INITIAL STUDY

1. Project Title:

650 PCH Project

2. Lead Agency Name/Address:

City of El Segundo
350 Main Street
El Segundo, CA 90245

3. Contact Person and Phone Number:

Eduardo Schonborn, AICP, Principal Planner
(310) 524-2312

4. Project Location:

The Project Site is located in the north-central portion of the City of El Segundo on the east side of Pacific Coast Highway between East Maple Avenue to the north and East Mariposa Avenue to the south, in the County of Los Angeles. Specifically, the Project Site is located at 650 and 700 North Pacific Coast Highway and 737 Carl Jacobson Way, approximately 0.45 mile south of Los Angeles International Airport (LAX) and approximately 2 miles east of the Pacific Ocean. Regional access to the Project site is provided via State Route 1 (Pacific Coast Highway), the San Diego Freeway (Interstate 405), located approximately 1.4 miles east of the Project site, and Interstate 105, located approximately 0.35 mile to the north. The site is approximately 0.4 mile northwest of the LA Metro Green Line Mariposa station.

Los Angeles County Assessor's Parcel Numbers (APN): The Project site is composed of seven contiguous parcels: 4138-006-030; 4138-006-031 (there are two parcels associated with this APN); 4138-006-005; 4138-006-010; 4138-006-014; and 4138-006-032.

Lot Size: 316,142 square feet or approximately 7.3 acres.

Figures: **Figure 1** shows the location of the Project site in the region, and **Figure 2** and **Figure 3** show the Project site and local vicinity in its local context.

Site Description: The Project site is an irregularly shaped, approximately 7.3-acre collection of seven parcels located between North Pacific Coast Highway and Carl Jacobson Way. The Project site is currently improved with three office buildings (referred to as Buildings A, B, and D) and surface parking lots. Five of the parcels are occupied by the existing office buildings, with the remaining two parcels consisting of a landlocked interior parcel improved with a surface parking lot and a narrow parcel comprising a former railroad spur, which runs north and south from East Maple Avenue to East Mariposa Avenue.

Building A (APN 4138-006-031) is located at 650 North Pacific Coast Highway and is improved with an eight-story, rectangular office building with a partial floor penthouse on the ninth level and rooftop mechanical equipment. The structure has a net floor area of 98,885 square feet and a height of 131 feet, and is clad in light-colored concrete panels,

narrow, horizontal strips of windows, and black granite on the first floor of the street-facing façade of the structure.

Building B (APNs 4138-005-006 and -030) is located at 700 North Pacific Coast Highway and has a square-shaped two-story office building. The structure has a net floor area of 69,692 square feet and height of 36.5 feet, and is clad in red brick and accented with a natural stone veneer. A driveway and mechanical equipment are located on the north side of Building B. Surface parking lots are located behind both Building A and Building B and are accessible from Pacific Coast Highway via driveways on the north side of Building B and on the south side of Building A~~, as well as from the south via East Mariposa Avenue~~. Buildings A and B are both currently occupied by Boeing.

Building D (APN 4138-006-014) is located at 737 Carl Jacobson Way, east of Buildings A and B. Building D is a one-story office building clad in red brick and accented with natural stone veneer. The structure has a net floor area of 16,652 square feet and rises to a height of 17 feet. **Figure 4** provides photo exhibits of existing conditions on the Project site. While Building D is part of the Project site, there are no changes proposed for this parcel, as shown in **Figure 3.**

5. Project Applicant's Name and Address:

L&R ZAV 650 Sepulveda, LLC
8445 Santa Monica Boulevard, Suite 5
West Hollywood, CA 90069

6. General Plan Designation:

Corporate Office

7. Zoning:

Corporate Office (CO)

8. Proposed Project Description:

The Project would involve the renovation and minor alteration of two existing office buildings on the Project site: Building A at 650 North Pacific Coast Highway, with a net addition of 1,031 square feet to the existing 98,885 square feet, for a total of 99,916 square feet; and Building B at 700 North Pacific Coast Highway, with a net reduction of 4,572 square feet from the existing 69,692 square feet, for a total of 65,120 square feet. The Project would also include the demolition of the existing surface parking lot behind Building A and the construction of a new, 122,156-square-foot, 7-level office building with 70,921 square feet of office space and an integrated 7-level, 1,185-space parking structure (referred to herein as Building C). Refer to **Figure 5** showing the proposed Project site layout depicting the locations of Buildings A, B, and C. In addition, the Project would consolidate the seven parcels of land that make up the Project site into a single approximately 7.3-acre parcel.

The renovation and alteration of Building A would expand the top penthouse level by 3,963 square feet and would provide roof deck amenities; however, the Project would not alter the existing height of the building (refer to **Figure 6a**, Building Elevations). The Project would also improve the façade of Building A by enlarging existing windows and refinishing the exterior of the building to be consistent with the exterior of the proposed Building C. This

would result in removal of the existing concrete panels and replacing them with a curtain wall along Pacific Coast Highway. The renovation would also provide a pedestrian entrance from Pacific Coast Highway and a double-height lobby at the building's center on ground level 1 and level 2. Building A's east-facing façade will also be renovated, and new openings will be installed on the north facade. Interior renovations of Building A would include minor reductions and additions in square footage (the first and second floors would be reduced by 2,746 and 1,138 square feet, respectively). In addition to the proposed double-height lobby, reductions in square footage involve plumbing fixtures, non-bearing interior walls, first-level curbs, and an exterior canopy, roof, and associated structures. The building remodeling would also include increases of 140 square feet in square footage on each floor for the third through seventh floors. In total, the net new square footage of the additions and reductions as compared with existing conditions would be an addition of 1,031 square feet. A conceptual rendering of Building A is provided in **Figure 7a.**

The remodeling of Building B would not alter the height of the building. Rather, remodeling of Building B would involve small reductions in square footage on both the first and second floors. The first floor would be reduced by 1,657 square feet and the second floor would be reduced by 2,915 square feet for a total net reduction of 4,572 square feet (refer to **Figure 6a**, Building Elevations). The proposed demolitions include eliminating portions of a floor slab to make way for a new elevator shaft, removal of non-weight-bearing interior walls, doors, and certain stairs, and removal of a portion of the roof structure. Renovations would also include installation of new skylights, and new glazing along the Pacific Coast Highway building frontage. The exterior of the building would be remodeled to be consistent with Buildings A and C. This would include staining the brick exterior a dark color and replacing the stone veneer accents with light-colored smooth plaster, and the addition and replacement of punched openings on all facades to increase fenestration and bring natural light into the building. The building would also be improved with metal and glazing accents. A conceptual rendering of Building B is in **Figure 7a.**

The proposed Building C would be a seven-story office building with 70,921 square feet of office space and an integrated 1,185-space parking structure on the eastern side of the building. Building C would provide terraced spaces as private patio and balconies for the office uses and would be located directly behind (east) Building A. The Project would also construct a new plaza area between Buildings A and C. Building C and the plaza area would replace a large surface parking lot that provides parking to Buildings A and B. The new office building would be 112 feet, 8 inches in height to the top of the elevator enclosure (refer to **Figure 6b**, Building C Cross-Section), complying with the CO Zone development standards. Conceptual renderings of Building C are in **Figure 7a** and **Figure 7b.** As shown in conceptual renderings (**Figure 7a** and **Figure 7b**), the architecture of the new concrete Building C would have a contemporary design with extensive use of glass on the façade and exposed concrete floor slab edges. The integrated parking structure would have architectural grilles/perforated panels screening the parking levels along the west end of Building C facing Building A (refer to **Figure 6c**, Building Cross-Section: Building A and C), and the concrete would be similarly colored as the office portion. Planters would be located at select areas of the parking structure facades to add interest to the building's concrete exterior.

Outdoor Gathering Space and Landscaping

The Project would involve improvements across the Project property, including a landscaped plaza area bounded by Buildings A, B and C; renovated and enhanced

landscaping in existing planting areas along the Pacific Coast Highway street frontage; new landscaped areas along interior (sides and rear) property lines, including a portion of the railroad spur; resurfaced parking and loading areas in the existing surface parking areas; and realignment of portions of the existing fire lane. **Figure 8** shows the landscape areas, streetscape improvements, the terraced, outdoor space proposed as part of Building C, and landscaping in the Project site interior (including along internal drive aisles and at the rear of the proposed parking structure).

The Project would include a number of outdoor gathering areas as part of the proposed improvements. The Project site boundaries would be planted with a variety of drought-tolerant native and climate-adapted decorative landscaping. The Project would plant Brisbane box trees along the publicly visible areas of the Project improvement areas, namely along the Pacific Coast Highway Project site frontage, the eastern side of Building B, and along the eastern face of the proposed parking structure. Marina madrone trees would be planted along the north and south frontages of proposed Building C. The proposed courtyard between Buildings A, B, and C would include several large (60-inch box) Coast live oak trees, as well as California sycamore trees. The courtyard would also be surrounded by Brisbane box and marina madrone trees along building courtyard frontages. The courtyard itself would be planted with other decorative landscaping and groundcover such as coast buckwheat, blue sage, manzanita, coffeeberry, decorative groundcovers, and limited areas of turf grass. The courtyard would also include areas with enhanced paving (e.g., concrete tiles or pavers) and wood decks with raised wooden terraces for seating. The ground floor of Building C and the plaza area would be located approximately 14 feet below the sidewalk level on Pacific Coast Highway.

Parking, Circulation, and Infrastructure

As stated above, the Project would include a seven-level parking structure, which would be integrated with the proposed Building C and located on the eastern side of the Project site. The proposed parking structure would provide a total of 1,185 parking spaces to serve the office uses at the Project site and potentially other nearby parcels that do not have adequate parking. This includes 732 standard-sized parking spaces (502 standard spaces and 230 tandem spaces), 336 compact parking spaces (106 standard spaces and 230 tandem spaces), 22 accessible parking spaces (including standard and van-accessible spaces), 72 electric vehicle spaces, and 23 clean air vehicle spaces. In total, the Project site would have 1,256 spaces when including the 64 existing and proposed surface parking spaces on the north and east side of Building B, and the seven existing parking spaces o the north side of Building D. The Project would also include 128 short-term and long-term bicycle parking spaces. Loading space would be provided via three loading docks, located on the south side of Building C.

There are two existing curb cuts on Pacific Coast Highway that would remain as part of the Project. These driveways currently provide access to the existing surface parking areas, i.e., a large surface parking lot at the rear of Building A and smaller surface parking areas along the north and east sides of Building B. One driveway is located on the north side of Building B, which is a two-way driveway, but it only permits a right-turn ingress and right-turn egress turning movement (a median in Pacific Coast Highway prevents left-turn egress from the Project site). The other driveway is a two-way drive into the property, and is located at the south end of the property that currently passes underneath the southern end of Building A and down a ramp into the existing large surface parking lot, which is the proposed location of Building C. ~~An additional driveway is located on Mariposa Avenue on a neighboring~~

~~property, which currently provides access to the large surface parking lot in the center of the Project site. However, this driveway is for emergency vehicle access only and serves as a fire lane. The existing fire lane crosses the existing surface parking lot and exits the property at the northeast corner of 700 North Pacific Coast Highway through a gate continuing onto the property at 1910 East Maple Avenue, exiting onto Maple Avenue.~~

The proposed Project would keep the two curb cuts on Pacific Coast Highway, thus allowing ingress and egress from the existing driveways on the south side of Building A and the north side of Building B. The driveway on the south side of Building A would follow the southern boundary of the Project site, accessing the parking structure on the east side of Building C. This driveway would also provide fire access to the~~A~~ fire lane, which would be located around the exterior of the proposed parking structure, connecting to the existing fire lane on the ~~south side of the Project site (connecting to Mariposa Avenue) and the fire lane on the~~ north side of the Project site (connecting to Maple Avenue) (refer to **Figure 5**). As also shown on **Figure 5**, the driveway on the south side of the Project site would consist of designed concrete to enhance the visual aesthetic of the internal drive aisles. The existing asphalt driveway on the north side of the Project site, which wraps around Building B, would remain as asphalt.

The Project may potentially need to upgrade an existing six-inch sewer lateral line to an eight-inch line. The lateral runs northward from the center of the site, through the neighboring property located at 740 N. Pacific Coast Highway and connects to an existing eight-inch public sewer mainline in Maple Avenue. The upgrade work would involve either trenching or a trenchless replacement method, which will be determined based upon coordination and agreement between the different stakeholders. Ownership of the lateral and easement requirements will be checked and formalized as required.

Construction Activities

The Project would require an estimated 20,770 cubic yards of cut and 120 cubic yards of fill, resulting in a net of 20,650 cubic yards of export. Construction of the proposed Project is anticipated to occur in one phase over an approximately 16-month period, beginning approximately October 2021, finishing in February 2023. In addition to earthwork and installation of site improvements, construction activities would include connections to existing off-site water, sewer, storm drainage, natural gas, and electrical distribution facilities located in nearby streets. Consistent with the City's Noise Ordinance, construction would occur Monday through Saturday between the hours of 7:00 a.m. and 6:00 p.m.

9. Surrounding Land Uses and Setting:

The Project site is surrounded by a mix of office, retail, restaurant, and some non-conforming light industrial, manufacturing, and freight forwarding uses. Specifically, the surrounding area includes the following land uses:

North: North of Building B, along Pacific Coast Highway, is a Chick-Fil-A fast food restaurant (740 North Pacific Coast Highway), parking facilities, and a 76 gasoline station with auto repair service (770 North Pacific Coast Highway). North of Building B and east of Chick-Fil-A and the gas station is a wholesale electronic equipment supplies and a hair product manufacturer, both located in an industrial building (1910 Maple Avenue). A large data center is located east of Building B and north of the landlocked parcel behind

Building A. Northeast of the Project site is Marina Packing and Forwarding, a freight forwarding use, on the southwest corner of the Maple Avenue and Carl Jacobson Way intersection. These land uses north of the Project site are all zoned Corporate Office (CO) in the City's zoning code.

East: Across Carl Jacobson Way, east of the Project site, is the Automobile Driving Museum (610 Carl Jacobson Way) and light industrial uses such as an automotive collision repair shop (760 Carl Jacobson Way), and an animation studio (750 Carl Jacobson Way). These land uses are all zoned Corporate Office (CO) in the City's zoning code.

South: The property immediately south of Building A is a single-story commercial strip center containing retail and restaurant uses located on the northeast corner of Pacific Coast Highway and Mariposa Avenue (zoned General Commercial, C-3). The parking lot of this commercial center contains a stand-alone fast-food restaurant building with a drive-through. A light industrial building, containing a logistics company and a manufacturing business, is located south of the Project site and along the north side of Mariposa Avenue. These businesses are also zoned Corporate Office (CO).

West: The Project site is bound by Pacific Coast Highway to the west. Across Pacific Coast Highway, land uses include a 76 gasoline station with convenience store at the northwestern corner of the Pacific Coast Highway and Mariposa Avenue intersection, a surface parking lot associated with the Fairfield Inn and Suites Marriott hotel located 600 feet southwest of the Project site (525 Pacific Coast Highway), a fast food restaurant (639 Pacific Coast Highway), a currently vacant restaurant building with surface parking lot (707 Pacific Coast Highway), and a dine-in restaurant (IHOP) (755 Pacific Coast Highway). Farther west of the commercial uses along Pacific Coast Highway are single- and multi-family residential uses. The land uses directly across Pacific Coast Highway are zoned General Commercial (C-3) and parking lot (P) in the City's zoning code. Residential land uses farther west are zoned Multi-Family Residential (R-3) in the City's zoning code.

10. Required Approvals:

The City of El Segundo is the lead agency for the Project and has sole discretionary land use authority over the Project proposal. To implement this Project, the following approvals are required:

- A Zone Text Amendment to amend the definition of floor area (net)~~ratio (FAR)~~ in the El Segundo Municipal Code (ESMC) Section 15-1-6 to exempt a fully integrated parking structure within a new construction building (pursuant to Section 15-26 of the ESMC).

- A Vesting Tentative Parcel Map to consolidate seven parcels into one ground parcel (pursuant to Sections 14-2 and 14-3 of the ESMC).

- A Site Plan Review for a new commercial development that includes structures which have a combined gross floor area of more than 50,000 square feet (pursuant to Section 15-30-2 of the ESMC).

- Waivers of Street Dedication requirements on North Pacific Coast Highway, Mariposa Avenue and Carl Jacobson Way (pursuant to Section 15-24-A-5 of the ESMC).

11. Other Public Agencies Whose Approval Is Required (e.g., permits, financing approval, or particular agreement):

This Initial Study is intended to cover all approvals necessary to construct and operate the Proposed Project. No discretionary public agency approvals are known to be required for the Project, other than those required by the City of El Segundo.

12. Have California Native American tribes traditionally and culturally affiliated with the project area requested consultation pursuant to Public Resources Code Section 21080.3.1? If so, has consultation begun?

One tribe has requested to be notified of projects in the City of El Segundo—the Gabrieleño Band of Mission Indians – Kizh Nation. Please refer to the response to Checklist item 18 for information regarding notification of and consultation with the Gabrieleño Band of Mission Indians – Kizh Nation.

ENVIRONMENTAL FACTORS POTENTIALLY AFFECTED:

The environmental factors checked below would be potentially affected by this project, involving at least one impact that is a "Potentially Significant Impact" as indicated by the checklist on the following pages.

☐ Land Use and Planning	☐ Mineral Resources	☐ Aesthetics
☐ Population and Housing	☐ Hazards and Hazardous Materials	☐ Cultural Resources
☐ Geology and Soils	☐ Noise	☐ Recreation

EVALUATION OF ENVIRONMENTAL IMPACTS:

1) A brief explanation is required for all answers except "No Impact" answers that are adequately supported by the information sources a lead agency cites in the parentheses following each question. A "No Impact" answer is adequately supported if the referenced information sources show that the impact simply does not apply to projects like the one involved (e.g., the project falls outside a fault rupture zone). A "No Impact" answer should be explained where it is based on project-specific factors as well as general standards (e.g., the project will not expose sensitive receptors to pollutants, based on a project-specific screening analysis).

2) All answers must take account of the whole action involved, including off-site as well as on-site, cumulative as well as project-level, indirect as well as direct, and construction as well as operational impacts.

3) "Potentially Significant Impact" is appropriate if there is substantial evidence that an effect is significant. If there are one or more "Potentially Significant Impact" entries when the determination is made, an EIR is required.

4) "Potentially Significant Unless Mitigation Incorporated" applies where the incorporation of mitigation measures has reduced an effect from "Potentially Significant Impact" to a "Less Than Significant Impact." The lead agency must describe the mitigation measures and briefly explain how they reduce the effect to a less than significant level (mitigation measures from Section 17, Earlier Analysis, may be cross-referenced).

5) Earlier analysis may be used where, pursuant to the tiering, program EIR, or other CEQA process, an effect has been adequately analyzed in an earlier EIR or negative declaration, Section 15063(c)(3)(D). Earlier analyses are discussed in Section 19, at the end of the checklist, if utilized.

DETERMINATION:

On the basis of this initial evaluation:

☐ I find that the project COULD NOT have a significant effect on the environment, and a NEGATIVE DECLARATION will be prepared.

☒ I find that, although the proposed project could have a significant effect on the environment, there will not be a significant effect in this case because the mitigation measures described on an attached sheet have been added to the project. A MITIGATED NEGATIVE DECLARATION will be prepared.

☐ I find that the proposed project MAY have a significant effect on the environment, and an ENVIRONMENTAL IMPACT REPORT is required.

☐ I find that the proposed project MAY have a significant effect(s) on the environment, but at least one effect (1) has been adequately analyzed in an earlier document pursuant to applicable legal standards, and (2) has been addressed by mitigation measures based on earlier analysis as described on attached sheets, if the effect is a "potentially significant impact" or "potentially significant unless mitigated." An ENVIRONMENTAL IMPACT REPORT is required but must analyze only the effects that remain to be addressed.

☐ I find that although the proposed project could have a significant effect on the environment, there WILL NOT be a significant effect in this case because all potentially significant effect (a) have been analyzed adequately in an earlier EIR pursuant to applicable standards, and (b) have been avoided or mitigated pursuant to that earlier EIR, including revisions or mitigation measures that are imposed on the proposed project.

1. AESTHETICS

Would the project:	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
a. Have a substantial adverse effect on a scenic vista?	☐	☐	☐	☒
b. Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?	☐	☐	☐	☒
c. In non-urbanized area, substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from publicly accessible vantage point.) If the project is in an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality?	☐	☐	☐	☒
d. Create a new source of substantial light or glare, which would adversely affect day or nighttime views in the area?	☐	☒	☐	☐

Explanation of Checklist Responses

1.a) A scenic vista is generally considered as a publicly accessible, prominent vantage point that provides expansive views of highly valued landscapes or prominent visual elements. As described in the General Plan,[1] the City is located within the urbanized Los Angeles area, and is considered part of the Los Angeles International Airport (LAX)/South Bay subregion at the southwestern edge of the Los Angeles coastal basin (**Figure 1**). The Project vicinity includes LAX and I-105 approximately 0.5 mile to the north, the Hyperion Sewage Treatment Plant 2 miles directly east along the Pacific Ocean coast, the Chevron Refinery 0.6 mile to the south and southwest, and the 405 freeway 1.4 miles to the east (**Figure 2**). The Project site is located in a predominantly urbanized area of the City, with a mix of commercial, office, and residential uses. The El Segundo General Plan Exhibit C-10 (Master Plan of Streets) identifies Pacific Coast Highway/Sepulveda Boulevard as a major arterial in an area of the City which consists of and is surrounded by urban and developed land (**Figure 3**). There are no scenic vistas as defined above or identified by the General Plan in the Project area. Further, there are no unique cultural or topographic features that offer a distinctive and enhanced visual setting which is recognized for its scenic vista qualities. Lastly, the proposed zone text amendment, which would exclude parking area from the floor area (net)~~FAR~~ calculation, would not have any impact upon this issue area. Therefore, the Project would have **no impact** on a scenic vista or view.

1.b) The Project site is not located within a designated state scenic highway.[2] Further, the Project site is not visible from the designated scenic highways nearest to the site, a portion of Route 91 in Orange County and a portion of Route 27 in Topanga Canyon of

[1] City of El Segundo. 1992. *General Plan.*
[2] Caltrans (California Department of Transportation). 2019. *California State Scenic Highway System Map.*

Los Angeles County.[3] The Project site is located along Pacific Coast Highway, which includes portions identified as eligible State Scenic Highway segments; however, the Project site is not located within the eligible portions, the nearest being in Santa Monica, near Route 187, approximately 11 miles north of the Project site.[4] There are no unique cultural, biological or geographic features onsite that would be considered to be a scenic resource. As a result, the site will not visible from the designated or eligible scenic highways. Therefore, Project would have **no impact** to scenic resources within a state scenic highway.

1.c) As mentioned previously, the Project site is located within an urban area with a variety of urban land uses such as commercial, office, and residential land uses. The proposed office use would be consistent with the property's Corporate Office (CO) zoning classification, and the Project would comply with the CO zoning design standards under El Segundo Municipal Code (ESMC) Article D, Corporate Office (CO) Zone, pertaining to building height and bulk, landscaping, yards, signs and outdoor lighting. Additionally, the proposed zone text amendment, which would exclude parking area from the floor area (net)~~FAR~~ calculation, would have no conflict with the zoning. No other regulations governing scenic quality are applicable to the Project. In summary, the Project would result in **no impact** involving conflicts with zoning standards.

A project is generally considered to have a significant visual/aesthetic impact if it substantially changes the character of an area such that it becomes visually incompatible or degrades the existing context and quality of the site and its surroundings. The Project site has been developed with existing office buildings constructed in the 1960s, and an associated parking lot. Landscaping, including several trees, is present along the Project site's Pacific Coast Highway/Sepulveda Boulevard frontage. The Project area's visual character is defined by low-rise commercial, retail, industrial, residential, and mid-rise office developments. West of the Project site across PCH, these include a Carl's Jr. restaurant, a parking lot that serves the Fairfield Inn and Suites located on the next block south of Mariposa Avenue, and a Union 76 gas station. Developments north of the site include a Chick fil-A restaurant and several industrial uses, including E-Salon Color Studio, a manufacturer of hair products, Marshall Electronics, which is a wholesale electronic equipment supplier, a large data center, and Marina Packing & Forward freight company. Businesses to the east of the site include the Automobile Driving Museum and light industrial uses. Developments to the south of the Project site include a shopping center with El Pollo Loco and In-N-Out Burger restaurants and a 2-3 story office building. **Figure 3** and **Figure 4** show the existing developments at the Project site and the immediate surroundings. The developments in the area consist of a variety of commercial, retail, industrial, and office uses that do not exhibit a distinct visual character and there is no uniformity of architectural styles or coherent visual theme.

The primary objectives of the Project include improving the visual appearance of the existing buildings and beautifying property. The Project proposes to renovate the two existing office buildings (Buildings A and B) along Pacific Coast Highway, demolish the surface parking on the Project site, and construct a new office building, Building C with an integrated parking structure along with a cohesive landscaped plaza. The buildings

[3] California Department of Transportation. 2019. *California State Scenic Highway System Map*.
[4] California Department of Transportation. 2019. *California State Scenic Highway System Map*.

will be renovated and constructed in a contemporary design, as shown in the architectural renderings on **Figures 7a** and **7b**. Building A will have a curtainwall including metal and glass elements. The existing brick facades on Building B will be cleaned and stained with colors matching the overall design palette. Both Buildings A and B will have added entrances and increased landscaping along Pacific Coast Highway. While Building C will be shielded from views from the west along PCH, the new building will be visible from the north, south, and east. the office portion of the new structure will be constructed with concrete and glass, and the design elements consistent with Buildings A and B. The integrated parking will be constructed concrete with architectural grilles and planters, with a similar color and design aesthetic as the office portion. The unifying central plaza area will include enhanced paving, wood seating, and significantly increased landscaping, including more than 75 trees of various species and ground covers and shrubs providing shade and seasonal color.

As described and depicted in the architectural renderings, the Project would improve the visual quality of the existing site with uniform and coherent architectural design and would enhance the visual character of the existing office buildings. Lastly, the proposed zone text amendment, which would exclude parking area from the floor area (net)~~FAR~~ calculation, would not have any impact upon this issue area. In summary, the Project would result in a **beneficial impact** on the visual character and visual quality in the Project area.

1.d) Light. The two primary sources of light are those emanating from building interiors that passes through windows, and light from exterior sources, such as street lighting, parking lot lighting, building illumination, security lighting, and landscape lighting. Depending on the location of the light source and its proximity to adjacent light-sensitive uses, light introduction may become a nuisance, affecting adjacent areas and diminishing the view of the clear night sky. Light spillage is typically defined as unwanted illumination from light fixtures on adjacent properties.

The Project involves the use of interior office lighting that is typical with office use. The lighting may be visible for surrounding areas during the nighttime; however, similar to the existing office lighting, the internal lighting would not be directly outward from the buildings and would not be considered new sources of substantial light.

The Project proposes use of security and safety lighting at entry areas, exit doors and at select perimeters areas (i.e., at the north and south sides of the buildings for safety visibility from Pacific Coast Highway), which will be shielded, low lumen downlighting, and will conform to the minimum ESMC required lighting for safety and security. The roof terrace will have well shielded, low lumen downlighting. Building C will have low level lighting for safety at exterior terraces, and the parking structure lighting will conform to the minimum ESMC requirements and will not be directed outward. The courtyard will have lower-level pole lighting and low lumen landscape lighting for nighttime safety and is surrounded by existing buildings and a perimeter site wall. As a result, no light from the Project is expected to spill onto adjacent properties or be a substantial source of light from off-site locations.

While off-site light intrusion is not expected, Mitigation Measure AES-1 will be implemented to ensure that the Project's outdoor lighting is properly designed to avoid such impacts. With implementation of Mitigation Measure AES-1, impacts would be **less than significant**.

Mitigation Measure AES-1: Prior to issuance of a building permit, the Project applicant must submit a lighting plan to the City for review and approval by the Director of Planning and Building Safety. The plan must include the location, height, number of lights, foot-candles by area, and estimates of maximum illumination on-site with no spill at the property lines. The plan must also demonstrate that all lighting fixtures on the buildings and throughout the entire project site are designed and installed so as to contain light on the subject property and will not create spillover effects or be directed toward adjacent properties or public rights-of-way.

Timing/Implementation: Prior to issuance of building permits

Monitoring/Enforcement: El Segundo Planning and Building Safety Department

Glare. Glare and glint refer to the unwanted reflection of the sun's rays or other forms of light by the face of a reflective surface. Glare is primarily a daytime occurrence caused by the reflection of sunlight or artificial light by highly polished surfaces such as window glass or reflective materials and, to a lesser degree, from broad expanses of light-colored surfaces. Glare can also be produced during evening and nighttime hours by the reflection of artificial light sources such as automobile headlights. Glare generation is typically related to either moving vehicles or sun angles, although glare resulting from reflected sunlight can occur regularly at certain times of the year. While glare is a continuous source of excessive brightness, glint is a momentary flash of light produced as a direct reflection of light, which could be experienced by an observer passing at speed, such as a motorist. Glare-sensitive uses include residences, hotels, transportation corridors, and aircraft landing corridors. Glint-sensitive uses include motorists along a transportation corridor and aircraft.

A Glare Analysis was prepared for the Project (**Appendix A**), which assessed the Project's potential to create glare on glare-sensitive uses along the Pacific Coast Highway corridor and the residential areas in the Project vicinity. The existing eight-story Building A was identified as having the potential to create glare based on the existing building height, location next to Pacific Coast Highway and 270 feet east of the nearest residential use (along East Palm Avenue), westward facing position, and the proposed renovation with a curtainwall using metal and glass materials. While the new structure, Building C, is proposed with glass facades, due to the location of the building behind the existing Building A, which extends nearly 20 feet higher than Building C, Building C would be screened from views directly west of the Project site. Portions of Building C would be visible from PCH south of the Project site and along Mariposa Avenue. Based on the orientation of Building C's glass facades, while sunlight would not result in a sustained reflection off the south-oriented façade to result in glare, observers may experience temporary glint. However, when evaluated with the following proposed surface treatments and selection of materials, the effects of glare were not found to be substantial: low-emissivity (low-e) glass that is clear and permits visible light to enter the building, thus reducing reflectivity; metal cladding on the curtainwall to be finished with aluminum composite panels (ACP), with matte white or matte, clear anodized aluminum finish, which would diffuse light; and concrete on the north and south elevations to be painted with low sheen paint and clad limitedly in matte finish ACP with matte white or matte, clear anodized aluminum finish. Similarly, the selected materials and proposed surface treatments would diffuse incident light and reduce the potential for glint.

While the Project is not expected to generate substantial glint and glare, Mitigation Measure AES-2 will be implemented to ensure that the Project's material use and surface treatments are properly incorporated to avoid such effects. With implementation of Mitigation Measure AES-2, impacts would be **less than significant**.

Mitigation Measure AES-2: Prior to issuance of a building permit, the Project applicant must submit the Final Design Plans to the City for review and approval by the Director of Planning and Building Safety. The plans must identify the material use that meets the Visible Light Reflection (VLR) performance of the following:

i) The new west-facing façade of Building A and south-facing façade of Building C shall employ a high-performance glazing system comprising a commercial glazing equal to Vitro Solarban 70(2) + Clear with exterior visible light reflection (VLR) of 13% or less;
ii) Exterior metal cladding on the Building A curtainwall facing Pacific Coast Highway to be finished with aluminum composite panels (ACP), with matte white or matte, clear anodized aluminum finish; and,
iii) Concrete on the north and south elevations of Building A will be painted with low sheen paint and clad limitedly in matte finish ACP with matte white or matte, clear anodized aluminum finish.

Timing/Implementation: *Prior to issuance of building permits*

Monitoring/Enforcement: *El Segundo Planning and Building Safety Department*

2. AGRICULTURE AND FOREST RESOURCES

In determining whether impacts to agricultural resources are significant environmental effects, lead agencies may refer to the California Agricultural Land Evaluation and Site Assessment Model (1997) prepared by the California Department of Conservation as an optional model to use in assessing impacts on agriculture and farmland. In determining whether impacts to forest resources, including timberland, are significant environmental effects, lead agencies may refer to information compiled by the California Department of Forestry and Fire Protection regarding the state's inventory of forest land, including the Forest and Range Assessment Project and the Forest Legacy Assessment project; and forest carbon measurement methodology provided in Forest Protocols adopted by the California Air Resources Board. Would the project:	**Potentially Significant Impact**	**Less Than Significant With Mitigation Incorporated**	**Less Than Significant Impact**	**No Impact**
a. Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to nonagricultural use?	☐	☐	☐	☒
b. Conflict with existing zoning for agricultural use, or a Williamson Act contract?	☐	☐	☐	☒
c. Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code Section 12220(g)), timberland (as defined by Public Resources Code Section 4526), or timberland zoned Timberland Production (as defined by Government Code Section 51104(g))?	☐	☐	☐	☒
d. Result in the loss of forest land or conversion of forest land to non-forest use?	☐	☐	☐	☒
e. Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland, to nonagricultural use or conversion of forest land to non-forest use?	☐	☐	☐	☒

Explanation of Checklist Responses

2.a) The Farmland Mapping and Monitoring Program (FMMP) produces maps and statistical data that are used for analyzing impacts on California's agricultural resources. Agricultural land is rated according to soil quality and irrigation status. The maps are updated every two years with the use of a computer mapping system, aerial imagery, public review, and field reconnaissance. FMMP produces Important Farmland Maps, which are a hybrid of resource quality (soils) and land use information. The Project site is identified as Urban and Built-Up Land,[5] which is defined as land occupied by structures with a building density of at least 1 unit to 1.5 acres, and is used for residential, industrial,

[5] California Department of Conservation. 2020. *California Important Farmland Finder*.

commercial, construction, institutional, public administration, railroad and other transportation yards, and other developed purposes.[6]

The Project site is currently developed with three office buildings and surface parking lots, and it is located in a fully developed and urbanized area of El Segundo. Further, the site is not adjacent to or near any land used for agricultural purposes. The Project site is not designated in the FMMP as Prime Farmland, Unique Farmland, or Farmland of Statewide Importance, and would not involve conversion of Farmland. Lastly, the proposed zone text amendment, which would exclude parking area from the floor area (net)~~FAR~~ calculation, would not have any impact upon this issue area. As such, the Project would result in **no impact**.

2.b) The Project site and the surrounding area is not zoned for agriculture. Instead the site is zoned Corporate Office (CO) and surrounding areas area zoned either CO or General Commercial. Neither of these zones permit agricultural use and there is no farmland on-site or in the vicinity.[7] The proposed Project, including the zone text amendment, would have no impact involving a conflict with zoning for agricultural use. The Project site is not part of a Williamson Act contract or any other sort of deed or land use restrictions intended to preserve or foster agricultural uses; therefore, there would be **no impact** involving a conflict with such zoning or land restrictions.

2.c) As noted above, the subject property is zoned CO, which is intended to provide for the development of office projects, as stated in ESMC Section 15-5D-1, and has no applicability to forestland or timberland. All surrounding land is fully developed with commercial and some non-conforming light industrial and manufacturing uses. There is no forest or timberland on or near the Project site. Therefore, there would be **no impact** involving a conflict with zoning for forest or timberland.

2.d) The Project site has been previously developed with commercial uses and does not contain any forestland. All surrounding land is fully developed with commercial and some non-conforming industrial and manufacturing uses. There is no forest or timberland on or near the Project site. Therefore, the Project would not cause the conversion of forest land to non-forest use, and would result in **no impact**.

2.e) The Project site is currently developed with office buildings and surface parking, and there are no agricultural or forest uses in the vicinity. Therefore, the Project would not involve changes in the existing environment that could result in conversion of Farmland to nonagricultural use or the conversion of forestland to non-forest use. As such, there would be **no impact**.

[6] California Department of Conservation. 2020. *California Important Farmland Categories*.
[7] El Segundo Municipal Code, Title 15, Chapter 5, Article C and Article D.

