon Year 2040 with Approved Specific Plan volumes to develop Horizon Year 2040 Plus Project traffic forecast volumes. The resulting peak hour traffic volumes are shown on Figure 7. The results of the Horizon Year Plus Project are summarized on Table 4. Intersection analysis worksheets are provided in *Appendix B*. Review of this table shows that the following study intersections would continue to operate at an unacceptable Level of Service:

- #2 – Grand Avenue at Pacific Coast Highway: PM – LOS E
- #3 – El Segundo Boulevard at Pacific Coast Highway: PM – LOS F

FUTURE CONDITIONS – WITH ROAD DIET

Horizon Year 2040 with Approved Specific Plan with Road Diet

This section analyzes how the intersections would operate under the roadway reconfigurations outlined in the Smoky Hollow EIR Traffic Study. The Road Diet would include the reconfiguration of north-south roadways to provide one-way traffic flow and diagonal on-street parking spaces. The peak hour volumes are shown on Figure 8. The results of the Horizon Year 2040 with Approved Specific Plan with Road Diet are summarized on Table 5. Intersection analysis worksheets are provided in *Appendix B*. Review of this table shows that the following study intersections would operate at an unacceptable Level of Service:



- #2 – Grand Avenue at Pacific Coast Highway: PM – LOS E
- #3 – El Segundo Boulevard at Pacific Coast Highway: PM – LOS F

Horizon Year 2040 with Approved Specific Plan with Road Diet – Mitigated

This section analyzes how the intersections would operate under the roadway reconfigurations and mitigation measures outlined in the Smoky Hollow EIR Traffic Study. The peak hour volumes are shown on Figure 8 (previously mentioned). The results of the Horizon Year 2040 with Road Diet with Mitigation are summarized on Table 6. Intersection analysis worksheets are provided in *Appendix B*. Review of this table shows that the following study intersection would operate at an unacceptable Level of Service:

- #3 – El Segundo Boulevard at Pacific Coast Highway: PM – LOS E

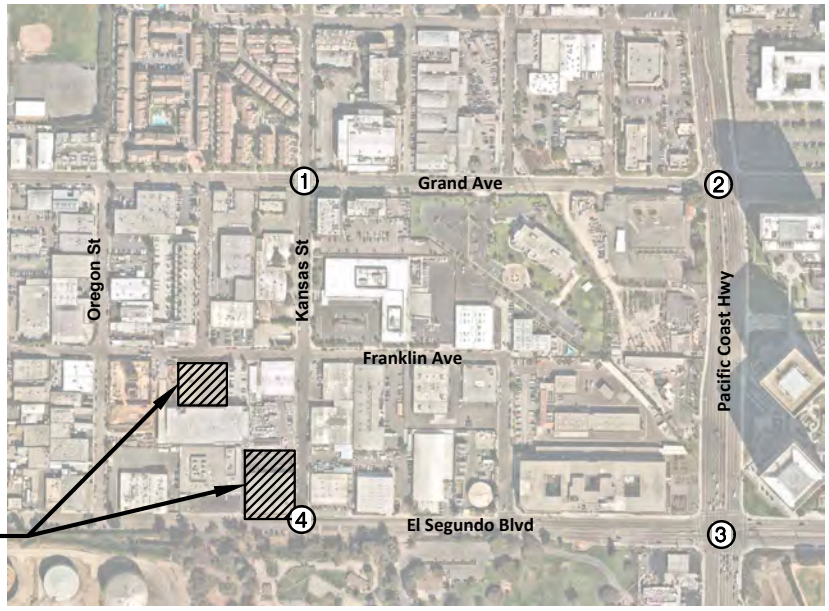
Horizon Year 2040 with Road Diet Plus Project

Project-related peak hour traffic volumes for the proposed project were added to the Horizon Year 2040 with Road Diet volumes to develop Horizon Year 2040 with Road Diet Plus Project traffic forecast volumes. The resulting peak hour traffic volumes are shown on Figure 9. The results of the Horizon Year 2040 with Road Diet Plus Project are summarized on Table 7. Intersection analysis worksheets are provided in *Appendix B*. Review of this table shows that the following study intersection would operate at an unacceptable Level of Service:

- #3 – El Segundo Boulevard at Pacific Coast Highway: PM – LOS E
- #4 – El Segundo Boulevard at Kansas Street: PM – LOS E

The Level of Service for an unsignalized intersection is reported based on the single approach movement with the highest delay, which in this case, would be the southbound approach for intersections #4. The traffic on this approach would experience delay during the evening peak hour while waiting for an acceptable gap in traffic on El Segundo Boulevard. While the side street approach operates at a deficient Level of Service based on the highest delay approach, the overall intersection delay would be acceptable. Any queuing that occurs on the side street is contained on the minor intersection approach, would occur for only a limited period of time during the working week, and would not impact the progression of traffic on the main arterial.



TRAFFIC SIGNAL WARRANT ANALYSIS

A signal warrant analysis was conducted for the intersection of Kansas Street at El Segundo Boulevard (#4), based on the 2014 California Manual on Uniform Traffic Control Devices (CA MUTCD). The warrant was conducted using Warrant 3 (Peak Hour Warrant) for the following scenarios:

- Horizon Year 2040 with Approved Specific Plan
- Horizon Year 2040 with Approved Specific Plan Plus Project
- Horizon Year 2040 with Approved Specific Plan with Road Diet
- Horizon Year 2040 with Road Diet Plus Project

Traffic Signal Warrant Analysis worksheets are provided in *Appendix C*. Based on the signal warrant analysis, Warrant 3 was not met for any of the scenarios.

CONCEPT PLANS AND COST ESTIMATES

Based on the Smoky Hollow Specific Plan EIR Traffic Study, below are recommended improvements at deficient intersections:

- #2 – Grand Avenue at Pacific Coast Highway: New right-turn overlap phases on all approaches. With this improvement, the intersection would operate at an acceptable Level of Service. The project will contribute on a fair-share basis to this improvement.
- #3 – El Segundo Boulevard at Pacific Coast Highway: Second eastbound left-turn lane, new right-turn overlap phase at northbound approach. Although the intersection would continue to operate at an unacceptable Level of Service, the improvement would improve the overall delay. The project will contribute on a fair-share basis to this improvement.

The project fair-share proportion of these improvements are shown on Table 8. The project fair-share was based on the net difference in project trips between the proposed uses and existing uses (as noted in Table 3), which would equate to 115 net new trips in the AM peak hour and 114 net new trips in the PM peak hour.

Please contact me if you have any questions or if you need additional information.

Sincerely,

KIMLEY-HORN AND ASSOCIATES, INC.

Trevor Briggs, P.E. (C87664)

Pranesh Tarikere, P.E.

Scenario 1 EX AM
9/30/2021

Intersection Analysis Summary

ID	Intersection Name	Control Type	Method	Worst Mvmt	V/C	Delay (s/veh)	LOS
1	Grand Ave at Kansas St	Signalized	HCM 6th Edition	EB Right	0.215	33.2	C
2	Grand Ave at Pacific Coast Highway	Signalized	HCM 6th Edition	SB Left	0.673	30.8	C
3	El Segundo Blvd at Pacific Coast Highway	Signalized	HCM 6th Edition	SB Left	0.706	31.5	C
4	El Segundo Blvd at Kansas St	Two-way stop	HCM 6th Edition	SB Left	0.050	15.5	C

V/C, Delay, LOS: For two-way stop, these values are taken from the movement with the worst (highest) delay value. For all other control types, they are taken for the whole intersection.

Intersection Level Of Service Report
Intersection 1: Grand Ave at Kansas St

Control Type:	Signalized	Delay (sec / veh):	33.2
Analysis Method:	HCM 6th Edition	Level Of Service:	C
Analysis Period:	15 minutes	Volume to Capacity (v/c):	0.215

Intersection Analysis Summary

ID	Intersection Name	Control Type	Method	Worst Mvmt	V/C	Delay (s/veh)	LOS
1	Grand Ave at Kansas St	Signalized	HCM 6th Edition	WB Right	0.256	30.9	C
2	Grand Ave at Pacific Coast Highway	Signalized	HCM 6th Edition	SB Left	0.772	40.7	D
3	El Segundo Blvd at Pacific Coast Highway	Signalized	HCM 6th Edition	WB Left	0.906	66.6	E
4	El Segundo Blvd at Kansas St	Two-way stop	HCM 6th Edition	SB Left	0.147	22.2	C

V/C, Delay, LOS: For two-way stop, these values are taken from the movement with the worst (highest) delay value. For all other control types, they are taken for the whole intersection.

Intersection Analysis Summary

ID	Intersection Name	Control Type	Method	Worst Mvmt	V/C	Delay (s/veh)	LOS
1	Grand Ave at Kansas St	Signalized	HCM 6th Edition	WB Left	0.398	26.9	C
2	Grand Ave at Pacific Coast Highway	Signalized	HCM 6th Edition	NB Left	0.703	35.3	D
3	El Segundo Blvd at Pacific Coast Highway	Signalized	HCM 6th Edition	EB Left	0.767	39.1	D
4	El Segundo Blvd at Kansas St	Two-way stop	HCM 6th Edition	SB Left	0.126	25.0	C

V/C, Delay, LOS: For two-way stop, these values are taken from the movement with the worst (highest) delay value. For all other control types, they are taken for the whole intersection.

Intersection Analysis Summary

ID	Intersection Name	Control Type	Method	Worst Mvmt	V/C	Delay (s/veh)	LOS
1	Grand Ave at Kansas St	Signalized	HCM 6th Edition	EB Left	0.448	22.9	C
2	Grand Ave at Pacific Coast Highway	Signalized	HCM 6th Edition	NB Left	0.858	61.7	E
3	El Segundo Blvd at Pacific Coast Highway	Signalized	HCM 6th Edition	EB Left	1.054	104.0	F
4	El Segundo Blvd at Kansas St	Two-way stop	HCM 6th Edition	SB Left	0.255	32.2	D

V/C, Delay, LOS: For two-way stop, these values are taken from the movement with the worst (highest) delay value. For all other control types, they are taken for the whole intersection.

Intersection Analysis Summary

ID	Intersection Name	Control Type	Method	Worst Mvmt	V/C	Delay (s/veh)	LOS
1	Grand Ave at Kansas St	Signalized	HCM 6th Edition	WB Left	0.435	25.5	C
2	Grand Ave at Pacific Coast Highway	Signalized	HCM 6th Edition	NB Left	0.705	35.5	D
3	El Segundo Blvd at Pacific Coast Highway	Signalized	HCM 6th Edition	EB Left	0.770	40.1	D
4	El Segundo Blvd at Kansas St	Two-way stop	HCM 6th Edition	SB Left	0.137	25.4	D

V/C, Delay, LOS: For two-way stop, these values are taken from the movement with the worst (highest) delay value. For all other control types, they are taken for the whole intersection.

Intersection Level Of Service Report
Intersection 1: Grand Ave at Kansas St

Control Type:	Signalized	Delay (sec / veh):	25.5
Analysis Method:	HCM 6th Edition	Level Of Service:	C
Analysis Period:	15 minutes	Volume to Capacity (v/c):	0.435

Intersection Analysis Summary

ID	Intersection Name	Control Type	Method	Worst Mvmt	V/C	Delay (s/veh)	LOS
1	Grand Ave at Kansas St	Signalized	HCM 6th Edition	WB Right	0.364	31.8	C
2	Grand Ave at Pacific Coast Highway	Signalized	HCM 6th Edition	SB Right	0.866	65.3	E
3	El Segundo Blvd at Pacific Coast Highway	Signalized	HCM 6th Edition	EB Left	1.067	105.4	F
4	El Segundo Blvd at Kansas St	Two-way stop	HCM 6th Edition	SB Left	0.313	34.5	D

V/C, Delay, LOS: For two-way stop, these values are taken from the movement with the worst (highest) delay value. For all other control types, they are taken for the whole intersection.

Intersection Level Of Service Report
Intersection 1: Grand Ave at Kansas St

Control Type:	Signalized	Delay (sec / veh):	31.8
Analysis Method:	HCM 6th Edition	Level Of Service:	C
Analysis Period:	15 minutes	Volume to Capacity (v/c):	0.364

Intersection Analysis Summary

ID	Intersection Name	Control Type	Method	Worst Mvmt	V/C	Delay (s/veh)	LOS
1	Grand Ave at Kansas St	Signalized	HCM 6th Edition	WB Left	0.443	25.0	C
2	Grand Ave at Pacific Coast Highway	Signalized	HCM 6th Edition	NB Left	0.735	38.7	D
3	El Segundo Blvd at Pacific Coast Highway	Signalized	HCM 6th Edition	EB Left	0.805	42.4	D
4	El Segundo Blvd at Kansas St	Two-way stop	HCM 6th Edition	SB Left	0.139	26.4	D

V/C, Delay, LOS: For two-way stop, these values are taken from the movement with the worst (highest) delay value. For all other control types, they are taken for the whole intersection.

Intersection Level Of Service Report
Intersection 1: Grand Ave at Kansas St

Control Type:	Signalized	Delay (sec / veh):	25.0
Analysis Method:	HCM 6th Edition	Level Of Service:	C
Analysis Period:	15 minutes	Volume to Capacity (v/c):	0.443

Intersection Analysis Summary

ID	Intersection Name	Control Type	Method	Worst Mvmt	V/C	Delay (s/veh)	LOS
1	Grand Ave at Kansas St	Signalized	HCM 6th Edition	WB Left	0.412	27.0	C
2	Grand Ave at Pacific Coast Highway	Signalized	HCM 6th Edition	SB Right	0.898	78.7	E
3	El Segundo Blvd at Pacific Coast Highway	Signalized	HCM 6th Edition	EB Left	1.096	116.9	F
4	El Segundo Blvd at Kansas St	Two-way stop	HCM 6th Edition	SB Left	0.277	34.7	D

V/C, Delay, LOS: For two-way stop, these values are taken from the movement with the worst (highest) delay value. For all other control types, they are taken for the whole intersection.

Intersection Level Of Service Report
Intersection 1: Grand Ave at Kansas St

Control Type:	Signalized	Delay (sec / veh):	27.0
Analysis Method:	HCM 6th Edition	Level Of Service:	C
Analysis Period:	15 minutes	Volume to Capacity (v/c):	0.412

Intersection Analysis Summary

ID	Intersection Name	Control Type	Method	Worst Mvmt	V/C	Delay (s/veh)	LOS
1	Grand Ave at Kansas St	Signalized	HCM 6th Edition	WB Left	0.442	24.9	C
2	Grand Ave at Pacific Coast Highway	Signalized	HCM 6th Edition	SB Left	0.713	36.2	D
3	El Segundo Blvd at Pacific Coast Highway	Signalized	HCM 6th Edition	EB Left	0.694	30.0	C
4	El Segundo Blvd at Kansas St	Two-way stop	HCM 6th Edition	SB Left	0.139	26.4	D

V/C, Delay, LOS: For two-way stop, these values are taken from the movement with the worst (highest) delay value. For all other control types, they are taken for the whole intersection.

Intersection Level Of Service Report
Intersection 1: Grand Ave at Kansas St

Control Type:	Signalized	Delay (sec / veh):	24.9
Analysis Method:	HCM 6th Edition	Level Of Service:	C
Analysis Period:	15 minutes	Volume to Capacity (v/c):	0.442

Intersection Analysis Summary

ID	Intersection Name	Control Type	Method	Worst Mvmt	V/C	Delay (s/veh)	LOS
1	Grand Ave at Kansas St	Signalized	HCM 6th Edition	WB Right	0.358	32.1	C
2	Grand Ave at Pacific Coast Highway	Signalized	HCM 6th Edition	NB Left	0.889	45.4	D
3	El Segundo Blvd at Pacific Coast Highway	Signalized	HCM 6th Edition	EB Right	0.721	56.8	E
4	El Segundo Blvd at Kansas St	Two-way stop	HCM 6th Edition	SB Left	0.277	34.7	D

V/C, Delay, LOS: For two-way stop, these values are taken from the movement with the worst (highest) delay value. For all other control types, they are taken for the whole intersection.

Intersection Level Of Service Report
Intersection 1: Grand Ave at Kansas St

Control Type:	Signalized	Delay (sec / veh):	32.1
Analysis Method:	HCM 6th Edition	Level Of Service:	C
Analysis Period:	15 minutes	Volume to Capacity (v/c):	0.358

Intersection Analysis Summary

ID	Intersection Name	Control Type	Method	Worst Mvmt	V/C	Delay (s/veh)	LOS
1	Grand Ave at Kansas St	Signalized	HCM 6th Edition	WB Left	0.480	23.7	C
2	Grand Ave at Pacific Coast Highway	Signalized	HCM 6th Edition	SB Left	0.736	36.7	D
3	El Segundo Blvd at Pacific Coast Highway	Signalized	HCM 6th Edition	EB Left	0.727	34.9	C
4	El Segundo Blvd at Kansas St	Two-way stop	HCM 6th Edition	SB Left	0.150	26.8	D

V/C, Delay, LOS: For two-way stop, these values are taken from the movement with the worst (highest) delay value. For all other control types, they are taken for the whole intersection.

Intersection Level Of Service Report
Intersection 1: Grand Ave at Kansas St

Control Type:	Signalized	Delay (sec / veh):	23.7
Analysis Method:	HCM 6th Edition	Level Of Service:	C
Analysis Period:	15 minutes	Volume to Capacity (v/c):	0.480

Intersection LOS	D					

Intersection Analysis Summary

ID	Intersection Name	Control Type	Method	Worst Mvmt	V/C	Delay (s/veh)	LOS
1	Grand Ave at Kansas St	Signalized	HCM 6th Edition	WB Left	0.461	26.3	C
2	Grand Ave at Pacific Coast Highway	Signalized	HCM 6th Edition	NB Left	0.902	49.9	D
3	El Segundo Blvd at Pacific Coast Highway	Signalized	HCM 6th Edition	WB Left	0.723	60.4	E
4	El Segundo Blvd at Kansas St	Two-way stop	HCM 6th Edition	SB Left	0.338	37.3	E

V/C, Delay, LOS: For two-way stop, these values are taken from the movement with the worst (highest) delay value. For all other control types, they are taken for the whole intersection.

Intersection Level Of Service Report
Intersection 1: Grand Ave at Kansas St

Control Type:	Signalized	Delay (sec / veh):	26.3
Analysis Method:	HCM 6th Edition	Level Of Service:	C
Analysis Period:	15 minutes	Volume to Capacity (v/c):	0.461

CITY OF EL SEGUNDO

Planning Commission Agenda Statement

Meeting Date: February 10, 2022
Agenda Heading: Continued public hearing

TITLE:

Proposed Pacific Coast Commons Specific Plan and Mixed-use Commercial and Residential Development Project to Include 263 Residential Units and 11,252 square feet of Commercial Space at 475-629 North Pacific Coast Highway (PCH).

RECOMMENDATION:

It is recommended the Planning Commission:

1) Adopt Resolution No. 2905, recommending the City Council certify the EIR for the Pacific Coast Commons Specific Plan and Development Project;

2) Adopt Resolution No. 2905, recommending that the City Council approve General Plan Amendment No. GPA 19-01, Subdivision No. SUB 19-03 (Vesting Tentative Tract Map), Site Plan Review No. 19-01, Parking Demand Study, and Waiver of public right-of-way dedications for the Pacific Coast Commons Specific Plan and mixed-use development project; and,

3) Adopt Resolution No. 2905, recommending that the City Council adopt an Ordinance adopting the Pacific Coast Commons Specific plan (SP 19-01), approving a zone change (ZC 19-01), a zone text amendment (ZTA 19-08), and a Development Agreement (DA 19-02);

4) Adopt Resolution No. 2906, recommending that the City Council approve modifications to Conditional Use Permit No. 14-01 for the Aloft Hotel;

5) Adopt Resolution No. 2907, recommending that the City Council approve modifications to Conditional Use Permit No. 14-02 for the Fairfield Inn and Suites Hotel.

INTRODUCTION:

On November 18, 2021, at the applicant's request, the Planning Commission continued the item to December 9, 2021. Although the item was continued to a date certain, staff provided full notice again for the December 9, 2021 meeting. The day prior to the hearing, staff received lengthy correspondence from two legal firms commenting on the Environmental Impact Report (EIR) for the project. On the day of the hearing, the Planning Commission received oral testimony from members of the public that were

present at the meeting. Following the public testimony, the Planning Commission continued the item to a date uncertain to allow staff time to review the correspondence and prepare responses.

This report updates and replaces the analysis in the prior staff report for the December 9, 2021 meeting. It also includes the written correspondence received prior to the December 9, 2021 meeting, a summary of the oral testimony received during the meeting, and staff's responses to all the written and oral comments.

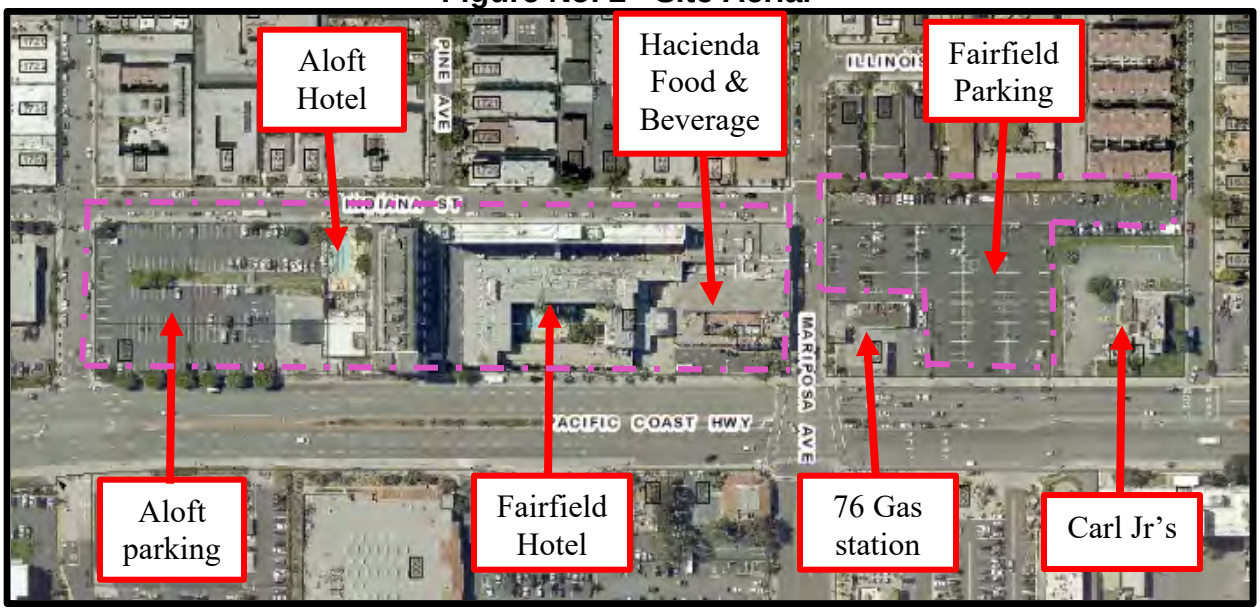
BACKGROUND:

The applicant, BRE El Segundo HOLDCO LLC, submitted an application for development of a mixed use project including commercial and residential uses on property generally located between Holly Avenue on the south, Indiana Street to the west, Palm Avenue to the north and North PCH to the east (see Figure 1, below). The property is currently occupied by two hotels (Aloft Hotel and Fairfield Inn and Suites), a vacant food and beverage building (former Hacienda hotel restaurant), and two open parking lots that provide parking for the two hotels.

The proposed mixed use project involves demolition of the existing food and beverage building and the construction of four new buildings consisting of 257 apartment units, 6 townhome condominium units, 11,252 square feet (sf) of commercial uses, and parking structures containing 792 parking spaces. Of the total 263 residential units, 32 are proposed as affordable housing units, further described below.

Figure No. 1 - Vicinity Map

High density residential uses are not currently permitted under the present General Plan Land Use designations for the site. Therefore, the overall project/request includes an application for a General Plan Amendment. Other applications associated with the project include a Zone Change, Zone Text Amendment, and Specific Plan.



The proposed entitlements, including the Specific Plan, Development Agreement and other entitlements are described in detail in the following sections of this report.

SITE DESCRIPTION:

The project site encompasses a "super-block" at 475-629 North Pacific Coast Highway (PCH) measuring 6.38 acres. The site is bounded by PCH, Holly Avenue, Indiana Street, and Palm Avenue, and bisected by Mariposa Avenue. Illustrated in Figures 2 and 3 below, the portion of the site south of Mariposa Avenue (South Site) has a General Plan Land Use designation of General Commercial and a Zoning designation of General Commercial (C-3). The South Site is currently improved with a 175-space parking lot; Aloft, a 246-room hotel; Fairfield Inn and Suites, a 350-room hotel; and a 41,660 sf vacant food and beverage building that previously operated as part of the Hacienda Hotel.

Illustrated in Figures 2 and 3 below, the portion of the site north of Mariposa Avenue (North Site) has a General Plan Land Use Designation of Parking and a Zoning designation of Parking (P). The North Site is currently improved with a 236-space surface parking lot, providing 213 spaces covenanted to the Fairfield Inn & Suites and 23 spaces covenanted to the Aloft hotel. The 7-Eleven/Unocal 76 gas station and Carl's Jr restaurant located at the corner of PCH and Mariposa Avenue and PCH and Palm Avenue respectively are not part of the project site.

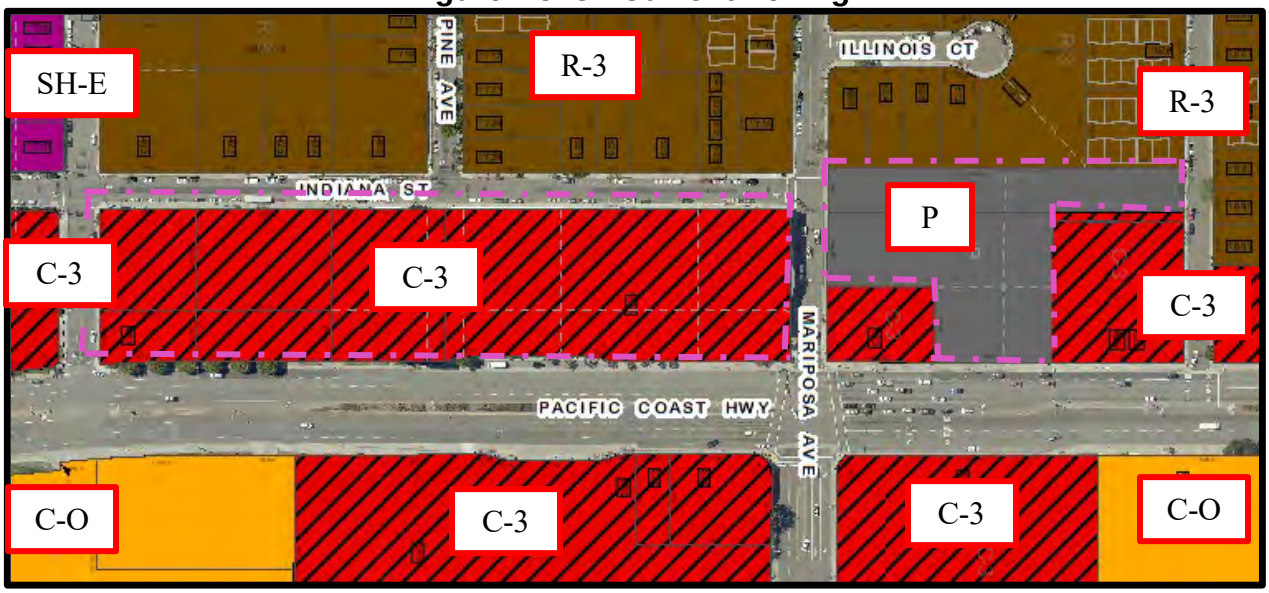


Figure No. 2 - Site Aerial

Surrounding Zoning and Uses

The properties immediately west of the project site are zoned Multi-Family Residential (R-3) and are developed with multi-family residential uses (apartments and condominium). The properties north of the site are in the R-3 and C-3 zones and are occupied by residential and commercial uses, including an existing fast-food restaurant and a vacant restaurant building. The properties east of the site, across PCH, are in the Corporate Office (CO) and C-3 zones and developed with office, retail, restaurant, and other commercial uses. The properties south of the site are in the C-3 and Smoky Hollow-East (SH-E) zones and occupied by a pharmacy, restaurant, and office uses. Figure No. 3 below illustrates the current zoning on and around the subject site.

Figure No. 3 - Current Zoning

PROJECT DESCRIPTION:

Entitlement Applications

The development project consists of a high-density mixed-use development, including 263 residential units and 11,252 sf of commercial space. High density residential uses are not permitted under the present General Plan Land Use designations for the site. Therefore, the overall project/request includes an application for a General Plan Amendment and other entitlements. Details of each application are provided below:

General Plan Amendment (GPA 19-01). A General Plan Amendment is proposed to create a new General Plan Land Use designation titled "Pacific Coast Commons Specific Plan (PCCSP)", which will replace the current General Commercial and Parking designations for the site (See Resolution Exhibit F). In addition, the proposed General Plan Land Use Element text will be modified to include a description of the new designation in the Land Use Plan section (See Resolution Exhibits C, D, and E).

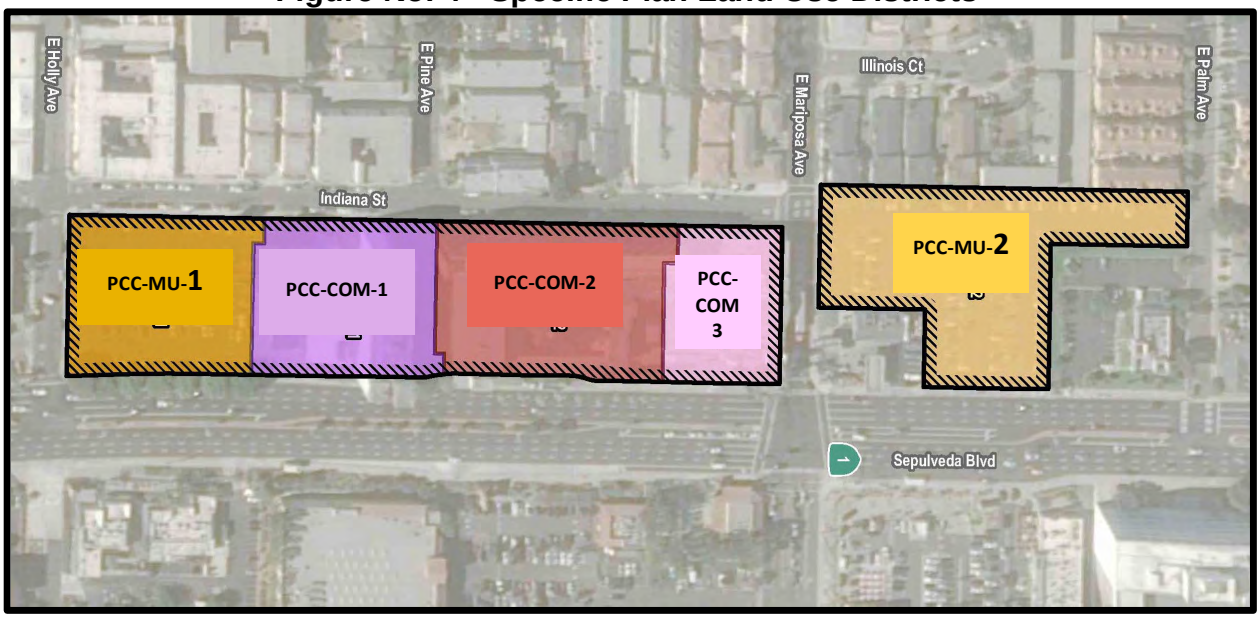
Zone Change (ZC 19-01). The zone change application is proposed to ensure that the Zoning Map designation for the site is consistent with the General Plan Land Use designation. Accordingly, the Zoning Map will change to replace the current General Commercial (C-3) and Parking (P) zoning designations for the site with a new PCCSP designation (See Resolution Exhibit B).

Zone Text Amendment (ZTA 19-08). The proposed Zone Text Amendment amends Zoning Code Section 15-3-2(A) to add a new Specific Plan Zone titled "Pacific Coast Commons Specific Plan" along with the new land use districts within the proposed Specific Plan.

Specific Plan (SP 19-01). A specific plan is a tool for the systematic implementation of the general plan that creates carefully tailored land use regulations within particular areas of the City. All future development plans and entitlements within a specific plan boundary must be consistent with the standards set forth in the adopted specific plan, even when they may be different from the general regulations contained in the El Segundo Municipal Code (ESMC). The proposed PCCSP establishes the regulations necessary to implement the proposed development project and maintain the conforming status of the existing hotel uses. The Specific Plan document covers the following regulatory areas, which are discussed in more detail below:

1) Specific Plan Land Use Plan

2) Design guidelines



3) Permitted uses and development standards

4) Administration/Site Plan Review procedures

1) Specific Plan Land Use Plan.

The applicant proposes to create five land use districts (or subareas) as illustrated below in Figure 4.

Figure No. 4 - Specific Plan Land Use Districts

PCC Mixed-Use 1 (PCC MU-1) – This land use district measures 1.24 net acres and includes the existing surface parking lot for the Aloft Hotel, but not the hotel itself. It is located at the southernmost parcel with frontage on PCH, Holly Avenue, and Indiana Avenue. The proposed PCC MU-1 land use district allows for development of multi-family residential uses (apartments) and commercial uses.

Within the PCC MU-1 district, the applicant proposes developing 120 apartment units, 5,756 gross sf of commercial space, and an 8-level parking structure accommodating 336 parking spaces. The name for this project sub-area is "PCC-South," and additional details of the proposed development concept within this district is provided below.

PCC Commercial-1 (PCC COM-1) – This land use district measures 0.95 net acre and is located northerly and adjacent to PCC MU-1, fronting along PCH and Indiana Avenue. The existing Aloft Hotel is located within this land use designation, which allows for hotel and several commercial uses.

Within the PCC COM-1 district, the applicant proposes to replace existing non-conforming fences, such as chain-link fencing, with decorative fencing design and material at the existing hotel site. Thus, since the applicant does not propose to remodel or rehabilitate the existing hotel at the present time, no construction activity occurs within this district.

PCC Commercial-2 (PCC COM-2) – This land use district measures 1.55 net acres and is located north of and adjacent to PCC COM-1 and fronts on PCH and Indiana Avenue. The existing Fairfield Inn and Suites is located within this land use designation, which allows for hotel and several commercial uses.

Within the PCC COM-2 district, the applicant proposes to replace existing non-conforming fences, such as chain-link fencing, with decorative fencing design and material at the existing hotel site. Thus, since the applicant does not propose to remodel or rehabilitate the existing hotel at the present time, no construction activity will occur within this district.

PCC Commercial-3 (PCC COM-3) – This land use district measures 0.73 net acres and is located north of and adjacent to PCC COM-2 and fronts on PCH, Indiana Avenue, and Mariposa Avenue. The existing Fairfield Inn and Suites hotel food and beverage building is located within this land use designation, which allows for hotel and several commercial uses.

Within the PCC COM-3 district, the applicant proposes to demolish the existing food and beverage building and replace it with a new 5-level parking structure for 215 parking spaces and construct 3,273 gross square feet of commercial space. The applicant also proposes to construct a dedicated right turn lane on the south side of Mariposa Avenue. The name for this component of the development project is "Fairfield Parking" and additional details of the proposed development concept within this district is provided below.

PCC Mixed-Use 2 (PCC MU-2) – Referred to as the North Site, this land use district measures 1.81 net acres and is the northernmost parcel in the project site and is located north of Mariposa Avenue, south of Palm Avenue, and west of PCH. The existing gas station and fast-food restaurant on this block are not part of the project site and are owned by different owners. This land use designation allows for residential and several commercial uses.

Within the PCC MU-2 district, the applicant proposes constructing 137 apartment units, 2,223 gross sf of commercial space, and a 6-level parking structure for 241 parking spaces. The applicant also proposes to develop six townhomes, with self-contained 2-car garages, on another parcel adjacent to Palm Avenue. The name for this component of the development project is "PCC-North," and additional details of the proposed development concept within this district is provided below.

2) Specific Plan Design Guidelines

The proposed Design Guidelines are intended as guidelines and, thus, are not development regulations. Therefore, strict compliance is not required. The design guidelines apply only to new development within the Specific Plan area, are used as metrics to determine when and if future development is consistent with the intent of the Specific Plan, and cover the following 10 design areas:

a) Site Planning

b) Access and Parking

c) Architecture/Orientation/Massing

d) Color and Materials

e) Screening and Mechanical Equipment

f) Parking Structures

g) Landscaping

h) Walls and Fences

i) Lighting Design

j) Signage

3) Specific Plan Development Standards

The Development Standards section lists in detail the regulations in 11 areas. Strict compliance is required and would apply to new development, additions, and redevelopment within the Specific Plan area:

a) Permitted Uses

b) Development Standards

c) Circulation

d) Parking and Loading

e) Landscaping

f) Common Recreation Facilities/Open Space and Private Open Space

g) Public Safety

h) Signage

i) Sustainability

j) Enclosed and Unenclosed Uses

k) Non-Conforming Uses and Buildings

4) Specific Plan Administration

The Administration section includes provisions for the following:

a) Introduction

b) Municipal Code References

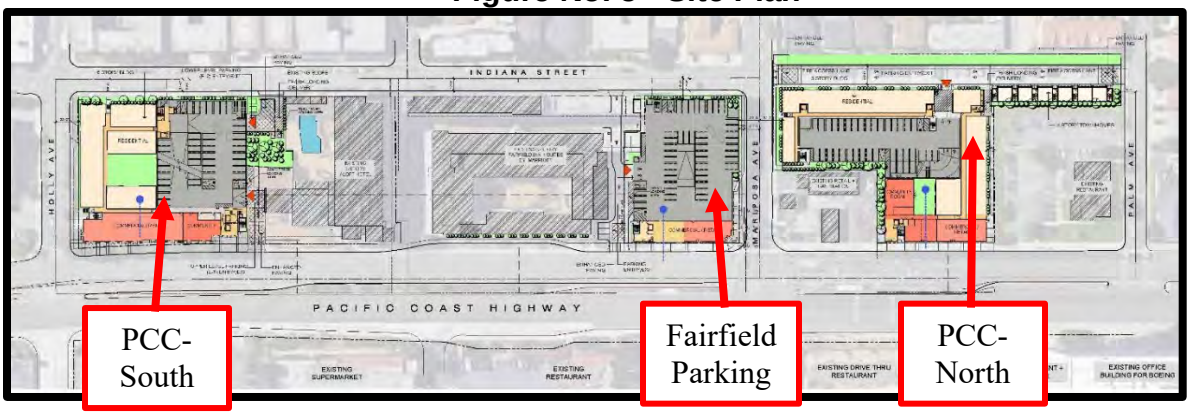
c) Modifications

d) Site Plan Review

e) Amendments

f) Infrastructure Improvements/Coordination

g) Financing Measures



h) California Environmental Quality Act Compliance

Site Plan Review SPR 19-01. Proposed PCCSP Section VII(D) requires approval of a Site Plan Review application for the proposed development project. This section of the staff report provides a physical description and evaluation of the development project.

Development Proposal

The applicant proposes to develop the Pacific Coast Commons mixed-use project on three districts comprised of two existing surface parking lots and an underutilized food and beverage hall as shown in Figure No. 5 below (PCC-South, Fairfield Parking, and PCC-North). Commercial uses are proposed on all three sub-areas, and residential uses on two sub-areas. The project exhibits contemporary design features and modulated building surfaces to enhance shadow lines and architectural features. The development project and Specific Plan development standards are summarized in the table below.

Figure No. 5 - Site Plan

PCC-South (PCC MU-1 District/Subarea): Bordered by PCH, Holly Avenue, Indiana Street, and the Aloft Hotel to the north, the proposed development at PCC-South includes a mixed-use 6-story building with 120 apartment units (105 market rate units and 15 affordable housing units), 5,756 gross sf of commercial space, and an 8-level parking structure containing 336 parking spaces as illustrated in Figure No. 6, below. The building will measure 72-feet in height as measured from lowest grade along PCH to top of parapet, and 83'-6" in height as measured from Indiana Street and Holly Avenue to top of parapet. In accordance with the proposed PCCSP, public and private open space will be provided. PCC-South features a private open-air courtyard (approximately 41'x70'), enclosed on all four sides by six floors of apartments, a large rooftop deck/pool area, a

community room, and private balconies for most units. The applicant also proposes private landscaping (ground cover and trees) along the outer edges of the built structure(s) as well as public street trees along the southern portion of PCH, Holly Avenue, and Indiana Street. Climbing fig plants will be added at certain locations along the parking structure facing Indiana Street.

Figure No. 6 – PCC-South Rendering

Fairfield Parking (PCC COM-3 District/Subarea): Bordered by PCH, Indiana Street, Mariposa Avenue, and the Aloft Hotel to the south, the proposed development incudes a 5-level parking structure accommodating 215 parking spaces and 3,273 gross sf of commercial space as illustrated in Figure No. 7 below. The building will measure 49.75-feet in height as measured from lowest grade along PCH to top of parapet, and 54'-6" in height as measured from lowest grade along Indiana Street to top of parapet. The applicant also proposes a 2-level "green wall", along the parking structure facing Indiana Street. The new parking structure will serve the parking needs of both Aloft hotel and Fairfield Inn that are currently encumbered on another parcel. The new structure will also serve the parking needs of the commercial uses and guest parking for the residential uses.

Figure No. 7 – Fairfield Parking Rendering

PCC-North (PCC MU-2 District/Subarea): Encompassing the existing surface parking lot and fire lane in the area north of Mariposa Avenue generally bounded by Carl's Jr. and the 7-Eleven/Union 76 Gas Station, the proposed development includes a 6-story mixed-use building with 137 apartment units (120 market rate units and 17 affordable housing units), 2,223 gross sf of commercial space, and a 6-level parking structure containing 252 parking spaces as illustrated in Figure No. 8 below. The proposed building will be 74-feet in height as measured from lowest grade along Mariposa Avenue, and 72'-6" as measured from lowest grade along PCH to top of parapet.

Figure No. 8 – PCC North Rendering

Townhomes
Six townhomes with 2-car garages are also proposed on a separate lot within PCC-North, as illustrated in Figure No. 9 below. The proposed building height, from lowest grade, is 44.7-feet along Palm Avenue to top of parapet and 47'-6" along the adjacent grade, south of the building. In accordance with the proposed PCCSP, public and private open space are provided. The proposal includes a private open-air courtyard (approximately 31'x51'), enclosed on all four sides by six floors of apartments and parking levels, a large rooftop deck/pool area, two community rooms, and private balconies for most units. The applicant is proposing to add private landscaping (ground cover and trees) along the outer edges of the built structure(s).

Figure No. 9 – Townhomes Rendering

Table No. 1 below provides a breakdown of the project's parking, floor area, number of units, and development intensity in each sub-area where new construction is proposed.

Table No. 1 – Specific Plan and Project Development Intensity/Summary

Use	Units / Number of Parking Spaces	Conceptual Site Plan Building Area (in square feet)		Specific Plan Maximum Buildout Building Area (in square feet)		Parcel Square Footage	FAR	Dwelling Units per Acre
		Net Area	Gross Area	Net Area	Gross Area

Commercial		2,156	2,223	2,156	2,223		–	
Parking structure	241 spaces	–	–	–	–		–	
Townhomes	6 units	9,540	10,344	9,540	10,344	13,649		19.17
PCC MU-2 Total		170,758	176,039	179,450	185,000	79,890	2.25	77.97
Total Development Areas		**317,257**	**327,068**	**329,800**	**340,000**		–	–

As illustrated in the table above, the proposed project site plan complies with the residential density and overall floor area ratio (FAR) limits of the Specific Plan.

Subdivision (SUB 19-03). Construction of the proposed development requires consolidation and reconfiguration of the existing parcels on the subject property to ensure that the new buildings do not cross legal parcel lines. As a result, the applicant has submitted an application for a Vesting Tentative Tract Map (VTTM 82806).

The vesting tentative tract map reconfigures the existing 12 lots south of Mariposa Avenue and the 3 parcels (4 lots) north of Mariposa Avenue into six individual lots (one lot for each of the five land use designations plus one lot for the townhome portion of the site). The vesting tentative tract map will provide:

- One residential ground and airspace parcel for 120 apartment units and a maximum of ten airspace parcels for commercial condominiums on Lot 1 (i.e., PCC-South)
- Ground and airspace parcel for the parking structure and up to ten airspace parcels for commercial condominiums on Lot 4 (i.e., Fairfield Parking)
- One residential ground and airspace parcel for 137 apartment units and up to a maximum of 20 airspace parcels for commercial condominiums on Lot 5 (i.e., southern portion of PCC-North)
- Six residential condominiums (townhomes) on Lot 6 (northern portion of PCC-North)

The vesting tentative tract map currently depicts the legal lots without the street dedications required on Mariposa Avenue, Indiana Street, Holly Avenue and Palm Avenue. The dedications are required as conditions of approval and will be provided through irrevocable offers to dedicate land before the final tract map is recorded and/or buildings are occupied.

DISCUSSION:

General Plan Consistency

In considering the proposed project, the Planning Commission reviews components of each requested application and considers the merits of the project to make a recommendation for City Council's consideration. This will include recommending that the project is consistent with the General Plan. The project is consistent with the goals and policies in the Economic Development, Land Use, Circulation, Housing, Open Space and Recreation, Conservation, Noise, and Public Safety General Plan Elements. It will increase the City's tax base, provide a mixed-use and pedestrian friendly environment, provide need housing, make improvements to the street network, and it will comply with all applicable building safety, noise, and air quality/construction related regulations. A detailed analysis of the General Plan consistency can be found in the attached draft resolution (Attachment No. 1).

City Council Strategic Plan Consistency

The proposed Specific Plan is also consistent with City Council Strategic Plan Goal No. 5 to Champion Economic Development and Fiscal Sustainability. Specifically, the proposed Specific Plan addresses the Council's priority to "identify areas within the community that are appropriate for housing." PCH serves as a primary corridor through El Segundo. A range of business and services are complimented by residential units

along commercial corridors by minimizing the oversaturation of non-residential uses as properties are redeveloped, reduces overall traffic, encourages and facilitates a stronger local customer base, and expands service demands on local business and services.

Housing Element Consistency

The City is currently updating its General Plan Housing Element. One of the goals of this process is to identify adequate locations to meet the City's RHNA (Regional Housing Needs Allocation), which is 521 units for the 2021-2029 Housing Element period. The 521 units are divided into the following affordability categories:

Table No. 2 – Housing Element RHNA allocation

Income Category	5th Cycle Carryover	6th Cycle RHNA	Total RHNA	Percent
Very Low Income	18	189	207	39.7%
Low Income	11	88	99	19.0%
Moderate Income	0	84	84	6.1%
Above Moderate Income	0	131	131	25.1%
Total	29	492	521	100.0%

The proposed Specific Plan results in the construction of 263 residential units, including 32 units set aside for low and very low-income households (See Development Agreement discussion below). As a result, the Specific Plan meets a substantial proportion of the City's RHNA allocation in both the affordable and market rate units.

In addition to helping meet the City's RHNA requirements, the proposed location is a good location for higher density housing. The location along PCH corridor can better accommodate higher density residential development compared to other parts of the City, because of its proximity to many existing amenities/uses, such as:

- Commercial retail and services (grocery store, restaurants, etc.).
- Park and recreation facilities.
- School facilities (elementary and middle school within walking distance).
- A major employment area east of PCH.

Further, the proposed location is advantageous due to its proximity to existing and planned transportation facilities, including:

- PCH, a major north-south commuting route and LAX connection.
- I-105 and I-405 freeways, major regional transportation corridors

- LA Metro Bus and Beach Cities Transit Bus lines that provide connections to nearby cities and to the LA Metro Green Line.
- LA Metro Green Line and Crenshaw Corridor Line. The nearest Green Line station to the PCC Specific Plan is half a mile away, at Mariposa and Nash. Once the Crenshaw Corridor project is completed (in 2022), it will connect the Green Line with the Expo Line and allow convenient transportation to Downtown Los Angeles and the West Los Angeles/Santa Monica area without using a car.

For the above reasons, the proposed PCC Specific Plan location meets the Council goal of identifying appropriate locations for housing.

Parking Discussion and Analysis

The applicant is providing enough on-site vehicular parking for the PCC project as required by ESMC Chapter 15-15 and the PCC Specific Plan. Based upon a parking demand study and shared parking analysis conducted by Fehr & Peers and peer-reviewed by Dudek, the City's consultant, the Specific Plan is requiring the mixed-use project to provide parking as described in Table No. 3 below.

Table No. 3: PCCSP Parking Requirements

Use/Unit Type	Minimum Number of Parking Spaces
Market Rate Units	
Studio	1.0
One-Bedroom	1.5
Two-Bedroom	2.0
Townhomes	2.0
Guest Parking	1/3 parking space per residential unit; may be shared with commercial uses; up to 5% of residential parking spaces within Specific Plan area may be shared with other uses.
Affordable Housing Units	
Studio	0.5
One-Bedroom	1.0
Two-Bedroom	1.5
Guest Parking	0.0
Non-Residential Uses	
Commercial, Restaurants, Hotel	Number of parking spaces to be determined by an approved parking demand study and shared use analysis

Compact Parking for Residential and Commercial Uses	Maximum of 20% of spaces
Tandem Parking for Residential Only	Maximum of 20% of spaces
Vehicle Lifts for Residential and Hotel Uses Only	Maximum of 10% of spaces

The PCC project provides 792 parking spaces within the three parking structures plus an additional 33 at-grade parking spaces on the Fairfield Inn and Suites site, 26 of which will remain after construction. Of the 792 parking spaces within the parking structures, the applicant is providing compact spaces and tandem spaces only in the PCC-North area (41 compact spaces, and 22 tandem spaces, which is less than the maximum allowed by the PCC Specific Plan and the ESMC). There are no compact spaces or tandem spaces in PCC-South and Fairfield Parking areas. Parking spaces for residential uses are reserved for the individual tenants, except for the 5% of residential spaces that may be shared with non-residential and guest parking. Residential parking within PCC-South and PCC-North meets the Specific Plan requirements as depicted in Table No. 4.

Table No. 4: Parking Compliance Analysis

Site	Use	Specific Plan Required Spaces	Parking Supply	Designated Residential Spaces
	All Market Rate Units (257)			
PCC-South	*Hotel* *Residential* *Guest/Retail*	126* 170 40*	336	165
Fairfield Parking	*Hotel/Retail*	213*	215	0
PCC-North	*Residential* *Guest/Retail*	194 47*	241	189
Total		**790**	**792**	**354**
	225 Market Rate Units Plus 32 Affordable Units			
PCC-South	*Hotel* *Residential* *Guest/Retail*	126* 140 35*	336	165
Fairfield Parking	*Hotel/Retail*	213*	215	0

PCC-North	*Residential* *Guest/Retail*	185 40*	241	189
Total		**739**	**792**	**354**

*There is no specific requirement for commercial uses in the Specific Plan. The commercial uses will share the parking spaces with the residential and/or hotel guests based on the Parking Demand Study and Shared Parking Analysis.

The parking requirements are reduced with the inclusion of affordable housing, pursuant to State law. The PCC Specific Plan specifies that parking rates for affordable housing units are less than for market rate units. As further discussed in the affordable housing agreement, the applicant will provide 32 affordable units, including 18 studios, 11 one-bedroom, and 3 two-bedroom units. This composition of affordable housing units reduces the parking requirement from a total of 790 spaces for all market rate units to 739 spaces for the proposed mix of market rate and affordable units.

Loading and Trash Pick-Up Discussion and Analysis

The applicant is providing loading/unloading spaces pursuant to ESMC Section 15-15-7 and the PCC Specific Plan as follows:

PCC-South: Two small truck loading areas are provided near the parking structure entrance on Indiana Street, on Level P-2, to serve the residents and commercial tenants. Residential trash pick-up is located in the same area. Commercial trash service is located on Level L-1, at-grade on PCH. The applicant is providing a dedicated area west of the parking structure entrance for commercial trash pick-up as well as an additional delivery area. The exact location is not identified on the plans.

Fairfield Parking: The applicant is providing an area for loading and trash service west of the parking structure entrance. The trucks will enter from PCH onto the one-way driveway in a westerly direction and exit the site onto Indiana Street. Smaller delivery trucks can access the parking structure and park along the rear of the commercial spaces.

PCC-North: Parking for loading/unloading and commercial and residential trash service is provided from the fire lane in a separate area (approximately 10’x30’) between the apartments and townhomes.

Bicycle Parking Discussion and Analysis

The applicant is providing the appropriate number of bicycle parking for both residential and commercial and uses as stipulated by ESMC Section 15-15-6 and PCC Specific Plan. Multi-family residential requires bicycle parking equivalent to 10 percent of the required vehicle parking spaces and for commercial uses, a minimum of four bicycle spaces for up to 15,000 square feet of commercial space.

Table No. 5: Bicycle Parking

Site	Residential Use		Commercial Use	
	Code	Provided	Code	Provided
PCC-South	34	34	4	4
Fairfield Parking	0	0	4	4
PCC-North	24	24	4	4
Total	**58**	**58**	**12**	**12**
Aloft Hotel and Fairfield Inn & Suites			**8***	**8***

*These are existing bicycle spaces to be replaced as part of the development.

Bicycle parking for both residential and commercial uses are located on private property, with the exception of bicycle parking in the Fairfield Parking area where it is located in the public right-of-way, specifically on the public sidewalk adjacent to the store window. The applicant will be required to obtain an encroachment permit and enter into a maintenance agreement to place the commercial bicycle parking spaces in the public right-of-way.

In addition to the new residential and commercial bicycle parking spaces, the applicant is replacing 8 existing bicycle parking spaces located in front of the Fairfield banquet facility, which will be demolished in the first phase of construction. These 8 bicycle spaces will be used by hotel guests and employees and reallocated equally between the two hotel sites.

Landscape Plan Discussion and Analysis

The applicant has provided a conceptual Landscape Plan and Plant Palette (Attachment No. 5). A full set of Landscape and irrigation Plans will be developed prior to issuance of a building permit and is included as a Condition of Approval. Landscaping is provided in the street setback areas, the two central courtyards, around the parking structures, and within the two pool/roof decks. To provide a variety of sizes of landscaping, including trees that will quickly reach maturity, ESMC Section 15-2-14 requires the following minimum sizes for plant material:

Table No. 6 – Minimum Plant Material Sizes

Container Size	Required	Provided
Trees		
60” box	Not Required	4%
36” box	20%	62%
24” box	30%	34%
15 gallon	50%	-
Shrubs		
5 gallon	100%	100%

In lieu of providing the smaller 15-gallon trees, the applicant has proposed to meet the requirement with larger trees.

Generally, the interior of the site has limited landscaping, due to the compact nature of the development. The proposed landscaping consists primarily of medium size trees within street facing and interior setback areas between parcels within the Specific Plan and properties outside the Specific Plan.

One exception is a portion of the 15-foot setback between PCC North and the abutting residential properties to the west. Staff recommends and has included a condition of approval requiring the applicant to plant additional trees and other landscaping along the entire western setback area, with the tree species being subject to staff review and approval (see Site Plan Review discussion below).

Site Plan Review Discussion and Analysis

During project review, staff proposed several design modifications to the project; however, as part of the ongoing negotiation of the Development Agreement, these items were not included in the final development proposal in order to accomplish a financially feasible project, while providing the City's requested 12% affordable housing units. As such, staff recommends including certain conditions requiring non-structural design changes to further improve the project.

The following discussion is included to provide the Planning Commission a complete picture of the project review process and some concessions made to reach a draft agreement with the applicant. The discussion also highlights the major design modifications conceded during the review process and the minor design modifications recommended as conditions of approval.

PCC North and PCC South elevations:
The proposed elevations of both buildings provide a variety of colors and materials, as well as changes in building planes (step-backs) that provide visual relief from the ground level to the top of the structures. It is unclear from the plans how big those building plane variations are, because they are not fully dimensioned. Condition of approval No. 17 requires submittal of detailed, fully dimensioned drawings for Development Services Director review and approval clearly showing the extent of the building step-backs and various architectural elements. With adequate details on the plans, staff can better evaluate the buildings' architectural design features. Any changes to the design that staff requires would not substantially affect the overall design of the project. Further, this will ensure internal architectural consistency and compatibility.

PCC North and PCC South courtyards/plazas:
As mentioned in the site plan design guidelines discussion, the proposed mixed-use buildings do not include any courts or plazas along the PCH frontage that can serve as gathering spaces and encourage more pedestrian activity. Staff recommends that, at a

minimum, some of the commercial spaces be designed with recessed entries or storefronts to allow for outdoor seating or retail displays, or provision of amenities such as bicycle parking. Condition of approval No.18 requires submittal of revised plans that promote a pedestrian oriented design that does not result in the loss of square footage, including recessed storefronts to accommodate amenities such as seating, bike parking, outdoor dining, outdoor retail display, etc. for the commercial uses at PCC North, PCC-South, and Fairfield Parking sites, subject to Development Services Director review and approval.

This condition partly replaces the public gathering/plaza design feature, in that it will provide some architectural relief, provide a better pedestrian experience, and encourage some pedestrian activity without substantially or structurally altering the overall design.

PCC South – West elevation (Indiana Street):
The west elevation of PCC South fronts on Indiana Street, which is occupied exclusively by residential uses on the west side of the street. Staff recommended during the review process that the project incorporate residential units with entrances along Holly Avenue and Indiana Street to add more visual interest and pedestrian activity along the project frontage on those streets and to better integrate the project with the residential uses across Indiana Street. Although staff continues to believe that such a design would result in a more pedestrian oriented development and street activation, staff does not recommend a re-design to include residential units at the street level.

PCC North Firelane and setback area (Blue Wall):
As mentioned in the project description, PCC North utilizes a 26-foot wide driveway along the western part of the property to provide access to the apartment building parking garage and the townhome units (see Figure No. 10 below). Directly next to the proposed firelane is an existing 6-foot tall concrete block wall painted blue, which is proposed to remain in place. However, it is not located on the western property line;it is set back 15 feet away from the property line, which creates an underutilized 15-foot strip of land running the entire length of the property from Mariposa Avenue to Palm Avenue. During the project review, staff recommended that the wall be removed, rebuilt at the actual property line, and that the 15-foot strip of land be incorporated into the development in the form of a landscaped setback, a pedestrian path, a seating/recreational area, or a combination of those options. This could provide a pedestrian connection and/or recreation space between Mariposa Avenue and Palm Avenue. Instead of removing the blue wall, the applicant proposes to paint it and plant climbing fig to cover the wall and provide some visual relief for residents driving along the firelane.

Rather than require a substantial re-design of the 15-foot setback area along PCC North, staff recommends condition of approval No. 16, which requires new trees or other landscaping materials be planted along the entire 15-foot wide setback area between Mariposa Avenue in order to contribute to screening and sound attenuation. Staff believes the condition will improve the project design and is common practice for new projects particularly those projects abutting residential uses.

Townhome site layout*:*

The proposed six townhomes are arranged in a row north-to-south at the north end of the site. They have a very small ground floor footprint consisting only of a two-car garage space and a stairway leading to the upper floors. All garages are oriented west and take access directly off the firelane/access driveway that runs north-south between Palm Avenue and Mariposa Avenue. The firelane/access driveway does not have a sidewalk along this portion of the site, although there is a sidewalk adjacent to the apartment building directly south of this location.

To improve pedestrian mobility and add more landscaping along the access driveway, staff recommended and a change to the townhome configuration. This would consist of reducing the number of townhomes to four and re-orienting the garages in a north-south direction so that they face each other. This would create more space between the townhome buildings and the fire lane to provide a sidewalk and landscaping, which would then extend from Mariposa Avenue all the way to Palm Avenue.

Staff does not recommend a substantial redesign of the project to re-orient or remove the townhomes. However, staff raised this issue during the project review process and development agreement negotiations to improve the project's design along the firelane without reducing the overall number of residential units.

Townhome Elevations:
The west elevations facing the firelane provide more variety in materials and building planes. This is partly because the garages, main entrances, and the balconies/decks on the upper levels are oriented toward the west. Staff believes that the east elevation should have a similar details and variety. Condition of approval No. 23 requires submittal of revised drawings for the townhome building that incorporate equal detail and variety in building planes and materials on all the elevations, subject to the Development Services Director review and approval that do not result in the loss of square footage. With additional architectural features, such as windows, balconies, etc., the east elevations will provide sufficient variety and interest without affecting the overall design substantially or structurally. Further, staff believes these features provide visual relief and minimize the apparent bulk and mass of the structure.

Figure No. 12 – Townhome Elevations

Additional Specific Plan Design Issues Considered

Circulation:
A potential improvement to the circulation within the Specific Plan area would be to extend Indiana Street from Mariposa Avenue to Palm Avenue as a public or a private street. The Specific Plan circulation plan currently contemplates a private access driveway/firelane at the same location with gates at either end restricting access only to the residential and commercial uses onsite. Removing the gates and adding a full-length sidewalk along this

driveway would provide an additional vehicular and pedestrian connection for the entire neighborhood. Staff recommended allowing public access along this private driveway and studying the potential impacts in the draft Environmental Impact Report (EIR). However, the applicant elected to proceed with the Specific Plan as currently presented.

Specific Plan boundaries:
One potential limitation of the PCC Specific Plan is that it does not incorporate at a minimum the two parcels abutting the PCC North site that are developed with the Unocal 76 station and the Carl's Jr restaurant. Staff believes that inclusion of those two parcels would have allowed for a more efficient design of the entire city block, while producing even more housing (including affordable units). However, the applicant elected to proceed without incorporating additional parcels in the Specific Plan.

Recreation/Open Space:
The Specific Plan does not contemplate any public open space that is accessible to residents or businesses outside the Specific Plan property. There are courtyards and community rooms on the ground level and rooftop decks/pools in each of the mixed-use districts of the Specific Plan, but those amenities are available only to residents of the proposed development. Providing public courtyards, as mentioned above, or replacing some or all of the townhomes in the PCC-North area with a public park would provide an additional amenity for the entire neighborhood. Staff recommended providing public open space where the townhomes are located and compensating by adding more residential units on the top level of the mixed-use buildings. However, the applicant elected to proceed with Specific Plan as currently presented, without publicly available open space.

Commercial Condominiums:
A staff concern with the proposed tract map relates to the proposed for commercial airspace units. The concern is about responsibility for the maintenance of common areas, trash, and landscaping. If the commercial area is divided and sold to multiple owners, the responsibility for the common areas may be neglected. The overall commercial floor area for the project is 11,252 gross sf and up to 30 commercial condominium units are proposed. The conditions of approval currently require recordation of CC&Rs, subject to City review and approval, that address maintenance of common areas and landscaping, including landscaping in the public right-of-way. Alternatively, the Planning Commission or City Council may consider either reducing the number or eliminating the commercial airspaces from the tract map.

Most of the above staff recommendations on the project site plan design were intended to provide physical and visual connections between the proposed development and the surrounding neighborhood, to add more interest at the ground level, and promote more pedestrian activity around the project site. Staff's objective was to better integrate the proposed development into the community around it. However, in the interest of reaching an agreement on the Development Agreement and the percentage of affordable units, staff did not pursue these points further. If the Planning Commission believes these issues are worth further exploring, the Commission has the authority to ask the applicant

to address them, including any potential implication on project design or impact to the number of affordable housing units, prior to making a decision on the project or including additional conditions when formulating a recommendation to City Council.

Dedications and Waiver Request

Chapter 24A of the Municipal Code requires certain right of way dedications in order for streets around the project site to meet the minimum standards in the Circulation Element of the General Plan. The required dedications based on the Circulation Element and the proposed dedications for the project are described in Table No. 7 below.

Table No. 7 – Required Dedications and Waiver Requests

Street Segment	Required Dedication	Requested Waiver	Net Proposed Dedication
Holly Avenue (North)	7 feet	0 feet	7 feet
Indiana Street (East)	7 feet	3 feet	4 feet*
Mariposa Avenue (South)	7 feet	3 feet	4-12 feet**
Mariposa Avenue (North)	7 feet	0 feet	7 feet
Palm Avenue (South)	12 feet	0 feet	12 feet

*Along Indiana Street, dedications are required only along the property frontage where new construction will occur (Fairfield Parking and PCC South Sites). No dedication is required along the existing hotel properties' frontage.
**The dedication width along the south side of Mariposa Avenue varies to accommodate the width of a proposed right-turn lane.

In accordance with ESMC Chapter 24A, the applicant has submitted a request to partially waive the dedications on two street segments, along Mariposa Avenue (South) and Indiana Street (East). After reviewing the requested waivers, the Public Works Director determined that the necessary findings can be made to approve the request. Specifically, even with the reduced dedications, both Indiana Street and Mariposa Avenue will maintain the minimum necessary width for emergency vehicle access and normal two-way operations, as well as maintain the minimum required public sidewalk widths. As a result, staff recommends that the Planning Commission recommend approval of the proposed dedication waivers to City Council. A more detailed discussion of the findings is provided in the attached draft resolution (Attachment No. 1).

Right Turn Lane:
The proposed project includes construction of a dedicated right-turn lane on eastbound Mariposa Avenue to southbound PCH. As a result, the east bound lanes of Mariposa Avenue at PCH would be reconfigured from one left-turn lane and one through-right lane, to one left-turn, one through, and one right-turn lane. The proposed right-turn lane is 10 feet wide and approximately 50 feet long (at full width) with a gradual (60-foot) taper. Based on the traffic analysis for the project, inclusion of the proposed right-turn lane will improve the operation and traffic flow at the Mariposa Avenue/PCH intersection.

Modifications to hotel CUP approvals

In 2014, the Planning Commission approved a Subdivision (SUB 14-05) to combine the underlying Hacienda Hotel site into two parcels to allow the Hacienda Hotel to be split into two hotels and remodeled. It also approved two conditional use permits (CUP 14-01 and CUP 14-02) to regulate the alcohol sales and service at each of the hotels. Resolutions Nos. 2759 and 2760 regulating the alcohol sales and service at each hotel also contain unrelated conditions regarding:

a. Subdivision No. SUB 14-05;
b. Off-site parking for the two hotels;
c. A lot-tie covenant between the Fairfield hotel site and the parking lot north of Mariposa Avenue; and
d. Construction conditions related to the 2014 remodel.

All these conditions (a-d) will be superseded with the approval of the proposed Pacific Coast Commons project, which contains conditions regarding sharing of access and parking between the proposed lots in the Specific Plan area. However, the existing CUPs and conditions regarding the alcohol sales and service need to remain in place. As a result, staff recommends that the Planning Commission approve resolutions Nos. 2906 and 2907 recommending City Council approve modifications to the existing CUPs to retain only those conditions related to the alcohol sales and service at each hotel.

Development Agreement Discussion and Analysis

City staff and applicant negotiated the attached Development Agreement to stipulate and to clarify the benefits, which each party is providing towards the completion and on-going implementation and maintenance of the PCC project. The term of the Development Agreement is 15 years and provides for an annual monitoring and reporting of good faith performance by both parties.

The Development Agreement stipulates that the applicant shall comply with this Agreement, and all Project approvals and EIR mitigation measures. The items contained in the Development Agreement are in addition to the code-required project development.

The applicant is providing the following additional development improvements, which are not required in either the City's General Plan, Zoning Ordinance, or PCC Specific Plan, and are considered to be of benefit to the community. The applicant is providing the following items as contained in the Development Agreement:

- **Affordable Housing:** The applicant agrees to provide 32 units of affordable housing for 55 years and to pay for an independent affordable housing consultant to monitor the implementation of the affordable housing program. The Affordable

Housing provisions are further detailed in a separate affordable housing agreement, which is discussed in the next section.

- **Preferential Parking Zone:** The applicant agrees to contribute $25,000 towards the establishment of a permit parking district, contingent upon community initiation. If after three years nearby residents do not initiate a parking district, the funds may be used towards the implementation of any public improvement that benefits the immediate neighborhood.

- **Community Meeting Room:** The applicant agrees to provide a meeting room for community non-profits to use at no charge.

- **Additional Public Landscaping and Public Seating Areas**: The applicant agrees to provide additional street trees on certain sections of the west side of Indiana Street, near Holly Avenue, as well as along the southern portion of PCH. The applicant further agrees to provide solo seating facilities, on private property, along the PCH frontage.

- **Enhanced Paving:** The applicant agrees to provide enhanced paving materials for specific locations to increase pedestrian safety.

- **EV Charging Stations:** The current CalGreen code requires 62 parking spaces to be capable of converting into an EV Charging Station. The applicant agrees to provide 200 EV spaces, of which 50 will have operational charging stations upon the completion of each construction phase. The remaining 150 EV parking spaces will be capable of converting to EV Charging Stations at a later date.

- **Solar Panels and Battery Storage:** The applicant agrees to provide solar panels, mounted on the top floor of the parking structures, to provide electricity for the project common areas, as well as battery storage units.

In exchange for the community benefits, the City is providing certain assurances to the applicant that reduces the applicant's risk and increases certainty:

- Certainty that the PCC Project is subject to only those City fees, codes, and regulations that are in effect at the time of approving the Development Agreement.
- Expedited process to review building plans.

Affordable Housing

As mentioned earlier in this report, the City's RHNA obligation is 521 units distributed among four income categories based on Table No. 8 below.

Table No. 8 – Housing Element RHNA allocation

Income Category	5th Cycle Carryover	6th Cycle RHNA	Total RHNA	Percent
Very Low Income	18	189	207	39.7%
Low Income	11	88	99	19.0%
Moderate Income	0	84	84	6.1%
Above Moderate Income	0	131	131	25.1%
Total	29	492	521	100.0%

The above RHNA obligation for the 2021-2029 period is seven times larger than that for the previous planning period (2013-2021). As a result, finding an adequate number of potential housing locations in the City and incentivizing and/or requiring the construction of affordable units is imperative. The PCC project offers an opportunity for the City to make significant progress towards meeting its RHNA obligations. The 32 affordable units agreed to in the Development Agreement will meet a significant proportion of the City's RHNA obligations in the low and very low-income categories. As part of the development agreement, the applicant will record two affordable housing agreements, one for each housing site (PCC South and PCC North). The two affordable housing agreements are attached to this report as Development Agreement Exhibits D1 and D2. Each agreement defines the affordability requirements, requires the affordable housing units to be equitably distributed throughout the two residential sites, provides the minimum number and type of apartment unit for each income category (summarized in Table No. 9 below), and identifies the annual monitoring requirements and reporting methodology.