3. AIR QUALITY

Where available, the significance criteria established by the applicable air quality management or air pollution control district may be relied upon to make the following determinations. Would the project:	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
a. Conflict with or obstruct implementation of the applicable air quality plan?	☐	☐	☒	☐
b. Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard?	☐	☐	☒	☐
c. Expose sensitive receptors to substantial pollutant concentrations?	☐	☐	☒	☐
d. Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?	☐	☐	☒	☐

The following analysis is based in part on the information contained in *Air Quality, Energy, and Greenhouse Gas Emissions Impact Analysis* prepared by Vista Environmental dated December 21, 2020. This report, hereinafter referred to as the AQ-Energy-GHG Study, is included as **Appendix B** of this IS/MND.

Background

The Project site is within the South Coast Air Basin (SCAB), which is under the jurisdiction of the South Coast Air Quality Management District (SCAQMD). As the local air quality management agency, the SCAQMD is required to monitor air pollutant levels to ensure that state and federal air quality standards are met and, if they are not met, to develop strategies to meet the standards. The health effects associated with criteria pollutants upon which attainment of state and federal quality standards is measured are described in **Table 3-1**. Depending on whether the standards are met or exceeded, SCAB is classified as being in attainment or nonattainment, as summarized in **Table 3-2**.

SCAB is designated as nonattainment for the federal and state 1-hour and 8-hour ozone standards, the state PM_{10} standards, and the federal and state $PM_{2.5}$ standards, which are provided in **Table 3-1**. The Los Angeles County portion of SCAB is also designated as non-attainment for federal lead standards. Thus, SCAB currently exceeds state and federal ambient air quality standards for these pollutants. The SCAQMD is required to implement strategies to reduce pollutant levels to acceptable standards. This nonattainment status is a result of several factors, primarily the naturally adverse meteorological conditions that limit the dispersion and diffusion of pollutants, the limited capacity of the local airshed to eliminate air pollutants, and the number, type, and density of emission sources within SCAB. The SCAQMD has adopted an Air Quality Management Plan (AQMP) that includes a strategy for the attainment of state and federal air quality standards.[8]

[8] South Coast Air Quality Management District. 2016. *2016 Air Quality Management Plan*.

Table 3-1. State and Federal Criteria Pollutant Standards

Air Pollutant	Concentration / Averaging Time		Most Relevant Effects
	California Standards	Federal Primary Standards	
Ozone (O_3)	0.09 ppm / 1-hour 0.07 ppm / 8-hour	0.070 ppm, / 8-hour	(a) Pulmonary function decrements and localized lung edema in humans and animals; (b) Risk to public health implied by alterations in pulmonary morphology and host defense in animals; (c) Increased mortality risk; (d) Risk to public health implied by altered connective tissue metabolism and altered pulmonary morphology in animals after long-term exposures and pulmonary function decrements in chronically exposed humans; (e) Vegetation damage; and (f) Property damage.
Carbon Monoxide (CO)	20.0 ppm / 1-hour 9.0 ppm / 8-hour	35.0 ppm / 1-hour 9.0 ppm / 8-hour	(a) Aggravation of angina pectoris and other aspects of coronary heart disease; (b) Decreased exercise tolerance in persons with peripheral vascular disease and lung disease; (c) Impairment of central nervous system functions; and (d) Possible increased risk to fetuses.
Nitrogen Dioxide (NO_2)	0.18 ppm / 1-hour 0.030 ppm / annual	100 ppb / 1-hour 0.053 ppm / annual	(a) Potential to aggravate chronic respiratory disease and respiratory symptoms in sensitive groups; (b) Risk to public health implied by pulmonary and extra-pulmonary biochemical and cellular changes and pulmonary structural changes; and (c) Contribution to atmospheric discoloration.
Sulfur Dioxide (SO_2)	0.25 ppm / 1-hour 0.04 ppm / 24-hour	75 ppb / 1-hour 0.14 ppm/annual	(a) Bronchoconstriction accompanied by symptoms which may include wheezing, shortness of breath and chest tightness, during exercise or physical activity in persons with asthma.
Suspended Particulate Matter (PM_{10})	50 µg/m^3 / 24-hour 20 µg/m^3 / annual	150 µg/m^3 / 24-hour	(a) Exacerbation of symptoms in sensitive patients with respiratory or cardiovascular disease; (b) Declines in pulmonary function growth in children; and (c) Increased risk of premature death from heart or lung diseases in elderly.
Suspended Particulate Matter ($PM_{2.5}$)	12 µg/m^3 / annual	35 µg/m^3 / 24-hour 12 µg/m^3 / annual	
Sulfates	25 µg/m^3 / 24-hour	No Federal Standards	(a) Decrease in ventilatory function; (b) Aggravation of asthmatic symptoms; (c) Aggravation of cardio-pulmonary disease; (d) Vegetation damage; (e) Degradation of visibility; and (f) Property damage.
Lead	1.5 µg/m^3 / 30-day	0.15 µg/m^3 /3-month rolling	(a) Learning disabilities; and (b) Impairment of blood formation and nerve conduction.
Visibility Reducing Particles	Extinction coefficient of 0.23 per kilometer - visibility of ten miles or more due to particles when relative humidity is less than 70 percent.	No Federal Standards	Visibility impairment on days when relative humidity is less than 70 percent.

Explanation of Checklist Responses

3.a) As part of its enforcement responsibilities, the United States Environmental Protection Agency (USEPA) requires each state with nonattainment areas to prepare and submit a State Implementation Plan (SIP) that demonstrates the means to attain the federal standards. The SIP must integrate federal, state, and local plan components and regulations to identify specific measures to reduce pollution in nonattainment areas,

using a combination of performance standards and market-based programs. Similarly, under state law, the California Clean Air Act requires an air quality attainment plan to be prepared for areas designated as nonattainment with regard to the federal and state ambient air quality standards. Air quality attainment plans outline emissions limits and control measures to achieve and maintain these standards by the earliest practical date.

As previously mentioned, the Project site is located within SCAB, which is under the jurisdiction of the SCAQMD. The SCAQMD is required, pursuant to the federal Clean Air Act, to reduce emissions of criteria pollutants for which SCAB is in nonattainment. In order to reduce such emissions, the SCAQMD prepared the 2016 Air Quality Management Plan. The 2016 AQMP establishes a program of rules and regulations directed at reducing air pollutant emissions and achieving state (California) and national air quality standards. The 2016 AQMP is a regional, multi-agency effort including SCAQMD, the California Air Resources Board (CARB), the Southern California Association of Governments (SCAG), and the USEPA. The plan's pollutant control strategies are based on the latest scientific and technical information and planning assumptions, including SCAG's 2016 Regional Transportation Plan/Sustainable Communities Strategy, updated emissions inventory methodologies for various source categories, and SCAG's latest growth forecasts. (SCAG's latest growth forecasts were defined in consultation with local governments and with reference to local general plans.) The project is subject to the SCAQMD's Air Quality Management Plan.

Criteria for determining consistency with the AQMP are defined by the following indicators:

- Consistency Criterion No. 1: Whether the project will result in an increase in the frequency or severity of existing air quality violations or cause or contribute to new violations, or delay timely attainment of air quality standards or the interim emission reductions specified in the AQMP.
- Consistency Criterion No. 2: Whether the project will exceed the assumptions in the AQMP or increments based on the year of project buildout and phase.

Both of these criteria are evaluated in the following sections.

Criterion 1 - Increase in the Frequency or Severity of Violations?

Based on the air quality modeling analysis contained in **Appendix B** and summarized herein in **Tables 3-3 and 3-4**, short-term construction air emissions would not result in significant impacts based on SCAQMD regional thresholds of significance or local thresholds of significance. As summarized in **Table 3-5** herein, the ongoing operation of the Project would generate air pollutant emissions that are inconsequential on a regional basis and would not result in significant impacts based on SCAQMD thresholds of significance. As shown in **Table 3-5**, the analysis for long-term local air quality impacts showed that local pollutant concentrations would not be projected to exceed the air quality standards. Therefore, a less than significant long-term impact would occur and no mitigation would be required.

Therefore, based on the information provided above, the proposed Project would be consistent with the first criterion.

Criterion 2 - Exceed Assumptions in the AQMP?

Consistency with the AQMP assumptions is determined by performing an analysis of the Project with the assumptions in the AQMP. The emphasis of this criterion is to ensure that the analyses conducted for the Project are based on the same forecasts for regional growth as the AQMP. The AQMP is developed through use of the planning forecasts provided in the 2016–2040 Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS) and the SCAG Federal Transportation Improvement Program (FTIP). Population forecasts are developed through a number of socio-economic variables and with input from local government agencies with respect to their long-range land use plans and local growth forecasts. The RTP/SCS is a major planning document for the regional transportation and land use network within Southern California. The RTP/SCS is a long-range plan that is required by federal and state requirements placed on SCAG and is updated every four years. The FTIP provides long-range planning for future transportation improvement projects that are constructed with state and/or federal funds within Southern California. Local governments are required to manage their communities in a manner consistent with these regional plans.

The Project site is currently designated as Corporate Office in the General Plan and is zoned Corporate Office (CO). The CO Zone permits a maximum floor area ratio (FAR) of 0.8:1. As such, the 7.2-acre Project site is allowed a maximum 252,913.6 square feet of net floor area. Since the proposed Project would result in a total of 235,057 square feet of net floor area, the Project is consistent with the existing land use designation and zoning. However, since the zoning code is unclear if the proposed parking structure is included in the FAR, the applicant is requesting a Zone Text Amendment to amend the definition of ~~F~~floor ~~A~~area (net)~~Ratio~~ within ESMC Section 15-1-6 to exempt a fully integrated parking structure within a new construction building. It should be noted the generation of vehicle trips and associated air emissions are generated by the amount of office building square footage and not by the size of the parking lot/structure or the number of parking spaces. As such, the proposed Zone Text Amendment for the proposed parking structure would not change the AQMP assumptions for the Project site. Therefore, the proposed Project, including the proposed zone text amendment, is not anticipated to exceed the AQMP assumptions, and is found to be consistent with the AQMP for the second criterion.

Based on the above, the Project would not result in an inconsistency with the SCAQMD AQMP. Therefore, a less than significant impact will occur in relation to implementation of the AQMP and no mitigation would be required.

3.b) The following section provides the calculated potential air emissions associated with the construction and operations of the Project and compares the emissions to the SCAQMD CEQA thresholds of significance.

Construction Emissions

The Project construction activities are anticipated to include demolition and rough grading of the existing surface parking lot, grading and foundation construction, building renovation and construction, application of architectural coatings, and paving and site improvements. The construction emissions have been analyzed for both regional and local air quality impacts.

Construction-Related Regional Impacts

The CalEEMod model has been used to calculate the Project construction-related regional emissions. The worst-case summer or winter daily Project construction-related criteria pollutant emissions for each phase of construction activities are shown below in **Table 3-3**. Since it is possible that building construction/renovation, architectural coating, and paving/site improvement activities may occur concurrently towards the end of the building construction phase, **Table 3-3** shows the combined regional criteria pollutant emissions from building construction/renovation (year 2023), architectural coating, and paving/site improvement phases of construction.

Table 3-3 shows that none of the analyzed criteria pollutants would exceed the regional emissions thresholds during either demolition/rough grading, grading/foundation, building construction/ renovation, or the combined building construction/renovation, architectural coatings, and paving/site improvement phases. Therefore, the Project construction would result in a **less than significant impact** to regional air quality and no mitigation would be required.

Table 3-3. Construction-Related Regional Criteria Pollutant Emissions

Activity	Pollutant Emissions (pounds/day)					
	VOC	NOx	CO	SO_2	PM10	PM2.5
Demolition/Rough Grading[1]						
On-site	4.65	49.34	33.30	0.07	3.71	2.20
Off-site	0.41	8.61	3.16	0.03	0.97	0.29
Total	5.05	57.95	36.46	0.10	4.68	2.48
Grading/Foundation[1]

Construction-Related Local Impacts

Construction-related air emissions may have the potential to exceed the State and Federal air quality standards in the Project vicinity, even though these pollutant emissions may not be significant enough to create a regional impact to the Air Basin.

The local air quality emissions from construction were analyzed through utilizing the methodology described in *Localized Significance Threshold Methodology* (LST Methodology), prepared by SCAQMD, revised October 2009. The LST Methodology found the primary criteria pollutant emissions of concern are NO_x, CO, PM10, and PM2.5. In order to determine if any of these pollutants require a detailed analysis of the local air quality impacts, each phase of construction was screened using the SCAQMD's Mass Rate LST Look-up Tables. The Look-up Tables were developed by the SCAQMD in order to readily determine if the daily onsite- emissions of CO, NO_x, PM10, and PM2.5 from the proposed project could result in a significant impact to the local air quality.

Table 3-4 shows the on-site emissions from the CalEEMod model for the different construction phases and the calculated localized emissions thresholds that have been detailed. Since it is possible that building construction/renovation, architectural coating, and paving/site improvement activities may occur concurrently, **Table 3-4** shows the combined local criteria pollutant emissions from building construction, paving and architectural coating phases of construction.

Table 3-4. Construction-Related Local Criteria Pollutant Emissions

Phase	Pollutant Emissions[1] (pounds/day)			
	NOx	CO	PM10	PM2.5
Demolition/Rough Grading[2]	50.42	33.70	3.83	2.23
Grading/Foundation[2]	23.52	13.28	3.83	2.34
Building Construction/Renovation (year 2022)	9.45	11.03	0.96	0.54
Combined Building Construction/Renovation (2023), Architectural Coatings, and Paving/Site Improvements	22.00	27.78	1.72	1.17
Maximum Daily Construction Emissions	50.42	33.70	3.83	2.34
SCAQMD Local Construction Thresholds[3]	197	2,387	55	16
Exceeds Threshold?	No	No	No	No

Notes:
[1] The Pollutant Emissions include 100% of the on-site emissions (off-road equipment and fugitive dust) and 1/8 of the off-site emissions (on road trucks and worker vehicles), in order to account for the on-road emissions that occur within a ¼ mile of the project site.
[2] Demolition and Grading phases based on adherence to fugitive dust suppression requirements from SCAQMD Rule 403.
[3] The nearest off-site sensitive receptors to the Project site are multi-family homes located as near as 270 feet (82 meters) west of the project site. As such, the 50 and 100 meter thresholds were interpolated to 82 meters.
Source: AQ Energy GHG Study, see **Appendix B**. Calculated from SCAQMD's Mass Rate Look-up Tables for five acres in Air Monitoring Area 3, Southwest Coastal LA County.

As shown in **Table 3-4**, the Project would not exceed any criteria pollutant local emissions thresholds during either demolition/rough grading, grading/foundation, building construction/renovation, or the combined building construction/renovation, architectural coatings, and paving/site improvement phases. Lastly, the proposed zone text amendment, which would exclude parking area from the floor area (net)~~FAR~~ calculation, would not have any impact upon this issue area. Therefore, construction of the Project would result in a **less than significant impact** to local air quality and no mitigation would be required.

Operational Emissions

The on-going operation of the Project would result in a long-term increase in air quality emissions. This increase would be due to emissions from onsite- area sources, energy usage, and Project generated vehicle trip emissions. The following section provides an analysis of potential long-term air quality impacts due to regional air quality and local air quality impacts with the on-going operations of the Project.

Operations-Related Regional Criteria Pollutant Analysis

The operations-related regional criteria air quality impacts created by Project have been analyzed through use of the CalEEMod model. The Project's worst-case summer or winter VOC, NO_x, CO, SO_2, PM10, and PM2.5 daily emissions during long-term operations have been calculated and are summarized below in **TABLE 3-**5.

Table 3-5. Operational Regional Criteria Pollutant Emissions

	Pollutant Emissions (pounds/day)					
Emissions Source	**VOC**	**NOx**	**CO**	**SO_2**	**PM10**	**PM2.5**
Area Sources[1]	7.60	<0.00	0.16	<0.00	<0.00	<0.00
Energy Usage[2]	0.10	0.92	0.78	0.01	0.07	0.07
Mobile Sources[3]	4.02	16.50	48.09	0.18	14.68	4.01
Total Emissions	11.72	17.42	49.02	0.18	14.75	4.08
SCQAMD Operational Thresholds	55	55	550	150	150	55
Exceeds Threshold?	No	No	No	No	No	No

Notes:
[1] Area sources consist of emissions from consumer products, architectural coatings, and landscaping equipment.
[2] Energy usage consist of emissions from natural gas usage.
[3] Mobile sources consist of emissions from vehicles and road dust.
Source: AQ Energy GHG Study, see **Appendix B**. Calculated from CalEEMod Version 2016.3.2.

As shown in **Table 3-5**, the long-term operation of the Project would not exceed the criteria pollutant regional emissions thresholds. Lastly, the proposed zone text amendment, which would exclude parking area from the floor area (net)~~FAR~~ calculation, would not have any impact upon this issue area. Therefore, operation of the Project would result a less than significant regional air quality impact and no mitigation would be required.

3.c) Some land uses are considered more sensitive to air pollution than others because of the types of population groups or activities involved. Sensitive population groups

include children, the elderly, the acutely ill, and the chronically ill, especially those with cardiorespiratory diseases. Residential areas are considered to be sensitive receptors to air pollution because residents (including children and the elderly) tend to be at home for extended periods of time, resulting in sustained exposure to any pollutants present. Children are considered more susceptible to the health effects of air pollution due to their immature immune systems and developing organs. As such, schools are also considered sensitive receptors, as children are present for extended durations and engage in regular outdoor activities. Recreational land uses are considered moderately sensitive to air pollution. Although exposure periods are generally short, exercise places a high demand on respiratory functions, which can be impaired by air pollution. In addition, noticeable air pollution can detract from the enjoyment of recreation.

The proposed Project would not expose sensitive receptors to substantial pollutant concentrations. The local concentrations of criteria pollutant emissions produced in the nearby vicinity of the Project, which may expose sensitive receptors to substantial concentrations have been calculated for both construction and operations, which are discussed separately below. The discussion below also includes an analysis of the potential impacts from toxic air contaminant emissions. The nearest sensitive receptors to the Project site are residents at the multi-family homes located as near as 270 feet west of the Project site.

Construction-Related Sensitive Receptor Impacts

The Project construction activities are anticipated to include demolition and rough grading of the existing surface parking lot, grading and foundation construction, building renovation and construction, application of architectural coatings, and paving and site improvements. Construction activities may expose sensitive receptors to substantial pollutant concentrations of localized criteria pollutant concentrations and from toxic air contaminant emissions created from on-site construction equipment, which are described below.

Local Criteria Pollutant Impacts from Construction

The local air quality impacts from the Project construction has been analyzed, with the results provided in **Table 3-4**, which provides the on-site emissions from the CalEEMod model for the different construction phases and the calculated localized emissions thresholds. Since it is possible that building construction/renovation, architectural coating, and paving/site improvement activities may occur concurrently, the results combine local criteria pollutant emissions from building construction, paving and architectural coating phases of construction. As shown, the Project construction emissions would not exceed the local NO_x, CO, PM10 and PM2.5 thresholds of significance. Therefore, construction of the proposed project would create a **less than significant** construction-related impact to local air quality and **no mitigation** would be required.

Toxic Air Contaminants Impacts from Construction

The greatest potential for toxic air contaminant emissions would be related to diesel particulate matter (DPM) emissions associated with heavy equipment operations during Project construction. According to SCAQMD methodology, health effects from carcinogenic air toxics are usually described in terms of "individual cancer risk."

"Individual Cancer Risk" is the likelihood that a person exposed to concentrations of toxic air contaminants over a 70-year lifetime will contract cancer, based on the use of standard risk-assessment methodology. It should be noted that the most current cancer risk assessment methodology recommends analyzing a 30-year exposure period for the nearby sensitive receptors.[9]

The Project construction activities involve the operation of diesel-powered haul trucks and off-road equipment that would operate between 270 feet and 1,000 feet from the nearest homes to the west. The maximum haul trips would occur during the combined demolition and grading phase, which entail the export of 26,575 cubic yards of material requiring a total of 3,322 haul trips and averaging 83 haul trips per day over 40 days. According to CAPCOA's 2009 *Health Risk Assessments for Proposed Land Use Projects*, CAPCOA recommends that sensitive receptors should not be placed within 1,000 feet of distribution centers that generate more than 100 trucks per day or more than 40 trucks per day with transport refrigeration units (TRUs). Since construction activities would generate less than the 100 trucks per day threshold that would have the potential to create a significant TAC impact at the nearby sensitive receptors as determined by CAPCOA's screening criteria, a less than significant TAC impact would occur from construction-related haul trucks.

There would be up to nine pieces of diesel-powered off-road equipment operating simultaneously on the Project site during the combined demolition and rough grading phase. All diesel-powered powered equipment would be required to adhere to California Code of Regulations Title 13, Article 4.8, Chapter 9, Section 2449 that regulates emissions from off-road diesel equipment in California. This regulation limits idling of equipment to no more than five minutes, requires equipment operators to label each piece of equipment and provide annual reports to CARB of their fleet's usage and emissions. This regulation also requires systematic upgrading of the emission Tier level of each fleet, and currently no commercial operator is allowed to purchase Tier 0 or Tier 1 equipment and by January 2023 no commercial operator is allowed to purchase Tier 2 equipment. In addition to the purchase restrictions, equipment operators need to meet fleet average emissions targets that become more stringent each year between years 2014 and 2023. As of January 2019, 25 percent or more of all contractors' equipment fleets must be Tier 2 or higher.

Given the relatively limited number of heavy-duty construction equipment and haul trucks used during the demolition and grading phase, the varying distances that construction equipment would operate to the nearby sensitive receptors, and the short-term construction schedule, the proposed Project would not result in a long-term (i.e., 30 or 70 years) substantial source of toxic air contaminant emissions and corresponding individual cancer risk Therefore, no significant short-term toxic air contaminant impacts would occur during construction of the proposed project. As such, construction of the proposed Project would result in a **less than significant** exposure of sensitive receptors to substantial pollutant concentrations and no mitigation would be required.

Operations-Related Sensitive Receptor Impacts

[9] California Office of Environmental Health Hazard Assessment. 2015. *The Air Toxics Hot Spots Program Guidance Manual for Preparation of Health Risk Assessments.*

The following sections analyze the effects of on-going operations of the Project, and the potential to expose sensitive receptors to substantial pollutant concentrations from the potential local air quality impacts from on-site operations and from possible toxic air contaminant impacts.

Local Criteria Pollutant Impacts from On-site Operations

The local air quality impacts from the Project operation would occur from on-site sources such as architectural coatings, landscaping equipment, and natural gas appliances, as well as from vehicle emissions from the Project site and the immediate vicinity. The local NOx, CO, PM10 and PM2.5 emissions resulting from the Project operations were analyzed using the SCAQMD's Mass Rate LST Look-up Tables and the methodology described in LST Methodology, and the results are summarized in **Table 3-5**. As shown, operation of the Project would not exceed the LST thresholds of significance. Therefore, the on-going operations of the proposed project would create a **less than significant** operations-related impact to local air quality due to on-site emissions and no mitigation would be required.

Operations-Related Toxic Air Contaminant Impacts

Particulate matter (PM) from diesel exhaust is the predominant Toxic Air Contaminant (TAC) in most areas and according to *The California Almanac of Emissions and Air Quality 2013 Edition*, prepared by CARB, about 80 percent of the outdoor TAC cancer risk is from diesel exhaust. The proposed Project would not generate other sources of TACs that could affect neighboring land uses. Some chemicals in diesel exhaust, such as benzene and formaldehyde have been listed as carcinogens by State Proposition 65 and the Federal Hazardous Air Pollutants program. According to *Health Risk Assessments for Proposed Land Use Project*, prepared by California Air Pollution Control Officers Association (CAPCOA), July 2009, recommends that sensitive receptors should not be placed within 1,000 feet of distribution centers that generate more than 100 trucks per day or more than 40 trucks per day with transport refrigeration units (TRUs).

According to the ITE Trip Generation 10th Edition Supplement, Version 2/20/20, for the ITE Land Use 710 – General Office Building, daily truck trips represent 1 percent of the overall trip generation for the proposed project. Per the Noise Study (**Appendix G**), the proposed Project would generate 2,797 gross daily trips, this would result in 28 daily truck trips per day or 14 truck deliveries per day to the Project site. Since the proposed project would generate well below the 100 trucks per day threshold that would have the potential to create a significant TAC impact at the nearby sensitive receptors as determined by CAPCOA's screening criteria, a **less than significant** TAC impact would occur during the on-going operations of the proposed Project and no mitigation would be required.

Therefore, operation of the proposed Project, including the zone text amendment, would result in a **less than significant** exposure of sensitive receptors to substantial pollutant concentrations.

3.d) The Project would not create objectionable odors affecting a substantial number of people. Individual responses to odors are highly variable and can result in a variety of effects. Generally, the impact of an odor results from a variety of factors such as frequency, duration, offensiveness, location, and sensory perception. The frequency is

a measure of how often an individual is exposed to an odor in the ambient environment. The intensity refers to an individual's or group's perception of the odor strength or concentration. The duration of an odor refers to the elapsed time over which an odor is experienced. The offensiveness of the odor is the subjective rating of the pleasantness or unpleasantness of an odor. The location accounts for the type of area in which a potentially affected person lives, works, or visits; the type of activity in which he or she is engaged; and the sensitivity of the impacted receptor.

Construction-Related Odor Impacts

Potential sources that may emit odors during construction activities include the application of coatings such as asphalt pavement, paints and solvents and from emissions from diesel equipment. Standard construction requirements that limit the time of day when construction may occur as well as SCAQMD Rule 1108 that limits VOC content in asphalt and Rule 1113 that limits the VOC content in paints and solvents would minimize odor impacts from construction. As such, the objectionable odors that may be produced during the construction process would be temporary and would not likely be noticeable for extended periods of time beyond the project site's boundaries. Through compliance with the applicable regulations that reduce odors and due to the transitory nature of construction odors, a **less than significant** odor impact would occur and no mitigation would be required.

Operations-Related Odor Impacts

Potential sources that may emit odors during the on-going operations of the Project would primarily occur from the outdoor trash storage areas. There would be no odor sources from building interior activities or building systems that would reach the outdoor atmosphere. Pursuant to City regulations, permanent trash enclosures that protect trash bins from rain as well as limit air circulation would be required for the trash storage areas. Due to the distance of the nearest receptors from the Project site and through compliance with SCAQMD's Rule 402 and City trash storage regulations, no significant impact related to odors would occur during the on-going operations of the proposed Project. Therefore, a less than significant odor impact would occur and no mitigation would be required.

4. BIOLOGICAL RESOURCES

Would the project:	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
a. Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special-status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or US Fish and Wildlife Service?	☐	☐	☐	☒
b. Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the California Department of Fish and Wildlife or US Fish and Wildlife Service?	☐	☐	☐	☒
c. Have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?	☐	☐	☐	☒
d. Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?	☐	☐	☐	☒
e. Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?	☐	☐	☐	☒
f. Conflict with the provisions of an adopted habitat conservation plan, natural community conservation plan, or other approved local, regional, or state habitat conservation plan?	☐	☐	☐	☒

Explanation of Checklist Responses

4.a–d) The Project site is in a fully developed, urbanized portion of the City and is not located in an area with high ecological sensitivity. As previously mentioned, the Project site is currently developed with existing office buildings and surface parking lots. The existing office buildings include: Building A, an eight-story, rectangular office building; Building B, a two-story, square office building; and Building D, a one-story, rectangular office building. There are limited ornamental trees and shrubs along the Project site's frontage along Pacific Coast Highway that vary in size, species, and health. Two mature street trees are located within the sidewalk between Building A and Pacific Coast Highway, which would be removed as part of the proposed Project; however, given that these trees are located within an urbanized area and surrounded by impervious surfaces, they are unlikely to support any sensitive wildlife species. One ornamental coniferous tree is located on the western frontage of Building A between the structure and the surface parking lot. The Project applicant would be required to comply with ESMC Title 9 Chapter Three (Street Trees), which states that removal of a street tree by a private entity requires a permit from the City. Further, whenever a street tree is removed or

destroyed pursuant to any tree permit, the permittee must plant another tree. The Project proposes to include more than 75 trees of a varying species throughout the Project site, including a selection of specimen size Coast Live Oaks that would visually enhance the plaza. Other areas enhanced with new trees include the front setback area of Buildings A and B along the Pacific Coast Highway street frontage and the eastern edge of the existing surface parking lot behind Building B. The increased landscaping as compared with existing conditions would beautify the site, provide much needed shade, increase site permeability, and increase the size of the City's urban forest, thus reducing heat island effect.

The Project site does not contain any natural vegetation, natural communities, or biological resources that could support any sensitive plants or wildlife species. The property is not in an area designated as critical habitat for any sensitive wildlife species, nor is the area subject to any conservation plans, recovery plans, or similar policies and ordinances. There are no wetlands, marshes, surface drainages, ponds, lakes, streams, or any type of water-based habitat or any riparian communities on or near the Project site. No food or water sources are on-site or in the surrounding areas that would support migrating fish or wildlife. The vegetation and animal species supported in the limited man-made ornamental landscaping beds include species that are commonly found in urban environments and are thus, not protected by California Department of Fish and Wildlife or U.S. Fish and Wildlife Service. Lastly, the proposed zone text amendment, which would exclude parking area from the floor area (net)~~FAR~~ calculation, would not have any impact upon this issue area. As a result, the Project would have **no impact** on sensitive or protected biological resources, migratory wildlife corridors, or protected wetland and riparian habitats.

4.e) As stated above, there are limited ornamental trees and shrubs along the Project site's Pacific Coast Highway frontage that vary in size, species, and health. This includes two mature street trees, which are located within the sidewalk between Building A and Pacific Coast Highway. These two trees would be removed as part of the proposed Project. The Project applicant would be required to comply with ESMC Title 9 Chapter Three (Street Trees), which states that a permit to remove a street tree is necessary. Further, whenever a street tree is removed or destroyed pursuant to any tree permit, the permittee must plant another tree. The proposed Project would provide landscaping to meet the types and minimum sizes of plant material (trees, shrubs, and groundcover) in landscaped areas in the plaza and in setback areas as required in the zoning regulations in the El Segundo Municipal Code. Street trees would be installed where required and where feasible in compliance with the requirements of El Segundo's Municipal Code and the City's Master Street Tree Plan. As stated above, more than 75 trees of a varying species would be planted throughout the Project site, which would include several specimen size Coast Live Oaks that would be planted in the proposed plaza between Building A and the proposed Building C. Other areas enhanced with new trees would include the front setback area of the Buildings A and B along the Pacific Coast Highway street frontage and the eastern edge of the existing surface parking lot behind Building B. Compliance with the City's Street Tree chapter of the municipal code, which would be confirmed through the City's plan check process, would ensure that the Project would not conflict with an applicable local policy or ordinance protecting biological resources. Lastly, the proposed zone text amendment, which would exclude parking area from the floor area (net)~~FAR~~ calculation, would not have any impact upon this issue area. As such, the Project would result in **no impact**.

4.f) As stated above, the Project site is a previously disturbed site with no existing natural vegetation. Although there are areas within El Segundo that contain sensitive habitat, they are located in coastal areas, specifically, coastal habitat for the El Segundo Blue Butterfly. As described in the General Plan Conservation Element, the El Segundo Blue Butterfly is listed on the federal endangered species list, and is dependent upon and rarely strays from coastal buckwheat plants. At this time, the butterfly occurs on a 1.96 acre preserve adjacent to and maintained by the Chevron Refinery and in the dune area under the flight path of the Los Angeles International Airport. Since this project is not located in the City's Coastal Zone, coastal sensitive habitat would not be impacted by the Proposed Project. As such, given the existing use of the Project site as commercial office space and surface parking lots, the Project would not conflict with provisions of an adopted habitat conservation plan, natural community conservation plan, or other approved local, regional, or state habitat conservation plan and the Project would have **no impact**.

5. CULTURAL RESOURCES

Would the project:	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
a. Cause a substantial adverse change in the significance of a historical resource pursuant to CEQA Guidelines Section 15064.5?	☐	☐	☒	☐
b. Cause a substantial adverse change in the significance of an archaeological resource pursuant to CEQA Guidelines Section 15064.5?	☐	☒	☐	☐
c. Disturb any human remains, including those interred outside of formal cemeteries?	☐	☐	☒	☐

The following analysis is based in part on the information contained in the Project Cultural Resources Memorandum by Michael Baker International, which is included as **Appendix C** of this IS/MND.

Explanation of Checklist Responses

5.a) A historical resource is defined in CEQA Guidelines Section 15064.5(a)(3) as any object, building, structure, site, area, place, record, or manuscript determined to be historically significant or significant in the architectural, engineering, scientific, economic, agricultural, educational, social, political, military, or cultural annals of California. Historical resources are further defined as being associated with significant events, important persons, or distinctive characteristics of a type, period, or method of construction; representing the work of an important creative individual; or possessing high artistic values.

The potential for historic resources on the Project site was evaluated in the Project Cultural Resources Memorandum by Michael Baker International (see **Appendix C**). The Project area was undeveloped until 1927, and then between 1928 and 1947, the land was used for agricultural purposes. No built features are depicted within the Project area until 1953 with the extant building at 737 Lairport Street (Carl Jacobson Way) (Building D). By 1964, both 650 and 700 North Pacific Coast Highway (Building A and Building B, respectively) were constructed. While Building A (650 North Pacific Coast Highway) was designed by noted architect Daniel Dworsky, the building has been permanently altered for over 55 years and was previously graded to accommodate the existing structure foundations and parking uses. Building A and Building B were evaluated for inclusion in the California Register and recommended ineligible for listing under Criteria 1, 2, 3, and 4 both individually and as contributors to a historic district due to a lack of association with a historic context. Additionally, the resources were evaluated in accordance with Section 15064.5(a)(2)–(3) of the CEQA Guidelines using the criteria outlined in Section 5024.1 of the California Public Resources Code, and they do not appear to be historic resources for the purposes of CEQA. As evaluated in the Project Cultural Resources Memorandum, the Project site neither contains structures listed on the National Register of Historic Places nor includes structures listed as a Los Angeles Historic–Cultural Monument. As such, the Project would have **a less than significant impact** on a historic resource.

5.b) An archaeological resource is defined in Section 15064.5(c) of the CEQA Guidelines as a site, area, or place determined to be historically significant as defined in Section 15064.5(a) (see definition of historical resource in checklist response 14.a) or as a unique archaeological resource defined in Public Resources Code Section 21083.2 as an artifact, object, or site that contains information needed to answer important scientific research questions of public interest, or that has a special and particular quality such as being the oldest or best example of its type, or that is directly associated with a scientifically recognized important prehistoric or historic event or person.

The earliest inhabitants to the Los Angeles Basin occurred in the Paleocoastal or Paleoindian Period terms, indicating proximity to the coast and is generally dated between about 13,000 and 8,500 before present (BP). These earliest inhabitants were highly mobile hunter-gatherers. Others redefined the Millingstone Horizon as the Encinitas Tradition, which dates to between about 8,500 BP and 3,500 BP. Encinitas is a widespread cultural phenomenon distinguished by an abundance of manos and metates and a dearth of vertebrate faunal remains, projectile points, and mortar and pestle groundstone tools. Definitions of the Intermediate Period and Late Prehistoric Period continue to be employed as temporal periods, though understanding of cultural practices, technology, and migrations, among other aspects, has been thoroughly deepened.

At the beginning of the historic period, the Project location is understood to be within the ancestral territory of the Gabrieliños though no Gabrieliño villages are known to be within the vicinity of the Project site, and the place name *Waachnga* is located approximately 3 miles to the north-northwest. This place name potentially corresponds to the location of *Gauchn*, an Indigenous village. The Gabrieliño Indians are named because of their association with the Mission San Gabriel Arcángel, located approximately 20 miles northeast. Generally, their territory included all of the Los Angeles Basin, parts of the Santa Ana and Santa Monica Mountains, along the coast from Aliso Creek in the south to Topanga Canyon in the north, and San Clemente, San Nicolas, and Santa Catalina Islands. The Gabrielino spoke a dialect of the Cupan group of the Takic language family.

The Project area was once part of Rancho Sausal Redondo, and as mentioned above, remained undeveloped until 1927. The cultural resources assessment included a records search (File No. 21729.7831) on October 15, 2020 through the South Central Coastal Information Center (SCCIC). The SCCIC, as part of the California Historical Resources Information System, California State University, Fullerton, an affiliate of the California Office of Historic Preservation (OHP), is the official state repository of cultural resources records and reports for Los Angeles County. Three cultural resource reports were previously completed within the Project area, and six were completed within the quarter-mile search area, as identified in **Table 5-1**.

No cultural resources were identified within the Project area; however, because the Project would involve excavations for a new building that would include native soils, there is potential, however slight, to uncover previously undiscovered archaeological resources from the regional inhabitants.

As a result, the following Mitigation Measure CUL-1 will be implemented such that in the event of any discovery of unknown cultural resources during earthwork, impacts would be **less than significant**.

Table 5-1. Previous Cultural Resource Investigations within 0.25 Mile of Project Site

Mitigation Measure CUL-1: Archaeological and Native American monitoring shall be conducted for any grading-related ground disturbing activity have the potential to disturb native soils (i.e., non-engineered fill) within the Project site. Monitoring shall be performed under the direction of a qualified archaeologist meeting the Secretary of the Interior's Professional Qualifications Standards for archaeology (National Park Service 1983). If cultural resources are encountered during ground-disturbing activities, work in the immediate area must halt and the find must be evaluated by the qualified archaeologist. Depending upon the nature of the find, if the discovery proves to be potentially significant under CEQA, as determined by the qualified archaeologist, additional work such as data recovery excavation, avoidance of the area of the find, documentation, testing, data recovery, reburial, archival review and/or transfer to the appropriate museum or educational institution, or other appropriate actions may be warranted at the discretion of the qualified archaeologist. The archaeologist shall complete a report of excavations and findings and submit the report to the Director of Planning and Building Safety. After the find is appropriately mitigated, work in the area may resume.

Timing/Implementation: *Applicant to submit evidence of a contracted qualified archaeologist to the City prior to issuance of building permits*

Monitoring/Enforcement: El Segundo Planning and Building Safety Department

5.c) No evidence of any prior human burials or use as a burial ground was identified in the Cultural Resources Assessment (see **Appendix C**) and Native American Consultation process conducted for this property. Based on the fully developed conditions on the site and the extent of disturbance on the entire property, the likelihood that Project

construction would encounter and impact any human remains is expected to be remote.

In the unlikely event that human remains are encountered during Project ground-disturbing activities, the remains shall be treated in accordance with California Health and Safety Code Section 7050.5, which states that no further disturbance shall occur until the County Coroner has made a determination of the origin and disposition pursuant to Public Resources Code Section 5097.98. In the event of an unanticipated discovery of human remains, the County Coroner shall be notified immediately. If the human remains are determined to be prehistoric, the coroner shall notify the Native American Heritage Commission (NAHC), which shall determine and notify the most likely descendant (MLD). The MLD shall complete the inspection of the site within 48 hours of notification and may recommend scientific removal and nondestructive analysis of human remains and items associated with Native American burials. Compliance with these regulations would reduce any potential impacts to a **less than significant** level.

6. ENERGY

Would the project:	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
a. Result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary construction of energy resources, during project construction or operation?	☐	☐	☒	☐
b. Conflict with or obstruct a state or local plan for renewable energy or energy efficiency?	☐	☐	☒	☐

The following analysis is based in part on the information contained in *Air Quality, Energy, and Greenhouse Gas Emissions Impact Analysis* prepared by Vista Environmental dated December 21, 2020. This report, hereinafter referred to as the AQ-Energy-GHG Study, is included as **Appendix B** of this IS/MND.

Explanation of Checklist Responses

6.a) The proposed Project would impact energy resources during construction and operation. Energy resources that would be potentially impacted include electricity, natural gas, and petroleum-based fuel supplies and distribution systems.

Project Construction

The Project construction activities are anticipated to include demolition and rough grading of the existing surface parking lot, grading and foundation construction, building renovation and construction, application of architectural coatings, and paving and site improvements. Based on these activities, the proposed Project would consume energy resources during construction in three (3) general forms:

1. Petroleum-based fuels used to power off-road construction vehicles and equipment on the Project site, construction worker travel to and from the Project site, as well as delivery and haul truck trips (e.g. hauling of demolition material to off-site reuse and disposal facilities);
2. Electricity associated with the conveyance of water that would be used during Project construction for dust control (supply and conveyance) and electricity to power any necessary lighting during construction, electronic equipment, or other construction activities necessitating electrical power; and,
3. Energy used in the production of construction materials, such as asphalt, steel, concrete, pipes, and manufactured or processed materials such as lumber and glass.

Construction-Related Electricity

During construction, the Project would consume electricity to construct the new structures and infrastructure. Electricity would be supplied to the Project site by Southern California Edison (SCE) and would be obtained from the existing electrical lines on the Project site. The use of electricity from existing power lines rather than temporary diesel

or gasoline powered generators would minimize impacts on energy use. Electricity consumed during Project construction would vary throughout the construction period based on the construction activities being performed. Various construction activities include electricity associated with the conveyance of water that would be used during Project construction for dust control (supply and conveyance) and electricity to power any necessary lighting during construction, electronic equipment, or other construction activities necessitating electrical power. Such electricity demand would be temporary, nominal, and would cease upon the completion of construction. Overall, the Project construction would require limited electricity consumption that would not be expected to have an adverse impact on available electricity supplies and infrastructure. Therefore, the use of electricity during Project construction would not be considered wasteful, inefficient, or unnecessary.

Since SCE already provides power to the Project site, it is anticipated that only nominal improvements would be required to SCE distribution lines and equipment with development of the proposed project. Compliance with the ESMC and SCE requirements would ensure that the proposed Project fulfills its responsibilities relative to infrastructure installation, coordinates any electrical infrastructure removals or relocations, and limits any impacts associated with construction of the project. Construction of the Project's electrical infrastructure is not anticipated to adversely affect the electrical infrastructure serving the surrounding uses or utility system capacity. Impacts would be **less than significant** and no mitigation would be required.

Construction-Related Natural Gas

The Project construction would not involve the consumption of natural gas. Natural gas would not be supplied to support construction activities, thus there would be no demand generated by construction. Since SoCal Gas already provides natural gas to the Project site, construction-related activities would be limited to installation of new natural gas connections within the Project site. Similarly, the Project would not require extensive natural gas infrastructure improvements to serve the buildings. Construction-related energy usage impacts associated with the installation of natural gas connections are expected to be confined to trenching in order to place the lines below surface. In addition, prior to ground disturbance, the Project would notify and coordinate with SoCalGas to identify the locations and depth of all existing gas lines and avoid disruption of gas service. Therefore, construction-related impacts to natural gas supply and infrastructure would be **less than significant** and no mitigation would be required.

Construction-Related Petroleum Fuel Use

Petroleum-based fuel usage represents the highest amount of transportation energy potentially consumed during construction, which would utilized by both off-road equipment operating on the project site and on-road automobiles transporting workers to and from the project site and on-road trucks transporting equipment and supplies to the project site.

The off-road construction equipment fuel usage was calculated through use of the off-road equipment assumptions and fuel use assumptions provided by the applicant, which found that the off-road equipment utilized during Project construction would consume 43,106 gallons of fuel. The on-road construction trips fuel usage was

calculated through use of the construction vehicle trip assumptions and fuel use assumptions, which found that the on-road trips generated from Project construction, including truck haul trips to export soil cut an demolition debris, would consume 112,908 gallons of fuel. As such, the combined fuel used from off-road construction equipment and on-road construction trips for the proposed project would result in the consumption of 156,015 gallons of petroleum fuel. This equates to 0.0039 percent[10] of the gasoline and diesel consumed in the County of Los Angeles annually.

The Project construction activities would be required to adhere to all State and SCAQMD regulations for off-road equipment and on-road trucks, which provide minimum fuel efficiency standards. As such, construction activities would not result in the wasteful, inefficient, and unnecessary consumption of energy resources. Impacts regarding transportation energy would be less than significant. Development of the proposed project would not result in the need to manufacture construction materials or create new building material facilities specifically to supply the Project. While it is difficult to measure the energy used in the production of construction materials such as asphalt, steel, and concrete, it is reasonable to assume that the production of building materials such as concrete, steel, etc., would employ all reasonable energy conservation practices in the interest of minimizing the cost of doing business.

Operation of the Project would result in consumption of electricity for interior and exterior lighting, heating and cooling systems, a variety of electrical appliances and office machinery, electrical vehicle charging infrastructure, and for outdoor irrigation system controls. The Project electricity consumption during operations was calculated to be 598,220 kilowatt-hours per year of electricity. This equates to 0.0098 percent[11] of the electricity consumed annually in the County of Los Angeles.

It should be noted, the Project would be required to comply with all Federal, State, and City requirements related to the electricity consumption, including California Code of Regulations (CCR) Title 24, Part 6 *Building Energy Efficiency Standards* and CCR Title 24, Part 11: *California Green Building Standards.* The CCR Title 24, Part 6 and Part 11 standards require numerous energy efficiency measures to be incorporated into the proposed office buildings, including enhanced insulation, use of energy efficient lighting and appliances, water and space heating systems, as well as requiring a variety of other energy-efficiency measures to be incorporated into the proposed office structures. Therefore, it is anticipated the Project will be designed and built to maximize efficiency of electricity use and that existing and planned electricity capacity and electricity supplies would be sufficient to support the proposed project's electricity demand. Lastly, the proposed zone text amendment, which would exclude parking area from the floor area (net)~~FAR~~ calculation, would not have any impact upon this issue area. Thus, the Project would not result in the wasteful or inefficient use of electricity and impacts would be **less than significant**, with no required mitigation measures.

[10] According to the California Energy Commission's "2010-2017_A15_Results.xlsx", in 2017, 3,659 million gallons of gasoline and 300 million gallons of diesel was sold in Los Angeles County. Data accessed on January 3, 2021 at: https://ww2.energy.ca.gov/almanac/transportation_data/gasoline/).

[11] According to the California Energy Commission, in 2019, Los Angeles County consumed 66,118 Gigawatt-hours per year of electricity. Data accessed on January 3, 2021 at: http://www.ecdms.energy.ca.gov/elecbycounty.aspx,)

Operations-Related Natural Gas

Project operations would result in increased consumption of natural gas, which was calculated to be 3,435 MBTU per year of natural gas. This equates to 0.0011 percent[12] of the natural gas consumed annually in Los Angeles County.

As mentioned previously, the Project would be required to comply with all Federal, State, and City requirements, including those related to the natural gas consumption. These include CCR Title 24, Part 6 *Building Energy Efficiency Standards* and CCR Title 24, Part 11: *California Green Building Standards.* The CCR Title 24, Part 6 and Part 11 standards require numerous energy efficiency measures to be incorporated into projects, including enhanced insulation as well as use of efficient natural gas appliances and HVAC units. Therefore, it is anticipated the Project will be designed and built to maximize efficiency of natural gas use and that existing and planned natural gas capacity and natural gas supplies would be sufficient to support the proposed Project's natural gas demand. Lastly, the proposed zone text amendment, which would exclude parking area from the floor area (net)~~FAR~~ calculation, would not have any impact upon this issue area. Thus, impacts with regard to wasteful or inefficient use of natural gas supply and infrastructure capacity would be **less than significant** and no mitigation measures would be required.

Therefore, the proposed Project, including the proposed zone text amendment, would not result in the wasteful, inefficient, or unnecessary consumption of energy resources during project construction or operation. Impacts would be **less than significant** and no mitigation would be required.

6.b) The proposed Project would not conflict with or obstruct a state or local plan for renewable energy or energy efficiency. Although the City has not adopted any specific plans that address energy efficiency, the City adopted the *City of El Segundo Climate Action Plan* on December 2017, that has been prepared to help the City comply with the City's GHG emissions reduction goals through implementation of many measures that also result in energy conservation and efficiency. As noted in **Table 8-2** in Section 8 – Greenhouse Gas Emissions, the Project would be consistent with the City's CAP and with the applicable energy efficiency strategies set forth in the CAP. This would primarily entail project compliance with the building energy efficiency standards set forth in Title 24, Part 6 of the California Government Code, and compliance with the City's Municipal Code, Title 13, Chapter 11, Green Building Standards Code, requires all development projects, including this Project, to meet the California Green Building Standards Code (CalGreen) building requirements to implement various energy efficiency design features into the proposed office buildings. As such, the proposed Project would be designed to meet all applicable State building energy efficiency standards as well as to meet the City's energy efficiency standards. Lastly, the proposed zone text amendment, which would exclude parking area from the floor area (net)~~FAR~~ calculation, would not have any impact upon this issue area. Therefore, the Project would not conflict with or obstruct a state or local plan for renewable energy or energy efficiency. Impacts would be **less than significant** and no mitigation would be required.

[12] According to the California Energy Commission, in 2019, Los Angeles County consumed 3,048.32 million therms of natural gas. Data accessed online on January 3, 2021 at: http://www.ecdms.energy.ca.gov/gasbycounty.aspx.

7. GEOLOGY AND SOILS

Would the project:	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
a. Directly or indirectly cause substantial adverse effects, including the risk of loss, injury, or death involving:	☐	☐	☒	☐
i) Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42.	☐	☐	☐	☒
ii) Strong seismic ground shaking?	☐	☐	☒	☐
iii) Seismic-related ground failure, including liquefaction?	☐	☐	☒	☐
iv) Landslides?	☐	☐	☐	☒
b. Result in substantial soil erosion or the loss of topsoil?	☐	☐	☒	☐
c. Be located on a geologic unit that is unstable, or that would become unstable as a result of the project, and potentially result in on-or off-site landslide, lateral spreading, subsidence, liquefaction, or collapse?	☐	☐	☒	☐
d. Be located on expansive soil, as defined in Table 18-1-B of the California Building Code (2004), creating substantial risks to life or property?	☐	☐	☒	☐
e. Have soils incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems where sewers are not available for the disposal of wastewater?	☐	☐	☐	☒
f. Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?	☐	☒	☐	☐

This section is based, in part, on the Preliminary Geotechnical Investigation Report prepared by Stantec, dated June 27, 2020, which is included as **Appendix D** of this IS/MND.

Explanation of Checklist Responses

7.a.i) The Alquist-Priolo Earthquake Fault Zoning Act of 1972 serves to mitigate the hazard of surface faulting to structures for human occupancy, and is intended to prevent the construction of buildings used for human occupancy on the surface trace of active faults. The Act requires the State Geologist to establish regulatory zones, known as Alquist-Priolo Earthquake Fault Zones, around the surface traces of active faults and to issue maps delineating these zones. If an active fault is found, a structure for human

occupancy cannot be placed over the trace of the fault and must be set back from the fault (typically 50 feet). The Act defines active faults as those that have experienced surface displacement or movement during the last 11,000 years.

The Project site is located at 650-700 N Pacific Coast Highway, in a seismically active region in Southern California near several fault systems. According to the Department of Conservation, the Project site is not affected by a State-designated Alquist-Priolo Earthquake Fault Zone.[13] Mapped fault zones closest to the Project vicinity include the Newport-Inglewood, Palos Verdes, Puente Hills (LA), and Santa Monica Faults, located 3.5, 4.9, 8.1, and 8.8 miles, respectively, from the Project site. The geotechnical report did not identify any traces of faults on or near the Project site, and the site does not lie within the boundaries of a known Earthquake Fault Zone. The Project would not expose people or structures to potential substantial adverse effects, including the risk of loss, injury, or death, involving rupture of a known earthquake fault. Lastly, the proposed zone text amendment, which would exclude parking area from the floor area (net)~~FAR~~ calculation, would not have any impact upon this issue area. Because there are no known faults on or near the Project site, the Project would be expected to result in **no impact**.

7.a.ii) Ground shaking is the primary cause of structural damage during an earthquake. Magnitude, duration, and vibration frequency from earthquakes would vary greatly, depending on the fault and its distance from the Project site.

As mentioned above, the nearest known active faults are the Newport-Inglewood, Palos Verdes, Puente Hills (LA), and Santa Monica Faults, located 3.5, 4.9, 8.1, and 8.8 miles from the Project site, with anticipated maximum moment magnitudes (Mw) of 7.5, 7.7, 7.0, and 7.4, respectively. Seismic activity along these faults or on any other of the numerous faults in the Southern California area would cause seismic ground shaking in El Segundo and consequently is considered during project design.

General types of ground failures that might occur as a consequence of severe ground shaking include landsliding, ground lurching, and shallow ground rupture. The probability of occurrence for these types of failures depends on the severity of the earthquake, distance from faults, topography, subsoils, and groundwater conditions. Current geotechnical analysis of the project site indicates none of these effects would be considered likely to occur. The potential for dynamic settlement resulting from severe earthquake shaking along the proposed fill slopes is present and is estimated to be on the order of 1.72 inches. The potential for ground rupture is remote and is not considered to be a hazard for this project.

The Project would be required to conduct a final geotechnical investigation and be designed in accordance with the California Building Standards Code (CBSC) and ESMC standards through the City's plan review and permitting process, which would reduce the effects of seismic ground shaking. As a result, the effects of ground shaking would be expected to be **less than significant** for the Project and no mitigation would be required.

[13] California Department of Conservation. *EQ Zapp: California Earthquake Hazards Zone Application*.

7.a.iii) Liquefaction is the transformation of a deposit of soil from a solid state to a liquefied state, typically during prolonged ground shaking events such as earthquakes, and the soil acquires mobility sufficient to permit both horizontal and vertical movements. According to the Project's preliminary geotechnical investigation, the Project site is not located in a California Geological Survey Liquefaction Hazard Zone, which is defined as areas where historical occurrence of liquefaction, or local geological, geotechnical and groundwater conditions indicate a potential for permanent ground displacement. Based on groundwater data collected at an off-site location approximately 250 feet north of the Project site, groundwater is expected to be encountered at a depth of approximately 121 below the ground surface. Given this depth to groundwater, the site is not subject to liquefaction induced settlement. Additionally, as the Project would be required to be designed in accordance with CBSC and ESMC standards, the Project would be expected to result in a **less than significant** impacts to liquefaction hazards and no mitigation would be required.

7.a.iv) The Project site is characterized by relatively flat topography. No unusual geographic features exist on the site or in its vicinity; thus, the site does not have the potential to slide or to experience sliding from adjacent areas. According to the California Department of Conservation, the Project site is not located in a landslide hazard area. Therefore, project implementation would not expose people or structures to landslides.[14] Thus, **no impact** would occur.

7.b) Construction of the Project involves ground-disturbance activities such as site preparation, asphalt removal, grading, excavation and trenching for foundations and utilities, and the erection of a new structure, Building C. Unstable soil conditions could develop if exposed soils are exposed to rain and wind erosion, or construction traffic.

However, the Project would be subject to the requirements of a municipal National Pollutant Discharge Elimination System (NPDES) Permit (implemented through a Standard Urban Stormwater Mitigation Plan [SUSMP]) and the City's Municipal Code. Both the Municipal Code and the SUSMP require application of erosion and sedimentation control best management practices (BMPs) during construction for proper water quality management. Erosion control BMPs are designed to prevent erosion, whereas sediment controls are designed to trap sediment once it has been mobilized. Further, the Project applicant is required to comply with South Coast Air Quality Management District (SCAQMD) Rule 403, which would reduce the potential for wind erosion by requiring the implementation of dust control measures during construction.

Compliance with these requirements would prevent significant soil erosion during construction. During operations, the majority of the fully developed site would be covered by impervious surfaces such as pavement and buildings, which would prevent any soil erosion following construction. Unpaved areas would be landscaped, which would also prevent soil erosion. In summary, Project-related impacts involving soil erosion and loss of topsoil would be **less than significant** and no mitigation would be required**.**

[14] California Department of Conservation. *EQ Zapp: California Earthquake Hazards Zone Application*.

7.c) The Project site has a relatively flat topography, with no hillsides on-site or in the surrounding area. Further, the Project site is not located on a cliff, mountainside, bluff, or other geographic feature with stability concerns. As described above in checklist response 7.a, the site is not susceptible to liquefaction, landslide, subsidence, or collapse. Grading and structural design of the proposed improvements would apply the recommendations of the final geotechnical report and the applicable standards of the California Building Code to ensure that the proposed building foundation provides a stable footing for the proposed new building. The Project is expected to result in **less than significant impacts** related to unstable geologic units or soils, thus no mitigation would be required.

7.d) Based on the preliminary geotechnical report prepared for the Project (**Appendix D**), near-surface soils, in the upper approximately 10 feet, have a low potential to be expansive. The samples tested were granular with low-plasticity fines. Therefore, the Proposed Project's impacts related to expansive soils would be **less than significant**.

7.e) No septic tanks or alternative wastewater disposal systems are proposed as part of the Project. Since the Project site is currently developed, sewer and wastewater infrastructure are currently in place. Furthermore, the site is connected to the public sewer system in the City. Therefore, **no impact** would occur with regard to sewers or alternative wastewater disposal systems.

7.f) The Project site does not contain any unique geological feature or formation. As discussed previously, the entire Project property has been highly disturbed with prior agricultural uses and subsequently developed with the current buildings and parking lot. As shown in the Project Geotechnical Report (**Appendix D**) subsurface boring has indicated that the Project site sediments consist of artificial fill and asphalt within the top layer of soil (approximately 1 foot), followed by underlying old eolian deposits (Qoe). Based on prior paleontological investigations performed for the Crenshaw Transit Corridor Project and LAX Master Plan Final EIS/EIR, which include the Project area, sensitive paleontological resources were identified in the Project vicinity. While the renovation activities on Building A and Building B do not involve substantial earthwork, the construction of Building C would require excavations exceeding 1 foot during the foundation work. As a result, the Project has the potential to disturb unknown paleontological resources. The following Mitigation Measure PALEO-1 will be implemented such that in the event of any discovery of unknown paleontological resources during earthwork, impacts would be **less than significant**.

> **Mitigation Measure Paleo-1:** Prior to the issuance of any grading permits, the applicant shall retain a qualified paleontologist who meets the qualifications established by the Society of Vertebrate Paleontology (SVP) to develop a Worker Environmental Awareness Program (WEAP), which shall be in compliance with SVP guidelines. The paleontologist shall present the training to all construction staff to provide them with a basic understanding of the types of fossils that may be encountered and the laws protecting them, and the procedures to follow in the event the finds are encountered. In the event that paleontological resources are encountered during earth disturbance activities, all construction activities in the area of the find shall be temporarily halted and the paleontologist shall be notified to evaluate the find and determine the appropriate treatment in accordance with SVP guidelines for identification, evaluation, disclosure, avoidance, or recovery, and curation, as appropriate.

Timing/Implementation: *Applicant to submit evidence of a contracted qualified paleontologist to the City prior to issuance of building permits. WEAP training shall be administered prior to the start of earthwork activities and shall be administered to any new construction workers involved in excavation efforts associated with the Project.*

Monitoring/Enforcement: El Segundo Planning and Building Safety Department

8. GREENHOUSE GAS EMISSIONS

Would the project:	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
a. Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?	☐	☐	☒	☐
b. Conflict with an applicable plan, policy, or regulation adopted for the purpose of reducing the emissions of greenhouse gases?	☐	☐	☒	☐

The following analysis is based in part on the information contained in *Air Quality, Energy, and Greenhouse Gas Emissions Impact Analysis* prepared by Vista Environmental dated December 21, 2020. This report, hereinafter referred to as the AQ-Energy-GHG Study, is included as **Appendix B** of this IS/MND.

Explanation of Checklist Responses

8.a) CEQA Guidelines Section 15064(h)(3) allows a lead agency to make a finding of non-significance for GHG emissions if a project complies with a program and/or other regulatory schemes to reduce GHG emissions. The City adopted the *City of El Segundo Climate Action Plan* (El Segundo CAP) in 2017 to help implement compliance with the City's GHG emissions reduction goals as well as State and federal regulations that include Assembly Bill (AB) 32 (Chapter 488, Statutes of 2006), Senate Bill (SB) 32 (Chapter 249, Statutes of 2016), and the 2017 Climate Change Scoping Plan Update GHG emission reduction goals. The El Segundo CAP was prepared in accordance with Section 15183.5(b) of the State CEQA Guidelines for qualified plans to support tiering for project level analyses, and states "Within the CEQA process, a qualified CAP framework offers the ability to streamline future CEQA greenhouse gas analyses by being able to tier off the climate action plan."

While quantification of the proposed Project's GHG emissions are not required to show consistency with the CAP, the Project's GHG emissions have been calculated with the CalEEMod model, for informational purposes. A summary of the results is shown below in **Table 8-1**.

Table 8-1. Project Related Greenhouse Gas Annual Emissions

	Greenhouse Gas Emissions (Metric Tons per Year)			
Category	**CO_2**	**CH_4**	**N_2O**	**CO_2e**
Area Sources[1]	0.04	<0.00	<0.00	0.04
Energy Usage[2]	2,238.14	0.09	0.02	2,246.58
Mobile Sources[3]	2,866.53	0.14	<0.00	2,870.15
Solid Waste[4]	31.15	1.84	<0.00	77.17
Water and Wastewater[5]	340.56	1.63	0.04	393.39
Construction[6]	52.44	<0.00	<0.00	52.55
Total GHG Emissions	**5,528.86**	**3.70**	**0.06**	**5,639.89**

Notes:
[1] Area sources consist of GHG emissions from consumer products, architectural coatings, and landscaping equipment.
[2] Energy usage consists of GHG emissions from electricity and natural gas usage.
[3] Mobile sources consist of GHG emissions from vehicles.
[4] Waste includes the CO_2 and CH_4 emissions created from the solid waste placed in landfills.
[5] Water includes GHG emissions from electricity used for transport of water and processing of wastewater.
[6] Construction emissions amortized over 30 years as recommended in the SCAQMD GHG Working Group on November 19, 2009.
Source: CalEEMod Version 2016.3.2.

The data provided in **Table 8-1** shows that the Project would generate 5,639.89 $MTCO2_e$ per year of GHGs, which includes the 30-year amortized construction emissions. It should be noted that **Table 8-1** is based on current emission rates from area sources, energy usage, solid waste, water and wastewater sources. State regulations, including SB 100 (Chapter 312, Statutes of 2018) that requires 100 percent of retail sales of electricity to be generated from zero-carbon emissions sources by 2045, along with other regulations aimed at GHG reduction from other sources, will result in further reducing these emissions sources. In addition, the transportation sources only incorporate previously adopted state regulations and do not account for recent state regulations, including the anticipated reductions from Executive Order N-79-20 that requires 100 percent of new passenger vehicles sold in California to be zero-emissions by 2035. The Project's consistency with the El Segundo CAP is provided in **Table 8-2,** below. In summary, proposed Project would not generate substantial levels of GHG emissions, either directly or indirectly, that may have a significant impact on the environment. Project impacts would be **less than significant** and no mitigation measure would be required.

8.b) The applicable plan for the Project would be the El Segundo CAP, which was developed in cooperation with the South Bay Cities Council of Governments, and serves as a guide for action by setting GHG emission reduction goals and establishing strategies and policies across various sectors to achieve desired outcomes into the future. The strategies are community-wide, and focus on lowering GHG emission s from a range of sources including transportation, land use, energy generation and consumption, water, and waste. The Project's consistency with applicable GHG emissions reduction strategies in the El Segundo CAP is provided in **Table 8-2**.

Table 8-2. Consistency with the El Segundo CAP

Sub-Strategies	**Project Consistency**
Goal LUT: A – Accelerate the Market for EV Vehicles	
LUT: A1 EV Parking Policies	**Not Applicable**. This Strategy requires the City to consider to allow reduction of parking spaces in exchange for EV or NEWV parking. The Project applicant is not requesting a reduction in parking spaces. Nevertheless, the Project is proposing 72 electric vehicle spaces.
LUT: A2.4 Adopt charging standards beyond CalGreen 2016 requirements.	**Does not conflict**. This action is applicable to the City to implement. However, the Project is required to meet CalGreen 2016 requirements for on-site electric vehicle charging infrastructure.

Sub-Strategies	Project Consistency
LUT: A2.5 Create policies that encourage facility owners to provide level 1 charging.	**Not Applicable**. This action is applicable to the City to implement. However, the Project will include designated EV parking.
Goal LUT: B – Encourage Ride-Sharing	
LUT: B1 Facilitate Private and Public Mobility Services (Ride-Hailing, Ride-Sharing, Car-Sharing, Bike-Sharing)	**Not Applicable**. This policy is only applicable to the City to work with private and public services to provide different types of mobility services for sharing.
LUT: B1.1 Facilitate bike-sharing.	**Does not conflict.** This policy is only applicable to the City to implement. However, the Project provides both short-term and long-term bike parking.
LUT: B1.2 Facilitate car-sharing.	**Does not conflict.** This policy is only applicable to the City to implement. However, the Project is over parked and the extra parking spaces could be used for a car-sharing use in the future.
LUT: B1.3 Facilitating ride-hailing and ride-sharing.	**Does not conflict**. This policy is only applicable to the City to implement. However, the Project is over parked and the extra parking spaces could be used for ride-hailing and ride-sharing uses in the future.
Goal LUT: D – Adopt Active Transportation Initiatives	
LUT: D1 Provide Traffic Calming Measures	**Consistent.** The Project meets the City's strategies to provide traffic calming measures with proposed increased landscaping along the Project frontage and encouraging pedestrian and bicycle uses.
LUT: D1.2 Use traffic calming measures on streets where feasible.	**Consistent.** The Project meets the City's requirements to provide traffic calming measures on the Project site with increased landscaping along the Project frontage and encouraging pedestrian and bicycle uses.
LUT: D2 Provide Pedestrian/Bicycle Networks Improvements	**Consistent.** The Project provides an on-site pedestrian and bicycle circulation system and associated amenities.
LUT: D3 Improve Design of Development.	**Consistent.** The Project improves design development by providing pedestrian and bicycle amenities and bicycle parking.
LUT: D3.2 Require bicycle parking through the Zoning Code or other implementation documents.	**Does not conflict**. This policy is only applicable to the City to implement. However, the Project does provide both short-term and long-term bicycle parking.
LUT: D3.3 Require new developments to provide pedestrian, bicycle, and transit amenities.	**Consistent.** The Project would provide pedestrian and bicycle amenities.
LUT: D3.5 Require commercial and multi-family residential projects to provide permanent bicycle parking facilities.	**Consistent.** The Project would provide permanent (long-term) bicycle parking locations.
LUT: D3.6 Provide short and long-term bicycle parking near key areas.	**Consistent.** The Project would provide both short and long-term bicycle parking on the Project site.
LUT: D3.12 Construct or improve pedestrian infrastructure around transit.	**Not Applicable**. This policy is only applicable to the City to implement. However, the Project would provide an on-site pedestrian circulation system.
Goal LUT: E – Parking Strategies	

Sub-Strategies	Project Consistency
LUT: E2.2 Encourage developers of new development to unbundle parking and eliminate the assignment of specific stalls.	**Consistent.** The Project parking structure would not assign specific stalls other than for electric and clean air vehicle spaces within the public parking areas.
Goal EE: D – Increase Energy Efficiency in New Commercial Developments	
EE: D Encourage or Require EE Standards Exceeding Title 24	**Consistent.** The Project will be designed to meet or exceed existing Title 24 requirements.
Goal EE: E – Increase Energy Efficiency through Increased Water Efficiency (WE)	
EE: E1 Promote or Require Water Efficiency Through SB X7-7.	**Not Applicable**. This policy is only applicable to the City to implement. However, the Project is required to meet California Green Building Standards Title 24 Part 11 related to water efficiency.
EE: E1.3 Require low-irrigation landscaping.	**Consistent.** The proposed project will provide low-water demand irrigation landscaping.
Goal EE: F – Decrease Energy Demand through Reducing Urban Heat Island Effect	
EE: F1 Promote Tree Planting for Shading and EE	**Consistent.** The Project provides a landscape plan with over 75 trees of varying species, including specimen size coast live oaks that will provide shading.
EE: F1.1 Encourage tree planting at plan check.	**Not Applicable**. This policy is only applicable to the City to implement. However, the proposed project does provide a landscape plan with a variety of new trees.
Goal EE: G – Participate in Education, Outreach and Planning for Energy Efficiency	
No Sub-Strategies provided for this Goal, which does not apply to developers of private commercial land uses.	
Goal EE: H – Increase Energy Efficiency in Municipal Buildings	
No Sub-Strategies provided for this Goal, which does not apply to private development projects.	
Goal EE: I – Increase Energy Efficiency in City Infrastructure	
No Sub-Strategies provided for this Goal, which does not apply to private development projects.	

Source: City of El Segundo Climate Action Plan, 2017.

As shown in Table 8-2, the proposed Project would generally be consistent with applicable strategies identified in the El Segundo CAP. Lastly, the proposed zone text amendment, which would exclude parking area from the floor area (net)~~FAR~~ calculation, would not have any impact upon this issue area. Therefore, implementation of the Project would not impede attainment of the GHG reduction objectives in the CAP and would not result in cumulatively considerable environmental impacts associated with its GHG emissions. Project impacts would be **less than significant** and no mitigation measures are required.

9. HAZARDS AND HAZARDOUS MATERIALS

Would the project:	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
a. Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?	☐	☐	☒	☐
b. Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?	☐	☒	☐	☐
c. Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?	☐	☒	☐	☐
d. Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?	☐	☐	☐	☒
e. For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, result in a safety hazard or excessive noise for people residing or working in the project area?	☐	☐	☐	☒
f. Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?	☐	☐	☒	☐
g. Expose people or structures, either directly or indirectly, to a significant risk of loss, injury, or death involving wildland fires?	☐	☐	☐	☒

Responses to the following questions include information from site investigations and assessments of prior land use activities regarding potential environmental contaminants in the Phase I and Phase II Environmental Site Assessments (ESAs) prepared by AEI Consultants, Partner Engineering and Science, Inc., and Ramboll Environ US Corp. The investigation reports are included in this Initial Study as **Appendix E**, and were conducted on all parcels comprising the Project site area. The Phase I ESAs were conducted to identify potential presence of recognized environmental conditions (RECs) or historical recognized environmental conditions (HRECs) through review of historical property information and regulatory files and databases, and conducting interviews with property representatives and site reconnaissance, in general conformance with ASTM Practice E127-13 Standard Practice for Environmental Site Assessments.

Explanation of Checklist Responses

9.a) The proposed Project would provide office building uses that would involve the use of equipment and materials that are standard in general office uses, parking uses, and for

landscaping. Small amounts of commercially available hazardous materials may be used for regular cleaning and maintenance activities which would neither require the storage, use, or disposal of substantial amounts of hazardous materials, nor generate significant quantities of hazardous waste. This usage would not require the storage, use, transport, or disposal of quantities of hazardous substances that would be subject to any special handling or permitting requirements. Therefore, this Project's normal operations would not create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials. Impacts in this regard would be **less than significant** and no mitigation measures are required**.**

9.b) The Project site was developed for agricultural use from at least 1928, and then was left undeveloped from at least 1947 until 1953. The existing site improvements began with the construction of the building at 700 North Pacific Coast Highway (Building B) in 1955, followed by the construction of Building A at 650 North Pacific Coast Highway in 1962. Tenants in these buildings have included several aerospace companies, pharmaceutical companies, and a computer hardware manufacturer. Based on the age of the buildings, the prior uses, and proposed construction activities, the Project has the potential to result in accidental releases of hazardous substances, which are addressed in the following subsections.

1) Recognized Environmental Conditions (RECs):

The Phase I and Phase II investigations identified several RECs on the Project site:

Underground storage tanks (USTs) at 700 Pacific Coast Highway (Building B): Eight 1,000-gallon USTs were in operation from 1958 until 1985. The USTs were constructed of concrete and reportedly contained gasoline, sulfides, organic acids, copper, zinc, mineral oils, alcohols, and solvents associated with the manufacturing of lighter fluid and pharmaceuticals. The exact location of the USTs was not identified. However, according to historical sources, the USTs appear to have been likely located in the northeast portion of the property. A building permit for removal of the USTs was identified, dated May 21, 1982 to remove the tanks and fill and compact the void. Although the USTs were scheduled to be removed and backfilled with sand, based on the results of the previous Phase II (Ramboll 2016), where borings included concrete and asphalt, the concrete USTs may have been closed in place and/or remnants of the concrete remain.