Table No. 9 – Affordable Unit Types and Income Levels

Housing Site	Type of Unit	PCC South	Affordable Housing Units (Sub-Set of Total)	Affordability Levels
PCC South	Studios	44	9	1 Very Low/8 Low
	One Bedrooms	52	5	5 Low
	Two Bedrooms	24	1	1 Low
	Subtotals	**120**	**15**	**1 Very Low/14 Low**
PCC North	Studios	47	9	2 Very Low/7 Low
	One Bedrooms	67	6	6 Low
	Two Bedrooms	23	2	2 Low
	Subtotals	**137**	**17**	**2 Very Low/15 Low**
	Totals	**257**	**32**	**3 Very Low/29 Low**

Development Feasibility Analysis

The Development Agreement negotiations were informed by the findings of a Development Feasibility Analysis conducted by Keyser Marston Associates (KMA), the City's economic/financial consultant for this project. KMA based their analysis on construction pro forma information provided by the applicant, their own expertise in public and private real estate development, and market information on current rents and sales prices for real estate. For their analysis KMA also assumed that 10% (or 26) of the proposed residential units would have rents restricted at levels affordable to households with low incomes. The purpose of the analysis was to help determine whether the project would be financially feasible if it incorporates a certain percentage of affordable units and to what extent the City could gain additional benefits through the Development Agreement. KMA's analysis indicates that with 10% of the residential units set aside for low income households, the proposed development is feasible, but that there is little ability to negotiate for additional benefits to the City.

Fiscal Impact Analysis

In addition to the Development Feasibility Analysis, KMA peer reviewed a Fiscal Impact Analysis prepared by Stanley Hoffman Associates (SHA), a consultant retained by the applicant. The purpose of the Fiscal Impact Analysis was to determine the impact of the proposed project on the City budget through a comparison of the anticipated annual City revenues (taxes, service charges, etc.) with the anticipated annual City costs for services (Police, Fire, Recreation, etc.) from the project. KMA peer-reviewed the Fiscal Impact Analysis and agreed with its estimate that the proposed development would have a net negative impact on the City budget of $127,631 annually. For contextual purposes, KMA indicated to staff that residential developments generally tend to have a more negative fiscal impact for cities compared to commercial developments.

ENVIRONMENTAL REVIEW

Notice of Preparation

Pursuant to the requirements of the California Environmental Quality Act (CEQA) and based on staff's review of the project and discussion with the applicant, City staff concluded that the project necessitated the preparation of an EIR. As such, on May 26, 2020, the City distributed a Notice of Preparation (NOP) for an EIR, initiating a 30-day public scoping period that concluded on June 25, 2020. The purpose of the NOP was to indicate formally that the City was preparing a Draft EIR for the PCC Project and, as Lead Agency, to solicit input regarding the scope and content of the Draft EIR. The City held a public scoping session on June 10, 2020 to provide the public with an opportunity to learn more about the PCC Project before submitting any written comments. The NOP was distributed to all Responsible Agencies, as well as other agencies; property owners and occupants within a 300-foot radius from the subject property, plus additional occupants of properties immediately east of Independence Park between Holly Avenue

and Palm Avenue, and published in the El Segundo Herald. The NOP was also posted on the City's website.

Draft EIR

After the NOP comment period ended, the Draft EIR was prepared taking into account and addressing the various comments received during the NOP phase. After completing the Draft EIR, the document was made available to the public on February 25, 2021 for a 45-day public comment and circulation period that concluded on April 12, 2021. The purpose of this circulation period is to allow the public and agencies to provide input on the content and analysis contained in the Draft EIR.

The Draft EIR analysis determined that the project would have less than significant impacts in the following topical issues: Aesthetics, Agriculture and forestry Resources, Air Quality, Biological Resources, Cultural Resources, Energy, Geology and Soils, Greenhouse Gas Emissions, Hazards and Hazardous Materials, hydrology and Water Quality, Land Use, Mineral Resources, Noise, Population and Housing, Public Services and Recreation, Transportation, Utilities and Services Systems, and Wildfire. In addition, the analysis determined that the project would have less than significant impacts with mitigation incorporated in the following issues: Air Quality, Cultural Resources, Geology and Soils, Hazards and Hazardous Materials, Noise, Transportation, and Tribal Cultural Resources. The impacts and mitigation measures related to these environmental factors are summarized in the Final EIR Executive Summary. Finally, the Draft EIR analysis found that the project would have a significant and unavoidable impact to Air Quality.

Final EIR

As a result of circulating the Draft EIR, the City received 37 comment letters. The Final EIR document contains a section titled "Response to Comments," which contains each written comment submitted, responses to each comment, and a section containing the mitigation measures identified in the EIR document to reduce impacts to a less than significant level. Lastly, the Final EIR contains an Errata section to the DEIR, which contains some minor modifications to the text for clarification or edits resulting from the comments received. The text modifications are shown in <u>underline</u> for language added and ~~strikethrough~~ for language deleted. As a result of the comment and circulation periods associated with the NOP and the subsequent Draft EIR, and with the edits made to the Final EIR and responses to comments, no new impacts have been identified to warrant recirculation of the document or significant amendments to the analysis.

EIR Findings

Pursuant to CEQA requirements, the City is required to adopt two sets of findings prior to approving a project that will generate a significant and unavoidable impact on the environment: 1) Statement of Facts and Findings, and 2) a Statement of Overriding Considerations.

Statement of Facts and Findings: The Statement of Facts and Findings identifies the significant impacts, presents facts supporting the conclusions reached in the analysis, makes one or more of the following three findings for each impact, and explains the reasoning behind the City's findings. The possible findings are as follows:

1. Changes or alteration have been required in, or incorporated into, the project which avoid or substantially lessen the significant environmental effect as identified in the Final EIR.
2. Such changes or alterations are within the responsibility and jurisdiction of another public agency and not the agency making the finding. Such changes have been adopted by such other agency or can and should be adopted by such other agency.
3. Specific economic, legal, social, technological, or other considerations, including provision of employment opportunities for highly trained works, make infeasible the mitigation measures or project alternatives identified in the Final EIR.

The attached Exhibit "4", titled "Findings of Fact and Statement of Overriding Considerations" provides draft findings for each of the impacts identified and provides the necessary supporting evidence. In summary, staff believes that Finding No. 3 can be adopted because:

a. The proposed project would maintain the existing hotel uses while providing for a mixed-use multiple-family and commercial neighborhood.

b. The proposed project would provide additional housing opportunities that support the goals of the Housing Element of the City's General Plan.

c. The proposed project would improve the jobs/housing balance in the City of El Segundo, help address the regional housing shortage, and support and retain existing businesses by providing needed housing for employees.

d. The proposed project would enhance bicycle and vehicular circulation through roadway intersection improvements that facilitate a safe and walkable community along PCH.

e. The proposed project would eliminate surface parking lots and provide parking garages that allow for sharing among hotel, commercial, and residential land uses.

f. The proposed project would reduce single-occupancy vehicle use by providing a mix of land uses in walkable proximity to the Metro C Line and the City's downtown.

Based upon the mitigation measures identified in the EIR document, this finding can be made and adopted.

Statement of Overriding Considerations: The Statement of Overriding Considerations is required when a project will cause an unavoidable significant impact that cannot be mitigated. The EIR prepared for the proposed project identifies potentially significant environmental impacts within one issue area related to Air Quality, which cannot be fully mitigated and is therefore considered significant and unavoidable. Specifically, in regards to Air Quality, the proposed project would conflict with the region's Air Quality Management Plan (AQMP) population and housing estimates. The project site is located within the South Coast Air Basin (SCAB), which is under the jurisdiction of the South Coast Air Quality Management District (SCAQMD). SCAQMD administers the Air Quality Management Plan for the region which relies on population growth estimates in the Final SCAG 2016 RTP/SCS for the 2012-2040 period. Using population and housing estimates from the California Department of Finance, the City has a household size of 2.35 persons per household (DOF 2020). Assuming a household size of 2.35 persons per household, the proposed Project's residential units would accommodate 618 individuals upon its anticipated full occupancy in 2025. Considering the population growth anticipated in the 2016 RTP/SCS of 600 individuals within the City between 2012 and 2040, the proposed Project would result in a population growth in the City that would exceed the growth assumptions in the 2016 RTP/SCS, and would thereby exceed the population growth assumptions in the AQMP. There are no feasible mitigation measures for population growth. As a result, for the purposes of CEQA analysis, the proposed Specific Plan will have a significant and unavoidable impact with regard to AQ.

As a result, a Statement of Overriding Considerations must be adopted, (ultimately, by the City Council for this project). In adopting a Statement of Overriding Considerations, Staff believes that the following finding can be made:

The proposed project's benefits outweigh the significant and unavoidable impacts and, therefore, those impacts are acceptable in light of the proposed project's benefits. Each of the following benefits is an overriding consideration, independent of the other benefits, that warrants approval of the proposed project notwithstanding the proposed project's significant and unavoidable impacts related to air quality. The proposed project would provide several public benefits, including, without limitation, the following:

1. The Project is consistent with the City's housing strategy to facilitate the development of affordable housing units and meet its Regional Housing Needs Allocation (RHNA).

2. The Project will physically improve two underutilized parking lots and a vacant 41,660 square-foot food and beverage building and replace them with 263 much needed housing units as well as 11,252 square feet of retail, service and restaurant uses to serve the neighboring residents and businesses.

3. The Project make land dedications and several improvements in the public right-of-way that will improve vehicular, bicycle, and pedestrian circulation in the area, including:

a. Construction of a right turn lane from eastbound Mariposa Avenue onto southbound PCH.
b. Widening and sidewalk reconstruction along Holly Avenue between PCH and Indiana Street.
c. Installation of street trees along PCH, Holly Avenue, Indiana Street, Mariposa Avenue, and Palm Avenue.
d. Installation of public seating along PCH.

4. The Project is consistent with the City's housing strategy to direct growth in regional centers and areas near transit stations, major bus centers, and bus stops along major bus routes.

5. The Project is a mixed-use development that would generate fewer vehicle trips than traditional single-use and subdivision development, and it would take advantage of existing infrastructure systems serving the area.

6. The Project would implement the majority of the proposed measures by the California Air Pollution Control Officers Association (CAPCOA) to reduce GHG emissions, which also reduce criteria pollutants.

7. Promotes consistency with regional growth strategies, such as the SCAG 2016-2040 Regional Transportation Plan and Sustainable Communities Strategy, by increasing density within the Plan area.

To the extent the Air Quality impact would remain significant after mitigation, this impact is acceptable and outweighed by social, economic and other benefits of the project. Further, the alternatives that were identified in the Final EIR would not provide the project benefits to the same extent as the proposed project.

Therefore, having reviewed and considered the information contained in the Final EIR, Technical Appendices and the public record, staff believes that a Statement of Overriding Considerations has been balanced against the unavoidable adverse impacts in reaching a decision on this project, and that a Statement of Overriding Considerations can be adopted.

As indicated above, the attached Exhibit "4", titled "Findings of Fact and Statement of Overriding Considerations", provides the details and justification for making the necessary findings and Statement of Overriding Considerations.

PUBLIC COMMENTS

The day of the December 9, 2021 Planning Commission meeting staff received lengthy and substantial written correspondence from two legal firms commenting and expressing concern about the analysis in the EIR:

1) Legal firm Mitchell M. Tsai representing Southwest Regional Council of Carpenters ("Southwest Carpenters" or "SWRCC") and
2) Legal firm Lozeau Drury, LLP representing Supporters Alliance For Environmental Responsibility ("SAFER").

Due to the extent and substantive nature of the comments, the Planning Commission -at staff's recommendation- continued the item to a date uncertain to give staff adequate time to review and respond to the comments. Prior to continuing the item, the Planning Commission also received oral testimony from several residents and interested parties who attended the December 9, 2021 meeting. The written correspondence, a summary of the oral testimony received, as well as responses to each of the comments, are attached as Exhibit No. 11.

Further, since the December 9, 2021 meeting, staff has received correspondence from residents expressing general concern on issues such as parking (during and after construction), traffic, and construction noise that are addressed in this report and the EIR. That written correspondence is attached as Exhibit No. 10.

ADDITIONAL INFORMATION:

Specific Plan Public Outreach/Participation

When the applicant initially approached staff with a development concept in 2019, staff suggested the applicant commence rigorous public outreach efforts due to the number of residential properties and neighborhoods that abut and are in close proximity to the specific plan area. Staff suggested the applicant also take a proactive approach to engage with the community, listen to their issues and concerns, and work with them to create a development project that is sensitive to those abutting communities. In response, the applicant conducted a community-wide open house meeting at the Fairfield Inn & Suites hotel and a virtual community meeting via Zoom. These meetings were advertised by sending individual mailers to residents living within 300' of the specific plan boundaries and was further extended to the residents living west of the Freedom Park along Washington Street. The two meetings were attended by at least 56 participants. City staff also attended these two meetings to observe and note the feedback provided by the community. Generally, the feedback consisted of questions/concerns regarding traffic, parking, height, noise, and air quality impacts from the project's construction and operation. The applicant also presented the project to four local community service organizations, including the Chamber of Commerce, El Segundo Kiwanis Club, El Segundo Rotary Club, and the El Segundo Unified School District Board. City staff were not present at these additional meetings/presentations. Information concerning the project, including renderings and plans, was also posted on the City's website and the applicant's website. The Specific Plan was posted on the website and copies were available for public review at the Development Services Department.

RESOLUTION NO. 2905

A RESOLUTION MAKING FINDINGS OF FACT PURSUANT TO CEQA AND RECOMMENDING THAT THE CITY COUNCIL (1) CERTIFY THE ENVIRONMENTAL IMPACT REPORT (ENVIRONMENTAL ASSESSMENT NO. EA-1248) FOR THE PACIFIC COAST COMMONS SPECIFIC PLAN PROJECT, MAKE FINDINGS OF FACT AND ADOPT A STATEMENT OF OVERRIDING CONSIDERATIONS; (2), ADOPT GENERAL PLAN AMENDMENT NO. GPA 19-01, SPECIFIC PLAN NO. SP 19-01, ZONE CHANGE AND ZONING MAP AMENDMENT NO. ZC 19-01, AND ZONE TEXT AMENDMENT NO. ZTA 19-08; (3) APPROVE DEVELOPMENT AGREEMENT NO. 19-02; (4) APPROVE SUBDIVISION NO. SUB 19-03, SITE PLAN REVIEW NO. SPR 19-01, PARKING DEMAND STUDY AND SHARED PARKING USE ANALYSIS; AND (5) APPROVE A WAIVER OF PUBLIC RIGHT-OF-WAY DEDICATIONS FOR THE PACIFIC COAST COMMONS SPECIFIC PLAN AND PACIFIC COAST COMMONS MIXED-USE PROJECT.

The Planning Commission of the City of El Segundo does resolve as follows:

SECTION 1: The Planning Commission finds and declares that:

A. On May 31, 2019, BRE El Segundo Property Owner A LLC, BRE El Segundo Property Owner B LLC, and BRE El Segundo Parking LLC, submitted applications for Environmental Assessment No. EA-1248, General Plan Amendment and General Plan Map Amendment No. GPA 19-01, Specific Plan No. SP 19-01, Zone Change and Zoning Map Amendment No. ZC 19-01, Zone Text Amendment No. ZTA 19-08, Development Agreement No. 19-02, Subdivision No. SUB 19-03, Site Plan Review No. SPR 19-01, Parking Demand Study and Shared Parking Use Analysis, and waiver of public right-of-way dedications for the Pacific Coast Commons Specific Plan and Pacific Coast Commons mixed-use project;

B. The project applications were reviewed by the City's Development Services Department for, in part, consistency with the General Plan and conformity with the El Segundo Municipal Code ("ESMC");

C. The City reviewed the project's environmental impacts under the California Environmental Quality Act (Public Resources Code §§ 21000, *et seq.*, "CEQA"), the regulations promulgated thereunder (14 Cal. Code of Regulations §§15000, *et seq.*, the "CEQA Guidelines");

D. An Environmental Impact Report (EIR) was prepared pursuant to the requirements of CEQA Guidelines Section 15161 as more fully set forth in Section 9 below;

E. The Development Services Department completed its review and scheduled a public hearing regarding the application before the Planning Commission for

November 18, 2021;

F. On November 18, 2021, the Planning Commission held a duly noticed public hearing to receive public testimony and other evidence regarding the application;

G. On November 18, 2021, the Planning Commission continued the public hearing to December 9, 2021; and

H. On December 8, 2021 a letter was submitted to the City by Mitchell M. Tsai, Attorney At Law, on behalf of the Southwest Regional Council of Carpenters ("Carpenters' Letter") objecting to the Project and referring to an earlier letter which had never been received by the City which raised issues with the EIR; and

I. Based on the submission of the Carpenters' Letter the City determined that it would be necessary to continue the hearing to allow time to respond, but nevertheless took testimony on December 9, 2021; and

J. During the public testimony portion of the hearing, a letter was submitted by the Lozeau Drury law firm on behalf of Supporters Alliance For Environmental Responsibility ("SAFER letter");

K. On February 10, 2022, the Planning Commission held a new duly noticed public hearing to receive public testimony and other evidence regarding the application;

L. This Resolution and its findings are made based upon the evidence presented to the Commission at its November 18, 2021, December 9, 2021, and February 10, 2022 hearings including the staff reports submitted by the Development Services Department and the totality of the evidence in the administrative record.

SECTION 2: *Factual Findings and Conclusions*. The Planning Commission finds that the following facts exist:

A. The subject property is located at 475-629 North Pacific Coast Highway in the northwest quadrant of the City of El Segundo.

B. The property site is a level 6.385 gross acre site located on two blocks along Pacific Coast Highway.

C. The project site is comprised of two blocks and is currently improved with two existing hotels and two existing paved parking lots. The block bounded by Pacific Coast Highway, Holly Avenue, Indiana Street and Mariposa Avenue is currently developed with the 350-room Fairfield Inn and Suites and the 246-room Aloft hotels totaling approximately 325,000 gross square feet combined and a paved parking lot. The portion of the project site on the block north of Mariposa Avenue and south of Palm Avenue is developed with a paved surface parking lot. No trees are located

on the parking lot site.

D. The project is a residential and commercial mixed-use concept. The Specific Plan would allow 622,398 gross square feet of development including 282,398 square feet of existing development that would remain. The proposed maximum development density is a 2.70 Floor Area Ratio (FAR) after dedications for right-of-way improvements. The Specific Plan would allow a maximum of two hundred sixty-three (263) residential dwelling units including thirty-two (32) affordable housing units located among three of the Land Use Districts within the Specific Plan. Each new lot will meet or exceed the minimum size and dimension requirements.

E. The surrounding land uses include a fast food restaurant (Carl's Jr.), a vacant restaurant and parking lot, and multi-family residential uses to the north and a gas station on the northwest corner of Mariposa Avenue and Pacific Coast Highway; restaurants and office uses, a Ralphs market, two commercial shopping centers with retail and restaurant uses, and a 6- story office building to the east; a small commercial shopping center with a drug store, bank, two restaurants and retail store to the south; and multi-family residential uses to the west.

F. Development standards for allowable uses have been developed for the Specific Plan and all uses within the Plan area must be compliant. The allowed uses identified in the development standards include multiple-family residential uses including both townhomes and apartments, and a range of commercial uses including but not limited to, hotel, retail, restaurant, and offices.

G. The proposed General Plan re-designation and rezoning of the Project Site would change the General Plan land use designation from General Commercial and Parking to the Pacific Coast Commons Specific Plan (PCCSP) land use designation and rezone the area from the General Commercial (C-3) Zone and Parking (P) Zone to the Pacific Coast Commons Specific Plan (PCCSP) Zone.

H. The PCCSP contains five land use designations. These are: PCC Mixed-Use 1 (PCC MU-1), PCC Commercial-1 (PCC COM-1), PCC Commercial-2 (PCC COM-2), PCC Commercial-3 (PCC COM-3), and PCC Mixed-Use 2 (PCC MU-2). The PCC MU-1 designation applies to one parcel comprised of 1.241 acres after right-of-way dedications. The PCC COM-1 designation applies to one parcel comprised of 0.905 acres after right-of-way dedications. The PCC COM-2 designation applies to one parcel comprised of 1.549 acres after right-of-way dedications. The PCC COM-3 designation applies to one parcel comprised of acres after 0.728 acres after right-of-way dedications. The PCC MU-1 designation applies to two parcels comprised of 1.806 acres after right-of-way dedications.

I. The Project includes completion of a roadway widening on Mariposa Avenue and the addition of a new eastbound dedicated right-turn only travel lane that turns

south onto Pacific Coast Highway. The Project also includes roadway widening on Holly Avenue.

SECTION 3: *General Plan Consistency Findings*. The Planning Commission finds that the proposed Project will further the goals, objectives and policies of the General Plan and not obstruct their attainment. The Project's consistency with the General Plan is analyzed below:

A. ECONOMIC DEVELOPMENT ELEMENT

Goal ED1: To create in El Segundo a strong, healthy economic community in which all diverse stakeholders may benefit.

Objective ED1-1 To build support and cooperation among the City of El Segundo and its business and residential communities for the mutual benefits derived from the maintenance and expansion of El Segundo's economic base.

Policy ED1-1.1: Maintain economic development as one of the City's and the business and residential communities' top priorities.

Policy ED1-2.1: Seek to expand El Segundo's retail and commercial base so that the diverse needs of the City's business and residential communities are met.

Policy ED1-2.2: Maintain and promote land uses that improve the City's tax base, balancing economic development and quality of life goals.

Analysis: In order to have a strong economic base and maintain and attract high-caliber businesses, there needs to be housing for employees in nearby areas. The provision of 263 new housing units, ranging in size from studio units to townhome style condominiums, including 32 affordable units, provides new housing opportunities that will help maintain and expand the City's business community. The addition of new residents will help support the local businesses in the area. The redevelopment of the project area, from unused buildings and surface parking lots, along with new commercial development, will add to the City's tax base allowing the City to continue providing high quality services to the residents and daytime population.

B. LAND USE ELEMENT

Policy LU1-5.8: Innovative land development and design techniques as well as new materials and construction methods should be encouraged.

Goal LU3: Promote the health, safety, and well-being of the people of El Segundo by adopting standards for the proper balance, relationship, and distribution of the residential land uses.

Objective LU3-1: Preserve, protect, and extend, if possible, existing Single-Family Residential uses.

Policy LU3-2.1: Promote construction of high-quality Multi-Family Residential development with ample open space, leisure and recreational facilities.

Policy LU3-2.2: Multi-family development will be located only in appropriate places and evaluated carefully to ensure that these developments are not detrimental to the existing single-family character.

Objective LU3-3.1: Adopt and enforce recreational area requirements for large multiple unit developments.

Analysis: The project is located on the eastern edge of the residential area of the City, adjacent to multi-family development and will not impact existing single-family neighborhoods. The project will be of the highest quality residential development with common space areas such as pools, courtyards, and a community center.

Goal LU4: Provide a stable tax base for the City through development of new commercial uses, primarily within a mixed-use environment, without adversely affecting the viability of Downtown.

Objective LU4-1: Promote the development of high-quality retail facilities in proximity to major employment centers.

Policy LU4-1.1: Require landscaping, its maintenance, and permanent upkeep on all new commercial developments.

Policy LU4-1.2: All commercial facilities shall be built and maintained in accordance with Health and Safety Code requirements and shall meet seismic safety regulations and environmental regulations.

Policy LU4-1.4 New commercial developments shall meet seismic safety standards and regulations, as well as comply with all noise, air quality, water and environmental regulations.

Analysis: The project is a mixed-use project, mixing residential and commercial development on the west side of Pacific Coast Highway. The commercial development will serve the new residents and adjacent business community and not detract from the businesses in Downtown. The developments will be required to maintain the landscape and premises and all buildings will be constructed to meet the most current building code requirements as well as be designed to comply with all environmental regulations.

Objective LU4-4: Provide areas where development has the flexibility to mix uses, in an effort to provide synergistic relationships

which have the potential to maximize economic benefit, reduce traffic impacts, and encourage pedestrian environments.

Policy LU4-4.6: Promote mixed-use development near transit nodes and encourage modes of transportation that do not require an automobile.

Analysis: The project is located along a major bus route corridor and approximately ½ mile from a Green Line Station and within close proximity to major employment centers allowing for people to walk, ride bicycles, and/or use public transportation. Additionally, as the project is mixed-use, there will be amenities for the resident population on-site, thereby reducing vehicular trips.

Goal LU7: Provide the highest quality public facilities, services, and public infrastructure possible to the community.

Policy LU7-1.2: No new development shall be allowed unless adequate public facilities are in place or provided for.

Policy LU7-2.3: All new development shall place utilities underground.

Analysis: The project will be required to pay public facility impact fees, including for facilities, vehicles, and equipment for law enforcement, fire suppression, and general services, as well as libraries, community centers, and road projects.

C. CIRCULATION ELEMENT

Goal C1: Provide a safe, convenient, and cost-effective circulation system to serve the present and future circulation needs of the El Segundo community.

Objective C1-1: Provide a roadway system that accommodates the City's existing and project land use and circulation needs.

Policy C1-1.8: Provide all residential, commercial, and industrial areas with efficient and safe access to the major regional transportation facilities.

Policy C1-1.9: Provide all residential, commercial, and industrial areas with efficient and safe access for emergency vehicles.

Policy C1-1.14: Require a full evaluation of potential traffic impacts associated with proposed new developments prior to project approval. Further require the implementation of appropriate mitigation measures prior to, or in conjunction with project development. Mitigation measures may include new roadway links on segments that would connect the new development to the existing roadway system, intersection improvements, and other measures.

Mitigation measures shall be provided by or paid for by the project developer.

Objective C1-3: *Ensure that the City's Master Plan Truck Route System efficiently serves the shipping needs of the commercial and industrial land uses in El Segundo while balancing potential conflicts with residential and recreation land uses throughout the City.*

Policy C1-3.2: Ensure that the development review process incorporates consideration of off-street commercial loading requirements for all new projects.

Objective C2-1: *Provide a pedestrian circulation system to support and encourage walking as a safe and convenient travel mode within the City's circulation system.*

Policy C2-1.6: Encourage shopping areas to design their facilities for ease of pedestrian access.

Policy C2-1.7: Closely monitor design practices to ensure a clear pedestrian walking area by minimizing obstructions, especially in the vicinity of intersections.

Objective C2-2: Provide a bikeway system throughout the City to support and encourage the use of the bicycle as a safe and convenient travel mode within the City's circulation system.

Policy C2-2.1: Implement the recommendations on the Bicycle Master Plan contained in the Circulation Element, as the availability arises; i.e., through development, private grants, signing of shared routes.

Policy C2-2.2: Encourage new development to provide facilities for bicyclists to park and store their bicycles and provide shower and clothes changing facilities at or close to the bicyclist's work destination.

Policy C2-5.1: Ensure that Transportation Demand Management (TDM) measures are considered during the evaluation of new developments within the City, including but not limited to ridesharing, carpooling and vanpooling, flexible work schedules, telecommuting and car/vanpool preferential parking.

Policy C3-1.8: Require the provision of adequate pedestrian and bicycle access for new development projects through the development review process.

Policy C3-2.1: Ensure the provision of sufficient on-site parking in all new development.

Analysis: The project was thoroughly reviewed by the City's Development Services Department to ensure the adequacy of parking facilities and

pedestrian access and also reviewed by the Fire and Police Department. A parking study was provided to demonstrate the adequacy of the parking. The project will provide 70 bicycle parking spaces for residents and guests. The sidewalks along Pacific Coast Highway are 12 feet wide, allowing for a pedestrian-friendly environment for the mixed-use development. The project will include a widening of eastbound Mariposa Avenue, approaching Pacific Coast Highway, to include a right-turn only lane. Additionally, the project will provide dedications and irrevocable offers of dedication for other right-of-way improvements.

D. HOUSING ELEMENT

Goal 3: Provide opportunities for new housing construction in a variety of locations and a variety of densities in accordance with the land use designations and policies in the Land Use Element.

Analysis: The project provides a variety of new housing opportunities, including 32 affordable units, at the eastern edge of the City's residential area along Pacific Coast Highway, along with densities that are not realistically achievable in other areas of the City.

E. OPEN SPACE AND RECREATION ELEMENT

Goal OS1: Provide and maintain high quality open space and recreational facilities that meet the needs of the existing and future residents and employees within the City of El Segundo.

Analysis: The project will pay impact fees, including those for libraries, public use facilities, and parks/open space and recreation facilities. Additionally, the project will provide common open space areas including rooftop pools, courtyards and community rooms which would provide an alternative to public parks and recreational facilities.

F. CONSERVATION ELEMENT

Policy CN2-5: Require new construction and development to install water-conserving fixtures and appliances to reduce the amount of new demand.

Policy CN2-7: Require new construction and development to incorporate the principles and practices of sound landscape design and management, particularly those conserving water and energy.

Policy CN2-8: Encourage the retrofitting of existing landscapes to incorporate the principles and practices of sound landscape design and management, particularly those conserving water and energy.

Policy CN2-11: Encourage, whenever appropriate and feasible, development techniques which minimize surface run-off and allow replenishment of soil moisture. Such techniques may include, but not be limited to, the on-site use and retention of storm water, the use of pervious paving material (such as walk-on-bark, pea gravel, and cobble mulches), the preservation of vegetative covers, and efficiently designed and managed irrigation systems.

Analysis: The project will comply with all requirements of the Cal-Green Code, including the installation of water-saving fixtures, as well as comply with the California Model Water Efficient Landscape Ordinance, and low-impact development requirements.

G. AIR QUALITY ELEMENT

Goal AQ3: Vehicle work trip reduction for private employees.

Objective AQ-3-1: Increase the proportion of work trips made by transit.
Analysis: The project is located along a major bus route corridor and approximately ½ mile from a Green Line Station and within close proximity to major employment centers allowing for people to walk, ride bicycles, and/or use public transportation. Additionally, as the project is mixed-use, there will be amenities for the resident population on-site, thereby reducing vehicular trips.

Goal AQ12: Reduction in Residential, Commercial, and Industrial Energy Consumption.

Objective AQ-12-1: Enact the recommendations of the AQMP Energy Working Group for commercial and residential buildings and adopt ordinances to mitigate air quality impacts from water and pool heating systems.

Policy AQ-12-1.2: It is the policy of the City of El Segundo that the City encourage the incorporation of energy conservation features in the design of new projects and the installation of conservation devices in existing developments.

Analysis: The project will comply with Cal-Green requirements. There will be 200 EV capable spaces, including 50 installed EV chargers across the PCC Specific Plan area. Additionally, solar panels will be installed in both the PCC North and PCC South developments that will generate sufficient power for their respective common area power needs.

H. NOISE ELEMENT

Goal N1: Encourage a high quality environment within all parts of the City of El

Segundo where the public's health, safety, and welfare are not adversely affected by excessive noise**.**

Objective N1-1: It is the objective of the City of El Segundo to ensure that City residents are not exposed to mobile noise levels in excess of the interior and exterior noise standards or the single event noise standards specified in the El Segundo Municipal Code.

Objective N1-2: It is the objective of the City of El Segundo to ensure that City residents are not exposed to stationary noise levels in excess of El Segundo's Noise Ordinance standards.

Policy N1-2.1: Require all new projects to meet the City's Noise Ordinance Standards as a condition of building permit approval.

Program N1-2.1A: Address noise impacts in all environmental documents for discretionary approval projects, to ensure that noise sources meet City Noise Ordinance standards. These sources may include mechanical or electrical equipment, truck loading areas, or outdoor speaker systems.

Analysis: The project underwent a thorough environmental analysis, including for noise, and it was determined that there would not be significant noise impacts. The project will be designed to meet the City's noise standards.

I. PUBLIC SAFETY ELEMENT

Goal PS1: Protect the public health and safety and minimize the social and economic impacts associated with geologic hazards.

Objective PS1-1: It is the objective of the City of El Segundo to reduce exposure to potentially hazardous geological conditions through land use planning and project review.

Policy PS1-1.1: Continue to review proposals for new development and for the expansion of existing development in areas of potential geological hazards.

Program PS1-1.1A: The City shall review projects to ensure that slope design considers the potential effects of high rainfall, private sewage systems, landscaping irrigation, and possible runoff from adjacent future development.

Policy PS1-1.2: Enforce, monitor and improve development standards which place the responsibility on the developer, with advice from qualified engineers and geologists, to develop and implement adequate mitigation measures as

conditions for project approval.

Program PS1-1.2A: The City shall review projects to ensure that adequate geotechnical investigation has been completed in areas susceptible to land sliding and debris flows and in areas where collapsible or expansive soils occur, and to approve only those which mitigate these hazards to the satisfaction of the City Engineer.

Policy PS2-1.2: The City shall assist in the prevention of structural damage in areas with a high potential for liquefaction, landslides, and mudslides by requiring geotechnical studies for new development to mitigate potential impacts.

Analysis: The project underwent a thorough environmental review, including for geological issues and it was determined that by following the building codes, no mitigation measures were required.

Goal PS6: A fire safe community.

Objective PS6-1: It is the objective of the City of El Segundo that the City minimize threats to public safety and protect property from wildland and urban fires.

Policy PS6-1.1: Review projects and development proposals, and upgrade fire prevention standards and mitigation measures in areas of high urban fire hazard.

Policy PS6-1.2: Continue efforts to reduce fire hazards associated with older buildings, high-rise buildings, and fire-prone industrial facilities, and maintain adequate fire protection in all areas of the City. Review projects and development proposals, and upgrade fire prevention standards and mitigation measures in areas of high urban fire hazard.

Program PS6-1.2C: The City shall continue to require that all property be maintained in compliance with the fire code.

Analysis: The project will comply with the most current version of the California Fire Code, as adopted by the City.

Goal PS7: Protect public health, safety, and welfare, and minimize loss of life, injury, property damage, and disruption of vital services, resulting from earthquakes, hazardous material incidents, and other natural and man-made disasters.

Analysis: The project will be built to the most current version of the California Building Code to protect against disasters such as earthquakes. Mitigation measures will be imposed to protect against the release of hazardous

materials.

SECTION 4: *General Plan Amendment Findings.* In accordance with Government Code section 65358, and based on the findings set forth in Sections 2 and 3, together with the evidence in the administrative record as a whole, the Planning Commission finds that amendment of the General Plan and the General Plan Map to change the land use designation from General Commercial and Parking to Pacific Coast Commons Specific Plan and to update the text of the General Plan, is in the public interest and consistent with other provisions of the General Plan.

SECTION 5: *Zone Change Findings.* Based on the findings set forth in Sections 2 and 3, and the totality of the evidence in the record, the Planning Commission finds as follows:

A. The proposed Zone Change is necessary to carry out the proposed project because the proposed General Plan Amendment changes the land use classification of the project site from General Commercial and Parking to Pacific Coast Commons Specific Plan (PCCSP). The proposed Zone Change changing the property and the Zoning Map from General Commercial (C-3) and Parking (P) to Pacific Coast Commons Specific Plan (PCCSP) is necessary to maintain consistency with the proposed General Plan land use designation of Pacific Coast Commons Specific Plan.

B. ESMC Title 15 is intended to be the primary tool for implementing the goals, objectives and policies of the El Segundo General Plan. The zone change will maintain consistency with the proposed change in General Plan land use designation to Pacific Coast Commons Specific Plan and is also consistent with the General Plan goals, objectives and policies set forth in Section 3 of this Resolution. Those findings of consistency are incorporated by reference as if fully set forth below.

SECTION 6: *Zone Text Amendment Findings*. In accordance with ESMC Chapter 15-26 (Amendments), and based on the findings set forth in Sections 2 and 3, together with the evidence in the administrative record as a whole, the Planning Commission finds that the proposed Zone Text Amendment is necessary to implement the Project and establish the proposed Pacific Coast Commons Specific Plan (PCCSP) Zone. An amendment to ESMC § 15-3-2(A)(12) to create the Pacific Coast Commons Specific Plan (PCCSP) Zone is necessary for consistency with the General Plan.

SECTION 7: *Specific Plan Findings.* The proposed creation of the Pacific Coast Commons Specific Plan (PCCSP) would allow a residential and commercial mixed-use development concept. Without adoption of the PCCSP, the current zoning would not permit a residential and commercial mixed-use development with an overall average 2.15 FAR based on the 6.23 net acre (post dedications) size of the project area. Based on the factual findings set forth herein and the evidence in the administrative record as a whole,

the Planning Commission finds that the Pacific Coast Commons Specific Plan will further the goals, policies and objectives of the General Plan and will not obstruct their attainment.

SECTION 8: *Development Agreement Findings.* Pursuant to City Council Resolution No. 3268, adopted June 26, 1984, the Planning Commission finds that:

A. The project is consistent with the objectives, policies, general land uses, and programs specified in the general plan and any applicable specific plan. The Development Agreement would provide the following public benefits in exchange for valuable development rights (fifteen-year entitlement with a five-year extension option):

1. Create a Specific Plan with a range of multiple-family residential and commercial uses that will contribute to the City's housing stock including the addition of affordable housing units and contribute to job creation opportunities and balance growth with local resources and infrastructure capacity. Additionally, the addition of housing units will improve the jobs-housing balance within the City.

2. The project will provide thirty-two affordable housing units for occupancy by low income and very low-income households for 55 years.

3. The project will help foster economic development in the City by contributing to a strong business climate, with positive outcomes such as business retention and attraction, as well as effective levels of City services to all members of the community.

4. The project will increase the City's tax base including utility user tax, property tax and sales tax, and therefore provide the City with resources to provide high-quality services to residents and the daytime population.

5. The project includes the payment of $25,000 to the City for either the costs to implement a permit parking district adjacent to the Project site if the residents petition for such district or, to be used by the City for public improvements in the geographical vicinity of the Project site.

6. Community Non-Profit Space. The project will provide 1,000 square feet of community space on the ground floor of the Fairfield parking structure.

7. Landscaping improvements. Additional landscaping and trees will be provided on the west side of Indiana Street between Mariposa Avenue and Holly Avenue. Enhanced landscaping and pedestrian seating will be provided in the existing landscaped areas in front of the Fairfield Inn and Suites and Aloft hotels that will be installed with the development of the PCC South Site. Six new street trees will be planted along the PCC South Site

development street frontage. Enhanced landscaping will be provided with the development of the PCC North Site along the western block wall.

8. Enhanced on-site paving improvements. Enhanced on-site paving improvements will be provided at several vehicular entrances/exits to the three new development areas.

9. EV Charging. The project will include 200 EV capable spaces including 50 installed EV chargers across the PCC Specific Plan area.

10. Solar Panels. Solar panels will be installed in the PCC North and PCC South residential developments that will generate sufficient power for their respective common areas power needs.

11. Battery Storage. The project will comply with the battery storage system requirements consistent with the 2022 Building Energy Efficiency Standards (Title 24 Energy Code) for both PCC North and PCC South.

12. Fencing improvements. Chain link fencing at the Fairfield and Aloft Hotel sites will be removed and replaced with decorative fencing.

13. The increase in density, which is located along a major bus route corridor and approximately ½ mile from the existing Metro Green Line Light Rail Station at Mariposa Avenue and Nash Street, helps implement regional planning programs and plans such as the SCAG Regional Transportation Plan/Sustainable Communities Strategy and efforts towards improving mobility and livability.

14. The increase in density close to the existing Metro Green Line light rail station also implements General Plan Land Use Element Policy LU 4-4.6 promoting denser mixed-use development near the City's existing Metro Green Line stations.

B. The project is compatible with the uses authorized in, and the regulations prescribed for, the land use district in which the real property is located. The proposed project includes a new land use designation and zoning classification which establishes the permitted uses and development standards that would apply to the project. These uses and development standards are similar and compatible with the other commercially zoned districts in the City.

C. The project conforms to public convenience, general welfare and good land use practice. The Pacific Coast Commons Specific Plan includes a range of multiple-family residential and commercial uses that will contribute to the City's housing stock including affordable units, contribute to job creation opportunities, balance growth with local resources and infrastructure capacity, and improve the jobs-housing balance within the City. The project will provide roadway improvements

on Holly Avenue and on Mariposa Avenue including a new dedicated eastbound (to southbound) right turn lane on Mariposa Avenue.

D. The project will not be detrimental to the health, safety and general welfare. An EIR was completed to evaluate the project which reviewed issue areas such as Aesthetics, Air Quality, Cultural Resources, Energy, Geology and Soils, Greenhouse Gas Emissions, Hazards and Hazardous Materials, Hydrology and Water Quality, Land Use and Planning, Noise, Population and Housing, Public Services, Recreation, Transportation, Tribal Cultural Resources, and Utilities and Service Systems. All feasible mitigation has been incorporated into the project to reduce or eliminate potential impacts and to maintain public health, safety and general welfare. The EIR concluded that the project will have a significant, unavoidable impact with regard to air quality due to the fact that it will result in slightly higher population growth than that anticipated in the SCAG 2016 RTP/SCS for the 2016-2040 period (an increase of 618 individuals as opposed to the 600 anticipated by SCAG). Notwithstanding the fact that the project would slightly increase the City's population growth beyond SCAG's projections for the 2016-2040 period, the Planning Commission finds that the project will not be detrimental to the health, safety and general welfare.

E. The project will not adversely affect the orderly development of property or the preservation of property values. This project is surrounded by previously developed multiple-family residential and commercially developed land and the proposed uses of the Pacific Coast Commons Specific Plan are consistent with surrounding development and will not adversely affect the value of neighboring properties. The proposed Pacific Coast Commons Specific Plan development standards and development agreement will ensure that the project will be developed in an orderly fashion. All mitigation measures will be implemented at the time and place impacts occur.

SECTION 9: *Environmental Assessment*. The Planning Commission makes the following environmental findings based on the whole of the administrative record:

A. The City completed a Draft Environmental Impact Report (DEIR) for Pacific Coast Commons Specific Plan project. A noticed Public Scoping meeting was held on June 10, 2020 pursuant to CEQA Guidelines §15083. A Notice of Preparation of the DEIR was circulated for public review from May 26, 2020 to June 25, 2020 pursuant to CEQA Guidelines §15082. A Notice of Completion for the DEIR was filed with the State Office of Planning and Research on February 25, 2021 pursuant to CEQA Guidelines §15085. The public comment and review period for the DEIR was open between February 25, 2021 and April 12, 2021 in compliance with CEQA Guidelines §15087.

B. A Final Environmental Impact Report (FEIR) dated October 2021 was prepared which included comments received by the City, responses to the comments, changes to the DEIR, and a mitigation monitoring and reporting program. The

FEIR was posted on the City's website on November 4, 2021.

C. Based on the Carpenters' Letter and SAFER letter, the Environmental Consultant prepared an additional document entitled "Pacific Coast Commons Specific Plan Final Environmental Impact Report Responses to Additional Comments Received" dated January 2022 (hereafter referred to as "Additional Responses").

D. The DEIR, FEIR and Additional Responses are jointly referred to herein as the EIR.

E. The EIR was presented to the Planning Commission and each commissioner has independently reviewed and considered the EIR and its appendices prior to making a recommendation on the Project. Furthermore, each commissioner has reviewed and considered the testimony and other additional evidence presented at or prior to the public hearings on November 18, 2021, December 9, 2021, and February 10, 2022;

F. The EIR is an accurate and complete statement of the potential environmental impacts of the project and is in compliance with CEQA and the CEQA Guidelines. The EIR was prepared under the City's direction and reflects its independent judgment and good faith analysis of the potential environmental impacts and includes substantive and thorough responses to comments received during the public review period, as well as responses to the Carpenters' Letter, the SAFER letter, and comments made at the December 9, 2021 hearing;

G. In response to comments from the public and other public agencies, some other minor changes have been made to the Draft EIR. Additionally, the Additional Responses adjusted the CalEEMod land use inputs. Minor changes were made to the tables relating to: Construction Criteria Air Pollutant Emissions; Estimated Maximum Daily Operational Criteria Air Pollutant Emissions; Localized Significance Thresholds for Project Construction; Estimated Annual GHG Emissions; and Estimated Operational GHG Emissions. The changes were all insignificant, did not result in any change in determination regarding the significance of any impact, and do not require recirculation.

H. In accordance with CEQA and for the reasons set forth in Section 4.1 of the Findings of Fact and Statement of Overriding Considerations, incorporated herein by this reference, the Planning Commission finds that recirculation of the EIR is not required.

I. The project would result in the following unavoidable significant adverse impacts after mitigation:

1. Air Quality (AQ). The project site is located within the South Coast Air Basin (SCAB), which is under the jurisdiction of the South Coast Air Quality

Management District (SCAQMD). SCAQMD administers the Air Quality Management Plan for the region which relies on population growth estimates in the Final SCAG 2016 RTP/SCS for the 2012-2040 period. Using population and housing estimates from the California Department of Finance, the City has a household size of 2.35 persons per household (DOF 2020). Assuming a household size of 2.35 persons per household, the proposed Project's residential units would accommodate 618 individuals upon its anticipated full occupancy in 2025. Considering the population growth anticipated in the 2016 RTP/SCS of 600 individuals within the City between 2012 and 2040, the proposed Project would result in a population growth in the City that would exceed the growth assumptions in the 2016 RTP/SCS, and would thereby exceed the population growth assumptions in the AQMP. There are no feasible mitigation measures for population growth. As a result, for the purposes of CEQA analysis, the proposed Specific Plan will have a significant and unavoidable impact with regard to AQ.

J. The City's obligations to make findings and adopt a Statement of Overriding Considerations in accordance with Public Resources Code section 21081(a) and CEQA Guidelines sections 15091 and 15093 are met by the Findings of Fact and Statement of Overriding Considerations incorporated herein by this reference. The Planning Commission concurs with the findings set forth therein, including that the alternatives are infeasible for the reasons stated.

K. The Planning Commission has weighed and considered the project's benefits against its significant and unavoidable impacts. The Planning Commission finds that the proposed project's benefits outweigh the significant and unavoidable impacts and, therefore, that those impacts are acceptable in light of the proposed project's benefits as set forth in Section 5 of the of the Findings of Fact and Statement of Overriding Considerations.

SECTION 10: *Subdivision.* With respect to Vesting Tentative Tract Map (VTTM 82806) (SUB 19-03), attached as Exhibit "G," the Planning Commission finds that the evidence in the record does not support any of the findings for denial set forth in ESMC § 14-1-6:

A. The proposed map is consistent with applicable general and specific plans as specified in Government Code § 65451. As set forth in Section 3 of this Resolution, this project generally meets the goals and objectives of the General Plan and it is consistent with the Pacific Coast Commons Specific Plan. Vesting Tentative Map (VTM) No. 82806 proposes 6 new lots. The proposed lots vary in size and meet the minimum lot size requirements established in the Pacific Coast Commons Specific Plan.

B. The design of the proposed subdivision is consistent with applicable general and

specific plans. As set forth in Section 3, the design of this subdivision and the proposed development project meets the goals and objectives of the General Plan.

C. The site is physically suitable for the proposed type of development in that the proposed lots meet the size and dimension requirements to allow the subdivision of the existing project site. The previous land use designation was General Commercial and Parking and the zoning designation for the property was General Commercial (C-3) and Parking (P). The new Pacific Coast Commons Specific Plan allows for the continued operation of the two existing hotels (Fairfield Inn and Suites and Aloft) and allows for both new multiple-family residential uses and expanded commercial development that is consistent with existing development surrounding the Project area.

D. The site is physically suitable for the proposed density of development. The proposed project involves subdivision of an approximately 6.385-acre project site into 6 parcels. The Specific Plan allows 622,398 gross square feet of development including 282,398 square feet of existing development that will remain. The proposed maximum development density is a 2.70 Floor Area Ratio (FAR) after dedications for right-of-way improvements. The Specific Plan allows a maximum of two hundred sixty-three (263) residential dwelling units located among two of the Land Use Districts within the Specific Plan. This density is consistent with the Pacific Coast Commons Specific Plan. Each new lot will meet or exceed the minimum size and dimension requirements.

E. The design of the subdivision or the proposed improvements is unlikely to cause substantial damage or substantially and avoidably injure fish or wildlife or their habitat. The proposed project site is comprised of two blocks and is currently improved with two existing hotels and an existing paved parking lot. The block bounded by Pacific Coast Highway, Holly Avenue, Indiana Street and Mariposa Avenue contains the 350-room Fairfield Inn and Suites and the 246-room Aloft hotels totaling approximately 325,000 gross square feet combined. The portion of the project site on the block to the north of the hotels on the north side of Mariposa Avenue contains the paved surface parking lot. No trees are located on the parking lot site. The project site is also predominately surrounded by developed urban land permanently altered with buildings, roads and hardscape. There are no fish or wildlife habitats on the site that could be damaged by the proposed subdivision or new development.

F. The design of the subdivision and the type of improvements authorized are not likely to cause serious public health problems. Vesting Tentative Map (VTM) No. 82806 proposes 6 new lots. The proposed lots vary in size and meet the minimum lot size requirements established in the Pacific Coast Commons Specific Plan. The subdivision will facilitate a development project consisting of four new buildings consisting of 257 apartment units, 6 townhome condominium units, 11,252 square feet of commercial uses, and parking structures containing 792

parking spaces. The development project is consistent with all the development standards in the Pacific Coast Commons Specific Plan. Before issuance of permits for construction detailed project plans will be submitted and reviewed for compliance with the California Building and Fire Codes and all other applicable safety codes. Furthermore, the development project's potential environmental impacts were evaluated pursuant to CEQA and mitigation measures will be implemented to reduce all impacts to the maximum extent feasible.

G. The design of the subdivision will not conflict with easements, acquired by the public at large, for access through or use of property within the proposed subdivision. The proposed subdivision is not anticipated to conflict with any known easements located at or near the property.

SECTION 11. *Site Plan Review Findings.* With respect to Site Plan Review No. SPR 19-01, the Planning Commission finds:

A. The proposed development is consistent with the general plan, any applicable specific plan and the Zoning Code

The proposed development is consistent with the goals, policies and objectives of the general plan. A specific plan (the Pacific Coast Commons Specific Plan) is applicable to the property involved in the proposed development which is consistent with the goals, policies and objectives of the general plan. The Pacific Coast Commons Specific Plan establishes the development standards and the design standards. The development project for the project site is consistent with the development standards and design guidelines of the Pacific Coast Commons Specific Plan.

The land use designation of the project site under the general plan will be the Pacific Coast Commons Specific Plan (PCCSP) Zone. The PCCSP has 5 districts within the Pacific Coast Commons Specific Plan (PCCSP) Zone (see Chapter III Land Use Plan in the Pacific Coast Commons Specific Plan). The 5 districts are: PCC Mixed-Use 1 (PCC MU-1), PCC Commercial-1 (PCC COM-1), PCC Commercial-2 (PCC COM-2), PCC Commercial-3 (PCC COM-3), and PCC Mixed-Use 2 (PCC MU-2).

The PCC MU-1 is a mixed-use district that permits a maximum of 120 apartments and various commercial uses generally in the categories of retail, restaurant and office uses.

The PCC Commercial-1 (PCC COM-1) allows hotels and several other commercial uses that either accessory to hotel uses or complementary and compatible commercial uses. PCC COM-1 contains the existing Aloft Hotel which will remain.

The PCC Commercial-2 (PCC COM-2) allows hotels and several other commercial

uses that either accessory to hotel uses or complementary and compatible commercial uses. PCC COM-2 contains the existing Fairfield Inn and Suites Hotel which will remain.

The PCC Commercial-3 (PCC COM-3) allows hotels and several other commercial uses that either accessory to hotel uses or complementary and compatible commercial uses.

The PCC MU-2 is a mixed-use district that permits a maximum of 137 apartments and 6 townhomes, and various commercial uses generally in the categories of retail, restaurant and office uses.

The proposed development is consistent with the goals, policies and objectives of the general plan as outlined in Chapter II Section C of the Pacific Coast Commons Specific Plan.

B. The project is functionally compatible with the area in which it is located.

The project is functionally compatible with the area in which it is located as the project site already has 2 existing hotels. The project site has commercial retail and restaurant uses to the north and south of the project site on the same side of the street and a mix of office uses, and commercial retail and restaurants across the street. Additionally, the project site is located on a portion of Pacific Coast Highway between Grand Avenue and Imperial Highway that is primarily zoned General Commercial (C-3) that allows a mix of office, hotel, retail and restaurant uses. The subject site is currently zoned General Commercial (C-3) and Parking (P) Zone. Multi-family residential uses are located to the west, southwest and northwest of the project site.

C. The proposed development will not adversely affect the general welfare of the City.

The proposed development will not adversely affect the general welfare of the City in that the existing hotels that will remain are permitted uses both under the existing zoning and in the proposed Pacific Coast Commons Specific Plan (PCCSP). The proposed new multi-family residential apartments, townhomes, commercial uses, and parking structures are designed in compliance with the development standards and design standards in the Pacific Coast Commons Specific Plan Zone and its 5 Districts. All of the proposed multi-family uses will be permitted by right as specified in the new PCCSP. The commercial uses will either be permitted by right or by Conditional Use Permit in the PCCSP depending upon the individual type of commercial use.

The physical improvements have been designed to comply with all building code regulations, the Pacific Coast Commons Specific Plan and the City's General Plan. The site has adequate and safe ingress and egress via multiple driveways along

the street frontages of the property and a minimum of one driveway for each legal parcel). The project site has street frontage on Pacific Coast Highway, Mariposa Avenue, Holly Avenue, Indiana Street and Palm Avenue.

Additionally, the project site is surrounded by developed urban land permanently altered with buildings, roads and hardscape. There are no fish or wildlife habitats on the site that could be damaged by the proposed subdivision or new development.

SECTION 12. *Parking Demand Study and Shared Parking Use Findings.* With respect to the Parking Demand Study and Shared Parking Use attached hereto as Exhibit "H," the Planning Commission finds:

A. The parking demand study for shared use demonstrates that no substantial conflict will exist in the peak hours of parking demand for the uses in which joint use is proposed.

A Parking Demand Study and Shared Use Parking Analysis ("Study") was prepared dated February 17, 2021 for the Pacific Coast Commons Specific Plan ("Plan"). The Study assessed the parking demand for the three new development sites ("Fairfield Parking Site", "PCC South Site" and "PCC North Site") within the Plan boundaries along with the existing peak parking demand for the two existing hotel uses. The two hotels, other commercial uses, and the guest parking for the multiple-family residential apartments will share parking spaces in the three parking structures that will be located on Lots 1, 4, and 5 of Vesting Map No. 82806 (PCC South Site, Fairfield Parking Site and PCC North Site respectively). Assigned parking will be provided for the tenants of the multiple-family residences except for 5 unassigned parking spaces each in the PCC South Site and PCC North Site parking structures. The townhomes have their own two-car garages for the residents. The guest parking for the townhomes will be provided on Lot 5 of Vesting Map No. 82806 (PCC North Site) as part of the joint use parking shared with the hotels, other commercial uses, and multiple-family residential guest parking.

The Study determined the peak parking demand rate for Pacific Coast Commons. Peak parking for the two existing hotels was calculated using empirical data collected at the hotel sites in May 2019 based upon the total number of parking spaces and total number of rooms occupied to develop a peak parking rate. Peak parking demand for the commercial uses (other than the hotels) and all of the residential uses were then evaluated for peak occupancy based upon ITE 5th edition peak parking demand again using conservative analysis that did not take any discount for proximity to transit service, internal capture or mode split. Parking rates for commercial uses such as retail and restaurants were based upon El Segundo Municipal Code requirements as referenced in the Pacific Coast Commons Specific Plan. Parking rates for all the residential uses were based

upon requirements in the Pacific Coast Commons Specific Plan which is a modified residential requirement based on unit type/number of bedrooms which is more conservative than the parking demand rate.

The PCC Fairfield Site will provide 215 parking spaces and it will have a peak parking demand of 191 spaces, leaving a 24-space surplus during the peak parking demand period. The PCC North Site will provide 241 parking spaces and it will have a peak parking demand of 160 residential parking spaces and a peak shared parking demand for 49 spaces for all other uses for a total demand of 209 spaces. However, because 189 parking spaces at the PCC North Site are reserved exclusively for residential use, there will only be a 3-space surplus. The PCC South Site will provide 336 parking spaces and it will have a peak parking demand of 144 residential parking spaces and a peak shared parking demand for 192 spaces for all other uses for a total demand of 336 spaces. However, because 165 parking spaces at the PCC South Site are reserved exclusively for residential use, there will be a 21-space deficit for the guest parking and commercial uses at the peak period. This 21-space deficit will be accommodated however by the 24-space surplus at the Fairfield Parking Site and if needed, the 3-space surplus at the PCC North Site. There will be a net 6-space surplus for joint uses among all three parking structures. Therefore, the parking demand study for shared use demonstrated that there will not be substantial conflict in the peak hours of parking demand for the uses in which joint use is proposed.

B. The number of parking stalls which may be credited against the requirements of the structures or uses involved will not exceed the number of stalls reasonably anticipated to be available during different hours of operation; and

The PCC Fairfield Site will provide 215 parking spaces and it will have a peak parking demand of 191 spaces, leaving a 24-space surplus during the peak parking demand period. The PCC North Site will provide 241 parking spaces and it will have a peak parking demand of 160 residential parking spaces and a peak shared parking demand for 49 spaces for all other uses for a total demand of 209 spaces. Due to additional assigned residential parking above the peak demand period requirements to comply with the development standards, the PCC North Site will have a net 3-space surplus during the peak parking demand period. The PCC South Site will provide 336 parking spaces and it will have a peak parking demand of 144 residential parking spaces and a peak shared parking demand for 192 spaces for all other uses for a total demand of 336 spaces. However, because 165 parking spaces at the PCC South Site are reserved exclusively for residential use, there will be a 21-space deficit for the guest parking and commercial uses at the peak period. This 21-space deficit will be accommodated however by the 24-space surplus at the Fairfield Parking Site and if needed, the 3-space surplus at the PCC North Site. There will be a net 6-space surplus for joint uses among all three parking structures.

The peak period demand analysis was conservative as it did not take any adjustments to discount for proximity to transit service, internal capture, or mode split but did take into account time of day, seasonal variations, and average auto occupancy for the hotel demand rates. Therefore, the analysis demonstrated that the number of parking stalls for the joint uses would not exceed the number of stalls reasonably anticipated to be available during different hours of operation.

C. A written agreement, in a form approved by the City Attorney, must be executed by all parties concerned assuming the continued availability of the number of stalls designed for joint use.

Each of the three parking structures that will be located on Lots 1, 4, and 5 of Vesting Map No. 82806 in the Pacific Coast Commons Specific Plan will be used for overflow parking if needed because of on-site parking demand exceeding on-site parking supply for the joint uses as described above. A Shared Use Parking Agreement will be prepared and reviewed to the satisfaction of the City Attorney and then executed and recorded.

SECTION 13. *Street Dedication Waivers.* The Public Works Director has reviewed the request for street dedication waivers set forth in Exhibit I and has recommended approval of the following waivers:

- A 3-foot waiver of the 7-foot dedication along the eastern side of Indiana Street only along the project frontage of Lot 1 of Vesting Tentative Map. No. 82806 resulting in a required 4-foot dedication.

- A 3-foot waiver of the 7-foot dedication along the eastern side of Indiana Street only along the project frontage of Lot 4 of Vesting Tentative Map. No. 82806 resulting in a required 4-foot dedication.

- A 7-foot waiver of the 7-foot dedication along the eastern side of Indiana Street only along the project frontage of Lots 2 and 3 of Vesting Tentative Map No. 82806 resulting in a 0-foot dedication.

- A 3-foot waiver of the 7-foot dedication on the south side of Mariposa Avenue along the project frontage of Lot 4 of Vesting Tentative Map. No. 82806 resulting in a minimum dedication of 4 feet near Indiana Street to a maximum dedication of 12 feet near Pacific Coast Highway to accommodate the proposed 10-foot wide right-turn only lane and 2-foot widening and reconfiguration of the two existing lanes in compliance with the Circulation Element requirements.

In connection with this request, the Planning Commission makes the following findings:

A. The proposed waiver maintains the minimum roadway width necessary for emergency vehicle access as determined by the fire chief;

The proposed waivers maintain the minimum roadway width necessary for emergency vehicle access. Mariposa Avenue will be widened to a minimum 40' curb-to-curb street width and Indiana Street will maintain a 34-foot roadway width, which meets the required 26' clear width needed.

B. The proposed waiver maintains the minimum roadway width and lane width deemed necessary for safe two-directional vehicular passage. The minimum lane width cannot be less than ten (10') feet in width for a travel lane and eight (8') feet in width for a parking lane;

The minimum lane width and parking width standards will be achieved on Mariposa Avenue and Indiana Street with all proposed travel lanes being a minimum of 10-feet wide and proposed parking lanes being a minimum of 8-feet wide.

C. The proposed waiver will maintain the necessary roadway width for the traffic volumes projected during the general plan buildout as determined by the director of development services unless the director determines that the dedication or irrevocable offer to dedicate will require the removal will require the removal of all or a portion of an existing building;

The proposed waivers will maintain the necessary roadway widths for the projected traffic volumes. The traffic study prepared as part of this project's application process has indicated that the surrounding streets can accommodate the projected traffic volumes.

D. The proposed waiver complies with any requirements of state and federal regulations, including without limitation, disabled access requirements for public sidewalks;

Public sidewalks surrounding the project site are a minimum of 5 feet, which complies with state and federal regulations. Additionally, the applicant is required to provide a minimum 4-foot sidewalk clearance around any obstruction in the sidewalk (i.e. posts, power poles, etc.) along any property frontage where new construction is taking place.

E. The proposed waiver would not be detrimental to the neighborhood or district in which the property is located;

A thorough evaluation by the Department of Public Works has revealed no evidence that these waivers would be detrimental to the neighborhood in which this project is located.

F. That the proposed waiver is necessary in order that the applicant is not unreasonably deprived the use or enjoyment of his property; and

Provision of full dedications along Indiana Street and Mariposa Avenue would have the following impacts on the existing and proposed structures on the project site:

- Along Indiana Street, there are existing buildings with a 0-foot setback from the property line. Any dedication along this frontage would require demolition of the existing buildings.

- Along the portions of Indiana Street and Mariposa Avenue where new development is proposed, additional dedication would reduce the buildable area on the Project site. Due to the narrow dimensions of the Project site, any additional reductions in those dimensions would create significant design issues with ramp design in the proposed parking structures and/or reduce the number of parking spaces that could be provided for the existing and proposed uses on the Project site. Further, additional dedication would substantially impact the design and size of proposed residential and commercial uses on the Project site. Finally, the above changes to the project design would jeopardize the financial feasibility of the Project. Therefore, the proposed waivers are necessary in order that the applicant is not unreasonably deprived use of their property.

G. The proposed waiver is consistent with the legislative intent of this title [Title 15].

The proposed waiver is consistent with the legislative intent of Title 15 in that the proposed waiver will still allow roadways and sidewalks along the Project site in compliance with the minimum width standards for local commercial streets specified in the Circulation Element.

SECTION 14: *Recommendations*. Based upon the foregoing and the evidence in the record as a whole, the Planning Commission makes the following recommendations:

A. The Planning Commission recommends that the City Council certify the Environmental Impact Report for Environmental Assessment No. 1248 consisting of the DEIR, the FEIR, and the Additional Responses; adopt a Mitigation Monitoring and Reporting Program; adopt the Findings of Fact and Statement of Overriding Considerations dated February 2022 incorporating the facts set forth in Section 9 of this resolution; and

B. The Planning Commission recommends that the City Council approve General Plan Amendment No. GPA 19-01 for the Pacific Coast Commons Specific Plan and Pacific Coast Commons mixed-use project as set forth in Exhibits “C – F”;

C. The Planning Commission recommends that the City Council adopt the Ordinance attached as Exhibit “B”, including the attachments thereto, which would adopt Zone Change No. ZC 19-01 (Exhibit A to Ordinance), Zone Text Amendment No. ZTA

19-08, the Specific Coast Commons Specific Plan (Exhibit B to Ordinance) and Development Agreement No. DA 19-02 (Exhibit C to Ordinance); and

D. The Planning Commission recommends that the City Council approve Subdivision No. SUB 19-03 (VTM 82806) as set forth in Exhibit "G," Site Plan Review No. SPR 19-01, dated 10.29.2021, Parking Demand Study and Shared Parking Analysis as set forth in Exhibit "H," and waiver of public right-of-way dedications for the Pacific Coast Commons mixed-use project as set forth in Exhibit "I," all subject to the conditions of approval set forth in Exhibit "A."

SECTION 15: *Exhibits.* This Resolution includes the following exhibits which are attached hereto and a part hereof:

A. Project Conditions of Approval
B. Draft Ordinance
    Exhibit A – Zoning Map Changes
    Exhibit B – Pacific Coast Commons Specific Plan
    Exhibit C – Development Agreement

C. Amendment to General Plan Land Use Designations
D. Amendment to General Plan Land Use Plan Northwest Quadrant subsection
E. Amendment to 1992 General Plan Summary of Existing Trends Build-out
F. Amendment to General Plan Land Use Map
G. Vesting Tentative Map (VTM) No. 82806
H. Parking Demand Study and Shared Parking Analysis
I. Street Dedication Map, including waivers

In addition to the Exhibits listed above, this Resolution also includes by reference:

A. The EIR as described in Section 9D, above
B. The Findings of Fact and Statement of Overriding Consideration, dated February 2022
C. The Site Plan dated 10.29.2021

SECTION 16: *Reliance on Record.* Each and every one of the findings and determination in this Resolution are based on the competent and substantial evidence, both oral and written, contained in the entire record relating to the project. The findings and determinations constitute the independent findings and determinations of the Planning Commission in all respects and are fully and completely supported by substantial evidence in the record as a whole.

SECTION 17: *Limitations*. The Planning Commission's analysis and evaluation of the project is based on information available at the time of the decision. It is inevitable that in evaluating a project that absolute and perfect knowledge of all possible aspects of the project will not exist. In all instances, best efforts have been made to form accurate assumptions.

SECTION 18. *Summaries of Information*. All summaries of information in the findings, which precede this section, are based on the substantial evidence in the record. The absence of any particular fact from any such summary is not an indication that a particular finding is not based in part on that fact.

SECTION 19: This Resolution will remain effective unless and until superseded by a subsequent resolution.

SECTION 20: The Commission secretary is directed to mail a copy of this Resolution to any person requesting a copy.

PASSED AND ADOPTED this ___ day of February, 2022.

PLANNING COMMISSION RESOLUTION NO. 2905

EXHIBIT A

CONDITIONS OF APPROVAL

In addition to all applicable provisions of the El Segundo Municipal Code ("ESMC"), the Applicant agrees to comply with the following provisions as conditions for the City of El Segundo's approval of Environmental Impact Report for Environmental Assessment No. EA-1248, General Plan Amendment and General Plan Map Amendment No. GPA 19-01, Specific Plan No. SP 19-01, Zone Change and Zoning Map Amendment No. ZC 19-01, Zone Text Amendment No. ZTA 19-08, Development Agreement No. DA 19-02, Subdivision No. SUB 19-03 for Vesting Tentative Map (VTM) No. 82806, Site Plan Review No. SPR 19-01, Parking Demand Study and Shared Parking Analysis, and Waiver of public right-of-way dedications for the Pacific Coast Commons Specific Plan and mixed-use development project ("Project Conditions").

Development Services Department

1. This approval is for the project as shown on the plans dated October 7, 2021, and on file with the Development Services Department.

2. Before the City issues a building, grading, and/or demolition permit for each building site within the Pacific Coast Commons Specific Plan (PCCSP), the applicant must submit plans, showing that the project substantially complies with the plans and conditions of approval on file with the Development Services Department. Any subsequent modification must be referred to the Development Services Director for a determination regarding the need for Planning Commission review and approval of the proposed modification.

3. This approval shall not become effective unless and until the City Council adopts an ordinance approving Specific Plan No. SP 19-01, Zone Change No. ZC 19-01, Zone Text Amendment No. ZTA 19-08, and Development Agreement No. 19-02 and said ordinance takes effect.

4. This approval allows for the following development within the Pacific Coast Commons Specific Plan (PCCSP) area:

    a. Demolition of the existing food and beverage building in the PCC COM-2 Land Use District and the construction of a parking structure with 3,273 gross square feet of new commercial uses;
    b. Construction of a mixed-use building consisting of 120 residential apartment units and 5,756 gross square feet of new commercial uses and a parking structure in the PCC MU-1 Land Use District;
    c. Construction of a mixed-use building consisting of 137 residential apartment units, 2,223 gross square feet of new commercial uses, and a parking structure

in the PCC MU-2 Land Use District;

d. Construction of a building consisting of six townhome residential condominium units with individual garages for each unit in the PCC MU-2 Land Use District.
e. Up to 3,700 gross square feet of the total 11,252 gross square feet of commercial floor area may be used for fast casual restaurant space. The remainder may be used for other commercial uses allowed in the Pacific Coast Commons Specific Plan.

A change in uses or changes in the square footages specified above, must be referred to the Development Services Director for a determination regarding the need for Planning Commission review and approval of the proposed changes.

5. The applicant shall comply with the requirements set forth in Ordinance 1594 (Public Art).

6. New signs proposed for each phase of the project, including monument signs, shall be designed to conform to the sign guidelines and standards of the Pacific Coast Commons Specific Plan. All proposed signage shall require separate application and approval by the Development Services Director or designee. Before the City issues any Certificate of Occupancy a master sign program must be approved by the Development Services Director.