As part of the Phase II (**Appendix E**), soil vapor sampling was performed in the suspected location of the former USTs (northeastern portion of the site). The soil vapor samples were collected at depths ranging from 10.5 to 12 feet below ground surface; as such shallow soil vapor conditions do not appear to have been assessed. Due to soil conditions, the ground penetrating radar (GPR) penetration was 3 feet or less, while the closed USTs may have been installed at greater depths that exceed 5 feet. Analytical results at the time of the Phase II revealed concentrations of constituents of concern (petroleum hydrocarbons, volatile organic compounds, metals) in soil and soil vapor below the environmental screening levels (ESLs)[15] in

[15] Environmental Screening Levels (ESLs) were developed by the San Francisco Bay Regional Water Quality Board (Water Board) to provide conservative screening levels for over 100 chemicals found at sites with contaminated soil and groundwater. They are intended to help expedite the identification and evaluation of potential environmental

effect at the time. However, because the ESLs have changed in California since 2016, soil vapor concentrations detected at the time of the previous sampling are now above the current 2019 commercial/ industrial ESLs for benzene and ethylbenzene. The detected concentrations of benzene and ethylbenzene above the current commercial/industrial ESLs represents a REC.

The samples were also evaluated for indoor air cancer risk for residential land use, based on USEPA Regional Screening Levels (RSLs) and Department of Toxic Control Substances (DTSC) modified screening levels (SLs) for total petroleum hydrocarbons and metals. None of the evaluated soil gas concentrations would result in a DTSC indoor air cancer risk greater than 1 x 10-6 for carcinogenic compounds

. Because the use of DTSC indoor air screening levels for residential land uses represents a conservative approach for the Project (as a nonresidential use), Ramboll concluded that the level of hazard from potential indoor soil gas concentrations was less than significant (**Appendix E**). The only compound detected in the soil samples that exceeded its respective USEPA RSL was arsenic, which was determined to be naturally occurring at the site due to the fact that the levels detected in soil samples were within the typical background ranges of naturally occurring arsenic in Southern California. (**Appendix E**)

Potential UST at 650 N Pacific Coast Highway (Building A): Hughes Aircraft Co SCG at the address 690 N Sepulveda Boulevard was listed in the Statewide Environmental Evaluation and Planning System (SWEEPS UST) database. The 690 N Sepulveda Boulevard has been historically associated with the building at 650 N Pacific Coast Highway (Building A), and as such, this listing may pertain to a UST associated with Building A. The underground storage tank listing was updated and maintained by the State Water Resources Control Board in the early 1990's. The listing is no longer updated or maintained. No information regarding the number of USTs, content, capacity or status is available in this database. This listing is also associated with a permit associated with the Los Angeles County Department of Public Works (LACDPW)(Facility Id: 010427-010342). AEI contacted the LACDPW for additional information regarding this UST listing, however, a response is pending. It is unclear if this UST listing is associated with the former USTs located at 700 N Sepulveda Boulevard. The lack of information on this UST is considered a data gap. The potential presence of a UST associated with the Building A and the lack of supporting documentation represents a REC. (**Appendix E**)

Concrete Clarifier at 700 Pacific Coast Highway (Building B): A concrete clarifier was operated from at least 1966 until at least 1985, and was used for the manufacturing of pharmaceuticals. Six samples of clarifier sludge submitted by Hughes Aircraft Space and Communications were analyzed on October 16, 1985 and were found to contain high levels (up to concentrations of up to 2,000 micrograms per liter (µg/L)) of tetrachloroethylene. AEI identified correspondence from the County of Los Angeles, Department of Public Works indicating that the clarifier was filled in place on October 29, 1985. Based on a review of historical permits, the clarifier was identified to be located in the "rear end of building - 700 N. Sepulveda". Based on

concerns at contaminated sites. ESLs address a range of media (soil, groundwater, soil gas, and indoor air) and a range of concerns (e.g., impacts to drinking water, vapor intrusion, and impacts to aquatic habitat).

the lack of more specific location identification, the lack of testing of the clarifier during prior investigations, and the levels of tetrachloroethylene identified in the clarifier sludge samples, the former clarifier was identified as a REC. (**Appendix E**)

Should construction occur in an area where a UST or clarifier was/is located or contaminated soils are found, this could result in an upset or accident condition, resulting in a release of hazardous materials. As described in the Project Geotechnical Report (**Appendix D**), groundwater is at a depth of approximately 121 feet below ground surface and is not expected to be encountered during construction activities. Impacts related to the previous USTs and clarifier are potentially significant. However, with implementation of Mitigation Measure HAZ-1 and HAZ-2, construction impacts associated with potential upset and accident conditions would be less than significant.

2) Lead-Based Paint (LBP) and Asbestos-Containing Materials (ACMs):

Due to the age of the existing buildings, there is a potential that LBP and ACMs are present. During the site reconnaissance performed during the Phase I ESAs (**Appendix E**), damaged painted surfaces were observed throughout the interior and exterior of Buildings A and B. The California Department of Public Health enforces lead laws and regulations related to the prevention of lead poisoning, accreditation and training for construction-related activities, lead exposure and screening, disclosures, and limitations on the amount of lead in products.

The Project would be required to comply with SCAQMD Rule 1403, Asbestos Emissions from Demolition/Renovation Activities, which addresses asbestos emissions from demolition and renovation activities and requires the safe handling of known or suspected ACM. The purpose of SCAQMD Rule 1403 is to specify work practice requirements to limit asbestos emissions from building demolition and renovation activities, including the removal and associated disturbance of ACM. The requirements for demolition and renovation activities include asbestos surveying (in accordance with the EPA NESHAP 40 CFR Part 61); notification; ACM removal procedures and time schedules; ACM-handling and clean-up procedures; and storage, disposal, and landfilling requirements for asbestos-containing waste materials.

Demolition and disposal of these materials without proper abatement could cause an upset or accident condition. Proper identification, delineation, and abatement of potentially hazardous materials would prevent potential exposure of hazardous materials to the public or the environment during transportation and disposal of potentially contaminated media. Impacts related to LBP and ACM are potentially significant. With implementation of Mitigation Measure HAZ-2, construction impacts associated with potential upset and accident conditions would be less than significant.

3) Adjacent Properties:

The Project Phase I ESAs included review of adjacent properties, and identified that the Equinix Operating Center, located east of the Project site, contains three 12,000-gallon USTs, used for leaded and unleaded fuel. Then, Hughes Aircraft, located east of the Project site previously contained leaking underground storage tanks (LUSTs),

but this case is identified by the LUST database as closed. Several other adjacent properties have permits regarding structures or uses of environmental concern, but no current issues concerning the release of hazardous materials into the environment are noted on properties adjacent to the Project site.

4) Project Construction:

Construction activities may also include refueling and minor maintenance of construction equipment on-site, which could lead to minor fuel and oil spills. As described in checklist response 10.a, a variety of construction control measures would be incorporated, including preconstruction development controls, sedimentation, storm drain, and landscaping, and irrigation controls to prevent conditions that would release hazardous materials into the environment.

In summary, while the Project has the potential to result in accidental releases of hazardous substances due to the historically used USTs and clarifier associated with previous tenants, and the potential presence of LBP and ACM, with implementation of **Mitigation Measures HAZ-1** and **HAZ-2**, impacts would be **less than significant**.

Mitigation Measure HAZ-1: The applicant shall conduct additional investigation and potential remediation actions associated with the previous USTs and clarifier uses. As identified in the Phase I ESA (**Appendix E**), the following investigations will be conducted to identify and confirm the location of the eight 1,000-gallon USTs and clarifier at 700 Pacific Coast Highway and the potential UST at 650 Pacific Coast Highway (associated with 690 North Sepulveda Boulevard).

- Eight 1,000-gallon USTs at 700 Pacific Coast Highway: A geophysical survey and Phase II subsurface investigation shall be conducted to identify the location of the former USTs and to sample at the depth of the UST to determine the concentrations of constituents of concern (petroleum hydrocarbons, volatile organic compounds, and metals). In the event that the analyte concentrations exceed appropriate use standards, as designated by the El Segundo Fire Department (local Certified Unified Program Agency [CUPA]), the Project shall implement applicable protective measures in accordance with an approved remedial action plan, including: 1) installation of a soil vapor barrier adequate to protect against vapor transmission; 2) implement a soil-vapor extraction system; and/or 3) conduct remedial excavation activities. Based on information provided by the CUPA, if passive or active systems are utilized to prevent vapor migration, a Land Use Covenant would be required, and recorded, and an Operation and Maintenance (O&M) Plan would be developed for the systems.

- Clarifier at 700 Pacific Coast Highway: A geophysical survey and Phase II subsurface investigation shall be conducted to identify the location of the former clarifier and to sample adjacent soils to determine the extent, if any, of prior release of tetrachloroethylene. In the event that the analyte concentrations exceed appropriate use standards, as designated by the El Segundo Fire Department (local CUPA), the Project shall implement applicable protective measures in accordance with an approved remedial action plan, including: 1) installation of a soil vapor barrier adequate to

protect against vapor transmission; 2) implement a soil-vapor extraction system; and/or 3) conduct remedial excavation activities.

- Potential UST at 650 North Pacific Coast Highway: The applicant shall conduct review of pending agency records for the UST listed at 690 North Sepulveda Boulevard to determine whether a UST is located on the Project site. In the event the documentation indicates that a UST has the potential to be present, the applicant shall conduct a geophysical survey and Phase II subsurface investigation to identify the location of the former UST and to sample at the depth of the UST to determine whether any concentrations of constituents of concern (petroleum hydrocarbons, volatile organic compounds, and metals) are present in surround soils. In the event that the analyte concentrations exceed appropriate use standards, as designated by the El Segundo Fire Department (local CUPA), the Project shall implement applicable protective measures in accordance with an approved remedial action plan, including: 1) installation of a soil vapor barrier adequate to protect against vapor transmission; 2) implement a soil-vapor extraction system; and/or 3) conduct remedial excavation activities.

Timing/Implementation: *Applicant to provide evidence of the presence/absence of a UST at 650 N Pacific Coast Highway, and submit the results of the geophysical surveys and Phase II Investigations and incorporate applicable treatment procedures in the final design plans to the City prior to issuance of grading and/or building permits.*

Monitoring/Enforcement: *El Segundo Planning and Building Safety Department and El Segundo Fire Department (local CUPA)*

Mitigation Measure HAZ-2: Prior to commencement of renovation activities on Buildings A and B, a hazardous building materials survey shall be conducted on both buildings to identify asbestos, lead-based paint, and other potentially hazardous building materials (such as mercury thermometers, lighting and electrical appurtenances). Following results of the hazardous materials survey, renovation plans and contract specifications shall incorporate abatement procedures for the removal of materials containing asbestos and lead. All abatement work shall be done in accordance with federal, state, and local regulations, including those of the U.S. EPA, Occupational Safety and Health Administration, California Occupational Safety and Health Administration, and the SCAQMD.

Timing/Implementation: *Applicant to submit a Hazardous Building Materials Survey Report, provide proper notification to SCAQMD of demolition and abatement activities in accordance with SCAQMD Rule 1403 , and incorporate applicable abatement procedures in the final design plans to the City prior to issuance of building permits.*

Monitoring/Enforcement: *El Segundo Planning and Building Safety Department and El Segundo Fire Department (local CUPA)*

9.c) The nearest school is St. John's Lutheran Preschool, which is approximately 1,039 feet (0.2 mile) northwest of the Project location. As discussed above under 9.b, several RECs have been identified on the Project site that are associated with previous tenant uses of the property. Additionally, due to the age of the buildings there is the potential that LBP and ACMs are present. While these conditions are associated with the prior uses of the property, they may require clean-up and remediation efforts the during the Project construction period. The potential treatment efforts would be temporary and limited to the Project site premises and therefore the risk of release and exposure is remote. With implementation of proper handling practices associated with **Mitigation Measures HAZ-1 and HAZ-2**, any related impacts on nearby schools would be **less than significant**.

During operations, the indoor and outdoor activities associated with the proposed office use would not generate hazardous air emissions or handle hazardous or acutely hazardous materials, substances, or waste.

In summary, with implementation of **Mitigation Measures HAZ-1 and HAZ-2**, the proposed Project would not emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school. Impacts in this regard are **less than significant**.

9.d) The Phase I ESA (**Appendix E**) included a search of the DTSC EnviroStor database and a search of the State Water Resources Control Board (SWRCB) leaking underground storage tank database, and found 26 sites involving current or past site contamination and government agency oversight thereof within 1 mile of the Project site (**Appendix E**). The Project site is not recorded on either database; however, DTSC has maintained records of the previous disposal of multiple waste streams associated with previous building occupants.

The Project site is identified in the CA DTSC Envirostor database as a "historical" site and in the SEMS-ARCHIVE database as an archived site. These listings are not associated with a release case and do not identify the Project site has having a potential for a significant hazard to the public or the environment Instead, they pertain to questionnaires and assessments of the property to determine if waste streams generated at the property were considered a significant threat to the environment. As a result, the Project, including the proposed zoning text amendment, would result in **no impact**.

9.e) Los Angeles International Airport (LAX) is the closest public airport, located approximately 0.5 miles north of the Project site. In compliance with legislative requirements, the Los Angeles County Airport Land Use Commission (ALUC) prepared the Los Angeles County Airport Land Use Plan (ALUP), revised on December 1, 2004. The ALUP provides for the orderly expansion of Los Angeles County's public use airports and the areas surrounding them. It is also intended to provide for the adoption of land use measures that minimize the public's exposure to excessive noise and safety hazards. In formulating the ALUP, the Los Angeles County ALUC established provisions for safety, noise insulation, and the regulation of building height in areas adjacent to each of the county's public airports. The Project site is not located within the LAX noise contour or airport influence area, which the ALUP. Defines as an area where current or future airport-related noise, over flight, safety, and/or airspace protection factors may significant affect land uses or necessitate restrictions on those uses.

Further, the Project would comply with ALUP Policy S-7, which designates height restriction standards and procedures set forth in the Federal Aviation Regulations (FAR) Part 77, and establishes standards and notification requirements for objects affecting navigable airspace. Airspace obstructions include buildings, antennas, trees, and other structures. The Project proposes to renovate an existing eight-story building and construct a seven-story office building. While the new office Building C will have lower elevations than the existing Building A, based on the FAA notification requirement that applies to any new structure that breaks a 20:1 imaginary surface of up to 4,000 feet from the nearest runway the Project provide the required FAA notification at least 45 days prior to construction, in accordance with CFR Title 14 Part 77.19. In summary, the Project, including the proposed zoning text amendment, would result in ***no impact****.*

9.f) The El Segundo Standardized Emergency Management System (SEMS) Emergency Operations Plan (EOP) addresses the City's planned response to extraordinary emergency situations and incorporates the Emergency Operations Center (EOC), phone systems, and other infrastructure changes that occurred since the first edition of the plan was created. The objective of the EOP is to centralize coordination of all necessary personnel and facilities of the City into an organization capable of responding to any emergency. The EOP addresses the four fundamental elements of comprehensive emergency management: Mitigation; Preparedness; Response; and Recovery. The proposed Project would have no impact on the City's EOP.

During construction**,** Pacific Coast Highway would remain open and existing driveways entering and exiting the property would remain accessible to emergency vehicles. The Project would be required to obtain approval from the El Segundo Fire Department (ESFD) to verify that the Project complies with all applicable Fire Code requirements, which would ensure that adequate emergency vehicle access would be provided. During long-term operation, adequate access for emergency vehicles to connected roadways (North Pacific Coast Highway and East Maple Avenue) adjacent to the Project site would be available via the proposed and existing driveways. Thus, the Project would not impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan. Impacts in this regard are **less than significant.**

9.g) Since the previously developed Project site is located in a highly urbanized area where there are no wildlands, development of the proposed Project would not expose buildings or people to wildland fire hazards. Thus, **no impact** would occur.

10. HYDROLOGY AND WATER QUALITY

Would the project:	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
a. Violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water quality?	☐	☐	☒	☐
b. Substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin?	☐	☐	☒	☐
c. Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, or through the addition of impervious surfaces, in a manner which would:	☐	☐	☒	☐
i) Result in substantial erosion or siltation on- or off-site;	☐	☐	☒	☐
ii) Substantially increase the rate or amount of surface runoff in a manner which would result in flooding on-or off-site;	☐	☐	☐	☒
iii) Create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff; or	☐	☐	☒	☐
iv) Impede or redirect flood flows?	☐	☐	☐	☒
d. In flood hazard, tsunami, or seiche zones, risk release of pollutants due to project inundation?	☐	☐	☐	☒
e. Conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan?	☐	☐	☒	☐

Explanation of Checklist Responses

10.a, c) The Project site has been fully developed, including the existing Building A, Building B, and the paved parking lot. The Project includes the new construction of Building C, as well as a landscaped outdoor plaza area. The Project would be required to prepare a grading and drainage plan to allow for proper stormwater drainage, and the Project will include development techniques, such as use of landscaping vegetative cover and pervious ground cover, such as pea gravel and mulches to encourage infiltration and reduce runoff.

Section 402 of the federal Clean Water Act requires National Pollutant Discharge Elimination System (NPDES) permits for stormwater discharges from storm drain systems

to waters of the United States.[16] The City of El Segundo is a co-permittee of the Los Angeles County storm drain system permit or "municipal permit" (Order No. R4-2012-0175-A01; NPDES No. CAS004001), which was adopted November 8, 2012, and amended June 16, 2015, by the State Water Resources Control Board (WQ2015-0075).

The proposed Project would be subject to the requirements of the Municipal NPDES Permit and the City's Municipal Code, which incorporates by reference the County of Los Angeles Low Impact Development (LID) Ordinance (Ordinance Number 2013-0044).[17] The Municipal Code requires application of erosion and sedimentation control BMPs during construction for proper water quality management. Erosion control BMPs are designed to prevent erosion, whereas sediment controls are designed to trap sediment once it has been mobilized. BMPs must be designed to prevent erosion and construction pollutants from entering the City's storm drain and receiving waters. As part of its normal project approval and construction oversight activities, the City of El Segundo monitors compliance with stormwater BMP requirements.

The Los Angeles County Municipal Permit also requires that stormwater pollution prevention plans (SWPPPs) be prepared for all construction projects with disturbed areas of 1 acre or greater. The statewide NPDES Construction General permit maintained by the State Water Resources Control Board also requires a SWPPP for construction projects that involve 1 or more acres of land disturbance. The SWPPP is required to outline the best management practices that would be incorporated during construction.[18] These BMPs would minimize construction-induced water pollutants by controlling erosion and sediment, establishing waste handling/disposal requirements, and providing non-stormwater management procedures.

Further, the Los Angeles Regional Water Quality Control Board (LARWQCB) prepares and maintains a basin plan which identifies narrative and numerical water quality objectives to protect all beneficial uses of the waters of that region. The basin plan strives to achieve the identified water quality objectives through implementation of Waste Discharge Requirements (WDRs) and by employing three strategies for addressing water quality issues: control of point source pollutants, control of nonpoint source pollutants, and remediation of existing contamination. The Project site is located in the Los Angeles region and is, therefore, covered under the Basin Plan for the Coastal Watersheds of Los Angeles and Ventura Counties (Basin Plan).

Point sources of pollutants are well-defined locations at which pollutants flow into water bodies (discharges from wastewater treatment plants and industrial sources, for example). These sources are controlled through regulatory systems including permitting under California's WDRs and the NPDES program; permits are issued by the appropriate RWQCB and may set discharge limitations or other discharge provisions. According to the Basin Plan, nonpoint sources of pollutants in runoff are typically caused by rain or irrigation and have been classified by the USEPA into one of the following categories:

[16] Storm drainage systems are described as Municipal Separate Storm Sewer Systems (MS4s) and include streets, gutters, conduits, natural or artificial drains, channels, and watercourses or other facilities that are owned, operated, maintained, or controlled by a permittee and used for purposes of collecting, storing, transporting, or disposing of stormwater.

[17] El Segundo Municipal Code, Title 5, Chapter 7, 5-7-8, Best Management Practices (BMPs) and Title 5, Chapter 4, Stormwater and Urban Runoff Pollution Control.

[18] El Segundo Municipal Code, Title 5, Chapter 4, 5-4-9, Construction Activity Stormwater Measures

agriculture, urban runoff, construction, hydromodification, resource extraction, silviculture, and land disposal. Runoff from the proposed Project would consist only of non-point sources, during construction and over the operating life of the fully developed site, as discussed below.

The Project could have both short- and long-term impacts on water quality. Short-term impacts would occur during the construction phase of the Project, when the pollutants of greatest concern are sediment, which may run off the Project site due to site grading or other site preparation activities, miscellaneous solid and liquid wastes that may not be properly collected and stored, and hydrocarbon or fossil fuel remnants from the construction equipment. In addition, on-site watering activities to reduce airborne dust could contribute to pollutant loading in surface runoff.

However as indicated above, the Project applicant would be subject to the requirements of the Municipal NPDES Permit and the City's Municipal Code. Specifically, construction runoff is regulated by the NPDES Construction General Permit, discussed above, which requires identification of a variety of water quality control BMPs to be specified on construction plans and implemented throughout construction. Such BMP requirements may include, but would not be limited to, containing stormwater runoff on-site during rain events, limiting grading during the wet season, covering slopes susceptible to erosion, and retaining non-stormwater runoff, such as runoff from vehicle washing, on site. Through these existing, mandatory regulatory compliance measures, potential water quality impacts during construction would be avoided or reduced to less than significant levels and would avoid conflicts with water quality standards established by the Regional Water Quality Control Board.

Long-term impacts would result from operation of the completed Project, with waste material dumped into storm drain inlets having the potential to adversely impact surface water and groundwater. Anticipated pollutants of concern likely generated by Project operation would be those related to commercial office uses. Building materials can potentially contribute to pollutants of concern for stormwater runoff through leaching. Building construction materials, roofing, and fencing materials may be sources of metals in stormwater runoff, especially due to acidic precipitation. Stormwater runoff from areas where refuse is stored or handled could inadvertently transport trash to storm drain inlets, channels, and/or receiving waters. Oil and grease buildup in parking areas, drive aisles, and driveways is a form of contaminant that could be captured in site runoff and flow into the City's storm drains. Landscaping practices could produce pollution through irrigation runoff and by allowing pollutants to enter the storm drainage system. Discharges from the Project site could thus produce polluted runoff that could enter the municipal storm drain system.

While the Project would generate stormwater runoff during Project operation, as described above, the proposed increased landscaping and infiltration design would reduce the volume of runoff compared with the existing Project site, since the existing site is fully developed with impervious surfaces and minimal landscaping. Further, the Project would be required to have a stormwater management system that is designed to comply with the City of El Segundo's LID requirements, which state that the first flush (resulting from the 85th percentile annual rainstorm) would need to be infiltrated in the soils via infiltration wells, captured in a cistern and treated for on-site re-use, or filtered through bio-retention planters and released. Therefore, the Project would not substantially alter the existing drainage pattern of the Project site.

Specifically, the Project would include three stormwater infiltration dry wells with one located between Buildings A and C, one located between Buildings B, and C, and one located on the northwest corner of the proposed parking structure. Additionally, the Project would include a 60-foot-long, 8-inch diameter stormwater storage pipe underneath the courtyard between Buildings A and C, and a 130-foot-long, 8-inch storage pipe under the western wide of the proposed parking structure. These stormwater storage pipes would allow stormwater to be collected and discharged at a controlled rate, so as to not overwhelm existing municipal storm drains located within Pacific Coast Highway.

The Project's operation would result in a negligible decrease in the amount of impermeable surfaces as compared with existing conditions due to the inclusion of the LID BMPs identified above and the increase in total landscaped area. Therefore, the volume of runoff would not adversely affect the capacity of the City's storm drainage system that receives the site's runoff. Further, the proposed volume control, treatment, and maintenance BMPs specified above would sufficiently minimize the potential water pollution impacts of site runoff. Although the proposed Project may result in some minor alteration of existing on-site drainage patterns, stormwater would continue to be directed toward Pacific Coast Highway, and the storm drain system that serves the current Project site would remain sufficient. Therefore, the proposed Project would not result in flooding, would not create runoff that would exceed the capacity of the storm drain system, and would not be a substantial additional source of polluted runoff.

The Project site is not located within a 100-year floodplain boundary, as identified by the Flood Insurance Rate Maps prepared by the Federal Emergency Management Agency (FEMA 2008). Since the project would not be located within a 100-year flood hazard area, development of the proposed Project would not expose people or structures to significant flood hazards and would not impede or redirect flood flows.

In short, implementation of the best management practices identified above would be sufficient to limit water pollution impacts in site runoff and ensure that the developed site would not result in polluted runoff which would violate applicable water quality standards. Further, as the existing drainage pattern of the Project site would not be substantially altered by the proposed development, the Project would not result in excessive sedimentation, redirected flood flows, or other impacts resulting from a change in drainage patterns. As such, Project impacts would be **less than significant** and no mitigation measure is required**.**

10.b) The Project site is located within the jurisdiction of the West Basin Municipal Water District (West Basin). West Basin purchases imported water from the Metropolitan Water District of Southern California and wholesales the imported water to cities and private companies in southwest Los Angeles County, including El Segundo. Water utility service to the Project site is provided by the El Segundo Public Works Department Water Division. According to the West Basin Municipal Water District's 2015 Urban Water Management Plan (UWMP), the estimated 2020 water supply consists of: 19 percent groundwater; 52 percent imported water; 12 percent recycled water; 17 percent water conservation savings; and less than 1 percent desalinated water.[19]

[19] West Basin Municipal Water District*, 2015 Urban Water Management Plan*.

The groundwater supply is extracted from the West Coast Groundwater Basin, which covers approximately 140 square miles and underlies much of the West Basin service area, including El Segundo. The average amount of water extracted from the groundwater basin is approximately 36,000 acre-feet per year. Because the basin is adjudicated (i.e., the amount to be extracted each year has been determined by a court decision), the rights to the amount of groundwater extracted each year remain virtually the same. The Water Replenishment District of Southern California (WRD) is responsible for maintaining and replenishing the basin. Natural replenishment of the basin's groundwater supply occurs through the underflow from the Central Groundwater Basin and limited local precipitation. Artificial replenishment of the basin, which is the responsibility of the WRD, occurs through a mix of imported and recycled water. Groundwater recharge through surface spreading occurs at the following locations: Montebello Forebay Spreading Grounds adjacent to Rio Hondo and the San Gabriel River, within the unlined portion of the San Gabriel River, and behind the Whittier Narrows Dam in the Whittier Narrows Reservoir.[20]

The Project would not install any groundwater wells and would connect to the existing municipal water system. In addition, there are no aquifer conditions or recharge features at the Project site or in the surrounding area that could be affected by excavation or development of the Project. Stormwater that percolates into the substrate in the Project area remains in the upper layers of soil. While the Project site is currently covered with impervious surfaces, the Project's addition of dry wells for stormwater capture would allow stormwater to percolate into the soil. Therefore, the Project would not impede percolation of stormwater into the underlying substrate and impacts would be **less than significant**.

10.d) According to the California Geological Survey Los Angeles County Tsunami Inundation Maps, the Project site is not located within a tsunami inundation area.[21] There are no bodies of water located on or near the Project site, therefore, inundation caused by a seiche would not occur. Thus, there would be **no impact.**

10.e) As discussed in the response to 10. a, the Project is designed to be consistent with the LA Basin Plan, Statewide NPDES General Construction Permit and Municipal Code/LA County LID Standards for water quality control, for both construction and site improvements. As mentioned above, the West Basin Municipal Water District's 2015 Urban Water Management Plan (UWMP) states that the estimated 2020 water supply consists of: 19 percent groundwater; 52 percent imported water; 12 percent recycled water; 17 percent water conservation savings; and less than 1 percent desalinated water.[22] The groundwater supply that serves El Segundo is extracted from the West Coast Groundwater Basin. The Water Replenishment District of Southern California (WRD) is responsible for maintaining and replenishing the basin. Natural replenishment of the basin's groundwater supply occurs through the underflow from the Central Groundwater Basin and limited local precipitation. Artificial replenishment of the basin, which is the responsibility of the WRD, occurs through a mix of imported and recycled water at the Montebello Forebay Spreading Grounds, within the unlined portion of the

[20] Water Replenishment District. 2020. *Regional Groundwater Monitoring Report: Water Year 2018-2019, Central and West Coast Basins, Los Angeles County, California*.

[22] West Basin Municipal Water District. 2016. *2015 Urban Water Management Plan*.

San Gabriel River, and behind the Whittier Narrows Dam in the Whittier Narrows Reservoir.[23]

Because the Project would not affect any of the regional groundwater management measures noted above, and because it would not involve the use, disposal, or storage of hazardous chemicals that could impact groundwater quality, the proposed Project would have a **less than significant** impact on the WRD's groundwater management and replenishment activities.

[23] Water Replenishment District, 2020. *Regional Groundwater Monitoring Report: Water Year 2018-2019, Central and West Coast Basins, Los Angeles County, California*.

11. LAND USE AND PLANNING

Would the project:	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
a. Physically divide an established community?	☐	☐	☐	☒
b. Cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?	☐	☐	☐	☒

Explanation of Checklist Responses

11.a) The Project site is developed with existing office uses, and the proposed Project would continue this office use. The Project site is bordered by commercial and general office land uses, within a developed area of the City, with fully developed urban infrastructure systems in place, including major arterial and local streets, water, sewer, storm drainage, and energy distribution facilities. The nearest residence and community is located along East Palm Avenue, which is approximately 270 feet to the west across a major thoroughfare (refer to **Figure 3**). The Project site is not located within or directly adjacent to any residential areas, and all proposed improvements would occur within the limits of the Project site. Lastly, the proposed zone text amendment, which would exclude parking area from the floor area (net)~~FAR~~ calculation, would not have any impact upon this issue area. Therefore, the Project would not physically divide an established community, and there would be **no impact**.

11.b) The City of El Segundo's General Plan and Zoning Ordinance govern the land use of the Project site and surroundings; there are no other governmental authorities with land use control over this project. Development of the proposed Project would not conflict with the any plans, policies, or regulations of the City that are intended to avoid or mitigate an environmental effect. No changes are proposed to the existing Corporate Office General Plan land use designation and Corporate Office zoning designation of the Project property. The proposed Project includes a request for a zone text amendment to amend the definition of f~~F~~loor ~~A~~area (net)~~Ratio~~ in the ESMC Section 15-1-6. Specifically, as the existing code requirements were intended to exempt parking from the definition of net floor area, the requirements do not currently include a design scenario where parking is fully integrated with a building. The zone text amendment requests an integrated parking structure within a new construction building be exempted, similar to other structural parking means, such as underground parking or exclusive parking structures. With this amendment's approval, the Project applicant would comply with the ESMC development standards. As such, the Project would have **no impact** involving a conflict with local or regional land use plans, policies, programs, or regulations.

12. MINERAL RESOURCES

Would the project:	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
a. Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?	☐	☐	☐	☒
b. Result in the loss of availability of a locally important mineral resource recovery site delineated on a local general plan, specific plan, or other land use plan?	☐	☐	☐	☒

Explanation of Checklist Responses

12.a) As described in the General Plan Conservation Element, the City has been associated with petroleum resource development dating back to its founding in 1911. The City is partially underlain by the El Segundo Oil Field, where over 14 million barrels of oil and condensate were produced locally between 1935 and 1992, but production has steadily declined since 1967. The Project site is not located within the El Segundo Oil Field, which is located on the south side of Mariposa Avenue, as delineated by the California Department of Conservation, Geologic Energy Management Division (CalGEM).[24] The nearest oil well to the Project site is located near the Homewood Studio Suites hotel on the south side of Mariposa Avenue; however, this well has been categorized as a dry well, and has been plugged and abandoned, as reported by the California Department of Conservation.[25] No other types of mineral resources are identified on or near the Project site in the City's General Plan. Lastly, the proposed zone text amendment, which would exclude parking area from the floor area (net)~~FAR~~ calculation, would not have any impact upon this issue area. As a result, the Project would not result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state. Thus, **no impact** would occur.

12.b) According to the City's General Plan, there are no designated Mineral Resources Zones in El Segundo. Further, the General Plan does not identify the Project site as an important mineral resource recovery site. Thus, **no impact** would occur.

13. NOISE

Would the project:	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
a. Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?	☐	☐	☒	☐
b. Generation of excessive groundborne vibration or groundborne noise levels?	☐	☐	☒	☐
c. For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, exposure of people residing or working in the project area to excessive noise levels?	☐	☐	☐	☒

The following analysis is based on information contained in the *Noise Impact Analysis for the 650 PCH Project* prepared by Vista Environmental, dated December 24, 2020. This report, hereinafter referred to as the Noise Report, is included as **Appendix G** of this IS/MND.

Noise Fundamentals

Noise is generally defined as unwanted sound, and sound becomes unwanted when it interferes with normal activities or when it causes actual physical harm, including adverse effects on health. Sound pressure levels are used to measure the intensity of sound and are described in terms of decibels. The decibel (dB) is a logarithmic unit which expresses the ratio of the sound pressure level being measured to a standard reference level. A-weighted decibels (dBA) approximate the subjective response of the human ear to a broad frequency noise source by discriminating against very low and very high frequencies of the audible spectrum. They are adjusted to reflect only those frequencies which are audible to the human ear.

Noise Equivalent sound levels are not measured directly but are calculated from sound pressure levels typically measured in A-weighted decibels (dBA). The equivalent sound level (Leq) represents a steady state sound level containing the same total energy as a time varying signal over a given sample period. The peak traffic hour Leq is the noise metric used by California Department of Transportation (Caltrans) for all traffic noise impact analyses.

The Day-Night Average Level (Ldn) is the weighted average of the intensity of a sound, with corrections for time of day, and averaged over 24 hours. The time of day corrections require the addition of ten decibels to sound levels at night between 10:00 p.m. and 7:00 a.m. While the Community Noise Equivalent Level (CNEL) is similar to the Ldn, except that it has another addition of 4.77 decibels to sound levels during the evening hours between 7:00 p.m. and 10:00 p.m. These additions are made to the sound levels at these time periods because during the evening and nighttime hours, when compared to daytime hours, there is a decrease in the ambient noise levels, which creates an increased sensitivity to sounds. For this reason, the sound appears louder in the evening and nighttime hours and is weighted accordingly. The City of El

Segundo relies on the CNEL noise standard to assess transportation-related impacts on noise sensitive land uses.

Noise can be generated by a number of sources, including mobile sources, such as automobiles, trucks, and airplanes, and stationary sources, such as construction sites, machinery, and industrial operations. The rate depends on the ground surface and the number or type of objects between the noise source and the receiver. Mobile transportation sources, such as highways, and hard and flat surfaces, such as concrete or asphalt, have an attenuation rate of 3.0 dBA per doubling of distance. Soft surfaces, such as uneven or vegetated terrain, have an attenuation rate of about 4.5 dBA per doubling of distance from the source. Noise generated by stationary sources typically attenuates at a rate of approximately 6.0 to 7.5 dBA per doubling of distance from the source (EPA 1971). Construction noise levels are assumed to average 6 dBA of attenuation per doubling of distance from the source (FHWA 1978).

Human response to sound is highly individualized. Annoyance is the most common issue regarding community noise. The percentage of people claiming to be annoyed by noise generally increases with the environmental sound level. However, many factors also influence people's response to noise. The factors can include the character of the noise, the variability of the sound level, the presence of tones or impulses, and the time of day of the occurrence. Additionally, non-acoustical factors, such as the person's opinion of the noise source, the ability to adapt to the noise, the attitude toward the source and those associated with it, and the predictability of the noise, all influence people's response. As such, response to noise varies widely from one person to another, and with any particular noise, individual responses would range from "not annoyed" to "highly annoyed."

El Segundo Municipal Code

Based on the federal and state guidelines, the City established land use standards for noise, which are set forth in ESMC Title 7, Chapter 2, Noise and Vibration. The relevant sections of the chapter are presented below.

Section 7-2-4, Noise Standards. This section establishes the standard for commercial and industrial property as 8 dBA above the ambient noise level. The standard for residential property is 5 dBA above the ambient noise level.

Section 7-2-10, Exemptions. As cited in this section, the following activities are exempt from the provisions of this chapter:

D. Construction Noise: Noise sources associated with or vibration created by construction, repair, or remodeling of any real property, provided said activities do not take place between the hours of six o'clock (6:00) P.M. and seven o'clock (7:00) A.M. Monday through Saturday, or at any time on Sunday or a Federal holiday, and provided the noise level created by such activities does not exceed the noise standard of sixty five (65) dBA plus the limits specified in subsection 7-2-4C of this Chapter as measured on the receptor residential property line and provided any vibration created does not endanger the public health, welfare and safety.

For construction noise, a "substantial" noise increase can be defined as interference with activities during the day and night. One indicator that construction noise could interfere with daytime activities would be speech interference.

Nearest Sensitive Receptor s and Existing Noise Conditions

The nearest sensitive receptors to the Project site are residents at the multi-family homes located as near as 270 feet west of Building A along East Palm Avenue, as well as approximately 270 feet west of Building B to the northwest along Indiana Court. To determine the existing noise levels, noise measurements have been taken in the vicinity of the Project site. The noise measurements were recorded between 12:29 p.m. on Tuesday, November 24, 2020 and 12:47 p.m. on Wednesday, November 25, 2020. It should be noted that the noise measurements were taken during the COVID-19 pandemic during stay-at-home orders; therefore, the measured baseline ambient noise levels are lower and hence more conservative than during normal conditions. The field survey noted that noise within the proposed Project area is generated primarily by vehicle traffic on Pacific Coast Highway, which is located adjacent to the west side of the Project site. The results of the noise level measurements are presented in **Table 13-1**. The measured sound pressure levels in dBA have been used to calculate the minimum and maximum L_{eq} averaged over 1-hour intervals. **Table 13-1** also shows the L_{eq}, L_{max}, and CNEL, based on the entire measurement time.

Table 13-1. Existing (Ambient) Noise Level Measurements

No.	Measurement Location Description	Average (dBA L_{eq})		1-hr Average (dBA L_{eq}/Time)		Average (dBA CNEL)
		Daytime [1]	Nighttime[2]	Minimum	Maximum	
1	Located northwest of project site, on the wall between IHOP and multi-family homes on Indiana Court, approximately 195 feet west of Pacific Coast Highway centerline.	64.1	57.9	53.9 3:08 a.m.	65.3 3:35 p.m.	66.9
2	Located west of Project site, on power pole located on southeast corner of 1637 E Palm Avenue, approximately 22 feet north of Palm Avenue centerline.	63.6	55.7	51.9 3:08 a.m.	67.3 8:44 a.m.	65.2
3	Located on light pole that is located approximately in center of Project site parking lot.	60.1	53.2	52.9 5:34 a.m.	62.2 7:48 a.m.	62.2

Notes:
[1] Daytime is defined as 7:00 a.m. to 10:00 p.m. (Section 7-2-8(A) of the Municipal Code)
[2] Nighttime defined as 10:00 p.m. to 7:00 a.m. (Section 7-2-8(A) of the Municipal Code)
Source: Noise Report, see **Appendix G**.

Explanation of Checklist Responses

13.a) The following sections evaluate the noise sources and levels associated with the temporary construction activities and long-term operations of the proposed Project and compares the noise levels to the City standards.

Short-Term Construction Impacts

The noise impacts from the Project construction have been analyzed through use of the FHWA's Roadway Construction Noise Model (RCNM). Construction activities are anticipated to include demolition and rough grading of the existing surface parking lot, grading and foundation construction, building renovation and construction, application of architectural coatings, and paving and site improvements. Noise

impacts from the Project construction activities would be a function of the noise generated by construction equipment, equipment location, sensitivity of nearby land uses, and the timing and duration of the construction activities.

Section 7-2-10(D) of the City's Municipal Code exempts construction noise from the City noise standards provided that construction activities occur between 7:00 a.m. and 6:00 p.m., except Sundays and Federal holidays and such activities do not exceed 65 dBA at the nearby residential properties.

Construction noise impacts to the nearby sensitive receptors have been calculated with the results summarized below in **Table 13-2**.

Table 13-2. Construction Noise Levels at the Nearby Sensitive Receptors

	Construction Noise Level (dBA Leq) at:	
Construction Phase	**Homes to Northwest (Indiana Court)**	**Homes to West (East Palm Avenue)**
Demolition/Rough Grading	63	63
Grading/Foundation	63	63
Building Construction	62	63
Architectural Coating	54	54
Paving/Site Improvements	64	64
City Construction Noise Threshold[1]	**65**	**65**
Exceed Thresholds?	**No**	**No**

Source: Noise Report, see **Appendix G**.

Table 13-2 shows that greatest construction noise impacts would be as high as 64 dBA Leq during the paving and site improvements phase at the nearest homes to the northwest and west of the Project site. ll calculated construction noise levels shown in **Table 13-2** are within the City's construction noise standard of 65 dBA. Therefore, through adherence to the limitation of allowable construction times provided in Section 7-2-10(D) of the Municipal Code, construction-related noise levels would not exceed any standards established in the General Plan or Noise Ordinance nor would construction activities create a substantial temporary increase in ambient noise levels from construction of the proposed project. Impacts would be **less than significant** and mitigation measures are not required.

Operational Noise Sources

Potential noise impacts associated with the operations of the proposed Project would be from Project-generated vehicular traffic on the nearby roadways and from on-site activities, which have been analyzed separately below.

Roadway Traffic Noise

Vehicle noise is a combination of the noise produced by the engine, exhaust and tires. The level of traffic noise depends on three primary factors (1) the volume of traffic, (2) the speed of traffic, and (3) the number of trucks in the flow of traffic. The proposed project does not propose any uses that would require a substantial number of truck trips

and the proposed project would not alter the speed limit on any existing roadway so the proposed project's potential off-site noise impacts have been focused on the noise impacts associated with the change of volume of traffic that would occur with development of the proposed project.

Since neither the General Plan nor the CEQA Guidelines define what constitutes a "substantial permanent increase to ambient noise levels," this impact analysis has utilized guidance from the Federal Transit Administration for a moderate impact that shows that the Project contribution to the noise environment can range between 0 and 7 dB, which is dependent on the existing noise levels, as shown in **Table 13-3**.

Table 13-3. FTA Project Effects on Cumulative Noise Exposure

Existing Noise Exposure (dBA Leq or Ldn)	Allowable Noise Impact Exposure dBA Leq or Ldn		
	Project Only	Combined	Noise Exposure Increase
45	51	52	+7
50	53	55	+5
55	55	58	+3
60	57	62	+2
65	60	66	+1
70	64	71	+1
75	65	75	0

Source: Noise Report, see **Appendix G**.

The potential off-site traffic noise impacts created by the on-going operations of the proposed project have been analyzed through utilization of the FHWA Traffic Noise Prediction Model - FHWA-RD-77-108 (FHWA Model). The proposed Project's potential off-site traffic noise impacts have been analyzed for the existing year and opening year 2023 conditions, which are discussed below.

Existing Year Conditions

The proposed Project's potential off-site roadway noise impacts have been calculated through a comparison of the existing scenario to the existing with Project scenario. The results of this comparison are shown in **Table 13-4**.

Table 13-4. Project Traffic Noise Contributions for Existing Year Conditions

Roadway	Segment	dBA CNEL at Nearest Receptor[1]			Increase Threshold[2]	Significant Impact?
		Existing	Existing Plus Project	Project Contribution		
PCH	North of Grand Avenue	60.3	60.3	0.0	+2 dBA	No
PCH	North of Mariposa Avenue	60.6	60.6	0.0	+2 dBA	No
PCH	North of Palm Avenue	64.2	64.3	0.1	+2 dBA	No
PCH	North of Maple Avenue	62.8	62.8	0.0	+2 dBA	No
Grand Avenue	West of PCH	67.1	67.1	0.0	+1 dBA	No

Notes:
[1] Calculated noise at the nearest residential does not take into account existing noise barriers.
[2] Increased Threshold obtained from the FTA's allowable noise impact exposures.
Source: FHWA Traffic Noise Prediction Model FHWA-RD-77-108.

Table 13-4 shows that for the existing conditions, the proposed Project's permanent noise increases to the nearby homes from the generation of additional vehicular traffic would not exceed the traffic noise increase thresholds detailed above. Therefore, the proposed Project would not result in a substantial permanent increase in ambient noise levels for the existing year conditions. Impacts would be **less than significant** and no mitigation measures are required.

Opening Year 2023 Conditions

The proposed Project's potential off-site roadway noise impacts have been calculated through a comparison of the opening year 2023 scenario to the opening year 2023 with Project scenario. The results of this comparison are shown in **Table 13-5**.

Table 13-5. Project Traffic Noise Contributions for Opening Year 2023 Conditions

		dBA CNEL at Nearest Receptor[1]				
Roadway	Segment	Year 2023	Year 2023 Plus Project	Project Contribution	Increase Threshold[2]	Significant Impact?
PCH	North of Grand Avenue	60.3	60.3	0.0	+2 dBA	No
PCH	North of Mariposa Avenue	60.6	60.6	0.0	+2 dBA	No
PCH	North of Palm Avenue	64.2	64.3	0.1	+2 dBA	No
PCH	North of Maple Avenue	62.8	62.8	0.0	+2 dBA	No
Grand Avenue	West of Pacific Coast Highway	67.1	67.1	0.0	+1 dBA	No

Notes:
[1] Calculated noise at the nearest residential use does not take into account existing noise barriers.
[2] Increased Threshold obtained from the FTA's allowable noise impact exposures.
Source: FHWA Traffic Noise Prediction Model FHWA-RD-77-108.

Table 13-5 shows that for the opening year 2023 conditions, the proposed Project's permanent noise increases to the nearby homes from the generation of additional vehicular traffic would not exceed the traffic noise increase thresholds detailed above. Therefore, the proposed Project would not result in a substantial permanent increase in ambient noise levels for the opening year 2023 conditions. Impacts would be **less than significant** and no mitigation measures are required.

On-site Noise Sources

Project operations may create an increase in on-site noise levels from noise impacts from rooftop mechanical equipment, parking lots, and delivery trucks. Section 7-2-4(A) of the City's Municipal Code limits the noise created on the Project site at the nearby residential properties to the ambient noise level plus 5 dBA and Section 7-2-4(B) of the City's Municipal Code limits the noise created on the Project site at the nearby commercial and industrial properties to the ambient noise level plus 8 dBA. As mentioned previously, the nearest sensitive receptors to the Project site are homes to

the north and northwest that are located as near as 270 feet from the Project site. Additionally, commercial uses to the south are adjacent to the Project site.

In order to determine the noise impacts from the operation of rooftop mechanical equipment, parking lots, and delivery trucks, reference noise measurements for each noise source are shown in **Table 13-6**, and the noise levels from each source were calculated through use of standard geometric spreading of noise from a point source with a drop-off rate of 6 dB for each doubling of the distance between the source and receiver.

Table 13.6 Operational Noise Levels at Nearby Land Uses

	Homes to Northwest		Homes to West		Commercial to South	
Noise Source	Distance - Source to Homes (feet)	Noise Level[1] (dBA Leq)	Distance - Source to Homes (feet)	Noise Level[1] (dBA Leq)	Distance - Source to Commercial (feet)	Noise Level[1] (dBA Leq)
Rooftop Equipment[2]	310	31	300	31	60	45
Parking Lot[3]	310	27	380	25	60	42
Truck Delivery[4]	480	31	380	33	60	49
Combined Noise Levels		**35**		**35**		**51**
City Noise Standard (day/night)		**69/63**		**69/61**		**68/61**
Exceed City Noise Standard?		**No/No**		**No/No**		**No/No**

Notes:
[1] The noise levels were calculated through use of standard geometric spreading of noise from a point source with a drop-off rate of 6 dB for each doubling of the distance between the source and receiver. Does not account for noise reduction features such as buildings and walls.
[2] Rooftop equipment is based on a reference noise measurement of 66.6 dBA at 10 feet.
[3] Parking lot is based on a reference noise measurement of 63.1 dBA at 5 feet.
[4] Truck delivery is based on a reference noise measurement of 54.8 dBA at 30 feet.
[5] City Noise Standard based on ambient noise level plus 5 dB at the residential uses and plus 8 dB for the commercial uses.

Table 13-6 shows that the proposed Project's on-site operational noise from the anticipated on-site noise sources would not exceed the applicable noise standards at the nearby residential and commercial uses. Therefore, operational on-site noise impacts would be **less than significant** and no mitigation measures are required.

13.b) Project construction can generate varying degrees of groundborne vibration, depending on the construction procedure and the equipment used. Operation of construction equipment generates vibrations that spread through the ground and diminish in amplitude with distance from the source. The effect on buildings located in the vicinity of a construction site often varies depending on soil type, ground strata, and construction characteristics of the receiver building(s). The results from vibration can range from no perceptible effects at the lowest vibration levels to low rumbling sounds and perceptible vibration at moderate levels, to slight damage at the highest levels. Groundborne vibrations from construction activities rarely reach levels that damage structures.

The types of construction vibration impact include human annoyance and building/property damage. Human annoyance occurs when construction vibration rises significantly above the threshold of human perception for extended periods of time. Building damage can be cosmetic or structural. Ordinary buildings that are not

particularly fragile would not experience any cosmetic damage (e.g., plaster cracks) at distances beyond 30 feet. This distance can vary substantially depending on the soil composition and underground geological layer between the vibration source and the receiver. In addition, not all buildings respond similarly to vibration generated by construction equipment.

The following section analyzes the potential vibration impacts associated with the construction and operations of the proposed project.

Construction-Related Vibration Impacts

The Project construction activities are anticipated to include demolition and rough grading of the existing surface parking lot, grading and foundation construction, building renovation and construction, application of architectural coatings, and paving and site improvements. Vibration impacts from construction activities would typically be created from the operation of heavy off-road equipment. The nearest off-site structure where people may sit, which makes them much more susceptible to vibration, would be the commercial uses, located as near as 30 feet south of the Project site.

Section 7-2-9 of the City's Municipal Code restricts the creation of vibration which is perceptible without the use of instruments to any reasonable person on normal sensitivity. However, since neither the Municipal Code nor the General Plan provides a quantifiable vibration threshold level, Caltrans guidance has been utilized, which defines the threshold of perception from transient sources at 0.25 inch per second PPV.

The primary source of vibration during construction would be from the operation of a bulldozer, which was selected from the applicant's equipment list as the equipment generating the highest vibration levels. A large bulldozer would create a vibration level of 0.089 inch per second PPV at 25 feet. Based on typical propagation rates, the vibration level at the nearest adjacent structures (30 feet away) would be 0.11 inch per second PPV. The vibration level at the nearest off-site structure where people likely sit, would be below the 0.25 inch per second PPV threshold detailed above. Impacts would be **less than significant** and no mitigation measures are required.

Operations-Related Vibration Impacts

Operation of the Project is expected to require delivery trucks to the Project site, which are a known source of vibration. The nearest off-site structure where people may sit, which makes them much more susceptible to vibration, would be the commercial uses, located as near as 30 feet south of the Project site of the nearest on-site driveway.

Caltrans has performed extensive research on vibration levels created along freeways and State Routes and their vibration measurements of roads have not exceeded 0.08 inches per second PPV at 15 feet from the center of the nearest lane, with the worst-case combinations of heavy trucks. Based on typical propagation rates, the vibration level at the nearest commercial buildings (30 feet away) would by 0.037 inch per second PPV. Therefore, vibration created from operation of the proposed project would be within the 0.25 inch per second PPV threshold of detailed above. Impacts would be **less than significant** and no mitigation measures are required.

13.c) The proposed Project would not expose people residing or working in the Project area to excessive noise levels from aircraft. The nearest airport is Los Angeles International Airport that is located as near as 0.5 mile north of the Project site, however it should be noted that the Airport's runways run in a generally east-west direction and the Project site is located roughly perpendicular to the length of the Airport runways, so take-offs and landings do not occur over the Project site. As detailed in *3Q19 Los Angeles International Airport – California State Airport Noise Standards Quarterly Report*[26] the Project site is located outside of the 65 dBA CNEL noise contours of Los Angeles International Airport. Therefore, aircraft noise impacts would be **less than significant** and no mitigation measures are required.

[26] Los Angeles International Airport. 2019. *3Q19 Los Angeles International Airport – California State Airport Noise Standards Quarterly Report.*

14. POPULATION AND HOUSING

Would the project:	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
a. Induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?	☐	☐	☒	☐
b. Displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?	☐	☐	☐	☒

Explanation of Checklist Responses

14.a) As discussed in the responses to the Land Use and Planning thresholds in Section 11, the proposed Project is consistent with the City of El Segundo General Plan land use policies, which designate the Project site for office uses. No housing units would be developed as part of the Project, and no new or expanded urban infrastructure would be constructed that could foster increased development intensity on-site or at surrounding properties. Similar to other construction projects in the region, the Project construction workers would be expected to be drawn from the large, available regional labor force, who would commute to the Project site during the construction stages. The Project would provide an additional 67,380 square feet of office space. Based on the 2019 CDC Table 1004.5, which calculates the maximum total occupants for office use at a ratio of 1 person/150 square feet, the Project would provide office space for up to an additional 450 people.

Based on the Project vehicle miles traveled (VMT) of 21.8 miles, which represents the average distance each employee would travel in an automobile to the Project site, as analyzed in Section 17, Transportation, it is anticipated that the majority of workers employed at the Project would commute to, rather than relocate to the Project area, Additionally, the Project's close proximity to the Metro Station (approximately 0.4 mile to the east at Mariposa Avenue and Nash Street) would also facilitate commuters using public transit. Further, based on the State of California Employment Development Department Labor Force data, the unemployment rate in El Segundo was 12.3 percent in December 2020, which is 1.6 percentage points higher than the overall county unemployment rate of 10.7 percent (EDD 2021). Based on this data, it is also possible that the Project would provide employment opportunities to the local inhabitants in El Segundo in a variety of occupations, including maintaining or being employed at the offices in the Project.

To be conservative and assume that up to 5 percent, or approximately 23 of the additional future employees relocate to El Segundo, it is expected that based on the number of available or vacant housing units, which was 354 units in 2019 (U.S. Census 2019), the existing housing would sufficiently accommodate the estimated number of future employees who would relocate to El Segundo and require 6 percent of the vacant housing. This Project does not, therefore, represent unplanned growth. Lastly, the proposed zone text amendment, which would exclude parking area from the floor

area (net)~~FAR~~ calculation, would not have any impact upon this issue area. Therefore, the Project would result in a **less than significant impact** to directly or indirectly induce unplanned population growth in the City.

14.b) There is no existing housing on the Project site, which is currently zoned and in-use for Commercial Office. Construction and renovation of the proposed buildings, therefore, would not displace any people or housing. Lastly, the proposed zone text amendment, which would exclude parking area from the floor area (net)~~FAR~~ calculation, would not have any impact upon this issue area. Thus, the Project would not necessitate the construction of replacement housing elsewhere and there would be **no impact**.

15. PUBLIC SERVICES

Would the project:	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
a. Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times, or other performance objectives for any of the public services:	☐	☐	☒	☐
i) Fire protection?	☐	☐	☒	☐
ii) Police protection?	☐	☐	☒	☐
iii) Schools?	☐	☐	☒	☐
iv) Parks?	☐	☐	☒	☐
v) Other public facilities?	☐	☐	☒	☐

Explanation of Checklist Responses

15.a.i) The El Segundo Fire Department (ESFD) provides fire protection and emergency medical services to the Project area. The ESFD maintains 14 firefighters on duty 24 hours a day, 7 days a week. The City is divided into two districts for fire response, with Pacific Coast Highway as the dividing line. Station 1 responds to calls west of Pacific Coast Highway and Station 2 responds east of Pacific Coast Highway. Depending on the nature of the emergency request, units may cross over into the other district and coordinate resources to assist in response activities.[27] The Project site is located within Station 2's fire response district. Station 2 is located at 2261 E. Mariposa Avenue, approximately 0.53 mile from the Project site, and includes one fire engine, one fire truck, and one paramedic unit. Station 1 (headquarters at the Civic Center Complex) is located at 314 Main Street, approximately 1.25 miles from the Project site.

The Project would result in increased square footage of commercial office space and an increase in the number of employees on the Project site as compared with current conditions; however, the Project would not create any new uses that could not be served by existing ESFD equipment and personnel. Additionally, the Project designs to renovate Building A and Building B and construct Building C would be required to comply with ESMC fire protection requirements to reduce fire hazards associated with the buildings. The ESFD has review and approval authority over building plans in subsequent phases of construction design to ensure adherence with fire department regulations and requirements. Additionally, ESMC Title 15, Chapter 27A, Section 15-27A-

[27] City of El Segundo, *Fire Department, Suppression Frequently Asked Questions*.

2, establishes the City's ability to impose development impact fees, which requires new development projects to pay their fair share of cost to offset a project's impact on public services, including fire suppression facilities, law enforcement facilities, and libraries. The amount of each impact fee is generally calculated based on the gross square footage of nonresidential development or other appropriate methodology which ensures that the fee is roughly proportional to the impacts of new development on public facilities. As such, the Project is not anticipated to affect fire protection demands to the extent that new or physically altered fire facilities would be required. Impacts on fire protection serves are anticipated to be **less than significant** and no mitigation measures are required.

15.a.ii) The El Segundo Police Department (ESPD) provides police protection in the City. The department's headquarters are located at 348 Main Street at the Civic Center Complex, approximately 1.25 miles west of the Project site. The City is divided into two geographic areas bisected by Pacific Coast Highway. The area west of Pacific Coast Highway is designated the West Command and the area east of Pacific Coast Highway is designated the East Command. The Project site is located within the East Command. The ESPD is staffed by a total of approximately 62 sworn officers, 20 administrative personnel, and volunteers.[28] The Project does not involve housing development or growth inducing effects, as discussed in Section 14, that would increase service population demands for law enforcement.

The Project would increase the number of employees on the Project site through the construction of a new, 7-level office building and renovation of existing office buildings. Because the Project site already contains office buildings, and the Project site is surrounded by commercial and industrial land uses, the Project would not create a unique land use that would result in new or expanded sources of crime. Further, the ESPD is involved in the City's review of new development plans and provides specific recommendations to improve safety and security and the ability to respond to law enforcement incidents through various project design features. Examples of such recommendations typically pertain to lighting; landscaping; monitoring and surveillance devices; address signs; doors and hardware; etc. Additionally, as mentioned above, the Project would be assessed development impact fees, which represent a project's fair share costs to the City for public services and facilities, including law enforcement. Thus, the Project is not expected to substantially affect police protection needs or service ratios and would not result in the need for new or physically altered police facilities. As such, impacts would be **less than significant** and no mitigation measures are required.

15.a.iii) The Project site is located within the El Segundo Unified School District boundaries, which provides kindergarten through twelfth grade public education services in El Segundo. The school district is ranked in the top 10 percent of the nation and maintains a 25:1 student to teacher ratio (Public School Review 2021). Based on the school district's Board of Education Goals for Our Future: 2020-2040 (El Segundo Unified School District 2020), the school district has not identified issues with capacity or inadequate facilities. The Project would renovate two existing commercial buildings and would construct a five-story office building with a 1,185-space parking structure. As such, the Project would result in the increase of the total number of employees by approximately 450 on the

[28] City of El Segundo. 2019. *Adopted Operating & Capital Improvement Budget, Fiscal Year 2019-2020.*

Project site as compared with current conditions. While most future employees are expected to commute, rather than relocate to El Segundo, based on a conservative assumption that 5 percent or 23 of the future employees would move to El Segundo, these future employees may have children who would attend school at the El Segundo Unified School District facilities. Based on the current school district status, it is expected that the schools may accommodate additional students from the 23 future employees. Further, the Project would be subjected to levied developer fees applicable to both new construction and reconstruction projects, pursuant to Education Code Section 17620, to support school facilities. Because there are no residential units associated with the Project and the Project would result in insignificant growth-inducing effects as mentioned in Section 14, the Project would not have a direct impact on school facilities. Lastly, the proposed zone text amendment, which would exclude parking area from the floor area (net)~~FAR~~ calculation, would not have any impact upon this issue area. As such, the Project would result in a **less than significant impact** to public school facilities.

15.a.iv) As the Project does not involve residential development or other effects to increase housing growth, and the Project, with a conservatively assumed additional 23 employees who would relocate to El Segundo, would not significantly increase demands for park facilities. As such, the Project would not affect the City's parkland to population ratio, which is set forth at 5 acres per 1,000 population, based on the El Segundo General Plan Open Space and Recreation Element. The City maintains a park and recreation inventory totaling approximately 91 acres (LAWA 2019). Based on the U.S. Census population estimate of 16,610 inhabitants in 2019, the City's parkland to population ratio is 5.5 acres per 1,000 population, exceeds the General Plan parkland performance standard. Additional park users resulting from the estimated 23 relocated employees are expected to be accommodated without exceeding the 5 acres to1,000 population parkland to population ratio. While the Project would increase the number of employees on the site as compared with existing conditions, the proposed Project design also provides an enhanced outdoor plaza area for employee use. The plaza would be centrally located among Buildings A, B, and C, and would be designed with wood seating and landscaping, including over 75 trees of varying species, and a variety of native and climate-adapted shrubs and groundcovers. The plaza would provide employees with a means to spend time in a beautified outdoor setting with shading and seating amenities, and would be expected to decrease the demand that employees would have on neighborhood or regional parks. Lastly, the proposed zone text amendment, which would exclude parking area from the floor area (net)~~FAR~~ calculation, would not have any impact upon this issue area. As a result, the Project would result in a **less than significant impact**.

15.a.v) The El Segundo Public Library located at 111 West Mariposa Avenue, approximately 1.2 miles west of the Project site provides library services to the City. Outdoor gathering places and public amenities, such as those provided by the Joslyn Center Senior Center and the George E. Gordon Clubhouse, are located approximately 1 mile southwest of the Project site. As stated above, the Project would not involve residential development or significant growth-inducing effects that have the potential to increase the demand for other public services, such as libraries and community centers, to the extent where new or physically altered facilities would be required. Lastly, the proposed zone text amendment, which would exclude parking area from the floor area (net)~~FAR~~ calculation, would not have any impact upon this issue area. As such, the Project would result in a **less than significant impact** to other municipal facilities.

16. RECREATION

Would the project:	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
a. Would the project increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?	☐	☐	☒	☐
b. Does the project include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment?	☐	☐	☐	☒

Explanation of Checklist Responses

16.a) The existing Project site, which has been occupied most recently by Boeing for over a decade and has been used for commercial office space since 1957 (for Building B) and 1962 (for Building A), does not provide recreational use. The nearest recreational facility is Washington Park, approximately 650 feet west of the Project site, along East Palm Avenue and Washington Street. This park is separated from the Project site by Pacific Coast Highway and commercial and residential uses. As stated above, construction of the new Building C and the updating of Buildings A and B would not involve residential development; thus, it would not generate a direct demand on recreational facilities. Further, the Project would provide employees of on-site office uses with outdoor seating areas and a plaza, thus decreasing the demand that employees would have on neighborhood or regional parks, such as Washington Park, during the day. As discussed in **15.a.iv**, while the majority of the Project users are expected to commute or be hired locally, this analysis assumes that 5 percent, or 23 of the additional future employees may relocate to the Project area. The current parkland to population ratio, which is considered the relevant performance standard concerning parkland, is 5.5 acres per 1,000 population, which exceeds the General Plan Open Space and Recreation parkland performance standard of 5 acres per 1,000 population. The additional park users resulting from the Project-related relocations would be expected to maintain the parkland to population ratio of 5 acres to 1,000 population. Lastly, the proposed zone text amendment, which would exclude parking area from the floor area (net)~~FAR~~ calculation, would not have any impact upon this issue area. In summary, the Project would be expected to result in **less than significant** impacts in this regard.

16.b) As stated above, the Project is not anticipated to substantially increase the demand on municipal parks and recreation facilities in the City, thus requiring construction or expansion of recreational facilities. The Project itself would include a courtyard in between Buildings A, B, and C, which would be enhanced with decorative landscaping and multiple seating areas for use by employees on the site. Environmental impacts associated with the construction of the Project's outdoor gathering spaces are included in the Project analysis discussed in the other sections of this Initial Study. Therefore, there would be no additional impacts associated with constructing these outdoor recreation amenities beyond those already discussed in this Initial Study. Lastly, the proposed zone text amendment, which would exclude parking area from the floor

area (net)~~FAR~~ calculation, would not have any impact upon this issue area. As such, the Project would result in **no impacts**.

17. TRANSPORTATION

Would the project:	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
a. Conflict with a program, plan, ordinance, or policy addressing the circulation system, including transit, roadway, bicycle, and pedestrian facilities?	☐	☐	☐	☒
b. Conflict or be inconsistent with CEQA Guidelines Section 15064.3, subdivision (b)?	☐	☒	☐	☐
c. Substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?	☐	☐	☒	☐
d. Result in inadequate emergency access?	☐	☐	☒	☐

The discussion and analysis in this section are based on the traffic impact analysis (TIA) for the proposed Project prepared by Kimley-Horn (2020; see **Appendix H**).

17.a) The Project is proposed at an existing developed site in the urban portion of El Segundo along Pacific Coast Highway that is well-served by public transit systems. The Project site is located within in a High Quality Transit Area (HQTA),[29] approximately 0.3 mile from the Los Angeles County Metropolitan Transportation Authority (Metro) rail system Mariposa Station, near the intersection of Mariposa Avenue and Nash Street. Additionally, the Metro Bus Line 232 has a bus stop approximately 300 feet from the Project site along Pacific Coast Highway. (**Figure 2**, Project Location).

The Project would not conflict with a program or plan addressing the circulation system, which include the City of El Segundo General Plan Circulation Element (September 2004), the City's municipal code (ESMC), and the SCAG RTP/SCS. The City of El Segundo General Plan Circulation Element (September 2004) guides development to provide a safe, convenient, and efficient circulation system, while providing a means to respond to anticipated growth. SCAG adopted the 2016–2040 Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS) in April 2016 and the 2020-2045 RTP/SCS in September 2020. The purpose of the RTP/SCS is to plan and balance the region's future mobility and housing needs with economic, environmental and public health goals.

The Project is consistent with the guiding principles and policies in the City's Circulation Element and SCAG RTP/SCS. The Project involves the renovation of existing buildings and proposes the construction of a new office building and enhanced outdoor courtyard area. The Project would modernize existing workplaces, provide additional

[29] SCAG defines a High Quality Transit Area (HQTA): Areas within one-half mile of a fixed guideway transit stop or a bus transit corridor where buses pick up passengers at a frequency of every 15 minutes or less during peak commuting hours. While HQTAs account for only three percent of total land area in SCAG region, they are planned and projected to accommodate 46 percent of the region's future household growth and 55 percent of the future employment growth.

areas of employment in close proximity to public transit systems, and encourage use of outdoor areas. The Project would also encourage pedestrian and bicycle access by providing pedestrian entrances and bicycle access along Pacific Coast Highway near other existing commercial businesses. The Project also includes development of new bicycle facilities, with 128 short-term and long-term bicycle parking spaces, in accordance with the ESMC requirements. The Project parking facilities could help serve parking needs for nearby business, and would include tandem, electric, and clean-air vehicle spaces to further encourage alternative transportation and rideshare programs.

In summary, the Project would not conflict with applicable programs, plans, ordinances, or policies addressing the circulation system, including transit, roadway, bicycle, and pedestrian facilities. Lastly, the proposed zone text amendment, which would exclude parking area from the floor area (net)~~FAR~~ calculation, would not have any impact upon this issue area. There would be **no impact** in this regard.

While not required for CEQA analysis, the following provides the Project level of service findings for informational purposes only. Two intersections, N Pacific Coast Highway at El Segundo Boulevard and N Pacific Coast Highway at Imperial Highway, near the Project site currently operate at LOS F. Under existing plus project conditions, the two intersections would continue to operate at LOS F, and the northern driveway for the Project site would also operate at LOS F. Under the opening year (2023) cumulative base scenario, the intersections operating at LOS F are N Pacific Coast Highway at El Segundo Boulevard (no change in LOS), N Pacific Coast Highway at Grand Avenue, and North Pacific Coast Highway at Imperial Highway. Under opening year (2023) cumulative plus project conditions, the intersections operating at LOS F include those under the cumulative base scenario as well as the northern and southern driveways onto the Project site.

17.b) In January 2019, the Natural Resources Agency and the Governor's Office of Planning and Research (OPR) codified SB 743 (Chapter 386, Statutes of 2013) into the Public Resources Code (PRC) and the State CEQA Guidelines, Section 15064.3 to establish vehicles miles traveled (VMT) as the new transportation impact metric. VMT refers to the amount and distance of automobile travel attributable to a project. The City is in the process of developing SB 743 implementation guidelines at the time of this analysis. Therefore, the Project VMT Analysis (**Appendix H**) was prepared in accordance with the City's draft SB 743 Implementation Guidelines, which are based on OPR's *Technical Advisory on Evaluating Transportation Impacts in CEQA* (OPR 2018).

The analysis of the Project VMT is conducted by calculating the Project VMT, meaning the distance the future occupant or employee at the Project would travel in an automobile to reach the Project site, and then comparing the Project VMT with a threshold. Based on the draft Implementation Guidelines, the threshold is established at 15 percent below the regional average VMT. In this case, the regional average VMT is established at 20.0 miles, which is based on the SCAG travel demand model developed as part of the 2016 SCAG RTP/SCS; therefore, the VMT threshold is calculated to be 15 percent of this average, or 17.0 miles.

Based on the Project characteristics utilized as the primary input in the VMT Calculator, the Project would generate an average Project Home-Based Work (HBW) (i.e., commute) per capita VMT of 21.8 miles per employee, without application of any transportation demand management (TDM) measures. Therefore, the VMT per

employee of 21.8 exceeds the regional average significance threshold of 17.0 (15 percent below 20.0) by 4.8 miles. In order to identify a measurable unit to apply mitigation, the VMT reduction of 4.8 miles was converted into the equivalent daily trips. By applying 22 percent of 1,115 total daily trips[30], 4.8 miles per employee is equivalent to 254 daily trips.

As a result, **Mitigation Measure TRANS-1** would be required to reduce the Project VMT under the regional average significance threshold. With implementation of Mitigation Measure TRANS-1, the Project's impact would be **less than significant.**

Mitigation Measure TRANS-1: The applicant shall prepare and implement a Project-specific TDM program that will reduce the Project's daily trips by 254. The TDM program shall consist of a list of approved strategies, guided by the California Air Pollution Control Officers Association (CAPCOA) recommendations to promote carpool, bicycling, walking, and transit in place of individual vehicle trips to and from the Project. These elements may change or be adjusted to adapt to changing commute trends and to maximize the efficiency and performance of the program. The following is a preliminary list of applicable strategies that provide feasible means to adequately reduce the Project VMT:

- Safe and Well-Lit Access to Transit: Enhance the route for people walking or bicycling to nearby transit stops, such as those located on Pacific Coast Highway and Mariposa Avenue. (Maximum reduction of 23 trips)

- Transit Subsidies: Provide subsidization of transit fare for employees of the project site. This strategy helps reduce single-occupancy vehicle trips by utilizing transit service already present in the project area. (Maximum reduction of 116 trips)

- Travel Behavior Change Program: Provide a web site that allows employees to research other modes of transportation for commuting. (Maximum reduction of 46 trips)

- Promotions & Marketing: Provide marketing and promotional tools to educate and inform travelers about site-specific transportation options and the effects of their travel choices with passive educational and promotional materials. (Maximum reduction of 46 trips)

- Commute Assistance Center: Provide a computer kiosk that allows employees to research other modes of transportation for commuting. (Maximum reduction of 46 trips)

- Preferential Carpool / Vanpool Parking Spaces: Provide reserved carpool/vanpool spaces closer to the building entrance. (Maximum reduction of 116 trips)

[30] The total daily trips is calculate dot be1,155 daily trips, based on the Institute of Transportation Engineers (ITE) Trip Generation Manual (10th Edition) trip rates for General Office Building (ITE Land Use 710).