7. All new exterior mechanical equipment shall be architecturally screened in accordance with Pacific Coast Commons Specific Plan design guidelines, to the satisfaction of the Development Services Director.

8. All new utilities to and on the property shall be provided underground for each phase of the project. Existing utilities in the public rights-of-way surrounding each development phase are not required to be relocated underground.

9. Project entrances at the following locations: (i) PCC South entrances/exits on Indiana and Pacific Coast Highway; (ii) Fairfield Parking Structure entrance/exits on Pacific Coast Highway; and (iii) PCC North entrances/exists on Mariposa Avenue and Palm Avenue, shall be provided with admixture colored concrete and/or design that enhance and complement the project, to the satisfaction of the Development Services Director.

10. A trellis or other approved covering must be maintained over any external trash enclosure on the property. Before the City issues building permits for each phase of the project, the applicant must submit plans for Development Services Department review and approval that show the design of the exterior trash enclosures and the required trellis covers. The enclosures and trellises must comply with the PCCSP Design Guidelines to the satisfaction of the Director.

11. The applicant shall submit a photometric lighting plan for each phase of the project that illustrates that there is no light spillover beyond the project property line for review and approval by the Development Services Department and the Police

Department. Exterior lighting design for the project shall comply with the Pacific Coast Commons Specific Plan design guidelines. Light shields shall be used to block light and reduce spill over light and glare as necessary. Light spill over on the property shall be zero foot-candles at the property line. Prior to the final inspection and issuance of a certificate of occupancy, the applicant shall schedule an evening inspection with the Planning Division to verify compliance with this requirement.

12. Each phase of the project site shall be fenced and screened during construction. Signage to report dust, noise and other construction related problems shall be posted on site at a location clearly visible to the public from all public streets surrounding the Project site.

13. The applicant must comply with all mitigation measures identified in the Final Environmental Impact Report prepared for the Project. A Mitigation Monitoring and Reporting Program (MMRP) was prepared as part of the environmental review for the project. The mitigation measures of the MMRP are incorporated into these conditions of approval by reference. All mitigation measures and conditions of approval must be listed on the plans submitted for plan check and the plans for which a building permit is issued.

14. Prior to any demolition, clearing, grubbing or grading or as otherwise appropriate, the applicant shall demonstrate compliance with all of the Mitigation Measures contained in the MMRP. In the event of a conflict between the adopted mitigation measures and these conditions of approval, the stricter of the two shall govern. The applicant is responsible to bear all costs should a consultant be required to manage and implement the MMRP.

15. Before the City issues building permits for each building site within the Pacific Coast Commons Specific Plan (PCCSP), the applicant must submit site specific landscape and irrigation plans to the Development Services Department for review and approval to demonstrate compliance with the project plans on file with the City, the City's Water Conservation regulations and Guidelines for Water Conservation in Landscaping (ESMC §§10-2-1, *et seq*.), and the PCCSP Development Guidelines and standards. The landscaping and irrigation must be completely installed before the City issues a final Certificate of Occupancy.

16. The applicant must plant trees and/or other landscape materials along the entire 15-foot setback area between PCC North and the residential properties to the west extending from Mariposa Avenue to Palm Avenue to contribute to screening and sound attenuation. Before the City issues building permits for the PCC North site, the applicant shall submit detailed landscaping and irrigation plans for Development Services Director review and approval showing trees and/or other landscape materials along the entire 15-foot setback area. The final species, number and location of the trees shall be specified to the satisfaction of the Director.

17. Before the City issues building permits for each building site within the PCCSP, the applicant must submit detailed architectural plans for Development Services Director review and approval, including fully dimensioned site plans, floor plans, elevation, and section drawings identifying the depth of building step-backs as well as dimensions of architectural building features, such as exterior columns, parapets, cornices, balconies, and tower elements.

18. Before the City issues building permits for each building site within the PCCSP, the applicant must submit detailed architectural plans for Development Services Director review and approval that promote a pedestrian oriented design along the Pacific Coast Highway frontage, including recessed storefronts that do not result in the loss of square footage, but provide space for outdoor dining, outdoor retail displays, bicycle parking and similar amenities, to the satisfaction of the Director.

19. The applicant shall replace any existing chain-linked fencing visible from the public right-of-way with other walls and/or fencing at the time of development of the PCC South or the Fairfield Parking, whichever occurs first. Before the City issues building permits for either phase of the development, the applicant shall submit plans for Development Services Director review and approval showing the proposed replacement walls and/or fencing. The replacement walls or fencing must be consistent with the PCCSP Design Guidelines and standards for walls and fencing to the Director's satisfaction.

20. With development of PCC South, the applicant shall install seating that is available to the public along the Pacific Coast Highway frontage between Holly Avenue and Mariposa Avenue, including in front of the Aloft Hotel and the Fairfield Hotel. Six single-occupant chairs shall be located in front of the Fairfield Hotel in the existing landscaped area, and four single-occupant chairs shall be located in front of the Aloft Hotel in the existing landscaped area. Before the City issues building permits for the PCC South phase of the development, the applicant shall submit plans for Development Services Department review and approval showing the location, number and proposed design of the public seating. The seating must be consistent with the PCCSP Design Guidelines to the Director's satisfaction.

21. The applicant shall install six new trees in the Pacific Coast Highway public right-of-way in front of the PCC South portion of the PCCSP. Before the City issues building permits for the PCC South phase of the development, the applicant shall submit detailed landscaping and irrigation plans for Development Services Department review and approval showing the location and species of trees. The trees must be consistent with the City's Master Street Tree Plan to the Director's satisfaction.

22. The applicant shall install new street trees in the Indiana Street public right-of-way on the west side of the street between Holly Avenue and Mariposa Avenue only within existing parkway areas with existing irrigation systems in place. Before the City issues building permits for the PCC South phase of the development, the

applicant shall submit detailed landscaping plans for Development Services review and approval showing the location and species of trees. The trees must be consistent with the City's Master Street Tree Plan to the Director's satisfaction.

23. Before the City issues building permits for the townhomes in the PCC North area of the PCCSP, the applicant shall submit detailed plans for Development Services Director review and approval that incorporate equal detail and variety in building planes and materials on all the elevations to the Director's satisfaction that do not result in the loss of square footage.

24. New trash and recycling enclosures must be provided and shown on site plans that are sufficiently large enough to store the necessary bins required for the regular collection of commercial solid waste and recyclable materials. The site plan with the location and dimensions of the trash and recycling enclosure and an elevation view of the enclosure must be provided to the Development Services Department for review and approval before the City issues building permits.

25. New ground level mechanical equipment, refuse collectors, storage tanks, generators, and other similar facilities must be screened from view consistent with the development standards and design guidelines contained in the Pacific Coast Commons Specific Plan.

26. Exterior lighting must be designed to minimize off-site glare.

27. Buildings must be designed to comply with all ESMC standards for the attenuation of interior noise.

28. Before the City issues a grading permit, building permit, or certificate of occupancy, as applicable, the applicant must provide evidence to the Director of Development Services that all mitigation measures in the MMRP are or will be implemented.

29. Each phase of the project must meet all design guidelines of the Specific Plan to the satisfaction of the Director Development Services.

30. Before the City issues a certificate of occupancy for each parking structure, the applicant must clearly identify the designated residential tenant spaces and the spaces to be shared by retail uses, residential guests, and/or hotel guests. The spaces shall be identified through the use of signage and stencils on the pavement in each parking structure to the satisfaction of the Development Services Director.

31. If any portion of the Project is developed as condominiums, before the City issues a certificate of occupancy for each of the proposed buildings the applicant shall draft and submit CC&Rs for Development Services Director and City Attorney review including provisions for:
    a) Maintenance and cleaning of common areas and landscaping onsite;

b) Maintenance of landscaping in the public right-of-way immediately abutting the subject property;
c) Maintenance and cleaning of the balconies of the residential units; and
d) Cleaning the public sidewalk along the Pacific Coast Highway public right-of-way immediately abutting the commercial uses on each building site (PCC South, Fairfield Parking and PCC North) to maintain it clear of any trash and debris from the commercial uses and project trash facilities.

32. Before the City issues building permits for each of the building sites, the applicant shall submit detailed plans for Development Services Director review and approval, including the locations, materials, and colors of enhanced paving areas on private property, in conformance with Section 5.6 of the Development Agreement, as well as in the public right-of-way immediately abutting the subject property. The enhanced paving must be consistent with the architectural and landscaping plans on file with the City to the satisfaction of the Director.

33. A Shared Parking Agreement shall be prepared and reviewed and approved by the Director of Development Services and the City Attorney. The Shared Parking Agreement shall be recorded after the final map for Vesting Map No. 82806 has been recorded and the Fairfield Parking Site has been constructed and received its Certificate of Occupancy. The Shared Parking Agreement will grant Lots 1 through 5 of Vesting Map No. 82806 rights to shared use of parking provided on Lots 1, 4 and 5 of Vesting Map No. 82806. The shared parking will be permitted for all commercial uses and guest parking for the multi-family residential uses located on Lot 1 and 5 of Vesting Map No. 82806. Guest parking for the townhomes that are located on Lot 6 will be provided on Lot 5 of Vesting Map No. 82806.

The Shared Parking Agreement will rescind "Covenant and Agreement Regarding Maintenance and Use of Off-Site Parking" for property commonly known as 629 North Sepulveda Boulevard (now known as 629 North Pacific Coast Highway), recorded on July 1, 2015, as Instrument No. 20150792116, of Official Records, Recorder's Office of the County of Los Angeles, California. The Shared Parking Agreement will rescind "Covenant and Agreement Regarding Maintenance and Use of Off-Site Parking" for property commonly known as 629 North Sepulveda Boulevard (now known as 629 North Pacific Coast Highway), recorded on July 1, 2015, as Instrument No. 20150792117, of Official Records, Recorder's Office of the County of Los Angeles, California. The Shared Parking Agreement will rescind "Covenant and Agreement Regarding Maintenance of Parking Site" for property commonly known as 629 North Sepulveda Boulevard (now known as 629 North Pacific Coast Highway), recorded on April 1, 2015, as Instrument No. 20150351986, of Official Records, Recorder's Office of the County of Los Angeles, California.

34. After the final map for Vesting Tentative Map No. 82806 has been recorded, a document shall be recorded to rescind the "Covenant and Agreement to Hold Property as One Parcel" for property commonly known as 629 North Pacific Coast Highway (formerly 629 North Sepulveda Boulevard), recorded on April 1, 2015, as

Instrument No. 20150351988, of Official Records, Recorder's Office of the County of Los Angeles, California.

35. A Reciprocal Easement Agreement shall be prepared to provide reciprocal access between Lots 5 and 6 of Vesting Tract Map No. 82806 and reciprocal access to the public rights-of-way of Palm and Mariposa Avenues. The Reciprocal Easement Agreement shall rescind "Reciprocal Easement Agreement", recorded on April 1, 2015, as Instrument No. 20150351989, of Official Records, Recorder's Office of the County of Los Angeles, California. The Reciprocal Easement Agreement shall be reviewed and approved by the Director of Development Services and the City Attorney. The Reciprocal Easement Agreement shall not be recorded until the final map for Vesting Tentative Map No. 82806 is recorded, the Fairfield Parking Site and PCC South Site are constructed, and a building permit is issued for the PCC North Site.

36. A positive balance shall be maintained in all project reimbursement accounts at all times. If the balance of the Reimbursement Account(s) associated with the project becomes negative at any time, all work on the project shall be suspended, including the issuance of permits and project inspections, until such time as the sufficient funds are deposited to return the account(s) to a positive balance.

Building Division Conditions

37. Before the City issues grading permits for each building site in the PCCSP, the applicant must submit a geotechnical/soils report for that building site, along with an associated grading plan that addresses the current code to the Development Services Department for review and approval.

38. Before the City issues grading permits for each building site in the PCCSP, the applicant must submit a soils report for that building site to the Development Services Department for review and approval.

39. Before the City issues building permits for each building site in the PCCSP, the applicant must submit plans for that building site to the Development Services Department for review and approval showing compliance with the version of the California Building Code, as adopted by the ESMC, in effect at the time of building permit application.

40. Before the City issues building permits for the PCC North Site and/or the PCC South Site ("Sites"), the applicant must show proof of Los Angeles County Health Department approval for any public pools proposed for those Sites.

Fire Department Conditions

41. Each phase of the project must comply with all applicable requirements in the California Fire Code and the International Fire Code, as adopted by the ESMC,

and El Segundo Fire Department regulations, in effect at the time of building permit application.

42. Before the City issues a building permit for each building site, the applicant must submit a Fire/Life Safety Plan for that building site to the Fire Chief (or designee) identifying fire safety precautions during demolition and construction, emergency site access during construction, permanent fire department access, fire hydrant locations and any existing or proposed fire sprinkler system and fire alarm systems.

Public Works Department Conditions

General

43. All work in the City's right-of-way or on City-owned and maintained facilities shall require review and approval of the City Engineer or his/her designee. "City Engineer" = City Engineer or his/her designee throughout this document.

44. The applicant shall ensure that encroachment permits are secured from the Public Works Department/Engineering Division before commencing any and all work in the City's public right-of-way (ROW), including lane closures.

45. Construction inspection shall be coordinated with the Public Works Inspector and no construction shall deviate from the approved plans without approval of the City Engineer. If plan deviations are necessary, the applicant shall provide a revised plan or details of the proposed change for review and approval of the City Engineer prior to construction.

46. Prior to issuing of the Certificate of Occupancy, the applicant shall ensure installation of all improvements required by the Public Works Department are inspected and approved by the City Engineer for that building site.

47. All construction-related parking shall be accommodated on-site or on other private property. No construction related parking shall be permitted off-site in the public right-of-way.

48. A grading and drainage plan shall be provided and stamped by a California (CA) State-licensed civil engineer as part of the Building Permit process.

49. A utility plan for each building site shall be provided that shows all existing and proposed utility lines and their sizes (sewer, water, gas, storm drain, electrical, etc.), including easements, within 200 feet of the project site boundary.

50. All record drawings (PDF and CAD format) and supporting documentation shall be submitted to the Public Works Engineering Division prior to scheduling the project's final inspection for that phase.

51. Haul trucks are to use PCH north to Imperial Highway and PCH south to El Segundo Boulevard. All three of these streets are currently designated as truck routes in the City.

52. The applicant shall record Vesting Map No. 82806, subject to review and approval by the Director of Public Works and the Director of Development Services.

Street Improvements & Traffic Control

53. The applicant shall dedicate to the City in fee that certain portion of real property that includes the eastern 25 feet of Indiana Street (from the centerline of Indiana Street) between Mariposa Avenue to the north and Holly Avenue to the south as depicted on Vesting Tentative Tract Map No. 82806. Such dedication shall occur through and upon recordation of the Final Map.

54. The applicant shall dedicate to the City in fee that certain portion of real property that includes the northern 25 feet of Holly Avenue (from the centerline of Holly Avenue) between Indiana Street to the west and Pacific Coast Highway to the east as depicted on Vesting Tentative Tract Map No. 82806. Such dedication shall occur through and upon recordation of the Final Map.

55. Before the recording of the Final Map, the applicant shall record a lot tie covenant if any buildings are to be constructed across existing lot lines or if any building location does not meet the development standards of the Pacific Coast Commons Specific Plan (PCCSP) due to the location of the existing lot lines. No Certificates of Occupancy shall be granted for any use or structure until the recording of the Final Map.

56. General Provisions regarding dedications and improvements in Conditions 57 through 59:
    a. Improvements and dedication shall be required in conjunction with the development of the lot immediately adjacent to the street or streets where the improvement and dedication is required.
    b. The applicant shall prepare a grant deed and legal description of the land to be dedicated, subject to review and approval by the City Attorney for any required dedications.
    c. All dedications shall be in favor of the City of El Segundo.
    d. Before the issuance of a building permit for the related site, the applicant shall submit Street and Public Right-of-Way Improvement Plans for review and approval to the Director of Public Works and the Director of Development Services. Said plans shall include any required dedications, roadway widening, sidewalks and parkway in accordance with the conditions below, to be developed to City standards, except as modified by these conditions.
    e. All required right-of-way dedications shall be made prior to the issuance of a Certificate of Occupancy for any building on the related site.
    f. All right-of-way improvements shall be completed before the issuance of a

"Final Inspection Approval." The improvements shall be reviewed and approved by the City Engineer and Director of Development Services.

g. The applicant shall be responsible for the costs to modify and construct the roadway widening and sidewalk improvements as described in conditions 57 through 59.

57. Street dedication and improvement conditions related to the development of Lot 4 of Vesting Tentative Tract Map No. 82806 (Pacific Coast Commons – Fairfield Parking Site):

a. The applicant shall construct a new 10-foot wide right-turn only lane along the south side of Mariposa Avenue, roadway widening improvements, and a new public sidewalk.

b. The applicant shall dedicate a variable width dedication on the south side of Mariposa Avenue ranging from a minimum of 4 feet on the west at Indiana Street, prior to the 10-foot wide right-turn only lane, to a maximum of 12 feet on the east at Pacific Coast Highway to accommodate the 10-foot wide right-turn only lane and 2-foot widening and reconfiguration of the two existing lanes in compliance with the Circulation Element requirements.

c. In addition to the 25-foot dedication required by Condition 53 above, the applicant shall dedicate an additional 4 feet along the eastern side of Indiana Street along the frontage of Lot 4 of Vesting Tentative Map. No. 82806.

d. Before the construction of the right-of-way improvements on the south side of Mariposa Avenue, including the new right-turn lane that would intersect Pacific Coast Highway and any improvements on Pacific Coast Highway, the applicant shall obtain a Caltrans Encroachment Permit, if required, for any alteration to Pacific Coast Highway. All alterations shall be in accordance with relevant Caltrans Encroachment Permit requirements and conditions shall be shown on the Final Working Drawings.

58. Street dedication and improvement conditions related to the development of Lot 1 of Vesting Tentative Map No. 82806 (Pacific Coast Commons South Site):

a. In addition to the 25-foot dedication required by Condition 54 above, the applicant shall dedicate an additional 7 feet along the northern side of Holly Avenue along the frontage of Lot 1 of Vesting Tentative Map No. 82806.

b. In addition to the 25-foot dedication required by Condition 53 above, the applicant shall dedicate an additional 4 feet along the eastern side of Indiana Street only along the frontage of Lot 1 of Vesting Tentative Map. No. 82806.

c. Before the construction of the right-of-way improvements on the north side of Holly Avenue, including the 2-foot roadway widening that would intersect Pacific Coast Highway and any improvements on Pacific Coast Highway, the applicant shall obtain a Caltrans Encroachment Permit, if required, for any alteration to Pacific Coast Highway. All alterations shall be in accordance with relevant Caltrans Encroachment Permit requirements and conditions shall be shown on the Final Working Drawings.

59. Street dedication and improvement conditions related to the development of Lot 5 and Lot 6 of Vesting Tentative Map No. 82806 (Pacific Coast Commons North Site). These conditions shall apply with the development of Lot 5 or Lot 6, whichever develops first:
    a. The applicant shall dedicate 7 feet on the north side of Mariposa Avenue along the frontage of Lot 5.
    b. The applicant shall dedicate 12 feet on the south side of Palm Avenue along the frontage of Lot 6.

60. The applicant shall provide reciprocal access agreements, subject to review and approval by the City Attorney, between any parcels that do not have independent direct vehicle access to a public right-of-way. Such agreements shall be recorded before issuance of any Certificate of Occupancy for a building on an affected parcel.

61. All new sidewalk, curb & gutter, driveway approaches, and curb ramps shall be constructed per the latest Standard Plans for Public Works Construction (SPPWC) "Greenbook" and City standards.

62. All existing sidewalk, curb & gutter, driveway approaches, and curb ramps that are broken or not in conformance with the latest SPPWC or City standards shall be removed and constructed per the latest SPPWC and City standards.

63. Any obstruction located within existing curb ramps shall be relocated.

64. All unused driveways shall be removed and replaced with full-height curb, gutter and sidewalk per SPPWC standards and City standards.

65. The applicant shall provide a minimum 4' sidewalk clearance around any obstruction in the sidewalk i.e. posts, power poles, etc. along any property frontage where new construction is taking place. This condition does not apply on Indiana Street along the frontage of proposed Lot 2 and 3 of Vesting Tentative Map No. 82806.

66. PG-64-10 tack coat and hot mix asphalt shall be used for all slot paving required next to new concrete installations. Slot paving shall be 3 feet wide and 1 foot deep, consisting of 6 inches of asphalt over 6 inches of base.

67. The applicant shall coldmill 2" Asphalt Concrete (AC) pavement surface and overlay with 2" AC PG-64-10 the curb-to-curb full street width of Mariposa Avenue along the property frontages and the curb-to-centerline half street width of Palm Avenue, Indiana Street, and Holly Avenue along the property frontages. AC mix specification shall conform to Standard Specifications for Public Works Construction (SSPWC) "Greenbook", section 203-1.

68. The applicant shall provide street signing and striping plans for the new development. All striping in the public ROW shall consist of thermoplastic paint per the latest CA Manual on Uniform Traffic Control Devices (MUTCD).

69. The applicant shall provide traffic control plans for all work requiring a lane closure.

70. The work scheduled in the public right-of-way on major arterial streets shall be Monday through Friday from 9am to 3pm, except holidays. Work scheduled on all other street classifications shall be Monday through Friday from 7am to 4pm. Contractor shall obtain prior approval from the City Engineer for performing weekend work, night work, or work on a holiday.

71. During construction, it shall be the responsibility of the applicant to provide safe pedestrian traffic control around the site. A pedestrian protection plan shall be submitted to the Public Works Department for review and approval by the City Engineer. This may include but not be limited to signs, flashing lights, barricades and flag persons.

72. Once the ROW improvements are accepted by the City Engineer, they are not to be used for staging building construction activities, including but not limited to, storage of construction materials and equipment. The street and sidewalks shall be kept free of construction debris, mud and other obstacles and shall remain open to traffic at all times. The applicant shall bear the entire cost of replacement or repair to any damage to improvements caused by its use, or its Contractors' and Subcontractors' use, of the improvements after acceptance by the City Engineer.

73. The applicant shall submit any new traffic signal plans to the City Public Works Department and LA County Department of Public Works (LACDPW) for review and approval. The applicant will coordinate all inspections with the LACDPW inspector for acceptance of the traffic signal poles and related equipment. The applicant will inform the City of any updates during this process.

Water

74. The proposed improvement will impact the capacity of the existing City owned water main lines. The applicant must submit a water study to determine if there is a capacity deficiency in the affected water main lines and if so, water main upgrades will be required. The water study shall be reviewed and approved by the City Engineer.

75. Any existing water meters, potable water service connections, fire backflow devices and potable water backflow devices for each new building site must be upgraded to current City Water Division standards. These devices shall be placed or relocated onto private property.

76. The applicant must submit plans for water system upgrades for each new building site to the City of El Segundo Public Works Department for review and approval.

77. Any unused water laterals for each new building site shall be abandoned and properly capped at the City main. The Contractor is to obtain necessary permits and licenses, and provide traffic control plans and shoring plans.

Sewer

78. The proposed improvement will impact the capacity of the existing City owned sewer main lines. The applicant must submit a sewer study for each new building site to determine if there is a capacity deficiency in the affected sewer main lines and if so, sewer upgrades will be required for that new building site. The sewer study shall be reviewed and approved by the City Engineer.

79. Prior to issuance of a Certificate of Occupancy for each new building site, the sewer connection fee for must be paid to the City of El Segundo Public Works Department for that building site.

80. Any unused sanitary sewer laterals shall be abandoned and properly capped at the City main for each new building site. The Contractor is to obtain necessary permits and licenses, and provide traffic control plans and shoring plans.

Storm Drain

81. Provide a Low Impact Development Study (LID) signed and stamped by a registered Civil Engineer. Make sure to comply with the project design requirements to retain on site (infiltrate or store for use) volume of runoff from ¾ inch storm or the 85th percentile 24-hour storm, whichever is greater (SWQDv) for each phase of the project.

82. Hydrologic and hydraulic calculations shall be submitted to size appropriate storm drain facilities to control on-site drainage and mitigate off-site impacts. Refer to the most recent Los Angeles County Hydrology Manual. Instructions and the manual are available at the County website at http://dpw.lacounty.gov/wrd/Publication/index.cfm. Calculations shall be signed by a registered civil engineer.

83. The project shall comply with the National Pollutant Discharge Elimination System (NPDES) requirements and shall provide Best Management Practices (BMPs) for sediment control, construction material control and erosion control.

Landscaping & Irrigation

84. Irrigation plans shall be submitted to the Public Works Department for review and approval for each new building site. All irrigation meters and mechanical equipment shall meet the City Water Division standards.

85. All public landscape improvements shall be designed to City standards and approved by the Parks & Recreation Department.

86. The property owner shall maintain all landscaping and irrigation in the public ROW fronting the property.

87. The applicant shall coordinate any tree removals in the public right-of-way with the Parks & Recreation Department prior to the start of construction.

Police Department Conditions

88. Prior to the issuance of building permits, the applicant must submit a Photometric Lighting Plan complying with El Segundo Security Code, Ordinance 1540, Sections, 13-20-15.E; 13-20-16.L; 13-20-17.M.

89. Prior to the issuance of building permits, the applicant submit a Wayfinding Plan complying with El Segundo Security Code, Ordinance 1540, Sections, 13-20-15.C.

90. Prior to the issuance of building permits, the applicant must submit a Construction Site Security Plan complying with El Segundo Security Code, Ordinance 1540, Section, 13-20-20.C.

91. Prior to the issuance of building permits, the applicant must submit an Emergency Access Plan complying with El Segundo Security Code, Ordinance 1540, Sections, 13-20-18 and 13-20-19.C.

92. Prior to the issuance of building permits, the applicant must provide a Parking Surveillance Camera Plan parking structures complying with the following standards:

    a) High Definition color cameras shall be installed at all vehicle and pedestrian entrances and be capable of clearly capturing an entire vehicle including license plate and driver. Cameras at pedestrian entrances shall clearly capture the entire person and a recognizable face image.
    b) Camera images shall be digitally stored for at least 30 days.
    c) A camera surveillance plan noting the type and mounting height of cameras, demonstrating compliance with this section, shall be developed as part of the construction plans.

93. Prior to authorization to use, occupy, and/or operate, the applicant shall arrange for and have passed an inspection, to be performed by the Police Department, to ensure compliance with the Parking Surveillance Camera Plan.

94. Prior to authorization to use, occupy, and/or operate, the applicant shall arrange for and have passed an inspection, to be performed by the Police Department, to ensure compliance with the Emergency Access Plan.

Impact Fee Conditions

95. Pursuant to ESMC §§ 15-27A-1, *et seq*., and before building permits are issued, the applicant must pay a one-time fire services mitigation fee in accordance with City Council Resolution No. 4687 for the building that the permit is applicable to.

96. Pursuant to ESMC §§ 15-27A-1, *et seq*., and before building permits are issued, the applicant must pay a one-time police services mitigation fee in accordance with City Council Resolution No. 4687 for the building that the permit is applicable to.

97. Pursuant to ESMC §§ 15-27A-1, *et seq.,* and before building permits are issued, the applicant must pay a one-time park services mitigation fee in accordance with City Council Resolution No. 4687 for the building that the permit is applicable to.

98. Before building permits are issued, the applicant must pay the required sewer connection fees (as specified in ESMC Title 12-3) for the building that the permit is applicable to.

99. Pursuant to ESMC §§ 15-27A-1, *et seq*., and before the City issues a certificate of occupancy for buildings within the Specific Plan, the applicant must pay a one-time traffic mitigation fee in accordance with City Council Resolution No. 4443 for the building that the permit is applicable to.

100. Subject to any applicable limitations set forth in the Development Agreement, permittee agrees to pay City any development impact fees ("DIFs") that may be applicable to the Project. Permittee takes notice pursuant to Government Code § 66020(d) that City is imposing the DIFs upon the Project in accordance with the Mitigation Fee Act (Government Code § 66000, et seq.). The permittee is informed that it may protest DIFs in accordance with Government Code § 66020.

101. Before building permits are issued, the applicant must pay the required School Fees. This condition does not limit the applicant's ability to appeal or protest the payment of these fees to the school districts(s).

Miscellaneous

102. Residential lease agreements shall prohibit the storage of bicycles and goods on balconies of residential units. The prohibition against storage on balconies shall not prevent typical use of balconies as private outdoor space.

103. Unless otherwise provided by the Development Agreement, the vesting tentative map will expire pursuant to Government Code § 66452.6 and ESMC § 14-1-12.

104. Approval of this Project shall not be construed as a waiver of applicable and appropriate zoning regulations, or any Federal, State, County and/or City laws and regulations. Unless otherwise expressly specified herein or in the Development

Agreement or Pacific Coast Commons Specific Plan, all other requirements of the El Segundo Municipal Code shall apply.

105. Failure to comply with and adhere to all of these conditions of approval may be cause to revoke the approval of the project by the Planning Commission, pursuant to the provisions of the El Segundo Municipal Code.

106. In the event that any of these conditions conflict with the recommendations and/or requirements of another permitting agency or City Department, the stricter standard shall apply.

107. The Applicant, agrees to indemnify and hold the City harmless from and against any claim, action, damages, costs (including, without limitation, attorney's fees), injuries, or liability, arising from the City's approval of an Environmental Impact Report for Environmental Assessment No. EA-1248, General Plan Amendment No. GPA 19-01, Specific Plan No. SP 19-01, Zone Change and Zoning Map Amendment No. ZC 19-01, Zone Text Amendment No. ZTA 19-08, Development Agreement No. DA 19-02, Subdivision No. SUB 19-03 for Vesting Tentative Map (VTM) No. 82806, Site Plan Review No. SPR 19-01, Parking Demand Study ad Shared Parking Analysis, and Waiver of public right-of-way dedications for the Pacific Coast Commons Specific Plan and mixed-use development. Should the City be named in any suit, or should any claim be brought against it by suit or otherwise, whether the same be groundless or not, arising out of the City approval of an Environmental Impact Report for Environmental Assessment No. EA-1248, General Plan Amendment No. GPA 19-01, Specific Plan No. SP 19-01, Zone Change and Zoning Map Amendment No. ZC 19-01, Zone Text Amendment No. ZTA 19-08, Development Agreement No. DA 19-02, Subdivision No. SUB 19-03 for Vesting Tentative Map (VTM) No. 82806, Site Plan Review No. SPR 19-01, Parking Demand Study and Shared Parking Analysis, and Waiver of public right-of-way dedications for the Pacific Coast Commons Specific Plan and mixed-use development project, the Applicant, agrees to defend the City (at the City's request and with counsel satisfactory to the City) and will indemnify the City for any judgment rendered against it or any sums paid out in settlement or otherwise. For purposes of this section "the City" includes the City of El Segundo's elected officials, appointed officials, officers, and employees.

By signing this document, Patrick Volz, on behalf of BRE EL SEGUNDO PROPERTY OWNER A LLC, BRE EL SEGUNDO PROPERTY OWNER B LLC, and BRE EL SEGUNDO PARKING LLC, certifies that he has read, understood, and agrees to the Project Conditions listed in this document.

PLANNING COMMISSION RESOLUTION NO. 2905
EXHIBIT "B"

ORDINANCE NO. _____

AN ORDINANCE APPROVING ZONE CHANGE AND ZONING MAP AMENDMENT NO. 19-01, SPECIFIC PLAN NO. SP 19-01, ZONE TEXT AMENDMENT NO. ZTA 19-08, AND DEVELOPMENT AGREEMENT NO. DA 19-02 FOR THE PACIFIC COAST COMMONS SPECIFIC PLAN AND PACIFIC COAST COMMONS MIXED-USE PROJECT AT 475-629 PACIFIC COAST HIGHWAY.

The City Council of the city of El Segundo does ordain as follows:

SECTION 1: The Council finds and declares as follows:

A. On May 31, 2019, BRE El Segundo Holdco, LLC, submitted applications for an Environmental Assessment (EA No. 1248), General Plan Amendment and General Plan Map Amendment No. GPA 19-01, Specific Plan No. SPA 19-01, Zone Change and Zoning Map Amendment No. ZC 19-01, Zone Text Amendment No. ZTA 19-08, Development Agreement No. DA 19-02, and Subdivision No. SUB 19-03 for Vesting Tentative Map No. 82806 for the Pacific Coast Commons Specific Plan and Pacific Coast Commons Mixed-Use Project at 475-629 North Pacific Coast Highway ("Project");

B. The project applications were reviewed by the City's Development Services Department for, in part, consistency with the General Plan and conformity with the ESMC;

C. The City reviewed the project's environmental impacts under the California Environmental Quality Act (Public Resources Code §§ 21000, *et seq.*, "CEQA"), the regulations promulgated thereunder (14 Cal. Code of Regulations §§15000, *et seq.*, the "CEQA Guidelines");

D. An Environmental Impact Report (EIR) was prepared pursuant to the requirements of CEQA and the CEQA Guidelines;

E. The Development Services Department completed its review and scheduled a public hearing regarding the application before the Planning Commission for November 18, 2021;

F. On November 18, 2021, the Planning Commission opened a duly noticed public hearing to receive public testimony and other evidence regarding the application;

G. On November 18, 2021, the Planning Commission continued the public hearing to December 9, 2021; and

H. On December 8, 2021 a letter was submitted to the City by Mitchell M. Tsai, Attorney At Law, on behalf of the Southwest Regional Council of Carpenters ("Carpenters' Letter") objecting to the Project and referring to an earlier letter which had never been received by the City which raised issues with the EIR; and

I. Based on the submission of the Carpenters' Letter the City determined that it would be necessary to continue the hearing to allow time to respond, but nevertheless took testimony at the continued public hearing held on December 9, 2021; and

J. During the public testimony portion of the hearing, a letter was submitted by the Lozeau Drury law firm on behalf of Supporters Alliance For Environmental Responsibility ("SAFER letter");

K. On February 10, 2022, the Planning Commission held a new duly noticed public hearing to receive public testimony and other evidence regarding the application;

L. After the close of the public hearing, the Planning Commission adopted Resolution No. 2905 recommending that the City Council approve the Project including, without, limitation, adopting this Ordinance;

M. On _____, 2022, the City Council held a public hearing and considered the information provided by City staff, public testimony, and representatives of BRE El Segundo Property Owner A LLC, BRE El Segundo Property Owner B LLC, and BRE El Segundo Parking LLC regarding this Ordinance; and

N. This Ordinance and its findings are made based upon the entire administrative record including, without limitation, testimony and evidence presented to the City Council at its _____, 2022 hearing and the staff report submitted by the Development Services Department.

SECTION 2: *Environmental Assessment.* Prior to adopting this Ordinance, the City Council adopted Resolution No. ____ certifying a Final Environmental Impact Report (FEIR), adopting Findings of Fact and a Statement of Overriding Considerations (SOC) and adopting a mitigation monitoring and reporting program (MMRP) for this Project which, among other things, properly assesses the environmental impact of this Ordinance, and the Project, in accordance with CEQA. This Ordinance incorporates by reference the environmental findings and analysis set forth in Resolution No. ____.

SECTION 3: *General Plan Amendment.* Prior to adopting this Ordinance, the City Council adopted Resolution No. ____ for General Plan Amendment No. 19-01, changing the land use designation for the property at 475-629 North Pacific Coast Highway from General Commercial and Parking to Pacific Coast Commons Specific Plan (PCCSP).

SECTION 4: *Factual Findings and Conclusions*. The City Council finds that the following facts exist:

A. The subject property is located at 475-629 North Pacific Coast Highway in the northwest quadrant of the City of El Segundo.

B. The property site is a level 6.385 gross acre site located on two blocks along Pacific Coast Highway.

C. The project site is comprised of two blocks and is currently improved with two existing hotels and two existing paved parking lots. The block bounded by Pacific Coast Highway, Holly Avenue, Indiana Street and Mariposa Avenue is currently developed with the 350-room Fairfield Inn and Suites and the 246-room Aloft hotels totaling approximately 325,000 gross square feet combined and a paved parking lot. The portion of the project site on the block north of Mariposa Avenue and south of Palm Avenue is developed with a paved surface parking lot. No trees are located on the parking lot site.

D. The project is a residential and commercial mixed-use concept. The Specific Plan would allow 622,398 gross square feet of development including 282,398 square feet of existing development that would remain. The proposed maximum development density is a 2.70 Floor Area Ratio (FAR) after dedications for right-of-way improvements. The Specific Plan would allow a maximum of two hundred sixty-three residential dwelling units including thirty-two affordable housing units located among three of the Land Use Districts within the Specific Plan. Each new lot will meet or exceed the minimum size and dimension requirements.

E. The surrounding land uses include a fast food restaurant (Carl's Jr.), a vacant restaurant and parking lot, and multi-family residential uses to the north and a gas station on the northwest corner of Mariposa Avenue and Pacific Coast Highway; restaurants and office uses, a Ralphs market, two commercial shopping centers with retail and restaurant uses, and a 6-story office building to the east; a small commercial shopping center with a drug store, bank, two restaurants and retail store to the south; and multi-family residential uses to the west.

F. Development standards for allowable uses have been developed for the Specific Plan and all uses within the Plan area must be compliant. The allowed uses identified in the development standards include multiple-family residential uses including both townhomes and apartments, and a range of commercial uses including but not limited to, hotel, retail, restaurant, and offices.

G. This Ordinance rezones the area from the General Commercial (C-3) Zone and Parking (P) Zone to the Pacific Coast Commons Specific Plan (PCCSP) Zone and adopts the Pacific Coast Commons Specific Plan.

H. The PCCSP contains five land use designations. These are: PCC Mixed-Use 1 (PCC MU-1), PCC Commercial-1 (PCC COM-1), PCC Commercial-2 (PCC COM-2), PCC Commercial-3 (PCC COM-3), and PCC Mixed-Use 2 (PCC MU-2). The

PCC MU-1 designation applies to one parcel comprised of 1.241 acres after right-of-way dedications. The PCC COM-1 designation applies to one parcel comprised of 0.905 acres after right-of-way dedications. The PCC COM-2 designation applies to one parcel comprised of 1.549 acres after right-of-way dedications. The PCC COM-3 designation applies to one parcel comprised of acres after 0.728 acres after right-of-way dedications. The PCC MU-1 designation applies to two parcels comprised of 1.806 acres after right-of-way dedications.

I. The Project includes completion of a roadway widening on Mariposa Avenue and the addition of a new eastbound dedicated right-turn only travel lane that turns south onto Pacific Coast Highway. The Project also includes roadway widening on Holly Avenue.

SECTION 5: *Zone Change Findings.*

A. Based on the factual findings set forth in Section 4 of this Ordinance, the proposed Zone Change is necessary to carry out the proposed project because the proposed General Plan Amendment changes the land use classification of the project site from General Commercial and Parking to Pacific Coast Commons Specific Plan (PCCSP). The Zone Change changing the property and the Zoning Map from General Commercial (C-3) and Parking (P) to Pacific Coast Commons Specific Plan (PCCSP) is necessary to maintain consistency with the proposed General Plan land use designation of Pacific Coast Commons Specific Plan.

B. ESMC Title 15 is intended to be the primary tool for implementing the goals, objectives and policies of the El Segundo General Plan. The zone change will maintain consistency with the proposed change in General Plan land use designation to Pacific Coast Commons Specific Plan and is also consistent with the General Plan goals, objectives and policies set forth in Section 3 of Resolution No. ____. Those findings of consistency are incorporated by reference as if fully set forth below.

SECTION 6: *Zone Text Amendment Findings.* Based on the factual findings in Resolution No. _____, as incorporated into this Ordinance, the Zone Text Amendment is necessary to implement the Project and establish the proposed Pacific Coast Commons Specific Plan (PCCSP) Zone. An amendment to ESMC § 15-3-2(A) to add a new subsection (12) to create the Pacific Coast Commons Specific Plan (PCCSP) Zone is necessary for consistency with the General Plan.

SECTION 7: *Specific Plan Findings.* The Pacific Coast Commons Specific Plan (PCCSP) will provide the comprehensive planning and zoning regulations for the proposed residential and commercial mixed-use development concept. Based on the factual findings set forth herein and in Resolution No. ___, together with the evidence in the administrative record as a whole, the City Council finds that the PCCSP will further the goals, policies and objectives of the General Plan and will not obstruct their attainment. The City Council further finds that the PCCSP contains all of the elements required of a

specific plan pursuant to Government Code section 65451.

SECTION 8: *Development Agreement Findings.* Pursuant to City Council Resolution No. 3268, adopted June 26, 1984, the City Council finds that:

A. The project is consistent with the objectives, policies, general land uses, and programs specified in the general plan and any applicable specific plan. The Development Agreement would provide the following public benefits in exchange for valuable development rights (fifteen-year entitlement with a five-year extension option):

1. Create a Specific Plan with a range of multiple-family residential and commercial uses that will contribute to the City's housing stock including the addition of affordable housing units and contribute to job creation opportunities and balance growth with local resources and infrastructure capacity. Additionally, the addition of housing units will improve the jobs-housing balance within the City.

2. The project will provide thirty-two affordable housing units for occupancy by low income and very low-income households for 55 years.

3. The project will help foster economic development in the City by contributing to a strong business climate, with positive outcomes such as business retention and attraction, as well as effective levels of City services to all members of the community.

4. The project will increase the City's tax base including utility user tax, property tax and sales tax, and therefore provide the City with resources to provide high-quality services to residents and the daytime population.

5. The project includes the payment of $25,000 to the City for either the costs to implement a permit parking district adjacent to the Project site if the residents petition for such district or, to be used by the City for public improvements in the geographical vicinity of the Project site.

6. Community Non-Profit Space. The project will provide 1,000 square feet of community space on the ground floor of the Fairfield parking structure.

7. Landscaping improvements. Additional landscaping and trees will be provided on the west side of Indiana Street between Mariposa Avenue and Holly Avenue. Enhanced landscaping and pedestrian seating will be provided in the existing landscaped areas in front of the Fairfield Inn and Suites and Aloft hotels that will be installed with the development of the PCC South Site. Six new street trees will be planted along the PCC South Site development street frontage. Enhanced landscaping will be provided with the development of the PCC North Site along the western block wall.

8. Enhanced on-site paving improvements. Enhanced on-site paving improvements will be provided at several vehicular entrances/exits to the three new development areas.

9. EV Charging. The project will include 200 EV capable spaces including 50 installed EV chargers across the PCC Specific Plan area.

10. Solar Panels. Solar panels will be installed in the PCC North and PCC South residential developments that will generate sufficient power for their respective common areas power needs.

11. Battery Storage. The project will comply with the battery storage system requirements consistent with the 2022 Building Energy Efficiency Standards (Title 24 Energy Code) for both PCC North and PCC South.

12. Fencing improvements. Chain link fencing at the Fairfield and Aloft Hotel sites will be removed and replaced with decorative fencing.

13. The increase in density, which is located along a major bus route corridor and approximately ½ mile from the existing Metro Green Line Light Rail Station at Mariposa Avenue and Nash Street, helps implement regional planning programs and plans such as the SCAG Regional Transportation Plan/Sustainable Communities Strategy and efforts towards improving mobility and livability.

14. The increase in density close to the existing Metro Green Line light rail station also implements General Plan Land Use Element Policy LU 4-4.6 promoting denser mixed-use development near the City's existing Metro Green Line stations.

B. The project is compatible with the uses authorized in, and the regulations prescribed for, the land use district in which the real property is located. The proposed project includes a new land use designation and zoning classification, which establishes the permitted uses and development standards that would apply to the project. These uses and development standards are similar and compatible with the other commercially zoned districts in the City.

C. The project conforms to public convenience, general welfare and good land use practice. The Pacific Coast Commons Specific Plan includes a range of multiple-family residential and commercial uses that will contribute to the City's housing stock including affordable units, contribute to job creation opportunities, balance growth with local resources and infrastructure capacity, and improve the jobs-housing balance within the City. The project will provide roadway improvements on Holly Avenue and on Mariposa Avenue including a new dedicated eastbound (to southbound) right turn lane on Mariposa Avenue.

D. The project will not be detrimental to the health, safety and general welfare. An EIR was completed to evaluate the project which reviewed issue areas such as Aesthetics, Air Quality, Cultural Resources, Energy, Geology and Soils, Greenhouse Gas Emissions, Hazards and Hazardous Materials, Hydrology and Water Quality, Land Use and Planning, Noise, Population and Housing, Public Services, Recreation, Transportation, Tribal Cultural Resources, and Utilities and Service Systems. All feasible mitigation has been incorporated into the project to reduce or eliminate potential impacts and to maintain public health, safety and general welfare. The EIR concluded that the project will have a significant, unavoidable impact with regard to air quality due to the fact that it will result in slightly higher population growth than that anticipated in the SCAG 2016 RTP/SCS for the 2016-2040 period (an increase of 618 individuals as opposed to the 600 anticipated by SCAG). Notwithstanding the fact that the project would slightly increase the City's population growth beyond SCAG's projections for the 2016-2040 period, the City Council finds that the project will not be detrimental to the health, safety and general welfare.

E. The project will not adversely affect the orderly development of property or the preservation of property values. This project is surrounded by previously developed multiple-family residential and commercially developed land and the proposed uses of the Pacific Coast Commons Specific Plan are consistent with surrounding development and will not adversely affect the value of neighboring properties. The proposed Pacific Coast Commons Specific Plan development standards and development agreement will ensure that the project will be developed in an orderly fashion. All mitigation measures will be implemented at the time and place impacts occur.

SECTION 9: Actions. The City Council takes the following actions:

A. ESMC § 15-3-2(A) is amended to add subsection 12 to read as follows:

"12. Pacific Coast Commons Specific Plan (PCCSP):

There are five classes of use districts intended to be used within the boundaries of the Pacific Coast Commons Specific Plan. These districts are:

PCC Mixed-Use-1 (PCC MU-1)
PCC Commercial-1 (PCC COM-1)
PCC Commercial-2 (PCC COM-2)
PCC Commercial-3 (PCC COM-3)
PCC Mixed-Use-2 (PCC MU-2)"

B. The current Zoning Map is amended by changing the Project site from "Parking" and "General Commercial (C-3)" to "Pacific Coast Commons Specific Plan," including the zoning district designations within the Specific Plan. The corresponding changes to the Zoning Map are set forth in attached Exhibit "A," which is incorporated into this Ordinance by reference.

C. The "Pacific Coast Commons Specific Plan" is adopted as set forth in attached Exhibit "B," which is incorporated into this Ordinance by reference.

D. The Development Agreement by and between the City of El Segundo and BRE El Segundo Property Owner A LLC, BRE El Segundo Property Owner B LLC, AND BRE El Segundo Parking LLC, as set forth in attached Exhibit "C," and incorporated into this Ordinance by reference, is approved. The Mayor is authorized to execute the Development Agreement in a form approved by the City Attorney.

E. To the extent they are not otherwise adopted or approved by this Ordinance, the City Council approves Zone Change and Zoning Map Amendment No. ZC 19-1 and Zone Text Amendment No. ZTA 19-08.

SECTION 10: *Exhibits.* This Ordinance includes the following exhibits which are attached hereto and made a part hereof:

A. Zoning Map Changes
B. Pacific Coast Commons Specific Plan
C. Development Agreement

SECTION 11: *Reliance on Record.* Each and every one of the findings and determinations in this Ordinance are based on the competent and substantial evidence, both oral and written, contained in the entire record relating to the project. The findings and determinations constitute the independent findings and determinations of the City Council in all respects and are fully and completely supported by substantial evidence in the record as a whole.

SECTION 12: *Limitations.* The City Council's analysis and evaluation of the Project is based on the best information currently available. It is inevitable that in evaluating a project that absolute and perfect knowledge of all possible aspects of the project will not exist. One of the major limitations on analysis of the project is the City Council's knowledge of future events. In all instances, best efforts have been made to form accurate assumptions. Somewhat related to this are the limitations on the City's ability to solve what are in effect regional, state, and national problems and issues. The City must work within the political framework within which it exists and with the limitations inherent in that framework.

SECTION 13: *Summaries of Information.* All summaries of information in the findings which precede this section, are based on the substantial evidence in the record. The absence of any particular fact from any such summary is not an indication that a particular finding, is not based in part on that fact.

SECTION 14: *Construction*. This Ordinance must be broadly construed in order to achieve the purposes stated in this Ordinance. It is the City Council's intent that the

provisions of this Ordinance be interpreted or implemented by the City and others in a manner that facilitates the purposes set forth in this Ordinance.

SECTION 15: *Enforceability*. Repeal of any provision of the ESMC does not affect any penalty, forfeiture, or liability incurred before, or preclude prosecution and imposition of penalties for any violation occurring before this Ordinance's effective date. Any such repealed part will remain in full force and effect for sustaining action or prosecuting violations occurring before the effective date of this Ordinance.

SECTION 16: *Validity Of Previous Code Sections.* If this entire Ordinance or its application is deemed invalid by a court of competent jurisdiction, any repeal or amendment of the ESMC or other city ordinance by this Ordinance will be rendered void and cause such previous ESMC provision or other the city ordinance to remain in full force and effect for all purposes.

SECTION 17: *Severability.* If any part of this Ordinance or its application is deemed invalid by a court of competent jurisdiction, the City Council intends that such invalidity will not affect the effectiveness of the remaining provisions or applications and, to this end, the provisions of this Ordinance are severable.

SECTION 18: *Certification and Recordation.* The City Clerk is directed to certify the passage and adoption of this Ordinance; cause it to be entered into the City of El Segundo's book of original ordinances; make a note of the passage and adoption in the records of this meeting; and, within fifteen (15) days after the passage and adoption of this Ordinance, cause a summary thereof to be published or posted in accordance with California law. Additionally, the City Clerk is directed to record the Development Agreement.

SECTION 19: *Effective Date.* This Ordinance shall take effect 30 days after its passage and adoption.

PASSED AND ADOPTED this ___ day of _____, 2022.

APPENDICES

Appendix A Pacific Coast Commons Specific Plan Legal Description.....88

I. INTRODUCTION

A. SPECIFIC PLAN AREA

Pacific Coast Commons Specific Plan (PCCSP) area is located in the City of El Segundo, County of Los Angeles, California. El Segundo is situated approximately 15 miles southwest of downtown Los Angeles. The City of El Segundo is located south of the City of Los Angeles, west of the City of Hawthorne and the County of Los Angeles, north of the City of Manhattan Beach, and east of the City of Los Angeles and the Pacific Ocean (refer to Exhibit 1, *Regional Vicinity Map*).

More specifically, the roughly 6.385 gross acre area within the Specific Plan (6.23 net acres post street dedications) is located in the northwest quadrant of the City of El Segundo, approximately three quarters of a mile south of the Los Angeles International Airport (LAX) and the Glen Anderson Century Freeway (I-105), approximately two and one quarter miles west of the San Diego Freeway (SR-405), and approximately two and a half miles southwest of the juncture of these two freeways.

The site encompasses a "superblock" bounded by Pacific Coast Highway, Mariposa Avenue, Holly Avenue and Indiana Street containing the Aloft and Fairfield Inn and Suites hotels. The site also includes a parking lot on a portion of the block to the north of the hotel "superblock" that has frontage on Pacific Coast Highway, Mariposa Avenue to the south and Palm Avenue to the north (refer to Exhibit 2, *Local Vicinity Map*, and Exhibit 3, *Local Vicinity Aerial View*).

The adjacent land uses and zoning include the following (refer to Exhibit 4, Existing Development):

North: The adjacent land uses to the north include: a fast food restaurant and a vacant restaurant and parking lot in the General Commercial (C-3) Zone; and multi-family residential uses in the Multi-Family Residential (R-3) Zone. A gas station is located on the northwest corner of Mariposa Avenue and Pacific Coast Highway in the General Commercial (C-3) Zone, which is north of the superblock that contains the two existing hotels and southeast of the parking lot for the Fairfield Inn and Suites Hotel located along Pacific Coast Highway between Mariposa and Palm Avenues. A fast-food restaurant, Carl's Jr., is located northeast of the same parking lot. Carl's Jr. is located at the southwest corner of Pacific Coast Highway and Palm Avenue.

East: The adjacent land uses to the east across Pacific Coast Highway include: a property with restaurants and office uses in the Corporate Office (CO) Zone; a Ralphs market and two commercial shopping centers with retail and restaurant uses in the General Commercial (C-3) Zone, and a 6-story office building in the Corporate Office (CO) Zone.

South: The adjacent land uses to the south of Holly Avenue include a small commercial shopping center with a drug store, bank, two restaurants and a retail store in the General Commercial (C-3) Zone.

West: The adjacent land uses to the west include multi-family residential uses in the Multi-Family Residential (R-3) Zone.

B. BACKGROUND

In 1957 a 386-room hotel known as the Thunderbird International Hotel was built on the property that is contained within the Specific Plan area. A restaurant, coffee shop, banquet rooms and lounge were added in 1958. The coffee shop was later renovated and re-opened in August 1962 as the Huki Lau restaurant with Polynesian décor and cuisine. The hotel was sold in the 1960's and renamed the Hacienda International Hotel which was later shortened to the Hacienda Hotel. The restaurant was renamed the Tiki Hut at that time as well.

The hotel was further expanded over the years and enlarged to include a maximum of 640 rooms at its peak with a reputation as the 10th largest hotel in the County of Los Angeles. In 1987, the hotel was granted a new Conditional Use Permit (EA-132; CUP 87-01) to allow for further renovations and the construction of a 60-foot tall sign tower with a 150 square-foot sign. Parking for the Hacienda Hotel was provided in multiple locations that included a parking lot located on the same block to the south of the Hacienda Hotel, a parking lot across the street on the block to the north of the hotel at 629 North Pacific Coast Highway, and some parking spaces interspersed around the hotel buildings.

On October 9, 2014 the Planning Commission approved two new conditional use permits (EA-1061; CUP 14-01 and CUP 14-02) to allow the existing Hacienda Hotel with 619 guest rooms to be split into two hotels, renovated and modernized. The North Hotel (located at 525 and 545 North Pacific Coast Highway) was renamed the Fairfield Inn and Suites and the South Hotel was renamed the Aloft Hotel (located at 475 North Pacific Coast Highway). The Aloft Hotel was reduced from 263 to 246 guest rooms and included a 6,640 square-foot addition to the existing 9-story hotel that provided a front desk area, lounge, self-serve food area, bar, multi-purpose room and exercise room. The Aloft Hotel includes an outdoor pool and an outdoor dining patio. The Aloft Hotel is 106,747 gross square feet in size. The Fairfield Inn and Suites was reduced from 356 to 350 guest rooms. The Fairfield Inn and Suites includes 3 buildings: a 9-story tower containing guest rooms, a 4-story building (with a central courtyard and pool area) that contains a lobby area, restaurant, bar, meeting rooms, a fitness room, and guest rooms, and a 2-story "food and beverage" building that contains banquet rooms, a restaurant/bar, and storage uses. The total square footage of the existing Fairfield Inn and Suites Hotel (3 buildings) is 217,311 gross square feet in size. Parking for the Aloft Hotel is provided in the existing parking lot to the south of the hotel (167 parking spaces). Additionally, 23 spaces are currently provided off-site pursuant to an off-site parking covenant in the existing parking lot at 629 North Pacific Coast Highway. Parking for the Fairfield Inn and Suites Hotel is provided primarily off-site with 213 parking spaces provided pursuant to an off-site parking covenant in the existing parking lot at 629 North Pacific Coast Highway and 33 parking spaces provided on-site.

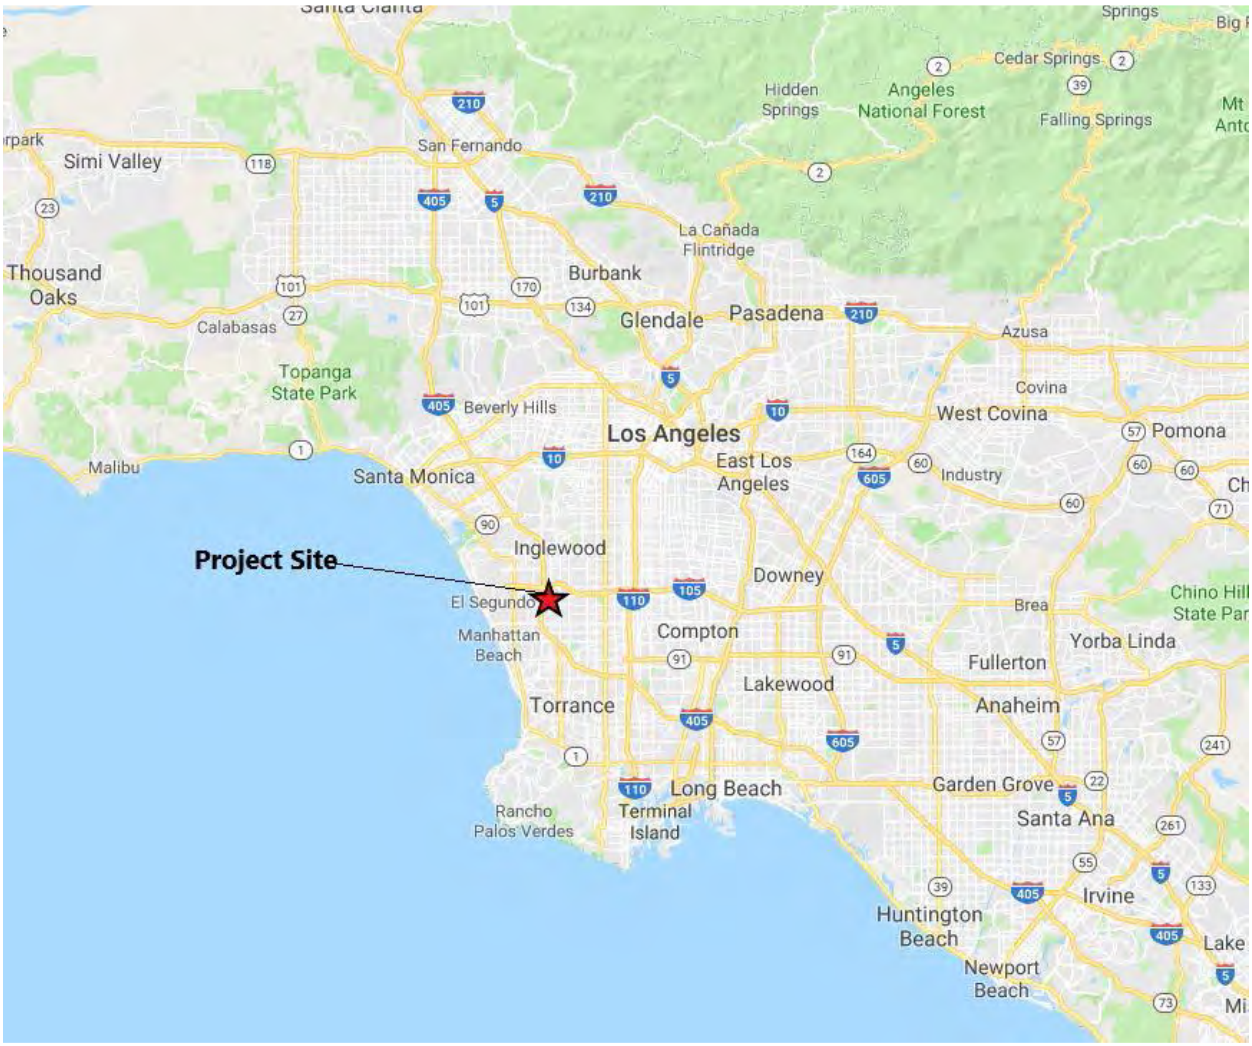

EXHIBIT 1
REGIONAL LOCATION MAP

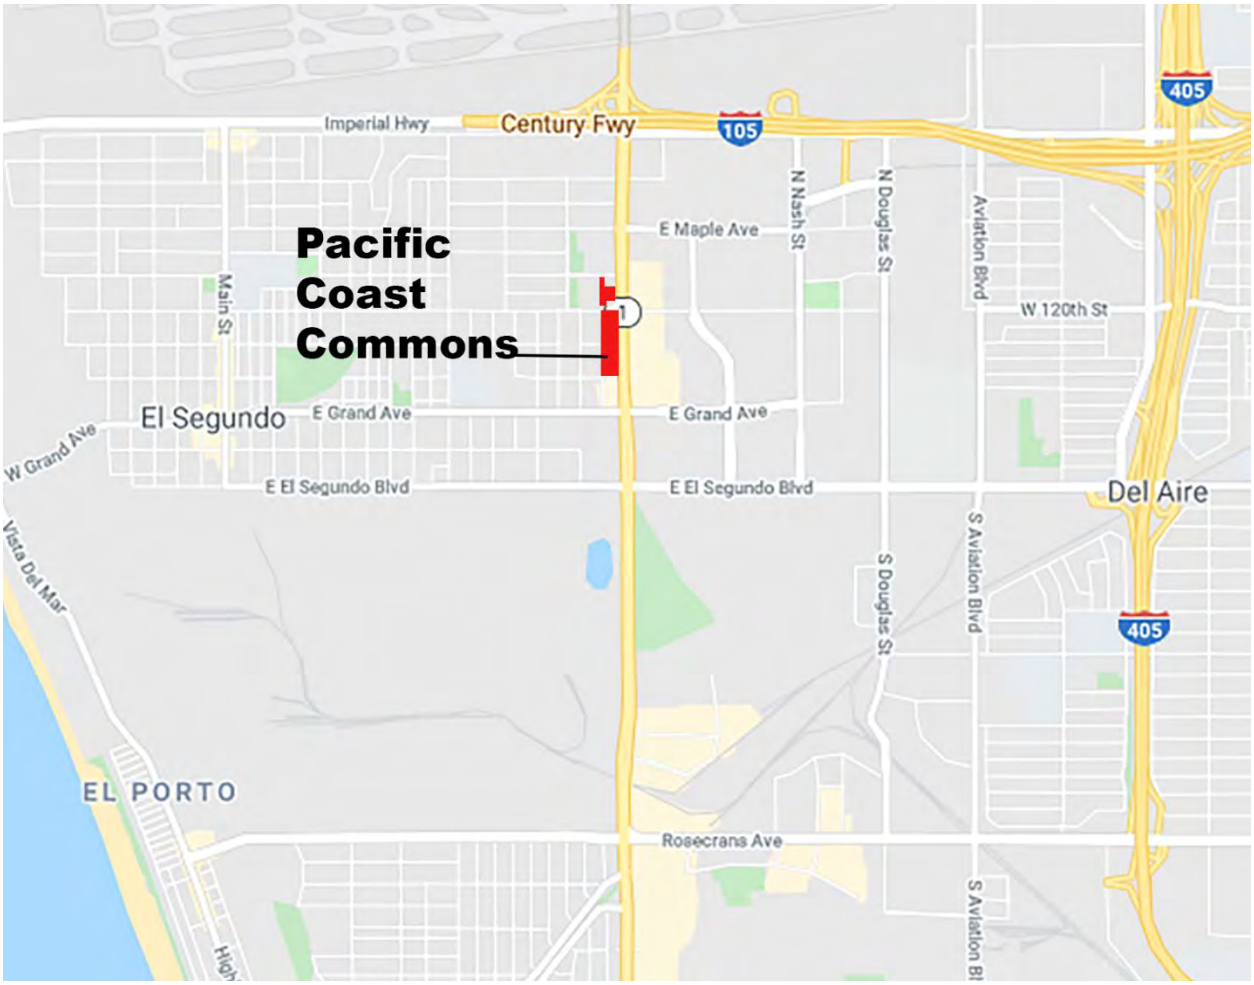

EXHIBIT 2
LOCAL VICINITY MAP

EXHIBIT 3
LOCAL VICINITY AERIAL VIEW

EXHIBIT 4
EXISTING DEVELOPMENT

The Aloft Hotel is 98,741 net square feet in size with an existing 0.992 FAR based upon its current lot size and configuration where a maximum of 1.0 FAR is allowed. The 3 buildings that comprise the Fairfield Inn and Suites Hotel total 190,026 net square feet in size with an existing 1.94 FAR where 1.0 FAR is allowed (existing legal, non-conforming condition). Both properties are non-conforming in regard to many development standards as they were built prior to the current development standards of the General Commercial (C-3) Zone.

The existing uses consist of:

Table I-1
Existing Uses

Building	Use	Net Square Footage	Gross Square Footage
Aloft Hotel	246 guest rooms, lobby/check-in area, lounge/bar, retail (food self-serve), multi-purpose meeting room/hospitality suite, fitness room, outdoor pool	98,741	106,747
Fairfield Inn and Suites Hotel	350 guest rooms, lobby/check in area, restaurant/bar, meeting room/event space (banquet rooms), office, storage , outdoor pool and patio area	190,028	217,311
Total		**288,767 square feet**	**324,058 square feet**

Under the existing General Commercial (C3) development standards no additional development could occur as the existing hotels utilize the maximum FAR allowed. Further, the parking lot to the north is currently zoned Automobile Parking (P) which only allows surface parking lots and parking structures. Commercial development is not permitted in the Automobile Parking (P) Zone. Therefore, a Specific Plan is needed in order to allow the proposed mixed-use residential/commercial development to be added to the site along with the two existing hotels that will remain.

BRE El Segundo Property Owner A LLC, BRE El Segundo Property Owner B LLC, and BRE EL Segundo Parking LLC (collectively, "BRE El Segundo") filed for this Specific Plan along with other applications. The other applications include an Environmental Assessment, a General Plan and General Plan Map Amendment, Zone Change, Zoning Map Amendment, Zone Text Amendment, a Development Agreement, a Subdivision of Land (Vesting Tentative Map), Site Plan Review, a Parking Demand Study and Shared Parking Analysis, street dedication waivers for a portion of the dedication requirements for Mariposa Avenue and Indiana Street, reciprocal access agreements, an amendment to Resolution Nos. 2759 and 2760 to rescind the previous approvals of SUB No. 1405, Lot Tie Covenant No. 14-03, Off-site Parking Covenant Nos. MISC 14-03 and 14-06, leaving in place CUP Nos. 14-01 for the Fairfield Inn and Suites Hotel and CUP No. 14-02 for the Aloft Hotel, along with alcohol service at both hotels with modifications to the conditions

of approval accordingly, and new off-site parking covenants to replace the previously approved Parking Covenant Nos. MISC 14-03 and 14-06. The intent of the Specific Plan is to allow the development of the Specific Plan area with the combination of new and existing development with allowed residential and commercial uses with an average floor area ratio (FAR) of 2.15:1, a minimum floor area ratio (FAR) of 0.16:1 in any one land use district and a maximum floor area ratio (FAR) of 2.70:1 in any one land use district. The majority of the new development will target adding new housing stock to the community to meet existing and future housing needs through the development of existing surface parking lots and demolition of 41,660 gross square feet of a portion of the Fairfield Inn and Suites hotel ("Food and Beverage" Building") located at the southwest corner of Mariposa Avenue and Pacific Coast Highway. The adoption of this Specific Plan will allow expansion of the uses permitted on the site with development standards tailored to the unique mix of hotel, residential and commercial (retail and office) uses on the site.

C. DEMOGRAPHICS

According to the 2010 United States Census, as of 2010 El Segundo had a population of 16,654 persons and a total of 7,410 dwelling units. From 2000 to 2010, El Segundo's population increased by 4%. The California Department of Finance reported a population of 17,066 persons in May 2019. The 2019 Profile of the City of El Segundo prepared by the Southern California Association of Governments ("SCAG") indicates that as of 2017 there were 48,515 jobs in the City of El Segundo.

D. ECONOMIC CONTEXT

At its peak before the economic recession in 2008, El Segundo had a daytime population of approximately 85,000 persons compared to its resident population of approximately 17,000 persons. There was a net loss of jobs in the City between 2007 and 2012 with the number of jobs beginning to increase again in 2013. According to SCAG's 2015 profile the total number of jobs dropped from 56,559 persons in 2007 to 38,447 jobs in 2012. In addition to the fiscal benefits including increased sales tax, utility tax and property tax that will be provided as a result of the added residential and commercial uses, the potential for approximately 56 additional jobs that will be created by this Specific Plan will improve the overall economic health of the City. The additional jobs will be the result of the new commercial uses as no changes in employment are anticipated at the two existing hotels with the adoption of this Specific Plan. The additional jobs and increased tax base will contribute to the City's ability to provide high quality municipal services to the benefit of the City's resident and business community. The addition of 263 housing units will have a positive effect on the jobs/housing balance by increasing the number of housing units in the City to support El Segundo's jobs rich environment.

II. OVERVIEW OF THE SPECIFIC PLAN

A. PURPOSE AND AUTHORITY OF SPECIFIC PLAN

The purpose of this Specific Plan is to provide a foundation for the proposed land uses on the subject property through the application of regulations, standards and design guidelines. The Pacific Coast Commons Specific Plan provides text and exhibits which describe the proposed land uses and associated guidelines.

This Specific Plan is adopted pursuant to Government Code §§ 65450 through 65457.

Pursuant to Government Code § 65451, a Specific Plan must include text and a diagram or diagrams which specify all of the following in detail:

- The distribution, location, and extent of the uses of land, including open space within the area covered by the plan.
- The proposed distribution, location, extent, and intensity of major components of public and private transportation, sewage, water, drainage, solid waste disposal, energy and other essential facilities proposed to be located within the land area covered by the plan and needed to support the land uses described in the plan.
- Standards and criteria by which development will proceed, and standards for the conservation, development, and utilization of natural resources, where applicable.
- A program of implementation measures including regulations, programs, public works projects and financing measures necessary to carry out the above items.
- A discussion of the relationship of the Specific Plan to the General Plan.

A thorough review of the El Segundo General Plan shows that this Specific Plan is compatible and consistent with the goals and policies outlined in the General Plan. This Specific Plan will further the goals and policies of the General Plan as more fully described below.

This Specific Plan was prepared to provide the essential relationship between the policies of the El Segundo General Plan and actual development in the Project area. By functioning as a regulatory document, the Pacific Coast Commons Specific Plan provides a means of implementing the City of El Segundo's General Plan. All future development plans and entitlements within the Specific Plan boundaries must be consistent with the standards set forth in this document. The Specific Plan is the sole regulatory document for development standards and design standards except where explicit references are made to the El Segundo Municipal Code or where terms used in this Specific Plan are defined in the El Segundo Municipal Code Section 15-1-6 and are not defined herein.

B. SPECIFIC PLAN SCOPE AND GOALS

The City of El Segundo is an employment-led community and accordingly, development has been led by employment rather than housing growth. The Pacific Coast Commons Specific Plan will: 1) serve the mission of economic development in the City which is to create, maintain, and implement a business climate that fosters a strong economic community; 2) provide opportunities for new high-quality multiple-family housing (apartments and townhomes) that will increase housing supply to meet the needs of El Segundo residents and employees in El Segundo's expanding business community; 3) improve the jobs/housing balance by increasing housing supply; 4) add affordable housing to the City; 5) provide benefits to air quality through the reduction of greenhouse gas emissions by providing new housing in close proximity to jobs and public transit; 6) enhance sustainability through the design of the development; and 7) maintain the quality of life that has characterized El Segundo for more than one hundred years.

Permitted uses within the Specific Plan area will create both housing and job opportunities for the residential and business community. The new commercial uses (restaurant, retail and office) allowed by the Specific Plan will create a synergy with the existing hotels, the new multi-family residential uses, and other existing commercial and industrial uses in the surrounding area. The commercial uses will provide needed amenities for the residents of the multi-family residential uses and the multi-family residential uses will support the growth of the surrounding commercial businesses. The design of the project will provide a high-quality pedestrian environment that will be compatible with the surrounding uses and create a sense of place for the surrounding neighborhood. The development allowed under the Specific Plan will provide a basis for a positive contribution to the maintenance and expansion of El Segundo's economic base as development typically increases the City's business license taxes, increases the City's utility user taxes, and increases the City's sales taxes. An increased economic base will provide the City with resources to provide high-quality services to its residents and daytime population.

C. CONSISTENCY WITH THE GENERAL PLAN

The El Segundo General Plan provides the underlying fundamentals of the Pacific Coast Commons Specific Plan, which serves both as a planning and regulatory document. The Specific Plan is the document implementing the El Segundo General Plan for the Specific Plan area.

Proposed development plans, tentative maps, and any other development approvals must be consistent with the Specific Plan. Projects consistent with this Specific Plan will be automatically deemed consistent with the General Plan.

Concurrent with the adoption of the Pacific Coast Commons Specific Plan the City also processed a General Plan Amendment that changes the Land Use Designation from General Commercial for the block bounded by Pacific Coast Highway, Mariposa Avenue, Indiana Street, and Holly Avenue to the Pacific Coast Commons Specific Plan and from Parking for the remaining parcels to the Pacific Coast Commons Specific Plan with an accompanying Land Use map change. The Specific Plan is therefore consistent with the General Plan of the City of El Segundo. More specifically, the Specific Plan directly implements or furthers the intent of the following goals, objectives and policies of the General Plan:

ECONOMIC DEVELOPMENT ELEMENT

Goal ED1: To create in El Segundo a strong, healthy economic community in which all diverse stakeholders may benefit.

Objective ED1-1 *To build support and cooperation among the City of El Segundo and its business and residential communities for the mutual benefits derived from the maintenance and expansion of El Segundo's economic base.*

Policy ED1-1.1: Maintain economic development as one of the City's and the business and residential communities' top priorities.

Policy ED1-2.1: Seek to expand El Segundo's retail and commercial base so that the diverse needs of the City's business and residential communities are met.

Policy ED1-2.2: Maintain and promote land uses that improve the City's tax base, balancing economic development and quality of life goals.

LAND USE ELEMENT

Policy LU1-5.8: Innovative land development and design techniques as well as new materials and construction methods should be encouraged.

Goal LU3: Promote the health, safety, and well-being of the people of El Segundo by adopting standards for the proper balance, relationship, and distribution of the residential land uses.

Objective LU3-1: *Preserve, protect, and extend, if possible, existing Single-Family Residential uses.*

Policy LU3-2.1: Promote construction of high quality Multi-Family Residential development with ample open space, leisure and recreational facilities.

Policy LU3-2.2: Multi-family development will be located only in appropriate places and evaluated carefully to insure that these developments are not detrimental to the existing single-family character.

Objective LU3-3.1: *Adopt and enforce recreational area requirements for large multiple unit developments.*

Goal LU4: **Provide a stable tax base for the City through development of new commercial uses, primarily within a mixed-use environment, without adversely affecting the viability of Downtown.**

Objective LU4-1: *Promote the development of high quality retail facilities in proximity to major employment centers.*

Policy LU4-1.1: Require landscaping, its maintenance, and permanent upkeep on all new commercial developments.

Policy LU4-1.2: All commercial facilities shall be built and maintained in accordance with Health and Safety Code requirements and shall meet seismic safety regulations and environmental regulations.

Policy LU4-1.4 New commercial developments shall meet seismic safety standards and regulations, as well as comply with all noise, air quality, water and environmental regulations.

Objective LU4-4: *Provide areas where development has the flexibility to mix uses, in an effort to provide synergistic relationships which have the potential to maximize economic benefit, reduce traffic impacts, and encourage pedestrian environments.*

Policy LU4-4.6: Promote mixed-use development near transit nodes and encourage modes of transportation that do not require an automobile.

Goal LU7: **Provide the highest quality public facilities, services, and public infrastructure possible to the community.**

Policy LU7-1.2: No new development shall be allowed unless adequate public facilities are in place or provided for.

Policy LU7-2.3: All new development shall place utilities underground.

CIRCULATION ELEMENT

Goal C1: **Provide a safe, convenient, and cost-effective circulation system to serve the present and future circulation needs of the El Segundo community.**

Objective C1-1: *Provide a roadway system that accommodates the City's existing and project land use and circulation needs.*

Policy C1-1.8: Provide all residential, commercial, and industrial areas with

efficient and safe access to the major regional transportation facilities.

Policy C1-1.9: Provide all residential, commercial, and industrial areas with efficient and safe access for emergency vehicles.

Policy C1-1.14: Require a full evaluation of potential traffic impacts associated with proposed new developments prior to project approval. Further require the implementation of appropriate mitigation measures prior to, or in conjunction with project development. Mitigation measures may include new roadway links on segments that would connect the new development to the existing roadway system, intersection improvements, and other measures. Mitigation measures shall be provided by or paid for by the project developer.

Objective C1-3: *Ensure that the City's Master Plan Truck Route System efficiently serves the shipping needs of the commercial and industrial land uses in El Segundo while balancing potential conflicts with residential and recreation land uses throughout the City.*

Policy C1-3.2: Ensure that the development review process incorporates consideration of off-street commercial loading requirements for all new projects.

Objective C2-1: *Provide a pedestrian circulation system to support and encourage walking as a safe and convenient travel mode within the City's circulation system.*

Policy C2-1.6: Encourage shopping areas to design their facilities for ease of pedestrian access.

Policy C2-1.7: Closely monitor design practices to ensure a clear pedestrian walking area by minimizing obstructions, especially in the vicinity of intersections.

Objective C2-2: *Provide a bikeway system throughout the City to support and encourage the use of the bicycle as a safe and convenient travel mode within the City's circulation system.*

Policy C2-2.1: Implement the recommendations on the Bicycle Master Plan contained in the Circulation Element, as the availability arises; i.e., through development, private grants, signing of shared routes.

Policy C2-2.2: Encourage new development to provide facilities for bicyclists to park and store their bicycles and provide shower and clothes changing facilities at or close to the bicyclist's work destination.

Policy C2-5.1: Ensure that Transportation Demand Management (TDM) measures are considered during the evaluation of new developments within the City, including but not limited to ridesharing, carpooling and vanpooling, flexible work schedules, telecommuting and car/vanpool preferential parking.

Policy C3-1.8: Require the provision of adequate pedestrian and bicycle access for new development projects through the development review process.

Policy C3-2.1: Ensure the provision of sufficient on-site parking in all new development.

HOUSING ELEMENT

Goal 3: Provide opportunities for new housing construction in a variety of locations and a variety of densities in accordance with the land use designations and policies in the Land Use Element.

OPEN SPACE AND RECREATION ELEMENT

Goal OS1: Provide and maintain high quality open space and recreational facilities that meet the needs of the existing and future residents and employees within the City of El Segundo.

CONSERVATION ELEMENT

Policy CN2-5: Require new construction and development to install water-conserving fixtures and appliances to reduce the amount of new demand.

Policy CN2-7: Require new construction and development to incorporate the principles and practices of sound landscape design and management, particularly those conserving water and energy.

Policy CN2-8: Encourage the retrofitting of existing landscapes to incorporate the principles and practices of sound landscape design and management, particularly those conserving water and energy.

Policy CN2-11: Encourage, whenever appropriate and feasible, development techniques which minimize surface run-off and allow replenishment of soil moisture. Such techniques may include, but not be limited to, the on-site use and retention of storm water, the use of pervious paving material (such as walk-on-bark, pea gravel, and cobble mulches), the preservation of vegetative covers, and efficiently designed and managed irrigation systems.

AIR QUALITY ELEMENT

Goal AQ3: Vehicle work trip reduction for private employees.

Objective AQ-3-1: Increase the proportion of work trips made by transit.

Goal AQ12: Reduction in Residential, Commercial, and Industrial Energy Consumption.

Objective AQ-12-1: Enact the recommendations of the AQMP Energy Working Group for commercial and residential buildings and adopt ordinances to mitigate air quality impacts from water and pool heating systems.

Policy AQ-12-1.2: It is the policy of the City of El Segundo that the City encourage the incorporation of energy conservation features in the design of new projects and the installation of conservation devices in existing developments.

NOISE ELEMENT

Goal N1: Encourage a high quality environment within all parts of the City of El Segundo where the public's health, safety, and welfare are not adversely affected by excessive noise.

Objective N1-1: It is the objective of the City of El Segundo to ensure that City residents are not exposed to mobile noise levels in excess of the interior and exterior noise standards or the single event noise standards specified in the El Segundo Municipal Code.

Objective N1-2: It is the objective of the City of El Segundo to ensure that City residents are not exposed to stationary noise levels in excess of El Segundo's Noise Ordinance standards.

Policy N1-2.1: Require all new projects to meet the City's Noise Ordinance Standards as a condition of building permit approval.

Program N1-2.1A: Address noise impacts in all environmental documents for discretionary approval projects, to insure that noise sources meet City Noise Ordinance standards. These sources may include mechanical or electrical equipment, truck loading areas, or outdoor speaker systems.

PUBLIC SAFETY ELEMENT

Goal PS1: Protect the public health and safety and minimize the social and economic impacts associated with geologic hazards.

Objective PS1-1: It is the objective of the City of El Segundo to reduce exposure to potentially hazardous geological conditions through land use planning and project review.

Policy PS1-1.1: Continue to review proposals for new development and for the expansion of existing development in areas of potential geological hazards.

Program PS1-1.1A: The City shall review projects to ensure that slope design considers the potential effects of high rainfall, private sewage systems, landscaping irrigation, and possible runoff from adjacent future development.

Policy PS1-1.2: Enforce, monitor and improve development standards which place the responsibility on the developer, with advice from qualified engineers and geologists, to develop and implement adequate mitigation measures as conditions for project approval.

Program PS1-1.2A: The City shall review projects to ensure that adequate geotechnical investigation has been completed in areas susceptible to land sliding and debris flows and in areas where collapsible or expansive soils occur, and to approve only those which mitigate these hazards to the satisfaction of the City Engineer.

Policy PS2-1.2: The City shall assist in the prevention of structural damage in areas with a high potential for liquefaction, landslides, and mudslides by requiring geotechnical studies for new development to mitigate potential impacts.

Goal PS6: A fire safe community.

Objective PS6-1: It is the objective of the City of El Segundo that the City minimize threats to public safety and protect property from

wildland and urban fires.

Policy PS6-1.1: Review projects and development proposals, and upgrade fire prevention standards and mitigation measures in areas of high urban fire hazard.

Policy PS6-1.2: Continue efforts to reduce fire hazards associated with older buildings, high-rise buildings, and fire-prone industrial facilities, and maintain adequate fire protection in all areas of the City. Review projects and development proposals, and upgrade fire prevention standards and mitigation measures in areas of high urban fire hazard.

Program PS6-1.2C: The City shall continue to require that all property be maintained in compliance with the fire code.

Goal PS7: Protect public health, safety, and welfare, and minimize loss of life, injury, property damage, and disruption of vital services, resulting from earthquakes, hazardous material incidents, and other natural and man-made disasters.

D. ENTITLEMENTS

The following entitlements are required in conjunction with this Specific Plan (SP No. 19-01):

- Environmental Assessment No. EA-1248 for the proposed mixed-use development that will add 263 housing units, approximately 11,250 square feet of commercial uses (comprised of retail, restaurant and hotel support based office uses), and 1,727 square feet of commercial floor area that cannot be occupied by commercial businesses[1], and three parking structures to provide parking for the uses in the Specific Plan area.

- General Plan Amendment No. GPA 19-01 to change the land use designation from "General Commercial" and "Parking" to "Pacific Coast Commons Specific Plan (PCCSP)" with an accompanying Land Use map change.

- Zone Text Amendment No. ZTA 19-08 to add a new ESMC §15-3-2(A)(12) "Pacific Coast Commons Specific Plan (PCCSP)."

- Zone Change No. ZC 19-01 to rezone the property from "General Commercial (C-3)" and "Parking (P)" to "Pacific Coast Commons Specific Plan (PCCSP)" and an accompanying Zoning map change.

[1] This commercial floor area is located in the Fairfield Parking Site and is comprised of lobby area and access to the multiple levels of the parking structure and any central circulation areas such as hallway access from the rear of commercial businesses to the lobby and parking structure that is not usable floor area located within those commercial businesses. This square footage is labeled as lobby area in Table III-II in this Plan.

- Development Agreement No. DA 19-02 between the City of El Segundo and BRE El Segundo Property Owner A LLC, BRE El Segundo Property Owner B LLC, and BRE El Segundo Parking LLC.

- Vesting Tentative Tract Map No. (VTTM 82806) SUB 19-03 – for merger, subdivision and residential/commercial condominium purposes reconfiguring 3 parcels (comprised of 12 existing lots) on the block bounded by Pacific Coast Highway, Mariposa Avenue, Indiana Street and Holly Avenue and 3 parcels (comprised of portions of 4 existing lots) on the block north of Mariposa Avenue and south of Palm Avenue in the Specific Plan Area into 6 new individual lots. Additionally, the Vesting Tentative Tract Map No. 82806 will allow: a) 1 residential ground and airspace parcel for 120 apartments and a maximum of 10 airspace parcels for commercial condominiums on Lot 1; b) a ground and airspace parcel for the parking structure and up to a maximum of 10 airspace parcels for commercial condominiums on Lot 4; and c) 1 residential ground and airspace parcel for 137 apartments and up to a maximum of 20 airspace parcels for commercial condominiums on Lot 5; and d) 6 residential condominiums (townhomes) on Lot 6.

- Site Plan Review No. SPR 19-01 to allow the site plan and architectural design to construct the mixed-use commercial and residential development for the 263 residential units, 11,252 square feet of new commercial development, 1,727 square feet of commercial floor area that cannot be occupied by commercial businesses[2], and 3 parking structures.

- Modification of Resolution Nos. 2759 and 2760 to rescind the previous approvals SUB No. 14-05, Lot-Tie Covenant No. 14-03, Off-site Parking Covenant Nos. MISC 14-03 and 14-06, leaving in place CUP No. 14-01 for the Fairfield Inn and Suites Hotel and CUP No. 14-02 for the Aloft Hotel, along with alcohol service at both hotels with modifications to the conditions of approval accordingly.

- Parking Demand Study and Shared Parking Analysis to establish the parking requirements for the proposed commercial and residential development combined with the existing hotel development.

- Shared Parking Agreement in conjunction with the Parking Demand Study and Shared Parking Analysis, to replace the previous approval of Off-Site Parking Covenant Nos. MISC 14-03 and MISC 14-06.

- Reciprocal Access Agreements for driveways and drive aisles accessing multiple parcels.

[2] This commercial floor area is located in the Fairfield Parking Site and is comprised of lobby area and access to the multiple levels of the parking structure and any central circulation areas such as hallway access from the rear of commercial businesses to the lobby and parking structure that is not usable floor area located within those commercial businesses. This square footage is labeled as lobby area in Table III-II in this Plan.

- Street dedication waiver requests for a portion of the dedication requirements for the south side of Mariposa Avenue and for a portion of the dedication requirements for the east side of Indiana Street.

Findings justifying the General Plan Amendment and Zone Change include:

1. The primary objective of the Specific Plan is to provide for superior, more comprehensive site planning of the Specific Plan area and zoning standards that address the needs of the unique master planned site that will maintain the existing hotel uses and construct new mixed-use multiple-family residential and commercial neighborhood serving uses in three phases.

2. Uses permitted within the Specific Plan area are consistent with the proposed zoning and are compatible with adjacent uses.

3. The Specific Plan will provide for additional housing opportunities in a variety of housing sizes, types and densities in support of the goals of the Housing Element of the General Plan.

E. EXISTING LAND USES

The City of El Segundo has distinctive land use patterns, which are divided into four quadrants by the intersection of Pacific Coast Highway and El Segundo Boulevard. Compatibility of an individual land use is determined mainly by its relationship to other uses within its quadrant. The Pacific Coast Commons Specific Plan area is located in the northwestern quadrant of the City of El Segundo, which is west of Pacific Coast Highway and north of El Segundo Boulevard. The design and implementation of this Specific Plan relate directly to its position within this larger context.

The Pacific Coast Commons Specific Plan is located in the northwest quadrant of the City. The northwest quadrant of the City has the most varied mix of uses within the City. All of the City's residential units, the Downtown area, the Civic Center, the commercial uses and hotel uses along the west side of the Pacific Coast Highway corridor and the industrial area of Smoky Hollow, are located in this quadrant.

The northeast quadrant of the City lies east across Pacific Coast Highway and north of El Segundo Boulevard. It consists primarily of corporate office and urban mixed uses which allow for office and commercial uses. The southwest quadrant of the City lies south of El Segundo Boulevard and west of Pacific Coast Highway. It consists primarily of an oil refinery/heavy industrial use. The southeast quadrant of the City lies south of El Segundo Boulevard and east of Pacific Coast Highway. It consists primarily of the light industrial land use category which allows a mixture of industrial and office uses. This quadrant also contains a commercial region which is home to the retail developments of Plaza El Segundo and the Point, which are both lifestyle commercial retail shopping centers that total approximately 500,000 square feet and the Lakes Municipal Golf Course. A Multimedia Overlay Zone overlies both the southeast and northeast quadrants of the City.

Before the adoption of the Pacific Coast Commons Specific Plan (PCCSP) the property was designated as General Commercial and Parking in the General Plan Land Use Element with General Commercial (C-3) and Parking (P) zoning.

Adjacent land uses include the following:

North: The adjacent land uses to the north include: a fast food restaurant, a vacant restaurant and parking lot, and multi-family residential uses. A gas station is located on the northwest corner of Mariposa Avenue and Pacific Coast Highway which is north of the superblock that contains the two existing hotels and south east of the parking lot for the Fairfield Inn and Suites Hotel located along Pacific Coast Highway between Mariposa and Palm Avenues. A fast-food restaurant, Carl's Jr., is located northeast of the same parking lot. Carl's Jr. is located at the southwest corner of Pacific Coast Highway and Palm Avenue.

East: The adjacent land uses to the east across Pacific Coast Highway include: a property with restaurants and office uses, a Ralphs market, two commercial shopping centers with retail and restaurant uses, and a 6- story office building.

South: The adjacent land uses to the south of Holly Avenue include a small commercial shopping center with a drug store, bank, two restaurants and retail store.

West: The adjacent land uses to the west include multi-family residential uses.

III. LAND USE PLAN

The Pacific Coast Commons Specific Plan encompasses 6.38 gross acres of existing developable area that includes the "superblock" bounded by Pacific Coast Highway, Mariposa Avenue, Holly Avenue and Indiana Street and a portion of the block to the north of the "superblock" that has frontage on Pacific Coast Highway, Mariposa Avenue to the south, and Palm Avenue to the north, see Exhibit 5, *Land Use Plan,* and Exhibit 6, *Conceptual Site Plan*. The Pacific Coast Commons Specific Plan ("PCCSP") has 5 land use districts within the plan boundary which is discussed in detail below.

Table III-I provides a Land Use Summary with the square footage of the new development and the existing development. Table III-II provides greater detail of the project development scenario with the uses on each Parcel (per the Vesting Tentative Map), the acreage of the parcel, the building area (gross and net), and the FAR.

The existing Aloft Hotel will remain. Two of the three buildings that comprise the existing Fairfield Inn & Suites Hotel will remain. The 41,660 square-foot, 2-story building at the southwest corner of Pacific Coast Highway and Mariposa Avenue commonly called the "Food and Beverage" building (primarily comprised of conference/meeting rooms and restaurant space) will be demolished and replaced with a parking structure that contains parking primarily for the Fairfield Inn and Suites Hotel and 3,273 gross square feet of new commercial uses at the front of the structure. Access to the parking structure occurs primarily from an existing driveway on Pacific Coast Highway.

The existing parking lot located at the south end of the PCCSP bounded by Holly Street to the south, Indiana Street to the west, Pacific Coast Highway to the east and the Aloft Hotel to the north will be replaced with new development. The new development will be a residential/commercial mixed-use project with a parking structure integrated into the building design. The new building will include 120 residential units (apartments) and 5,756 gross square feet of commercial uses. The parking structure will have access from existing driveways on Pacific Coast Highway and Indiana Street.

The existing northern parking lot that is on the block north of the Fairfield Inn and Suites Hotel with frontage on Pacific Coast Highway, bounded by Mariposa Avenue to the south and Palm Avenue to the north will be replaced with new development. The new residential/commercial mixed-use project will include 137 residential units (apartments) and 2,223 gross square feet of new commercial development. It will have a parking structure integrated into the building design with access to the structure from existing driveways on both Mariposa and Palm Avenues. The north parking lot site will also include 6 townhomes which are located directly west of the Carl's Jr. restaurant and south of Palm Avenue.

A. DEVELOPMENT CONCEPT

The Specific Plan establishes the general type, parameters and character of the development in order to develop an integrated Project area that is also compatible with and complements the surrounding area. The proximity of the Specific Plan Area to other residential and commercial

uses, freeways, major arterials, and the Metro Rail makes it an appropriate and attractive location for a residential/commercial mixed-use development that provides both housing and facilitates economic development in El Segundo.

The Pacific Coast Commons Specific Plan development concept provides a transition from the multi-family neighborhoods to the west and the large-scale commercial uses to the east of Pacific Coast Highway. The Pacific Coast Commons Specific Plan provides for both the maintenance of both the existing Aloft hotel and the Fairfield Inn and Suites hotel within the Specific Plan boundaries with the addition of new mixed-use residential/commercial development to complement the hotel uses and to provide compatible uses to the surrounding neighborhood. The development will include 3 parking structures incorporated into the development to provide both replacement parking for the hotels from the loss of surface parking as well as provide parking for new uses.

On an overall basis, the maximum development potential within the 6.23-acre (post dedications) Specific Plan is based upon an average floor area ratio (FAR) of 2.15. A 2.15 FAR results in a maximum development intensity of 622,398 gross square feet. The 622,398 gross square feet includes 282,398 gross square feet of existing development that will remain and 340,000 gross square feet of new square footage of residential and commercial uses combined. The floor area ratio varies in each of the 5 land use districts that range from a minimum of 0.16 to a maximum of 2.70 based upon how the uses are configured combined with the nonconforming conditions for the two existing hotels (see Table III-III).

Residential uses are proposed in 2 of the 5 land use districts, namely the PCC Mixed-Use 1 (PCC MU-1) district at the southern end of the Specific Plan area and the PCC Mixed-Use 2 (PCC MU-2) district at the northern end of the Specific Plan area. There are 120 dwelling units (apartments) in the PCC MU-1 land use district and 143 dwelling units in the PCC MU-2 land use district comprised of 137 apartments and 6 townhomes. The density in the PCC MU-1 land use district is approximately 97 dwelling units to the acre (96.67 dwelling units to the acre based upon 54,072 square feet of land area) and the density in the PCC MU-2 land use district is approximately 80 units to the acre (79.17 dwelling units to the acre based upon 78,686 square feet of land area). The average density of the two land use districts combined is 86.31 units to the acre and the average density within the entire Specific Plan area is 42.22 units to the acre. If the land area of either PCC Mixed-Use 1 or PCC Mixed-Use 2 is reduced, the number of dwelling units to the acre would increase accordingly.

The Pacific Coast Commons Specific Plan allows affordable housing and provides reduced requirements for parking in the Development Standards Chapter of this Specific Plan. The 263 residential units permitted in this Specific Plan including affordable housing units will contribute significantly to the City's housing allocation requirements specified in the Regional Housing Needs Assessment (RHNA) established by State law.

B. LAND USE PLAN

The Pacific Coast Commons Specific Plan is based upon the following land uses (refer to Exhibit 5, *Land Use Plan*):

1. PCC Mixed-Use 1 (PCC MU-1)

The PCC Mixed-Use 1 (PCC MU-1) land use designation is located on the southernmost parcel with frontage on Pacific Coast Highway, Holly Avenue and Indiana Street, totaling 1.242 net acres (the developable portion of the proposed parcel after dedication of right-of-way). It is both a corner parcel and a through lot. The PCC MU-1 area allows for multiple-family residential uses (apartments) and several commercial uses. The specific residential and commercial uses are limited in this land use category as specified in the Specific Plan's development regulations. The parcel that contains the PCC Mixed-Use 1 (PCC MU-1) land use district currently contains the parking lot for the Aloft hotel that is located on the adjacent parcel, as shown in the conceptual site plan in Exhibit 6, *Conceptual Site Plan*.

2. PCC Commercial-1 (PCC COM-1)

The Commercial-1 (COM-1) land use designation is located on the parcel to the north of the PCC Mixed-Use 1 (PCC MU-1) land use designation with frontage on both Pacific Coast Highway and Indiana Street (it is a through lot). The PCC Commercial-1 (PCC COM-1) land use category totals 0.905 net acres (the developable portion of the proposed parcel after dedication of right-of-way). The PCC Commercial-1 (PCC COM-1) area allows hotels and several other commercial uses that are either accessory to hotel uses or complementary uses. The specific commercial uses in this land use category are specified in the Specific Plan's development regulations. The parcel currently contains the existing Aloft Hotel which will remain, as shown in the conceptual site plan in Exhibit 6, *Conceptual Site Plan*.

3. PCC Commercial-2 (PCC COM-2)

The PCC Commercial-2 (PCC COM-2) land use designation is located on the parcel to the north of the PCC Commercial-1 (PCC COM-1) land use designation with frontage on both Pacific Coast Highway and Indiana Street (it is a through lot). The PCC Commercial-2 (PCC COM-2) land use category totals 1.549 net acres (the developable portion of the proposed parcel after dedication of right-of-way). The PCC Commercial-2 (PCC COM-2) area allows hotels and several other commercial uses that are either accessory to hotel uses or complementary uses. The permitted commercial uses in this land use category are specified in the Specific Plan's development regulations. The parcel currently contains the existing Fairfield Inn and Suites hotel (3 buildings) which will remain, as shown in the conceptual site plan in Exhibit 6, *Conceptual Site Plan*. One of the three existing buildings known as the "Food and Beverage" building which is partially located in the PCC COM-2 land use district and partially located in the PCC COM-3 land use district will be demolished.

4. PCC Commercial-3 (PCC COM-3)

The PCC Commercial-3 (PCC COM-3) land use designation is located on the parcel to the

north of the PCC Commercial-2 (PCC COM-2) land use designation with frontage on Pacific Coast Highway, Mariposa Avenue, and Indiana Street (it is a through lot). The PCC Commercial-3 (PCC COM-3) land use category totals 0.728 net acres (the developable portion of the proposed parcel after dedication of right-of-way). The PCC Commercial-3 (PCC COM-3) area allows hotels and several other commercial uses that are either accessory to hotel uses or complementary uses. The specific commercial uses in this land use category are specified in the Specific Plan's development regulations. The parcel currently contains the existing Fairfield Inn and Suites hotel food and beverage building that will be demolished and replaced with other commercial uses and a parking structure, as shown in the conceptual site plan in Exhibit 6, *Conceptual Site Plan*.

5. PCC Mixed-Use 2 (PCC MU-2)

The PCC Mixed-Use 2 (PCC MU-2) land use designation is located on the northernmost parcel with frontage on Pacific Coast Highway, Mariposa Avenue and Palm Avenue, totaling 1.806 net acres (the developable portion of the proposed parcels after dedication of right-of-way). The PCC MU-2 area allows for multiple-family residential (apartments and condominiums) and several commercial uses. The specific residential and commercial uses are limited in this land use category as specified in the Specific Plan's development regulations. The parcel currently contains a parking lot that provides parking for the Fairfield Inn and Suites. The parking lot will be demolished and replaced with multiple-family residential uses (a mix of apartments and townhomes) and commercial uses, as shown in the conceptual site plan in Exhibit 6, *Conceptual Site Plan*. The PCC Mixed-Use 2 (PCC MU-2) land use district is proposed to be comprised of 2 parcels as shown in the Vesting Tentative Map with one parcel containing 137 multiple family residential units (apartments) and commercial uses. The other parcel contains 6 townhomes (condominium units).

Table III-1, *Land Use Summary-Project Development Scenario*, and Table III-II, *Land Uses-Project Development Scenario,* show the anticipated project development scenario for the implementation of the uses and standards of this Specific Plan based upon the Conceptual Site Plan shown in Exhibit 6, *Conceptual Site Plan* and the Vesting Tentative Map shown in Exhibit 7A, *Vesting Tentative Map No. 82806*. An additional exhibit is provided for greater clarity of existing and proposed lot configuration conditions which is also provided in Exhibit 7B, *Existing and Proposed Lot Configuration Diagram.* Table III-III, *Land Use Summary-Specific Plan Scenario* shows the maximum allowable floor area for each of the 5 land use districts.

Table III-1
Land Use Summary – Project Development Scenario

Land Use	Building Area (Net) (square feet)	Building Area (Gross) (square feet)
New Development		
Multi-family Residential (Apartments) (120 dwelling units in the PCC MU-1 District)	136,571	140,794
Multi-family Residential (Apartments) (137 dwelling units in the PCC MU-2 District)	159,062	163,472
Multi-family Residential (Townhomes /Condominiums) (6 dwelling units in the PCC MU-2 District)	9,540	10,344
Commercial uses (PCC MU-1 District)	5,583	5,756
Commercial uses (PCC COM-3 District)	4,345	4,479
Commercial uses (PCC MU-2 District)	2,156	2,223
Subtotal New Development	***317,257***	***327,068***
Existing Development		
Hotel (Aloft)	98,741	106,747
Hotel (Fairfield Inn and Suites)	190,026	217,311
Subtotal Existing Development	***288,767***	***324,058***
Existing Development To Be Demolished (Fairfield Inn and Suites "Food and Beverage" Building)	***- 36,605***	***- 41,660***
Subtotal Existing Development After Demolition of "Food and Beverage" Building	***252,162***	***282,398***
Total Site Development	**569,419**	**609,466**

Table III-II
Land Uses – Project Development Scenario

Subdivision Parcel	Use	Acreage[3]	Building Area (Net)	Building Area (Gross)[4]	FAR[5]
PCC Mixed-Use 1 (PCC MU-1))					
1	Multiple-family Residential (120 apartments)		136,571	140,794	-
1	Commercial Uses		5,583	5,756	-
1	Parking Structure		-	-	-
Subtotal		**1.242 (54,072 square feet)**	**142,154**	***146,550***	***2.63***
PCC Commercial-1 (PCC COM-1)					
2	Commercial – Existing Hotel (Aloft)		98,741	106,747	-
Subtotal		**0.905 (39,425 square feet)**	**98,741**	***106,747***	***2.51***
PCC Commercial-2 (PCC COM-2))					
3	Commercial-Existing Hotel (Fairfield Inn and Suites)		190,026	217,311	-
4	Existing Hotel (Fairfield Inn & Suites - Food & Beverage Building)		-36,605	-41,660	-
Subtotal		**1.549 (67,487 square feet)**	**153,421**	***175,651***	***2.28***
PCC Commercial-3 (PCC COM-3)					
4	Commercial Uses		3,175	3,273	-
4	Parking structure/ lobby		1,170	1,206	-
Subtotal		**0.728 (31,693 square feet)**	**4,345**	***4,479***	***0.14***
PCC Mixed-Use 2 (PCC MU-2)					
5	Multiple-family Residential (137 apartments)		159,062	163,472	-
5	Commercial Uses		2,156	2,223	-
5	Parking Structure		-	-	-
6	Multiple-family Residential (6 townhomes)		9,540	10,344	-
Subtotal		**1.806 (78,686 square feet)**	**170,758**	***176,039***	***2.24***
TOTAL DEVELOPMENT		**6.23 (271,363 square feet)**	**569,419**	**609,466**	**2.15**

[3] Acreage is based upon net acreage post dedications.
[4] Total allowable intensity per the Specific Plan is capped at 622,398 gross square feet (both existing and new development combined).
[5] FAR calculation is based upon net floor area and developable lot area. See Chapter VI for definitions of gross and net floor area.

Table III-III
Land Use Summary – Specific Plan Scenario

Land Use District	Building Area (Net) (square feet)	Building Area (Gross) (square feet)	Floor Area Ratio (FAR)
PCC Mixed-Use-1 (PCC MU-1)	145,500	150,000	2.70
PCC Commercial-1 (PCC COM-1)	98,741	106,747	2.51
PCC Commercial-2 (PCC COM-2)	153,421	175,651	2.28
PCC Commercial-3 (PCC COM-3)	4,850	5,000	0.16
PCC Mixed-Use-2 (PCC MU-2)	179,450	185,000	2.29
Total Development (New + Existing)	**581,962**	**622,398**	**2.15**

C. PHASING

Construction of the new development areas would occur in three phases. The first phase of construction would occur in the PCC Commercial-3 (PCC COM-3) land use district at the Fairfield Parking Site/Area 4. The second phase of construction would consist of the South Site/Area 1 development in the PCC Mixed-Use 1 (PCC MU-1) land use district. The third phase of construction would consist of the North Site/Area 5 development in the PCC Mixed-Use 2 (PCC MU-2) land use district. It is currently anticipated that these phases will occur sequentially and if so, are anticipated to be completed within 4 1/2 years of EIR certification and project approval. However, if the second and third phases of development occur concurrently, construction is anticipated to be completed within 2 years and 8 months of EIR certification and project approval.

D. CIRCULATION PLAN

Regionally, the Specific Plan site is accessible from the San Diego freeway (405), Century Freeway (105), the Metro Green Line, multiple bus lines, and the major arterial Pacific Coast Highway. No public rights-of-way are proposed within the boundaries of the Specific Plan. However, the Specific Plan site has several vehicular access points off four of the streets surrounding the Specific Plan area including Pacific Coast Highway, Mariposa Avenue, Indiana Street and Palm Avenue. The development of the Specific Plan will facilitate on-site circulation and parking. Access will be provided for emergency vehicles to Area 5 in the PCC Mixed-Use 2 (PCC MU-2) land use district via the two vehicle access points to the fire lane from Mariposa and Palm Avenues. Development within the Specific Plan site will provide infrastructure and facilitate access for various modes of travel including automobiles, bicycles, and pedestrians. Pedestrian and handicap access will be provided between buildings and to public sidewalks on the five street frontages along the site.

VEHICULAR CIRCULATION

The proposed street dedications and street dedication waivers discussed in the sections below are depicted in Exhibit 7C, *Conceptual Street Dedication Plan.*

Pacific Coast Highway. Pacific Coast Highway is an existing public major arterial street that abuts the property on its eastern edge. No additional right-of-way improvements are required as a result of the development allowed in the Specific Plan. No additional curb cuts besides the three existing curb cuts that provide access and circulation to the two existing hotels may be allowed along Pacific Coast Highway in the Specific Plan area. The two existing driveways that access the north parking lot at 629 North Pacific Coast Highway will be removed.

Mariposa Avenue. Mariposa Avenue is an existing public 2-lane collector street that abuts the property between the northern and southern blocks of the Specific Plan area. Some additional right-of-way improvements are required as a result of the development allowed in the Specific Plan. A waiver request was granted for a portion of the street dedication requirements on the south side of Mariposa Avenue. No additional curb cuts besides the one existing curb cut on the north side of the street (which also serves as a fire lane) may be allowed along the north side of

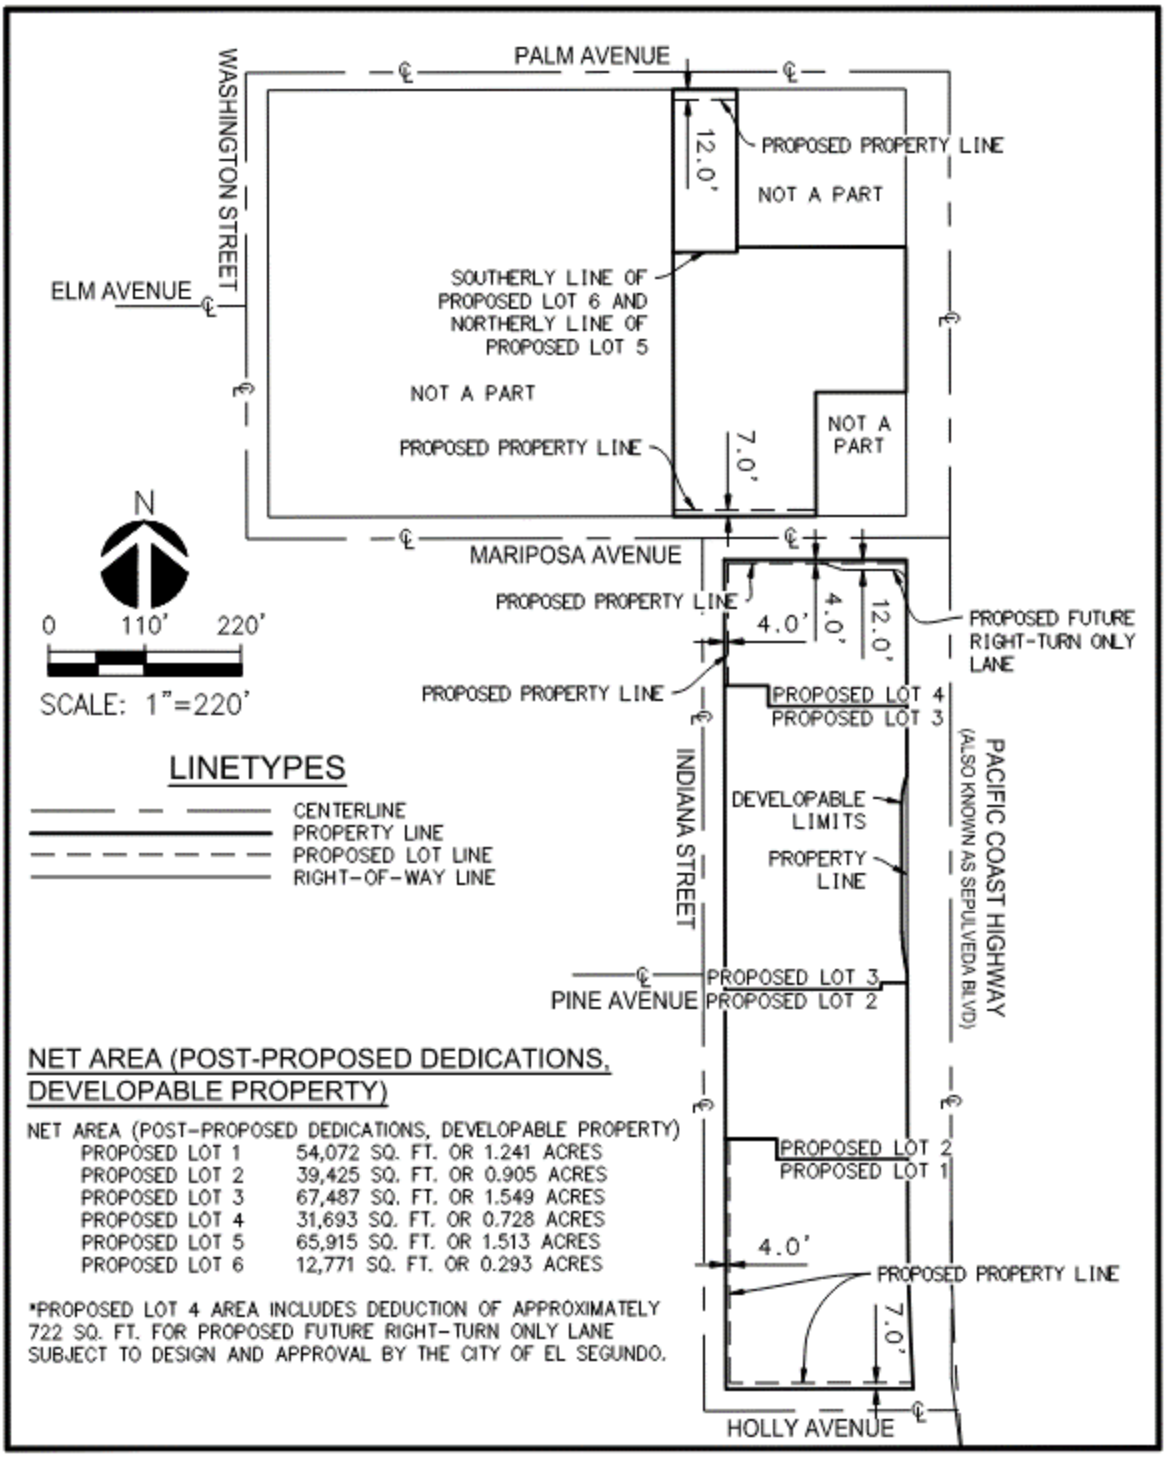

EXHIBIT 7C
CONCEPTUAL STREET DEDICATION PLAN
(Source: KPFF)

Mariposa Avenue in the Specific Plan area. No curb cuts may be allowed along the south side of Mariposa Avenue within the Specific Plan area.

Palm Avenue. Palm Avenue is an existing public local commercial/residential street that abuts the property on its northern edge. Palm Avenue has been classified as a local commercial street for the frontage of the Specific Plan area. Some additional right-of-way improvements are required as a result of the development allowed in the Specific Plan. No additional curb cuts besides the one existing curb cut (which also serves as a fire lane) may be allowed along Palm Avenue within the Specific Plan area. Street dedication to expand the width of the public right-of-way will be provided.

Holly Avenue. Holly Avenue is an existing public local commercial/residential street that abuts the property on its southern edge. Holly Avenue is classified as a local commercial street for the block fronting the Specific Plan area. Some additional right-of-way improvements are required as a result of the development allowed in the Specific Plan. There are no existing curb cuts along this block of Holly Avenue. No curb cuts may be allowed along Holly Avenue in the Specific Plan area. Street dedication to expand the width of the public right-of-way will be provided.

Indiana Street. Indiana Street is an existing public local commercial/residential street that abuts the property on its western edge. Some additional right-of-way improvements are required as a result of the development allowed in the Specific Plan. The project includes dedication of 25 feet of existing roadway and sidewalk (to the centerline of the street) to the City of El Segundo. Currently, the roadway and sidewalk are privately owned and the City of El Segundo only has easement rights. An additional dedication of 4 feet will be provided on the east side of the street along the frontage of Proposed Lots 1 and 4 only. A waiver request was granted for a 3-foot portion of the street dedication requirements to expand the right-of-way on the east side of the street for the portions of the block where new development is proposed in the PCC COM-3 and a the PCC MU-1 land use districts (along the frontage of proposed Lots 1 and 4). Additionally, a waiver request was granted for a 7-foot portion of the street dedication requirements to expand the right-of-way on the east side of the street for the portion of the block where existing development is located in the PCC COM-1 and PCC COM-2 land use districts (along the frontage of proposed Lots 2 and 3). No additional curb cuts besides the three existing curb cuts may be allowed along Indiana Street.

Public Transit

Public transit includes the Metro C Line and multiple bus lines that operate in the vicinity of the Specific Plan. The Metro C line is a light rail line running between Redondo Beach and Norwalk. The line runs north/south east of the project site along Nash Street with the closest station at Nash Street and Mariposa Avenue. The Mariposa C Line station is approximately ½ mile away from the project site.

There are two Metro bus lines, one Beach Cities bus line, and two LADOT Commuter Express lines that run in the vicinity of the Specific Plan. Metro Line 232 provides local service between the City of El Segundo and downtown Long Beach and runs along Pacific Coast Highway. LADOT Commuter Express 574 provides express service on weekdays from Encino to the City

of Hawthorne along Pacific Coast Highway and then heads east along El Segundo Boulevard south of the project site. Beach Cities Line 109 provides local service between the City of Redondo Beach and Los Angeles International Airport and runs along Pacific Coast Highway south of Grand Avenue (one block south of the Specific Plan area) and turns onto Grand Avenue to Downtown El Segundo to Main Street and north to Imperial Highway. Metro Line 625 provides local service between the City of El Segundo and Los Angeles International Airport and it runs along Imperial Highway north of the Specific Plan area. LADOT Commuter Express 438 provides express service on weekdays from El Segundo to the Downtown Los Angeles Financial District along Imperial Highway north of the project site. LADOT Commuter Express 439 provides express service on weekdays from El Segundo to Downtown Los Angeles along Douglas Street and Imperial Highway to the east of the site.

NON-VEHICULAR CIRCULATION

Walkways will be provided connecting the buildings, uses (hotels, residential and commercial uses), parking structures and surfaces areas, and the public sidewalks on the five (5) surrounding streets (Pacific Coast Highway, Mariposa Avenue, Palm Avenue, Holly Avenue and Indiana Street). Marked crosswalks are provided at all major arterial intersections.

The City of El Segundo adopted the South Bay Bicycle Plan and it has implemented some of the bicycle improvements in the proposed Bicycle Plan network including 4.9 miles of Class III Bike Routes (where vehicles and bicycles share travel lanes) on several City streets. The Bike Routes that are closest to the Specific Plan area are on Grand Avenue from Loma Vista Street to Duley Road and on Nash Street from Imperial Highway to El Segundo Boulevard. The Bicycle Master Plan includes Class I Bike Paths, Class II Bike Lanes, Class III Bike Routes and Bike-Friendly streets. The nearest proposed facilities are a Class II Bike Lane running east-west on Mariposa Avenue and a Class I Bike Path on Washington Street one block west of the Specific Plan boundary.

Bicycle parking facilities in accordance with Municipal Code and California Green Building Code requirements will be provided in multiple locations in the parking structures and surface parking areas in the Specific Plan.

E. GRADING CONCEPT

Some rough grading will be required at the South Site located in the PCC Mixed-Use 1 (PCC MU-1) land use district, the Fairfield Parking Site located in the PCC Commercial-3 (PCC COM-3) land use district, and the North Site located in the PCC Mixed-Use 2 (PCC MU-2) land use district. No grading will be required for the areas where the existing hotel buildings will remain.

Site grading will require a combination of cut and fill to create a building/parking structure pad and to accommodate one level of subterranean parking and retaining walls on the South Site as a result of the existing sloped topography. The property slopes down from Pacific Coast Highway to Indiana Street and slopes down toward Holly Avenue as well with the lowest point at the intersection of Indiana Street and Holly Avenue. The grading is estimated to result in approximately 27,700 cubic yards of cut and fill resulting in 17,700 cubic yards of soil export.

The Fairfield Parking Site and the North Site are relatively flat. The Fairfield Parking site is estimated to require 6,000 cubic yards of cut and fill for site rebalancing that will result in 0 cubic yards of export. The North Site is estimated to require 15,000 cubic yards of cut and fill for site rebalancing resulting in 0 cubic yards of soil export. Final grading plans will be approved by the City Engineer before the City issues grading permits.

IV. UTILITIES AND INFRASTRUCTURE

The following is a summary of existing and proposed public infrastructure for development of the Specific Plan area. All infrastructure will be constructed in accordance with the standards of the governing agency.

A. WATER SERVICE

EXISTING CONDITION

Water utility service is provided by the City of El Segundo and is currently available within the Specific Plan area and serves the two existing hotels. Water is purchased through West Basin Municipal Water District which is a member of The Metropolitan Water District of Southern California.

There is an existing City of El Segundo 10-inch asbestos-cement water line located 11 feet west of the centerline of Indiana Street. This water line is scheduled to be replaced with a new 10-inch ductile iron water main in FY 2020-2021. There are also two existing water lines in Pacific Coast Highway. One is a City of El Segundo 10-inch ductile iron pipe located 32-feet west of the street centerline. The other is a 10-inch pipe located 33-feet east of the street centerline. In Palm Avenue north of the Specific Plan area, there is a City of El Segundo 10-inch asbestos-cement pipe located 6 feet north of the street centerline. In Holly Street south of the Specific Plan area, there is a City of El Segundo 10-inch asbestos-cement pipe located 13 feet south of the street centerline. There is also an existing City of El Segundo 10-inch ductile iron water line in Mariposa Avenue, located 6-feet south of the street centerline (refer to Exhibits 8A, 8B and 8C, *Conceptual Water Plan South Site, Conceptual Water Plan Fairfield Parking Site, and Conceptual Water Plan North Site respectively*).

Water for fire suppression is provided by on-site building sprinklers and from 7 off-site fire hydrants. Existing fire hydrants owned by the City of El Segundo are located along Pacific Coast Highway, Holly Avenue, and Indiana Street.

PROPOSED CONDITION

The water service connection for domestic water and fire protection shall be made to one or more of the existing City of El Segundo water lines. The specific location of these connections and pipe sizing will be based upon the City of El Segundo's approval. The system shall provide adequate water supply for operation of the building's domestic requirements, automatic sprinkler systems and on-site fire hydrants (if required by the State or City Fire Marshal). A Conceptual Water Utility Plan has been developed for the Specific Plan Area (refer to Exhibits 8A, 8B and 8C, *Conceptual Water Plan South Site, Conceptual Water Plan Fairfield Parking Site, and Conceptual Water Plan North Site respectively*).

Fire flows for the proposed development will be based on the requirements listed in that version of the California Fire Code that is in effect at the time of plan submission, as amended by the City.

Demands for domestic water in the proposed condition were calculated with the assumption that they will be 120% of the sewer demand rates. s

Based on the requirements outlined by the El Segundo Fire Department in Regulation H-2-a for Fire Hydrant and Private Fire Main System Installation, 2 additional fire hydrants may need to be installed in order to provide coverage for portions of the proposed buildings that are in excess of 150-feet from a public fire hydrant. Coordination with the El Segundo Fire Department Fire Prevention Division is required to determine whether the additional fire hydrants will be located in the public street and/or within the development.

The minimum number of fire hydrants required was calculated using Table C102.1 from the California Fire Code. The spacing between fire hydrants for all three sites will be 300-feet for public fire hydrants, as stated in the City of El Segundo Fire Prevention Division "Regulation H-2-a Fire Hydrant and Private Fire Main System Installation" document (see Table IV-2 below for the hydrant and number spacing requirements).

Table IV-2. Required Number and Spacing of Fire Hydrants.

	Minimum Number of Hydrants	Spacing Between Hydrants
North Site	3	
Fairfield Parking	1	300 ft (typ.)
South Site	3

(Source: KPFF)

B. RECLAIMED WATER

EXISTING CONDITION

Reclaimed water utility service is provided by the West Basin Municipal Water District from a treatment plant on Hughes Way. There are no existing reclaimed water mains in the streets adjacent to the project. According to West Basin Municipal Water District record drawings, the closest reclaimed water main is located in Washington Avenue adjacent to Washington Park at the intersection with Elm Street, approximately 500-feet from the intersection of Palm Avenue and Indiana Street.

PROPOSED CONDITION

Future reclaimed water service is anticipated to be provided through the existing point of connection on Washington Avenue. Should West Basin Municipal Water District extend the reclaimed water lines adjacent to the Specific Plan area in the future, exact points of connection will be based on West Basin Municipal Water District's and the City of El Segundo's input. Reclaimed water service may not be available at the time of project completion.

C. SEWER SERVICE

EXISTING CONDITION

All existing sanitary sewer lines in the streets surrounding the project site are owned by the City of El Segundo. Sewer utility service is provided by the City of El Segundo and the Los Angeles County Sanitation District and is currently available within the site.

An 8-inch vitrified clay pipe (VCP) gravity line is located west of the site under the centerline of Indiana Street, with a depth varying from 2-feet to 9-feet below grade to the pipe invert. The sewer begins at a manhole located approximately 98-feet south of Mariposa Avenue, before sloping south where it connects to two 12-inch sewer lines—one on Holly Avenue and one that continues south on Indiana Street. In Indiana Street, there is also a 10-inch ductile iron pressure sewer located 6-ft east of the street centerline.

In Pacific Coast Highway, there is an existing 12-inch VCP gravity line located 26-feet west of the street centerline. The pipe slopes from north to south and varies in depth from 6-feet to 18-feet. At the intersection with Holly Avenue, the pipe connects to a 12-inch sewer running west on Holly Avenue.

An existing 8-inch VCP gravity line is located under the street centerline of Palm Avenue. This sewer has a high point elevation at a manhole located approximately 390-feet west of Pacific Coast Highway. The pipe slopes to drain out to both mainlines on both sides of the manhole. On the east end, it connects to the 12-inch sewer located in Pacific Coast Highway.

There are two existing sewer lines on Mariposa Avenue, west of Indiana Street. One is an 8-inch VCP gravity line located on the street centerline. It slopes from east to west and connects to an 8-

inch sewer line on Illinois Court. The other sewer line on Mariposa Avenue is a 10-inch pressure sewer located 5 feet north of the street centerline. A sewer study has been conducted that determined the existing sewer system has sufficient capacity to accommodate the additional flow that will be generated by the new development.

PROPOSED CONDITION

New sewer laterals are proposed for all the new buildings. It is anticipated that the new sewer laterals will connect to several of the existing gravity lines surrounding the project. The proposed project does not currently impact the existing pressure lines. The sewer laterals will be designed to slope at a minimum of 2% and maintain a minimum scouring velocity of 2-feet/second. Points of connection will be based on the City of El Segundo's input and will require a Sewer Connection Permit from the City of El Segundo. A conceptual sewer plan has been developed for the Specific Plan area (refer to Exhibits 9A, 9B and 9C, *Conceptual Sewer Plan South Site, Conceptual Sewer Plan Fairfield Parking Site, and Conceptual Sewer Plan North Site respectively*).

CONCEPTUAL SEWER PLAN
NORTH SITE IN THE PCC MU-2 DISTRICT

(Source: KPFF)

D. DRAINAGE

EXISTING CONDITION

There are two existing storm drains near this project that are owned by Caltrans and the City of El Segundo.

The existing Caltrans storm drain is located below Pacific Coast Highway. The storm drain is comprised of reinforced concrete pipe (RCP) and varies in size from 18-inches to 24-inches. The variable width existing RCP storm drain is located 66.5-feet east of the centerline in the portion of the street that is south of Pine Avenue and is located approximately 23-feet east of centerline in the portion that is north of Pine Avenue, although this location varies. The pipe flows from north to south. The depth of the pipe invert varies from approximately from 4-feet to 6-feet below grade.

The City of El Segundo storm drain is an existing 24-inch, RCP storm drain that runs through Indiana Street, and flows from north to south. It conveys stormwater from a catch basin on the west side of Indiana Street and is located 39 feet west of the project's property line. This storm drain runs south and ties in to another storm drain on Holly Avenue that runs west before ultimately discharging into a basin located approximately 0.5-miles southwest of the Specific Plan area, at the intersection of Center Street and Grand Avenue. The catch basin is located approximately 230-feet north of Holly Avenue.

Federal Emergency Management Agency (FEMA) map #06037C1770F shows this Project site is located within Zone X, which is described to be an area of minimal flood hazard and determined to be outside of the 0.2% annual chance floodplain. There are no Special Flood Hazards on-site.

PROPOSED CONDITION

Drainage must comply with all applicable laws and regulations, including without limitation, the City's National Pollution Discharge Elimination System (NPDES) Permit.

Proposed drainage will include stormwater treatment features on multiple sites within the Specific Plan area, in accordance with the City of El Segundo Low Impact Development (LID) requirements. The storm water quality design volume required by Los Angeles County Low Impact Development (LID) standards will be stored in the system and infiltrate into the soil beneath the underground system within 48 hours. These treatment features are designed to treat the 85th percentile storm event, while overflow drainage features will be designed based on the 25-year storm event.

Infiltration is feasible for stormwater treatment within the Specific Plan area. It appears that one drywell at each of the three new development sites within the Specific Plan area will be able to capture the required volume and will be able to treat that volume as quickly as it enters the drywell system. The same drywell design will be used at each site. The drywells will include overflow piping that will be sized based on the 25-year storm event. Overflow features will convey water to Indiana Street or Mariposa Avenue and into the City of El Segundo catch basin on Indiana Street. Thus, stormwater in the proposed condition will flow only to the City of El Segundo storm drain.

Because the peak flow rate will be reduced in the proposed condition, it is assumed that the City of El Segundo storm drain will have more than enough capacity to handle the flow rate generated.

A Conceptual Drainage Plan has been developed for the Specific Plan area that provides both existing and proposed conditions (refer to Exhibits 10A, 10B, 10C, 10D, 10E, and 10F, *Existing Drainage Plan South Site, Conceptual Drainage Plan South Site, Existing Drainage Plan Fairfield Parking Site, Conceptual Drainage Plan Fairfield Parking Site, Existing Drainage Plan North Site, and Conceptual Drainage Plan North Site respectively*).

E. GAS

EXISTING CONDITION

Natural gas service is provided by Southern California Gas Company (SoCal Gas) and is currently available within the developed portions of the site and in streets surrounding the project site. Specifically, existing SoCal Gas utilities are located in the following streets adjacent to the project site: Pacific Coast Highway, Palm Avenue, Mariposa Avenue, Indiana Street, and Holly Avenue.

PROPOSED CONDITION

The existing gas service will be maintained and future gas service will be provided through private gas service line connections to the SoCal Gas utilities (public main line(s)) in the surrounding streets that include Pacific Coast Highway, Palm Avenue, Mariposa Avenue, Indiana Street, and Holly Avenue. The private gas service lines will be secured by easements with SoCal Gas.

A conceptual plan has been developed for the Specific Plan area (refer to Exhibits 11A, 11B, and 11C, *Conceptual Electric, Gas & Telecommunication Plan South Site, Conceptual Electric, Gas & Telecommunication Plan Fairfield Parking Site, and Conceptual Electric, Gas & Telecommunication Plan North Site respectively*).

F. ELECTRIC

EXISTING CONDITION

Electric power is provided by Southern California Edison (SoCal Edison) to the Specific Plan area through an underground utility conduit system in the streets adjacent to the project site including Pacific Coast Highway and Mariposa Avenue.

PROPOSED CONDITION

SoCal Edison has existing underground electrical utilities in the streets adjacent to the project site, including Pacific Coast Highway and Mariposa Avenue. New underground utility conduit systems will be needed to intercept the existing underground electric system and provide electrical power to the proposed improvements. An easement will be granted to SoCal Edison for access and maintenance. Final locations and points of connection for the electrical system will be based on a final approved SoCal Edison design. A conceptual plan has been developed for the Specific Plan area (refer to Exhibits 11A, 11B, and 11C, *Conceptual Electric, Gas & Telecommunication Plan South Site, Conceptual Electric, Gas & Telecommunication Plan Fairfield Parking Site, and Conceptual Electric, Gas & Telecommunication Plan North Site respectively*).

(Source: KPFF)

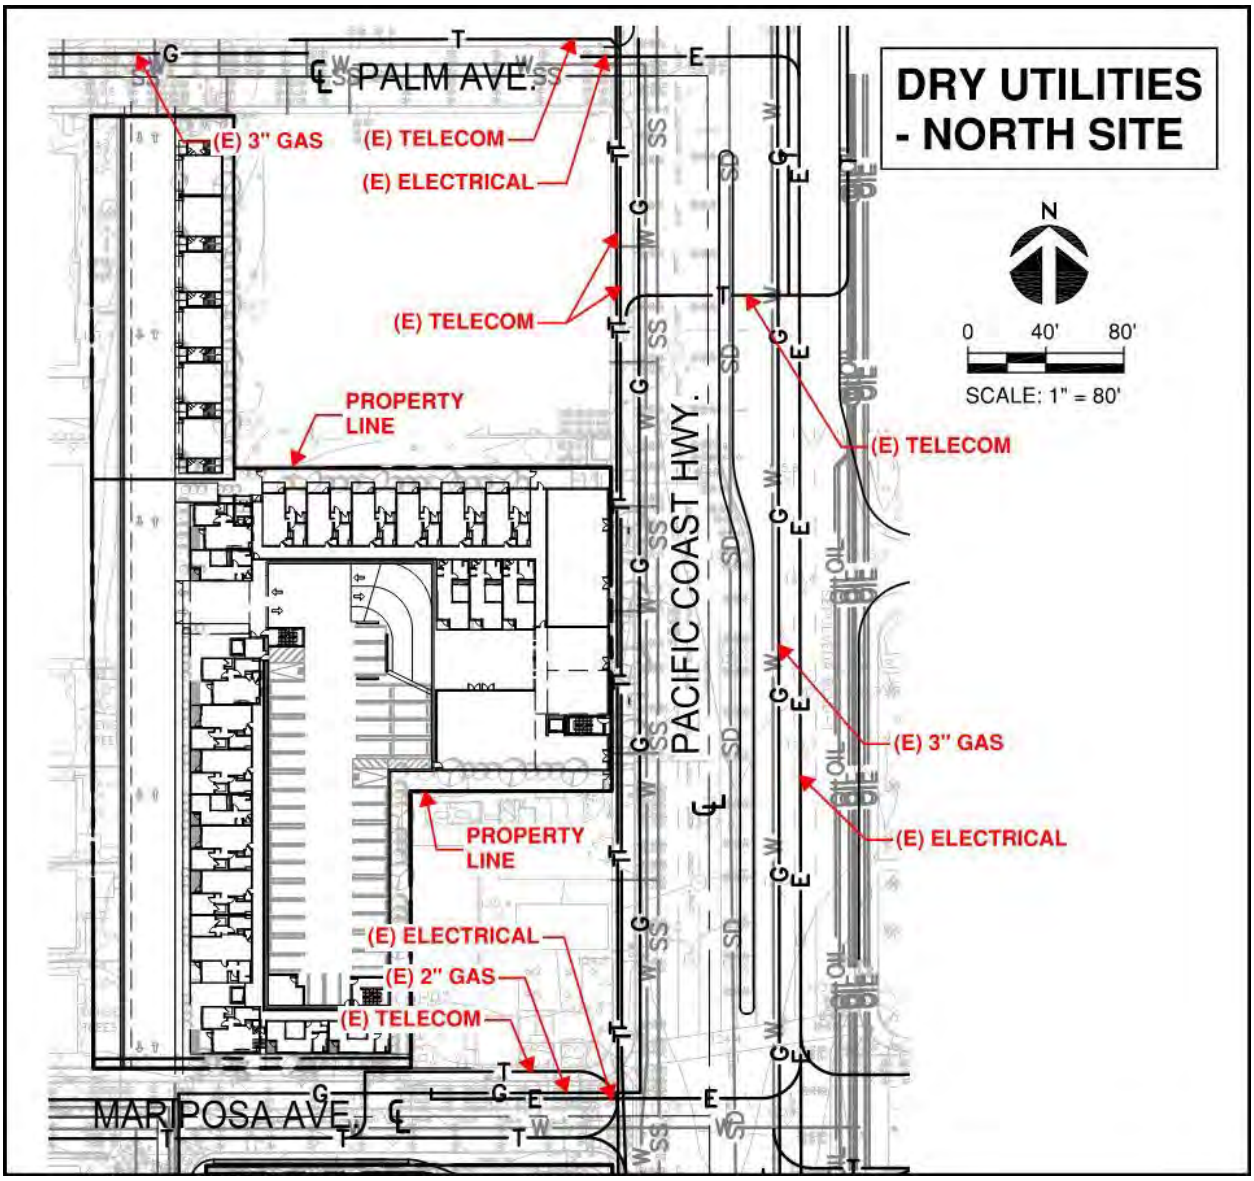

EXHIBIT 11C
CONCEPTUAL ELECTRIC, GAS AND TELECOMMUNICATIONS PLAN
NORTH SITE IN THE PCC MU-2 DISTRICT

(Source: KPFF)

G. TELECOMMUNICATIONS UTILITIES

EXISTING CONDITION

Cable and telecommunication service is provided by Sonify, Velocity, Verizon, CenturyLink, and Charter Communications in the vicinity of the Specific Plan area. Verizon and CenturyLink currently have underground facilities in Pacific Coast Highway. Charter Communications has a combination of aerial and underground facilities in Indian Street, Mariposa Avenue, Palm Avenue and Holly Avenue. Velocity provides phone and internet service to the Aloft and the Fairfield Inn and Suites hotels. Currently, Sonify provides television service to the Aloft and Fairfield Inn and Suites hotels.

PROPOSED CONDITION

It is anticipated that Velocity and Sonify would continue to provide service to the Aloft and the Fairfield Inn and Suites hotels. Charter Communications has indicated that it may provide service to the project, but will need to perform an investigation of the area to confirm that it is feasible. New underground utility conduit systems will intercept the existing underground telecommunications system and provide services to the proposed buildings. An easement will be granted to the telecommunication companies for access and maintenance. Final locations and points of connection for the telecommunications system will be based on a final approved design by the telecommunications providers. A conceptual plan has been developed for the Specific Plan area (refer to Exhibits 11A, 11B, and 11C, *Conceptual Electric, Gas & Telecommunication Plan South Site, Conceptual Electric, Gas & Telecommunication Plan Fairfield Parking Site, and Conceptual Electric, Gas & Telecommunication Plan North Site respectively*).

H. SOLID WASTE DISPOSAL

EXISTING CONDITION

Solid waste disposal is provided to multiple-family and commercial users by a variety of private haulers.

FUTURE CONDITION

Development within the Specific Plan would contract with a provider. Landfill capacity is adequate for assumed population and residential and commercial growth within Los Angeles County. Solid waste facilities within the Specific Plan area will comply with all ESMC requirements pertaining to building, fire, zoning codes (e.g., adequate trash enclosures and screening).

I. FIRE PROTECTION

EXISTING CONDITION

Fire protection services are provided by the El Segundo Fire Department which has two stations.

Fire Station 1 is located at 314 Main Street (next to City Hall) which is 1.1 miles from the Specific Plan area. Fire Station 2 is located at 2261 East Mariposa Avenue (at Mariposa Avenue and Douglas Street) which is 0.8 miles from the Specific Plan area. The provision of water for fire suppression is provided by on-site building sprinklers and from several off-site fire hydrants.

FUTURE CONDITION

Buildings will have sprinkler systems as required by the ESMC. Additional fire hydrants will be provided in addition to existing hydrants to provide coverage for portions of the proposed buildings that are in excess of 150 feet from a public hydrant. Spacing between fire hydrants for the South Site (in the PCC Mixed-Use 1 (PCC MU-1) land use district), Fairfield Parking Site (in the PCC Commercial-3 (PCC COM-3) land use district), and in the North Site (in the PCC Mixed-Use 2 (PCC MU-2) land use district) will be 300 feet for public fire hydrants. The North Site will have a minimum of 3 hydrants. The Fairfield Parking Site will have a minimum of 1 hydrant and the South Site will have a minimum of 3 hydrants. Fire hydrant requirements are discussed in greater detail above in "Section IV-A Water Service" of this Specific Plan. Development will be required to pay fire impact fees to off-set the additional demand for municipal fire protection services as a result of the new development.

J. POLICE SERVICES

EXISTING CONDITION

Police services are provided by the El Segundo Police Department which is located at 348 Main Street.

FUTURE CONDITION

Development will be required to pay police impact fees to off-set the additional demand for municipal police services as a result of the new development.

V. DESIGN GUIDELINES

These design guidelines are intended as "guidelines" instead of "development regulations." Consequently, strict compliance is not required. These design guidelines apply only to new construction (not applicable to existing buildings and site improvements in the PCC MU-1, PCC COM-1, PCC COM-2, and PCC COM-3 land use districts) and site areas that are modified as of the effective date of this Specific Plan. To promote the quality of design planned for this Project, the design guidelines given in this document establish criteria that enhance the coordination, organization, function and identity of the site, while maintaining a compatible relationship with the surrounding development of the Pacific Coast Commons Specific Plan.

A. DESIGN OBJECTIVES

Design Guidelines for the Pacific Coast Commons Specific Plan will promote and reinforce the City's commitment to high quality development. The objectives of these guidelines are to:

- Provide for high-quality residential and commercial development within the Specific Plan area.
- Promote orderly and predictable development.
- Encourage individual creativity and innovative solutions by allowing flexibility in how a particular guideline is met as long as the intent of the guideline is achieved.
- Ensure functional pedestrian, bicycle and motor vehicle circulation within the Project and convenient pedestrian and bicycle linkages to and from adjacent residential and commercial areas and schools.

1. Site Planning

a. The arrangement of new buildings, parking and circulation areas should recognize the particular characteristics of the site and should create a cohesive identity.

b. Site development should utilize variations on building orientation and landscaping adjacent to the public streets so that a monolithic "wall" of building faces is not created.

c. The design and location of accessory buildings (e.g., maintenance and storage buildings, trash and recycling enclosures, and outdoor mechanical equipment enclosures) should be incorporated into and be compatible with the overall design of the Project and the main buildings on the site.

d. Appropriate linkages between internal Project components and buildings should be incorporated, including pedestrian walkways.

e. Buildings should be arranged to create opportunities for outdoor amenities (e.g., plazas, courtyards, outdoor eating areas, etc.) where appropriate and feasible.