- Passenger Loading Zones: Provide passenger loading zones for easy access to carpools or vanpools. (Maximum reduction of 58 trips)

- Bike Share: Implement bike share to allow people to have on-demand access to a bicycle, as-needed. (Maximum reduction of 3 trips)

- Bike Parking and Facilities: Include secure bike parking and showers to provide additional end-of-trip bicycle facilities to support safe and comfortable bicycle travel. Provide on-site bicycle repair tools and space to use them supports on-going use of bicycles for transportation. (Maximum reduction of 35 trips)

- Traffic Calming Improvements: Implement traffic calming measures throughout and around the perimeter of the Project site that encourage people to walk, bike, or take transit within the development and to the development from other locations. (Maximum reduction of 12 trips)

- Pedestrian Network Improvements: Implement pedestrian network improvements throughout and around the Project site that encourages people to walk (Maximum reduction of 23 trips)

- Parking Cash Out: Provide employees a choice of forgoing current parking for a cash payment to be determined by the employer. (Maximum reduction of 58 trips)

- Alternative Works Schedule: Implement Flextime, Compressed Work Week (CWW), and staggered shifts for employees. (Maximum reduction of 173 trips)

Timing/Implementation: *Applicant to provide a TDM Program to the City for review, with approval completed prior to Building Permit Final or issuance of the first certificate of occupancy. The success of the program will be monitored and the tenant commute patterns will be reviewed, with updates of adjustments and changes to be provided in an annual monitoring report, or the TDM shall include a mechanism to report to the City on the progress.*

Monitoring/Enforcement: *El Segundo Planning and Building Safety Department*

17.c) The Project property is an existing developed site, and the proposed Project layout does not include sharp curves or other geometric designs that would increase hazards, as shown on Figure 5, Project Site Layout. Vehicular access is provided by two driveways on Pacific Coast Highway and one driveway on Carl Jacobson Way, and as depicted on Figure 5, the circulation pattern provides adequate and safe ingress and egress. The Project would also be designed with safe and convenient pedestrian access from the buildings to the parking structure through the central courtyard. Additionally, Buildings A and B would be renovated to provide direct pedestrian access to the Pacific Coast Highway. The Project does not involve creating unsafe geometric design features such as sharp curves or dangerous intersections. Project impacts would be **less than significant.**

17.d) The proposed Project layout includes fire access from the driveways along North Pacific Coast Highway and East Maple Avenue, which~~dedicated fire lanes that~~ provide emergency access to the site, as shown on **Figure 5**, Project Conceptual Site Layout. A fire lane easement runs through adjacent properties ~~both~~ north ~~and south~~ of the Project site, which the applicant has partially redesigned to be in compliance with Fire Department purposes. As addressed above in 9.f, during construction and operations, the Project would not interfere with or close access along Pacific Coast Highway, and existing driveways entering and exiting the property would remain open to emergency vehicles. Thus, the Project's would not result in inadequate emergency access and impacts in this regard would be **less than significant.**

18. TRIBAL CULTURAL RESOURCES

Would the project cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code Section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place or object with cultural value to a California Native American tribe, and that is:	**Potentially Significant Impact**	**Less Than Significant With Mitigation Incorporated**	**Less Than Significant Impact**	**No Impact**
a. Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code Section 5020.1(k)?	☐	☐	☒	☐
b. A resource determined by the lead agency, in its discretion and supported by substantial evidence to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1? In applying the criteria set forth in subdivision (c) of Public Resources Code Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe.	☐	☒	☐	☐

Explanation of Checklist Responses

18.a As mentioned previously, the potential for resources eligible for listing on the California Register of Historical Resources to exist on the Project site was evaluated in the Project Cultural Resources Memorandum provided in **Appendix C**. The Project area was undeveloped until 1927, and then between 1928 and 1947, the land was used for agricultural purposes. No built features are occurred within the Project area until 1953 with the extant building at 737 Lairport Street (Carl Jacobson Way) (Building D). By 1964, both 650 and 700 North Pacific Coast Highway (Building A and Building B, respectively) were constructed. The site has been permanently altered for over 55 years and was previously graded to accommodate the existing structure foundations and parking uses. As evaluated in the Project Cultural Resources Memorandum, the Project site neither contains structures listed on the National Register of Historic Places or California Register of Historical Resources nor includes structures listed as a Los Angeles Historic–Cultural Monument. Building A and Building B were evaluated for inclusion in the California Register and recommended ineligible for listing under Criteria 1, 2, 3, and 4 both individually and as contributors to a historic district due to a lack of association with a historic context. Additionally, the resources were evaluated in accordance with Section 15064.5(a)(2)–(3) of the CEQA Guidelines using the criteria outlined in Section 5024.1 of the California Public Resources Code, and they do not qualify as historic resources for the purposes of CEQA. As such, the Project would not cause a substantial adverse change in the significance of a tribal cultural resource that is listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources. Impacts in this regard are **less than significant impact**.

18.b) One California Native American tribe, the Gabrieleño Band of Mission Indians–Kizh Nation, has notified the City of El Segundo with a request to be notified of pending projects that are being reviewed in accordance with the City's local CEQA implementation procedures. A formal notification regarding this Project proposal and

the City's environmental review process was sent to this tribal entity on October 1, 2020, and the Kizh Nation submitted correspondence requesting further consultation.

The City met with the Gabrieleño Band of Mission Indians – Kizh Nation (Gabrieleño) to identify tribal cultural resources and tribal cultural places in accordance with Assembly Bill (AB) 52 (Chapter 532, Statutes of 2014) on December 9, 2020. Mr. Andy Salas and Mr. Matthew Teutimez of the Kizh Nation noted that El Segundo and the Project site are located in a region with several surrounding Native American villages and trade routes. Each village covered large areas, with oftentimes overlapping areas between villages to allow shared use of natural resources. The trade routes were used by the Gabrieleño to move trade items, including salt, which was produced in the region, and the routes were also used for visiting family, going to ceremony, and accessing recreation and foraging areas. At times isolated burials may occur within and around the routes which are not associated with a village community burial site or ceremonial burial site, but where the person died. While the Project is not located within a mapped route, as a result of the prior use of the region, the potential cannot be precluded that buried tribal cultural resources or an isolated buried remain may be encountered during the Project's new Building C foundation earthwork activities.

As a result, the following **Mitigation Measure TCR-1** will be implemented such that in the event of any discovery of unknown tribal cultural resources during earthwork, impacts would be **less than significant**.

Mitigation Measure TCR-1: Prior to the commencement of any ~~grading-related~~ ground disturbing activity at the Project site~~having the potential to unearth native soils (i.e., non-engineered fill)~~, the Project applicant shall retain a Native American Monitor approved by the Gabrieleno Band of Mission Indians-Kizh Nation, the tribe that consulted on this project pursuant to Assembly Bill AB 52 (the "Tribe" or the "Consulting Tribe"). A copy of the executed contracts shall be submitted to the City of El Segundo Development Services Department prior to the issuance of any permit necessary to commence a ground-disturbing activity. The Tribal monitor will only be present on-site during the construction phases that involve ground-disturbing activities. Ground disturbing activities are defined by the Tribe as activities that may include, but are not limited to, pavement removal, potholing or auguring, grubbing, tree removals, boring, grading, excavation, drilling, and trenching, within the project area. The Tribal Monitor will complete daily monitoring logs that will provide descriptions of the day's activities, including construction activities, locations, soil, and any cultural materials identified. The on-site monitoring shall end when all ground-disturbing activities on the Project site are completed, or when the Tribal Representatives and Tribal Monitor have indicated that all upcoming ground-disturbing activities at the Project site have little to no potential for impacting Tribal Cultural Resources.~~that is culturally affiliated with the area to be present on-site during ground-disturbing activities in native soils. Monitoring shall be performed under the direction of a qualified archaeologist meeting the Secretary of the Interior's Professional Qualifications Standards for archaeology (National Park Service 1983).~~

Upon discovery of any Tribal Cultural Resources, construction activities shall cease in the immediate vicinity of the find (not less than the surrounding 100 feet) until the find can be assessed. All Tribal Cultural Resources unearthed by Project activities shall be evaluated by the Consulting Tribe approved Tribal monitor. ~~If tribal cultural~~

~~resources are encountered during ground-disturbing activities, work in the immediate area must halt and the find must be evaluated by the Qualified Archaeologist or the Tribal Monitor.~~If the resources are Native American in origin, the Consulting Tribe will retain it/them in the form and/or manner the Tribe deems appropriate, for educational, cultural and/or historic purposes.~~Upon discovery of~~ If human remains and/or grave goods are discovered or recognized at the Project site, all ground disturbance shall immediately cease, and the county coroner shall be notified per Public Resources Code Section 5097.98, and Health & Safety Code Section 7050.5. ~~the tribal and/or archaeological monitor/consultant/consultant will immediately divert work at minimum of 100 feet and place an exclusion zone around the discovery location.~~Human remains and grave/burial goods shall be treated alike per California Public Resources Code section 5097.98(d)(1) and (2). Work may continue on other parts of the Project site while evaluation and, if necessary, mitigation takes place (CEQA Guidelines Section 15064.5[f]). ~~The monitor/consultant(s) will then notify the Tribe, the qualified lead archaeologist, and the construction manager who will call the coroner. Work will continue to be diverted while the coroner determines whether the remains are human and subsequently Native American. The discovery is to be kept confidential and secure to prevent any further disturbance. If the finds are determined to be Native American, the coroner will notify the NAHC as mandated by state law who will then appoint a Most Likely Descendent (MLD). If resources are discovered that are Native American in origin, the Consulting Tribe will retain it/them in the form and/or manner the Tribe deems appropriate. The on-site monitoring shall end when all ground-disturbing activities on the Project Site are completed, or when the Tribal Representatives and Tribal Monitor have indicated that all upcoming ground-disturbing activities at the Project Site have little to no potential for impacting Tribal Cultural Resources.~~

Timing/Implementation: *Applicant to submit evidence of a contracted Native American Monitor to the City prior to issuance of building permits*

Monitoring/Enforcement: *El Segundo Planning and Building Safety Department*

19. UTILITIES AND SERVICE SYSTEMS

Would the project:	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
a. Require or result in the relocation or construction of new or expanded water, wastewater treatment, or storm water drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects?	☐	☐	☒	☐
b. Have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry, and multiple dry years?	☐	☐	☒	☐
c. Result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?	☐	☐	☒	☐
d. Generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals?	☐	☐	☒	☐
e. Comply with federal, state, and local management and reduction statutes and regulations related to solid waste?	☐	☐	☒	☐

Explanation of Checklist Responses

19.a) The Project would involve renovation and minor alteration of two existing office buildings (Buildings A and B), as well as the construction of a 5-level office building with an integrated 7-level parking structure within portion of the Project site that is currently occupied by a surface parking lot. The result of the rehabilitation activities would be a net increase in 1,031 square feet in Building A, and net reduction of 4,572 square feet in Building B. The proposed construction of Building C would add approximately 70,921 square feet of office space to the Project site. Given the increase in intensity of office uses at the Project site, the Project would result in an increase in water demand, wastewater generation, and an increase in demand on other utilities, such as electricity, natural gas, and telecommunications. The Project site contains existing commercial office buildings that are currently served by these utilities.

Wastewater

Wastewater generated by the Project would be conveyed to the Sanitation Districts of Los Angeles County (the Sanitation Districts) Joint Water Pollution Control Plant (JWPCP), located at 24501 South Figueroa Street in Carson. The facility currently provides both primary and secondary treatment for approximately 400 million gallons of wastewater daily (mgd) and currently processes an average flow of 261.1 mgd. serving over 4.8 million residents, businesses, and industries. Before discharge, the treated wastewater is disinfected with hypochlorite and sent to the Pacific Ocean through a network of

outfalls. These outfalls extend 2 miles off the Palos Verdes Peninsula to a depth of 200 feet. The JWPCP must comply with its current National Pollutant Discharge Elimination System (NPDES) Permit, which regulates the plant's discharges. The Sanitation Districts issued the Project a Will Serve letter (Appendix I), confirming adequate capacity to serve the Project, based on an estimated generation of 36,945~~37,880~~ gpd. Additionally, as part of the entitlement review, El Segundo Public Works Department has indicated no concerns with the Project impacting the overall sewer system from the property. The Project may potentially upgrade the onsite private sewer line conveying wastewater from the site to the connecting trunk line on Maple Avenue. . As such, the Project would not require any change in the treatment protocol for Project-generated wastewater. . Lastly, the proposed zone text amendment, which would exclude parking area from the floor area (net)~~FAR~~ calculation, would not have any impact upon this issue area. Project impacts will be **less than significant**.

Storm Water Drainage

As discussed in Section 10, Hydrology and Water Quality, of this Initial Study, the existing storm drainage facilities, coupled with proposed improvements, including pervious pavers and on-site stormwater storage/infiltration basins would be adequate to accommodate Project runoff. No physical modifications to the existing municipal stormwater infrastructure in the Project vicinity would be required to handle the Project stormwater runoff. Further, short-term stormwater impacts, such as those resulting from construction activities and resulting sediment runoff from the Project site, would be regulated by the NPDES Construction General Permit. As discussed in Section 10, Hydrology and Water Quality, of this Initial Study, this permit requires identification of a variety of water quality control BMPs to be specified on construction plans and implemented throughout construction. Through compliance with existing, mandatory regulations regarding stormwater storage and treatment, potential water quality impacts during construction and operation would be avoided or reduced to less than significant levels and would avoid conflicts with water quality standards established by the Los Angeles Regional Water Quality Control Board. Thus, the Project would not require the construction or relocation of new or expanded stormwater facilities and would result in **no impact**.

Dry Utilities (Natural Gas, Electricity, Telecommunication)

Southern California Edison (SCE) and Southern California Gas Company (SoCalGas) provide electricity and natural gas services to the Project site, respectively. These electricity and natural gas providers service the existing commercial buildings on the Project site. As such, Project-related impacts would result from connection of existing natural gas and electricity service lines to the proposed Building C and parking structure, as well as outdoor lighting in the courtyard, common areas, and along pathways.

Regarding natural gas, no major upgrades to the delivery system are anticipated as a result of this Project because overall regional projections set forth by energy purveyors anticipate that energy demand will decline. As stated in the 2020 California Gas Report, prepared by the California Gas and Electric Utilities, natural gas usage by commercial uses in California is expected to decline at a rate of 1.7 percent per year from 2019 to

2035.[31] This is because of more efficient power plants, statewide efforts to minimize greenhouse gas emissions through demand-side reductions, more efficient building standards incorporated into the California Title 24 building code, and CPUC-authorized energy efficiency programs. Given such decline in natural gas demand, it is not anticipated that the Proposed Project would require any major reconstruction or relocation of off-site natural gas infrastructure. Should SoCal Gas determine that upgrades to existing natural gas infrastructure would be necessary, resulting from either the demand of the proposed project or cumulative demand increases, such off-site upgrade projects would be undertaken by SoCal Gas and would be subject to environmental review pursuant to CEQA.

Regarding electricity, the California Energy Commission (CEC) provides new forecasts for electricity demand every two years as part of the *Integrated Energy Policy Report* process. The most recent report was adopted in 2019 and states that energy demand is anticipated to increase over the next 10 years with the increase depending on economic and demographic growth, the rates of electrical rates, and how broadly energy efficiency programs are adopted. However, the CEC and individual electricity purveyors, such as SCE, review demand projections published in this report and plan for capacity improvements in their distribution systems, as necessary. Should SCE determine that upgrades to existing electrical energy infrastructure would be necessary, resulting from either the demand of the proposed Project or cumulative demand increases, such off-site upgrade projects would be undertaken by SCE and would be subject to environmental review pursuant to CEQA. Attempting to estimate what environmental impacts may result from such electrical utility infrastructure improvements without knowledge of when and where the improvements would take place would be speculative.

Telecommunication services are provided to the existing office buildings on the Project site by private companies. Upgrades to the existing telecommunication infrastructure on the Project site would involve connecting the proposed Building C to existing telecommunications connections within the Project site and in adjacent streets. Upgrades to existing telecommunication facilities and construction of new facilities to meet the demand of users are determined by telecommunication providers and is subject to its own environmental review. Any traffic disruptions associated with telecommunication utility activities within the travel lanes would be addressed through routine traffic control measures. Lastly, the proposed zone text amendment, which would exclude parking area from the floor area (net)~~FAR~~ calculation, would not have any impact upon this issue area.

In summary, the Project would not result in the relocation or construction of new or expanded water, wastewater treatment, or storm water drainage, electric power, natural gas, or telecommunications facilities and impacts would be **less than significant**.

19.b) Water service is provided to the Project site by the City of El Segundo's Water Division, which is a partner of the West Basin Municipal Water District (WBMWD). The WBMWD provides wholesale potable water to 17 cities, serving approximately 900,000 people. According to the West Basin Municipal Water District's 2015 Urban Water Management Plan (UWMP), the 2020 water supply consists of: 19 percent groundwater; 52 percent

[31] California Gas and Electric Utilities. 2020. *2020 California Gas Report.*

imported water; 12 percent recycled water; 17 percent water conservation savings; and less than 1 percent desalinated water.[32] In compliance with legislative requirements, the UWMP details how West Basin manages its water supplies and demands under all hydrology conditions. The UWMP also demonstrates how West Basin proposes to meet its service area's retail demands over 25 years and provide long-term water reliability. According to the UWMP (**Table 3-1**), while the population within the WBMWD is anticipated to increase between 2020 and 2040, the overall baseline potable water demand in acre-feet per year is expected to decrease over this time period due to water efficiency measures implemented within the service area, as well as implementation of recycled water programs. The UWMP concluded that West Basin does not anticipate any shortages and will be able to provide reliable water supplies under both single dry year and multiple dry year conditions. No new water supply, storage, or distribution facilities are identified in the UWMP to address water demands in El Segundo. Under Water Code Section 10912, the Project is not subject to a water supply assessment since the Project does not meet the commercial office building criteria to: add more than 1,000 persons; or add more than 250,000 square feet of floor space. The City's Public Works Department has provided indication, and found the Project Will Serve letter acceptable that the existing water service infrastructure serving the Project site is sufficient to meet the Project's estimated net increase in water demand of 15,363 gallons per day (gpd) and of sustaining a minimum pressure of 50 pounds per square inch (psi). Therefore, while the Project would result in an increase in water consumption given the increase in commercial square footage on the Project site, the Project would not require the construction or relocation of new or expanded water facilities and impacts would be **less than significant** and no mitigation measures are required.

As discussed above, the West Basin Municipal Water District's 2015 UWMP concluded the City would be able to rely on the groundwater, imported water recycled water, water conservation savings and desalinated water supplies within the District. Specifically, the West Basin Municipal Water District states in the UWMP that it does not anticipate any shortages and will be able to provide reliable water supplies under both single dry year and multiple dry year conditions through 2040. Accordingly, there would be sufficient water supplies available to serve the Project and reasonably foreseeable future development during normal, dry and multiple dry years. Therefore, impacts to water supplies would be **less than significant.**

19.c) As discussed above, the Sanitation Districts issued the Project a Will Serve letter (Appendix I), confirming adequate capacity to serve the Project, based on an estimated generation of 37,880 gpd. Additionally, as part of the entitlement review, El Segundo Public Works Department has indicated no concerns with the Project impacting the overall sewer system from the property. Therefore, impacts to wastewater treatment would be **less than significant**.

19.d, e) Once operational, solid waste generated by the Project would consist of typical waste from a commercial office building. Project-generated wastes would continue to be accepted by the same multiple refuse disposal facilities that currently receive El Segundo's municipal solid wastes. In 2019, El Segundo disposed of approximately 46,016 tons of solid waste, as reported to the California Department of Resources Recycling

[32] West Basin Municipal Water District. 2016. *2015 Urban Water Management Plan.*

and Recovery (CalRecycle 2020). Approximately 30 percent was taken to the El Sobrante Landfill, which has a cease operations date of January 1, 2051. Approximately 17 percent of this waste was taken to the Simi Valley Landfill & Recycling Center, which has a cease operations date of March 31, 2063. The proposed Project would result in a minor increase in solid waste as a result of the net increase in commercial office space. Specifically, with a net increase in 66,480 square feet, the Project would result in an increase of approximately 404 lbs per day.[33] Furthermore, as applicable, the Project would comply with Senate Bill 1018 (Chapter 39, Statutes of 2012), Mandatory Commercial Recycling, which requires a business that generates 4 cubic yards or more of commercial solid waste per week to arrange for recycling services. Because landfill capacity is closely monitored by the Los Angeles County Sanitation District, the landfills that serve the City of El Segundo would have sufficient remaining capacities to absorb the solid waste increase resulting from the Project.

It should also be noted that the City has completed a comprehensive Source Reduction and Recycling Element (SRRE) in compliance with Assembly Bill (AB) 939, which requires every city in California to reduce the waste it sends to landfills. As of 2006, El Segundo was recycling 84 percent of its solid waste, thereby complying with the standards established by AB 939, which required cities to reduce waste disposal at landfills by 50 percent by the year 2000.

In addition, the City and/or the Project would be required to comply with federal, State, and local management and reduction statutes and regulations related to solid waste to ensure that the solid waste stream diverted to landfills and recycling facilities is reduced in accordance with existing regulations. For example, the California Green Building Code requires that at least 50 percent of all nonhazardous construction wastes be recycled and/or salvaged, rather than transported to a landfill for disposal.

Finally, the Project would be required to comply with adopted programs and regulations pertaining to solid waste. Thus, participation in the City's recycling programs during construction and operation would ensure that the Project would not conflict with federal, state, and local statutes and regulations related to solid waste. Accordingly, the Project would not generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals. Therefore, impacts related to solid waste generation would be **less than significant**.

[33] California Department of Resources Recycling and Recovery, 2020. *Estimated Solid Waste Generation Rates.*

20. WILDFIRE

If located in or near state responsibility areas or lands classified as very high fire hazard severity zones would the project:	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
a. Substantially impair an adopted emergency response plan or emergency evacuation plan?	☐	☐	☐	☒
b. Due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to, pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?	☐	☐	☐	☒
c. Require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?	☐	☐	☐	☒
d. Expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?	☐	☐	☐	☒

Explanation of Checklist Responses

20.a) The Project site is not located within or adjacent to a Very High Fire Hazard Severity Zone (VHFHSZ), as designated by the California Department of Forestry and Fire Protection.[34] The nearest VHFHSZs to the Project site are isolated areas located north of the Project site (the Ballona Wetlands Ecological Reserve and the Inglewood Oil Field (located 3.5 miles and 5 miles north of the Project site, respectively). The closest large fire hazard area is the Palos Verdes Peninsula, located 8 miles south of the Project site. The Project property is situated in a fully urbanized area with an urban street network, fully pressurized water system, and managed landscaping limited to decorative trees and shrubs. As such, wildland fires would not occur on or near the Project site. Regardless, in the event of any disaster warranting evacuation, the emergency routes used would depend on a number of variables, including the type, scope, and location of the incident. It is the responsibility of emergency service and/or appropriate public officials to adequately assess the situation so that safe and efficient evacuation routes are selected. As the Project site is in a fully urbanized area with a major arterial street (i.e., Pacific Coast Highway) and a major highway (I-105) within close proximity, the proposed Project would not substantially impair an adopted emergency response plan or emergency evacuation plan, and **no impact** would occur.

20.b) As the Project site is not within or near a VHFHSZ, the proposed Project would not have the potential to expose Project occupants to pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire due to slope, prevailing winds, and other factors,

[34] California Department of Forestry and Fire Protection, 2020. *Fire Hazard Severity Zone Viewer*.

or exacerbate wildfire risks. As such, the Project would result in **no impact** that would exacerbate wildfire risks and expose occupants to pollutants released from a wildfire.

20.c) The proposed Project would not require the installation or maintenance of associated infrastructure in or near a state responsibility area or VHFHSZ that may exacerbate fire risk or result in temporary or ongoing impacts to the environment. As such, **no impact** would occur.

20.d) The Project site is within a relatively flat, urbanized area that is adjacent to existing commercial and industrial structures. The Project would not expose people or structures to significant risks in or near a state responsibility area or VHFHSZ, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes. As such, **no impact** would occur.

21. MANDATORY FINDINGS OF SIGNIFICANCE

Would the project:	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
a. Does the project have the potential to degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, reduce the number or restrict the range of a rare or endangered plant or animal, or eliminate important examples of the major periods of California history or prehistory?	☐	☐	☒	☐
b. Does the project have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects.)	☐	☐	☒	☐
c. Does the project have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly?	☐	☐	☒	☐

Explanation of Checklist Responses

21.a) As discussed in checklist responses 3.a–d and 13.a–c, the proposed Project would generate less than significant emissions of criteria air pollutants and less than significant noise levels during the demolition, renovation, and construction phases and over the operating life of the office campus. With adherence to regulatory requirements, air quality and noise impacts would not be significant and would not result in a degradation of the quality of the urbanized environment in which the Project is proposed. The existing Project site has been fully developed, and there are no sensitive biological resources on or near the Project site, and as discussed in checklist responses 4.a–f, the Project would have no impact on fish or wildlife populations, nor would it eliminate any habitat or biological resources that could reduce the number or range of rare or endangered species. In addition, as discussed in checklist responses 5.a–c, no local, state, or federally designated examples of major periods in California history or prehistory have been identified on the site or in the vicinity. Lastly, the proposed zone text amendment, which would exclude parking area from the floor area (net)~~FAR~~ calculation, would not have any impact upon this issue area. The Project would have a **less than significant impact** and the Project would not result in a mandatory finding of significance in this regard.

21.b) A significant cumulative impact may occur if a project, in conjunction with related projects, would result in impacts that are less than significant when viewed individually but would be cumulatively significant when viewed together. In addition to this Project, there are currently 17 other development projects (refer to Appendix J, Cumulative Projects List) in various areas of El Segundo that have been proposed and approved

but have not been completed. These consist of nine projects currently in construction and eight with pending entitlements. These other projects include a range of land uses types and intensities, including other office buildings, a total of 278 residential units, a golf pro shop and driving range, office/warehouse/retail uses, a computer data center, and several expansions of existing office and industrial uses. The nearest project is a pending entitlement for a zone change and General Plan Amendment to multi-family residential uses for 15 dwelling units located approximately 1,000 feet southwest of the Project site, However, when considering the proposed Project in combination with other past, present, and reasonably foreseeable future projects in the vicinity of the Project site, the proposed Project does not result in environmental impacts that would incrementally contribute to a significant cumulatively impact. As detailed in the preceding checklist responses, the proposed Project would not result in any significant and unmitigable impacts in any environmental categories. The Project would be consistent with regional plans and programs that address environmental factors such as air quality, energy, greenhouse gases, hydrology and water quality, transportation, utilities, and other applicable regulators that have been adopted by public agencies. Additionally, in many cases, including aesthetics, agriculture, biological resources, cultural resources, geology, hazards, hydrology, land use, population and housing, public services, mineral resources, noise, recreation, tribal cultural resources, and wildfire, the impacts associated with the Project are either localized to the Project site or are of such a negligible degree that they would not result in a considerable contribution to any significant cumulative impacts. In the case of population and housing, a conservative assumption that 5 percent or 23 of the new employees may relocate to the Project area was analyzed, which concluded that adequate housing is available in the Project area. Further, when considered with the cumulative project scenario, which includes the addition of 278 residential units, the additional new housing from current and future projects would further ameliorate any effects in Project housing. Lastly, the proposed zone text amendment, which would exclude parking area from the floor area (net)~~FAR~~ calculation, would not have any impact upon this issue area. As such, cumulative impacts would be **less than significant (not cumulatively considerable)** and the Project would not result in a mandatory finding of significance in this regard.

21.c) As discussed in checklist responses 3.a–d and 13.a–c, the proposed Project would generate less than significant emissions of criteria air pollutants and TACs, and less than significant noise levels during the demolition, renovation, and construction phases and over the operating life of the office campus. With adherence to regulatory requirements for air quality and noise, these impacts would not cause substantial adverse effects on humans. As discussed in checklist responses 9.a–b, based on the environmental site assessments conducted on the Project site, mitigation measures HAZ-1 and HAZ-2 would manage, potentially remediate, and protect against prior environmental contamination from past land use activities, such that the proposed office building uses would not result in significant hazards associated with the storage, use, transport, or disposal of hazardous materials or wastes. Lastly, the proposed zone text amendment, which would exclude parking area from the floor area (net)~~FAR~~ calculation, would not have any impact upon this issue area. As a result, the Project, including the proposed zoning code amendment, would have a **less than significant impact** and the Project would not result in a mandatory finding of significance in this regard.

Davis, CA

January 4, 2021

Introduction

This study is to determine whether the west-facing façade (part of proposed renovations) for the existing 7-story building at 650 North Pacific Coast Highway (Sepulveda)[1] would create a new source of substantial light and glare which would adversely affect day or nighttime views in the area.

Figure 1 Existing Facade 650 NPCH

The existing building has an estimated 15% window to wall ratio. The proposed new façade increases the window wall ratio to over 80%. Considering the number of cases in which reflected glare from new glass facades has created glare that caused damage to adjacent buildings and affected the use of adjacent property, the impact that this proposed façade might create raises legitimate concerns.

Figure 2 Proposed New Façade 650 NPCH

[1] For the purposes of this report, Pacific Coast Highway (Sepulveda) will be referred to as "PCH" and the 7-story building being renovated will be referred to as "650 NPCH".

Glare

The Illuminating Engineering Society is the only ANSI-certified standards-writing trade association in the general field of light and lighting. In their Lighting Handbook, IES describes glare this way.

> *"Glare occurs in two ways: luminance is too high, or luminance ratios are too high. First, it is possible to have too much light. Too much light produces a simple photobiotic response in which the observer squints, blinks or looks away. Too much light is common in full sunlight. The only solution to the problem is to reduce the retinal illuminance by obscuring a bright part of the visual field – by wearing a cap with a brim – or by lowering the luminance of the of the whole visual field – by wearing sunglasses. Second, glare occurs when the range of luminance in a visual environment is too large. Glare of this sort can have two effects: a feeling of discomfort and a reduction in visual performance."*[2]

The glare that might be associated with the new façade on 650 NPCH is of the first kind (too much light caused by full sunlight). This is because window glass acts like a mirror. A specular[3] reflection of sunlight from the new window glass facing due west will cause sun reflections after noon to be in the westward direction at a time when solar glare will normally be in the eastward direction. The significant increase in the amount of glass will cause more reflections and at more angles than the current windows cause.

In the past decade, solar reflections from new buildings have caused several well publicized sunlight reflection problems:

- The Vdara Hotel, Las Vegas
- The Nasher Museum Sculpture Garden, Dallas
- 20 Fenchurch Street (the "Walkie Scorchie"), London
- The Disney Concert Hall, Los Angeles

The first three were the direct result of sunlight reflected from window glass. The Disney Concert Hall was the result of a polished metal skin on the building.

The Proposed Project

The proposed project is a renovation and expansion of the existing office building and surrounding structures described on Page 2. Architects supplied complete drawings and

[2] Chapter 4.10, "Glare", **Illuminating Engineering Society IES Lighting Handbook**, 10th Edition, New York 2011.
[3] "Relating to or having the properties of a mirror", Oxford English Dictionary via Google

elevations for our review. They were then asked to describe the project and the windows and cladding to be used. Their response was as follows:

"The Project is comprised of 3 different buildings, two are existing ('650 PCH-Building A' and '700 PCH-Building B'), and one is new construction ('Building C'). Building A is a 9-story office building that will be reclad in a predominately all glass curtain wall on the east and west elevations, and will maintain a predominately solid, painted concrete north and south elevation. Although a manufacturer has not yet been chosen, all of the glass proposed for the east and west elevations will be low-E, highly transparent in nature. Visible reflectivity on the glass will be held to a minimum, as the general aesthetic of the building is to be "see-through". Any metal cladding on the curtain wall system will be finished with Aluminum Composite Panels (ACP), with matte white or matte, clear anodized aluminum finish. The painted concrete on the north and south elevations will be painted with low sheen paint and clad limitedly in matte finish Aluminum Composite Panels (ACP)with matte white or matte, clear anodized aluminum finish.

Building B is an existing 2 story masonry building (only 1 story high along PCH). Very little façade work is planned for this building. It is proposed that the existing red brick will be stained with a full body, solid stain. Color will be dark grey, and the sheen will be ultra-flat.

Building C will be a new 7 story office building that will be built the east (and behind) the 9 story 650 PCH building. Generally speaking, Building C will not be visible from PCH or any of its residential neighbors to the west. Similar to the Building A, Building C will predominately be clad in glass curtainwall. It will be low-E and highly transparent in nature. Visible reflectivity on the glass will be held to a minimum, as the general aesthetic of the building is to be "see-through". Any metal cladding on the curtain wall system will be finished with ACP, with matte white or matte, clear anodized aluminum finish.

We plan no lighting out of the ordinary for a typical office building of this scale. The project is three separate buildings. The building that will have the most exposure to general public and possible residential exposure will be Building A. Mostly all the artificial lighting on that building exterior will be from light emitting from the interior environment. The entry areas and exit doors will have minimal El Segundo City code required lighting for safety and security that will be directed downwards and shielded to minimize spill and glare to adjacent properties. The north and south sides of the building will have lighting for visibility from PCH. These lights will be shielded with a focused light distribution directed towards the building to minimize spill and glare. The roof terrace will have well shielded, low lumen downlighting and landscape tree lighting. Building B will have minimal, downward directed entry, exit and perimeter lighting for safety and to meet El Segundo City codes. Building C will have low level lighting for safety at exterior terraces. The courtyard that connects the 3 buildings of the campus will have lower-level pole lighting and low lumen landscape and feature lighting to provide a safe nighttime environment for people to move between buildings. This courtyard is surrounded on all sides by the buildings and a perimeter site wall so no light will spill to adjacent properties or be visible from offsite.

At a minimum, we will design per Cal Green requirements, which are some of the most forward thinking and environmentally considerate design parameters in the country. We will be utilizing a new Variable Refrigerant Flow (VRF) HVAC system which allow for both heating and cooling

within the space. This system is known to exceed Title 24 efficiency compliance and does not require any gas usage. All lighting will be on control systems with auto daylight dimming and light fixtures will be the state of the art, LED type which exceed CALGreen and Title 24 energy compliance. All plumbing fixtures will have low flow and auto sensors for water conservation, and again, will be equal to or outperform Title 24 compliance."

Electric lighting issues were immediately ruled out based on the Architect's description. No significant amount of glare will be caused by buildings other than building "A" (650 NPCH). Attention was focused on solar reflections from the windows on its prominent west curtain wall.

Direction of Reflected Light

Because the curtain wall faces west, all reflections will be to the west of the building front and will be in the general north-south direction of the actual sunlight but in the opposite of the normal east-west direction. Using a solar calculator, it is possible to predict the exact direction of sunlight on any given date and time and it is reasonably easy to the direction of sunlight reflected by them. Of course, on cloudy days there will be no reflection of the sun, only that of the clouds.