2. Access and Parking

a. The use of common (shared) access points and driveways is encouraged; placement of vehicle access points close to building entries should be avoided to minimize pedestrian and vehicular conflicts.

b. Entry driveway areas should be clearly marked by identifying features, (e.g., prominent landscape features and well-designed monument-type signs).

c. Access to each building should be clearly visible to pedestrians and motorists through the use of signage, color, and/or design elements.

d. Surface parking lots adjacent to and visible from public streets should incorporate landscaping to minimize undesirable visual impacts.

e. Surface parking areas should be enhanced and visually broken up through the use of canopy trees and landscape improvements and to reduce the effects of heat gain.

f. Parking lot and driveway design is encouraged to include water quality storm water facilities consistent with City standards.

3. Architecture/Orientation/Massing

a. The massing, scale and architectural style should consider compatibility with the surrounding character and existing buildings to reflect a cohesive character.

b. The orientation of the newly constructed buildings should facilitate and encourage pedestrian activities.

c. The mass and scale of new buildings should be compatible with the existing and adjacent structures and with each other. This can be accomplished by transitioning from the height of adjacent buildings to the tallest elements of the new building, stepping back the upper portions of taller buildings, and incorporating human scale elements, such as pedestrian scaled doors, windows, and building materials on the ground floor.

d. Buildings should be divided into distinct massing elements and should be articulated with architectural elements and details. Changes in height, horizontal plane, materials, patterns and colors should be used to reduce building scale and mass.

e. Primary building entries should be easily identified through the use of prominent architectural elements, signage, landscaping, decorative hardscape, lighting, canopies, roof form, architectural projections, columns, vertical and/or horizontal elements, and other design features that help emphasize a building's entry.

f. Building elevations, whether front, side, or rear, that are visible from public rights-of-way should be architecturally detailed to incorporate quality materials and architectural features that reflect the theme of surrounding structures and facades. Building entrances should be readily identifiable. The use of recesses, projections, columns, and other design elements to articulate entrances is encouraged.

g. Facades should include vertical and horizontal variations in wall planes, building projections, door and window bays, and similar elements. Building articulation should be present on the side and rear walls of the buildings if visible from the adjacent streets (Pacific Coast Highway, Mariposa Avenue, Holly Avenue, Indiana Street, and Palm Avenue) and the western facing building facades in the PCC Mixed-Use 2 (PCC MU-2) land use district.

h. The exterior surfaces of buildings for the ground floor must be protected with anti-graffiti coating where not screened by shrubs, vines and trees.

4. Color and Materials

a. Colors and materials should be consistent and complementary throughout the Project area.

b. Exterior materials and architectural details should complement each other and should be stylistically consistent.

c. Building materials must be durable and resistant to damage, defacing, and general wear and tear. Acceptable building materials may include concrete, fiber cement siding, stone masonry, metal, stucco, glass and/or other contemporary composites.

d. Building materials that support sustainability through the use of environmentally sound building materials and local resources (e.g., locally available, contain high recycled-content, are reused, come from renewable sources, and that contain low volatile organic compound (VOC) levels) is highly encouraged.

5. Screening and Mechanical Equipment

a. All screening devices should be compatible with the architecture, materials and colors of the building.

b. Loading docks, bays and parking spaces, delivery service areas, outdoor storage areas, stand-alone mechanical equipment facilities, should be located and designed to minimize their visibility, circulation conflicts and adverse noise impacts. Sound attenuation walls should be used where appropriate to reduce noise where required by code or the Project's environmental analysis.

c. Utility and mechanical equipment should be screened from view of public streets and nearby buildings on all sides with landscaping and/or architectural elements.

d. Rooftop mounted equipment visible from the surrounding area, adjacent buildings, and any public rights-of-way should be screened from public view and equipment should be painted to match the roof color when equipment is visible.

e. Trash and recycling receptacles areas should be completely screened from public view from public rights-of-way with solid walls, wood, and/or landscaping.

f. Ground mounted enclosures should be protected with anti-graffiti coating where not screened by shrubs, vines and trees.

Trash enclosures with architectural screening elements

6. Parking Structures

a. Parking garages should be designed to help reduce the mass and scale of the garage and to ensure their compatibility with surrounding uses.

b. Parking garages should be designed to minimize the view of vehicles in the garage through a combination of screen walls and plantings while providing adequate visibility for security purposes.

c. The exterior elevations of parking structures should be designed to avoid a monotonous, monolithic appearance. This can be accomplished through a menu of options as follows:

i. Minimize horizontal and vertical banding by balancing both horizontal and vertical elements.
ii. Design 'green screens' to provide visual relief.
iii. Use simple, clean geometric forms, and coordinated massing.
iv. Size openings in the parking garage to resemble large windows as in an office building.
v. Use masonry materials that are predominantly light in color but avoid unpainted concrete. Use of accent materials is encouraged.
vi. Avoid a sloping ramp appearance by providing level and uniform spandrels.
vii. Visually define and differentiate between pedestrian and vehicular entrances through appropriate architectural detailing.

d. Stairs and elevators should be located adjacent to a street on the exterior of the structure where lobbies can be exposed to outside view. Safe pedestrian street crossings should be taken into consideration.

e. Lighting levels should be equally distributed to provide uniform illumination over all parking areas.

f. Light sources should be shielded so that the source of the illumination is not seen from outside the structure.

g. The ground floor level of any parking structure must be protected with anti-graffiti coating.

7. Landscaping

A Landscape Plan must be provided to the City concurrently with each site plan review submittal.

General

a. All areas not covered by buildings, parking structures, walkways, driveways, drive aisles, fire lanes, parking spaces, and service areas should be landscaped (with drought tolerant plantings and sustainable hardscapes in accordance with the City's water conservation requirements).

b. Landscaping should enhance the quality of the Project by framing and softening the appearance of buildings, defining site functions, screening undesirable views and buffering incompatible uses.

c. Landscaping at the perimeter of buildings is encouraged to soften the transition between building and adjacent uses and between building and the public right-of-way where feasible. Parking lot landscaping must be distributed evenly to the extent feasible to provide for consistent design and

shading.

d. Landscaped areas should generally incorporate a combination of planting materials utilizing a three-tiered system consisting of: 1) trees, 2) shrubs or vines, 3) groundcover/ornamental grasses. Landscaping should be in scale with the adjacent buildings and be of appropriate size at maturity.

e. Placement of landscaping should not interfere with the lighting of the Project area or restrict access to utilities.

f. Landscaping should be utilized to define edges, buffer adjacent properties, screen parking areas and storage areas.

g. Trees must adequately shade parking lots and provide sufficient area for water quality requirements.

h. Paving materials should include pervious hardscape materials to facilitate water treatment and reduce runoff.

i. Bio-retention areas can be used to detain/percolate run-off in planted swales, raised open-bottomed planters, etc.

On-site storm water capture system

j. Site furnishings including, but not limited to, fixed and moveable seating, trash and recycling receptacles, bike racks, and pedestrian scaled lighting should be of durable and sustainable materials.

8. Walls and Fences

a. Wall and fence design should complement the Project's architecture. Landscaping may be used to soften the appearance of the wall surface.

b. Wall and fencing materials must be made of a durable material. Wall and fencing materials may consist of wrought iron, tubular steel, stone, stucco, or brick. Solid walls should incorporate pilasters with decorative caps and offsets, consistent with the overall architecture.

c. Landscaping should be used to soften the appearance of the wall surfaces and deter graffiti.

d. Walls and fences that are not screened by vines, shrubs and trees should be protected with anti-graffiti coating.

9. Lighting Design

a. The type and location of parking structure, parking area, building and drive aisle/fire lane lighting should prevent direct glare on to adjacent residential properties.

b. Pedestrian scale lighting should be present at all entries, plazas, courtyards, parking lots, parking structures, pedestrian ways, and other areas where nighttime pedestrian activity is expected.

c. Lighting design of fixtures and their structural support should be architecturally compatible with the architecture of the Project.

d. When appropriate, wall-mounted lighting may be incorporated. Wall-mounted lights should be compatible with the building's architectural style.

10. Signage

a. The character of signage, including the location, size, height, design and lighting should be in keeping with the architectural character and monument style of the overall Project.

b. Signs should make a positive contribution to the desired character of the Project and provide for clear identification and wayfinding.

c. Incorporate pedestrian level signage where appropriate throughout the commercial areas in the Specific Plan.

VI. DEVELOPMENT STANDARDS

The following standards are intended to supplement the existing General Plan and ESMC. Where this Specific Plan is inconsistent with the ESMC, the Specific Plan prevails. Where this Specific Plan does not specifically regulate, development must comply with the standards and requirements set forth in the ESMC.

A. PERMITTED USES

Uses within the Specific Plan area are governed by the following Table, by district: Wireless facilities are permitted subject to the requirements of ESMC Chapter 15-19.

Table VI-1
Allowable Uses

Use	PCC MU-1	PCC COM-1	PCC COM-2	PCC COM-3	PCC MU-2
Bars (in conjunction with a Hotel)	-	CUP	CUP	CUP	-
Cafes	P	P	P	P	P
Conference Facility/Conference Rooms (in conjunction with a Hotel)	-	P, A	P, A	P, A	-
Fitness Facility or Private Training Studio	P	A	A	P	P
General Offices	P, A	P, A	A	A	P, A
General Storage	A	A	A	A	A
Hotels	-	CUP	CUP	CUP	-
Maintenance Buildings/Facilities (in conjunction with a Hotel or in in conjunction with a multiple-family residential building)	A	A	A	A	A
Medical/Dental Offices	P	-	-	P	P
Multiple-family residential lease office	P	-	-	-	P
Multiple-family residential dwellings (apartments, townhomes)	P	-	-	-	P

On-site sale and consumption of alcohol at restaurants and cafes	AUP	AUP	AUP	AUP	AUP
On-site sale and consumption of alcohol at bars, other than wine bars	-	CUP	CUP	CUP	-
On-site sale and consumption of alcohol at wine bars	CUP	CUP	CUP	CUP	CUP
Outdoor Dining	A	A	A	A	A
Parking structures and surface parking lots	A	A	A	A	A
Recreational facilities or multipurpose recreational building or room accessory to multi-family residential uses or hotels	A	A	A	A	A
Restaurants, full service	P	A	A	P, A	P
Restaurants, fast food	P	A	P, A	P, A	P
Retails Sales - including convenience stores and General Retail Stores (excluding building material stores, warehouse retail showrooms, and off-site sale alcohol sales)	P, A	A	A	P, A	P, A
Retail Services (including Personal Services and Business and Consumer Support Services)	P, A	A	A	P, A	P, A
Wireless Communications Facilities (Pursuant to ESMC Chapter 15-19)	AUP, CUP	AUP, CUP	AUP, CUP	AUP, CUP	AUP, CUP
Any use customarily incidental to a permitted use	A	A	A	A	A
All uses that are not permitted, conditionally permitted or determined to be similar uses as specified above.	-	-	-	-	-

AUP	**Administrative Use Permit**
A	**Permitted Accessory Use**
CUP	**Conditional Use**
P	**Permitted Use**
--	**Not Permitted**

Note: Pursuant to the ESMC, uses of a similar nature which are unlisted in Table IV-1 may be considered by the Director of Planning and Building Safety, subject to appeal to the Planning Commission.

B. DEVELOPMENT STANDARDS

1. Lot Area

a. The minimum building lot area is 10,000 gross square feet in all land use districts.

2. Height

a. Buildings and structures within the PCC Mixed-Use 1 (PCC MU-1) land use district in the Specific Plan cannot exceed 90 feet in height including elevator/stairwell roof projections, measured from lowest finished grade to the highest point of measurement. Light standards on roof level parking areas and roof level recreational facilities/open space areas are permitted and they cannot exceed 14 feet in height. Exceptions to building height are permitted in accordance with ESMC §15-2-3.

b. Buildings and structures within the PCC Commercial-1 (PCC COM-1) land use district in the Specific Plan cannot exceed 105 feet in height, measured from lowest finished grade to the highest point of measurement. Exceptions to building height are permitted in accordance with ESMC §15-2-3.

c. Buildings and structures within the PCC Commercial-2 (PCC COM-2) land use district in the Specific Plan cannot exceed 115 feet in height, measured lowest finished grade to the highest point of measurement. Exceptions to building height are permitted in accordance with ESMC §15-2-3.

d. Buildings and structures within the PCC Commercial-3 (PCC COM-3) land use district in the Specific Plan cannot exceed 68 feet in height including elevator/stairwell roof projections, measured from lowest finished grade to the highest point of measurement. Light standards on roof level parking areas are permitted and they cannot exceed 14 feet in height. Exceptions to building height are permitted in accordance with ESMC §15-2-3.

e. Buildings and structures within the PCC Mixed-Use 2 (PCC MU-2) land use district in the Specific Plan cannot exceed 85 feet in height including

elevator/stairwell roof projections, measured from lowest finished grade to the highest point of measurement. Light standards on roof level parking areas and roof level recreational facilities/open space areas are permitted and they cannot exceed 14 additional feet in height. Exceptions to building height are permitted in accordance with ESMC §15-2-3.

3. Setbacks

a. Pacific Coast Highway: Building and structures within the PCC Mixed-Use 1 (PCC MU-1) land use district, the PCC Commercial-1 (PCC COM-1) land use district, the PCC Commercial-2 (PCC COM-2) land use district, the PCC Commercial-3 (PCC COM-3) land use district, and the PCC Mixed-Use 2 (PCC MU-2) land use district in this Specific Plan must be setback a minimum of zero feet (0') from the adjoining public right-of-way of Pacific Coast Highway.

b. Mariposa Avenue (north and south sides): Buildings and structures within the PCC Commercial-3 (PCC COM-3) land use district in this Specific Plan must be setback a minimum of zero feet (0') from the adjoining public right-of-way of Mariposa Avenue. Buildings and structures within the PCC Mixed-Use 2 (PCC MU-2) land use district in this Specific Plan must be setback a minimum of zero feet (0') from the adjoining public right-of-way of Mariposa Avenue.

c. Holly Avenue: Buildings and structures within the PCC Mixed-Use 1 (PCC MU-1) land use district in this Specific Plan must be setback a minimum of zero feet (0') from the adjoining public right-of-way of Holly Avenue.

d. Indiana Street: Building and structures within the PCC Mixed-Use 1 (PCC MU-1) land use district, the PCC Commercial-1 (PCC COM-1) land use district, the PCC Commercial-2 (PCC COM-2) land use district, and the PCC Commercial-3 (PCC COM-3) land use district in this Specific Plan must be setback a minimum of zero feet (0') from the adjoining public right-of-way of Indiana Street.

e. Palm Avenue: Buildings and structures within the PCC Mixed-Use 2 (PCC MU-2) land use district in this Specific Plan must be setback a minimum of zero feet (0') from the adjoining public right-of-way of Palm Avenue.

f. Interior Setbacks: Minimum interior setbacks for buildings and structures in the PCC Commercial-1 (PCC COM-1), the PCC Commercial-2 (PCC COM-2) and the PCC Commercial-3 (PCC COM-3) land use districts within the Specific Plan must be setback a minimum of zero feet (0'). Parking and loading spaces must maintain a minimum of zero feet (0').

g. Interior Setbacks in the PCC Mixed-Use 1 (PCC MU-1) land use district:

Buildings and structures in the PCC Mixed-Use 1 (PCC MU-1) land use district within the Specific Plan must maintain a minimum of zero feet (0') from each interior lot line. Parking and loading spaces may maintain a minimum of zero feet (0').

h. Interior and Rear Setbacks in the PCC Mixed-Use 2 (PCC MU-2) land use district: The apartment building and townhomes in the PCC Mixed-Use 2 (PCC MU-2) must maintain a minimum of forty-one feet (41') from the western lot line. The apartment building and townhomes must maintain a minimum of ten feet (10') and balconies, decks and patios must maintain a minimum of five feet (5') from all other interior lot lines except that only a minimum of 3 feet (3') is required from the interior property line between the 2 parcels in the PCC Mixed-Use 2 (PCC MU-2) land use district. Accessory buildings in the PCC Mixed-Use 2 (PCC MU-2) land use district within the Specific Plan must maintain a minimum of ten feet (10') from each interior or rear lot line. Structures in the PCC Mixed-Use 2 (PCC MU-2) land use district within the Specific Plan must maintain a minimum of three feet (3') from each interior or rear lot line. Fences and walls may be located at zero feet (0'). Parking and loading spaces may maintain a minimum of 0 feet (0') from the interior property line between the 2 parcels in the PCC Mixed-Use 2(PCC MU-2) land use district.

i. Exceptions to setback requirements are permitted subject to the requirements of ESMC § 15-2-7 Open Space Areas and Encroachments, and as permitted in Sections VI(D) and VI(E) of this Specific Plan.

4. Lot Frontage

a. A minimum of 100 feet of frontage must be provided for all lots on a dedicated public street, except that only a minimum of 50 feet of frontage must be provided for a lot with frontage on Palm Avenue. Lot frontage only applies to ground parcels and not to airspace parcels.

5. Residential Density

a. A maximum of 120 dwelling units is permitted in the PCC Mixed-Use 1 (PCC MU-1) land use district.

b. A maximum of 143 dwelling units is permitted in the PCC Mixed-Use 2 (PCC MU-2) land use district.

6. Floor Area

Floor area shall be based upon the net floor area definition established in this Section VI(B)(6)(f) below.

a. The maximum floor area permitted in the PCC Mixed-Use 1 (PCC MU-1) land use district is 2.70:1.

b. The maximum floor area permitted in the PCC Commercial-1 (PCC COM-1) land use district is 2.51:1.

c. The maximum floor area permitted in the PCC Commercial-2 (PCC COM-2) land use district is 2.28:1.

d. The maximum floor area permitted in the PCC Commercial-3 (PCC COM-3) land use district is 0.16:1.

e. The maximum floor area permitted in the PCC Mixed-Use 2 (PCC MU-2) is 2.29:1.

f. Net floor area consists of the area of all floors, stories or levels, as measured to the interior of a building's perimeter walls. Space devoted to the following is not included when determining the total net floor area within a building or structure:

1. Balconies, decks, patios, porches and verandas that are covered up to a cumulative total of 100 square feet per unit for multiple-family residential dwellings in the in the PCC MU-1 and PCC MU-2 land use districts;
2. Balconies, decks, patios, porches and verandas that are covered up to a cumulative total of 300 square feet per townhome unit in the PCC MU-2 land use district;
3. Elevator shafts;
4. Stairwells and stairway enclosures;
5. Courts, courtyards or atriums;
6. Rooms exclusively holding building operating equipment;
7. Parking spaces at or above grade and access thereto;
8. Structures or portions of buildings or structures devoted exclusively for parking;
9. Restrooms in common areas of nonresidential buildings; and
10. Up to 500 square feet of interior floor area of an attached garage per townhome unit in the PCC MU-2 land use district.

g. Gross floor area consists of the area included within the surrounding exterior walls of a building or portion thereof, exclusive of garages, vent shafts, and courts. The floor area of a building, or portion thereof, not provided with surrounding exterior walls is the usable area under the horizontal projection of the roof or floor above. Covered balconies, decks, patios, porches and verandas for residential uses up to a cumulative total of 100 square feet for multiple-family residential dwellings per unit and 300 square feet per townhome unit are excluded.

6. Walls and Fences

a. All walls and fences must comply with ESMC § 15-2-4 except as specified in Section VI(B)(2) of this Specific Plan and except that the maximum height of retaining walls in the PCC Mixed-Use 1 (PCC MU-1) land use district cannot exceed 15 feet.

b. Razor wire is not permitted.

c. Chain link fencing is not permitted that is visible from any public rights-of-way.

8. **Accessory Structures**

a. Trash and recycling areas, outdoor storage areas, utility and mechanical equipment, rooftop and ground mounted equipment, transformers and similar structures are permitted subject to screening requirements in ESMC § 15-2-8 and the Design Guidelines in Section V.A(5) of this Specific Plan.

b. Other permitted accessory structures include architectural landscape features per Section VI(E) Landscaping of this Specific Plan and playground equipment.

C. CIRCULATION

1. Public streets must be designed and constructed in accordance with the General Plan and in the overall right-of-way size identified in the Street Classification and Standards (Exhibit C-8) in the Circulation Element of the General Plan or as exempted or a waiver granted subject to the regulations in ESMC Chapter 15-24A Right of Way Dedications and Improvements. No private streets are located within the Specific Plan area. A portion of one public street, Mariposa Avenue (a commercial collector), bisects the northern and southern portions of the Specific Plan area. Streets that adjoin the boundaries of the Specific Plan area include Pacific Coast Highway (a major arterial street that is a Caltrans owned State Highway Facility), Holly Avenue, Indiana Street and Palm Avenue. Holly Avenue, Indiana Street and Palm Avenue are classified as local streets. A portion of Mariposa Avenue between Indiana Street and Pacific Coast Highway is proposed to be expanded on the south side of the street to include a dedicated right turn lane (eastbound on Mariposa Avenue to southbound on Pacific Coast Highway.

D. PARKING AND LOADING

1. Parking and loading must be provided in accordance with the requirements of ESMC Chapter 15-15, except as provided below:

a. Multiple-family Residential Parking: A minimum of 1 parking space will

be provided for each studio unit. A minimum of 1.5 parking spaces will be provided for each one-bedroom unit. A minimum of 2 parking spaces will be provided for each two-bedroom unit. A minimum of 1/3 of a parking space per residential unit will be provided for guest parking. Guest parking for multiple-family residential uses may be co-located and shared with parking for commercial uses. Required non-guest multiple-family residential parking is permitted to be shared with parking that is required for commercial uses up to a maximum of five percent (5%) of the total required parking. The maximum five percent (5%) of shared multiple-family residential parking is based upon the total parking provided within the entire Specific Plan area and is not calculated for individual lots.

b. Multiple-family Residential Parking for Affordable Units: A minimum of 0.5 parking spaces will be provided for each studio unit. A minimum of 1 parking space will be provided for each one-bedroom unit. A minimum of 1.5 parking spaces will be provided for each two-bedroom unit. No guest parking spaces will be required for affordable units.

c. Multiple-family Residential Parking for Townhomes (Condominiums): Townhomes will be provided a two-car garage. A minimum of 1/3 of a parking space per residential unit will be provided for guest parking.

d. The number of parking spaces required for uses other than multiple-family uses specified above will be determined based upon review and approval of a parking demand study which may include shared use analysis.

e. Compact Parking: Compact parking is permitted for a maximum of twenty percent (20%) of spaces for residential and commercial uses.

f. Tandem Parking: Tandem parking is permitted for a maximum of twenty percent (20%) of spaces for residential uses.

g. Vehicle Lifts: Vehicle lifts are permitted for a maximum of ten percent (10%) of parking spaces for multiple-family residential and hotel uses. Vehicle lifts are not permitted for other commercial and retail uses. Vehicle lifts would be permitted in parking structures. A vehicle lift may only be used to store two (2) vehicles vertically where a minimum vertical height clearance in the parking structure is a minimum of fourteen feet (14') clear of obstructions. Both the upper and lower space where a lift is used count toward the maximum percentage. A vehicle lift may be permitted only with a key locking mechanism and an automatic shutoff safety device which is installed in accordance with manufacturer specifications. Maintenance of vehicle lifts is required in accordance with manufacturer specifications. Lifts shall be maintained in good working condition. Lifts shall be maintained through either a maintenance contract or self-performance and they may be inspected by the City of El Segundo.

h. Loading Spaces: Two small truck loading spaces (as defined in ESMC Section 15-15-7 are required in the PCC Mixed-Use 1 (PCC MU-1) land use district to serve the multiple-family residential and commercial uses. Two small truck loading spaces are required in the PCC Mixed-Use 2 (PCC MU-2) land use district to serve the multiple-family residential and commercial uses. One small truck loading space is required for the commercial uses in the PCC Commercial-3 (PCC COM-3) land use district.

i. Parking Space Dimensions (for All Residential and Commercial Uses): All standard parking spaces must be a minimum of 8'-6" in width by 18'-0" in length. All compact parking spaces must be a minimum of 8'-6" in width by 15'-0" in length.

j. Off-site parking and off-site loading is permitted. The parking and loading spaces must be located on private property within the boundary of the Specific Plan area it serves unless otherwise approved by the Planning Commission. A written agreement must be executed by all parties concerned, and recorded to the satisfaction of the Director of Development Services and the City Attorney assuring the continued availability of the number of parking spaces and loading spaces located off-site. Reciprocal access easements or covenants must be recorded for contiguous lots before issuance of a building permit and must be shown or noted on the applicable site plans.

k. Parking lots and driveways may straddle lot lines subject to provisions in a reciprocal parking and access easement or covenant. Driveways that connect parking lots with a right-of-way may encroach into a required landscape setback. Such documents must provide provisions for shared maintenance.

2. Preferential parking must be provided for carpools and vanpools.

3. Bicycle parking and EV Charging must comply with the stricter of ESMC Chapters 15-15 and 15-16 or Cal Green Code.

E. LANDSCAPING

This section will ensure that adequate landscaping area and permanent maintenance is provided for the development.

Landscaped areas must be provided and permanent irrigation systems installed in the landscaped areas at: 1) around the perimeter of the buildings in the setbacks, 2) within the required setbacks along the property perimeter and, 3) in the Vehicular Use Areas (VUAs) as defined in ESMC §15-1-6.

A Landscape Master Plan must be prepared for each sub-district of the Specific Plan area to ensure a unified appearance implementing the intent of the Design Guidelines and objectives of this Specific Plan. The Landscape Master Plan must be prepared by a licensed landscape architect and it must be submitted to the City concurrently with the first site plan review within the Specific Plan area.

ALL LANDSCAPING

1. Landscaping must conform to the City's Water Conservation in Landscaping requirements as set forth in ESMC Chapter 15-15A.

BUILDING PERIMETER LANDSCAPING

1. Except as otherwise allowed by this Plan, a minimum horizontal depth of five feet of landscape materials, excluding curbs, must be provided around each building except for entrances to buildings and any other required paved areas. In instances where two buildings are separated by ten feet, the landscape requirement may be reduced to allow for pedestrian walkways/access.

PROPERTY PERIMETER LANDSCAPING

1. Landscaping must be provided in all property perimeter areas except where buildings, driveways, pedestrian walkways, driveway visibility and corner clearance areas are located. One shade tree must be provided for every 25 feet of street frontage where landscaping is provided. One shade tree must be provided for every 25 feet along interior property lines where landscaping is provided in the PCC Mixed-Use 2 (PCC MU-2) land use district. Trees are not required to be evenly spaced.

2. The following encroachments are permitted into the landscaped setback areas:

    a. "Architectural landscape features" including fountains, water features and waterfalls, free-standing arbors/pergolas, and similar features, may encroach into the landscaped setback area subject to site plan review, provided a minimum landscaped setback of three feet is maintained. The features may cover a maximum of twenty-five percent of the total area of the setback and be a maximum of twenty feet in height.

VEHICULAR USE AREAS

1. Vehicular Use Areas (VUA) include surface parking lots. Landscaping in the VUAs must cover a minimum of five percent of the VUA and be distributed throughout the VUA for any new surface parking lots. Such landscaping is in addition to the required property perimeter and building perimeter landscaping.

    a. Planting areas containing trees must have a minimum width of 5 feet except

for existing planting areas. Trees are required to provide shade.

MINIMUM SIZES FOR PLANT MATERIAL

1. The minimum tree container size for all trees on site shall be provided as follows:

a. At least twenty percent (20%) of the trees must be thirty-six inch (36") box size or larger.

b. At least thirty percent (30%) of the trees must be twenty-four inch (24") box size or larger.

c. The remaining fifty percent (50%) must be fifteen (15) gallon size or larger.

d. The Director of Development Services may approve smaller tree container sizes than required based on site conditions, however no tree may be smaller than a fifteen (15) gallon size.

2. Shrubs must be planted from a minimum five (5) gallon size container. One (1) gallon size containers may be allowed for shrubs that are not commonly available in five (5) gallon size containers, subject to approval by the Director of Development Services.

F. COMMON RECREATION FACILITIES/OPEN SPACE AND PRIVATE OPEN SPACE

Common recreation facilities/open space and private open space are required for multiple-family residential uses in the PCC Mixed-Use 1 and PCC Mixed-Use 2 districts. Common recreation facilities/open space are not required for the townhomes.

Common recreation facilities/open space are facilities that are accessible to all multiple-family residential unit occupants. Common recreation facilities may include indoor and/or outdoor areas. Indoor areas may include, but are not limited to, gyms or fitness areas, indoor pools, indoor spas and saunas, multi-purpose recreation and community rooms and similar facilities.

Private open space includes decks, patios and balconies that are accessible from the multi-family residential unit or townhome unit and exclusively devoted to that unit. There is no requirement to provide private open space for each multiple-family residential unit, however, any private open space that is provided must meet minimum dimensions. In order to count towards these requirements, the minimum dimensions for any private open space shall be 5 feet in width by 5 feet in length.

Multiple-family residential units must provide an average of 100 square feet per unit in combined common recreation facilities/open space and private open space. Townhomes must provide a minimum of 100 square feet of total private open space. In order to count towards these requirements, the minimum dimensions of private open space for townhome units shall be 5 feet in width by 5 feet in length.

G. PUBLIC SAFETY

In an effort to ensure the safety of residents, employees and visitors to the Pacific Coast Commons Specific Plan area, the following strategies must be incorporated into site development:

1. Lighting must be adequate throughout the Specific Plan area and shielded to minimize off-site illumination. Submittal of photometric studies is required as part of any site plan review submittal which includes parking lots, and parking structures in the Specific Plan area.

2. The site design and operation must comply with fire and police safety regulations with regard to site layout, building configurations, landscape design, and infrastructure requirements.

3. Street lighting must be provided in accordance with ESMC requirements.

H. SIGNAGE

1. Signage within the Specific Plan area must conform to the signage regulations of ESMC Chapter 15-18 except as established and approved in a Master Sign Program for each land use district in the Specific Plan. The existing Master Sign Program for the existing buildings in the Specific Plan area (for the Aloft and the Fairfield Inn and Suites hotels) remains in effect and is excluded from the Master Sign Program requirements for the new development.

2. Section 15-18-3 shall apply relating to exempt signs.

3. Neon signage is not permitted on any building façades facing west in the PCC Mixed-Use 1 land use district or on any building façade facing west in the PCC Commercial-3 land use district. Neon signage is not permitted on the Palm Avenue street frontage or on any building facades facing west in the PCC Mixed-Use 2 land use district between Mariposa and Palm Avenues or along the Palm Avenue.

4. The following signs are not permitted within the Specific Plan:

    - Balloons or other inflated devices or signs used in conjunction with commercial premises for commercial purposes; unless allowed by a temporary sign permit
    - Beacon signs
    - Billboards, as defined in the ESMC
    - Pole signs
    - Signs incorporating flashing or blinking lights
    - Signs that flash, rotate, pulsate or otherwise move in a way to create a traffic hazard
    - Signs that emit sounds, odor or visible matter such as smoke or steam
    - Strobe lights used in signs; and

- Trailer or portable signs except for sandwich board signs for restaurants.

5. A Master Sign Program for each land use district in the Specific Plan area must be developed and submitted for review and approval by the Director of Development Services concurrent with the first site plan review in that land use district within the Specific Plan. The Master Sign Program must include the following elements:

   - Master signage (entryways, common sign design throughout the Specific Plan area);
   - Sign standards developed for the mixed-use multiple-family residential and commercial development;
   - Provisions for wayfinding and decorative elements such as banners;
   - General features that all signs are required to comply with; and
   - Regulations for temporary signs (including construction signs).

I. SUSTAINABILITY

1. All new development must have buildings designed to be energy efficient to meet or exceed Title 24 requirements.
2. The Project parking lot areas must include storm water management practices that treat storm water runoff in compliance with the ESMC and all applicable law.
3. Bicycle parking must comply with the ESMC and Cal Green Code.
4. Exterior lighting must be energy efficient and designed to minimize light pollution.
5. Low-emitting building materials must be utilized.
6. Roof structures of new buildings must be designed to support solar panels.
7. Reclaimed water must be utilized for all landscaped areas if available and feasible.

J. ENCLOSED AND UNENCLOSED USES

All uses must be conducted wholly within an enclosed building or structure except for the following:

1. Mechanical equipment provided they comply with the requirements of ESMC § 15-2-8.
2. Outdoor restaurants and cafes incidental to the permitted use, provided they comply with the provisions of ESMC § 15-2-16.

3. Recreation facilities customarily conducted in the open (including but not limited to pools and play equipment).

4. Outdoor private common area for residential developments.

5. Wireless communications facilities (including antennas, and dishes) provided they comply with the requirements of ESMC Chapter 15-19 subject to applicable law.

K. NON-CONFORMING USES AND BUILDINGS

Any existing uses, buildings, structures, parking areas, landscaping and signage located in the PCC Commercial-1 (PCC COM-1), PCC Commercial-2 (PCC COM-2), and PCC Commercial-3 (PCC COM-3) that become non-conforming at the time of adoption of this Specific Plan will be permitted to remain.

Until such time as building permits are issued for development of the Specific Plan, the existing food and beverage building may continue to be used for commercial, restaurant and meeting spaces.

VII. ADMINISTRATION

A. INTRODUCTION

Unless regulated by this Specific Plan, development will be administered and enforced by the City in accordance with the ESMC. This Specific Plan supersedes any conflicts with ESMC zoning regulations.

1. The Director of Development Services may grant administrative use permits in accordance with ESMC Chapter 15-22.

2. The Director of Development Services may make other administrative determinations using the same procedures set forth in ESMC Chapter 15-22.

3. The Director of Development Services may grant adjustments and administrative adjustments in accordance with ESMC Chapter 15-24.

4. The Planning Commission may grant conditional use permits in accordance with ESMC Chapter 15-23.

5. The Director of Development Services may grant off-site parking covenants between parcels within the Specific Plan area in accordance with ESMC Chapter 15-15.

6. The Director of Development Services may grant modifications to the number of parking spaces as determined in a parking demand study in accordance with Section VID of this Plan and ESMC Chapter 15-15.

B. MUNICIPAL CODE REFERENCES

All section references in the Specific Plan refer to the El Segundo Municipal Code (ESMC) as adopted at the time of Specific Plan approval.

C. MODIFICATIONS

1. Major Modifications

The following modifications constitute a Major Modification and require an amendment to this Specific Plan:

a. Any decrease in the required building setbacks as set forth in Section VI.B.3 above;

b. Any increase in the total developable square footage of the entire Specific Plan in excess of the maximum allowable development intensity allowed under the Specific Plan;

c. Any increase in height of buildings or structures on the Property above 5 feet;

d. Any change in use to a use which is not permitted under the Specific Plan, except as approved by the Director in accordance with Chapter 15-22 of the ESMC;

e. Any change in the land use plan categories identified in Exhibit 5 of this plan;

f. Any decrease in the minimum required lot area;

g. Any decrease in the minimum required lot frontage;

h. Any material modification that requires modification to the EIR other than an Addendum; and

i. Any modification deemed by the Director of Development Services as a major modification and requiring amendment to this Specific Plan.

2. Minor Modifications

Any modification to this Specific Plan not listed above as a "major modification," including a use approved subject to an Administrative Use Permit, is a Minor Modification. The Developer may make Minor Modifications without amending this Specific Plan upon the administrative approval of the Director of Development Services or designee, provided that such modifications are consistent with the Development and Design Standards, Applicable Rules, and Project Approvals. Such Minor Modifications may include:

- Modifications to infrastructure sizing based upon final engineering plans approved by the City.

- Adjustments, Administrative Adjustments, Administrative Determinations subject to the requirements in Section VII.A, above.

D. SITE PLAN REVIEW

1. Overview

In order to develop a Project that is in conformance with the uses, density, approved FAR, and Design Guidelines of this Specific Plan, a Site Plan Review ("SPR") application shall be filed with the Development Services Department in accordance with ESMC Chapter 15-

30 except as specified below.

2. Site Plan Review - Procedure

a. The Director of Development Services may extend the Site Plan approval for up to two additional years for good cause upon written request of the applicant received prior to expiration of the site plan approval.

b. After the Site Plan is approved, the Director of Development Services may approve minor changes in the Site Plan or its conditions if the Director finds that there are practical reasons for such changes, that such changes do not substantially vary from the previously approved site plan and applicable law and that such changes do not involve deviations from the design's intent.

3. Exempt Activities

The following is a list of activities which are exempt from the site plan review process. This list is not all-inclusive; the Director of Development Services may exempt other activities not listed:

a. All interior changes and alterations

b. Exterior mechanical equipment (heating, air conditioning, water heater, transformers) designed with mechanical equipment screening compatible with the architecture of the building to which it is adjacent or affixed.

c. Minor exterior repairs with the same or similar types of building materials as determined by the Director of Development Services.

d. Minor surface parking area changes and restriping of parking stalls.

e. Re-glazing new mullions.

f. Re-landscaping consistent with the landscape palette.

g. Repainting.

h. Reroofing with similar style roofing materials.

E. AMENDMENT

In accordance with the Government Code §§ 65450-65457, Specific Plans must be prepared, adopted and amended in the same manner as General Plans except that Specific Plans may be adopted by resolution or by ordinance.

This Specific Plan may be amended as necessary by ordinance. Said amendment or amendments do not require a concurrent General Plan amendment unless the Director of Development Services

determines that the proposed amendment would substantially affect General Plan goals, policies, objectives or programs.

F. INFRASTRUCTURE IMPROVEMENTS/COORDINATION

The developer and/or property owner shall be responsible for making transportation and infrastructure utility improvements required by the Pacific Coast Commons Specific Plan. All improvements shall be to the specifications of the City of El Segundo Development Services Department, Public Works Department, and/or other applicable departments.

G. FINANCING MEASURES

Implementation and financing of improvements of the Pacific Coast Commons Specific Plan depend exclusively on private investment and development. The developer and/or property owner shall be responsible for financing the project, including all improvements and mitigation measures.

H. CALIFORNIA ENVIRONMENTAL QUALITY ACT COMPLIANCE

The Pacific Coast Commons Specific Plan and related entitlements were approved in accordance with the California Environmental Quality Act (CEQA), the State CEQA Guidelines (Guidelines), and City policies adopted to implement the CEQA and the Guidelines.

An Environmental Impact Report was prepared and certified by the City Council which establishes the development thresholds shown in Table VII-1 below.

Table VII-1
California Environmental Quality Act Compliance

EIR Project	Floor Area
The Specific Plan, including the Conceptual Site Plan and Application Materials evaluated within the EIR document.	340,000 gross square feet (new development in Specific Plan)

The existing development located in the Pacific Coast Commons Specific Plan area totals 324,058 gross square feet (Fairfield Inn and Suites hotel is 217,311 gross square feet and the Aloft hotel is 106,747 gross square feet). A portion of the Fairfield Inn and Suites hotel will be demolished. More specifically, the 41,660 square-foot 2-story "food and beverage" building (that contains banquet room facilities, a restaurant and storage uses located at the southwest corner of Pacific Coast Highway and Mariposa Avenue) will be demolished leaving 282,398 square feet of existing development to remain within the Pacific Coast Commons Specific Plan area. The CEQA clearance indicated above analyzes the effects of a maximum of 340,000 gross square feet of new incremental development per the Specific Plan. Based upon the maximum allowable floor area in each land use district, the 340,000 square feet will be comprised of 150,000 gross square feet in the "PCC South" development site (PCC Mixed-Use 1 District), 5,000 gross square feet in the "Fairfield Parking" site (PCC COM-3 District), and 185,000 gross square feet in the "PCC North"

site (PCC Mixed-Use 2 District). The Development Project depicted in the Conceptual Site Plan includes 327,068 gross square feet of new development that will occur after the demolition of the existing 41,660 gross square-foot 2-story "food and beverage" building. The demolition of the 41,660 gross square-foot "food and beverage" building will reduce the existing Fairfield Inn and Suites Hotel to 175,651 gross square feet in size.

APPENDIX A

PACIFIC COAST COMMONS SPECIFIC PLAN LEGAL DESCRIPTION

THE LAND REFERRED TO HEREIN BELOW IS SITUATED IN THE CITY OF EL SEGUNDO, IN THE COUNTY OF LOS ANGELES, STATE OF CALIFORNIA, AND IS DESCRIBED AS FOLLOWS:

PARCEL 1: (APN: 4139-025-075)

LOT 428 IN BLOCK 123 OF EL SEGUNDO, IN THE CITY OF EL SEGUNDO, COUNTY OF LOS ANGELES, STATE OF CALIFORNIA, AS PER MAP RECORDED IN BOOK 22 PAGES 106 AND 107 OF MAPS, IN THE OFFICE OF THE COUNTY RECORDER OF SAID COUNTY.

PARCEL 2: (APN: 4139-025-073, 074, 076, 081)

LOTS 385, 386, 387, 429 AND 430 IN BLOCK 123 OF EL SEGUNDO, IN THE CITY OF EL SEGUNDO, COUNTY OF LOS ANGELES, STATE OF CALIFORNIA, AS PER MAP RECORDED IN BOOK 22 PAGES 106 AND 107 OF MAPS, IN THE OFFICE OF THE COUNTY RECORDER OF SAID COUNTY.

PARCEL 3: (APN: 4139-025-091)

LOTS 382, 383, 384, 431, 432 AND 433 IN BLOCK 123 OF EL SEGUNDO, IN THE CITY OF EL SEGUNDO, IN THE COUNTY OF LOS ANGELES, STATE OF CALIFORNIA, AS PER MAP RECORDED IN BOOK 22 PAGES 106 AND 107 OF MAPS, IN THE OFFICE OF THE COUNTY RECORDER OF SAID COUNTY.

EXCEPT ALL PETROLEUM, GAS, ASPHALTUM AND OTHER HYDROCARBONS AND OTHER MINERALS, WHETHER SIMILAR TO THOSE HEREIN SPECIFIED OR NOT, WITHIN OR UNDERLYING OR THAT MAY BE PRODUCED FROM PARCELS 1 AND 2, TOGETHER WITH THE EXCLUSIVE RIGHT TO ENTER INTO, ACROSS OR THROUGH THE SUBSURFACE OF SAID LAND FOR THE PURPOSE OF TAKING OR PRODUCING ANY PETROLEUM, GAS, ASPHALTUM, OTHER HYDROCARBONS AND OTHER MINERALS AND UNDER SAID LAND, BY DIRECTIONAL DRILLING OR OTHER SUBSURFACE OPERATIONS AND THE EXCLUSIVE RIGHT TO USE THE SUBSURFACE OF SAID LAND FOR THE PURPOSE OF INJECTING THEREIN, OR WITHDRAWING THEREFROM GAS, OIL, OR OTHER SUBSTANCES, WHETHER HYDROCARBON OR NOT, FOR STORAGE, REPRESSURING, OR OTHER PURPOSES, BUT WITH NO RIGHT TO ENTER UPON THE SURFACE OF SAID LAND, AS GRANTED TO STANDARD OIL

COMPANY OF CALIFORNIA, A CORPORATION, BY DEED RECORDED APRIL 28, 1947 AS INSTRUMENT NO. 480 IN BOOK 24472 PAGE 357, OFFICIAL RECORDS.

DEVELOPMENT AGREEMENT

This Development Agreement (the "Agreement") is made and entered into by and among the CITY OF EL SEGUNDO, a municipal corporation (referred to hereinafter as "City") and BRE El Segundo Property Owner A LLC, BRE El Segundo Property Owner B LLC, and BRE El Segundo Parking LLC, all Delaware limited liability companies (hereinafter collectively referred to as "BRE" or "Developer") as of this ____ day of_____, 2022. City and Developer are referred to hereinafter individually as "Party" and collectively as "Parties". In consideration of the mutual covenants and agreements contained in this Agreement, City and Developer agree as follows:

1. Definitions. Unless the contrary is stated or clearly appears from the context, the following definitions govern the construction of the words and phrases used in this Agreement. Words and phrases not defined in this Section will have the meaning set forth in this Agreement, the El Segundo Municipal Code, or in common usage.

"Applicable Rules" means:

- The El Segundo General Plan, as it existed on the Approval Date, as modified by the Project Approvals;
- The El Segundo Municipal Code, as it existed on the Approval Date, as modified by the Project Approvals;
- Such other laws, ordinances, rules, regulations, and official policies governing permitted uses of the property, density, design, improvement, development fees, and construction standards and specifications applicable to the development of the Property in force at the time of the Effective Date, which are not in conflict with this Agreement.

"Approval Date" means _____, 2022, the date on which the last of the Project Approval applications was approved by the City.

"Approved Plans" means a plan for any aspect of the Project, including, without limitation, the Site Plan, signage plans, and landscaping and irrigation plans, which are approved by the City in accordance with the Applicable Rules, and Project Approvals.

"Building Regulations" means those regulations set forth in Title 13 of the ESMC.

"CEQA" means the California Environmental Quality Act, Public Resources Code § 21000 *et seq.*

"CEQA Guidelines" means the regulations implementing CEQA which have been adopted by the State and found at Title 14 of the California Code of Regulations, § 150000 *et seq.*

"City Council" means the City Council of the City of El Segundo.

"Developer" means BRE El Segundo Property Owner A LLC, BRE El Segundo Property Owner B LLC, and BRE El Segundo Parking LLC, and their transferees, assigns and successors in interest.

"Development Standards" means the design and development standards that are applicable to the Project as set forth in the Specific Plan.

"Director" means the Director of Development Services, or his designee.

"Effective Date" means the date on which the Enabling Ordinance becomes effective in accordance with Government Code § 36937.

"ESMC" means the El Segundo Municipal Code.

"Enabling Ordinance" means Ordinance No. XXX, approving this Development Agreement.

"Future Approvals" means such subsequent discretionary and ministerial entitlements, including permits, which are required to develop the Project in addition to the Project Approvals, and which are applied for by the Developer and approved by the City. Once approved, a Future Approval becomes part of the Project Approvals.

"Party" means the City or the Developer. "Parties" shall mean both the City and the Developer.

"Person" means a natural person or any entity.

"Project" means the development of the Property in accordance with the Project Approvals.

"Project Approvals" means:

- Final Environmental Impact Report (FEIR) No. EA–1248, as certified by Resolution No. _____ on ___ ;
- Mitigation Monitoring Program for FEIR No. EA-1248, as adopted by Resolution No. _____ on ____;
- General Plan Amendment No. GPA 19-01, as approved by Resolution No. _____ on ____, including a change in the Land Use Map;
- Pacific Coast Commons Specific Plan No. SP 19-01, as adopted by Ordinance No. XXX on _____.
- Zone Change No. ZC 19-01, as approved by Ordinance No. _____ on _____, including a change in the Zoning Map;
- Zone Text Amendment No. ZTA 19-08, as approved by Ordinance No. XXX on _____;
- Vesting Map No. 82806, as approved by Resolution No. ___ on _____;

- Site Plan Review No. SPR 19-01, as approved by Resolution No. ___ on _____;

- This Development Agreement (DA No. 19-02) as approved by Ordinance No. _____ on _____.

- Modification of Resolution Nos. 2759 and 2760 to rescind the previous approvals SUB NO. 14-05, Lot Tie Covenant No. 14-03, Off-Site Parking Covenant Nos. MISC 14-03 and 14-06, leaving in place CUP No. 14-01 for the Fairfield Inn and Suites Hotel and CUP NO. 14-02 for the Aloft Hotel, along with alcohol service at both hotels with modification to the conditions of approval accordingly.

- Parking Demand Study and Shared Parking Analysis to establish the parking requirements for the proposed commercial and residential development combined with the existing hotel development.

- Shared Parking Agreement in conjunction with the Parking Demand Study and Shared Parking Analysis, to replace the previous approval of Off-Site Parking Covenant Nos. MISC 14-03 and MISC 14-06.

- Reciprocal Access Agreements for driveways and drive aisles accessing multiple parcels.

"Property" refers to that approximate 9 acres which is described in Exhibit A, attached hereto and incorporated herein by reference.

"Specific Plan" or "PCCSP" means the Pacific Coast Commons Specific Plan.

"Subsequent Rules" means any changes to the Applicable Rules, including, without limitation, any change by means of an ordinance, initiative, resolution, policy, order or moratorium, initiated or instituted for any reason whatsoever and adopted by the City Council, the Planning Commission or any other board, agency, commission or department of the City, or any officer or employee thereof, or by the electorate, which would, absent this Agreement, otherwise apply to the Property.

"Transferee" means a Person which assumes in whole or in part the rights and obligations under this Agreement with respect to all or a portion of the Property.

2. Recitals. This Agreement is made with respect to the following facts and for the following purposes, each of which is acknowledged as true and correct by the Parties:

2.1 Pursuant to Government Code § 65865 *et seq.*, the City is authorized to enter into a binding contractual agreement with any person having a legal or equitable interest in real property for the development of such property.

2.2 Developer warrants that it is the owner of the Property.

2.3 Developer desires to redevelop the Property in accordance with the Project Approvals.

2.4 By this Agreement, each Party desires to obtain the binding agreement of the other Party to develop the Property in accordance with the Project Approvals, Applicable Rules and this Agreement. In consideration thereof, the City agrees to limit the future exercise of certain of its governmental and proprietary powers to the extent specified in this Agreement.

2.5 City and Developer have acknowledged and agreed that the consideration that is to be exchanged pursuant to this Agreement is fair, just and reasonable.

2.6 The Project is consistent with the City's General Plan, as amended, (the "General Plan").

2.7 Development of the Project has, and will continue to, further the comprehensive planning objectives contained within the General Plan, and will result in public benefits, including, among others, the following:

2.7.1 Providing needed housing, including thirty-two units of affordable housing;

2.7.2 Providing both short-term construction employment and long-term permanent employment within City; and

2.7.3 Providing a dedicated right-turn only lane on east bound Mariposa Avenue to southbound Pacific Coast Highway.

2.8 On _____, 2021, the Planning Commission of the City commenced a duly noticed public hearing on the Project Approvals. At the conclusion of the hearing the Planning Commission recommended that the City Council approve the Project Approvals.

2.9 On _____, 2021, the City Council commenced a duly noticed public hearing on the Project Approvals. Prior to approving this Agreement by the Enabling Ordinance, the City Council adopted Resolution No. ___ approving the FEIR.

2.10 All of the Property is subject to this Agreement.

3. Binding Effect. The burdens of this Agreement are binding upon, and the benefits of the Agreement inure to the City and the Developer and each successive transferee, assign and successor in interest thereto and constitute covenants that run with the land. Any and all rights and obligations that are attributed to the Developer under this Agreement shall run with the land. For purposes of this Agreement, until such time as any portion of the Property may be transferred, BRE El Segundo Property Owner A LLC, BRE El Segundo Property Owner B LLC, and BRE El Segundo Parking LLC, shall be jointly and severally liable for all obligations set forth in this Agreement. In the case of a partial transfer, Developer may identify which of the three BRE entity or entities remain liable for any obligations remaining with Developer.

3.1 Constructive Notice and Acceptance. Every person who acquires any right, title or interest in or to any portion of the Property in which the Developer has a legal interest is, and shall be, conclusively deemed to have consented and agreed to be bound by this Agreement, whether or

not any reference to this Agreement is contained in the instrument by which such person acquired such right, title or interest.

3.2 Rights to Assign and Transfer. Developer may assign or transfer its rights and obligations under this Agreement with respect to the Property, or any portion thereof, to any person at any time during the term of this Agreement without approval of the City. For purpose of this Agreement, the Transferee must be considered the "owner" of that portion of the Property which is covered by such transfer.

3.3 Liabilities Upon Transfer. Upon the delegation of the duties and obligations under this Agreement and the sale, transfer or assignment of all or any portion of the Property, Developer will be released from its obligations under this Agreement with respect to the Property, or portion thereof, so transferred arising subsequent to the effective date of such transfer, if: (i) Developer has provided to the City prior or subsequent written notice of such transfer; and (ii) the Transferee has agreed in writing to be subject to all of the provisions hereof applicable to the portion of the Property so transferred by executing an Assignment and Assumption Agreement in the form of Exhibit B attached hereto and incorporated herein by reference. Upon any transfer of any portion of the Property and the express assumption of Developer's obligations under this Agreement by such Transferee, the City agrees to look solely to the Transferee for compliance by such Transferee with the provisions of this Agreement as such provisions relate to the portion of the Property acquired by such Transferee. Any such Transferee shall be entitled to the benefits of this Agreement as "Developer" hereunder and shall be subject to the obligations of this Agreement applicable to the parcel(s) transferred. A default by any Transferee shall only affect that portion of the Property owned by such Transferee and shall not cancel or diminish in any way Developer's rights hereunder with respect to any portion of the Property not owned by such Transferee. The Transferee shall be responsible for satisfying the good faith compliance requirements set forth in Section 8 below relating to the portion of the Property owned by such Transferee, and any amendment to this Agreement between the City and a Transferee shall only affect the portion of the Property owned by such Transferee.

3.4 Resumption of Rights. If Transferee defaults with respect to any provision of this Agreement, Developer may, but is not obligated to, resume Transferee's obligations upon written notification to City.

4. Development of the Property. The following provisions, in addition to the Applicable Rules, shall govern the development of the Project.

4.1 Permitted Uses, Design and Development Standards, and Dedication of Land for Public Purposes. The permitted, administratively permitted, and conditionally permitted uses of the Property as well as the Development Standards and provisions for reservation or dedication of land for public purposes are set forth in the Project Approvals and Applicable Rules.

4.2 Entitlement to Develop. The Developer is granted the vested right to develop the Project subject to the Applicable Rules, the Project Approvals, and any Future Approvals.

4.3 Building Regulations. Notwithstanding Section 4.4 below, all construction on the Property shall adhere to the Building Regulations in effect at the time an application for a building

permit is submitted and to any federal or state building requirements that are then in effect at such time. Additionally, nothing in this Agreement prevents the City from applying "standard specifications" for public improvements (e.g., streets, storm drainage, parking lot standards, driveway widths), as the same may be adopted or amended from time to time by the City, provided that the provisions of any such standards and specifications apply only to the extent they are in effect on a Citywide basis and do not conflict with the provisions of the Specific Plan.

4.4 Subsequent Rules. Subsequent Rules cannot be applied by the City to the Project unless the Developer gives the City written notice of its election to have such Subsequent Rule applied to the Project, in which case such Subsequent Rule is deemed to be an Applicable Rule.

4.5 Fees, Exactions, Mitigation Measures, Conditions, Reservations and Dedications.

4.5.1 Subject to sections 4.5.2, 4.5.3, and 5.2, all fees, exactions, mitigation measures, conditions, reservations and dedications of land for public purposes that are applicable to the Project are set forth in the Applicable Rules, the Project Approvals, and this Agreement.

4.5.2 Except as otherwise provided in this Agreement, and specifically excluding fees set by entities not controlled by the City that are collected by the City, the City can only charge and impose those fees and exactions, including, without limitation, dedication and any other fee relating to development or the privilege of development, which are in effect on a City-wide basis as of the Effective Date.

4.5.3 The Developer must pay the amount of the impact fees that are in effect at the time of application for the building permit pursuant to City Council Resolution Nos. 4443 and 4687, or such subsequent resolutions as may be adopted by the City Council in accordance with applicable procedures, but shall not be required to pay any new impact fees that are not in effect at the time of Project Approvals.

4.5.4 This Section shall not be construed to limit the authority of the City to charge normal and customary application, processing, and permit fees, including legal and environmental processing costs, for land use approvals, building permits and other similar permits, for Future Approvals, which fees are designed to reimburse City's actual expenses attributable to such application, processing and permitting and are in force and effect on a City-wide basis at such time as applications for such approvals are filed with the City.

4.6 Use of Easements. Notwithstanding the provisions of the Applicable Rules, easements dedicated for vehicular and pedestrian use shall be permitted to include easements for underground drainage, water, sewer, gas, electricity, telephone, cable, and environmental remediation and other utilities and facilities so long as they do not unreasonably interfere with pedestrian and/or vehicular use.

4.7 Timing of Development. In *Pardee Construction Co. v. City of Camarillo* (*Pardee*), 37 Cal.3d 465 (1984), the California Supreme Court held that the failure of the parties therein to provide for the timing or rate of development resulted in a later-adopted initiative restricting the rate of development to prevail against the parties' agreement. City and Developer intend to avoid the result in *Pardee* by acknowledging and providing that Developer shall have the right, without

obligation, to develop the Property in such order and at such rate and times as Developer deems appropriate within the exercise of its subjective business judgment subject to the terms of this Agreement.

In furtherance of the Parties' intent, as set forth in this Section, no future amendment of any existing City ordinance or resolution, or future adoption of any ordinance, resolution or other action, that purports to limit the rate or timing of development over time or alter the sequencing of development phases, whether adopted or imposed by the City Council or through the initiative or referendum process, shall apply to the Property. However, nothing in this Section shall be construed to limit City's right to enforce Developer's obligation pursuant to this Agreement to provide all infrastructure required by the Project Approvals and this Agreement.

4.8 Moratorium.

4.8.1 The City shall not impose a moratorium on the Property that restricts development of the Project unless such is necessary to protect against a significant threat to the health, safety and welfare of the City.

4.8.2 Except as provided in Section 4.8.1 above, no City-imposed moratorium or other limitation (whether relating to the rate, timing or sequencing of the development or construction of all or any part of the Project, whether imposed by ordinance, initiative, resolution, policy, order or otherwise, and whether enacted by the City Council, an agency of the City, the electorate or otherwise) affecting parcel or subdivision maps (whether tentative, vesting tentative, or final), building permits, occupancy certificates, or other entitlements to use or service (including, without limitation, water and sewer), approved, issued or granted within the City, or portions of the City, applies to the Project to the extent such moratorium or other limitation is in conflict with this Agreement. However, the provisions of this Section do not affect the City's compliance with moratoria or other limitations mandated by other governmental agencies or court-imposed moratoria or other limitations.

4.9 Term. This Agreement shall be in effect for a period of 15 years from the Effective Date of the Enabling Ordinance. However, the Developer or the City shall be entitled to, by written notice to the other Party prior to the Agreement's expiration, one (1) five (5)-year extension, provided that the requesting Party is not in material default of this Agreement at such time beyond any applicable period to cure provided for by Section 8.5 below. Before the expiration of the five (5) year extension, the Parties may mutually agree to further extensions. In the event of litigation challenging this Agreement, the Term is automatically suspended for the duration of such litigation and resumes upon final disposition of such challenge and any appeal thereof upholding the validity of this Agreement. In the event that a referendum petition concerning this Agreement is duly filed in such a manner that the ordinance approving this Agreement is suspended, then the Term is deemed to commence upon City Council certification of the results of the referendum election approving this Agreement.

4.10 Term of Map(s) and Other Project Approvals. Pursuant to California Government Code Sections 66452.6(a) and 65863.9, the term of any subdivision or parcel map that has been or in the future may be processed on all or any portion of the Property and the term of each of the Project Approvals shall be extended for a period of time through the scheduled termination date of this Agreement as set forth in Section 4.9 above, including any extensions thereto.

4.11 Future Approvals.

4.11.1 Minor Modifications to Project. The Developer may make minor changes to the Project and Project Approvals ("Minor Modifications") without the need to amend this Agreement upon the administrative approval of the Director.

(a) Minor Modifications include:

(i) A modification to the Site Plan approved by the Director in accordance with section VII.D.2 of the Specific Plan;

(ii) A modification to the Site Plan approved by the Planning Commission through the Site Plan Review procedure contained in ESMC Chapter 15-30, provided the change does not include any change which would qualify as a Major Modification under section 4.11.2 below;

(iii) A Minor Modification to the Specific Plan as identified in Section VII.C.2 thereof; and

(iv) any other change that does not qualify as a Major Modification as defined below.

(b) The City shall not unreasonably withhold or delay approval of any Minor Modification. The City shall have the right to impose reasonable conditions in connection with Minor Modifications, provided, however, such conditions shall not be inconsistent with the Applicable Rules, the Project Approvals or with the development of the Project as contemplated by this Agreement.

(c) A Minor Amendment approved by the City shall continue to constitute a Project Approval as referenced herein.

4.11.2 Modifications Requiring Amendment to this Agreement. Any proposed modification to the Project which results in any of the following shall constitute a Major Modification and shall require an amendment to this Agreement pursuant to Section 14 below:

(a) Any change which constitutes a Major Modification to the Specific Plan as identified in Section VII.C.1 thereof; or

(b) Any change which creates a new environmental impact which cannot be mitigated to a level of insignificance.

4.12 Site Plan Review. Site Plan Review approval shall be required in accordance with Chapter 15-30 of the El Segundo Municipal Code. Nothing in this Agreement is intended to limit the applicability of the Site Plan Review requirement in Chapter 15-30 of the ESMC.

4.13 Issuance of Building Permits. No building permit, final inspection or Certificate of

Occupancy will be unreasonably withheld, conditioned, or delayed from the Developer if all infrastructure required to serve the portion of the Property covered by the building permit, final inspection or Certificate of Occupancy is in place or is suitably guaranteed to be completed (by covenant, bond, letter of credit or otherwise) to the reasonable satisfaction of the City prior to completion of construction and all of the other relevant provisions of the Project Approvals, Future Approvals and this Agreement have been satisfied.

5. Developer Agreements.

The Property is divided up into the following five land use districts from south to north as shown on Exhibit C: PCC Mixed-Use 1(PCC South); PCC Commercial-1 (Aloft Hotel); PCC Commercial-2 (Fairfield Hotel); PCC Commercial-3 (Fairfield Parking); and PCC Mixed-Use 2 (PCC North).

5.1 General. The Developer shall comply with: (i) this Agreement; (ii) the Project Approvals, including without limitation all mitigation measures required by the determination made pursuant to the California Environmental Quality Act; and (iii) all Future Approvals for which it is the applicant or a successor in interest to the applicant.

5.1.1 In the event that any of the mitigation measures or conditions required of Developer hereunder have been implemented by others, Developer shall be conclusively deemed to have satisfied such mitigation measures or conditions, consistent with CEQA. If any such mitigation measures or conditions are rejected by a governmental agency with jurisdiction, the Developer may implement reasonably equivalent substitute mitigation, consistent with CEQA, to the City's satisfaction, in lieu of the rejected mitigation measures or conditions. Such substitution shall be deemed to be a Minor Modification pursuant to Section 4.11.1 above.

5.1.2 Except for dedications made with the recordation of Vesting Map No. 82806, all other dedications and improvements required as part of the Project Approvals shall be required concurrent with the development of the adjacent district, except as may otherwise be specified herein.

5.2 Affordable Housing. Developer shall provide a total of 15 affordable housing units in PCC South and 17 affordable units in PCC North to persons who qualify as low or very-low income households for 55 years as further detailed in accordance with the housing covenants to be recorded against the property as set forth in Exhibits D1 and D2 (Agreements Creating Affordable Housing Covenants [Including Rental Restrictions]), attached hereto. The recordation of the affordable housing covenants shall occur before the issuance of the first certificate of occupancy for each building.

Developer shall pay for actual costs of an independent third-party affordable housing consultant, chosen by the City, to provide income limit verification that meets the affordable housing requirements of this Section 5.2. The independent third-party consultant shall charge Developer rates that are competitive to the market area. Developer shall provide the necessary tenant documentation to the selected third-party affordable housing consultant.

5.3 Undergrounding of Overhead Wires. All new utilities to and on the property shall be provided underground for each phase of the project. Existing utilities in the public rights-of-way

surrounding each development phase are not required to be relocated underground.

5.4 Preferential Parking Zone. Developer shall provide $25,000 to the City for the costs to implement a preferential parking zone adjacent to the Project site. Formation of the preferential parking zone will be dependent upon a petition of residents pursuant to ESMC § 8-5A-5. If no preferential parking zone is established within 3 years of the first occupancy for PCC North or PCC South, whichever is the latter to be developed, the City may use any portion of the funds for improvements in the geographical vicinity of the Project site at its discretion. Such payment shall be made prior to the issuance of any building or grading permit, whichever is first, for any improvement in the Specific Plan area.

5.5 Landscaping.

5.5.1 Landscaping Requirements.

5.5.1.1 No certificate of occupancy shall be issued for the development to which the requirement is tied until the improvements are made or Developer has provided appropriate bonds in a form satisfactory to the City Attorney.

5.5.1.2 All landscape and other improvements shall be substantially in conformance with the Landscape Plan approved with the Site Plan Review approval as to the number and location of trees and improvements.

5.5.1.3 All landscaping/improvement work identified in this section 5.5 shall occur with the development of the adjacent PCC area as identified below.

5.5.2 Indiana Street. Developer shall provide, in accordance with City standards and requirements, additional landscaping and trees on the west side of Indiana Street between Mariposa Avenue and Holly Avenue in existing landscaped areas with existing irrigation systems in place. Developer has no obligation to create new parkway areas or to install, operate, or maintain any required irrigation. The installation of this landscaping shall occur with the development of PCC South. Developer has no obligation to maintain the additional landscaping and trees after installation.

5.5.3 Pacific Coast Highways/Hotels. Developer shall provide single occupancy pedestrian seating and enhanced landscaping in the existing landscape areas in front of the Aloft Hotel and the Fairfield Hotel. Six single-occupant chairs shall be located in front of the Fairfield Hotel in the existing landscaped area and four single-occupant chairs shall be located in front of the Aloft Hotel in the existing landscaped area. This installation of the seating and landscaping will take place with the development of PCC South.

5.5.4 PCC North. Developer shall provide the following improvements with the development of PCC North.

5.5.4.1 Developer shall provide enhanced landscaping along the existing block wall on the western side of PCC North in the form of “climbing fig ivy”.

5.5.5 PCC South. Developer will replace the existing street trees along the Pacific Coast Highway frontage of PCC south with six new street trees along the same frontage. In the event that Caltrans does not permit trees to be planted in the right-of-way, Developer will provide six additional trees on the PCC South site in a location to be approved by Community Services Director or his designee that is outside of the Caltrans right-of-way and the building footprint.

5.6 Enhanced Paving. Developer shall provide enhanced paving such as stamped or colored concrete, at the following locations: (i) PCC South entrances/exits on Indiana and Pacific Coast Highway; (ii) Fairfield Parking Structure entrance/exits on Pacific Coast Highway; and (iii) PCC North entrances/exists on Mariposa Avenue and Palm Avenue.

5.7 EV Charging Stations. Developer shall provide a total of 200 EV capable spaces, including a total of 50 installed EV chargers across the entire PCC Specific Plan area. A minimum of 50 EV capable spaces, including 20 EV chargers, shall be installed in each parking structure in PCC North and PCC South. A minimum of 20 EV capable spaces, including 8 EV chargers, shall be installed in the Fairfield Parking structure. The remaining 80 EV capable spaces, including 2 EV chargers may be distributed between the three structures without restriction.

5.8 Solar Panels and Battery Storage.

5.8.1 Developer shall install solar panels on the roofs of both PCC North and PCC South to generate sufficient power for their respective Common Area Power needs or generate the maximum power available from rooftop installed solar panels, whichever is less. "Common Area Power" shall be defined as all project power that does not serve a residential or commercial unit. City may, at Developer's expense, retain a third-party consultant to verify that the solar infrastructure proposed is consistent with this paragraph.

5.8.2 Developer shall comply with the battery storage system requirements consistent with the 2022 Building Energy Efficiency Standards (Title 24 Energy Code) for both PCC North and PCC South as adopted by the California Building Standards Commission prior to the effective date of the 2022 Code. If the City makes any amendments to this provision of the Building Code in accordance with law, Developer shall comply with any such amendments for building permits filed after the effective date of the amendments.

5.9 Fencing. Developer shall remove and replace all chain link fencing visible from the public right of way at the existing Aloft and Fairfield Hotel properties. The fencing will be replaced with decorative fencing and/or landscaping approved by the Development Services Department. The fencing shall be replaced at the time of development of PCC South or the Fairfield Parking, whichever occurs first.

5.10 Community Non-Profit Space.

5.10.1 Developer shall provide a minimum space of 1,000 square feet of community space to be located on the ground floor of the Fairfield parking structure.

5.10.2 For the first 10 years after issuance of the certificate of occupancy, non-profit groups registered located in the City of El Segundo shall have priority of using this space.

5.10.3 Non-profit groups shall be able to use this room without payment of any rental rate for the room, but may be required to pay set-up fees, clean-up fees, and any fees for additional services such as food and beverage service.

5.11 Development Fees. Subject to the provisions of Section 4.5 above, Developer shall pay the development fees in effect at the time of building permit application. The Developer shall be entitled to credits against the City's traffic mitigation fees to the extent off-site traffic improvements that are required by the Project Approvals are included in any subsequent traffic fee mitigation program adopted by the City pursuant to Government Code Section 66000, *et seq*. Such credits shall be based upon the actual audited costs and shall only be granted to the extent such improvements are constructed in accordance with all applicable state and local laws. The Developer waives any and all rights it may have to challenge development fees that are in effect at the time of the Effective Date and the City's right to amend its current development fees. However, the Developer retains the legal right to challenge the amount of any such amended or increased development fees to the extent such are not in compliance with the requirements of Government Code Section 66000, *et seq*. as well as its right to receive credits against such amended or increased fees.

5.12 Maintenance Obligations. Developer shall maintain all portions of the Property in its possession or control, and any improvements thereon, in a clean, neat and orderly manner. Except as specified herein, Developer shall also maintain any landscaping and bike racks placed in the public right of way. The Parties' respective maintenance obligations shall survive any termination or expiration of this Agreement.

5.13 Sales and Use Tax.

5.13.1 In the event the contract price for any work on the Project is valued at five million dollars ($5,000,000.00) or more, Developer agrees to report, on a State Board of Equalization Tax Return, any purchases of tangible personal property made in connection with the finishing of and/or installation of materials, or fixtures for the Project, when such purchases were made without sales or use tax due. Developer shall indicate the City as a registered job site location on the State Board of Equalization Tax Return. In such event, Developer shall also obtain a permit or a sub-permit from the State Board of Equalization indicating the City as the registered job site location, in accordance with Revenue and Taxation Code § 7051.3 or State Board of Equalization Compliance Policy and Procedure Manual § 295.060.

5.13.2 Developer further agrees that if Developer retains contractors or subcontractors to perform a portion of work in the Project, and said contracts or subcontracts are valued at five million dollars ($5,000,000) or more, said contracts or subcontracts shall contain the provisions set forth in Subsection (a) above.

5.13.3 The Director of Finance of the City is authorized to relieve Developer, and Developer's contractors and subcontractors, from the requirements set forth in this Section 5.7 upon proof to the reasonable satisfaction of the Director of Finance that Developer and/or its contractors or subcontractors have made good faith efforts to obtain said permit or sub-permits, but were denied the same by the State Board of Equalization.

6. City Agreements.

6.1 Expedited Processing. The City shall process, at Developer's expense, in an expedited manner all plan checking, excavation, grading, building, encroachment and street improvement permits, Certificates of Occupancy, utility connection authorizations, and other ministerial permits or approvals necessary, convenient or appropriate for the grading, excavation, construction, development, improvement, use and occupancy of the Project in accordance with the City's accelerated plan check process under the Applicable Rules. Without limiting the foregoing, if requested by Developer, the City agrees to utilize private planners and plan checkers (upon Developer's request and at Developer's cost) and any other available means to expedite the processing of Project applications, including concurrent processing of such applications by various City departments.

6.2 Processing Cooperation and Assistance. To the extent permitted by law, the City shall reasonably cooperate with the Developer in securing any and all entitlements, authorizations, permits or approvals which may be required by any other governmental or quasi-governmental entity in connection with the development of the Project or the Property. Without limiting the foregoing, the City shall reasonably cooperate with the Developer in any dealings with federal, state and other local governmental and quasi-governmental entities concerning issues affecting the Property. The City shall keep the Developer fully informed with respect to its communications with such agencies which could impact the development of the Property. The City must not take any actions to encourage any other governmental or quasi-governmental entities from withholding any necessary approvals and any such contrary actions on the part of the City must be considered a breach of this Agreement by City.

6.3 Processing During Third Party Litigation. The filing of any third party lawsuit(s) against the City or the Developer relating to this Agreement, the Project Approvals, any Future Approvals or to other development issues affecting any portion of the Property or the Project shall not hinder, delay or stop the development, processing or construction of the Project, approval of the Future Approvals, or issuance of ministerial permits or approvals should the Developer wish to proceed, unless the third party obtains a court order restraining the activity. The City must not stipulate to or cooperate in the issuance of any such order.

6.4 Performance of Director Duties. The City shall ensure that a person or persons are designated at all times to carry out the duties of the Director set forth in this Agreement.

7. Modification/Suspension.

7.1 Pursuant to Government Code Section 65869.5, in the event that any state or federal law or regulation, enacted after the Effective Date, precludes compliance with any provision of this Agreement, such provision shall be deemed modified or suspended to the extent practicable to comply with such state or federal law or regulation, as reasonably determined necessary by City. Upon repeal of said law or regulation or the occurrence of any other event removing the effect thereof upon the Agreement, the provisions hereof shall be restored to their full original effect.

7.2 In the event any state or federal resources agency (i.e., California Department of Fish and Game, U.S. Fish and Wildlife Service, U.S. Army Corps of Engineers, Regional Water Quality Control Board/State Water Resources Control Board), in connection with its final issuance of a permit or certification for all or a portion of the Project, imposes requirements ("Permitting Requirements") that require modifications to the Project, then the parties will work together in good faith to incorporate such changes into the Project; provided, however, that if Developer appeals or challenges any such Permit Requirements, then the Parties may defer such changes until the completion of such appeal or challenge.

8. Demonstration of Good Faith Compliance.

8.1 Review of Compliance. In accordance with Government Code Section 65865.1, this Section 8 and the Applicable Rules, once each year, on or before each anniversary of the Effective Date ("Periodic Review"), the Development Services Director shall review the extent of the Developer's good faith substantial compliance with the terms and provisions of this Agreement as well as the performance by the City of its obligations under this Agreement.

8.2 Good Faith Compliance. During each Periodic Review, the Developer shall demonstrate by written status report that, during the preceding twelve month period, that it has been in good faith compliance with this Agreement. For purposes of this Agreement, the phrase "good faith compliance" shall mean that the Developer has demonstrated that it has acted in a commercially reasonable manner (taking into account the circumstances which then exist) and in good faith in and has substantially complied with the Developer's material obligations under this Agreement.

8.3 City Report - Information to be Provided to Developer. At least 14 days before the annual anniversary of the Effective Date, the City must deliver to the Developer a copy of all staff reports prepared in connection with a Periodic Review, any prior staff reports generated during the review period, written comments from the public, and, to the extent practical, all related exhibits concerning such Periodic Review. This information shall be known as the "City Report."

8.4 Developer's Report. No later than the annual anniversary of the Effective Date, Developer must submit a written status report to the Director addressing the good faith compliance issue and any issues raised by the City Report provided to the Developer in accordance with section 8.3 above.

8.5 Notice of Non-Compliance; Cure Rights. If, after reviewing the Developer's Report, the Director reasonably concludes on the basis of substantial evidence that as to any parcel or parcels comprising the Property, Developer has not demonstrated that it is in good faith compliance with this Agreement, the Director may issue and deliver to the Developer a written Notice of Violation as set forth in Section 10 below.

8.6 Public Notice of Finding. Any appeal of the Director's determination (including any appeal by the Developer) must be filed within 20 days following such decision. Filing such an appeal tolls the cure period specified in the Notice of Violation. Notwithstanding Section 13.1, an appeal regarding the Notice of Violation shall be heard directly by the City Council at a duly-noticed public hearing and the City Council must issue a final decision. Developer retains the right to challenge the City's issuance of any final decision pursuant to Code of Civil Procedure § 1094.5 without complying

with the procedures set forth in Section 10.4 below.

8.7 Failure of Periodic Review. The City's failure to review, at least annually, compliance by the Developer with the terms and conditions of this Agreement shall not constitute or be asserted by any Party as a breach by any other Party of this Agreement. If the City fails to provide the City Report by the Effective Date, Developer will be deemed to be in good faith compliance with this Agreement.

9. Excusable Delays. Performance by any Party of its obligations hereunder shall be excused during any period of "Excusable Delay," as hereinafter defined, provided that the Party claiming the delay gives notice of the delay to the other Party as soon as reasonably possible after the same has been ascertained. For purposes hereof, Excusable Delay shall mean delay that directly affects, and is beyond the reasonable control of, the Party claiming the delay, including without limitation: (i) act of God; (ii) civil commotion: (iii) riot: (iv) strike, picketing or other labor dispute; (v) shortage of materials or supplies; (vi) damage to work in progress by reason of fire, flood, earthquake or other casualty; (vii) reasonably unforeseeable delay caused by a reasonably unforeseeable restriction imposed or mandated by a governmental entity other than City; (viii) litigation brought by a third party attacking the validity of this Agreement, a Project Approval, a Future Approval or any other action necessary for development of the Property; (ix) delays caused by any default by City or the Developer hereunder; or (x) delays due to the presence or remediation of hazardous materials. The term of this Agreement, including any extensions, shall be extended by any period of Excusable Delay.

10. Default Provisions.

10.1 Default. Either Party to this Agreement shall be deemed to have breached this Agreement if it materially breaches any of the provisions of this Agreement and the same is not cured within the time set forth in a written notice of violation (the "Notice of Violation") from the non-breaching Party to the breaching Party, which period of time shall not be less than 10 days for monetary defaults, and not less than 60 days for non-monetary defaults from the date that the notice is deemed received, provided if the breaching Party cannot reasonably cure a non-monetary default within the time set forth in the notice, then the breaching Party shall not be in default if it commences to cure the default within such time limit and diligently effects such cure thereafter. If the City determines that a default may have occurred, the City shall give written notice to the Developer of its intention to terminate this Agreement and comply with the notice and public hearing requirements of Government Code Sections 65867 and 65868. At the time and place set for the hearing on termination, the Developer shall be given an opportunity to be heard. If the City Council finds based upon the evidence that the Developer is in breach of this Agreement, the City Council may modify this Agreement with the consent of the Developer or unilaterally terminate this Agreement. If Developer initiates a resolution of dispute in accordance with the provisions of Section 10.4 below within 60 days following the City Council's determination that Developer is in breach of this Agreement, the City Council's decision to modify or terminate this Agreement is stayed until the issue has been resolved through informal procedures, mediation, or court proceedings.

10.2 Content of Notice of Violation. Every Notice of Violation shall state with specificity that it is given pursuant to this Section of the Agreement, the nature of the alleged breach, (including references to the pertinent provisions of this Agreement), the portion of the Property involved, and

the manner in which the breach may be satisfactorily cured. The notice shall be deemed given in accordance with Section 19 hereof.

10.3 Remedies for Breach. The Parties agree that the remedies for breach of this Agreement shall be limited to the remedies expressly set forth in this section. Developer's remedies for any breach of this Agreement by City shall be limited to injunctive relief and/or specific performance.

10.4 Resolution of Disputes. The City and the Developer agree to attempt to settle any claim, dispute or controversy arising from this Agreement through consultation and negotiation in good faith and in spirit of mutual cooperation. If those attempts fail, the dispute may be mediated by a mediator chosen jointly by the City and the Developer within 30 days after notice by one of the parties demanding non-binding mediation. Neither Party may unreasonably withhold consent to the selection of a mediator. The City and the Developer will share the cost of the mediation equally. The Parties may agree to engage in some other form of non-binding alternate dispute resolution ("ADR") procedure in lieu of mediation. Any dispute that cannot be resolved between the Parties through negotiation or mediation within two months after the date of the initial demand for non-binding mediation may then be submitted to a court of competent jurisdiction in the County of Los Angeles, California.

10.5 Attorney's Fees and Costs. Each Party to this Agreement agrees to waive any entitlement of attorney's fees and costs incurred with respect to any dispute arising from this Agreement. The parties will each bear their own attorney's fees and costs in the event of any dispute.

11. Mortgagee Protection. This Agreement shall not prevent or limit the Developer, in any manner, at Developer's sole discretion, from encumbering the Property or any portion thereof or any improvements thereon by any mortgage, deed of trust or other security device. The City acknowledges that the lender(s) providing such financing ("Mortgagee") may require certain Agreement interpretations and agrees, upon request, from time to time, to meet with the Developer and representatives of such lender(s) to provide within a reasonable time period the City's response to such requested interpretations. The City will not unreasonably withhold its consent to any such requested interpretation, provided that such interpretation is consistent with the intent and purposes of this Agreement. Any Mortgagee of a mortgage or a beneficiary of a deed of trust or any successor or assign thereof, including without limitation the purchaser at a judicial or non-judicial foreclosure sale or a person or entity who obtains title by deed-in-lieu of foreclosure on the Property shall be entitled to the following rights and privileges:

11.1 Mortgage Not Rendered Invalid. Neither entering into this Agreement nor a breach of this Agreement shall defeat, render invalid, diminish, or impair the priority of the lien of any mortgage or deed of trust on the Property made in good faith and for value. No Mortgagee shall have an obligation or duty under this Agreement to perform the Developer's obligations, or to guarantee such performance, prior to taking title to all or a portion of the Property.

11.2 Request for Notice to Mortgagee. The Mortgagee of any mortgage or deed of trust encumbering the Property, or any part thereof, who has submitted a request in writing to the City in the manner specified herein for giving notices, shall be entitled to receive a copy of any Notice of Violation delivered to the Developer.

11.3 Mortgagee's Time to Cure. The City shall provide a copy of any Notice of Violation to the Mortgagee that has requested such copy within ten days of sending the Notice of Violation to the Developer. The Mortgagee shall have the right, but not the obligation, to cure the default for period of 60 days after receipt of such Notice of Violation, or such longer period of time as may be specified in the Notice. Notwithstanding the foregoing, if such default shall be a default which can only be remedied by such Mortgagee obtaining possession of the Property, or any portion thereof, and such Mortgagee seeks to obtain possession, such Mortgagee shall have until 60 days after the date of obtaining such possession to cure or, if such default cannot reasonably be cured within such period, to commence to cure such default, provided that such default is cured no later than one year after Mortgagee obtains such possession.

11.4 Cure Rights. Any Mortgagee who takes title to all of the Property, or any part thereof, pursuant to foreclosure of the mortgage or deed of trust, or a deed in lieu of foreclosure, shall succeed to the rights and obligations of the Developer under this Agreement as to the Property or portion thereof so acquired; provided, however, in no event shall such Mortgagee be liable for any defaults or monetary obligations of the Developer arising prior to acquisition of title to the Property by such Mortgagee, except that any such Mortgagee shall not be entitled to a building permit or occupancy certificate until all delinquent and current fees and other monetary or non-monetary obligations due under this Agreement for the Property, or portion thereof acquired by such Mortgagee, have been satisfied.

11.5 Bankruptcy. If any Mortgagee is prohibited from commencing or prosecuting foreclosure or other appropriate proceedings in the nature of foreclosure by any process or injunction issued by any court or by reason of any action by any court having jurisdiction of any bankruptcy or insolvency proceedings involving the Developer, the times specified in Section 10 above shall be extended for the period of the prohibition, except that any such extension shall not extend the term of this Agreement.

11.6 Disaffirmation. If this Agreement is terminated as to any portion of the Property by reason of (i) any default or (ii) as a result of a bankruptcy proceeding, and this Agreement is disaffirmed by a receiver, liquidator, or trustee for the Developer or its property, the City, if requested by any Mortgagee, shall negotiate in good faith with such Mortgagee for a new development agreement for the Project as to such portion of the Property with the most senior Mortgagee requesting such new agreement. This Agreement does not require any Mortgagee or the City to enter into a new development agreement pursuant to this Section.

12. Estoppel Certificate. At any time and from time to time, the Developer may deliver written notice to City and City may deliver written notice to the Developer requesting that such Party certify in writing that, to the knowledge of the certifying Party: (i) this Agreement is in full force and effect and a binding obligation of the Parties; (ii) this Agreement has not been amended, or if amended, the identity of each amendment; and (iii) the requesting Party is not in breach of this Agreement, or if in breach, a description of each such breach. The Party receiving such a request shall execute and return the certificate within thirty (30) days following receipt of the notice. The failure of the City to deliver such a written notice within such time shall constitute a conclusive presumption against the City that, except as may be represented by the Developer, this Agreement is in full force and effect without modification, and that there are no uncured defaults in the performance of the Developer. The

Development Services Director shall be authorized to execute, on behalf of the City, any Estoppel Certificate requested by the Developer. City acknowledges that a certificate may be relied upon by successors in interest to the Developer who requested the certificate and by holders of record of deeds of trust on the portion of the Property in which that Developer has a legal interest.

13. Administration of Agreement.

13.1 Appeal of Staff Determinations. Any decision by City staff concerning the interpretation or administration of this Agreement or development of the Property in accordance herewith may be appealed by the Developer to the Planning Commission, and thereafter, if necessary, to the City Council pursuant to the El Segundo Municipal Code. The Developer shall not seek judicial review of any staff decision without first having exhausted its remedies pursuant to this Section. Final determinations by the City Council are subject to judicial review subject to the restrictions and limitations of California law.

13.2 Operating Memoranda. The provisions of this Agreement require a close degree of cooperation between City and Developer. During the Term of this Agreement, clarifications to this Agreement and the Applicable Rules may be appropriate with respect to the details of performance of City and Developer. If and when, from time to time, during the term of this Agreement, City and Developer agree that such clarifications are necessary or appropriate, they shall effectuate such clarification through a memoranda approved in writing by City and Developer (the "Operating Memoranda"), which, after execution, shall be attached hereto and become part of this Agreement and the same may be further clarified from time to time as necessary with future written approval by City and the Developer. Operating Memoranda are not intended to and shall not constitute an amendment to this Agreement but are mere ministerial clarifications, therefore public notices and hearings are not required. The City Attorney shall be authorized, upon consultation with, and approval of, the Developer, to determine whether a requested clarification may be effectuated pursuant to this Section or whether the requested clarification is of such character to constitute an amendment hereof which requires compliance with the provisions of Section 14 below. The authority to enter into such Operating Memoranda is hereby delegated to the Director, and the Director is hereby authorized to execute any Operating Memoranda hereunder without further City Council action.

13.3 Certificate of Performance. Upon the completion of the Project, or the completion of development of any parcel within the Project, or upon completion of performance of this Agreement or its earlier revocation and termination, the City shall provide the Developer, upon the Developer's request, with a statement ("Certificate of Performance") evidencing said completion or revocation and the release of the Developer from further obligations hereunder, except for any ongoing obligations hereunder. The Certificate of Performance shall be signed by the appropriate agents of the Developer and the City and shall be recorded in the official records of Los Angeles County, California. Such Certificate of Performance is not a notice of completion as referred to in California Civil Code § 3093.

14. Amendment or Termination by Mutual Consent. Except as otherwise set forth herein, this Agreement may only be amended or terminated, in whole or in part, by mutual consent of City and the Developer, and upon compliance with the provisions of Government Code § 65867.

15. Indemnification/Defense.

15.1 Indemnification. The Developer agrees to indemnify and hold the City harmless from and against any claim, action, damages, costs (including, without limitation, attorney's fees), injuries, or liability, arising from the City's approval of the Project, this Agreement, Developer's performance of this Agreement, and all procedures with approving this Agreement (collectively, "Discretionary Approvals"), except to the extent such is a result of the City's sole negligence or intentional misconduct. Should the City be named in any suit, or should any claim be brought against it by suit or otherwise, whether the same be groundless or not, arising out of the Discretionary Approvals, Developer agrees to defend the City (at the City's request and with counsel satisfactory to the City) and will indemnify the City for any judgment rendered against it or any sums paid out in settlement or otherwise, except to the extent such action is a result of the City's sole negligence or intentional misconduct. For purposes of this Section, "the City" includes the City of El Segundo's elected officials, appointed officials, officers, consultants, and employees.

15.2 Defense of Agreement. If the City accepts Developer's indemnification and defense as provided in Section 15.1 above, the City agrees to and shall timely take all actions which are necessary or required to uphold the validity and enforceability of this Agreement, the Discretionary Approvals, Project Approvals, Development Standards, and the Applicable Rules. This Section 15 shall survive the termination of this Agreement.

16. Cooperation in the Event of Legal Challenge.

16.1 Third Party Challenges. In the event of any administrative, legal or equitable action or other proceeding instituted by any person or entity not a party to the Agreement challenging the validity of any provision of this Agreement, challenging any Approval, or challenging the sufficiency of any environmental review of either this Agreement or any Approval under CEQA (each a "Third Party Challenge"), each party must cooperate in the defense of such Third Party Challenge, in accordance with this Section. Developer agrees to pay City's costs of defending a Third Party Challenge, including all court costs and reasonable attorney's fees expended by City (including the time and cost of the City Attorney) in defense of any Third Party Challenge, as well as the time of City's staff spent in connection with such defense. Developer may select its own legal counsel to represent Developer's interests in any Third Party Challenge at Developer's sole cost and expense. City agrees that it will not enter into a settlement agreement to any Third Party Challenge without Developer's written consent. Developer's obligation to pay City's costs in the defense of a Third Party Challenge shall not extend to those costs incurred on appeal if Developer notifies the City is writing that it does not wish to pursue the appeal.

16.2 Third Party Challenges Related to the Applicability of City Laws. The provisions of this Section will apply only in the event of a legal or equitable action or other proceeding, before a court of competent jurisdiction, instituted by any person or entity not a party to the Agreement challenging the applicability to the Project or Project Site of a conflicting City Law (a "Third Party Enforcement Action"):

16.2.1 In the event of a Third Party Enforcement Action, City must: (i) promptly notify Developer of such action or proceeding; and (ii) stipulate to Developer's intervention as a party to such action or proceeding unless Developer has already been named as a respondent or real

party in interest to such action or proceeding. In no event will City take any action that would frustrate, hinder, or otherwise complicate Developer's efforts to intervene, join or otherwise participate as a party to any Third Party Enforcement Action. As requested by Developer, City must use its best efforts to ensure that Developer is permitted to intervene, join or otherwise participate as a party to any Third Party Enforcement Action. If, for any reason, Developer is not permitted to intervene, join or otherwise participate as a party to any Third Party Enforcement Action, the parties to this Agreement agree to cooperate, to the maximum extent permitted by law, in the defense of such action or proceeding. For purposes of this Section, the required cooperation between the parties includes, without limitation, developing litigation strategies, preparing litigation briefs and other related documents, conferring on all aspects of the litigation, developing settlement strategies, and, to the extent permitted by law, jointly making significant decisions related to the relevant litigation, throughout the course thereof.

16.2.2 City's costs of defending any Third Party Enforcement Action, including all court costs, and reasonable attorney's fees expended by City (including the time and cost of the City Attorney) in defense of any Third Party Enforcement Action, as well as the time of City's staff spent in connection with such defense (the "Enforcement Action Defense Costs), will be paid in accordance with this Agreement. The Enforcement Action Defense Costs shall extend to, and Developer will be obligated to pay, any costs incurred on appeal unless Developer notifies the City in writing that it does not wish to pursue the appeal.

16.2.3 City must not enter into a settlement agreement or take any other action to resolve any Third Party Enforcement Action without Developer's written consent. City cannot, without Developer's written consent, take any action that would frustrate, hinder or otherwise prevent Developer's efforts to settle or otherwise resolve any Third Party Enforcement Action.

16.2.4 Provided that City complies with this Section and provided that Developer is a party to the relevant Third Party Enforcement Action, Developer agrees to be bound by any final judgment (i.e., following all available appeals) arising out of a Third Party Enforcement Action and further agrees that no default under this Agreement will arise if such final judgment requires City to apply to the Project or Project Site a City Law that conflicts with Applicable Law or this Agreement.

17. Time of Essence. Time is of the essence for each provision of this Agreement of which time is an element.

18. Effective Date. This Agreement shall become operative on the date the Enabling Ordinance approving this Development Agreement becomes effective (the "Effective Date") pursuant to Government Code Section 36937.

19. Notices. Any notice that a party is required or may desire to give the other must be in writing and may be sent by: i) personal delivery; or ii) by deposit in the United States mail, postage paid, registered or certified mail, return receipt requested; or iii) by overnight delivery using a nationally recognized overnight courier, providing proof of delivery; or iv) by facsimile, evidenced by confirmed receipt; or v) by electronic delivery, evidenced by confirmed receipt, addressed as follows:

Either City or Developer may change its mailing address at any time by giving written notice of such change to the other in the manner provided herein at least ten days prior to the date such change is affected. Any notice given by mail is deemed to have been given as of the date of delivery (whether accepted or refused) established by the United State Post Office, return receipt, or the overnight carrier's proof of delivery as the case may be. Notices given in any other manner are effective only if and when received by the party to be notified between the hours of 8:00 a.m. and 5:00 p.m., local time of the recipient, of any business day with delivery made after such hours deemed received the following business day.

20. Entire Agreement. This Agreement contains the entire agreement between the Parties regarding the subject matter hereof, and supersedes in its entirety all prior agreements or understandings, oral or written. This Agreement shall not be amended, except as expressly provided herein.

21. Waiver. No waiver of any provision of this Agreement shall constitute a waiver of any other provision, whether or not similar; nor shall any such waiver constitute a continuing or subsequent waiver of the same provision. No waiver shall be binding, unless it is executed in writing by a duly authorized representative of the Party against whom enforcement of the waiver is sought.

22. Supersession of Subsequent Laws of Judicial Action. The provisions of this Agreement must, to the extent feasible, be modified or suspended as may be necessary to comply with any new law or decision issued by a court of competent jurisdiction, enacted or made after the effective date which prevents or precludes compliance with one or more provisions of this Agreement. Immediately after enactment of any such new law, or issuance of such decision, the parties must meet and confer in good faith to determine the feasibility of any such modification or suspension based on the effect such modification or suspension would have on the purposes and intent of this Agreement.

23. Severability. If any provision of this Agreement is determined by a court of competent jurisdiction to be invalid or unenforceable, the remainder of this Agreement shall be effective to the extent the remaining provisions are not rendered impractical to perform, taking into consideration the purposes of this Agreement.

24. Relationship of the Parties. Each Party acknowledges that, in entering into and performing under this Agreement, it is acting as an independent entity and not as an agent of any other Party in any respect. Nothing contained herein or in any document executed in connection herewith shall be construed as creating the relationship of partners, joint ventures or any other association of any king or nature between City and Developer, jointly or severally.

25. No Third-Party Beneficiaries. This Agreement is made and entered into for the sole benefit of the Parties and their successors in interest. No other person or party shall have any right of action based upon any provision of this Agreement.

26. Recordation of Agreement and Amendments. This Agreement and any amendment thereof shall be recorded with the County Recorder of the County of Los Angeles by the City Clerk of City.

27. Cooperation Between City and Developer. City and Developer shall execute and deliver to the other all such other and further instruments and documents as may be reasonably necessary to carry out the purposes of this Agreement. Upon satisfactory performance by Developer, and subject to the continuing cooperation of the Developer, City will commence and in a timely manner proceed to complete all steps necessary for the implementation of this Agreement and development of the Project or Property in accordance with the terms of this Agreement.

28. Rules of Construction. The captions and headings of the various sections and subsections of this Agreement are for convenience of reference only, and they shall not constitute a part of this Agreement for any other purpose or affect interpretation of the Agreement. Should any provision of this Agreement be found to be in conflict with any provision of the Applicable Rules or the Project Approvals or the Future Approvals, the provisions of this Agreement shall control.

29. Joint Preparation. This Agreement shall be deemed to have been prepared jointly and equally by the Parties, and it shall not be construed against any Party on the ground that the Party prepared the Agreement or caused it to be prepared.

30. Governing Law and Venue. This Agreement is made, entered into, and executed in the County of Los Angeles, California, and the laws of the State of California shall govern its interpretation and enforcement. Any action, suit or proceeding related to, or arising from, this Agreement shall be filed in the appropriate court having jurisdiction in the County of Los Angeles.

31. Counterparts. This Agreement may be executed in multiple counterparts, each of which shall be deemed an original, but all of which constitute one and the same instrument.

32. Weekend/Holiday Dates. Whenever any determination is to be made or action to be taken on a date specified in this Agreement, if such date shall fall upon a Saturday, Sunday or holiday specified in Government Code § 6700, the date for such determination or action shall be extended to the first business day immediately thereafter.

33. Not a Public Dedication. Except as otherwise expressly provided herein, nothing herein contained shall be deemed to be a gift or dedication of the Property, or of the Project, or any portion thereof, to the general public, for the general public, or for any public use or purpose whatsoever, it being the intention and understanding of the Parties that this Agreement be strictly limited to and for the purposes herein expressed for the development of the Project as private property. The Developer shall have the right to prevent or prohibit the use of the Property, or the Project, or any portion thereof, including common areas and buildings and improvements located thereon, by any person for any purpose which is not consistent with the development of the Project. Any portion of the Property conveyed to the City by the Developer as provided herein shall be held and used by the City only for the purposes contemplated herein or otherwise provided in such conveyance, and the City shall not take or permit to be taken (if within the power or authority of the City) any action or activity with respect to such portion of the Property that would deprive the Developer of the material benefits of this Agreement, or would in any manner interfere with the development of the Project as contemplated by this Agreement.

34. Releases. City agrees that upon written request of Developer and payment of all fees and performance of the requirements and conditions required by Developer by this Agreement, the City must execute and deliver to Developer appropriate release(s) of further obligations imposed by this Agreement in form and substance acceptable to the Los Angeles County Recorder's Office or as otherwise may be necessary to effect the release.

35. Consent. Where the consent or approval of City or Developer is required or necessary under this Agreement, the consent or approval will not be unreasonably withheld, delayed or conditioned.

IN WITNESS WHEREOF, the Developer and the City of El Segundo have executed this Development Agreement on the date first above written.

When Recorded Mail To:
BRE

ASSIGNMENT AND ASSUMPTION AGREEMENT

This ASSIGNMENT AND ASSUMPTION AGREEMENT ("Agreement") is made and entered into by and among BRE ("Assignors"), and, _____, a _____ ("Assignee").

R E C I T A L S

A. The City of El Segundo ("City") and Assignor entered into that certain Development Agreement dated _____, 20___ (the "Development Agreement"), with respect to the real property located in the City of El Segundo, State of California more particularly described in Exhibit "A" attached hereto (the "Project Site"), and

B. Assignor has obtained from the City certain development approvals and permits with respect to the development of the Project Site, including without limitation, approval of _____ for the Project Site (collectively, the "Project Approvals").

C. Assignor intends to sell, and Assignee intends to purchase that portion, of the Project Site more particularly described in Exhibit "B" attached hereto (the "Transferred Property").

D. In connection with such purchase and sale, Assignor desires to transfer all of the Assignor's right, title, and interest in and to the Development Agreement and the Project Approvals with respect to the Transferred Property. Assignee desires to accept such assignment from Assignor and assume the obligations of Assignor under the Development Agreement and the Project Approvals with respect to the Transferred Property. [or modify if not all interest sold]

THEREFORE, the parties agree as follows:

1. Assignment. Assignor hereby assigns and transfers to Assignee all of Assignor's right, title, and interest in and to the Development Agreement and the Project Approvals with respect to the Transferred Property. Assignee hereby accepts such assignment from Assignor.

2. Assumption. Assignee expressly assumes and agrees to keep, perform, and fulfill all the terms, conditions, covenants, and obligations required to be kept, performed, and fulfilled by Assignor under the Development Agreement and the Project Approvals with respect to the Transferred Property, including but not limited to those obligations specifically allocated to the

Transferred Parcel as set forth on Exhibit "C" attached hereto.

3. Effective Date. The execution by City of the attached receipt for this Agreement shall be considered as conclusive proof of delivery of this Agreement and of the assignment and assumption contained herein. This Agreement shall be effective upon its recordation in the Official Records of Los Angeles County, California, provided that Assignee has closed the purchase and sale transaction and acquired legal title to the Transferred Property.

4. Remainder of Project. Any and all rights or obligations pertaining to such portion of the Project Site other than the Transferred Property are expressly excluded from the assignment and assumption provided in sections 1 and 2 above.

IN WITNESS WHEREOF, the parties hereto have executed this Agreement as of the dates set forth next to their signatures below.

AGREEMENT CREATING AFFORDABLE HOUSING COVENANTS
(INCLUDING RENTAL RESTRICTIONS)

THIS AGREEMENT is entered into as of _____, 202_, by and between the CITY OF EL SEGUNDO, a municipal corporation (herein referred to as "City") and BRE EL SEGUNDO PROPERTY A LLC, a Delaware limited liability company (herein referred to as "Owner").

A. Owner owns fee title to that certain real property (the "Property") located in the City of El Segundo, County of Los Angeles, State of California, legally described on Exhibit A attached hereto and incorporated herein.

B. Owner has entered into a development agreement with City (the "Development Agreement") entitling Owner to develop a mixed-use project containing 120 multi-family apartment units on the Property (the "Project").

C. In accordance with the requirements of Section 5.2 of the Development Agreement, a minimum of fifteen (15) units, shall be reserved for occupancy at an Affordable Rent to persons or families that qualify as a Low-Income Household or Very Low-Income Household, as follows:

	PCC South	Affordable Housing Units (Sub-Set of Total)	Affordability Levels
Studios	44	9	1 Very Low/8 Low
One Bedrooms	52	5	5 Low
Two Bedrooms	24	1	1 Low
Totals	**120**	**15**	**1 Very Low/14 Low**

D. City desires to enter this Agreement in order to ensure that the required number of Restricted Units will be made available to and occupied by Qualified Households in accordance with the terms and conditions of the Development Agreement.

NOW, THEREFORE, for valuable consideration, receipt of which is hereby acknowledged, CITY AND OWNER AGREE AS FOLLOWS:

1. Definitions

"Adult" means a person 18 years of age or older.

"Affordable Rent" means the maximum gross rent that can be borne by tenants in the Restricted Units, as published by CTCAC annually, minus Housing Related Expenses. The gross rent for the Low Income Rental Units is based on 80% of the Los Angeles County median income for the applicable unit type, and the gross rent for Very Low Income Rental Units is based on 50% of the Los Angeles County median income for the applicable unit type. Affordable Rent amounts will be adjusted annually to reflect increases in maximum gross rent published by CTCAC.

"CTCAC" means the California Tax Credit Allocation Committee.

"Gross Household Income: means all income from whatever source from all Adult Household members, which is anticipated to be received during the 12-month period following the date of the determination of Gross Household Income. The applicable sources of income are defined in California Code of Regulations Title 25 Housing and Community Development Section 6914.

"Household" means all the persons who will occupy the Restricted Unit as their principal residence. A child who is subject to a legally binding shared-custody agreement, in which the child resides with the Household at least 50% of the time, is counted as a member of the Household. Excluded from the definition of Household are live-in caregivers/caretakers, foster children, unborn children and children being pursued for legal custody or adoption that are not currently living with the Household.

"Housing Related Expenses" means any costs other than rent that are required to be borne by a tenant in a Restricted Unit in the Project. These costs include, but are not limited to, a Utility Allowance, any cost that are imposed by the Owner on a mandatory basis, and any mandatory costs that are charged by the Owner for amenities included in the Project. Owner may charge tenants in a Restricted Unit optional costs that are not Housing Related Expenses related to elective amenities requiring an optional service fee such as classes, room rentals, food service, or special events, but is prohibited from charging a tenant in a restricted unit any fee for equal access to common areas or project amenities such as pools, gyms, community rooms and outdoor areas. In addition, Owner is prohibited from charging any optional amenity fees to a tenant in a Restricted Unit that is higher than optional amenity fees charged to tenants in non-restricted units.

"HUD" means the United States Department of Housing and Urban Development.

"Low-Income Household" means a Household whose Gross Household Income does not exceed eighty percent (80%) of area median income adjusted for family size and published by HUD, under the parameters established by Section 3 of the U.S. Housing Act of 1937, as amended, for the Los Angeles-Long Beach-Glendale, CA HUD Metro FMR Area.

"Low-Income Rental Unit" means a rental unit in the Project reserved for and rented to Low-Income Households at a maximum monthly rent as set forth in Exhibit B.

"Qualified Household" means a Household that qualifies as a Very Low-Income Household or Low-Income Household.

"Restricted Units" means the Very Low-Income Rental Units and Low-Income Rental Units.

"Utility Allowance" means the allowance for utilities not furnished by the Owner, which shall be calculated based on the most current version of the allowances for Tenant Furnished Utilities and Other Services worksheet prepared by the Los Angeles Community Development Authority or its successor agency using the form prepared by HUD.

"Very Low-Income Household" means a Household whose Gross Household Income does not exceed fifty percent (50.0%) of area median income, adjusted for family size published by the United States Department of Housing and Urban Development (HUD), under the parameters established by Section 3 of the U.S. Housing Act of 1937, as amended, for the Los Angeles-Long Beach-Glendale, CA HUD Metro FMR Area.

"Very Low-Income Rental Unit" means a rental unit in the Project reserved for and rented to Very Low-Income Households at a maximum monthly rent as set forth in Exhibit B.

2. Use of the Property. Owner, on behalf of itself and its successors, assigns, and each successor in interest to Owner's interest in the Property or any part thereof, hereby covenants and agrees as follows:

A. The portion of the Property comprising the Project shall be used for residential use. Owner shall rent: (i) Nine (9) of the studio units to be developed at Affordable Rents to Low-Income Households and Very Low-Income Households in the proportions shown in Recital "C;" (ii) 5 of the one-bedroom units to be developed at Affordable Rents to Low-Income Households, and (iii) 1 of the two-bedroom units to be developed at Affordable Rents to Low-Income Households.

B. The designated Restricted Units are shown on the floor plan attached hereto as Exhibit "C." These will be fixed locations *(Note prior to execution of this Agreement the Owner and City shall identify the Restricted Units on the floor plan. Those units shall not be segregated from the market rate units. The Restricted Units, by type and affordability, should be equitably distributed throughout the Project. They shall not be distinguishable, nor located in inferior locations nor clustered).* For the full term, the number, size, type, and

amenity level of Restricted Units shall not be fewer than the number nor different from the size, type and amenity level described in this Agreement. However, the location of the Restricted Units can be changed with prior written approval from the City.

C. The formula for determining the current applicable (for the year 2021) Affordable Rents is set forth in the Schedule of Affordable Rents attached to this Agreement as Exhibit "B".

D. Occupancy Requirements: For a studio Restricted Unit, a maximum of two people can occupy the unit. For a one-bedroom Restricted Unit , a maximum of three people can occupy the unit. For a two-bedroom Restricted Unit, a maximum of five people can occupy the unit.

E. The Owner must forward a copy of its initial standard form of lease agreement to the City for final review as to compliance with this Agreement and thereafter upon request by City. In addition to other requirements imposed under this Agreement, Owner's form of lease agreement must include the following: (1) restrictions prohibiting tenants from subleasing the Restricted Unit and that the Qualified Household must have continued residence in the Restricted Unit; (2) a provision to the effect that Owner has relied on the income certification and supporting information supplied by the tenant in determining qualification for occupancy of the Restricted Unit and that any material misstatement in such certification (whether or not intentional) will be cause for termination of the lease in the soonest time period permitted by applicable law; (3) A rider in the lease that a Household must move out within sixty (60) days if they become over-income at their annual income recertification. An over-income Household will be given a right of first refusal to move into any unit for which they qualify and that is or becomes vacant prior to moving out of their Restricted Unit; And (4) A rider in the lease that a Household must move to the next available qualifying Restricted unit if they are in excess of the maximum occupancy standards at their annual income recertification.

F. Fair Housing Covenants: Owner covenants that it will comply with all applicable state and federal fair housing laws in the marketing and rental of the Restricted Units. Owner agrees to accept as tenants, on the same basis as all other prospective tenants, persons who are recipients of federal certificates or vouchers for rent subsidies under the Section 8 program or any successor program, provided that the total rent to be paid for the subject unit is equal to the then full market rent. The total amount of rent that may be charged and received by Owner for a Restricted Unit is limited to the Affordable Rent.

G. Non-Discrimination Covenants: Owner may not restrict the rental, use, occupancy, or enjoyment of the Restricted Units, the Property, or any portion thereof, on the basis of the race, color, religion, sex, gender, gender identity, gender expression, sexual orientation, marital status, national origin, ancestry,

familial status, source of income, disability, or genetic information of any person. Owner covenants for itself and all persons claiming under or through it, and this Agreement is made and accepted upon and subject to the condition that there may be no discrimination against or segregation of any person or group of persons on account of any basis listed in subdivision (a) or (d) of Section 12955 of the Government Code, as those bases are defined in Sections 12926, 12926.1, subdivision (m) and paragraph (1) of subdivision (p) of Section 12955, and Section 12955.2 of the Government Code, in the lease, use, occupancy, tenure or enjoyment of the Restricted Units. Nor may Owner or any person claiming under or through Owner establish or permit any such practice or practices of discrimination or segregation with reference to the selection, location, number, use or occupancy of tenants.

H. Marketing of Units. Owner must offer each Restricted Unit for rental only to Qualified Households. Owner must continuously maintain an interest list of prospective tenants for Restricted Units that may become available in the future. Owner may not charge more than the then current industry standard per Adult Household member for application fees including credit check and screening and background checks.

3. Enforcement of Covenants.

A. The City shall have the right, but not the obligation, to monitor and enforce the covenants contained in this Agreement.

B. Owner shall comply with any monitoring program set up by City to enforce the affordability covenants. Owner shall pay for actual costs of an independent third-party affordable housing consultant chosen by the City to provide, at rates that are competitive in the market area income limit verification that meets the affordable housing requirements of this agreement.

C. Annual Reports. By no later than July 15th of each year following the Commencement of the Term, Owner must submit an annual report ("**Annual Report**") to the Director in a form reasonably satisfactory to the City Manager. The Annual Report must include the following information for each Restricted Unit:

1. The number of bedrooms;

2. The number of people residing in the Restricted Unit;

3. The current rent and other charges;

4. The dates of any vacancies during the previous year; and

5. The total Gross Household Income of the residents upon commencing occupancy of their Restricted Unit and the source of such information.

D. Additional Report Information. In addition to the information in Section 3.C, the information in the Annual Report must include the following:

1. Information on the status of waiting lists for the Restricted Units.

E. In the event that a Household, on annual recertification, is determined to have Gross Household Income in excess of the amounts set forth in Section 2(C) and 2(D) of this Agreement Owner must cause the Household to vacate the Restricted Unit and must re-rent the unit to a Qualified Household. However, Owner shall allow the Household to remain in the Restricted Unit at the Affordable Rent for up to sixty days. If, after sixty days, the Household has not voluntarily vacated, an eviction notice must be served and pursued with due diligence to conclusion. Owner shall offer any such Household that is above 80% area median income an opportunity to rent any then available comparably sized unit at market rent and shall offer any such Household that is at or below 80% area median rent an opportunity to rent any then available comparably sized Low-Income Rental Unit at Affordable Rent.

F. Maintenance of Records. Owner must maintain complete and accurate records pertaining to the Restricted Units for a period of five years after the final date of occupancy by a tenant and must permit any duly authorized representative of City to inspect the books and records of Owner pertaining to the Project including, but not limited to, those records pertaining to the occupancy of each Restricted Unit.

4. Covenant is in Lieu of Affordable Housing Fees. City agrees that Owner's provision of affordable rental housing in accordance with this agreement totally absolves the Project from being charged inclusionary housing fees or any other fees intended to subsidize or contribute to affordable housing in the City.

5. Covenants Running with the Land. All conditions, covenants and restrictions contained in this Agreement shall be covenants running with the land, and shall, in any event, and without regard to technical classification or designation, legal or otherwise, be, to the fullest extent permitted by law and equity, binding for the benefit and in favor of, and enforceable by City, its successors and assigns, against Owner, its successors and assigns, to or of the Property or any portion thereof or any interest therein, and any party in possession or occupancy of said Property or portion thereof. City shall be deemed the beneficiary of the covenants, conditions and restrictions of this Agreement both in its own right and for the purposes of protecting the interests of the community. The covenants, conditions, and restrictions shall run in favor of the City without regard to whether the City has been, remains, or is an owner of any land or interest therein in the Project area. The covenants, conditions and restrictions contained in this Agreement shall not benefit nor be enforceable by any person or entity except the City.

6. Subordination to Permitted Mortgages. The use restrictions contained in Section 1 of this Agreement, and City's rights hereunder, are subordinate to (i) any deed of trust or mortgage encumbering the property provided that all of the proceeds of the loan secured by the deed of trust or mortgage are used to acquire the Property and/or construct the Project, and (ii) any deed of trust or

mortgage securing the first permanent refinancing of the loan described in subsection (i) (said encumbrances are referred to individually and collectively as "Permitted Mortgages"). The use restrictions contained in Section 1 of this Agreement, and the City's rights thereunder, will not be subordinated to any encumbrance existing as of the date of this Agreement other than Permitted Mortgages.

7. Recordation. Prior to issuance of a certificate of occupancy, but not sooner than issuance of building permits for the Project, this Agreement shall be recorded in the office of the County Recorder of Los Angeles County.

8. Term. Every covenant and condition and restriction contained in this Agreement shall remain in effect for fifty-five (55) years from the date on which the Project obtains a certificate of occupancy.

9. Notice and Opportunity to Cure. Prior to exercising any remedies hereunder, City shall give Owner notice of such default. If the default is reasonably capable of being cured within thirty (30) days, Owner shall have such period to effect a cure prior to exercise of remedies by City. If the default is such that it is not reasonably capable of being cured within thirty (30) days, and Owner (a) initiates corrective action within said period, and (b) diligently, continually, and in good faith works to effect a cure as soon as possible, then Owner shall have such additional time as is reasonably necessary to cure the default prior to exercise of any remedies by City.

10. Enforcement. If a violation of any of the covenants or provisions of this Agreement remains uncured after the respective time period set forth in Paragraph 9, above, City and its successors and assigns, without regard to whether City or its successors and assigns is an owner of any land or interest therein to which these covenants relate, may institute and prosecute any proceedings at law or in equity to abate, prevent or enjoin any such violation or attempted violation or to compel specific performance by Owner of its obligations hereunder. No delay in enforcing the provisions hereof as to any breach or violation shall impair, damage or waive the right of the City to enforce the provisions hereof or to obtain relief against or recover for the continuation or repetition of such breach or violations or any similar breach or violation hereof at any later time.

11. Liens. Nothing herein contained shall be deemed to prohibit Owner from contesting the validity or amounts of any encumbrance, lien, levy or attachment, or to limit the remedies available to Owner in respect thereto.

IN WITNESS WHEREOF, the City and the Owner have signed this Agreement as of the dates set opposite their signatures.

LEGAL DESCRIPTION

All the certain real property located in the City of El Segundo, County of Los Angeles, State of California, described as follows:

Lot 1 of Vesting Map No. 82806 recorded on _____, 20___, in the County Recorder's Office of Los Angeles County.

EXHIBIT "B"

AFFORDABLE RENTS

a. The gross rents for the Restricted Units shall be based on the rent schedule published annually for Los Angeles County by CTCAC in accordance with IRC Section 42. This schedule currently provides:

Per HUD Notice
Effective: April 1, 2021

CALIFORNIA TAX CREDIT ALLOCATION COMMITTEE 2021

Maximum Rents for Projects From Ceilings Post-1989 and Those from the Pre-1990 Ceilings That Elected with the Secretary of the Treasury* to use the Post-1989 Rents

**(See IRC Section 42 - Section 13142(c) of the Omnibus Budget Reconciliation Act of 1993)*

For Projects Placed in Service on or after 4/1/21+

County	Efficiency	1 BR	2 BR	3 BR
LOS ANGELES				
100% Income Level	$2,070	$2,216	$2,660	$3,072
80% Income Level	$1,656	$1,774	$2,128	$2,459
50% Income Level	$1,035	$1,108	$1,330	$1,536

b. The Housing Related Expenses, as applicable, must be deducted from the gross rent as adjusted for unit size and described above to determine the Affordable Rent.

In the event this schedule ceases to be published, the gross monthly rents shall be calculated using the following methodology. The gross monthly rents must be reduced by the Housing Related Expenses to determine the Affordable Rent,

i. For the sole purpose of calculating the Affordable Rents, the following benchmark household sizes will be applied: Studio/ Efficiency Unit = 1 Person, 1 Bedroom Unit = 1.5 Persons and 2 Bedroom Unit = 3 Persons.

ii. Low Income Rental Units: Gross monthly rent is calculated by taking the most recent HUD Low-Income Limit for benchmark household sizes equal to 1.5 persons multiplied times the number of bedrooms in the unit. The benchmark household size is then multiplied times thirty percent (30%) then divided by twelve (12) to determine the gross monthly rent. By way of example: The FY2021 HUD Low-Income Limit for a 1 person household is $66,250 thus the gross monthly rent for a Studio/Efficiency Unit is ($66,250 x 30%) / 12 = **$1,656**. The FY2021 HUD Low-Income Limit for a 1.5 person household is the 1 person Low-Income Limit plus the 2 person Low-Income Limit, divided by two, thus the gross monthly rent for a 1 Bedroom Unit is (($66,250 + $75,700) /2) x 30%) / 12 = **$1,774**. The FY2021 HUD Low-Income Limit for a 3 person household is $85,150 thus the gross monthly rent for a 2 Bedroom Unit is ($85,150 times 30%) / 12 = **$2,128**.

iii. "Very Low-Income" units: Gross monthly rent is calculated by taking the most recent HUD Very Low-Income Limit for benchmark household sizes equal to 1.5 persons multiplied times the number of bedrooms in the unit.

The benchmark household size is then multiplied times thirty percent (30%) then divided by twelve (12) to determine the gross monthly rent. By way of example: The FY2021 HUD Very Low-Income Limit for a 1 person household is $41,400 thus the gross monthly rent for a Studio/Efficiency Unit is ($41,400 x 30%) / 12 = **$1,035**. The FY2021 HUD Very Low-Income Limit for a 1.5 person household is the 1 person Low- Income Limit plus the 2 person Very Low-Income Limit, divided by two thus the gross monthly rent for a 1 Bedroom Unit is (($41,400 + $47,300) /2) x 30%) / 12 = **$1,108**. The FY2021 HUD Very Low-Income Limit for a 3 person household is $53,200 thus the gross monthly rent for a 2 Bedroom Unit is ($53,200 x 30%) / 12 = **$1,330**.

AGREEMENT CREATING AFFORDABLE HOUSING COVENANTS (INCLUDING RENTAL RESTRICTIONS)

THIS AGREEMENT is entered into as of _____, 202_, by and between the CITY OF EL SEGUNDO, a municipal corporation (herein referred to as "City") and BRE EL SEGUNDO PARKING LLC, a Delaware limited liability company (herein referred to as "Owner").

A. Owner owns fee title to that certain real property (the "Property") located in the City of El Segundo, County of Los Angeles, State of California, legally described on Exhibit A attached hereto and incorporated herein.

B. Owner has entered into a development agreement with City (the "Development Agreement") entitling Owner to develop a mixed-use project containing 137 multi-family apartment units on the Property (the "Project").

C. In accordance with the requirements of Section 5.2 of the Development Agreement, a minimum of seventeen (17) units, shall be reserved for occupancy at an Affordable Rent to persons or families that qualify as a Low-Income Household or Very Low-Income Household, as follows:

	PCC North	Affordable Housing Units (Sub-Set of Total)	Affordability Levels
Studios	47	9	2 Very Low/7 Low
One Bedrooms	67	6	6 Low
Two Bedrooms	23	2	2 Low
Totals	**137**	**17**	**2 Very Low/15 Low**

D. City desires to enter this Agreement in order to ensure that the required number of Restricted Units will be made available to and occupied by Qualified Households in accordance with the terms and conditions of the Development Agreement.

NOW, THEREFORE, for valuable consideration, receipt of which is hereby acknowledged, CITY AND OWNER AGREE AS FOLLOWS:

1. Definitions

"Adult" means a person 18 years of age or older.

"Affordable Rent" means the maximum gross rent that can be borne by tenants in the Restricted Units, as published by CTCAC annually, minus Housing Related Expenses. The gross rent for the Low Income Rental Units is based on 80% of the Los Angeles County median income for the applicable unit type, and the gross rent for Very Low Income Rental Units is based on 50% of the Los Angeles County median income for the applicable unit type. Affordable Rent amounts will be adjusted annually to reflect increases in maximum gross rent published by CTCAC.

"CTCAC" means the California Tax Credit Allocation Committee.

"Gross Household Income: means all income from whatever source from all Adult Household members, which is anticipated to be received during the 12-month period following the date of the determination of Gross Household Income. The applicable sources of income are defined in California Code of Regulations Title 25 Housing and Community Development Section 6914.

"Household" means all the persons who will occupy the Restricted Unit as their principal residence. A child who is subject to a legally binding shared-custody agreement, in which the child resides with the Household at least 50% of the time, is counted as a member of the Household. Excluded from the definition of Household are live-in caregivers/caretakers, foster children, unborn children and children being pursued for legal custody or adoption that are not currently living with the Household.

"Housing Related Expenses" means any costs other than rent that are required to be borne by a tenant in a Restricted Unit in the Project. These costs include, but are not limited to, a Utility Allowance, any cost that are imposed by the Owner on a mandatory basis, and any mandatory costs that are charged by the Owner for amenities included in the Project. Owner may charge tenants in a Restricted Unit optional costs that are not Housing Related Expenses related to elective amenities requiring an optional service fee such as classes, room rentals, food service, or special events, but is prohibited from charging a tenant in a restricted unit any fee for equal access to common areas or project amenities such as pools, gyms, community rooms and outdoor areas. In addition, Owner is prohibited from charging any optional amenity fees to a tenant in a Restricted Unit that is higher than optional amenity fees charged to tenants in non-restricted units.

"HUD" means the United States Department of Housing and Urban Development.

"Low-Income Household" means a Household whose Gross Household Income does not exceed eighty percent (80%) of area median income adjusted for family size and published by HUD, under the parameters established by Section 3 of the U.S. Housing Act of 1937, as amended, for the Los Angeles-Long Beach-Glendale, CA HUD Metro FMR Area.

"Low-Income Rental Unit" means a rental unit in the Project reserved for and rented to Low-Income Households at a maximum monthly rent as set forth in Exhibit B.

"Qualified Household" means a Household that qualifies as a Very Low-Income Household or Low-Income Household.

"Restricted Units" means the Very Low-Income Rental Units and Low-Income Rental Units.

"Utility Allowance" means the allowance for utilities not furnished by the Owner, which shall be calculated based on the most current version of the allowances for Tenant Furnished Utilities and Other Services worksheet prepared by the Los Angeles Community Development Authority or its successor agency using the form prepared by HUD.

"Very Low-Income Household" means a Household whose Gross Household Income does not exceed fifty percent (50.0%) of area median income, adjusted for family size published by the United States Department of Housing and Urban Development (HUD), under the parameters established by Section 3 of the U.S. Housing Act of 1937, as amended, for the Los Angeles-Long Beach-Glendale, CA HUD Metro FMR Area.

"Very Low-Income Rental Unit" means a rental unit in the Project reserved for and rented to Very Low-Income Households at a maximum monthly rent as set forth in Exhibit B.

2. Use of the Property. Owner, on behalf of itself and its successors, assigns, and each successor in interest to Owner's interest in the Property or any part thereof, hereby covenants and agrees as follows:

A. The portion of the Property comprising the Project shall be used for residential use. Owner shall rent: (i) Nine (9) of the studio units to be developed at Affordable Rents to Low-Income Households and Very Low-Income Households in the proportions shown in Recital "C;" (ii) 6 of the one-bedroom units to be developed at Affordable Rents to Low-Income Households, and (iii) 2 of the two-bedroom units to be developed at Affordable Rents to Low-Income Households.

B. The designated Restricted Units are shown on the floor plan attached hereto as Exhibit "C." These will be fixed locations *(Note prior to execution of this Agreement the Owner and City shall identify the Restricted Units on the floor plan. Those units shall not be segregated from the market rate units. The Restricted Units, by type and affordability, should be equitably distributed throughout the Project. They shall not be distinguishable, nor located in inferior locations nor clustered).* For the full term, the number, size, type, and

amenity level of Restricted Units shall not be fewer than the number nor different from the size, type and amenity level described in this Agreement. However, the location of the Restricted Units can be changed with prior written approval from the City.

C. The formula for determining the current applicable (for the year 2021) Affordable Rents is set forth in the Schedule of Affordable Rents attached to this Agreement as Exhibit "B".

D. Occupancy Requirements: For a studio Restricted Unit, a maximum of two people can occupy the unit. For a one-bedroom Restricted Unit , a maximum of three people can occupy the unit. For a two-bedroom Restricted Unit, a maximum of five people can occupy the unit.

E. The Owner must forward a copy of its initial standard form of lease agreement to the City for final review as to compliance with this Agreement and thereafter upon request by City. In addition to other requirements imposed under this Agreement, Owner's form of lease agreement must include the following: (1) restrictions prohibiting tenants from subleasing the Restricted Unit and that the Qualified Household must have continued residence in the Restricted Unit; (2) a provision to the effect that Owner has relied on the income certification and supporting information supplied by the tenant in determining qualification for occupancy of the Restricted Unit and that any material misstatement in such certification (whether or not intentional) will be cause for termination of the lease in the soonest time period permitted by applicable law; (3) A rider in the lease that a Household must move out within sixty (60) days if they become over-income at their annual income recertification. An over-income Household will be given a right of first refusal to move into any unit for which they qualify and that is or becomes vacant prior to moving out of their Restricted Unit; and (4) A rider in the lease that a Household must move to the next available qualifying Restricted unit if they are in excess of the maximum occupancy standards at their annual income recertification.

F. Fair Housing Covenants: Owner covenants that it will comply with all applicable state and federal fair housing laws in the marketing and rental of the Restricted Units. Owner agrees to accept as tenants, on the same basis as all other prospective tenants, persons who are recipients of federal certificates or vouchers for rent subsidies under the Section 8 program or any successor program, provided that the total rent to be paid for the subject unit is equal to the then full market rent. The total amount of rent that may be charged and received by Owner for a Restricted Unit is limited to the Affordable Rent.

G. Non-Discrimination Covenants: Owner may not restrict the rental, use, occupancy, or enjoyment of the Restricted Units, the Property, or any portion thereof, on the basis of the race, color, religion, sex, gender, gender identity, gender expression, sexual orientation, marital status, national origin, ancestry,

familial status, source of income, disability, or genetic information of any person. Owner covenants for itself and all persons claiming under or through it, and this Agreement is made and accepted upon and subject to the condition that there may be no discrimination against or segregation of any person or group of persons on account of any basis listed in subdivision (a) or (d) of Section 12955 of the Government Code, as those bases are defined in Sections 12926, 12926.1, subdivision (m) and paragraph (1) of subdivision (p) of Section 12955, and Section 12955.2 of the Government Code, in the lease, use, occupancy, tenure or enjoyment of the Restricted Units. Nor may Owner or any person claiming under or through Owner establish or permit any such practice or practices of discrimination or segregation with reference to the selection, location, number, use or occupancy of tenants.

H. Marketing of Units. Owner must offer each Restricted Unit for rental only to Qualified Households. Owner must continuously maintain an interest list of prospective tenants for Restricted Units that may become available in the future. Owner may not charge more than the then current industry standard per Adult Household member for application fees including credit check and screening and background checks.

3. Enforcement of Covenants.

A. The City shall have the right, but not the obligation, to monitor and enforce the covenants contained in this Agreement.

B. Owner shall comply with any monitoring program set up by City to enforce the affordability covenants. Owner shall pay for actual costs of an independent third-party affordable housing consultant chosen by the City to provide, at rates that are competitive in the market area income limit verification that meets the affordable housing requirements of this agreement.

C. Annual Reports. By no later than July 15th of each year following the Commencement of the Term, Owner must submit an annual report ("**Annual Report**") to the Director in a form reasonably satisfactory to the City Manager. The Annual Report must include the following information for each Restricted Unit:

6. The number of bedrooms;

7. The number of people residing in the Restricted Unit;

8. The current rent and other charges;

9. The dates of any vacancies during the previous year; and

10. The total Gross Household Income of the residents upon commencing occupancy of their Restricted Unit and the source of such information.

D. Additional Report Information. In addition to the information in Section 3(C), the information in the Annual Report must include the following:

2. Information on the status of waiting lists for the Restricted Units.

E. In the event that a Household, on annual recertification, is determined to have Gross Household Income in excess of the amounts set forth in Section 2(C) and 2(D) of this Agreement Owner must cause the Household to vacate the Restricted Unit and must re-rent the unit to a Qualified Household. However, Owner shall allow the Household to remain in the Restricted Unit at the Affordable Rent for up to sixty days. If, after sixty days, the Household has not voluntarily vacated, an eviction notice must be served and pursued with due diligence to conclusion. Owner shall offer any such Household that is above 80% area median income an opportunity to rent any then available comparably sized unit at market rent and shall offer any such Household that is at or below 80% area median rent an opportunity to rent any then available comparably sized Low-Income Rental Unit at Affordable Rent.

F. Maintenance of Records. Owner must maintain complete and accurate records pertaining to the Restricted Units for a period of five years after the final date of occupancy by a tenant and must permit any duly authorized representative of City to inspect the books and records of Owner pertaining to the Project including, but not limited to, those records pertaining to the occupancy of each Restricted Unit.

4. Covenant is in Lieu of Affordable Housing Fees. City agrees that Owner's provision of affordable rental housing in accordance with this agreement totally absolves the Project from being charged inclusionary housing fees or any other fees intended to subsidize or contribute to affordable housing in the City.

5. Covenants Running with the Land. All conditions, covenants and restrictions contained in this Agreement shall be covenants running with the land, and shall, in any event, and without regard to technical classification or designation, legal or otherwise, be, to the fullest extent permitted by law and equity, binding for the benefit and in favor of, and enforceable by City, its successors and assigns, against Owner, its successors and assigns, to or of the Property or any portion thereof or any interest therein, and any party in possession or occupancy of said Property or portion thereof. City shall be deemed the beneficiary of the covenants, conditions and restrictions of this Agreement both in its own right and for the purposes of protecting the interests of the community. The covenants, conditions, and restrictions shall run in favor of the City without regard to whether the City has been, remains, or is an owner of any land or interest therein in the Project area. The covenants, conditions and restrictions contained in this Agreement shall not benefit nor be enforceable by any person or entity except the City.

6. Subordination to Permitted Mortgages. The use restrictions contained in Section 1 of this Agreement, and City's rights hereunder, are subordinate to (i) any deed of trust or mortgage encumbering the property provided that all of the proceeds of the loan secured by the deed of trust or mortgage are used to acquire the Property and/or construct the Project, and (ii) any deed of trust or

mortgage securing the first permanent refinancing of the loan described in subsection (i) (said encumbrances are referred to individually and collectively as "Permitted Mortgages"). The use restrictions contained in Section 1 of this Agreement, and the City's rights thereunder, will not be subordinated to any encumbrance existing as of the date of this Agreement other than Permitted Mortgages.

7. Recordation. Prior to issuance of a certificate of occupancy, but not sooner than issuance of building permits for the Project, this Agreement shall be recorded in the office of the County Recorder of Los Angeles County.

8. Term. Every covenant and condition and restriction contained in this Agreement shall remain in effect for fifty-five (55) years from the date on which the Project obtains a certificate of occupancy.

9. Notice and Opportunity to Cure. Prior to exercising any remedies hereunder, City shall give Owner notice of such default. If the default is reasonably capable of being cured within thirty (30) days, Owner shall have such period to effect a cure prior to exercise of remedies by City. If the default is such that it is not reasonably capable of being cured within thirty (30) days, and Owner (a) initiates corrective action within said period, and (b) diligently, continually, and in good faith works to effect a cure as soon as possible, then Owner shall have such additional time as is reasonably necessary to cure the default prior to exercise of any remedies by City.

10. Enforcement. If a violation of any of the covenants or provisions of this Agreement remains uncured after the respective time period set forth in Paragraph 9, above, City and its successors and assigns, without regard to whether City or its successors and assigns is an owner of any land or interest therein to which these covenants relate, may institute and prosecute any proceedings at law or in equity to abate, prevent or enjoin any such violation or attempted violation or to compel specific performance by Owner of its obligations hereunder. No delay in enforcing the provisions hereof as to any breach or violation shall impair, damage or waive the right of the City to enforce the provisions hereof or to obtain relief against or recover for the continuation or repetition of such breach or violations or any similar breach or violation hereof at any later time.

11. Liens. Nothing herein contained shall be deemed to prohibit Owner from contesting the validity or amounts of any encumbrance, lien, levy or attachment, or to limit the remedies available to Owner in respect thereto.

IN WITNESS WHEREOF, the City and the Owner have signed this Agreement as of the dates set opposite their signatures.

LEGAL DESCRIPTION

All the certain real property located in the City of El Segundo, County of Los Angeles, State of California, described as follows:

Lot 5 of Vesting Map No. 82806 recorded on _____, 20___, in the County Recorder's Office of Los Angeles County.

EXHIBIT "B"

AFFORDABLE RENTS

a. The gross rents for the Restricted Units shall be based on the rent schedule published annually for Los Angeles County by CTCAC in accordance with IRC Section 42. This schedule currently provides:

Per HUD Notice
Effective: April 1, 2021

CALIFORNIA TAX CREDIT ALLOCATION COMMITTEE 2021

Maximum Rents for Projects From Ceilings Post-1989 and Those from the Pre-1990 Ceilings That Elected with the Secretary of the Treasury* to use the Post-1989 Rents

**(See IRC Section 42 - Section 13142(c) of the Omnibus Budget Reconciliation Act of 1993)*

For Projects Placed in Service on or after 4/1/21+

County	Efficiency	1 BR	2 BR	3 BR
LOS ANGELES				
100% Income Level	$2,070	$2,216	$2,660	$3,072
80% Income Level	$1,656	$1,774	$2,128	$2,459
50% Income Level	$1,035	$1,108	$1,330	$1,536

b. The Housing Related Expenses, as applicable, must be deducted from the gross rent as adjusted for unit size and described above to determine the Affordable Rent.

In the event this schedule ceases to be published, the gross monthly rents shall be calculated using the following methodology. The gross monthly rents must be reduced by the Housing Related Expenses to determine the Affordable Rent,

i. For the sole purpose of calculating the Affordable Rents, the following benchmark household sizes will be applied: Studio/ Efficiency Unit = 1 Person, 1 Bedroom Unit = 1.5 Persons and 2 Bedroom Unit = 3 Persons.

ii. Low Income Rental Units: Gross monthly rent is calculated by taking the most recent HUD Low-Income Limit for benchmark household sizes equal to 1.5 persons multiplied times the number of bedrooms in the unit. The benchmark household size is then multiplied times thirty percent (30%) then divided by twelve (12) to determine the gross monthly rent. By way of example: The FY2021 HUD Low-Income Limit for a 1 person household is $66,250 thus the gross monthly rent for a Studio/Efficiency Unit is ($66,250 x 30%) / 12 = **$1,656**. The FY2021 HUD Low-Income Limit for a 1.5 person household is the 1 person Low-Income Limit plus the 2 person Low-Income Limit, divided by two, thus the gross monthly rent for a 1 Bedroom Unit is (($66,250 + $75,700) /2) x 30%) / 12 = **$1,774**. The FY2021 HUD Low-Income Limit for a 3 person household is $85,150 thus the gross monthly rent for a 2 Bedroom Unit is ($85,150 times 30%) / 12 = **$2,128**.

iii. "Very Low-Income" units: Gross monthly rent is calculated by taking the most recent HUD Very Low-Income Limit for benchmark household sizes equal to 1.5 persons multiplied times the number of bedrooms in the unit. The benchmark household size is then multiplied times thirty percent (30%) then divided by twelve (12) to determine the gross monthly rent. By way of example: The FY2021 HUD Very Low-Income Limit for a 1 person household is $41,400 thus the gross monthly rent for a Studio/Efficiency Unit is ($41,400 x 30%) / 12 = **$1,035**. The FY2021 HUD Very Low-Income Limit for a 1.5 person household is the 1 person Low- Income Limit plus the 2 person Very Low-Income Limit, divided by two thus the gross monthly rent for a 1 Bedroom Unit is (($41,400 + $47,300) /2) x 30%) / 12 = **$1,108**. The FY2021 HUD Very Low-Income Limit for a 3 person household is $53,200 thus the gross monthly rent for a 2 Bedroom Unit is ($53,200 x 30%) / 12 = **$1,330**.

DESIGNATED RESTRICTED UNITS

RESOLUTION NO. 2905
EXHIBIT "C"

El Segundo General Plan Land Use Element Excerpt - Pages 3-5 and 3-6

Modify the following text on pages 3-5 and 3-6

Land Use Designations

Following is a discussion of each type of land use designation found in the City. Each contains a short description and an indication of the maximum land use density or intensity allowed. Land use density refers to the number of dwelling units per acre of land (du/ac). This distinction is generally used only for residential designations. Land use intensity refers to the quantity of building on a specific lot size. For example, a 3,000 square foot single-family home would be considered a more intense use than a 1,600 square foot home on the same size lot. An example of non-residential intensity would be a multi-story building, which is considered a more intense use than a single-story building on the same sized lot. For non-residential uses, intensity is expressed in terms of Floor Area Ratio (FAR) which describes the ratio of the lot size to the building size or as otherwise defined in the Zoning Code from time to time. For example, typically a lot with a land area of 10,000 square feet and a FAR of 1.0, would allow a building area of 10,000 square feet. The allowed FAR may be exceeded for properties east of ~~Sepulveda Boulevard~~Pacific Coast Highway only, with approval of a Transfer of Development Rights (TDR) Plan.

Residential Designations

Single-Family Residential

Permits one single-family home on one legal lot at a maximum density of eight dwelling units per acre. The minimum lot size for new lots is 5,000 square feet.

Two-Family Residential

Permits two residences on one legal lot, either attached or detached, at a maximum density of 12 dwelling units per acre. The minimum lot size for new lots is 7,000 square feet.

Multi-Family Residential

Permits multiple dwelling units in either a condominium or apartment configuration. A condominium or apartment is a structure or group of structures containing three or more dwelling units, as defined by the Zoning Code. The maximum permitted density for multi-family residential is 27 dwelling units per acre on properties equal to or less than 15,000 square feet and 18 du/ac on properties greater than

15,000 square feet.

540 East Imperial Avenue Specific Plan
Permits a mix of residential uses with two possible development options. Option 1 would allow up to a maximum of 304 units in a Senior Housing Community with a Multi- Family Residential (R- 3) component, or Option 2 would allow up to a maximum of 58 units in a Mixed Residential Development (single-family and multi-family units). This designation is intended to encourage design flexibility and provide transitional densities and uses that are compatible with surrounding land uses. This designation is not intended to be used elsewhere within the City.

Pacific Coast Commons Specific Plan
Permits a mix of hotel, commercial, and residential uses. The existing Fairfield Inn & Suites by Marriott and Aloft Hotels, which have 350 and 246 rooms respectively remain and are considered conforming uses. The maximum allowed gross floor area for the commercial uses is 11,252 square feet. The maximum number of residential units is 263.

RESOLUTION NO. 2905
EXHIBIT "D"

General Plan Land Use Plan Excerpt Pages 3-10 thru 3-12

Modify the following text on pages 3-10 and 3-12:

Proposed Land Use Plan

"The following is a discussion of the 1992 Land Use Plan, which indicates future land uses for the entire City. For ease of discussion, the City is divided into four quadrants and the proposedland use designations within that quadrant are discussed. To knowwhat is allowed under each designation, please reference the land use definitions listed above.

Northwest Quadrant

The northwest quadrant of the City has the most varied mix of uses within the City. All of the City's residential units, the Downtown area, the Civic Center, and the older industrial area of SmokyHollow, are located in this quadrant. The 1992 Plan retains the three residential designations found on the old Plan: single-family, two-family, and multi-family, plus ~~a new designation~~two new designations of 540 East Imperial Avenue Specific Plan and Pacific Coast Commons Specific Plan, which is a mixed-use, high-density residential and commercial designation. The Plan shows 357.2 acres of single-family, 57.4 acres of two-family, 126.74 acres of multi- family, ~~and~~ 5.65 acres of 540 East Imperial Avenue Specific Plan and 6.38 acres of Pacific Coast Commons Specific Plan. The total number of dwelling units projected by the Plan is 8,089ok[1]. One of the major goals of the 1992 Plan is to preserve the residential neighborhoods.