The angle of the reflected sunlight will constantly change with the "movement" of the sun[4] and, when standing still and staring at the new 650 NPCH facade, the sun's reflected image will appear to move across the facade. The solar angle at noon ranges from a low elevation of 32 degrees on the winter solstice to almost 80 degrees at the summer solstice, which means that the mid-day summer reflections will be down onto the sidewalk and street, and winter impacts will reach further and exhibit longer shadows. The setting sun in the west will be reflected too, at the same time as the actual sunset

To illustrate where the reflected light will be directed, the following generally illustrates the impacts at each point for the instant when the viewer is at the exact angle to see the reflection. The following times were selected to illustrate the range of impacts and their daily and seasonal variety:

- When viewing a point near the top of the building at about 12:30 pm each day, the reflection will be towards the north-northwest along PCH. In summer, the reflection will be onto the sidewalk about 30' north of the viewpoint; in fall and spring, the reflection will be onto the outer northbound lane of PCH about 100' beyond the building; and in the winter, the reflection will be onto the inner northbound lane of PCH about 240' beyond the building. Throughout the morning, the reflections will move to the northwest, but will not directly affect buildings across PCH.

[4] The apparent movement of the sun is the result of the earth's daily rotation on its axis and its annual path around the sun.

- When viewing the center of the building near the top at 3:00 pm each day, the reflection will be across PCH towards the E. Palm intersection. In summer, the reflection will be directly into the eyes of a motorist or cyclist facing east towards the building; in spring and fall, that reflection will occur to the left of center and at a point about 1 story below the top; and in the winter, that reflection will strike the roof of the Carl's Junior across the street. As the afternoon wears on, the reflections will rotate south towards the Carl's Junior parking lot.
- At 25 minutes before sunset, in the summer the setting sun will be reflected in the general direction of the east facing windows of apartments at 600-620 Illinois Ct. In the spring and fall the reflection will be west along E. Palm Ave and towards the east facing windows on the upper stories of apartments at 1630 and 1637 E. Palm. In the winter, the reflections will be towards the upper floor apartments at 1637 E. Palm and 716 Indiana Ct.
- Due to trees and buildings, glare visible in and to the west of Washington Park will be minimal and even less impactful than the glare described above.

The reflection will only last about 5-10 minutes at each point of view as the "movement" of the sun will cause of the reflection to move across the 650 NPCH façade before shifting to the south until sunset.

Intensity of Reflected Light

Although all window glass will have specular reflections, the percentage of reflected light varies depending on coatings that are applied to the glass during the float process. These coatings are a thin metallic or metallic oxide layer deposited on the glass. The layer will alter the color of the glass, the amount of reflected light from the glass, and the amount of infrared energy that is either reflected away or passed into the building. In this way, windows are used to manage solar heat, an important element in building energy efficiency. Choosing the proper window glass and coatings is one of the most important decisions made by architects, as their choices affect both the appearance and the efficiency of the building. For office building curtain walls, two window panes are held together with an air gap for insulation and are called a commercial glazing unit.

There are two distinctively different types of commonly used commercial glazing units:

- ***Reflective glass windows*** that look like a mirror from the outside. They reduce both the amount of infrared light and the visible light entering the building. They can also impart coloration if a tint is used. Reflective glass windows are generally silver in appearance but can also be tinted blue, green, gold or bronze.
- ***Low-emissivity ("low-e") windows*** that are clear or slightly tinted in appearance. Low-e windows reflect infrared light but permits visible light to enter the building.

In both cases, the inside surface of the outer pane is coated with the metal oxide layer. Both panes are typically clear glass, although tinted glass can also be used. Generally, the low-e windows are more desirable because they allow significantly more visible light into the building and render a more realistic view. Reflective glass, while impressive in appearance, reduces interior light and view. From the architects' comments and desire to have a "clear" view through the building, the appropriate windows will be a low-e type with high visible light transmission (VLT) and low visible light reflection (VLR).

To reduce the glare of a reflected solar image, commercial glazing units with a VLR value of between 8 and 13% will reduce the glare in the reflection by 87-92%. The windows will appear as rendered by the architects (Figure 2) especially if low-iron clear glass is used for both panes, and the impact of the glare will be much less than direct sunlight.

One other consideration is the building's use of polished metals. The architects' description of the other building finishes does not suggest any large areas that will create mirror like reflections on a scale for which concern is warranted.

Summary

In summary, solar reflections from the facade's window glass will cause modest glare throughout the afternoon and into the evening along PCH and onto the retail properties, parking lots and nearby apartments to the west of 650 NPCH. However, the impact will be about 10% of the normal impact that occurs due to direct sunlight in the morning at the same locations, which is visually the equivalent of wearing dark sunglasses for attenuating the glare. As long as the window glass complies with the characteristics described above, the impact of the new glass curtain wall relative to glare will be much less than significant.

1.0 INTRODUCTION

1.1 Purpose of Analysis and Study Objectives

This Air Quality, Energy, and Greenhouse Gas (GHG) Emissions Impact Analysis has been completed to determine the air quality, energy, and GHG emissions impacts associated with the proposed The 650 PCH Project (proposed project). The following is provided in this report:

- A description of the proposed project;
- A description of the atmospheric setting;
- A description of the criteria pollutants and GHGs;
- A description of the air quality regulatory framework;
- A description of the energy conservation regulatory framework;
- A description of the GHG emissions regulatory framework;
- A description of the air quality, energy, and GHG emissions thresholds including the California Environmental Quality Act (CEQA) significance thresholds;
- An analysis of the conformity of the proposed project with the South Coast Air Quality Management District (SCAQMD) Air Quality Management Plan (AQMP);
- An analysis of the short-term construction related and long-term operational air quality, energy, and GHG emissions impacts; and
- An analysis of the conformity of the proposed project with all applicable energy and GHG emissions reduction plans and policies.

1.2 Site Location and Study Area

The project site is located in the City of El Segundo (City) at 650 and 700 North Pacific Coast Highway and 737 Carl Jacobson Way. The approximately 7.2-acre project site is currently developed with office buildings and surface parking lots. The existing onsite improvements are detailed below:

- 650 N. P Pacific Coast Highway (Parcels 1 and 3 above) has an existing gross floor area of 128,544 square feet. Net floor area is 98,885 square feet.
- 700 N. Pacific Coast Highway (Parcels 4 and 5 above) has an existing gross floor area of 78,512 square feet. Existing net floor area is 69,692 square feet.
- 737 Carl Jacobson Way has an existing gross floor area of 17,000 square feet. The net floor area is 16,652 square feet. Please note that while 737 Carl Jacobson Way and the existing building on the property is a part of the property and the project, no changes are contemplated to this building at this time as there is an existing long-term tenant at this building.

The entire project site is bounded by a fast-food restaurant (Chick-fil-A) and industrial buildings to the north, industrial buildings to the east, a shopping center and an industrial building to the south, and Pacific Coast Highway to the west. The project local study area is shown in Figure 1.

Sensitive Receptors in Project Vicinity

The nearest sensitive receptors to the project site are residents at the multi-family homes located as near as 270 feet west of the project site. The nearest school is Center Street Elementary School that is located as near as 1,800 feet (0.34 mile) west of the project site.

1.3 Proposed Project Description

The proposed project would involve the renovation and minor alteration of two existing office buildings at 650 North Pacific Coast Highway ("Building A") and 700 North Pacific Coast Highway ("Building B"). In addition, the project includes the demolition of the existing surface parking lot and construction of a new 7-story office building with an integrated parking structure ("Building C"). In addition, the project will consolidate the seven parcels of land into a single 7.258-acre ground parcel through the proposed Vesting Tentative Parcel Map No. 83129. The gross and net square footages for each building in the project are as follows:

- Building A: 130,526 gross square feet; 99,916 net square feet;
- Building B: 77,309 gross square feet; 65,120 net square feet;
- Building C: 122,156 gross square feet, inclusive of the terraces and balconies; 70,021 net square feet.

The project would provide a total of 1,256 parking spaces to serve the office uses at the property and potentially other nearby parcels that do not have adequate parking. The proposed Building C would provide parking within an integrated parking structure that will have 1,185 spaces. Also, the existing surface parking areas on the north and east side of Building B will remain. The surface parking areas include 51 existing standard parking space and 20 new standard parking spaces for a total of 71 standard parking spaces. The proposed site plan is shown in Figure 2.

1.4 Executive Summary

Standard Air Quality, Energy, and GHG Regulatory Conditions

The proposed project will be required to comply with the following regulatory conditions from the SCAQMD and State of California (State).

South Coast Air Quality Management District Rules

The following lists the SCAQMD rules that are applicable, but not limited to the proposed project.

- Rule 402 Nuisance – Controls the emissions of odors and other air contaminants;
- Rule 403 Fugitive Dust – Controls the emissions of fugitive dust;
- Rules 1108 and 1108.1 Cutback and Emulsified Asphalt – Controls the VOC content in asphalt;
- Rule 1113 Architectural Coatings – Controls the VOC content in paints and solvents; and
- Rule 1143 Paint Thinners – Controls the VOC content in paint thinners.

State of California Rules

The following lists the State of California Code of Regulations (CCR) air quality emission rules that are applicable, but not limited to the proposed project.

- CCR Title 13, Article 4.8, Chapter 9, Section 2449 – In use Off-Road Diesel Vehicles;
- CCR Title 13, Section 2025 – On-Road Diesel Truck Fleets;
- CCR Title 24 Part 6 – California Building Energy Standards; and
- CCR Title 24 Part 11 – California Green Building Standards.

Summary of Analysis Results

The following is a summary of the proposed project's impacts with regard to the State CEQA Guidelines air quality, energy, and GHG emissions checklist questions.

Conflict with or obstruct implementation of the applicable air quality plan?

Less than significant impact.

Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable Federal or State ambient air quality standard?

Less than significant impact.

Expose sensitive receptors to substantial pollutant concentrations?

Less than significant impact.

Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?

Less than significant impact.

Result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation;

Less than significant impact.

Conflict with or obstruct a state or local plan for renewable energy;

Less than significant impact.

Generate GHG emissions, either directly or indirectly, that may have a significant impact on the environment?

Less than significant impact.

Conflict with any applicable plan, policy or regulation of an agency adopted for the purpose of reducing the emissions of GHGs?

Less than significant impact.

1.5 Mitigation Measures for the Proposed Project

This analysis found that implementation of the State and SCAQMD air quality, energy, and GHG emissions reductions regulations were adequate to limit criteria pollutants, toxic air contaminants, odors, and GHG emissions from the proposed project to less than significant levels. No mitigation measures are required for the proposed project with respect to air quality, energy, and GHG emissions.

2.0 AIR POLLUTANTS

Air pollutants are generally classified as either criteria pollutants or non-criteria pollutants. Federal ambient air quality standards have been established for criteria pollutants, whereas no ambient standards have been established for non-criteria pollutants. For some criteria pollutants, separate standards have been set for different periods. Most standards have been set to protect public health. For some pollutants, standards have been based on other values (such as protection of crops, protection of materials, or avoidance of nuisance conditions). A summary of federal and state ambient air quality standards is provided in the Regulatory Framework section.

2.1 Criteria Pollutants and Ozone Precursors

The criteria pollutants consist of: ozone, NO_x, CO, SO_x, lead (Pb), and particulate matter (PM). The ozone precursors consist of NO_x and VOC. These pollutants can harm your health and the environment, and cause property damage. The Environmental Protection Agency (EPA) calls these pollutants "criteria" air pollutants because it regulates them by developing human health-based and/or environmentally-based criteria for setting permissible levels. The following provides descriptions of each of the criteria pollutants and ozone precursors.

Nitrogen Oxides

Nitrogen Oxides (NOx) is the generic term for a group of highly reactive gases which contain nitrogen and oxygen. While most NOx are colorless and odorless, concentrations of NO_2 can often be seen as a reddish-brown layer over many urban areas. NOx form when fuel is burned at high temperatures, as in a combustion process. The primary manmade sources of NO_x are motor vehicles, electric utilities, and other industrial, commercial, and residential sources that burn fuel. NOx reacts with other pollutants to form, ground-level ozone, nitrate particles, acid aerosols, as well as NO_2, which cause respiratory problems. NO_x and the pollutants formed from NO_x can be transported over long distances, following the patterns of prevailing winds. Therefore, controlling NOx is often most effective if done from a regional perspective, rather than focusing on the nearest sources.

Ozone

Ozone is not usually emitted directly into the air but in the vicinity of ground-level is created by a chemical reaction between NOx and volatile organic compounds (VOC) in the presence of sunlight. Motor vehicle exhaust, industrial emissions, gasoline vapors, chemical solvents as well as natural sources emit NOx and VOC that help form ozone. Ground-level ozone is the primary constituent of smog. Sunlight and hot weather cause ground-level ozone to form with the greatest concentrations usually occurring downwind from urban areas. Ozone is subsequently considered a regional pollutant. Ground-level ozone is a respiratory irritant and an oxidant that increases susceptibility to respiratory infections and can cause substantial damage to vegetation and other materials. Because NOx and VOC are ozone precursors, the health effects associated with ozone are also indirect health effects associated with significant levels of NOx and VOC emissions.

Carbon Monoxide

Carbon monoxide (CO) is a colorless, odorless gas that is formed when carbon in fuel is not burned completely. It is a component of motor vehicle exhaust, which contributes approximately 56 percent of all CO emissions nationwide. In cities, 85 to 95 percent of all CO emissions may come from motor vehicle exhaust. Other sources of CO emissions include industrial processes (such as metals processing and

chemical manufacturing), residential wood burning, and natural sources such as forest fires. Woodstoves, gas stoves, cigarette smoke, and unvented gas and kerosene space heaters are indoor sources of CO. The highest levels of CO in the outside air typically occur during the colder months of the year when inversion conditions are more frequent. The air pollution becomes trapped near the ground beneath a layer of warm air. CO is described as having only a local influence because it dissipates quickly. Since CO concentrations are strongly associated with motor vehicle emissions, high CO concentrations generally occur in the immediate vicinity of roadways with high traffic volumes and traffic congestion, active parking lots, and in automobile tunnels. Areas adjacent to heavily traveled and congested intersections are particularly susceptible to high CO concentrations.

CO is a public health concern because it combines readily with hemoglobin and thus reduces the amount of oxygen transported in the bloodstream. The health threat from lower levels of CO is most serious for those who suffer from heart disease such as angina, clogged arteries, or congestive heart failure. For a person with heart disease, a single exposure to CO at low levels may cause chest pain and reduce that person's ability to exercise; repeated exposures may contribute to other cardiovascular effects. High levels of CO can affect even healthy people. People who breathe high levels of CO can develop vision problems, reduced ability to work or learn, reduced manual dexterity, and difficulty performing complex tasks. At extremely high levels, CO is poisonous and can cause death.

Sulfur Oxides

Sulfur Oxide (SOx) gases are formed when fuel containing sulfur, such as coal and oil is burned, as well as from the refining of gasoline. SOx dissolves easily in water vapor to form acid and interacts with other gases and particles in the air to form sulfates and other products that can be harmful to people and the environment.

Lead

Lead is a metal found naturally in the environment as well as manufactured products. The major sources of lead emissions have historically been motor vehicles and industrial sources. Due to the phase out of leaded gasoline, metal processing is now the primary source of lead emissions to the air. High levels of lead in the air are typically only found near lead smelters, waste incinerators, utilities, and lead-acid battery manufacturers. Exposure of fetuses, infants and children to low levels of Pb can adversely affect the development and function of the central nervous system, leading to learning disorders, distractibility, inability to follow simple commands, and lower intelligence quotient. In adults, increased lead levels are associated with increased blood pressure.

Particulate Matter

Particle matter (PM) is the term for a mixture of solid particles and liquid droplets found in the air. PM is made up of a number of components including acids (such as nitrates and sulfates), organic chemicals, metals, and soil or dust particles. The size of particles is directly linked to their potential for causing health problems. Particles that are less than 10 micrometers in diameter (PM10) that are also known as *Respirable Particulate Matter* are the particles that generally pass through the throat and nose and enter the lungs. Once inhaled, these particles can affect the heart and lungs and cause serious health effects. Particles that are less than 2.5 micrometers in diameter (PM2.5) that are also known as *Fine Particulate Matter* have been designated as a subset of PM10 due to their increased negative health impacts and its ability to remain suspended in the air longer and travel further.

Volatile Organic Compounds

Hydrocarbons are organic gases that are formed from hydrogen and carbon and sometimes other elements. Hydrocarbons that contribute to formation of O_3 are referred to and regulated as VOCs (also referred to as reactive organic gases). Combustion engine exhaust, oil refineries, and fossil-fueled power plants are the sources of hydrocarbons. Other sources of hydrocarbons include evaporation from petroleum fuels, solvents, dry cleaning solutions, and paint.

VOC is not classified as a criteria pollutant, since VOCs by themselves are not a known source of adverse health effects. The primary health effects of VOCs result from the formation of O_3 and its related health effects. High levels of VOCs in the atmosphere can interfere with oxygen intake by reducing the amount of available oxygen through displacement. Carcinogenic forms of hydrocarbons, such as benzene, are considered toxic air contaminants (TACs). There are no separate health standards for VOCs as a group.

2.2 Other Pollutants of Concern

Toxic Air Contaminants

In addition to the above-listed criteria pollutants, toxic air contaminants (TACs) are another group of pollutants of concern. Under separate cover, we have prepared a health risk assessment, analyzing the potential health risks from nearby diesel emissions to the future residents that would live at the Project. TACs is a term that is defined under the California Clean Air Act and consists of the same substances that are defined as Hazardous Air Pollutants (HAPs) in the Federal Clean Air Act. There are over 700 hundred different types of TACs with varying degrees of toxicity. Sources of TACs include industrial processes such as petroleum refining and chrome plating operations, commercial operations such as gasoline stations and dry cleaners, and motor vehicle exhaust. Cars and trucks release at least 40 different toxic air contaminants. The most important of these TACs, in terms of health risk, are diesel particulates, benzene, formaldehyde, 1,3-butadiene, and acetaldehyde. Public exposure to TACs can result from emissions from normal operations as well as from accidental releases. Health effects of TACs include cancer, birth defects, neurological damage, and death.

TACs are less pervasive in the urban atmosphere than criteria air pollutants, however they are linked to short-term (acute) or long-term (chronic or carcinogenic) adverse human health effects. There are hundreds of different types of TACs with varying degrees of toxicity. Sources of TACs include industrial processes, commercial operations (e.g., gasoline stations and dry cleaners), and motor vehicle exhaust.

According to *The California Almanac of Emissions and Air Quality 2013 Edition*, the majority of the estimated health risk from TACs can be attributed to relatively few compounds, the most important of which is DPM. DPM is a subset of PM2.5 because the size of diesel particles are typically 2.5 microns and smaller. The identification of DPM as a TAC in 1998 led the CARB to adopt the Risk Reduction Plan to Reduce Particulate Matter Emissions from Diesel-fueled Engines and Vehicles in September 2000. The plan's goals are a 75-percent reduction in DPM by 2010 and an 85-percent reduction by 2020 from the 2000 baseline. Diesel engines emit a complex mixture of air pollutants, composed of gaseous and solid material. The visible emissions in diesel exhaust are known as particulate matter or PM, which includes carbon particles or "soot." Diesel exhaust also contains a variety of harmful gases and over 40 other cancer-causing substances. California's identification of DPM as a toxic air contaminant was based on its potential to cause cancer, premature deaths, and other health problems. Exposure to DPM is a health hazard, particularly to children whose lungs are still developing and the elderly who may have other

serious health problems. Overall, diesel engine emissions are responsible for the majority of California's potential airborne cancer risk from combustion sources.

Asbestos

Asbestos is listed as a TAC by CARB and as a HAP by the EPA. Asbestos occurs naturally in mineral formations and crushing or breaking these rocks, through construction or other means, can release asbestiform fibers into the air. Asbestos emissions can result from the sale or use of asbestos-containing materials, road surfacing with such materials, grading activities, and surface mining. The risk of disease is dependent upon the intensity and duration of exposure. When inhaled, asbestos fibers may remain in the lungs and with time may be linked to such diseases as asbestosis, lung cancer, and mesothelioma. The nearest likely locations of naturally occurring asbestos, as identified in the *General Location Guide for Ultramafic Rocks in California*, prepared by the California Division of Mines and Geology, is located in Santa Barbara County. The nearest historic asbestos mine to the project site, as identified in the *Reported Historic Asbestos Mines, Historic Asbestos Prospects, and Other Natural Occurrences of Asbestos in California,* prepared by U.S. Geological Survey, is located at Asbestos Mountain, which is approximately 50 miles southeast of the project site in the San Jacinto Mountains. Due to the distance to the nearest natural occurrences of asbestos, the project site is not likely to contain asbestos.

3.0 GREENHOUSE GASES

3.1 Greenhouse Gases

Constituent gases of the Earth's atmosphere, called atmospheric greenhouse gases (GHGs), play a critical role in the Earth's radiation amount by trapping infrared radiation from the Earth's surface, which otherwise would have escaped to space. Prominent greenhouse gases contributing to this process include carbon dioxide (CO_2), methane (CH_4), ozone (O_3), water vapor, nitrous oxide (N_2O), and chlorofluorocarbons (CFCs). This phenomenon, known as the Greenhouse Effect, is responsible for maintaining a habitable climate. Anthropogenic (caused or produced by humans) emissions of these greenhouse gases in excess of natural ambient concentrations are responsible for the enhancement of the Greenhouse Effect and have led to a trend of unnatural warming of the Earth's natural climate, known as global warming or climate change. Emissions of gases that induce global warming are attributable to human activities associated with industrial/manufacturing, agriculture, utilities, transportation, and residential land uses. Emissions of CO_2 and N_2O are byproducts of fossil fuel combustion. Methane, a potent greenhouse gas, results from off-gassing associated with agricultural practices and landfills. Sinks of CO_2, where CO_2 is stored outside of the atmosphere, include uptake by vegetation and dissolution into the ocean. The following provides a description of each of the greenhouse gases and their global warming potential.

Water Vapor

Water vapor is the most abundant, important, and variable GHG in the atmosphere. Water vapor is not considered a pollutant; in the atmosphere it maintains a climate necessary for life. Changes in its concentration are primarily considered a result of climate feedbacks related to the warming of the atmosphere rather than a direct result of industrialization. The feedback loop in which water is involved is critically important to projecting future climate change. As the temperature of the atmosphere rises, more water is evaporated from ground storage (rivers, oceans, reservoirs, soil). Because the air is warmer, the relative humidity can be higher (in essence, the air is able to "hold" more water when it is warmer), leading to more water vapor in the atmosphere. As a GHG, the higher concentration of water vapor is then able to absorb more thermal indirect energy radiated from the Earth, thus further warming the atmosphere. The warmer atmosphere can then hold more water vapor and so on and so on. This is referred to as a "positive feedback loop." The extent to which this positive feedback loop will continue is unknown as there is also dynamics that put the positive feedback loop in check. As an example, when water vapor increases in the atmosphere, more of it will eventually also condense into clouds, which are more able to reflect incoming solar radiation (thus allowing less energy to reach the Earth's surface and heat it up).

Carbon Dioxide

The natural production and absorption of CO_2 is achieved through the terrestrial biosphere and the ocean. However, humankind has altered the natural carbon cycle by burning coal, oil, natural gas, and wood. Since the industrial revolution began in the mid 1700s, each of these activities has increased in scale and distribution. CO_2 was the first GHG demonstrated to be increasing in atmospheric concentration with the first conclusive measurements being made in the last half of the 20th century. Prior to the industrial revolution, concentrations were fairly stable at 280 parts per million (ppm). The International Panel on Climate Change (IPCC) indicates that concentrations were 379 ppm in 2005, an increase of more than 30 percent. Left unchecked, the IPCC projects that concentration of carbon dioxide in the atmosphere is projected to increase to a minimum of 540 ppm by 2100 as a direct result of anthropogenic sources. This

could result in an average global temperature rise of at least two degrees Celsius or 3.6 degrees Fahrenheit.

Methane

CH_4 is an extremely effective absorber of radiation, although its atmospheric concentration is less than that of CO_2. Its lifetime in the atmosphere is brief (10 to 12 years), compared to some other GHGs (such as CO_2, N_2O, and Chlorofluorocarbons (CFCs)). CH_4 has both natural and anthropogenic sources. It is released as part of the biological processes in low oxygen environments, such as in swamplands or in rice production (at the roots of the plants). Over the last 50 years, human activities such as growing rice, raising cattle, using natural gas, and mining coal have added to the atmospheric concentration of methane. Other anthropocentric sources include fossil-fuel combustion and biomass burning.

Nitrous Oxide

Concentrations of N_2O also began to rise at the beginning of the industrial revolution. In 1998, the global concentration of this GHG was documented at 314 parts per billion (ppb). N_2O is produced by microbial processes in soil and water, including those reactions which occur in fertilizer containing nitrogen. In addition to agricultural sources, some industrial processes (fossil fuel-fired power plants, nylon production, nitric acid production, and vehicle emissions) also contribute to its atmospheric load. N_2O is also commonly used as an aerosol spray propellant (i.e., in whipped cream bottles, in potato chip bags to keep chips fresh, and in rocket engines and race cars).

Chlorofluorocarbons

CFCs are gases formed synthetically by replacing all hydrogen atoms in methane or ethane (C_2H_6) with chlorine and/or fluorine atoms. CFCs are nontoxic, nonflammable, insoluble, and chemically unreactive in the troposphere (the level of air at the Earth's surface). CFCs have no natural source, but were first synthesized in 1928. They were used for refrigerants, aerosol propellants, and cleaning solvents. Due to the discovery that they are able to destroy stratospheric ozone, a global effort to halt their production was undertaken and in 1989 the European Community agreed to ban CFCs by 2000 and subsequent treaties banned CFCs worldwide by 2010. This effort was extremely successful, and the levels of the major CFCs are now remaining level or declining. However, their long atmospheric lifetimes mean that some of the CFCs will remain in the atmosphere for over 100 years.

Hydrofluorocarbons

HFCs are synthetic man-made chemicals that are used as a substitute for CFCs. Out of all the GHGs, they are one of three groups with the highest global warming potential. The HFCs with the largest measured atmospheric abundances are (in order), HFC-23 (CHF_3), HFC-134a (CF_3CH_2F), and HFC-152a (CH_3CHF_2). Prior to 1990, the only significant emissions were HFC-23. HFC-134a use is increasing due to its use as a refrigerant. Concentrations of HFC-23 and HFC-134a in the atmosphere are now about 10 parts per trillion (ppt) each. Concentrations of HFC-152a are about 1 ppt. HFCs are manmade for applications such as automobile air conditioners and refrigerants.

Perfluorocarbons

Perfluorocarbons (PFCs) have stable molecular structures and do not break down through the chemical processes in the lower atmosphere. High-energy ultraviolet rays about 60 kilometers above Earth's surface are able to destroy the compounds. Because of this, PFCs have very long lifetimes, between 10,000 and 50,000 years. Two common PFCs are tetrafluoromethane (CF_4) and hexafluoroethane (C_2F_6).

Concentrations of CF_4 in the atmosphere are over 70 ppt. The two main sources of PFCs are primary aluminum production and semiconductor manufacturing.

Sulfur Hexafluoride

Sulfur Hexafluoride (SF_6) is an inorganic, odorless, colorless, nontoxic, nonflammable gas. SF_6 has the highest global warming potential of any gas evaluated; 23,900 times that of CO_2. Concentrations in the 1990s were about 4 ppt. Sulfur hexafluoride is used for insulation in electric power transmission and distribution equipment, in the magnesium industry, in semiconductor manufacturing, and as a tracer gas for leak detection.

Aerosols

Aerosols are particles emitted into the air through burning biomass (plant material) and fossil fuels. Aerosols can warm the atmosphere by absorbing and emitting heat and can cool the atmosphere by reflecting light. Cloud formation can also be affected by aerosols. Sulfate aerosols are emitted when fuel containing sulfur is burned. Black carbon (or soot) is emitted during biomass burning due to the incomplete combustion of fossil fuels. Particulate matter regulation has been lowering aerosol concentrations in the United States; however, global concentrations are likely increasing.

3.2 Global Warming Potential

GHGs have varying global warming potential (GWP). The GWP is the potential of a gas or aerosol to trap heat in the atmosphere; it is the cumulative radiative forcing effects of a gas over a specified time horizon resulting from the emission of a unit mass of gas relative to the reference gas, CO_2. The GHGs listed by the IPCC and the CEQA Guidelines are discussed in this section in order of abundance in the atmosphere. Water vapor, the most abundant GHG, is not included in this list because its natural concentrations and fluctuations far outweigh its anthropogenic (human-made) sources. To simplify reporting and analysis, GHGs are commonly defined in terms of their GWP. The IPCC defines the GWP of various GHG emissions on a normalized scale that recasts all GHG emissions in terms of CO_2e. As such, the GWP of CO_2 is equal to 1. The GWP values used in this analysis are based on the 2007 IPCC Fourth Assessment Report, which are used in CARB's 2014 Scoping Plan Update and the CalEEMod Model Version 2016.3.2 and are detailed in Table A. The IPCC has updated the Global Warming Potentials of some gases in their Fifth Assessment Report, however the new values have not yet been incorporated into the CalEEMod model that has been utilized in this analysis.

Table A – Global Warming Potentials, Atmospheric Lifetimes and Abundances of GHGs

Gas	Atmospheric Lifetime (years)[1]	Global Warming Potential (100 Year Horizon)[2]	Atmospheric Abundance
Carbon Dioxide (CO_2)	50-200	1	379 ppm
Methane (CH_4)	9-15	25	1,774 ppb
Nitrous Oxide (N_2O)	114	298	319 ppb
HFC-23	270	14,800	18 ppt
HFC-134a	14	1,430	35 ppt
HFC-152a	1.4	124	3.9 ppt
PFC: Tetrafluoromethane (CF_4)	50,000	7,390	74 ppt
PFC: Hexafluoroethane (C_2F_6)	10,000	12,200	2.9 ppt
Sulfur Hexafluoride (SF_6)	3,200	22,800	5.6 ppt

Notes:

[1] Defined as the half-life of the gas.
[2] Compared to the same quantity of CO_2 emissions and is based on the Intergovernmental Panel On Climate Change (IPCC) 2007 standard, which is utilized in CalEEMod (Version 2016.3.2),that is used in this report (CalEEMod user guide: Appendix A).
Definitions: ppm = parts per million; ppb = parts per billion; ppt = parts per trillion

3.3 Greenhouse Gas Emissions Inventory

According to https://cdiac.ess-dive.lbl.gov/trends/emis/tre_glob_2014.html 9,855 million metric tons (MMT) of CO_2 equivalent (CO_2e) emissions were created globally in the year 2014. According to https://www.epa.gov/ghgemissions/global-greenhouse-gas-emissions-data the breakdown of global GHG emissions by sector consists of: 25 percent from electricity and heat production; 21 percent from industry; 24 percent from agriculture, forestry and other land use activities; 14 percent from transportation; 6 percent from building energy use; and 10 percent from all other sources of energy use.

According to *Inventory of U.S. Greenhouse Gas Emissions and Sinks 1990-2018,* prepared by EPA, April 13, 2020, in 2018 total U.S. GHG emissions were 6,676.6 MMT of CO_2 equivalent (CO_2e) emissions. Total U.S. emissions have increased by 3.7 percent between 1990 and 2018, which is down from a high of 15.2 percent above 1990 levels in 2007. Emissions increased by 2.9 percent or 188.4 $MMTCO_2e$ between 2017 and 2018. The recent increase in GHG emissions was largely driven by an increase in CO_2 emissions from fossil fuel combustion, that was a result of multiple factors including greater heating and cooling needs due to a colder winter and hotter summer in 2018 compared to 2017.

According to https://www.arb.ca.gov/cc/inventory/data/data.htm the State of California created 424.1 $MMTCO_2e$ in 2017. The breakdown of California GHG emissions by sector consists of: 41 percent from transportation; 24 percent from industrial; 15 percent from electricity generation; 8 percent from agriculture; 7 percent from residential buildings; and 5 percent from commercial buildings. In 2017, GHG emissions were 5 $MMTCO_2e$ lower than 2016 levels, which is 7 $MMTCO_2e$ below the 2020 GHG limit of 431 $MMTCO_2e$ established by AB 32.

4.0 AIR QUALITY MANAGEMENT

The air quality at the project site is addressed through the efforts of various international, federal, state, regional, and local government agencies. These agencies work jointly, as well as individually, to improve air quality through legislation, regulations, planning, policy-making, education, and a variety of programs. The agencies responsible for improving the air quality are discussed below.

4.1 Federal – United States Environmental Protection Agency

The Clean Air Act, first passed in 1963 with major amendments in 1970, 1977 and 1990, is the overarching legislation covering regulation of air pollution in the United States. The Clean Air Act has established the mandate for requiring regulation of both mobile and stationary sources of air pollution at the state and federal level. The Environmental Protection Agency (EPA) was created in 1970 in order to consolidate research, monitoring, standard-setting and enforcement authority into a single agency.

The EPA is responsible for setting and enforcing the National Ambient Air Quality Standards (NAAQS) for atmospheric pollutants. It regulates emission sources that are under the exclusive authority of the federal government, such as aircraft, ships, and certain locomotives. NAAQS pollutants were identified using medical evidence and are shown below in Table B.

Table B – State and Federal Criteria Pollutant Standards

Air Pollutant	Concentration / Averaging Time		Most Relevant Effects
	California Standards	Federal Primary Standards	
Ozone (O_3)	0.09 ppm / 1-hour 0.07 ppm / 8-hour	0.070 ppm, / 8-hour	(a) Pulmonary function decrements and localized lung edema in humans and animals; (b) Risk to public health implied by alterations in pulmonary morphology and host defense in animals; (c) Increased mortality risk; (d) Risk to public health implied by altered connective tissue metabolism and altered pulmonary morphology in animals after long-term exposures and pulmonary function decrements in chronically exposed humans; (e) Vegetation damage; and (f) Property damage.
Carbon Monoxide (CO)	20.0 ppm / 1-hour 9.0 ppm / 8-hour	35.0 ppm / 1-hour 9.0 ppm / 8-hour	(a) Aggravation of angina pectoris and other aspects of coronary heart disease; (b) Decreased exercise tolerance in persons with peripheral vascular disease and lung disease; (c) Impairment of central nervous system functions; and (d) Possible increased risk to fetuses.
Nitrogen Dioxide (NO_2)	0.18 ppm / 1-hour 0.030 ppm / annual	100 ppb / 1-hour 0.053 ppm / annual	(a) Potential to aggravate chronic respiratory disease and respiratory symptoms in sensitive groups; (b) Risk to public health implied by pulmonary and extra-pulmonary biochemical and cellular changes and pulmonary structural changes; and (c) Contribution to atmospheric discoloration.
Sulfur Dioxide (SO_2)	0.25 ppm / 1-hour 0.04 ppm / 24-hour	75 ppb / 1-hour 0.14 ppm/annual	(a) Bronchoconstriction accompanied by symptoms which may include wheezing, shortness of breath and chest tightness, during exercise or physical activity in persons with asthma.
Suspended Particulate Matter (PM_{10})	50 µg/m^3 / 24-hour 20 µg/m^3 / annual	150 µg/m^3 / 24-hour	(a) Exacerbation of symptoms in sensitive patients with respiratory or cardiovascular disease; (b) Declines in pulmonary function growth in children; and (c) Increased risk of premature death from heart or lung diseases in elderly.

Air Pollutant	Concentration / Averaging Time		Most Relevant Effects
	California Standards	Federal Primary Standards	
Suspended Particulate Matter ($PM_{2.5}$)	12 µg/m^3 / annual	35 µg/m^3 / 24-hour 12 µg/m^3 / annual	
Sulfates	25 µg/m^3 / 24-hour	No Federal Standards	(a) Decrease in ventilatory function; (b) Aggravation of asthmatic symptoms; (c) Aggravation of cardio-pulmonary disease; (d) Vegetation damage; (e) Degradation of visibility; and (f) Property damage.
Lead	1.5 µg/m^3 / 30-day	0.15 µg/m^3 /3-month rolling	(a) Learning disabilities; and (b) Impairment of blood formation and nerve conduction.
Visibility Reducing Particles	Extinction coefficient of 0.23 per kilometer - visibility of ten miles or more due to particles when relative humidity is less than 70 percent.	No Federal Standards	Visibility impairment on days when relative humidity is less than 70 percent.