The Smoky Hollow area, which houses many of the City's older industrial uses, has been designated Smoky Hollow Specific Plan. The Specific Plan allows a combination of office, industrial, research and development, public facilities, parking facilities, and limited retail and restaurant uses. The Smoky Hollow area is approximately 94.3 acres.

The 222 Kansas Street Specific Plan (222 KSSP) consists of 4.83 acres, which were previously a part of the Smoky Hollow area. The 222 Kansas Street Specific Plan permits primarily office, light industrial, manufacturing, and research and development uses. The southerly portion may be used for governmental purposessubject to a development agreement. Commercial retail and restaurant uses are prohibited.

The Downtown area is designated as Downtown Commercial

(8.4acres) and Downtown Specific Plan (26.3 acres), where existing uses are already of a community-serving nature. There are also 7.0 acres designated for Neighborhood Commercial uses along Grand and Imperial Avenues and at Mariposa and Center Streets. These have been designated only where there are existing neighborhood-serving commercial uses.

The public schools, private schools, Library, and other public uses are all shown as Public Facilities. The Civic Center is included in the Downtown Specific Plan area. In addition, each of the existing public parks are designated as such. The open space areas under utility transmission corridors and the preserve for the Blue Butterfly are designated as Open Space.

The areas designated for parking on the Plan include public- and privately-owned lots which are necessary to serve existing businesses and the Downtown area.

The southwest corner of ~~Sepulveda Boulevard~~Pacific Coast Highway and Imperial Avenue is designated Corporate Office (17.8 ac) allowing a mix of office uses, similar to what exists there now, with retail in the lobby.

There are General Commercial uses indicated along ~~Sepulveda Boulevard~~Pacific Coast Highway, where there are existing commercial uses ~~including the Hacienda Hotel~~. There is also one General Commercial area along Imperial Avenue, where the Crown Sterling Suites Hotel now exists."

[1] The new total of 8,089 represents the maximum number of units developed under Option 1 of the 540 East Imperial Avenue Specific Plan. This number will be lower (7,843 units) if Option 2 is developed with a maximum of 58 units.

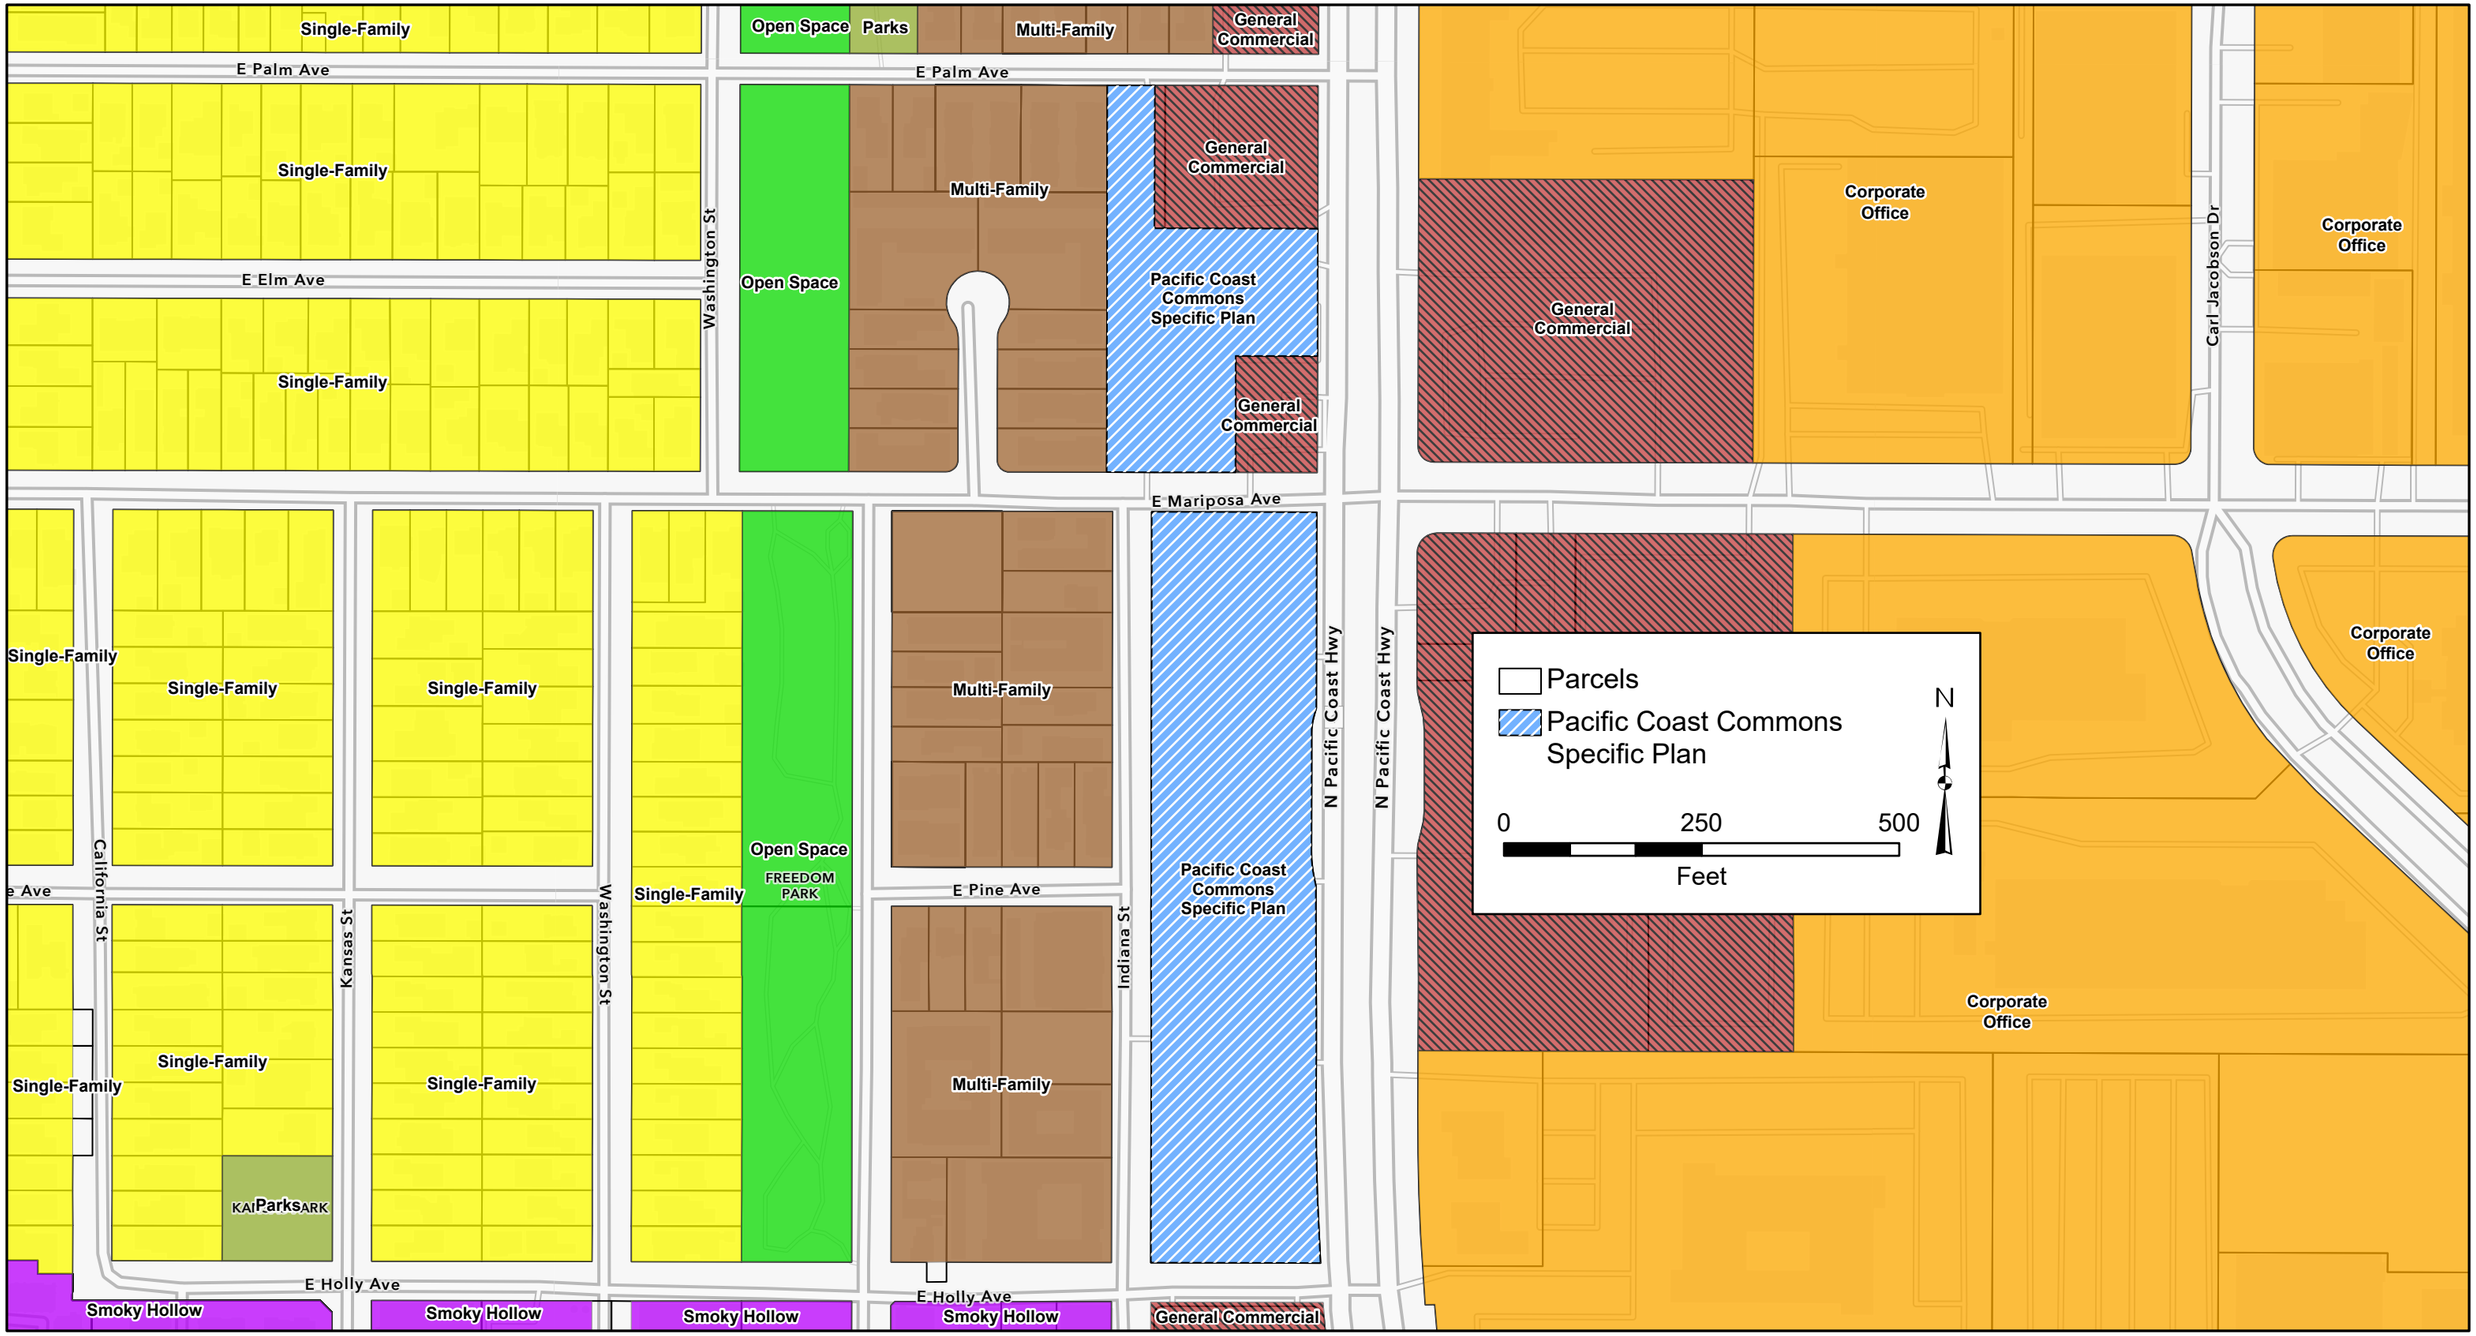
Population Projection	17,287		

1 Existing construction and recently constructed, renovated commercial centers and legal non-conforming residential uses at densities that are currently higher than allowed by the land use designations in this plan will not realistically be converted to mixed commercial/residential uses and these buildings are expected to remain for the life of the Plan.

2 The heavy industrial shown on this plan includes the Chevron Refinery and former Southern California Edison Generation Station. These facilities have processing equipment and tanks rather than buildings and are expected to remain for the life of the Plan. Therefore, no estimated building square footage is shown.



3 This number represents the maximum number of dwelling units that can be developed in Option 1 of the 540 East Imperial Avenue Specific Plan. If Option 1 is not built, the maximum number of units that can be developed in Option 2 of the 540 East Imperial Avenue Specific Plan is 58 residential dwelling units.

EXCEPTIONS

(PER CHICAGO TITLE INSURANCE COMPANY ORDER No. 00107022-994-LT2-DB DATED MARCH 22, 2019)

1. WATER RIGHTS, CLAIMS OR TITLE TO WATER, WHETHER OR NOT DISCLOSED BY THE PUBLIC RECORDS.

(2) THE RESERVATION OF THE SOUTH 25 FEET OF LOT 428 OF THE NORTH 25 FEET AND THE WEST 25 FEET OF LOT 385, THE WEST 25 FEET OF LOT 386, THE WEST 25 FEET AND THE SOUTH 25 FEET OF LOT 387, AND THE NORTH 25 FEET OF LOT 430, FOR PRIVATE ROADWAYS AND TO LAY AND MAINTAIN THEREIN, WATER AND GAS PIPES, SEWERS, ELECTRIC LIGHT AND POWER, TELEGRAPH AND TELEPHONE LINES, POLES AND CONDUITS, TOGETHER WITH A PERPETUAL ENTRY THEREON FOR THE ERECTION, LAYING AND MAINTENANCE THEREOF, AND THE CONSTRUCTION AND MAINTENANCE OF CURBS, SIDEWALKS AND GUTTERS THEREON FOR THE PERPETUAL AND IRREVOCABLE USE OF THE OWNER OR OWNERS OF EACH OF THE LOS IN SAID BLOCK 123, AND TO THEIR HEIRS OR ASSIGNS AS APPURTENANT TO EACH OF SAID LOTS, AS RESERVED BY LOS ANGELES TRUST AND SAVINGS BANK OF THE MAP OF EL SEGUNDO, RECORDED IN BOOK 22 PAGES 106 AND 107 OF MAPS.

(3) EASEMENT(S) FOR THE PURPOSE(S) SHOWN BELOW AND RIGHTS INCIDENTAL THERETO, AS GRANTED IN A DOCUMENT:

GRANTED TO: PACIFIC-SOUTHWEST TRUST AND SAVINGS BANK
PURPOSE: ROAD
RECORDING NO: IN BOOK 4897 PAGE 294, OF OFFICIAL RECORDS
AFFECTS: PORTIONS OF THE LAND, THE EXACT LOCATION OF WHICH CAN BE DETERMINED BY EXAMINATION OF THE ABOVE-MENTIONED INSTRUMENT, WHICH CONTAINS A COMPLETE LEGAL DESCRIPTION OF THE AFFECTED PORTIONS OF SAID LAND.

SAID EASEMENT WAS SINCE BEEN ASSIGNED TO THE CITY OF EL SEGUNDO AS TO THE NORTH 25 FEET OF LOTS 385 AND 430.

(4) EASEMENT(S) FOR THE PURPOSE(S) SHOWN BELOW AND RIGHTS INCIDENTAL THERETO, AS GRANTED IN A DOCUMENT:

GRANTED TO: CITY OF EL SEGUNDO
PURPOSE: SANITARY SEWER LINES
RECORDING NO: IN BOOK 17140 PAGE 25, OF OFFICIAL RECORDS
AFFECTS: SOUTHERLY 7.5 FEET OF LOT 428

(5) EASEMENT(S) FOR THE PURPOSE(S) SHOWN BELOW AND RIGHTS INCIDENTAL THERETO AS CONDEMNED BY AN INSTRUMENT,

COURT: SUPERIOR COURT
CASE NO.: 357580
PURPOSE: PUBLIC STREET AND HIGHWAY
RECORDING NO: IN BOOK 13174 PAGE 92, OF OFFICIAL RECORDS
AFFECTS: THOSE PORTIONS OF LOTS 429 AND 430, LYING EAST OF A LINE DESCRIBED AS BEGINNING AT THE INTERSECTION OF THE NORTH LINE OF SAID LOT 430, WITH AS LINE THAT IS PARALLEL WITH AND 70 FEET WEST OF THE EAST LINE OF SAID LOTS; THENCE SOUTH ALONG SAID PARALLEL LINE TO A POINT THEREON DISTANT 783.85 FEET SOUTHERLY FROM THE CENTER LINE OF MARIPOSA AVENUE, 40 FEET WIDE, AS SHOWN ON SAID MAP; THENCE SOUTHERLY ALONG A CURVE CONCAVE TO THE EAST AND HAVING A RADIUS OF 3050 FEET TO THE SOUTH LINE OF SAID LOT 429.

(6) EASEMENT(S) FOR THE PURPOSE(S) SHOWN BELOW AND RIGHTS INCIDENTAL THERETO, AS GRANTED IN A DOCUMENT:

GRANTED TO: CITY OF EL SEGUNDO
PURPOSE: SANITARY SEWER LINES
RECORDING NO: IN BOOK 17075 PAGE 253, OF OFFICIAL RECORDS
AFFECTS: THE SOUTHERLY 7.5 FEET OF LOT 387

(7) EASEMENT(S) FOR THE PURPOSE(S) SHOWN BELOW AND RIGHTS INCIDENTAL THERETO, AS GRANTED IN A DOCUMENT:

GRANTED TO: THE PACIFIC TELEPHONE AND TELEGRAPH COMPANY, A CALIFORNIA CORPORATION
PURPOSE: POLE LINES AND CONDUITS
RECORDING DATE: NOVEMBER 14, 1949
RECORDING NO: 2141, IN BOOK 31464, PAGE 123, OF OFFICIAL RECORDS
AFFECTS: PORTIONS OF THE LAND, THE EXACT LOCATION OF WHICH CAN BE DETERMINED BY EXAMINATION OF THE ABOVE-MENTIONED INSTRUMENT, WHICH CONTAINS A COMPLETE LEGAL DESCRIPTION OF THE AFFECTED PORTIONS OF SAID LAND.

(8) EASEMENT(S) FOR THE PURPOSE(S) SHOWN BELOW AND RIGHTS INCIDENTAL THERETO, AS GRANTED IN A DOCUMENT:

GRANTED TO: CITY OF EL SEGUNDO, A MUNICIPAL CORPORATION
PURPOSE: PUBLIC STREET
RECORDING DATE: SEPTEMBER 16, 1957
RECORDING NO: 3151, OF OFFICIAL RECORDS
AFFECTS: SOUTHERLY 25 FEET OF LOTS 387 AND 428 TO BE KNOWN AS HOLLY AVENUE

(9) EASEMENT(S) FOR THE PURPOSE(S) SHOWN BELOW AND RIGHTS INCIDENTAL THERETO, AS GRANTED IN A DOCUMENT:

GRANTED TO: CITY OF EL SEGUNDO, A CORPORATION
PURPOSE: PUBLIC STREET
RECORDING DATE: JANUARY 16, 1957
RECORDING NO: 2787, OF OFFICIAL RECORDS
AFFECTS: THE WEST 25.00 FEET OF LOTS 385, 386 AND 387

(10) EASEMENT(S) FOR THE PURPOSE(S) SHOWN BELOW AND RIGHTS INCIDENTAL THERETO AS DELINEATED OR AS OFFERED FOR DEDICATION, ON THE MAP OF SAID TRACT/PLAT;

IN FAVOR OF: LOS ANGELES TRUST AND SAVINGS BANK AND THE OWNERS OF OTHER LOTS
PURPOSE: POLE LINES AND CONDUITS, ROADWAY AND RAILROAD TRACKS
AFFECTS: THAT PORTION OF SAID LAND AS SHOWN ON SAID MAP.

(11) EASEMENT(S) FOR THE PURPOSE(S) SHOWN BELOW AND RIGHTS INCIDENTAL THERETO, AS GRANTED IN A DOCUMENT:

GRANTED TO: PACIFIC-SOUTHWEST TRUST AND SAVINGS BANK, A CORPORATION
PURPOSE: STREET
RECORDING DATE: JANUARY 26, 1926
RECORDING NO: IN BOOK 4571, PAGE 207, OF OFFICIAL RECORDS
AFFECTS: PORTIONS OF THE LAND, THE EXACT LOCATION OF WHICH CAN BE DETERMINED BY EXAMINATION OF THE ABOVE-MENTIONED INSTRUMENT, WHICH CONTAINS A COMPLETE LEGAL DESCRIPTION OF THE AFFECTED PORTIONS OF SAID LAND.

(12) EASEMENT(S) FOR THE PURPOSE(S) SHOWN BELOW AND RIGHTS INCIDENTAL THERETO AS CONDEMNED BY AN INSTRUMENT,

COURT: SUPERIOR COURT
CASE NO.: 357580
PURPOSE: WIDENING OF ARIZONA DRIVE, NOW SEPULVEDA BOULEVARD
RECORDING DATE: JANUARY 28, 1934
RECORDING NO: IN BOOK 13174 PAGE 92, OF OFFICIAL RECORDS
AFFECTS: EASTERLY 70 FEET OF PARCELS 3& 5.

(13) EASEMENT(S) FOR THE PURPOSE(S) SHOWN BELOW AND RIGHTS INCIDENTAL THERETO, AS GRANTED IN A DOCUMENT:

GRANTED TO: CITY OF LOS ANGELES
PURPOSE: PUBLIC STREET
RECORDING DATE: JUNE 30, 1952
RECORDING NO: 2469, IN BOOK 39276, PAGE 20, OF OFFICIAL RECORDS
AFFECTS: NORTH 5 FEET OF PARCEL 3

(14) EASEMENT(S) FOR THE PURPOSE(S) SHOWN BELOW AND RIGHTS INCIDENTAL THERETO, AS GRANTED IN A DOCUMENT:

GRANTED TO: CITY OF EL SEGUNDO
PURPOSE: PUBLIC STREET
RECORDING DATE: MARCH 9, 1953
RECORDING NO: 1936, IN BOOK 41156 PAGE 359, OF OFFICIAL RECORDS
AFFECTS: WEST 25 FEET OF LOTS 382, 383 AND 384 OF PARCEL 3

(15) EASEMENT(S) FOR THE PURPOSE(S) SHOWN BELOW AND RIGHTS INCIDENTAL THERETO, AS GRANTED IN A DOCUMENT:

GRANTED TO: SOUTHERN CALIFORNIA EDISON COMPANY, A CORPORATION
PURPOSE: UNDERGROUND CONDUITS
RECORDING DATE: JULY 1, 1958
RECORDING NO: 3792, IN BOOK D-143 PAGE 326, OF OFFICIAL RECORDS
AFFECTS: PORTIONS OF THE LAND, THE EXACT LOCATION OF WHICH CAN BE DETERMINED BY EXAMINATION OF THE ABOVE-MENTIONED INSTRUMENT, WHICH CONTAINS A COMPLETE LEGAL DESCRIPTION OF THE AFFECTED PORTIONS OF SAID LAND.

(16) EASEMENT(S) FOR THE PURPOSE(S) SHOWN BELOW AND RIGHTS INCIDENTAL THERETO, AS GRANTED IN A DOCUMENT:

GRANTED TO: SOUTHERN CALIFORNIA EDISON COMPANY, A CORPORATION
PURPOSE: UNDERGROUND ELECTRICAL SUPPLY SYSTEMS AND COMMUNICATION SYSTEMS
RECORDING DATE: AUGUST 24, 1979
RECORDING NO: 79-947919, OF OFFICIAL RECORDS
AFFECTS: PORTIONS OF THE LAND, THE EXACT LOCATION OF WHICH CAN BE DETERMINED BY EXAMINATION OF THE ABOVE-MENTIONED INSTRUMENT, WHICH CONTAINS A COMPLETE LEGAL DESCRIPTION OF THE AFFECTED PORTIONS OF SAID LAND.

(17) EASEMENT(S) FOR THE PURPOSE(S) SHOWN BELOW AND RIGHTS INCIDENTAL THERETO, AS GRANTED IN A DOCUMENT:
(PROPOSED TO DEDICATE THIS AREA TO CALTRANS AND GRANT AN INGRESS/EGRESS EASEMENT THAT INCLUDES THIS SAME AREA TO BRE EL SEGUNDO PROPERTY OWNER A LLC, A DELAWARE LIMITED LIABILITY COMPANY & BRE EL SEGUNDO PROPERTY OWNER B LLC, A DELAWARE LIMITED LIABILITY COMPANY)

GRANTED TO: CITY OF EL SEGUNDO, A MUNICIPAL CORPORATION
PURPOSE: PUBLIC STREET
RECORDING DATE: AUGUST 27, 1987
RECORDING NO: 87-1377588, OF OFFICIAL RECORDS
AFFECTS: PORTIONS OF THE LAND, THE EXACT LOCATION OF WHICH CAN BE DETERMINED BY EXAMINATION OF THE ABOVE-MENTIONED INSTRUMENT, WHICH CONTAINS A COMPLETE LEGAL DESCRIPTION OF THE AFFECTED PORTIONS OF SAID LAND.

(18) EASEMENT(S) FOR THE PURPOSE(S) SHOWN BELOW AND RIGHTS INCIDENTAL THERETO, AS GRANTED IN A DOCUMENT:
(TO BE QUITCLAIMED)

GRANTED TO: EL SEGUNDO LAND AND IMPROVEMENT COMPANY
PURPOSE: PIPES AND CONDUITS
RECORDING DATE: MAY 26, 1916
RECORDING NO: IN BOOK 6294, PAGE 50 OF DEEDS
AFFECTS: SOUTH 2.5 FEET OF LOTS 1 AND 2 IN PARCELS 4 AND 5.

EXCEPTIONS CONT'D

(PER CHICAGO TITLE INSURANCE COMPANY ORDER No. 00107022-994-LT2-DB DATED MARCH 22, 2019)

19. COVENANTS, CONDITIONS AND RESTRICTIONS BUT OMITTING ANY COVENANTS OR RESTRICTIONS, IF ANY, INCLUDING, BUT NOT LIMITED TO THOSE BASED UPON RACE, COLOR, RELIGION, SEX, SEXUAL ORIENTATION, FAMILIAL STATUS, MARITAL STATUS, DISABILITY, HANDICAP, NATIONAL ORIGIN, ANCESTRY, SOURCE OF INCOME, GENDER, GENDER IDENTITY, GENDER EXPRESSION, MEDICAL CONDITION OR GENETIC INFORMATION, AS SET FORTH IN APPLICABLE STATE OR FEDERAL LAWS, EXCEPT TO THE EXTENT THAT SAID COVENANT OR RESTRICTION IS PERMITTED BY APPLICABLE LAWS, AS SET FORTH IN THE DOCUMENT REFERRED TO IN THE NUMBERED ITEM LAST ABOVE SHOWN.

SAID COVENANTS, CONDITIONS AND RESTRICTIONS PROVIDE THAT A VIOLATION THEREOF SHALL NOT DEFEAT THE LIEN OF ANY MORTGAGE OR DEED OF TRUST MADE IN GOOD FAITH AND FOR VALUE.

(20) EASEMENT(S) FOR THE PURPOSE(S) SHOWN BELOW AND RIGHTS INCIDENTAL THERETO, AS GRANTED IN A DOCUMENT:

REFERENCE IS HEREBY MADE TO SAID DOCUMENT FOR FULL PARTICULARS.

25. ANY RIGHTS, INTERESTS, OR CLAIMS WHICH MAY EXIST OR ARISE BY REASON OF THE FOLLOWING MATTERS DISCLOSED BY SURVEY,

ALTA SURVEY BY: O. K. O. ENGINEERING, INC. (MICHAEL FURLONG)
DATE: MARCH 9, 2017, LAST REVISED JUNE 2, 2017
JOB NO.: 2017-33

A. A 0.3' ENCROACHMENT OF A BLOCK WALL LOCATED ON PARCEL 4 INTO THE STREET RIGHT OF WAY OF PALM AVENUE.
B. AN ENCROACHMENT OF 2 POWER POLES (#1191682E & #SC10150), CROSS ARMS AND OVERHEAD WIRES ACROSS THE NORTHERLY BOUNDARY OF PARCELS 4 AND 6, TO UNDISCLOSED AMOUNTS.
C. AN ENCROACHMENT OF POWER CROSS ARMS AND OVERHEAD WIRES ALONG THE WESTERLY BOUNDARY OF PARCEL 4, TO UNDISCLOSED AMOUNTS.
D. A 0.5' TO 0.7' ENCROACHMENT OF A CHAIN LINK FENCE 4 INTO THE STREET RIGHT OF WAY OF PALM AVENUE.
E. TWO OVERHEAD AREA LIGHTS CROSS THE WESTERLY BOUNDARY OF PARCEL 4.
F. A CHAIN LINK FENCE CROSSES THE EASTERLY BOUNDARY OF PARCEL 6 AND THE NORTHERLY BOUNDARY OF PARCEL 5.
G. AN UNRECORDED EASEMENT OR LESSER RIGHT FOR A POWER POLE (#1767353E) LOCATED ALONG THE NORTHERLY MOST SOUTHERLY BOUNDARY OF PARCEL 5.
H. AN UNRECORDED EASEMENT OR LESSER RIGHT FOR A POWER POLE (#1667351E) LOCATED ALONG THE SOUTHERLY MOST EASTERLY BOUNDARY OF PARCEL 5.
I. AN ENCROACHMENT OF A CONCRETE SIDEWALK ONTO PARCELS 4 AND 5 FROM THE STREET RIGHT OF WAY OF MARIPOSA AVENUE.
J. AN 2.8' ENCROACHMENT OF A BLOCK WALL ONTO PARCEL 4, AT THE SOUTHWEST CORNER, FROM THE LAND ADJOINING THE PROPERTY TO THE WEST.
K. AN UNRECORDED EASEMENT OR LESSER RIGHT FOR 3 TELEPHONE MANHOLES LOCATED NEAR THE NORTHEAST CORNER OF PARCEL 3.
L. AN UNRECORDED EASEMENT OR LESSER RIGHT FOR A 2.3' X 3.3' EDISON VAULT LOCATED NEAR THE NORTHWEST PORTION OF PARCEL 3.
M. AN UNRECORDED EASEMENT OR LESSER RIGHT FOR A POWER POLE (#1238780E) ALONG THE WESTERLY BOUNDARY OF PARCEL 3.
N. UNIDENTIFIED 1.3' X 3.3' AND 2.2' X 4.2' PULL BOXES LOCATED ALONG THE WESTERLY BOUNDARY OF PARCEL 3.
O. AN ENCROACHMENT OF A 9 STORY STUCCO BUILDING LOCATED ON PARCEL 3 OVER AN EASEMENT FOR ELECTRICAL UTILITY PURPOSES. SAID EASEMENT IS DESCRIBED IN ITEM 14 ABOVE (SHOWN AS ITEM # 15 HEREON).
P. AN ENCROACHMENT OF A 5 STORY STUCCO BUILDING LOCATED ON PARCEL 3 OVER AN EASEMENT FOR ELECTRICAL UTILITY PURPOSES. SAID EASEMENT IS DESCRIBED IN ITEM 14 ABOVE (SHOWN AS ITEM # 15 HEREON).
Q. AN ENCROACHMENT OF A SIDEWALK AND CAP RAMP ONTO THE PROPERTY FROM THE STREET RIGHT OF WAY OF SEPULVEDA BOULEVARD AND MARIPOSA AVENUE.
R. AN UNRECORDED EASEMENT FOR A PORTION OF SEPULVEDA BOULEVARD, PARCELS 1, 2, 3 AND 5
S. AN ENCROACHMENT OF A 9 STORY STUCCO BUILDING LOCATED ON PARCEL 2 OVER AN EASEMENT FOR TELEPHONE UTILITY PURPOSES. SAID EASEMENT IS DESCRIBED IN ITEM 1 ABOVE (SHOWN AS ITEM # 2 HEREON).
T. AN ENCROACHMENT OF A 9 STORY STUCCO BUILDING LOCATED ON PARCEL 2 OVER AN EASEMENT FOR UTILITY PURPOSES. SAID EASEMENT IS DESCRIBED IN ITEM 2 ABOVE (SHOWN AS ITEM # 3 HEREON).
U. AN ENCROACHMENT OF A 9 STORY STUCCO BUILDING LOCATED ON PARCEL 2 OVER AN EASEMENT FOR ROAD PURPOSES. SAID EASEMENT IS DESCRIBED IN ITEM 6 ABOVE (SHOWN AS ITEM # 2 HEREON).
V. AN ENCROACHMENT OR UNRECORDED EASEMENT FOR A POWER POLE (#708222H) AND GUY ANCHOR LOCATED ALONG THE NORTHERLY BOUNDARY OF PARCEL 1.
W. INTENTIONALLY DELETED.

26. AMENDED AND RESTATED DEED OF TRUST WITH ABSOLUTE ASSIGNMENT OF LEASES AND RENTS, SECURITY AGREEMENT AND FIXTURE FILING GIVEN TO SECURE AN INDEBTEDNESS IN THE AMOUNT SHOWN BELOW,

AMOUNT: $200,000,000.00
DATE: OCTOBER 2, 2018
TRUSTOR/GRANTOR TORRANCE INN JV, LLC, A DELAWARE LIMITED LIABILITY COMPANY, BRE EL SEGUNDO PROPERTY OWNER A LLC, A DELAWARE LIMITED LIABILITY COMPANY, BRE EL SEGUNDO PROPERTY OWNER B LLC, A DELAWARE LIMITED LIABILITY COMPANY, AND BRE EL SEGUNDO PARKING LLC, A DELAWARE LIMITED LIABILITY COMPANY
TRUSTEE: AMERICAN SECURITIES COMPANY, A CALIFORNIA CORPORATION
BENEFICIARY: WELLS FARGO BANK, NATIONAL ASSOCIATION, AS ADMINISTRATIVE AGENT FOR THE LENDERS
LOAN NO.: NOT SHOWN
RECORDING DATE: OCTOBER 5, 2018
RECORDING NO: 20181017591, OF OFFICIAL RECORDS

AFFECTS: THE HEREIN DESCRIBED LAND AND OTHER LAND. (NOT PLOTTED - NOT A SURVEY MATTER)

27. AMENDED AND RESTATED ASSIGNMENT OF LEASES AND RENTS

ASSIGNED TO: WELLS FARGO BANK, NATIONAL ASSOCIATION, AS ADMINISTRATIVE AGENT FOR THE LENDERS
RECORDING DATE: OCTOBER 5, 2018
RECORDING NO: 20181017592, OF OFFICIAL RECORDS

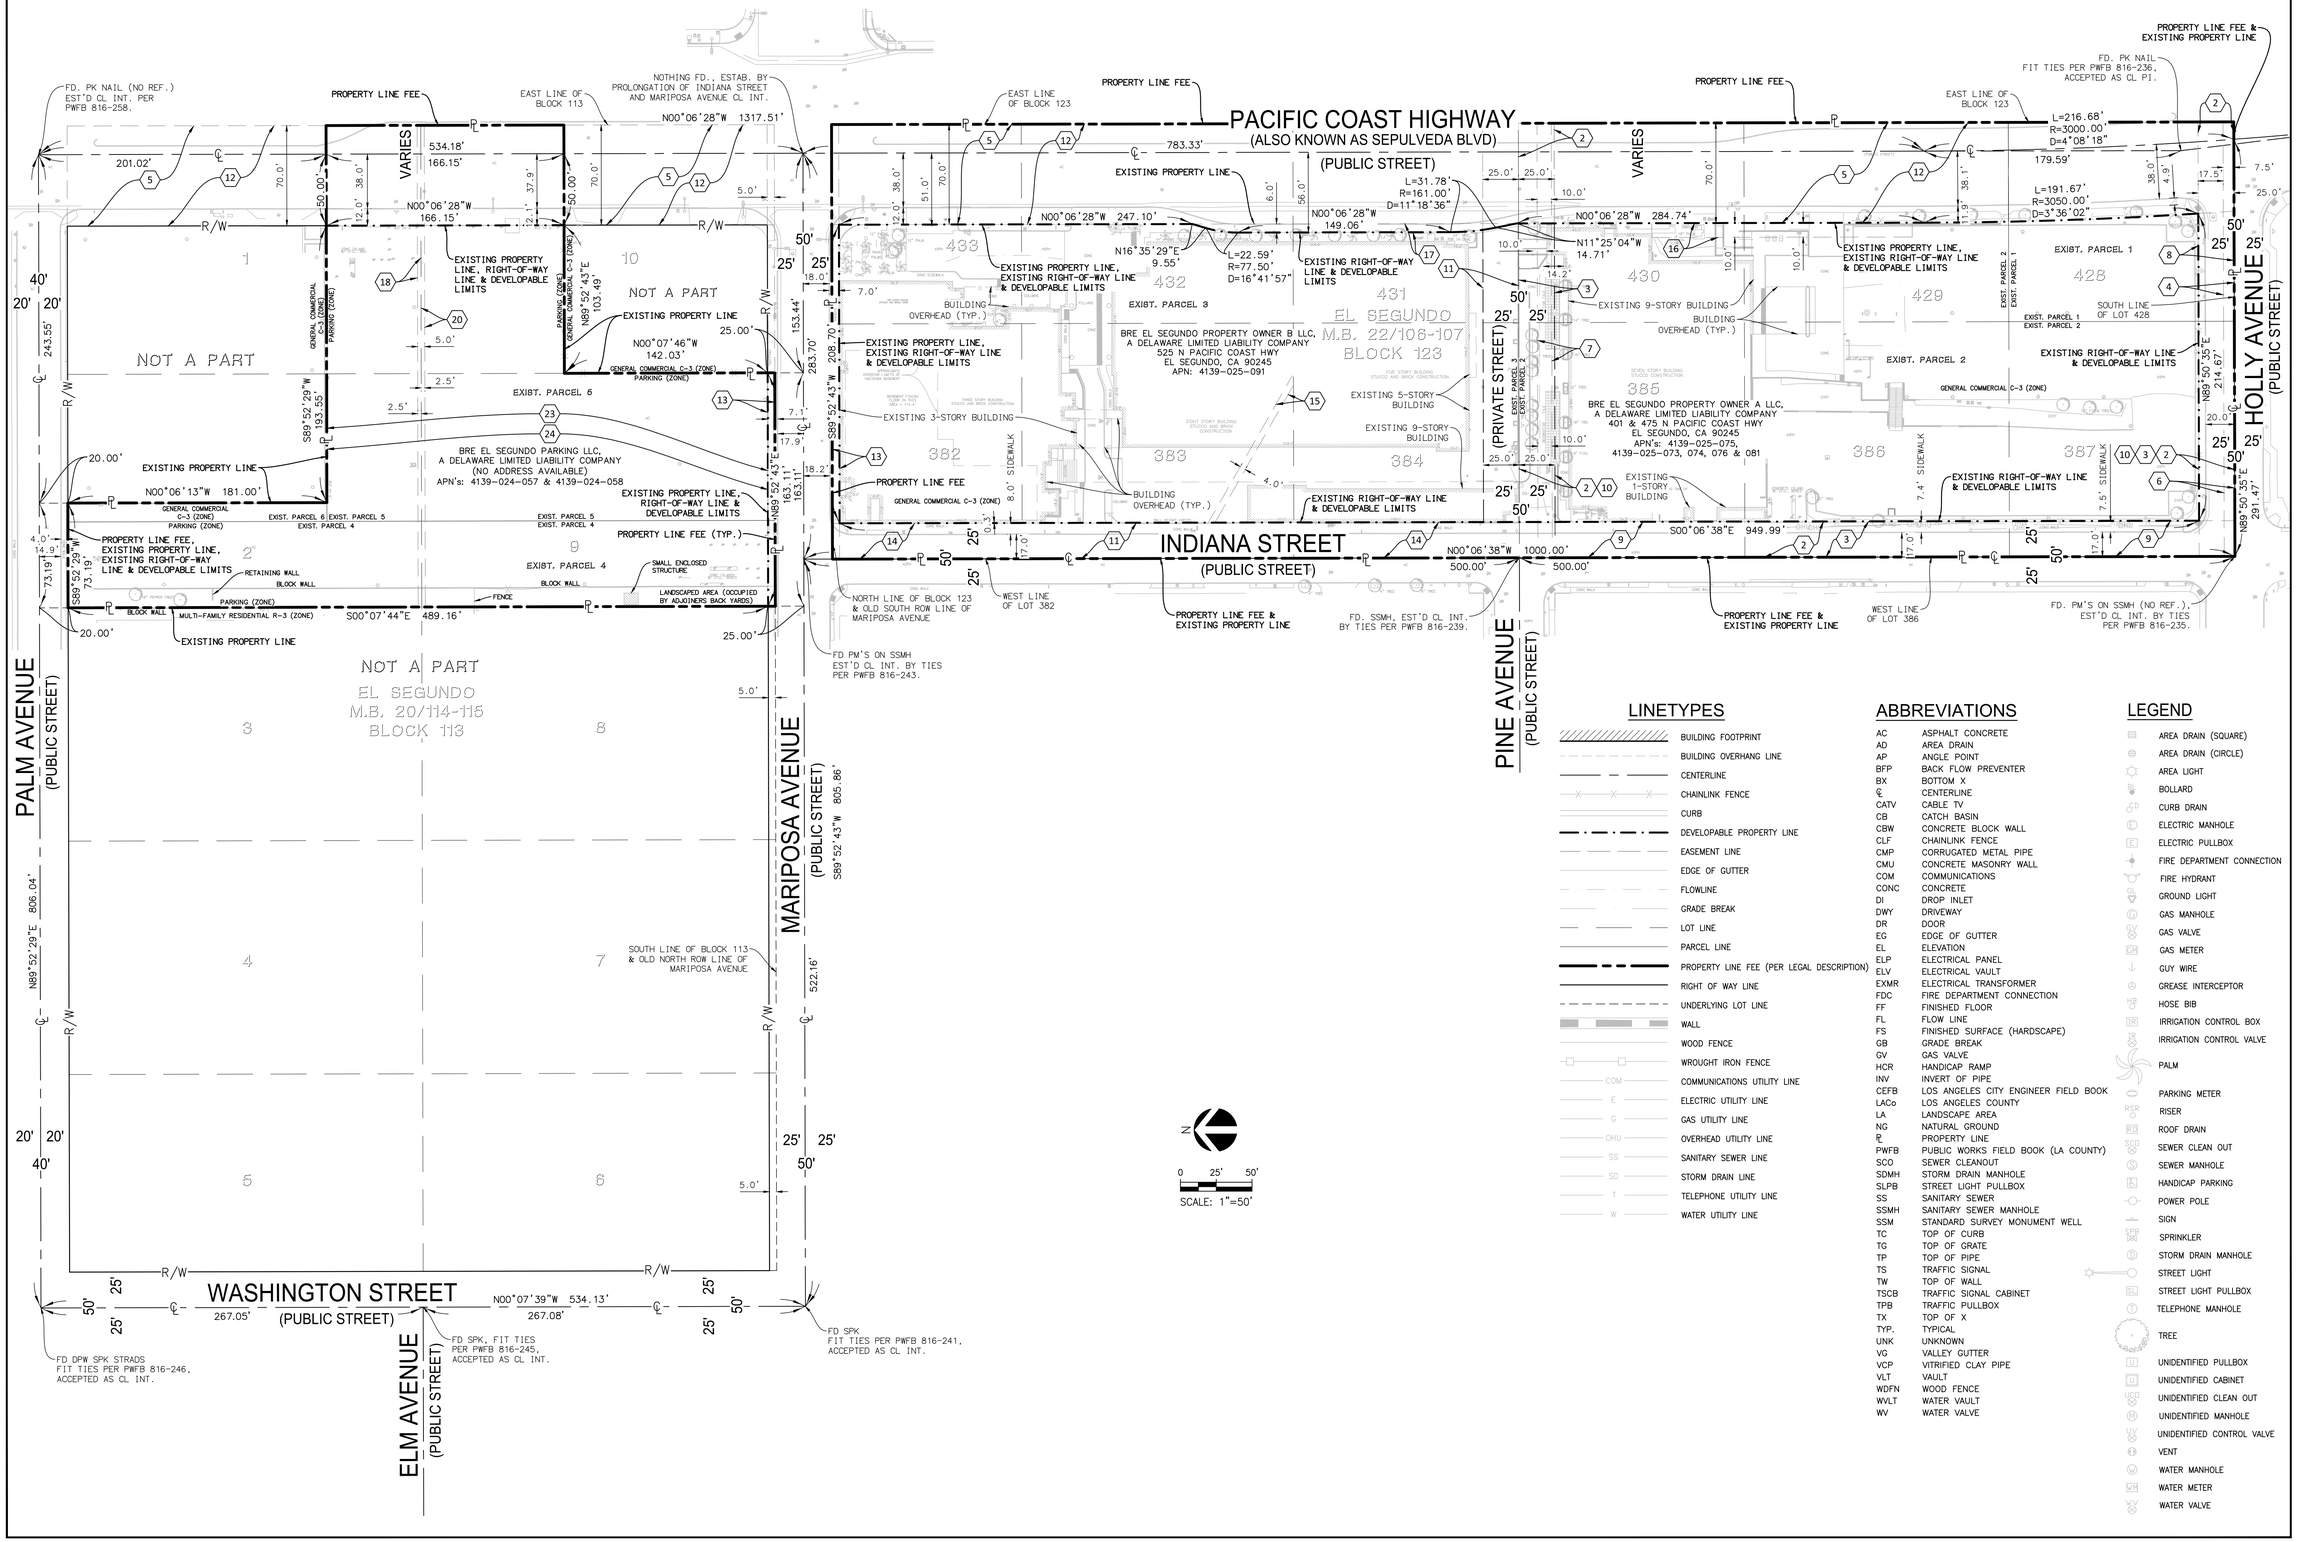
AFFECTS: THE HEREIN DESCRIBED LAND AND OTHER LAND. (NOT PLOTTED - NOT A SURVEY MATTER)

28. MATTERS WHICH MAY BE DISCLOSED BY AN INSPECTION AND/OR BY A CORRECT ALTA/NSPS LAND TITLE SURVEY OF SAID LAND THAT IS SATISFACTORY TO THE COMPANY, AND/OR BY INQUIRY OF THE PARTIES IN POSSESSION THEREOF.

29. ANY RIGHTS OF THE PARTIES IN POSSESSION OF A PORTION OF, OR ALL OF, SAID LAND, WHICH RIGHTS ARE NOT DISCLOSED BY THE PUBLIC RECORDS.

THE COMPANY WILL REQUIRE, FOR REVIEW, A FULL AND COMPLETE COPY OF ANY UNRECORDED AGREEMENT, CONTRACT, LICENSE AND/OR LEASE, TOGETHER WITH ALL SUPPLEMENTS, ASSIGNMENTS AND AMENDMENTS THERETO, BEFORE ISSUING ANY POLICY OF TITLE INSURANCE WITHOUT EXCEPTING THIS ITEM FROM COVERAGE.

THE COMPANY RESERVES THE RIGHT TO EXCEPT ADDITIONAL ITEMS AND/OR MAKE ADDITIONAL REQUIREMENTS AFTER REVIEWING SAID DOCUMENTS.



***REMAINING ITEMS ON PRELIMINARY TITLE REPORT NOT SHOWN AS PLOTTED ARE EITHER NOT PLOTTABLE, BLANKET IN NATURE OR NOT A SURVEY MATTER.

FEHR PEERS

MEMORANDUM

Date: February 17, 2021

To: Lionel Uhry, Mar Ventures

From: Vivian Lee and Tom Gaul

Subject: Pacific Coast Commons – Shared Parking Analysis *LA19-3078*

Fehr & Peers conducted a shared parking analysis for the proposed Pacific Coast Commons (PCC) development. The objective of the shared parking analysis is to assess the potential parking demand of each of the three various sites of the project at full buildout to determine whether the proposed supply is adequate to meet peak demand. This report outlines the methodology used for the shared parking analysis, as well as the methodology used to determine the parking ratios used for the hotel and the residential land uses that is used in the shared parking analysis.

PROJECT DESCRIPTION

Pacific Coast Commons is proposed mixed-use development in the City of El Segundo consisting of 263 residential dwelling units and 11,000 square feet of commercial space. The project is just over ½-mile from the Metro Mariposa Green Line Station and is also serviced by several bus routes including two local Metro (Route 232 and 625), one local Beach Cities Transit (109), and two LADOT Commuter Express (Route 438, 574) routes. The residential buildings would provide a mix of 91 studio, 119 one-bedroom, and 47 two-bedroom units with parking provided in new parking structures. Six townhouse-style units are also proposed, each of which would provide individual garages. For the purpose of this analysis, the project is separated into three different sites, as follows:

- PCC North Site [Land Use Area 5]
    - 143 residential units (137 apartments & 6 townhomes)
        - 47 Studios
        - 67 One-Bedrooms
        - 23 Two-Bedrooms
    - 2,223 square feet of retail space
    - 253 total parking spaces
        - 241 parking spaces
        - 12 townhome parking spaces in individual garages

- PCC Fairfield Site [Land Use Area 3 & 4]
    - Fairfield Hotel (350 rooms, already in operation)
    - 3,273 square feet of retail space
    - 215 replacement parking spaces for the Fairfield Hotel

- PCC South Site [Land Use Area 1 & 2]
    - 120 residential units
        - 44 Studios
        - 52 One-Bedrooms
        - 24 Two-Bedrooms
    - 5,756 square feet of commercial space
        - 2,056 square feet of retail space
        - 3,700 square feet of fast casual restaurant
    - Aloft Hotel (246 rooms, already in operation)
    - 336 parking spaces

PARKING DEMAND MODEL

The shared parking analysis was conducted using methodology provided in the Urban Land Institute's (ULI) *Shared Parking, 2nd Edition*.[1] The model was calibrated and adjusted based on the current parking demand for the existing hotels at the site based on the empirical parking counts conducted in May 2019 and ITE parking ratios for multifamily residential properties. These include adjustments to specific base parking rates and time-of-day occupancy factors.

BACKGROUND ON URBAN LAND INSTITUTE'S SHARED PARKING

ULI sponsored a national study in 1984 that established a basic methodology for analyzing parking demand in mixed-use developments and developed averages for parking rates by land use. Fehr & Peers staff was involved in the 2004 update of this national study sponsored by ULI. The analysis presented in this memorandum uses data from the updated *Shared Parking, 2nd Edition* report.

Shared parking is a concept in which land uses in close proximity share a "pool" of available parking spaces in order to reduce the overall supply needed for the development as a whole. Shared parking is practical in situations where variations exist in vehicles by hour, by day, or season at individual land uses.

In the shared parking methodology, the base parking rate and daily/hourly/seasonal patterns for each land use are established, and then the overall parking demand is calculated by taking into account the unique travel characteristics of the project being analyzed. In this analysis, certain adjustments were made to the base parking rate and time-of-day occupancy factor.

The calibrated model was then used to estimate peak parking demand for the peak month of the year for each project site.

[1] *Shared Parking.* Urban Land Institute. (2004). https://uli.bookstore.ipgbook.com/shared-parking-products-9780874202328.php

PARKING DEMAND ASSUMPTIONS

To determine the parking demand for Pacific Coast Commons, the following assumptions were made:

- Each of the three garages can be utilized as "overflow" parking if needed due to one of the other sites parking demand exceeding its on-site supply.[2]
- Peak parking demand rates for the residential units was estimated based on data from the El Segundo Municipal Code parking requirements and the Institute of Transportation Engineers' (ITE) *Parking Generation, 5th Edition*[3]; as discussed further below.
- The parking provided for residents of the townhouses in the individual garages were not included as part of the analysis, but guest parking for the townhouses were included in the shared parking calculation.
- The hotel peak parking demand rate was calculated using empirical data collected in May 2019 as part of this study at the Aloft and Fairfield hotels already operating onsite; as discussed further below.
- Peak parking demands for the retail and restaurant uses was estimated based on the El Segundo Municipal Code parking requirements for those uses.

RESIDENTIAL PARKING SUPPLY AND DEMAND RATE

Residential Parking Demand Research

To better understand the appropriate residential parking demand at Pacific Coast Commons, Fehr & Peers researched available data on parking demands at similar multifamily residential developments.

ITE Parking Generation Manual, 5th Edition

The Institute of Transportation Engineers published *Parking Generation, 5th Edition* in early 2019. The manual has traditionally provided parking demand rates for various land uses based on survey data collected in suburban, low-density areas. The 5th Edition includes additional survey data from Center City Core and Dense Multi-Use Urban locations as well. The latest survey information differentiates whether the survey data was collected within close proximity (½ mile) to rail transit. While the report does not provide authoritative findings, recommendations, or standards on parking demand, it is often referenced by planners and designers in making parking supply estimations and decisions.

Table 1 summarizes the parking supply recommendations from ITE for mid-rise multifamily housing developments. The General Urban/Suburban not within ½ mile of rail transit rates are the most conservative, although it should be noted that Pacific Coast Commons is located approximately ½ mile from the Metro Green Line Mariposa Station.

---

[2] Based on Conditional Use Permits approved by the El Segundo Planning Commission on October 9, 2014.
[3] *Parking Generation, 5th Edition.* Institute of Transportation Professionals. (2019). https://www.ite.org/technical-resources/topics/trip-and-parking-generation/

Table 1: Mid-Rise Multifamily Apartment Parking Generation Rates

Setting	Proximity to Rail Transit	Per Dwelling Unit	Per Bedroom
Center City Core	Within ½ mile of rail transit	1.1	1.0
Dense Multi-Use Urban	Within ½ mile of rail transit	1.2	0.9
	Not within ½ mile of rail transit	1.2	0.8
General Urban/Suburban	Within ½ mile of rail transit	1.5	0.8
	Not within ½ mile of rail transit	1.7	1.0

Palo Alto Multifamily Parking Demand Rate Study

Fehr & Peers conducted a study in April 2018 to provide the City of Palo Alto with parking demand rate data for multifamily developments. This report includes information from available reports, documents, studies, and the results of parking surveys conducted at multifamily developments as part of this study. Empirical data informed the parking demand rate information for market rate, affordable, and senior housing projects, as well as the change in parking demand when located near a robust transit system.

To begin, Fehr & Peers reviewed several reports and studies that included parking demand rates for multifamily market rate, affordable, and senior residential developments in the Bay Area. Fehr & Peers also conducted new parking surveys at nine multifamily complexes in the City of Palo Alto. Available information about each site, such as the number of units, walking distance (½ mile) to the nearest rail station, type of rail service, peak parking demand, parking supply and demand rates were documented. Parking occupancy surveys were conducted to count the numbers of parked vehicles by space type on a weekday (Tuesday, Wednesday, or Thursday) at three time periods (midday, evening, and late night – after midnight) and on a weekend day at two time periods (midday and late night).

Relevant conclusions for Pacific Coast Commons from the data collection effort, which includes all prior studies and the Palo Alto surveys are:

- For Market Rate units, the average surveyed parking demand rate is approximately 0.75 spaces per bedroom
    - Proximity to transit can reduce the rate by approximately 25 percent

El Segundo Municipal Code Parking Requirements

The El Segundo Municipal Code provides the number of required on-site parking spaces for the different land uses allowed within the city. Section 15-15-6 presents the following requirements for multifamily developments:

- Two spaces per dwelling unit
- One guest space for every 3 units (3-5 units = 1 visitor space, 6-8 units, 2 visitor spaces, etc.)

Table 2 summarizes the relevant parking data previously presented and applies it to the Pacific Coast Commons project. The table shows the projected demand based on the different parking rates.

Table 2: Summary of Parking Demand Rates

	Parking Spaces Per DU	Parking Spaces Per Bedroom	Pacific Coast Commons Parking Demand
ITE Parking Generation Manual	1.7	1.0	437 spaces (based on # of DUs); 304 spaces (based on # of bedrooms)
Palo Alto Multifamily Parking Demand Rate Study	N/A	0.75	228 spaces (based on # of bedrooms)
El Segundo Municipal Code Parking Requirements	2 per resident DU plus 1 guest space per 3 DUs	N/A	601 spaces (based on # of DUs)

Pacific Coast Commons Residential Parking Demand Rate

Based on the residential parking demand studies reviewed above, the following parking demand rates based on using a combination of ITE *Parking Generation* rates and El Segundo Municipal Parking requirements were used for the shared parking analysis:

- One resident space per bedroom
- One guest space for every 3 units (3-5 units = 1 visitor space, 6-8 units, 2 visitor spaces, etc.)

As shown in **Table 2**, this demand rate for the Pacific Coast Commons is conservative when compared to other similar projects (market rate, outside the ½ mile rail, etc.). Assuming that the demand is equal to the El Segundo Municipal Code requirements or the ITE rates based on dwelling units would likely result in an oversupply of parking and underutilization of spaces.

Table 3 shows the total parking demand based on the above demand rate.

Table 3: Pacific Coast Commons Residential Parking Demand

Land Use	Proposed Parking Rate	Size	Proposed Vehicle Spaces
Residential			
Studio	1 space/ bedroom	91 bedrooms	91
1 Bedroom	1 space/ bedroom	119 bedrooms	119
2 Bedroom	1 space/ bedroom	94 bedrooms	94
Guest	1 space/ 3 units [a]	263 units	87
		Total	**391**

Parking demand for residents is projected to be 304 spaces. Demand for residential guests is estimated to be 87 spaces, for a total demand of 391 parking spaces.

Pacific Coast Commons Residential Parking Supply

However, the Pacific Coast Commons project is proposing to provide parking using a modified residential parking requirement, based on unit type/number of bedrooms, which is more conservative than the demand rate. The follow parking supply is proposed:

- One space per studio unit
- 1.5 spaces per one-bedroom unit
- Two spaces per two-bedroom unit
- One guest space for every 3 units (3-5 units = 1 visitor space, 6-8 units, 2 visitor spaces, etc.)

Table 4 shows the proposed parking supply based on the above modified residential parking requirements.

Table 4: Pacific Coast Commons Proposed Residential Parking Supply

Land Use	Proposed Parking Rate	Size	Proposed Vehicle Spaces
Residential			
Studio	1 space/ unit	91 units	91
1 Bedroom	1.5 space/ unit	119 units	179
2 Bedroom	2 space/ unit	47 units	94
Guest	1 space/ 3 units	263 units	87
		Total	**451**

Based on the proposed parking supply rates, 364 total spaces would be supplied for residential tenant use. The estimated demand for the residents is 304 spaces, which projects an oversupply of 60 spaces. Guest parking would be provided in the shared pool of parking.

HOTEL PARKING DEMAND RATE

Although hotel rates are available from ITE, these rates are highly variable. Since the hotels for this project are currently in operation, Fehr & Peers conducted an empirical analysis of the existing parking demands at the Fairfield and Aloft Hotels, in place of using the ITE rates.

Existing Parking Supply

A series of parking lots currently serve the Fairfield Hotel and the Aloft Hotel. The "North" parking lot, located north of Mariposa Avenue, provides 232 parking spaces. This parking lot is currently gate controlled. The on-site parking lot at the Fairfield Hotel provides 33 parking spaces. The Aloft Hotel parking lot, located north of Holly Avenue, provides 165 parking spaces. The Conditional Use Permit for the hotels allows the Fairfield and Aloft Hotels to share the parking in the North parking lot north of Mariposa Avenue; therefore, the series of parking lots is viewed in this analysis as a system containing a total of 430 parking spaces. All parking lots are utilized by hotel guests and employees.

Existing Parking Occupancy

Parking utilization counts were conducted at the parking lots serving the Fairfield Hotel and the Aloft Hotel on Thursday, May 2nd and Sunday, May 5th, 2019, at 2:00 AM. These days and times were selected as they represent the busiest weekday night and weekend night on average for both hotels.

Table 5 shows the occupied spaces at each parking lot on both nights. On Wednesday night/early Thursday morning, the North parking lot was 53% occupied, the Fairfield on-site parking lot was 58% occupied, and the Aloft parking lot was 61% occupied. In total, the three lots combined were 56% occupied. On Saturday night/early Sunday morning, the North parking lot was 69% occupied, the Fairfield on-site parking lot was 45% occupied, and the Aloft parking lot was 56% occupied. In total, the three lots combined were 62% occupied. Count sheets can be found in **Appendix A**.

Table 5: Hotel Parking Utilization

Thursday, May 2, 2019 - 2:00 AM					
Lot	**Regular**	**Handicap**	**Total Spaces Occupied**	**Total Spaces**	**% Occupied**
North	123	0	123	232	53%
Fairfield	17	2	19	33	58%
Aloft	98	2	100	165	61%
Sunday, May 5, 2019 - 2:00 AM					
Lot	**Regular**	**Handicap**	**Total Spaces Occupied**	**Total Spaces**	**% Occupied**
North	158	1	159	232	69%
Fairfield	13	2	15	33	45%
Aloft	91	2	93	165	56%

Hotel Room Occupancy

Because of the hotels' close proximity to the Los Angeles International Airport (LAX), a portion of rooms are occupied by flight crews on any given night. On the Wednesday night, the Fairfield Hotel was 94% occupied (330 out of 350 rooms) and the Aloft Hotel was 98% occupied (242 out of 246 rooms). Of the total occupied rooms at the Fairfield and Aloft Hotels, 47% and 19% were occupied by flight crews, respectively. On the Saturday night, the Fairfield Hotel was 76% occupied (265 out of 350 rooms) and the Aloft Hotel was 75% occupied (184 out of 246 rooms). Of the total occupied rooms at the Fairfield and Aloft Hotels, 54% and 22% were occupied by flight crews, respectively. **Table 6** shows the number of total occupied rooms.

Table 6: Hotel Room Occupancy

Thursday, May 2, 2019 - 2:00 AM			
Hotel	**Total Rooms Available**	**Total Rooms Occupied**	**Total % Occupied**
Fairfield	350	330	94%
Aloft	246	242	98%
Sunday, May 5, 2019 - 2:00 AM			
Hotel	**Total Rooms Available**	**Total Rooms Occupied**	**Total % Occupied**
Fairfield	350	265	76%
Aloft	246	184	75%

Hotel Parking Demand Rates

Table 7 shows the empirical hotel parking demand rates. The parking demand rates were calculated using the total number of parking spaces occupied and total rooms occupied. Due to the Conditional Use Permit for the hotel allowing the Fairfield and Aloft Hotels to share parking in the parking lot north of Mariposa Avenue, a combined demand rate was developed across both properties. On Wednesday night, the combined demand rate was 0.42 per occupied room. On Saturday night, the combined demand rate was 0.59 per occupied room.

Table 7: Hotel Parking Demand Rate

Thursday, May 2, 2019 - 2:00 AM			
Hotel	**Total Spaces Occupied**	**Total Rooms Occupied**	**Occupied Spaces per Occupied Room**
Fairfield & Aloft Combined	242	572	0.42
Sunday, May 5, 2019 - 2:00 AM			
Hotel	**Total Spaces Occupied**	**Total Rooms Occupied**	**Occupied Spaces per Occupied Room**
Fairfield & Aloft Combined	267	449	0.59

Both hotels have a higher demand rate on the weekend than weekday, even though more rooms are occupied during the weekday. This is likely due to more families/tourists staying at the hotel during the weekends and having personal/rental cars with them. During the week, the hotel guests are more likely to be there for business and utilize ride sharing vehicles for their stay. Similarly, the flight crews which stay at the hotel often during the week do not need parking spaces.

Parking Demand at Full Hotel Occupancy

The number of spaces occupied assuming full hotel occupancy was calculated using the higher observed demand rate for the entire site, which occurred on the weekend. At the Fairfield Hotel, 207 spaces are projected to be demanded when the hotel is at full occupancy. At the Aloft Hotel, 145 spaces are projected to be demanded when the hotel is at full occupancy. This is shown in **Table 8**. The overall demand for parking is 352 spaces when both the Fairfield and Aloft are at full room capacity.

Table 8: Peak Hotel Parking Demand at Full Occupancy

Hotel	Peak Demand Rate	Hotel Rooms	Peak Parking Demand at Full Occupancy
Fairfield	0.59	350	207
Aloft	0.59	246	145
Total	0.59	596	352

SHARED PARKING ANALYSIS PARAMETERS

In order to evaluate the number of spaces needed under shared parking conditions, a number of characteristics regarding a particular development must be known. The most important of these characteristics are the mix of land uses within the project and the size of each individual land use. The other parking-related factors that must be estimated in order to determine peak parking demand by-hour are described below.

PARKING RATIO

As described earlier in the report, parking ratios for the existing hotels were developed based on the counts conducted in May 2019. For the residential land use, a combination of ITE *Parking Generation* rates and El Segundo Municipal Parking requirements were used based on the literature review discussed previously. For the commercial land uses, El Segundo Municipal Parking requirements were used.

Table 9 shows a summary of base parking rates used in the parking demand model for each of the components. The table also notes the source for each parking ratio.

Table 9: Pacific Coast Common Parking Rates

Land Use Component	Parking Rate
Aloft Hotel [1]	0.59 spaces per occupied room
Fairfield Hotel [1]	0.59 spaces per occupied room
Multifamily Residential [2]	1 space per bedroom
Residential Guest Parking [3]	1 space for every third unit
Fast Casual Restaurant [3]	1 space for each 75 ft of dining area; 1 space for each 250 ft of nondining area
Retail [3]	1 space for each 300 ft

[1] Empirical data collected onsite at the hotels on a weekday (May 2, 2019) and weekend (May 5, 2019). Parking ratio was determined by dividing the number of occupied spaces being used overnight by the number of occupied hotel rooms. A combined demand rate was developed as the Fairfield and Aloft hotels share overflow parking at the parking lot north of Mariposa Avenue.
[2] Rate was taken from *ITE Parking Generation, 5th Edition* for mid-rise multifamily apartments in general urban/suburban settings and that are not within ½ mile of rail transit.
[3] Rates from parking requirements in Section 15-15-6 of El Segundo Municipal Code.

RESIDENTIAL PARKING

Based on the projected residential demand and the modified residential parking supply, Pacific Coast Commons is projected to have an oversupply of 60 residential parking spaces. Per the *Pacific Coast Commons Specific Plan*, up to five percent of the total non-guest multi-family residential parking is permitted to be shared with commercial uses.[4] Therefore, five non-guest multi-family residential parking spaces from the North Site and five non-guest multi-family residential spaces from the South Site will be included for use in the shared parking supply.

GUEST PARKING

In accordance with City of El Segundo Municipal Code requirements, guest parking was presumed to be provided in addition to the parking for the residential units. One guest parking space is required to be supplied for every three multifamily units.

MODE SPILT/INTERNAL CAPTURE

To be conservative for the shared parking analysis, no adjustments were made for mode spilt or internal capture.

AUTO OCCUPANCY

This shared parking analysis used the national averages for auto occupancy for all land uses. No changes were made to the ULI average auto occupancy rates.

TIME-OF-DAY PATTERNS

Time-of-day occupancy assumptions were adjusted for the Aloft and Fairfield hotels to estimate the guest and employee split during late (after 9pm) evening hours. Late evening hours are when hotel guests are anticipated to be settled into their rooms, but hotel staff is slowly decreasing into the morning hours. For other uses, ULI-recommended time-of-day factors were used.

SEASONAL VARIATIONS

The parking demand model takes into consideration the variation in activity for each of the land uses from month-to-month. ULI-recommended seasonal factors, which incorporate variations in travel during seasonal periods such as holiday shopping in the winter, were used.

---

[4] *Pacific Coast Commons Specific Plan.* City of El Segundo (2021).

PARKING DEMAND PROJECTIONS

Because each of the three garages will be utilized as "overflow" parking if needed, the project was analyzed as one combined site. While each individual site's peak parking demand occurs at different hours, it was determined that the peak parking demand for the three sites combined would occur at 10:00 PM on a weekday (in June). Shared parking analysis worksheets for each site can be found in the **Appendix B**. **Table 10** summarizes the proposed parking supply by site and total. **Table 11** summarizes the estimated peak demand.

Table 10: Pacific Coast Common Parking Supply

Site	Parking Supply	Residential Reserved	Shared Spaces
North	241	189	52
Fairfield	215	0	215
South	336	165	171
Total	**792**	**354**	**438**

Table 11: Pacific Coast Common Parking Peak Demand, Weekday, June at 10 PM

Area	Residential Demand	Shared Use Demand				Total Shared Demand	Shared Surplus/ Deficit
		Residential Guest	Hotel	Retail	Restaurant		
North	160	48	0	1	0	49	**3**
Fairfield	0	0	188	3	0	191	**24**
South	144	40	133	1	18	192	**-21**
Total	**304**	**88**	**321**	**5**	**18**	**432**	**6**

PCC NORTH SITE

As shown in **Table 10**, the project proposes 241 parking spaces for the North Site, with 189 parking spaces reserved for exclusively for residential tenant use. The remaining 52 spaces would be shared between the residential guest parking, commercial uses, and for overflow if needed from the other sites.

As summarized in **Table 11**, the North site is projected to have a peak residential parking demand of 160 parking spaces and a peak shared parking demand of 49 spaces. As such, the North site is projected to have a surplus of three shared parking spaces during the peak demand period.

PCC FAIRFIELD SITE

The Fairfield site's peak parking shared demand is estimated to be 191 spaces. As shown in **Table 11**, the project proposes 215 parking spaces, indicating sufficient supply for the anticipated demand with a surplus of 24 spaces during the peak demand period.

PCC SOUTH SITE

As shown in **Table 10**, the project proposes 336 parking spaces for the South Site, with 165 parking spaces reserved for exclusively for residential tenant use. The remaining 171 spaces would be shared between the residential guest parking, commercial uses, and for overflow if needed from the other sites. As summarized in **Table 11**, The South site is estimated to have a peak residential parking demand of 144 parking spaces and a peak shared parking demand of 192 spaces. As such, the South site would have a deficit of 21 shared parking spaces during the peak demand period. The excess demand can be accommodated by the surplus of spaces at the North and Fairfield sites, which have a combined surplus of 27 spaces.

CONCLUSION

The shared parking analysis demonstrates that sufficient parking would be provided to meet the demand of the various uses on-site.

It is anticipated that retail/restaurant patrons will be provided with free validated parking in the structures, hotel guests will continue to be charged for parking, and residents will not be charged a separate parking fee from their base rental rate. A before and after study could be conducted on the adjacent residential streets to understand if the project has an effect on street parking. Based on the results of the study and if desired by the City and the residents in the adjacent neighborhoods, a residential parking district could be implemented to deter non-residential users from parking on the street.

PROJECT CONSTRUCTION PARKING DEMAND ANALYSIS

A parking analysis was also conducted for the Pacific Coast Commons construction period to understand the parking needs of construction employees and uses on-site. Phase 1 will construct the replacement parking for the Fairfield Inn & Suites site adjacent to the existing hotel. Phase 2 will consist of the construction of the South site. Phase 3 will consist of the buildout of the North site.

Construction will be phased based on two potential timelines. The first scenario analyzed is based on a sequential timeline with three separate phases. The second scenario analyzes a construction timeline in which Phase 2 and 3 will be constructed concurrently.

The shared parking analysis in **Appendix B** was used to determine the peak parking demand for each phase during construction hours. El Segundo Municipal Code (ESMC) limits construction activities to the hours from 7:00 AM to 6:00 PM Monday through Saturday, with no construction permitted on Sundays or holidays.

SEQUENTIAL CONSTRUCTION TIMELINE

Under a sequential timeline, Phase 1 of development will construct the replacement parking and new retail for the Fairfield Inn & Suites site adjacent to the existing hotel. During Phase 1, the Aloft and Fairfield Hotels will continue to be in operation. The second phase would consist of the construction of the South site, which consists of residential, retail, and parking. During Phase 2, both hotels will continue to operate, and new retail built in Phase 1 will be occupied. The third phase of development would consist of the buildout of the North site. During Phase 3, the retail and residential built on the South site in Phase 2 is assumed to be fully occupied.

During Phase 1 of construction, Fairfield and Aloft hotel guests would continue to park at the existing surface lots at their respective sites. The existing Fairfield surface lot has 232 parking spaces and the existing Aloft surface lot has 165 parking spaces, for a total of 397 parking spaces. Peak parking demand is estimate to occur on a weekday in June at 8:00 AM during Phase 1[5]. A peak demand of 171 parking spaces for the Fairfield Hotel and 119 parking spaces for the Aloft hotel will need to be accommodated, along with a peak demand of 60 construction employee parking spaces. As shown in **Table 12**, the total anticipated demand of 350 spaces can be accommodated by the existing 397 parking spaces, with a surplus of 47 spaces.

[5] For the purpose of this analysis, the month of June was used to determine peak parking demand for all phases of construction as it is the peak demand month and provides the most conservative results.

Table 12: Sequential Construction Phase 1 Parking Demand

Site	Retail	Hotel	Construction	Total Demand	Total Supply
North	-	-	-	-	232
Fairfield	-	171	60	231	-
South/Aloft	-	119	-	119	165
Total Overall	0	290	60	**350**	**397**

Once Phase 1 is completed, parking for the Fairfield site can be moved into the newly constructed garage, which will have 215 spaces. During Phase 2 of construction, Aloft parking can be accommodated via the existing surface lot of 232 spaces at the North site. Peak parking demand is estimated to occur on a weekday in June at 8:00 AM during Phase 2. A peak demand of 173 parking spaces for the Fairfield Hotel and newly constructed retail and 119 parking spaces for the Aloft hotel will need to be accommodated, along with a peak demand of 75 construction employee parking spaces. As shown in **Table 13**, the total demand of 367 spaces can be accommodated by the 447 parking spaces supplied, with a surplus of 80 spaces.

Table 13: Sequential Construction Phase 2 Parking Demand

Site	Retail	Hotel	Construction	Total Demand	Total Supply
North	-	-	-	-	232
Fairfield	2	171	-	173	215
South/Aloft	-	119	75	194	-
Total Overall	2	290	75	**367**	**447**

Once Phase 2 is completed, newly constructed uses will be able to park at the new South site garage of 336 spaces, in addition to the 215 spaces provided at the Fairfield garage constructed during Phase 1. Peak parking demand is estimated to occur on a weekday in June at 5:00 PM during Phase 3. A peak demand of 169 parking spaces for the Fairfield Hotel and newly constructed retail and 280 parking spaces for the uses on the South site will need to be accommodated, along with peak demand of 75 construction employee parking spaces. As shown in **Table 14**, the total demand of 524 spaces can be accommodated by the 551 parking spaces supplied, with a surplus of 27 spaces.

Table 14: Sequential Construction Phase 3 Parking Demand

Site	Residential	Retail	Hotel	Construction	Total Demand	Total Supply
North	-	-	-	75	75	-
Fairfield	-	8	161	-	169	215
South/Aloft	138	29	113	-	280	336
Total Overall	138	37	274	75	**524**	**551**

CONCURRENT CONSTRUCTION TIMELINE

Under a concurrent timeline, Phase 1 of development will construct the replacement parking and new retail for the Fairfield Inn & Suites site adjacent to the existing hotel. During Phase 1, the Aloft and Fairfield Hotels will continue to be in operation. Phase 2 and 3 would occur concurrently and would consist of the construction of the South site and the North site. During the construction of these two sites, both hotels will continue to operate, and new retail built in Phase 1 will be occupied.

During Phase 1 of construction, Fairfield and Aloft hotel guests would continue to park at the existing surface lots at their respective sites. The existing Fairfield surface lot has 232 parking spaces and the existing Aloft surface lot has 165 parking spaces, for a total of 397 parking spaces. Peak parking demand is estimated to occur on a weekday in June at 8:00 AM during Phase 1. A peak demand of 171 parking spaces for the Fairfield Hotel and 119 parking spaces for the Aloft hotel will need to be accommodated, along with a peak demand of 60 construction employee parking spaces. As shown in **Table 15**, the total demand of 350 spaces can be accommodated by the existing 397 parking spaces, with a surplus of 47 spaces.

Table 15: Concurrent Construction Phase 1 Parking Demand

Site	Retail	Hotel	Construction	Total Demand	Total Supply
North	-	-	-	-	232
Fairfield	-	171	60	231	-
South/Aloft	-	119	-	119	165
Total Overall	0	290	60	**350**	**397**

Once Phase 1 is completed, the Fairfield site will have 215 parking spaces. Because construction of Phase 2 and 3 occur concurrently under this scenario, the newly constructed garage for the Fairfield Hotel under Phase 1 will be the only parking available. Peak parking demand is estimated to occur on a weekday in June at 8:00 AM during the concurrent construction of Phase 2 and 3. A peak demand of 171 parking spaces for the Fairfield Hotel and newly constructed retail and 119 parking spaces for the Aloft hotel will need to be accommodated, along with a peak demand of 150 construction employee parking spaces. As shown in **Table 16**, the total demand of 442 spaces cannot be accommodated by the 215 parking spaces supplied, with a deficit of 227 spaces.

In order to accommodate the excess demand in parking during the concurrent construction of Phase 2 and 3, sufficient off-site parking with transport to and from the project site would need to be provided for hotel guests and employees, and construction employees.

Table 16: Concurrent Construction Phase 2/3 Parking Demand

Site	Retail	Hotel	Construction	Total Demand	Total Supply
North	-	-	75	75	-
Fairfield	2	171	-	173	215
South/Aloft	-	119	75	194	-
Total Overall	2	290	150	**442**	**215**

1 Preface

1.1 Purpose

This Final Environmental Impact Report (EIR) has been prepared by the City of El Segundo (City) for the Pacific Coast Commons Specific Plan Project (Specific Plan or Project). This Final EIR has been prepared in conformance with the California Environmental Quality Act of 1970 (CEQA) statutes (Cal. Pub. Res. Code, Section 21000 et. seq., as amended) and implementing guidelines (Cal. Code Regs., Title 14, Section 15000 et. seq.).

Before approving a project, CEQA requires the lead agency to prepare and certify a Final EIR. The City has the principal responsibility for approval of the proposed Project and is therefore considered the lead agency under CEQA Section 21067. According to the CEQA Guidelines, Section 15132, the Final EIR shall consist of:

- The Draft EIR or a revision of the Draft EIR
- Comments and recommendations received on the Draft EIR either verbatim or in summary
- A list of persons, organizations, and public agencies commenting on the Draft EIR
- The responses of the lead agency to significant environmental points raised in the review and consultation process; and
- Any other information added by the lead agency

1.2 Format of the Final EIR

This Final EIR consists of the February 2021 Draft EIR and the following four chapters:

1 Preface. This chapter summarizes the contents of the Final EIR, the environmental review process, and several minor updates that occurred in the Draft EIR subsequent to the release of the Draft EIR for public review.

2 Response to Comments. During the 45-day public review period for the Draft EIR, 37 comment letters were received. This chapter contains these comment letters, which have been bracketed to organize the responses, and the City's responses to the comments as well as letters from the Southwest Carpenters and SAFER received by the City after the close of the public review period and responses to those comments.

3 Changes to the Draft EIR. Comments that are addressed in Chapter 2 may have resulted in minor revisions to the information contained in the February 2021 Draft EIR. Where necessary, deletions to the text are shown in ~~**bold strikeout**~~ and additions to the text are shown in **bold underline** in all applicable sections of the Draft EIR. Additionally, through the certification of this Final EIR, where the term "Draft EIR" is used in the text, this is now deemed to be "Final EIR."

4 Mitigation Monitoring and Reporting Program. This chapter of the Final EIR provides the mitigation monitoring and reporting program (MMRP) for the proposed Project. The MMRP is presented in table format and identifies mitigation measures for the proposed Project, the implementation period for each measure, the implementing party, and the enforcing agency. The MMRP also provides a section for recordation of mitigation reporting.

1.3 Environmental Review Process

1.3.1 Notice of Preparation

CEQA requires preparation of an EIR when there is substantial evidence supporting a fair argument that a proposed project may have a significant effect on the environment. The purpose of an EIR is to provide decision makers, public agencies, and the general public with an objective and informational document that fully discloses the environmental effects of the proposed project. The EIR process is intended to facilitate the objective evaluation of potentially significant direct, indirect, and cumulative impacts of the proposed project, and to identify feasible mitigation measures and alternatives that would reduce or avoid the proposed project's significant effects. In addition, CEQA requires that an EIR identify adverse impacts determined to be significant after mitigation.

In accordance with the CEQA Guidelines, a Notice of Preparation (NOP) was circulated for a 30-day public review starting on May 26, 2020, to public agencies, organizations, and interested individuals. The purpose of the NOP was to provide notification that the City plans to prepare an EIR and to solicit input on the scope and content of the EIR. Additionally, a notice announcing the availability of the NOP was also published in the El Segundo Herald on May 21, 2020. Copies of the NOP were made available for electronic download on the City's website at https://www.elsegundo.org/government/departments/development-services/planning-division/active-projects. Comments on the NOP were received from five agencies, seven letters/emails from individuals or groups, which are provided in Appendix A-2 to the Draft EIR.

A scoping meeting was held on June 10, 2020. Rather than conducting an in-person meeting, the Governor's Executive Order N-25-20 allowed local governments to hold meetings via teleconferencing while still meeting State transparency requirements. As such, the Project's Scoping Meeting was held online, through a webinar type format. The City hosted one Scoping Meeting on Wednesday, June 10, 2020, from 6:30 p.m. to 7:30 p.m. and was made available through the City's website at https://www.elsegundo.org/government/departments/development-services/planning-division/active-projects. The purpose of this meeting was to seek input from public agencies and the general public regarding the potential environmental impacts of the proposed Project. The City received five comments/questions with environmental concerns during the Scoping Meeting, which are provided in the Draft EIR under Table A of Appendix A-2.

1.3.2 Noticing and Availability of the Draft

The Draft EIR was made available for public review and comment pursuant to CEQA Guidelines Section 15087. The 45-day public review period for the Draft EIR started on February 25, 2021 and ended on April 12, 2021. At the beginning of the public review period, an electronic copy of the Draft EIR and an electronic copy of the Notice of Completion (NOC) and Notice of Availability (NOA) were submitted to the State Clearinghouse. Relevant State agencies received electronic copies of the documents. An NOA was distributed to interested parties and filed with the Los Angeles County Clerk as well as published in the El Segundo Herald. The NOA described where the document was available and how to submit comments on the Draft EIR. A hardcopy of the Draft EIR was available at the El Segundo Development Services Department located at 350 Main Street, El Segundo, CA 90245. Additionally, the NOA and the Draft EIR were available to be viewed on the City website at https://www.elsegundo.org/government/departments/development-services/planning-division/active-projects.

The 45-day public review period provided interested public agencies, groups, and individuals the opportunity to comment on the contents of the Draft EIR. A total of 37 agency, organization, and individual comment letters

were received and are included in Chapter 2, Responses to Comments, of this Final EIR. Additionally, two organizations submitted comment letters prior to the City's December 9, 2021 Planning Commission hearing as well as seven individuals provided public comment. As such, Responses to Additional Comments Received has been included as part of Chapter 2, Responses to Comments, of this Final EIR.

1.3.3 Final EIR

The Final EIR addresses the comments received during the public review period and includes minor changes to the text of the Draft EIR in accordance with comments that necessitated revisions. This Final EIR will be presented to City decision-makers for potential certification as the environmental document for the proposed project. All agencies who commented on the Draft EIR will be provided with a copy of the Final EIR, pursuant to CEQA Guidelines Section 15088(b). The Final EIR will also be posted on the City's website at: https://www.elsegundo.org/government/departments/development-services/planning-division/active-projects.

Pursuant to CEQA Guidelines Section 15091, the City shall make findings for each of the significant effects identified in this EIR and shall support the findings with substantial evidence in the record. After considering the Final EIR in conjunction with making findings under Section 15091, the lead agency may decide whether or how to approve or carry out the Project. When a lead agency approves a project that will result in the occurrence of significant effects that are identified in the Final EIR but are not avoided or substantially lessened, the agency is required by CEQA to state in writing the specific reasons to support its action based on the Final EIR and/or other information in the record. Because the Project would result in significant and unavoidable impacts, a "statement of overriding considerations" will be prepared pursuant to CEQA Guidelines Section 15093 and supported by substantial evidence in the record.

1.4 Revisions to the Draft EIR

The comments received during the public review period for the Draft EIR resulted in minor clarifications and modifications in the text of the February 2021 Draft EIR, as shown in Chapter 3, Changes to the Draft EIR. These changes are included as part of the Final EIR, to be presented to City decision makers for review and consideration of certification and Project approval.

CEQA Guidelines Section 15088.5 identifies when a lead agency must recirculate an EIR. A lead agency is required to recirculate an EIR when significant new information is added to the EIR after public notice is given of the availability of the Draft EIR but before certification of the Final EIR. Information includes changes in the project or environmental setting as well as additional data or other information. New information added to an EIR is not considered significant unless the EIR is changed in a way that deprives the public of a meaningful opportunity to comment upon a substantial adverse environmental effect of the project or a feasible way to mitigate or avoid such an effect (including a feasible project alternative) that the project's proponents have declined to implement. As defined in CEQA Guidelines Section 15088.5(a), significant new information requiring recirculation includes the following:

1. A new significant environmental impact would result from the project or from a new mitigation measure proposed to be implemented.
2. A substantial increase in the severity of an environmental impact would result unless mitigation measures are adopted that reduce the impact to a level of insignificance.

3. A feasible project alternative or mitigation measure considerably different from others previously analyzed would clearly lessen the environmental impacts of the project, but the project's proponents decline to adopt it.
4. The draft EIR was so fundamentally and basically inadequate and conclusory in nature that meaningful public review and comment were precluded.

The minor clarifications, modifications, and editorial corrections that were made to the Draft EIR are shown in Chapter 3, Changes to the Draft EIR, of this Final EIR. None of the revisions that have been made to the Draft EIR resulted in new significant impacts; none of the revisions resulted in a substantial increase in the severity of an environmental impact identified in the Draft EIR; and, none of the revisions brought forth a feasible project alternative or mitigation measure that is considerably different from those set forth in the Draft EIR. Furthermore, the revisions do not cause the Draft EIR to be flawed such that it precludes meaningful public review. As none of the CEQA criteria for recirculation have been met, recirculation of the EIR is not warranted. As stated in CEQA Guidelines Section 15088.5(b), "recirculation is not required where the new information added to the EIR merely clarifies or amplifies or makes insignificant modifications in an adequate EIR."

2 Responses to Comments

2.1 Introduction

A draft version of the Environmental Impact Report (EIR) for the proposed Pacific Coast Commons Specific Plan (Project) was circulated for a 45-day public review from February 25, 2021 to April 12, 2021. This chapter of the Final EIR includes a copy of each comment letter provided during the 45-day public review period for the Draft EIR. The City of El Segundo (City) has prepared responses to each comment, which are included in this chapter. The comments are ordered numerically, and the individual issues within each comment letter are bracketed and numbered. The City's responses to comments on the Draft EIR represent a good-faith, reasoned effort to address the environmental issues identified by the comments. Under the CEQA Guidelines, the Lead Agency is required to evaluate and provide written responses to comments received on the Draft EIR (CEQA Guidelines, Section 15088).

As shown in Table 2-1 the City received comment letters from 1 agency, 4 organizations, and 32 community members. To finalize the EIR for the proposed Project, responses have been prepared for comments that were received during the public review period. In addition to providing individual responses to comments, one Topical Response has been prepared to respond to consistent comments raised by multiple commenters. When a commenter has made a comment that can be responded to using a Topical Response, the commenter is referred to the applicable Topical Response(s). For ease of reference, Topical Responses are included at the beginning of this Response to Comments chapter. In accordance with the requirements of CEQA Guidelines Section 15088(b), the City will provide a written response on comments submitted by public agencies to each respective public agency at least 10 days prior to certifying the Final EIR.

2.2 Topical Responses

Topical Response No. 1 – Cumulative Impacts

In response to comments regarding the listing of cumulative projects included in the Draft EIR, an additional three development projects identified by the City of El Segundo have been added to the cumulative projects list. Table 2-2, Additional Related Projects, below, represents three additional projects that were reasonably foreseeable at the time of the issuance of the Notice of Preparation of the Draft EIR. These projects are hereby incorporated into Table 2-3, List of Cumulative Projects, within Draft EIR Chapter 2. Please see Chapter 3, Changes to the Draft EIR, Section 3.2, Errata, of this Final EIR, for revisions. These edits do not change the impact conclusions in the Draft EIR, nor do they result in any new significant impacts or the need for new or altered mitigation measures, as further demonstrated in the analysis below. Rather, this information merely augments the discussion that was already presented in the Draft EIR, and results in no changes to the conclusions or mitigation measures previously presented. As such, these changes would not result in a new significant impact or in an increase in the severity of a previously identified significant impact and, therefore, do not warrant recirculation of the Draft EIR.

Table 2-2. Additional Related Projects

Location ID	Related Project Location	Within City Limits	Land Use/Project Type	Unit	Size
31	1475 El Segundo Boulevard	Yes	Office	47.84	KSF
			Residential	4	DU
32	1320-1330 Franklin Avenue	Yes	Office	47.25	KSF
			Residential	4	DU
33	243 and 330 Kansas Street	Yes	Office	243.22	KSF

Note: DU = dwelling unit; KSF = thousand square feet

This Topical Response provides an assessment of these three additional related projects into the analysis of each topical sections assessed in the Draft EIR, as described below.

Aesthetics

As described in the Draft EIR (Section 4.1.5), the City is almost entirely built out, and cumulative projects within the City would be considered infill development. As further stated in Section 4.1.5, cumulative projects would not have a substantial adverse effect to existing scenic views of resources. The addition of the three related projects listed in Table 2-2 would not change this conclusion. Consistent with the other related projects listed in the Draft EIR, these three additional projects are infill, redevelopment projects in a highly urbanized area. They are located within the City, which does not identify any officially designated scenic vistas within City boundaries, and are not within the vicinity of the Santa Monica Mountains, San Gabriel Mountains, the coastline, or beaches. For the same reasons identified in the Draft EIR, cumulative projects would not have a substantial adverse effect to existing scenic views, and the newly added related projects would not change this conclusion.

With regard to scenic quality, the Draft EIR states that the proposed Project would have less than significant impacts on the scenic quality of the area and that no identified cumulative projects are within close proximity to the Project site such that combined effects could occur. While this analysis would remain the same for the revised related projects list provided in this Final EIR, one of the newly added related projects is situated closer to the Project site than the closest related project identified in the Draft EIR.[1] This more proximal related project is located at 243 and 330 Kansas Street. The northern boundary of this related project is located along Holly Avenue, approximately 0.15-mile west of the proposed Project's southern boundary along Holly Avenue. However, the sloping topography of Holly Avenue between the proposed Project site and the related project site, combined with the distance between the two projects, intervening development, two-way roadway, landscaping, and utility lines, would minimize the potential for the two projects to combine within one viewshed to change the scenic quality of the area. As such, the proposed Project and the newly added proximal related project would not result in a significant impact to scenic quality.

As the related projects are implemented, a more dense and urban character would occur within the City, as described in Section 4.1.5 of the Draft EIR. The addition of three related infill development projects to the Draft EIR's original list of 30 related infill development projects would not substantively alter the overall pattern of increased density and urbanization described in the Draft EIR. The three additional projects would be consistent with overall land use patterns and trends in the Project vicinity and would be required to comply with development

[1] By way of comparison, the closest related project identified in the Draft EIR is located at 455 Continental Boulevard & 1995 E Grand Avenue, which is over 0.3 mile southeast of the Project site. The related project at 243 and 330 Kansas Street is located approximately 0.15 mile southwest of the Project site. (The other two newly added related projects listed in Table 2-2 above are located in similar proximities to the Project site as the related projects identified in the Draft EIR.)

standards from the El Segundo Municipal Code and with applicable scenic quality regulations. Impacts related to conflicts with scenic quality regulations would remain less than significant, for the same reasons as identified in the Draft EIR.

With regard to shade/shadow, such impacts are site specific, and the geographic area of potential shade/shadow impacts is thus located within the immediate vicinity of the Project site. The distance between this related project and the Project site, as well as the intervening features, would preclude the shade/shadow impacts of the two projects from combining to produce a cumulative impact. Impacts would remain less than significant, and the newly added related projects would not change this conclusion.

As determined in the Draft EIR, upon compliance with applicable regulations and guidelines regarding light and glare, the proposed Project would not result in a cumulatively considerable light/glare impact. The related projects (including the three additional projects identified herein) would be subject to similar regulations and are infill projects within an already urbanized area. The addition of three related infill development projects to a list of 30 other infill development projects in an urbanized area would not change the conclusions regarding light/glare that are presented in the Draft EIR. Impacts would therefore remain less than significant, and the newly added related projects would not change this conclusion.

Air Quality / Greenhouse Gas Emissions

Cumulative impacts to air quality from construction and operation of the Project and other past, present, and reasonably foreseeable projects were discussed in Draft EIR Section 4.2, Air Quality. Under Threshold 4.2b and under Section 4.2.5, Cumulative Impact Analysis, the Draft EIR states if a project does not exceed the South Coast Air Quality Management District (SCAQMD) recommended daily regional or localized emission thresholds for criteria pollutants, then project-specific impacts would also not result in a cumulatively considerable increase in emissions. While the proposed Project would contribute emissions for both short-term construction and long-term operations, its emissions would not exceed the SCAQMD's criteria pollutant threshold for criteria air pollutant emissions; therefore, the Project's contribution would not be cumulatively considerable. Furthermore, other projects would also be subject to CEQA and would require air quality analysis and, where necessary, mitigation if the project would exceed SCAQMD thresholds. Criteria air pollutant emissions associated with construction activity of future projects would be reduced through implementation of control measures required by the SCAQMD. Cumulative PM_{10} and $PM_{2.5}$ emissions would be reduced because all future projects would be subject to SCAQMD Rule 403 (Fugitive Dust), which sets forth general and specific requirements for all construction sites in the SCAQMD. In addition, cumulative VOC emissions would be subject to SCAQMD Rule 1113 (Architectural Coatings).

Additionally, a localized significance thresholds (LSTs) analysis was prepared to determine potential impacts to nearby sensitive receptors during construction of the Project. The LST methodology was developed to be used as a tool to assist lead agencies to analyze localized impacts associated with project-specific level projects. The LST methodology and associated mass rates are not designed to evaluate localized impacts from mobile sources traveling over the roadways and only assess emissions generated from onsite sources. As previously discussed, the SCAQMD has promulgated guidance that if daily emissions generated by construction or operation of a project remain below the regional or localized mass daily thresholds, those emissions would not result in a significant air quality impact either at the project level or under regionally cumulative considerations. Project-related construction activities would not generate emissions in excess of site-specific LSTs as described under Threshold 4.3c in Section 4.2, Air Quality; therefore, site-specific impacts during construction and operation of the proposed Project would be less than significant and therefore, would not result in a cumulatively considerable increase in emissions of

nonattainment pollutants. Therefore, even with consideration of the additional related projects, the proposed Project's air quality emissions would be less than significant.

Likewise, with greenhouse gas (GHG) emissions, impacts are inherently cumulative as described in Draft EIR Section 4.6, as no single project could cause global climate change. The proposed Project was determined to result in emissions less than the significance threshold and would also be consistent with the City's Climate Action Plan. Therefore, even with consideration of the additional related projects, the proposed Project's GHG emissions would be less than significant.

Cultural Resources

As stated in the Draft EIR (Section 4.3.5), there are no known historical or archaeological resources on the Project site and as such, the Project site is not part of an existing or known grouping or district of historical or archaeological resources that would be impacted as part of the cumulative impacts of other projects. The addition of three related projects to the related projects list would not change this conclusion. The proposed Project site does not support significant historic built environment resources; as such, the Project would not have the potential to combine with any of the related projects (including the additional three projects identified herein) to produce a cumulatively considerable impact on historic built environment resources.

As identified in the Draft EIR, there is the potential for accidental discovery of archaeological resources during excavation activities associated with the proposed Project and the related projects, including those that have been added in this Final EIR. MM-CUL-2 identified in the Draft EIR would address the proposed Project's potential impacts related to inadvertent finds of archaeological resources. Other individual projects occurring in the vicinity of the Project site would also be subject to the same requirements of CEQA as the proposed Project and any impacts to archaeological resources would be mitigated, as applicable. The addition of three related projects to the list originally identified in the Draft EIR would not change this conclusion.

The potential for effects to human remains from the proposed Project and related projects (including the three additional related projects identified herein) would continue to be addressed by compliance with applicable regulations, as identified in the Draft EIR. Effects to human remains would not be cumulatively considerable, for the same reasons set forth in the Draft EIR. Therefore, even with consideration of the additional related projects, the proposed Project's impacts to cultural resources would be less than significant.

Energy

As stated in the Draft EIR (Section 4.4.5), buildout of the proposed Project and the related projects would increase demands for energy (electricity, natural gas, and petroleum). The addition of the three related projects identified in Table 2-2 would marginally increase the energy demands of the overall cumulative development scenario. As stated in Section 4.4.5, the proposed Project and the related projects would be subject to increasingly stringent energy efficiency requirements and are also expected to reduce vehicle miles traveled (VMT) by encouraging the use of alternative modes of transportation and other design features that promote VMT reductions. The three additional related projects would be subject to the same energy efficiency requirements as the other related projects and may also promote reductions in VMT through provision of jobs and housing in an already urbanized area. As such, the addition of three related projects to the overall cumulative scenario would not change the conclusions or the analysis presented in the Draft EIR in the category of energy.

Geology and Soils

As stated in the Draft EIR (Section 4.5.5), the majority of impacts from geologic hazards, such as rupture of a fault line, liquefaction, landslides, expansive soils, and unstable soils, are site-specific and are therefore generally mitigated on a project-by-project basis. Each related project would be required to adhere to required building engineering design per the most recent version of the California Building Code in order to ensure the safety of building occupants and avoid a cumulative geologic hazard. Additionally, as needed, projects would incorporate individual mitigation or geotechnical requirements for site-specific geologic hazards present on each individual cumulative project site. The addition of three related projects to the originally identified list in the Draft EIR would not change the cumulative impacts conclusions included in the Draft EIR.

With regard to paleontological resources, MM-GEO-1 would ensure that the Project's potential impacts to paleontological resources would be less than significant. Other cumulative projects that would have a potential to impact soils that are sensitive for significant fossils would also require mitigation, including the three additional projects listed in Table 2-2. The newly added related projects would not alter the cumulative impacts conclusions related to paleontological resources that was presented in the Draft EIR.

Hazards and Hazardous Materials

As stated in the Draft EIR (Section 4.7.5), cumulative projects would be subject to federal, state, and local regulations related to hazardous materials and other public health and safety issues. Adherence to these regulatory requirements would reduce incremental impacts associated with public exposure to health and safety hazards in the vicinity of each related project. Furthermore, hazards and hazardous materials impacts are generally site specific. For these reasons, the Draft EIR concludes that cumulative impacts associated with hazards and hazardous materials would be less than significant. The three additional related projects would not change the impacts or conclusion, as these additional related projects would be subject to the same federal, state, and local regulations related to hazardous materials that are identified in the Draft EIR. Furthermore, as stated in Section 4.7.5, the proposed Project itself would not create significant human or environmental health or safety risk that could combine with other project impacts to create a significant and cumulatively considerable impact. For these reasons, the proposed Project would not result in cumulatively considerable impacts related to hazards and hazardous materials, and the newly added related projects would not change this conclusion.

Hydrology and Water Quality

The cumulative scenario for water quality that is analyzed in the Draft EIR (Section 4.8.5) encompasses the geographic context of the South Santa Monica Bay Watershed and accounts for all anticipated cumulative growth within this geographic area. As such, the analysis is regional in nature and is not altered by the addition of the three related projects listed in Table 2-2. As with the other related projects identified in the Draft EIR, the additional related projects are infill development projects that could temporarily increase sedimentation during construction and could increase impervious surfaces during operations. However, the same water quality regulations identified in the Draft EIR would apply to the newly added related projects. For the same reasons stated in the Draft EIR, Project impacts associated with water quality standards and polluted runoff would be less than significant, and the Project would not contribute considerably to cumulative impacts. The newly added related projects would not change this conclusion.

The cumulative impact analysis for drainage that is analyzed in the Draft EIR discusses cumulative development in the City and its potential to increase impervious surfaces that could cause or contribute to storm drain system

capacity exceedance, alter the existing storm drain system, and/or require construction of new or expanded facilities. However, as stated in the Draft EIR, new development would be subject to the same requirements for low impact development infrastructure and best management practices to address the potential for increased runoff from development sites. All projects must comply with current state and local environmental regulations, such as the El Segundo Municipal Code mandates. The related projects that are added to the cumulative development scenario would be subject to these same regulations. Furthermore, these three additional projects are redevelopment projects located on existing urbanized, developed sites. As such, they would not be expected to contribute to an increase in impervious surfaces. For the same reasons identified in the Draft EIR, potential impacts to drainage associated with the Project would be less than significant, and the Project would not contribute considerably to cumulative impacts. The newly added related projects would not change this conclusion.

Land Use and Planning

As stated in the Draft EIR (Section 4.9.5), cumulative land use impacts could occur if any of the related projects would result in incompatible land uses, or result in land uses that are inconsistent with adopted land use plans when combined with the impacts of the Project. Given the built-out conditions of the greater Los Angeles Metropolitan region, including the Project site, the Draft EIR states that cumulative development would likely convert existing underutilized properties in the Project area to revitalized higher-density developments to respond to the need for housing, sources of employment, and associated retail land uses. The three newly added related projects fit into this pattern of cumulative development that is described in the Draft EIR. As further stated in the Draft EIR, land use conflicts are typically site-specific and not cumulative in nature; despite the number of cumulative projects in a given area, they would not necessarily compound to create cumulative land use conflicts. As such, the addition of the three related projects would not change the cumulative analysis or conclusions presented in the Draft EIR for land use and planning. Cumulative impacts related to land use and planning would thus remain less than significant for the same reasons identified in the Draft EIR. The newly added related projects would not change this conclusion.

Noise

The addition of three related projects would not change the impact determinations for noise as addressed in Draft EIR Section 4.10, Noise. While these three additional projects would have the potential to incrementally increase construction and operational noise intensity in the Project area, they would not change the Project's potential for contributing to cumulative effects. The three additional related projects are not directly adjacent to the Project site. As such, the proposed Project would not contribute to or overlap with localized noise and vibration effects associated with these projects.

By way of example, construction of the 243 and 330 Kansas Street related project (the nearest of the three additional projects) would appear to have existing noise-sensitive residential receptors at the northwest corner of E. Holly Avenue and Kansas Street that are as close as approximately 140 feet; however, these offsite receptors are 700 feet from the Project site. Since implementation of the Project and its component site-specific development, as well as unrelated development projects within its vicinity would all be subject to applicable noise standards, this means that construction noise from 243 and 330 Kansas Street would need to meet the City's construction noise threshold of 65 dBA at these offsite receptors 140 feet away. But because construction noise from the Project needs to comply with 65 dBA at its nearest offsite receptors, which include those at the northwest corner of E. Holly Avenue and Indiana Street that are less than 65 feet from the Project boundary, the Project construction noise exposure level at the Kansas Street receptors would be much less due to the additional 640 feet of distance travelled. With each doubling of distance representing a 6 dB reduction, the 65 dBA construction

noise level at the Indiana Street receptor would thus be at least 18 dB less (i.e., -6 dB at 130 feet, -12 dB at 260 feet, and -18 at 520 feet) and consequently a negligible acoustic contributor compared to what may be concurrent construction noise from 330 Kansas Street at these receptors. The same conclusion could be made for the offsite receptors at Indiana Street, because they are 700 feet from the 243 and 330 Kansas Street related project and would similarly receive an acoustically negligible contribution to the cumulative noise level. Such contribution is considered negligible in this context due to the principles of acoustical energy logarithmic summation: in summary, when two noise levels received at a common receptor are more than 10 dB apart, the result is effectively the larger of the two values. Both construction of the Project and the 243 and 330 Kansas Street related project could occur concurrently and individually comply with the City's construction noise standard, and each would not contribute to cumulative exceedances of noise standards of the other. Therefore, the incremental noise effect would remain as a less-than-significant impact with mitigation incorporated (included as MM-NOI-1) for Project construction noise.

Future development from implementation of the Project along with other projects would generate off-site traffic noise; however, even with increased traffic volumes, the noise generated from the three additional related projects would not represent a new significant impact. For instance, the predicted peak-hour traffic volumes for selected roadway intersections that include the effect of adding these three related projects to the cumulative and cumulative-plus-Project scenarios were numerically compared to earlier future traffic volumes used as inputs for studied roadway segments in the Draft EIR's Appendix J-1. The largest differences in total peak hour traffic, predicted to occur in the afternoon, at the Pacific Coast Highway intersections with E. Mariposa Avenue and E. Palm Avenue, result in no greater than a 0.09 dB increase in predicted traffic noise for the cumulative scenario and no greater than a 0.35 dB increase for the cumulative-plus-Project scenario. On these bases, and with no changes to roadway vehicle speeds or other modeling parameters, cumulative off-site traffic noise impacts would remain less than significant. Therefore, even with consideration of the additional related projects, the proposed Project's noise emissions would be less than significant.

Population and Housing

The cumulative population and housing analysis in the Draft EIR (Section 4.11.5) identifies two related projects that would contribute new residential units to the City: the projects at 540 E. Imperial Avenue and 1225 Mariposa Avenue. Two of the three newly added related projects (shown in Table 2-2 above) would contribute over 300,000 sf of office land uses and a total of eight new residential units to the City, in addition to the other related projects described in the Draft EIR. As such, these three projects would contribute primarily to the employment-generating uses within the City, which could further exacerbate the need for additional local housing stock. The three related project's new units would be small (e.g., approximately 500 sf) and are intended for the caretakers of the commercial properties, such as for security guards or others that need to stay overnight. The addition of 8 units intended to serve the planned office uses for the three new related projects would not be a substantial change in the context of cumulative housing and population growth for the City.

The Draft EIR further states that the related projects would primarily increase employment in the City. The three newly added related projects primarily consist of office uses and, therefore, would contribute to this overall pattern. Furthermore, as mentioned in the Draft EIR, the City is jobs rich and the eight new units proposed to serve the new office projects would not help to balance the jobs-to-housing ratio in the City. With or without the three additional related projects, the proposed Project would provide additional housing in a jobs-rich area. For the same reasons described in the Draft EIR, it is not anticipated that the proposed Project, in combination with other future foreseeable projects, would create a cumulatively considerable impact to population, housing, or employment. The newly added related projects would not change this conclusion and may in fact further support the need for the proposed Project's residential uses to facilitate a more balanced jobs-housing community.

Public Services and Recreation

The cumulative analysis for public services and recreation presented in the Draft EIR (Section 4.12.5) states that cumulative impacts to fire protection, police protection, schools, parks and recreational facilities, and other public facilities such as libraries would be generally addressed through development fees from the related projects. The addition of three related projects to the overall cumulative development scenario would incrementally increase demands on services but would also represent a commensurate increase in fees. As such, the analysis and conclusions in the Draft EIR would not change, and cumulative impacts would remain less than significant for the same reasons identified in the Draft EIR. The newly added related projects would not change this conclusion.

Transportation

The addition of three related projects would not change the impact significance conclusions as addressed in Draft EIR Section 4.13, Transportation. As described in Draft EIR Sections 4.6, Greenhouse Gas Emissions; 4.9, Land Use and Planning; and 4.13, Transportation, the proposed Project is consistent with plans addressing the circulation system (SCAG's 2020-2045 RTP/SCS, the City's Climate Action Plan, Metro's Long Range Transportation Plan, and LADOT's Short Range Transit Plan) and would not conflict with adopted policies, plans, or programs regarding public transit, bicycle, or pedestrian facilities under cumulative conditions. The addition of three related projects would not change the proposed Project's proximity to public transit and the Project (and other related projects) would cumulatively contribute to transit ridership maintained by Metro and LADOT, which would result in less than significant impacts.

The Draft EIR includes information on intersection operations and congestion level of service (i.e., LOS) for informational purposes only related to the applicability of General Plan policies (see Section 4.13.4 of the Draft EIR and Appendix J-2 of the Draft EIR). Automobile delay and traffic congestion are not considered to be impacts on the environment for the purposes of traffic and transportation analysis (California Public Resources Code Section 21099(b)(2)). Therefore, as stated in the Draft EIR, the City's LOS policy in the General Plan would not be applicable per Senate Bill (SB) 743; however, a discussion of the changes in the LOS analysis due to the inclusion of the three additional related projects is provided below for informational purposes.

The addition of the three related projects listed in Table 2-2 above is anticipated to change the LOS of the intersection at Pacific Coast Highway/El Segundo Boulevard in the AM peak hour from LOS D to LOS E, as shown in the attached memorandum (see Appendix A) to this Final EIR (Fehr & Peers 2021). Prior to the addition of these related projects, this intersection was forecast to operate at LOS D in the AM peak hour, as shown in Table 2-3. With the addition of the three related projects, this intersection is forecast to operate at LOS E in the AM peak hour, as shown in Table 2-4.

Table 2-3. Draft EIR Future (2027) Plus Project Intersection LOS Signalized Intersections

No.	Intersection	Peak Hour	Future (2027)		Future plus Project	
			V/C	*LOS*	*V/C*	*LOS*
6	Pacific Coast Highway/El Segundo Boulevard	AM	0.867	D	0.877	D
		PM	1.115	F	1.117	F

Source: Fehr & Peers, 2020 (Appendix J-1); adapted from Table 8A
Note: V/C = volume to capacity; LOS = Level of Service

Table 2-4. Revised Future Plus Project Intersection LOS Signalized Intersections

No.	Intersection	Peak Hour	Future (2027)		Future plus Project	
			V/C	*LOS*	*V/C*	*LOS*
6	Pacific Coast Highway/El Segundo Boulevard	AM	0.901	E	0.908	E
		PM	1.170	F	1.172	F

Source: Fehr & Peers, 2021
Note: V/C = volume to capacity; LOS = Level of Service

This changed future LOS condition would occur with or without the proposed Project. Importantly, the addition of the proposed Project would not individually contribute to an LOS change from the pre-Project condition. In summary, the addition of the three related projects would not result in the Project creating adverse circulation conditions regarding trips generated on the street network.

Additionally, the addition of three related projects would not result in a cumulatively significant impact related to VMT. As stated in Section 4.13, Transportation of the Draft EIR, the City has not yet adopted VMT guidelines, metrics, and significance criteria per SB 743 guidelines. As such, the impact thresholds used for this Project are based on the Governor's Office of Planning and Research (OPR) guidelines outlined in their Technical Advisory on Evaluating Transportation Impacts in CEQA (December 2018). As shown in Table 4.13-3 of the Draft EIR, the Project is estimated to generate 10.9 daily household VMT per capita, which is lower than 15% below the existing City daily household VMT per capita (12.1 VMT). Per OPR guidelines, "…A project that falls below an efficiency-based threshold that is aligned with long-term environmental goals and relevant plans would have no cumulative impact distinct from the project impact. Accordingly, a finding of a less-than-significant project impact would imply a less than significant cumulative impact, and vice versa…" Per the VMT analysis, the Project's VMT of 10.9 VMT falls below the efficiency-based threshold of 12.1 VMT, and the Project site is located within an urbanized area served by public transit. As such, the Project would not exceed the SCAG threshold for VMT and the Project's contribution to cumulative VMT would not be cumulatively considerable.

Finally, the addition of three related projects would not result in a cumulatively considerable significant impact related to emergency access. As with the proposed Project, driveways and/or circulation modifications proposed in the surrounding area would comply with applicable local, regional, state, and/or federal requirements. Further, since modification to access is largely confined to the Project site and the immediate surrounding area, Project-specific emergency access impacts would likely not impact other cumulative projects. Therefore, even with consideration of the additional related projects, the proposed Project's transportation impact conclusions would remain less than significant as stated in Draft EIR Section 4.13.

Tribal Cultural Resources

As stated in the Draft EIR (Section 4.14.5), cumulative impacts on tribal cultural resources consider whether impacts of the proposed Project together with other related projects identified within the vicinity of the Project site, when taken as a whole, substantially diminish the number of such resources within the same or similar context or property type. As discussed in the Draft EIR, there are no known tribal cultural resources on the Project site and the area is considered to be of low potential to contain unanticipated cultural or tribal cultural resources. Furthermore, mitigation measure MM-TCR-1 is set forth for the proposed Project to address the potential for inadvertent finds during excavation. The related projects would be subject to the same requirements of CEQA as the proposed Project and any impacts to tribal cultural resources would be mitigated, as applicable. The three related projects that have been added to the cumulative scenario are also subject to the same requirements, and mitigation would be applied

if necessary. As stated in the Draft EIR, impacts would not be cumulatively considerable after the Project-specific mitigation measure is applied. The newly added related projects would not change this conclusion.

Utilities and Service Systems

As stated in Section 4.15.5 of the Draft EIR, the proposed Project and each cumulative project would incrementally increase demands for utilities and service systems. The analysis in the Draft EIR demonstrates that available capacity exists to serve the proposed Project's water, wastewater, electricity, natural gas, telecommunications, and solid waste disposal needs. Similar to the Project, the capacity and availability of utilities to serve the related projects would be determined on a project-specific basis. In the event that upgrades are required due to cumulative projects, all construction work would be subject to local municipal code and applicable agency requirements, and would be subject to CEQA review accordingly. Furthermore, increases in water demand would be analyzed relative to the available supply outlined in the applicable Urban Water Management Plan and the increase in sewer generation for related projects located in the City would be governed under Title 12 of the El Segundo Municipal Code, which regulates public sewer facilities. The three newly added related projects would be subject to these same requirements and would also undergo analysis for utilities capacity on a project-specific basis. For the same reasons described in the Draft EIR, the Project's impacts to utilities and service systems would not be cumulatively considerable, and the newly added related projects would not change this conclusion.

Other Environmental Topics

With regard to cumulative impacts for the other environmental topics addressed in the Draft EIR, the addition of the three related projects described above would not change any impact determinations. While these projects would incrementally increase development intensity in the Project area, they would not change the Project's potential for contributing to cumulative effects. The three additional cumulative projects are not directly adjacent to the Project site. As such, the proposed Project would not contribute to or overlap with localized effects associated with these projects. Compliance with local and regional policies and regulations, combined with on-going monitoring of service levels for public services, utilities, and infrastructure, would preclude the Project from creating a cumulatively considerable impact, with or without the addition of the three above projects to the cumulative development scenario. Additional details are provided above for the other environmental topics addressed in the Draft EIR.

Conclusion

As outlined above, no new or different impacts requiring new or different mitigation would be required as a result of the additional related projects. No changes are required to the analysis or conclusions within the Draft EIR. No significant new information regarding the additional related projects within the meaning of CEQA Guidelines Section 15088.5 is presented herein, and as such, recirculation of the Draft EIR is not necessary.

RE: Pacific Coast Commons Specific Plan –
Draft Environmental Impact Report (DEIR)
SCH# 2020050508
GTS# 07-LA-2020-03504
Vic. LA-1 PM 25.455
Vic. LA-105 PM 00.474

Dear Paul Samaras,

Thank you for including the California Department of Transportation (Caltrans) in the environmental review process for the above referenced project. The proposed Pacific Coast Commons Specific Plan (Project) includes approximately 6.3 acres (post-dedication) of developed property located along Pacific Coast Highway. The entire area would receive a new General Plan Land Use Designation and zoning of Pacific Coast Commons Specific Plan. The adoption of a Specific Plan would allow for the following:

1. The continued operation of the Fairfield Inn and Suites Hotel and Aloft Hotel, which contain 596 rooms within 288,767square feet of hotel development;
2. 327,021 square feet of residential development for 263 new housing units, including 257 multi-family apartments and six condominium/townhomes;
3. 11,252square feet of new commercial/retail uses; and
4. Three new parking structures that would contain approximately 792 parking stalls.

A1-1

The nearest State facilities to the proposed project are SR 1 and I-105. After reviewing the DEIR, Caltrans has the following comments:

Caltrans acknowledges and supports infill development that provides a mix of land uses which allow a neighborhood to meet their needs for housing, work, and services, like the proposed Project aims to facilitate. Caltrans applauds the inclusion of a Shared Parking Analysis (Appendix J-2) which provides additional evidence that current municipal parking requirements result in more car parking than necessary. However, Caltrans still recommends reducing the amount of car parking to the fewest number of spaces possible. Research looking at the relationship between land-use, parking, and transportation indicates that car parking prioritizes driving above all other

A1-2

"Provide a safe and reliable transportation network that serves all people and respects the environment"

travel modes and undermines a community's ability to choose public transit and active modes of transportation. If the car parking structures must be built, they should be designed in a way that is conducive to adaptive reuse. They should contain flat floors with ramps on the exterior edge so that they can be more easily converted to beneficial uses in the future.

A1-2 Cont.

The project will not be providing unbundled car parking for residential units, despite it being a specific goal in the City of El Segundo Climate Action Plan. The DEIR states that this goal isn't applicable to the project, even though mandatory bundle parking has been shown to have a direct impact on housing costs, transportation choice, and ultimately results in additional Vehicle Miles Travelled (VMT). Additionally, the exact number of secure bike parking spaces to be provided is not specified. Caltrans recommends at least one long-term bicycle parking space per residential unit. Caltrans would encourage the Lead Agency to seriously consider unbundled car parking and providing an equitable number of long-term bike parking spaces as conditions of approval for this Project.

A1-3

For any work on or adjacent to Caltrans Right-of-Way, an Encroachment Permit will be required. Please reference the following right-of-way maps when applying: P23579-1, P23579-3.

Additionally, transportation of heavy construction equipment and/or materials which requires use of oversized-transport vehicles on State highways will need a Caltrans transportation permit. We recommend large size truck trips be limited to off-peak commute periods.

A1-4

If you have any questions, please contact project coordinator Anthony Higgins, at anthony.higgins@dot.ca.gov and refer to GTS# 07-LA-2020-03504.

Sincerely,

Miya Edmonson

MIYA EDMONSON

"Provide a safe and reliable transportation network that serves all people and respects the environment"

Response to Comment Letter A1

California Department of Transportation
March 26, 2021

A1-1 This comment summarizes the proposed Project's characteristics and location. The comment's summary of the Project's characteristics and location are correctly recorded with the exception of the Project site's acreage post street dedications. The comment letter recorded the approximate size as 6.3 acres. As detailed in Section 3.1, Project Summary, of the Draft EIR, the Project site totals approximately 6.385 gross acres or 6.23 acres post street dedications. No further response is required.

A1-2 This comment summarizes the Project and identifies the nearest State facilities, consistent with Draft EIR Section 4.13, Transportation. This comment also acknowledges that the Project constitutes an infill redevelopment rather than an all-new development and applauds the inclusion of the Shared Parking Analysis (included as Appendix J-2 of the Draft EIR) to reduce the parking requirements from what is currently required by the City of El Segundo. However, Caltrans still recommends reducing the number of parking spaces provided to the fewest number of spaces possible.

The Shared Parking Analysis reduced the City's parking ratios below what is required by the City's Municipal Code. Residential parking ratios were reduced from 2 spaces per dwelling unit to 1 space per studio, 1.5 spaces per 1-bedroom, and 2 spaces per 2-bedroom, which is supported by Institute of Transportation Engineers (ITE) rates per bedroom and further supported with research from Palo Alto (see Draft EIR, Appendix J-2, for a summary of this research). Hotel parking rates were also reduced based on the observed parking demands at the existing hotels, and then were adjusted to assume full occupancy of the rooms.

Caltrans also states that the proposed parking structures should be designed in a way that is conducive to adaptive reuse and should contain flat floors with ramps on the exterior edge so that they can be more easily converted to beneficial uses in the future. Taking into account site constraints, the parking structures have been designed to have flat floors to accommodate future conversions to different uses, as depicted in Figures 3-4C, Conceptual PCC-South Section, 3-5C, Conceptual PCC-Fairfield Parking Section, and 3-6C, Conceptual PCC-North Section of Chapter 3, Project Description of the Draft EIR.

A1-3 This comment states that the Project will not be providing unbundled parking for residential units, despite being a goal in the City of El Segundo Climate Action Plan. The Project Applicant has not proposed to unbundle parking in order to be responsive to community feedback received during public outreach in which concerns were expressed related to the potential for overflow parking into the adjacent residential community. Further, compliance with all goals of the City's Climate Action Plan is not mandatory to determine consistency. The Climate Action Plan is an aspirational document and does not modify what is in the City's General Plan or the El Segundo Municipal Code (ESMC). Further, vehicle parking is not a required threshold of consideration for the purposes of determining environmental impacts pursuant to CEQA.

The comment also points out that the number of bicycle parking spaces is not specified and recommends at least one long-term bicycle parking space per residential unit. This comment is acknowledged and will be taken into consideration by the City's decision makers as part of the Final

EIR. The Project will provide the following number of bicycle parking spaces, per the bicycle parking requirements established in the ESMC and CalGreen requirements:

- PCC South
  - 8 bike parking spaces for commercial uses
  - 34 bike parking spaces for residential use
- Fairfield Site
  - 6 bike parking spaces for commercial uses
- PCC North
  - 6 bike parking spaces for commercial uses
  - 24 bike parking spaces for residential use

The Project will provide more bicycle parking for both commercial and residential uses than is required by the City's Municipal Code.

Finally, Caltrans encourages the Lead Agency to consider unbundled car parking and providing an equitable number of long-term bike parking spaces as conditions of approval for this Project. This comment is acknowledged and will be shared with the City's decision makers.

A1-4 This comment states an Encroachment Permit will be required for any work on or adjacent to the Caltrans right-of-way and that a Caltrans transportation permit is required for oversized-transport vehicles utilizing State highways. These requirements are noted in the Draft EIR, within Section 3.7.3, Other Permits and Approvals. The comment also recommends large size truck trips be limited to off-peak hour commute periods. As stated in the Draft EIR, within Section 3.7.3, Other Permits and Approvals, the Project will require approval of a Traffic Control Plan in compliance with the California Manual Uniform Traffic-Control Devices. Additionally, MM-TRA-1 included in Section 4.13, Transportation, requires that the Traffic Control Plan address the potential for construction-related vehicular traffic, as well as pedestrian and bicycle circulation disruption in the public right-of-way. The Plan shall describe safe detours and shall include protocols for implementing the following, if determined necessary and feasible: temporary traffic controls (e.g., a flag person) during construction to maintain smooth traffic flow; dedicated turn lanes for movement of construction trucks and equipment on and off site; scheduling of construction activities that affect traffic flow on the arterial system to off-peak hours; consolidation of truck deliveries; and/or rerouting of construction trucks away from congested streets or sensitive receptors. These requirements are adequate to address potential impacts associated with use of large trucks during construction activities. Lastly, the comment does not express any environmental comments or concerns related to the environmental analysis in the Draft EIR. No changes or additions to the project description or analyses included in the Draft EIR are required.

RE: Public Records Act Request and Request for Mailed Notice of Public Hearings and Actions – Pacific Coast Commons, 401 N Pacific Coast Highway El Segundo, CA 90245

Dear Mr. Samaras,

CREED LA is writing to request a copy of any and all records related to the project, the Pacific Coast Commons, located at 401 North Pacific Coast Highway in El Segundo. The project consists of a 6-story building with 120 residential units and 5,700 square feet of commercial space and a second 6-story building with 137 apartment units and 5,500 square feet of commercial space; along with 6 detached townhomes. We are also writing to request copies of all communications and mailed notice of any and all hearings and/or actions related to the Project.

Our request for mailed notice of all hearings includes hearings, study sessions and community meetings related to the Project, certification of the MND (or recirculated DEIR), and approval of any Project entitlements. This request is made pursuant to Public Resources Code Sections 21092.2, 21080.4, 21083.9, 21092, 21108 and 21152 and Government Code Section 65092, which require local agencies to mail such notices to any person who has filed a written request for them with the clerk of the agency's governing body. Our request includes notice to any City actions, hearings or other proceedings regarding the Project, Project approvals and any actions taken, or additional documents released pursuant to the California Environmental Quality Act.

Our request for all records related to the Project is made pursuant to the California Public Records Act. (Government Code § 6250 et seq.) This request is also made pursuant to Article I, section 3(b) of the California Constitution, which provides a constitutional right of access to information concerning the conduct of government. Article I, section 3(b) provides that any statutory right to information shall be broadly construed to provide the greatest access to government information and further requires that any statute that limits the right of access to information shall be narrowly construed.

O1-1

1

We will pay for any direct costs of duplication associated with filling this request up to $200. However, please contact me at (877) 810-7473 with a cost estimate before copying/scanning the materials.

Pursuant to Government Code Section 6253.9, if the requested documents are in electronic format and are 10 MB or less (or can be easily broken into sections of 10 MB or less), please email them to me as attachments.

Response to Comment Letter O1

CREED LA
March 8, 2021

O1-1 This comment requests a copy of any and all records related to the proposed Project, including copies of all communications and mailed notices of any and all hearings and/or actions related to the Project. The comment's request will be granted pursuant to Public Resource Code Sections 21092.2, 21080.4, 21083.9, 21092, 21108 and 21152, and Government Code Section 65092, as cited in the letter. Below is a list of approvals required for Project implementation.

As specified in the above listing, the certification of the Final EIR and the adoption of the Pacific Coast Commons Specific Plan, for example, would be considered at a public hearing by the City's decision makers. As such, these potential future approvals would be notified to the public in compliance with State and local regulations including the Ralph M. Brown Act (Government Code Section 54950, et seq.). The designated contact for CREED LA will be included in all future notices of actions or hearings related to the proposed Project. Furthermore, in accordance with CEQA Guidelines Section 15094, the Lead Agency shall file a Notice of Determination (NOD) within five working days after deciding to carry out or approve the project. The NOD will also be filed with the Los Angeles County Clerk and the Governor's Office of Planning and Research State Clearinghouse.

Lastly, the comment only partially summarizes the project description by not including the components of PCC-Fairfield Parking. Please see Chapter 3, Project Description of the Draft EIR for more details, including Table 3-2, Conceptual Site Plan and Specific Plan Buildout Summary, for a breakdown of the proposed units and square footage for each land use. Lastly, the comment does not express any environmental comments or concerns related to the environmental analysis in the Draft EIR. No changes or additions to the project description or analyses included in the Draft EIR are required.

RE: Public Records Act and Mailing List Request Regarding Pacific Coast Commons Specific Plan (SCH #: 2020050508).

Dear Ms. Weaver and Mr. Samaras,

On behalf of Southwest Regional Council of Carpenters ("**SWRCC**") and its members, this Office requests that the City of El Segundo ("**City**") provide any and all information referring or related to the Pacific Coast Commons Specific Plan ("**Project**") pursuant to the California Public Records Act ("**PRA**"), Cal. Government ("**Gov't**") Code §§ 6250–6270 (collectively "**PRA Request**").

Moreover, the SWRCC requests that City provide notice for any and all notices referring or related to the Project issued under the California Environmental Quality Act ("**CEQA**"), Cal Public Resources Code ("**PRC**") § 21000 *et seq*, and the California Planning and Zoning Law ("**Planning and Zoning Law**"), Cal. Gov't Code §§ 65000–65010. California Public Resources Code Sections 21092.2, and 21167(f) and Government Code Section 65092 require agencies to mail such notices to any person who has filed a written request for them with the clerk of the agency's governing body.

O2-1

The Southwest Regional Council of Carpenters is a labor union representing 50,000 union carpenters in six states, including in southern California, and has a strong interest in well-ordered land use planning and addressing the environmental impacts of development projects, such as the Project.

I. PUBLIC RECORDS ACT REQUEST.

SWRCC is requesting any and all information referring or related to the Project.

The Public Records Act defines the term "public record" broadly as "any writing containing information relating to the conduct of the public's business . . . regardless of physical form and characteristics." Gov't Code § 6252(d). "Records" includes all communications relating to public business regardless of physical form or characteristics, including but not limited to any writing, picture, sound, or symbol, whether paper, magnetic, electronic, text, other media, or written verification of any oral communication. Included in this request are any references in any appointment calendars and applications, phone records, or text records. These "records" are to include, but are not limited to correspondences, e-mails, reports, letters, memorandums, and communications by any employee or elected official of City concerning the Project.

Please include in your response to this request the following examples of "records," as well as any similar physical or electronic forms of communication: any form of writing such as correspondence, electronic mail records ("email"), legal and factual memoranda, facsimiles, photographs, maps, videotapes, film, data, reports, notes, audiotapes, or drawings. Cal. Government Code § 6252(g) (defining a writing to including "any record thereby created, regardless of the manner in which the record has been stored"). Responsive correspondence should include, inter alia, emails, text messages, or any other form of communication regardless of whether they were sent or received on public or privately-owned electronic devices "relating to the conduct of the public's business." Cal. Government Code § 6252(e); *Citizens for Ceres v. Super. Ct.* ("*Ceres*") (2013) 217 Cal. App. 4th 889, 909; *Citizens for Open Gov't v. City of Lodi* ("*Lodi*") (2012) 205 Cal.App.4th 296, 307, 311; *City of San Jose v. Superior Court* (2017) 2 Cal. 5th 608, 625 (finding that a public employee or officer's "writings about public business are not excluded" from the California Public Records Act "simply because they have been sent, received, or stored in a personal account.") .

O2-1 Cont.

This Office requests any and all information referring or related to the Project, including but not limited to:

(1) All Project application materials;

(2) All staff reports and related documents prepared by the City with respect to its compliance with the substantive and procedural requirements of the California Environmental Quality Act, Public Resources Code § 21000 et seq., and the CEQA Guidelines, title 14, California Code of Regulations, § 15000 et seq. (collectively "**CEQA**") and with respect to the action on the Project;

(3) All staff reports and related documents prepared by the City and written testimony or documents submitted by any person relevant to any findings or statement of overriding considerations adopted by the agency pursuant to CEQA;

(4) Any transcript or minutes of the proceedings at which the decisionmaking body of the City heard testimony on, or considered any environmental document on, the Project, and any transcript or minutes of proceedings before any advisory body to the public agency that were presented to the decisionmaking body prior to action on the environmental documents or on the Project;

(5) All notices issued by the City to comply with CEQA or with any other law governing the processing and approval of the Project;

(6) All written comments received in response to, or in connection with, environmental documents prepared for the Project, including responses to the notice of preparation;

(7) All written evidence or correspondence submitted to, or transferred from, the City with respect to compliance with CEQA or with respect to the Project;

(8) Any proposed decisions or findings submitted to the decisionmaking body of the City by its staff, or the Project proponent, Project opponents, or other persons;

O2-1 Cont.

(9) The documentation of the final City decision and approvals, including the final environmental impact report, mitigated negative declaration, negative declaration, or notice of exemption, and all documents, in addition to those referenced in paragraph (3), cited or relied on in the findings or in a statement of overriding considerations adopted pursuant to CEQA;

(10) Any other written materials relevant to the public agency's compliance with CEQA or to its decision on the merits of the Project, including the initial study, any drafts of any environmental document, or portions thereof, that have been released for public review, and copies of studies or other documents relied upon in any environmental document prepared for the Project and either made available to the public during the public review period or included in the City 's files on the Project, and all internal agency communications, including staff notes and memoranda related to the Project or to compliance with CEQA; and

(11) The full written record before any inferior administrative decisionmaking body whose decision was appealed to a superior administrative decisionmaking body prior to the filing of any litigation.

O2-1 Cont.

Please respond within 10 days from the date you receive this request as to whether this request specifies identifiable records not exempt from disclosure under the PRA or otherwise privileged or confidential, and are therefore subject to disclosure. This Office understands that this time may be extended up to 14 days for unusual circumstances as provided by Cal. Government Code § 6253(c), and that we will be notified of any extension and the reasons justifying it.

We request that you provide all documents in electronic format and waive any and all fees associated with this Request. SWRCC is a community-based organization. Please notify and obtain express approval from this Office before incurring any duplication costs.

If any of the above requested documents are available online, please provide us with the URL web address at which the documents may be downloaded. If any of the requested documents are retained by the City in electronic computer-readable format such as PDF (portable document format), please provide us with pdf copies of the

documents via email, or inform us of the location at which we can copy these documents electronically.

In preparing your response, please bear in mind that you have an obligation under Government Code section 6253.1 to (1) identify all records and information responsive to our request or the purpose of our request; (2) describe the information technology and physical location in which the records exist; and (3) provide suggestions for overcoming any practical basis for denying access to the records or information sought.

In responding to this request, please bear in mind that any exemptions from disclosure you may believe to be applicable are to be narrowly construed. *Marken v. Santa Monica-Malibu Unif. Sch. Dist.* (2012) 202 Cal. App. 4th 1250,1262; and may be further narrowed or eliminated by the adoption of Proposition 59, which amended article I, section 3(b)(2) of the California Constitution to direct that any "statute ... or other authority ... [that] limits the right of access" to "information concerning the conduct of the people's business" must be "narrowly construed."

As for any records that you nonetheless decline to produce on the grounds of an exemption, please bear in mind that the case law under the Public Records Act imposes a duty on you to distinguish between the exempt and the non-exempt portion of any such records, and to attempt in good faith to redact the exempt portion and to disclose the balance of such documents.

Please bear in mind further that should you choose to withhold any document from disclosure, you have a duty under Government Code section 6255, subd. (a) to "justify withholding any record by demonstrating that the record in question is exempt under express provisions" of the Public Records Act or that "the public interest served by not disclosing the record clearly outweighs the public interest served by disclosure of the record."

Finally, please note that you must retain and not destroy any and all records, notwithstanding any local record retention or document destruction policies. As the Court noted in *Golden Door Properties, LLC v. Superior Court of San Diego County* (2020) 53 Cal.App.5th 733 that a public agency "must retain '[a]ll written evidence or correspondence submitted to, or transferred from' . . . with respect to" CEQA compliance or "with respect to the project."

O2-1 Cont.

II. NOTICE LIST REQUEST.

We also ask that you put this Office on its notice list for any and all notices issued under the CEQA and the Planning and Zoning Law.

In particular, we request that City send by mail or electronic mail notice of any and all actions or hearings related to activities undertaken, authorized, approved, permitted, licensed, or certified by the City and any of its subdivision for the Project, or supported, in whole or in part, through permits, contracts, grants, subsidies, loans, or other forms of approvals, actions or assistance, including but not limited to the following:

- Notices of any public hearing held in connection with the Project; as well as
- Any and all notices prepared pursuant to CEQA, including but not limited to:
- Notices of determination that an Environmental Impact Report ("EIR") or supplemental EIR is required for a project, prepared pursuant to Public Resources Code Section 21080.4;
- Notices of availability of an EIR or a negative declaration for a project prepared pursuant to Public Resources Code Section 21152 and Section 15087 of Title 14 of the California Code of Regulations;
- Notices of approval or determination to carry out a project, prepared pursuant to Public Resources Code Section 21152 or any other provision of law;
- Notice of approval or certification of any EIR or negative declaration prepared pursuant to Public Resources Code Section 21152 or any other provision of law;
- Notice of exemption from CEQA prepared pursuant to Public Resources Code section 21152 or any other provision of law; and
- Notice of any Final EIR prepared pursuant to CEQA.

This Office is requesting notices of any approvals or public hearings under CEQA and the California Planning and Zoning Law. This request is filed pursuant to California

O2-1 Cont.

Public Resources Code Sections 21092.2, and 21167(f) and Government Code Section 65092 requiring agencies to mail such notices to any person who has filed a written request for them with the clerk of the agency's governing body.

Please send notice by regular and electronic mail to:

Response to Comment Letter O2

Southwest Regional Council of Carpenters
March 22, 2021

O2-1 This comment requests a copy of any and all information related to the proposed Project, including any and all notices of any and all hearings and/or actions related to the Project. The comment's request will be granted pursuant to the California Public Records Act (Government Code §§6250-6270); California Environmental Quality Act (CEQA) (Public Resource Code §21000 et seq); and Planning and Zoning Law (Government Code §§65000-65010), as cited in the letter.

As specified in Section 3.7 of the Draft EIR, the Project applicant has requested approvals including the certification of the Final EIR and the adoption of the Pacific Coast Commons Specific Plan, for example, which would be considered at a public hearing by the City's decision makers. These potential future approvals would be notified to the public in compliance with State and local regulations including the Ralph M. Brown Act (Government Code Section 54950, et seq.). The designated contacts for the Southwest Regional Council of Carpenters will be included in all future notices of actions or hearings related to the proposed Project. Furthermore, in accordance with CEQA Guidelines Section 15094, the Lead Agency shall file a Notice of Determination (NOD) within five working days after deciding to carry out or approve the project. The NOD will also be filed with the Los Angeles County Clerk and the Governor's Office of Planning and Research State Clearinghouse. Lastly, the comment does not express any environmental comments or concerns related to the environmental analysis in the Draft EIR. No changes or additions to the project description or analyses included in the Draft EIR are required.

Re: Comment on Draft Environmental Impact Report, Pacific Coast Commons Specific Plan (SCH# 2020050508)

Dear Mr. Samaras:

I am writing on behalf of Supporters Alliance For Environmental Responsibility ("SAFER") regarding the Draft Environmental Impact Report ("DEIR") prepared for the Project known as Pacific Coast Commons Specific Plan, aka SCH# 2020050508, including all actions related or referring to the proposed demolition of existing surface parking lots and construction of a new mixed use development located at 401-575 N. Pacific Coast Highway (PCH) and the parking lot on 600-block of PCH in the City of El Segundo ("Project").

After reviewing the DEIR, we conclude that the DEIR fails as an informational document and fails to impose all feasible mitigation measures to reduce the Project's impacts. SAFER requests that the Development Services Department address these shortcomings in a revised draft environmental impact report ("RDEIR") and recirculate the RDEIR prior to considering approvals for the Project. We reserve the right to supplement these comments during review of the Final EIR for the Project and at public hearings concerning the Project. *Galante Vineyards v. Monterey Peninsula Water Management Dist.*, 60 Cal. App. 4th 1109, 1121 (1997).

O3-1

Sincerely,

Rebecca Davis

INTENTIONALLY LEFT BLANK

Response to Comment Letter 03

Supporters Alliance for Environmental Responsibility (SAFER)
April 12, 2021

03-1 This commenter's assertion that the Draft EIR "fails as an informational document and fails to impose all feasible mitigation measures to reduce the Project's impacts" is inaccurate. This statement does not identify any deficiencies of the document and does not support this general assertion with any evidence.

The Draft EIR has been prepared in conformance with the substantive and procedural requirements of CEQA and the CEQA Guidelines. Specifically, the Draft EIR includes all of the required contents of an EIR and the associated required details and topics for analysis, as set forth in Sections 15120 through 15132 of the CEQA Guidelines. Furthermore, the Draft EIR was prepared by experts in the disciples of environmental impact assessment. For example, the topic of noise was evaluated by an Institute of Noise Control Engineering certified professional; the topic of archaeological resources was evaluated by a Registered Professional Archaeologist; the topic of historic resources was evaluated by professionals with master's degrees in the field; the topic of hazards and hazardous materials was evaluated by a professional engineer; and the topic of transportation was evaluated by an American Institute of Certified Planners professional. All conclusions in the Draft EIR are supported by substantial evidence (including facts, reasonable assumptions predicated upon facts, and expert opinion supported by facts), as defined in Section 15384 of the CEQA Guidelines.