Source: http://www.arb.ca.gov/research/aaqs/aaqs2.pdf .

As part of its enforcement responsibilities, the EPA requires each state with federal nonattainment areas to prepare and submit a State Implementation Plan (SIP) that demonstrates the means to attain the national standards. The SIP must integrate federal, state, and local components and regulations to identify specific measures to reduce pollution, using a combination of performance standards and market-based programs within the timeframe identified in the SIP. The CARB defines attainment as the category given to an area with no violations in the past three years. As indicated below in Table C, the Air Basin has been designated by EPA for the national standards as a non-attainment area for ozone and PM2.5 and partial non-attainment for lead. Currently, the Air Basin is in attainment with the national ambient air quality standards for CO, PM10, SO_2, and NO_2.

Table C – South Coast Air Basin Attainment Status

Criteria Pollutant	Standard	Averaging Time	Designation	Attainment Date
1-Hour Ozone	NAAQS	1979 1-Hour (0.12 ppm)	Nonattainment (Extreme)	2/6/2023 (revised deadline)
	CAAQS	1-Hour (0.09 ppm)	Nonattainment	N/A
8-Hour Ozone	NAAQS	1997 8-Hour (0.08 ppm)	Nonattainment (Extreme)	6/15/2024
	NAAQS	2008 8-Hour (0.075 ppm)	Nonattainment (Extreme)	7/20/2032
	NAAQS	2015 8-Hour (0.070 ppm)	Nonattainment (Extreme)	8/3/2038
	CAAQS	8-Hour (0.070 ppm)	Nonattainment	Beyond 2032
CO	NAAQS	1-Hour (35 ppm) 8-Hour (9 ppm)	Attainment (Maintenance)	6/11/2007 (attained)
	CAAQS	1-Hour (20 ppm) 8-Hour (9 ppm)	Attainment	6/11/2007 (attained)
NO_2	NAAQS	2010 1-Hour (0.10 ppm)	Unclassifiable/ Attainment	N/A (attained)

Criteria Pollutant	Standard	Averaging Time	Designation	Attainment Date
	NAAQS	1971 Annual (0.053 ppm)	Attainment (Maintenance)	9/22/1998 (attained)
	CAAQS	1-Hour (0.18 ppm) Annual (0.030 ppm)	Attainment	---
SO_2	NAAQS	1-Hour (75 ppb)	Designations Pending (expect Unclassifiable/ Attainment)	N/A (attained)
	NAAQS	24-Hour (0.14 ppm) Annual (0.03 ppm)	Unclassifiable/ Attainment	3/19/1979 (attained)
PM10	NAAQS	1987 24-hour (150 µg/m^3)	Attainment (Maintenance)	7/26/2013 (attained)
	CAAQS	24-hour (50 µg/m^3) Annual (20 µg/m^3)	Nonattainment	N/A
PM2.5	NAAQS	2006 24-Hour (35 µg/m^3)	Nonattainment (Serious)	12/31/2019
	NAAQS	1997 Annual (15.0 µg/m^3)	Attainment	8/24/2016
	NAAQS	2012 Annual (12.0 µg/m^3)	Nonattainment (Serious)	12/31/2025
	CAAQS	Annual (12.0 µg/m^3)	Nonattainment	N/A
Lead	NAAQS	3-Months Rolling (0.15 µg/m^3)	Nonattainment (Partial)	12/31/2015
Hydrogen Sulfide (H_2S)	CAAQS	1-Hour (0.03 ppm or 42 µg/m^3)	Attainment	---
Sulfates	CAAQS	24-Hour (25 µg/m^3)	Attainment	---
Vinyl Chloride	CAAQS	24-Hour (0.01 ppm or 26 µg/m^3)	Attainment	---

Source: SCAQMD (http://www.aqmd.gov/docs/default-source/clean-air-plans/air-quality-management-plans/naaqs-caaqs-feb2016.pdf?sfvrsn=14)

In 2015, one or more stations in the Air Basin exceeded the most current federal standards on a total of 146 days (40 percent of the year), including: 8-hour ozone (113 days over 2015 ozone NAAQS), 24-hour PM2.5 (30 days, including near-road sites; 25 days for ambient sites only), PM10 (2 days), and NO_2 (1 day). Despite substantial improvement in air quality over the past few decades, some air monitoring stations in the Air Basin still exceed the NAAQS for ozone more frequently than any other area in the United States. Seven of the top 10 stations in the nation most frequently exceeding the 2015 8-hour ozone NAAQS in 2015 were located within the Air Basin, including stations in San Bernardino, Riverside, and Los Angeles Counties (SCAQMD, 2016).

PM2.5 levels in the Air Basin have improved significantly in recent years. By 2013 and again in 2014 and 2015, there were no stations measuring PM2.5 in the Air Basin that violated the former 1997 annual PM2.5 NAAQS (15.0 µg/m^3) for the 3-year design value period. On July 25, 2016 the EPA finalized a determination that the Basin attained the 1997 annual (15.0 µg/m^3) and 24-hour PM2.5 (65 µg/m^3) NAAQS, effective August 24, 2016. Of the 17 federal PM2.5 monitors at ambient stations in the Air Basin for the 2013-2015 period, five stations had design values over the current 2012 annual PM2.5 NAAQS (12.0 µg/m^3), including: Mira Loma (Air Basin maximum at 14.1 µg/m^3), Rubidoux, Fontana, Ontario, Central Los Angeles, and Compton. For the 24-hour PM2.5 NAAQS (35.0 µg/m^3) there were 14 stations in the Air Basin in 2015 that had one or more daily exceedances of the standard, with a combined total of 25 days over that standard in the Air Basin. While it was previously anticipated that the Air Basin's 24-hour PM2.5 NAAQS would be attained by 2015, this did not occur based on the data for 2013 through

2015. The higher number of days exceeding the 24-hour PM2.5 NAAQS over what was expected is largely attributed to the severe drought conditions over this period that allowed for more stagnant conditions in the Air Basin with multi-day buildups of higher PM2.5 concentrations. This was caused by the lack of storm-related dispersion and rain-out of PM and its precursors (SCAQMD, 2016).

The Air Basin is currently in attainment for the federal standards for SO_2, CO, NO_2, and PM10. While the concentration level of the 1-hour NO_2 federal standard (100 ppb) was exceeded in the Air Basin for one day in 2015 (Long Beach- Hudson Station), the NAAQS NO_2 design value has not been exceeded. Therefore, the Air Basin remains in attainment of the NO_2 NAAQS (SCAQMD, 2016).

4.2 State – California Air Resources Board

The California Air Resources Board (CARB), which is a part of the California Environmental Protection Agency, is responsible for the coordination and administration of both federal and state air pollution control programs within California. In this capacity, the CARB conducts research, sets the California Ambient Air Quality Standards (CAAQS), compiles emission inventories, develops suggested control measures, provides oversight of local programs, and prepares the SIP. The CAAQS for criteria pollutants are shown above in Table B. In addition, the CARB establishes emission standards for motor vehicles sold in California, consumer products (e.g. hairspray, aerosol paints, and barbeque lighter fluid), and various types of commercial equipment. It also sets fuel specifications to further reduce vehicular emissions.

The Air Basin has been designated by the CARB as a non-attainment area for ozone, PM10 and PM2.5. Currently, the Air Basin is in attainment with the ambient air quality standards for CO, NO_2, SO_2, lead, and sulfates and is unclassified for visibility reducing particles and Hydrogen Sulfide.

The following lists the State of California Code of Regulations (CCR) air quality emission rules that are applicable, but not limited to all school projects in the State.

Assembly Bill 2588

The Air Toxics "Hot Spots" Information and Assessment Act (Assembly Bill [AB] 2588, 1987, Connelly) was enacted in 1987 as a means to establish a formal air toxics emission inventory risk quantification program. AB 2588, as amended, establishes a process that requires stationary sources to report the type and quantities of certain substances their facilities routinely release in California. The data is ranked by high, intermediate, and low categories, which are determined by: the potency, toxicity, quantity, volume, and proximity of the facility to nearby receptors.

CARB Regulation for In-Use Off-Road Diesel Vehicles

On July 26, 2007, the California Air Resources Board (CARB) adopted California Code of Regulations Title 13, Article 4.8, Chapter 9, Section 2449 to reduce diesel particulate matter (DPM) and NOx emissions from in-use off-road heavy-duty diesel vehicles in California. Such vehicles are used in construction, mining, and industrial operations. The regulation limits idling to no more than five consecutive minutes, requires reporting and labeling, and requires disclosure of the regulation upon vehicle sale. Performance requirements of the rule are based on a fleet's average NOx emissions, which can be met by replacing older vehicles with newer, cleaner vehicles or by applying exhaust retrofits. The regulation was amended in 2010 to delay the original timeline of the performance requirement making the first compliance deadline January 1, 2014 for large fleets (over 5,000 horsepower), 2017 for medium fleets (2,501-5,000 horsepower), and 2019 for small fleets (2,500 horsepower or less). Currently, no commercial operation in California may add any equipment to their fleet that has a Tier 0 or Tier 1 engine. By January 1, 2018

medium and large fleets will be restricted from adding Tier 2 engines to their fleets and by January 2023, no commercial operation will be allowed to add Tier 2 engines to their fleets. It should be noted that commercial fleets may continue to use their existing Tier 0 and 1 equipment, if they can demonstrate that the average emissions from their entire fleet emissions meet the NOx emissions targets.

CARB Resolution 08-43 for On-Road Diesel Truck Fleets

On December 12, 2008 the CARB adopted Resolution 08-43, which limits NOx, PM10 and PM2.5 emissions from on-road diesel truck fleets that operate in California. On October 12, 2009 Executive Order R-09-010 was adopted that codified Resolution 08-43 into Section 2025, title 13 of the California Code of Regulations. This regulation requires that by the year 2023 all commercial diesel trucks that operate in California shall meet model year 2010 (Tier 4 Final) or latter emission standards. In the interim period, this regulation provides annual interim targets for fleet owners to meet. By January 1, 2020, 90 percent of a truck fleet is required to have installed Best Available Control Technology (BACT) for NOx emissions and 100 percent of a truck fleet installed BACT for PM10 emissions. This regulation also provides a few exemptions including a onetime per year 3-day pass for trucks registered outside of California and a low use exemption for trucks that operate less than 1,000 miles per year or less than 100 hours, if the truck operates in a stationary mode. Starting January 1, 2020 the DMV will no longer register any vehicles that do not meet the Section 2025, title 13 requirements. All on-road diesel trucks utilized during construction of the proposed project will be required to comply with Resolution 08-43.

4.3 Regional – Southern California

The SCAQMD is the agency principally responsible for comprehensive air pollution control in the South Coast Air Basin. To that end, as a regional agency, the SCAQMD works directly with the Southern California Association of Governments (SCAG), county transportation commissions, and local governments and cooperates actively with all federal and state agencies.

South Coast Air Quality Management District

SCAQMD develops rules and regulations, establishes permitting requirements for stationary sources, inspects emission sources, and enforces such measures through educational programs or fines, when necessary. SCAQMD is directly responsible for reducing emissions from stationary, mobile, and indirect sources. It has responded to this requirement by preparing a sequence of AQMPs. The *Final 2016 Air Quality Management Plan* (2016 AQMP) was adopted by the SCAQMD Board on March 3, 2016 and was adopted by CARB on March 23, 2017 for inclusion into the California State Implementation Plan (SIP). The 2016 AQMP was prepared in order to meet the following standards:

- 8-hour Ozone (75 ppb) by 2032
- Annual PM2.5 (12 µg/m3) by 2021-2025
- 8-hour Ozone (80 ppb) by 2024 (updated from the 2007 and 2012 AQMPs)
- 1-hour Ozone (120 ppb) by 2023 (updated from the 2012 AQMP)
- 24-hour PM2.5 (35 µg/m^3) by 2019 (updated from the 2012 AQMP)

In addition to meeting the above standards, the 2016 AQMP also includes revisions to the attainment demonstrations for the 1997 8-hour ozone NAAQS and the 1979 1-hour ozone NAAQS. The prior 2012 AQMP was prepared in order to demonstrate attainment with the 24-hour PM2.5 standard by 2014 through adoption of all feasible measures. The prior 2007 AQMP demonstrated attainment with the 1997

8-hour ozone (80 ppb) standard by 2023, through implementation of future improvements in control techniques and technologies. These "black box" emissions reductions represent 65 percent of the remaining NOx emission reductions by 2023 in order to show attainment with the 1997 8-hour ozone NAAQS. Given the magnitude of these needed emissions reductions, additional NOx control measures have been provided in the 2012 AQMP even though the primary purpose was to show compliance with 24-hour PM2.5 emissions standards.

The 2016 AQMP provides a new approach that focuses on available, proven and cost effective alternatives to traditional strategies, while seeking to achieve multiple goals in partnership with other entities to promote reductions in GHG emissions and TAC emissions as well as efficiencies in energy use, transportation, and goods movement. The 2016 AQMP recognizes the critical importance of working with other agencies to develop funding and other incentives that encourage the accelerated transition of vehicles, buildings and industrial facilities to cleaner technologies in a manner that benefits not only air quality, but also local businesses and the regional economy.

Although SCAQMD is responsible for regional air quality planning efforts, it does not have the authority to directly regulate air quality issues associated with plans and new development projects throughout the Air Basin. Instead, this is controlled through local jurisdictions in accordance to the California Environmental Quality Act (CEQA). In order to assist local jurisdictions with air quality compliance issues the *CEQA Air Quality Handbook* (SCAQMD CEQA Handbook), prepared by SCAQMD, 1993, with the most current updates found at http://www.aqmd.gov/ceqa/hdbk.html, was developed in accordance with the projections and programs detailed in the AQMPs. The purpose of the SCAQMD CEQA Handbook is to assist Lead Agencies, as well as consultants, project proponents, and other interested parties in evaluating a proposed project's potential air quality impacts. Specifically, the SCAQMD CEQA Handbook explains the procedures that SCAQMD recommends be followed for the environmental review process required by CEQA. The SCAQMD CEQA Handbook provides direction on how to evaluate potential air quality impacts, how to determine whether these impacts are significant, and how to mitigate these impacts. The SCAQMD intends that by providing this guidance, the air quality impacts of plans and development proposals will be analyzed accurately and consistently throughout the Air Basin, and adverse impacts will be minimized.

The following lists the SCAQMD rules that are applicable but not limited to school development projects in the Air Basin.

Rule 402 - Nuisance

Rule 402 prohibits a person from discharging from any source whatsoever such quantities of air contaminants or other material which causes injury, detriment, nuisance, or annoyance to any considerable number of persons or to the public, or which endanger the comfort, repose, health or safety of any such persons or the public, or which cause, or have a natural tendency to cause, injury or damage to business or property. Compliance with Rule 402 will reduce local air quality and odor impacts to nearby sensitive receptors.

Rule 403- Fugitive Dust

Rule 403 governs emissions of fugitive dust during construction activities and requires that no person shall cause or allow the emissions of fugitive dust such that dust remains visible in the atmosphere beyond the property line or the dust emission exceeds 20 percent opacity, if the dust is from the operation of a motorized vehicle. Compliance with this rule is achieved through application of standard Best Available

Control Measures, which include but are not limited to the measures below. Compliance with these rules would reduce local air quality impacts to nearby sensitive receptors.

- Utilize either a pad of washed gravel 50 feet long, 100 feet of paved surface, a wheel shaker, or a wheel washing device to remove material from vehicle tires and undercarriages before leaving project site.
- Do not allow any track out of material to extend more than 25 feet onto a public roadway and remove all track out at the end of each workday.
- Water all exposed areas on active sites at least three times per day and pre-water all areas prior to clearing and soil moving activities.
- Apply nontoxic chemical stabilizers according to manufacturer specifications to all construction areas that will remain inactive for 10 days or longer.
- Pre-water all material to be exported prior to loading, and either cover all loads or maintain at least 2 feet of freeboard in accordance with the requirements of California Vehicle Code Section 23114.
- Replant all disturbed area as soon as practical.
- Suspend all grading activities when wind speeds (including wind gusts) exceed 25 miles per hour.
- Restrict traffic speeds on all unpaved roads to 15 miles per hour or less.

Rules 1108 and 1108.1 – Cutback and Emulsified Asphalt

Rules 1108 and 1108.1 govern the sale, use, and manufacturing of asphalt and limits the VOC content in asphalt. This rule regulates the VOC contents of asphalt used during construction as well as any on-going maintenance during operations. Therefore, all asphalt used during construction and operation of the proposed project must comply with SCAQMD Rules 1108 and 1108.1.

Rule 1113 – Architectural Coatings

Rule 1113 governs the sale, use, and manufacturing of architectural coatings and limits the VOC content in sealers, coatings, paints and solvents. This rule regulates the VOC contents of paints available during construction. Therefore, all paints and solvents used during construction and operation of the proposed project must comply with SCAQMD Rule 1113.

Rule 1143 – Paint Thinners

Rule 1143 governs the sale, use, and manufacturing of paint thinners and multi-purpose solvents that are used in thinning of coating materials, cleaning of coating application equipment, and other solvent cleaning operations. This rule regulates the VOC content of solvents used during construction. Solvents used during construction and operation of the proposed project must comply with SCAQMD Rule 1143.

Southern California Association of Governments

The SCAG is the regional planning agency for Los Angeles, Orange, Ventura, Riverside, San Bernardino, and Imperial Counties and addresses regional issues relating to transportation, the economy, community development and the environment. SCAG is the federally designated Metropolitan Planning Organization (MPO) for the majority of the southern California region and is the largest MPO in the nation. SCAG has prepared the *2016-2040 Regional Transportation Plan/Sustainable Communities Strategy* (RTP/SCS),

adopted April, 2016 to address GHG reduction targets for passenger vehicles and light duty truck sources, and the *2019 Federal Transportation Improvement* Program (FTIP), adopted September 2018, which addresses regional development and growth forecasts and provides an air quality conformance analysis to demonstrate compliance with federal air quality standards. Although the RTP/SCS and FTIP are primarily planning documents for future transportation projects a key component of these plans is to integrate land use planning with transportation planning that promotes higher density infill development in close proximity to existing transit service, as a way to reduce vehicular emissions. These plans form the basis for the land use and transportation components of the AQMP, which are utilized in the preparation of air quality forecasts and in the consistency analysis included in the AQMP. The RTP/SCS, FTIP, and AQMP are based on growth forecasts based on regional socio-economic modeling by SCAG and land use designations originating within the City and County General Plans.

4.4 Local – City of El Segundo

Local jurisdictions, such as the City of El Segundo, have the authority and responsibility to reduce air pollution through its police power and decision-making authority. Specifically, the City is responsible for the assessment and mitigation of air emissions resulting from its land use decisions. The City is also responsible for the implementation of transportation control measures as outlined in the AQMPs. Examples of such measures include bus turnouts, energy-efficient streetlights, and synchronized traffic signals. In accordance with CEQA requirements and the CEQA review process, the City assesses the air quality impacts of new development projects, requires mitigation of potentially significant air quality impacts by conditioning discretionary permits, and monitors and enforces implementation of such mitigation.

In accordance with the CEQA requirements, the City does not, however, have the expertise to develop plans, programs, procedures, and methodologies to ensure that air quality within the City and region will meet federal and state standards. Instead, the City relies on the expertise of the SCAQMD and utilizes the SCAQMD CEQA Handbook as the guidance document for the environmental review of plans and development proposals within its jurisdiction.

5.0 ENERGY CONSERVATION MANAGEMENT

The regulatory setting related to energy conservation is primarily addressed through State and City regulations, which are discussed below.

5.1 State

Energy conservation management in the State was initiated by the 1974 Warren-Alquist State Energy Resources Conservation and Development Act that created the California Energy Resource Conservation and Development Commission (currently named California Energy Commission [CEC]), which was originally tasked with certifying new electric generating plants based on the need for the plant and the suitability of the site of the plant. In 1976 the Warren-Alquist Act was expanded to include new restrictions on nuclear generating plants, that effectively resulted in a moratorium of any new nuclear generating plants in the State. The following details specific regulations adopted by the State in order to reduce the consumption of energy.

California Code of Regulations (CCR) Title 20

On November 3, 1976 the CEC adopted the *Regulations for Appliance Efficiency Standards Relating to Refrigerators, Refrigerator-Freezers and Freezers and Air Conditioners,* which were the first energy-efficiency standards for appliances. The appliance efficiency regulations have been updated several times by the Commission and the most current version is the *2016 Appliance Efficiency Regulations*, adopted January 2017 and now includes almost all types of appliances and lamps that use electricity, natural gas as well as plumbing fixtures. The authority for the CEC to control the energy-efficiency of appliances is detailed in California Code of Regulations (CCR), Title 20, Division 2, Chapter 4, Article 4, Sections 1601-1609.

California Code of Regulations (CCR) Title 24, Part 6

CCR Title 24, Part 6: *California's Energy Efficiency Standards for Residential and Nonresidential Buildings* (Title 24) were first established in 1978 in response to a legislative mandate to reduce California's energy consumption. The California Energy Commission (CEC) is the agency responsible for the standards that are updated periodically to allow consideration and possible incorporation of new energy efficiency technologies and methods. In 2008 the State set an energy-use reduction goal of zero-net-energy use of all new homes by 2020 and the CEC was mandated to meet this goal through revisions to the Title 24, Part 6 regulations.

The Title 24 standards are updated on a three-year schedule and since 2008 the standards have been incrementally moving to the 2020 goal of the zero-net-energy use. Currently the 2019 Title 24 standards are in effect and have been designed so that the average new home built in California will now use zero-net-energy. Single-family homes built with 2019 standards will use about 7 percent less energy due to energy efficiency measures versus those built under the 2016 standards. The 2019 standards also now require that all single-family homes to have rooftop solar photovoltaic systems and when the solar systems are factored in, homes built under the 2019 standards will use about 53 percent less energy than homes built under the prior 2016 standards. In addition to requiring rooftop solar systems, the 2019 standards also encourage the use of battery storage and heat pump water heaters, require the more widespread use of LED lighting, as well as improve the building's thermal envelope through high performance attics, walls and windows. The 2019 standards also require improvements to ventilation systems by requiring highly efficient air filters to trap hazardous air particulates as well as improvements

to kitchen ventilation systems. (https://ww2.energy.ca.gov/title24/2019standards/documents/Title24_2019_Standards_detailed_faq.pdf)

California Code of Regulations (CCR) Title 24, Part 11

CCR Title 24, Part 11: *California Green Building Standards* (CalGreen) was developed in response to continued efforts to reduce GHG emissions associated with energy consumption. The CalGreen Building Standards are also updated every three years and the current version is the 2019 California Green Building Standard Code that become effective on January 1, 2020.

The CALGreen Code contains requirements for construction site selection; storm water control during construction; construction waste reduction; indoor water use reduction; material selection; natural resource conservation; site irrigation conservation; and more. The code provides for design options allowing the designer to determine how best to achieve compliance for a given site or building condition. The code also requires building commissioning, which is a process for verifying that all building systems (e.g., heating and cooling equipment and lighting systems) are functioning at their maximum efficiency.

The CALGreen Code provides standards for bicycle parking, carpool/vanpool/electric vehicle spaces, light and glare reduction, grading and paving, energy efficient appliances, renewable energy, graywater systems, water efficient plumbing fixtures, recycling and recycled materials, pollutant controls (including moisture control and indoor air quality), acoustical controls, storm water management, building design, insulation, flooring, and framing, among others. Implementation of the CALGreen Code measures reduces energy consumption and vehicle trips and encourages the use of alternative-fuel vehicles, which reduces pollutant emissions.

Some of the notable changes in the 2019 CALGreen Code over the prior 2016 CALGreen Code include: an alignment of building code engineering requirements with the national standards that include anchorage requirements for solar panels, provides design requirements for buildings in tsunami zones, increases Minimum Efficiency Reporting Value (MERV) for air filters from 8 to 13, increased electric vehicle charging requirements in parking areas, and sets minimum requirements for use of shade trees.

Senate Bill 100

Senate Bill 100 (SB 100) was adopted September 2018 and requires that by December 1, 2045 that 100 percent of retail sales of electricity to be generated from renewable or zero-carbon emission sources of electricity. SB 100 supersedes the renewable energy requirements set by SB 350, SB 1078, SB 107, and SB X1-2. However, the interim renewable energy thresholds from the prior Bills of 44 percent by December 31, 2024, 52 percent by December 31, 2027, and 60 percent by December 31, 2030, will remain in effect.

Executive Order B-48-18 and Assembly Bill 2127

The California Governor issued Executive Order B-48-18 on January 26, 2018 that orders all state entities to work with the private sector to put at least five million zero-emission vehicles on California roads by 2030 and to install 200 hydrogen fueling stations and 250,000 electric vehicle chargers by 2025. Currently there are approximately 350,000 electric vehicles operating in California, which represents approximately 1.5 percent of the 24 million vehicles total currently operating in California. Implementation of Executive Order B-48-18 would result in approximately 20 percent of all vehicles in California to be zero emission electric vehicles. Assembly Bill 2127 (AB 2127) was codified into statute on September 13, 2018 and

requires that the California Energy Commission working with the State Air Resources Board prepare biannual assessments of the statewide electric vehicle charging infrastructure needed to support the levels of zero emission vehicle adoption required for the State to meet its goals of putting at least 5 million zero-emission vehicles on California roads by 2030.

Assembly Bill 1109

California Assembly Bill 1109 (AB 1109) was adopted October 2007, also known as the Lighting Efficiency and Toxics Reduction Act, prohibits the manufacturing of lights after January 1, 2010 that contain levels of hazardous substances prohibited by the European Union pursuant to the RoHS Directive. AB 1109 also requires reductions in energy usage for lighting and is structured to reduce lighting electrical consumption by: (1) At least 50 percent reduction from 2007 levels for indoor residential lighting; and (2) At least 25 percent reduction from 2007 levels for indoor commercial and all outdoor lighting by 2018. AB 1109 would reduce GHG emissions through reducing the amount of electricity required to be generated by fossil fuels in California.

Assembly Bill 1493

California Assembly Bill 1493 (also known as the Pavley Bill, in reference to its author Fran Pavley) was enacted on July 22, 2002 and required CARB to develop and adopt regulations that reduce GHGs emitted by passenger vehicles and light duty trucks. In 2004, CARB approved the "Pavley I" regulations limiting the amount of GHGs that may be released from new passenger automobiles that are being phased in between model years 2009 through 2016. These regulations will reduce GHG emissions by 30 percent from 2002 levels by 2016. In June 2009, the EPA granted California the authority to implement GHG emission reduction standards for light duty vehicles, in September 2009, amendments to the Pavley I regulations were adopted by CARB and implementation of the "Pavley I" regulations started in 2009.

The second set of regulations "Pavley II" was developed in 2010, and is being phased in between model years 2017 through 2025 with the goal of reducing GHG emissions by 45 percent by the year 2020 as compared to the 2002 fleet. The Pavley II standards were developed by linking the GHG emissions and formerly separate toxic tailpipe emissions standards previously known as the "LEV III" (third stage of the Low Emission Vehicle standards) into a single regulatory framework. The new rules reduce emissions from gasoline-powered cars as well as promote zero-emissions auto technologies such as electricity and hydrogen, and through increasing the infrastructure for fueling hydrogen vehicles. In 2009, the U.S. EPA granted California the authority to implement the GHG standards for passenger cars, pickup trucks and sport utility vehicles and these GHG emissions standards are currently being implemented nationwide. However, EPA has performed a midterm evaluation of the longer-term standards for model years 2022-2025, and based on the findings of this midterm evaluation, the EPA has proposed to amend the corporate average fuel economy (CAFE) and GHG emissions standards for light vehicles for model years 2021 through 2026. The EPA's proposed amendments do not include any extension of the legal waiver granted to California by the 1970 Clean Air Act and which has allowed the State to set tighter standards for vehicle pipe emissions than the EPA standards. On September 20, 2019, California filed suit over the EPA decision to revoke California's legal waiver that has been joined by 22 other states.

5.2 Local – City of El Segundo

General Plan

The City of El Segundo General Plan 1992 (General Plan), adopted December 1, 1992, includes a Conservation Element that provides goals and policies for beach preservation, water supply, groundwater

contamination, the El Segundo Blue Butterfly, and urban landscape. Although some of these policies may be applicable to the project, the Conservation Element does not provide any goals and policies related to energy conservation within the City. As such, the General Plan is not an applicable plan with regard to energy conservation for the proposed project.

Municipal Code

On November 19, 2019, the City Council adopted Municipal Code Section 13-11-1: Adoption of California Green Building Standards Code, 2019 Edition, which requires new buildings in the City to be designed to meet the CalGreen Building Standards, that have been detailed above under the CCR Title 24 Part 11 requirements.

6.0 GLOBAL CLIMATE CHANGE MANAGEMENT

The regulatory setting related to global climate change is addressed through the efforts of various international, federal, state, regional, and local government agencies. These agencies work jointly, as well as individually, to reduce GHG emissions through legislation, regulations, planning, policy-making, education, and a variety of programs. The agencies responsible for global climate change regulations are discussed below.

6.1 International

In 1988, the United Nations established the Intergovernmental Panel on Climate Change (IPCC) to evaluate the impacts of global climate change and to develop strategies that nations could implement to curtail global climate change. In 1992, the United States joined other countries around the world in signing the United Nations' Framework Convention on Climate Change (UNFCCC) agreement with the goal of controlling GHG emissions. The parties of the UNFCCC adopted the Kyoto Protocol, which set binding GHG reduction targets for 37 industrialized countries, the objective of reducing their collective GHG emissions by five percent below 1990 levels by 2012. The Kyoto Protocol has been ratified by 182 countries, but has not been ratified by the United States. It should be noted that Japan and Canada opted out of the Kyoto Protocol and the remaining developed countries that ratified the Kyoto Protocol have not met their Kyoto targets. The Kyoto Protocol expired in 2012 and the amendment for the second commitment period from 2013 to 2020 has not yet entered into legal force. The Parties to the Kyoto Protocol negotiated the Paris Agreement in December 2015, agreeing to set a goal of limiting global warming to less than 2 degrees Celsius compared with pre-industrial levels. The Paris Agreement has been adopted by 195 nations with 147 ratifying it, including the United States by President Obama, who ratified it by Executive Order on September 3, 2016. On June 1, 2017, President Trump announced that the United States is withdrawing from the Paris Agreement, however the Paris Agreement is still legally binding by the other remaining nations.

Additionally, the Montreal Protocol was originally signed in 1987 and substantially amended in 1990 and 1992. The Montreal Protocol stipulates that the production and consumption of compounds that deplete ozone in the stratosphere—CFCs, halons, carbon tetrachloride, and methyl chloroform—were to be phased out, with the first three by the year 2000 and methyl chloroform by 2005.

6.2 Federal – United States Environmental Protection Agency

The United States Environmental Protection Agency (EPA) is responsible for implementing federal policy to address global climate change. The Federal government administers a wide array of public-private partnerships to reduce U.S. GHG intensity. These programs focus on energy efficiency, renewable energy, methane, and other non-CO_2 gases, agricultural practices and implementation of technologies to achieve GHG reductions. EPA implements several voluntary programs that substantially contribute to the reduction of GHG emissions.

In Massachusetts v. Environmental Protection Agency (Docket No. 05–1120), argued November 29, 2006 and decided April 2, 2007, the U.S. Supreme Court held that not only did the EPA have authority to regulate greenhouse gases, but the EPA's reasons for not regulating this area did not fit the statutory requirements. As such, the U.S. Supreme Court ruled that the EPA should be required to regulate CO2 and other greenhouse gases as pollutants under the federal Clean Air Act (CAA).

In response to the FY2008 Consolidations Appropriations Act (H.R. 2764; Public Law 110-161), EPA proposed a rule on March 10, 2009 that requires mandatory reporting of GHG emissions from large sources in the United States. On September 22, 2009, the Final Mandatory Reporting of GHG Rule was signed and published in the Federal Register on October 30, 2009. The rule became effective on December 29, 2009. This rule requires suppliers of fossil fuels or industrial GHGs, manufacturers of vehicles and engines, and facilities that emit 25,000 metric tons or more per year of GHG emissions to submit annual reports to EPA.

On December 7, 2009, the EPA Administrator signed two distinct findings under section 202(a) of the Clean Air Act. One is an endangerment finding that finds concentrations of the six GHGs in the atmosphere threaten the public health and welfare of current and future generations. The other is a cause or contribute finding, that finds emissions from new motor vehicles and new motor vehicle engines contribute to the GHG pollution which threatens public health and welfare. These actions did not impose any requirements on industry or other entities, however, since 2009 the EPA has been providing GHG emission standards for vehicles and other stationary sources of GHG emissions that are regulated by the EPA. On September 13, 2013 the EPA Administrator signed 40 CFR Part 60, that limits emissions from new sources to 1,100 pounds of CO_2 per MWh for fossil fuel-fired utility boilers and 1,000 pounds of CO_2 per MWh for large natural gas-fired combustion units.

On August 3, 2015, the EPA announced the Clean Power Plan, emissions guidelines for U.S. states to follow in developing plans to reduce GHG emissions from existing fossil fuel-fired power plants (Federal Register Vol. 80, No. 205, October 23 2015). On February 9, 2016 the Supreme Court stayed implementation of the Clean Power Plan due to a legal challenge from 29 states and in April 2017, the Supreme Court put the case on a 60 day hold and directed both sides to make arguments for whether it should keep the case on hold indefinitely or close it and remand the issue to the EPA. On October 11, 2017, the EPA issued a formal proposal to repeal the Clean Power Plan and on June 19, 2019, the EPA issued the Affordable Clean Energy Rule that replaces the Clean Power Plan.

On September 27, 2019, the EPA and the National Highway Safety Administration published the *Safer Affordable Fuel-Efficient (SAFE) Vehicles Rule for Model Years 2021-2026 Passenger Cars and Light Trucks* (SAFE Vehicles Rule). Part One of the Rule revokes California's authority to set its own GHG emissions standards and zero-emission vehicle mandates in California, which results in one emission standard to be used nationally for all passenger cars and light trucks that is set by the EPA.

6.3 State

The California Air Resources Board (CARB) has the primary responsible for implementing state policy to address global climate change, however there are State regulations related to global climate change that affect a variety of State agencies. CARB, which is a part of the California Environmental Protection Agency, is responsible for the coordination and administration of both the federal and state air pollution control programs within California. In this capacity, the CARB conducts research, sets California Ambient Air Quality Standards (CAAQS), compiles emission inventories, develops suggested control measures, provides oversight of local programs, and prepares the SIP. In addition, the CARB establishes emission standards for motor vehicles sold in California, consumer products (e.g. hairspray, aerosol paints, and barbeque lighter fluid), and various types of commercial equipment. It also sets fuel specifications to further reduce vehicular emissions.

In 2008, CARB approved a Climate Change Scoping Plan that proposes a "comprehensive set of actions designed to reduce overall carbon GHG emissions in California, improve our environment, reduce our dependence on oil, diversify our energy sources, save energy, create new jobs, and enhance public health" (CARB 2008). The Climate Change Scoping Plan has a range of GHG reduction actions which include direct regulations; alternative compliance mechanisms; monetary and non-monetary incentives; voluntary actions; market-based mechanisms such as a cap-and-trade system. In 2014, CARB approved the First Update to the Climate Change Scoping Plan (CARB, 2014) that identifies additional strategies moving beyond the 2020 targets to the year 2050. On December 14, 2017 CARB adopted the California's 2017 Climate Change Scoping Plan, November 2017 (CARB, 2017) that provides specific statewide policies and measures to achieve the 2030 GHG reduction target of 40 percent below 1990 levels by 2030 and the aspirational 2050 GHG reduction target of 80 percent below 1990 levels by 2050. In addition, the State has passed the following laws directing CARB to develop actions to reduce GHG emissions, which are listed below in chronological order, with the most current first.

California Code of Regulations (CCR) Title 24, Part 6

The Title 24 Part 6 standards have been developed by the CEC primarily for energy conservation and is described in more detail above in Section 5.1 under Energy Conservation Management. It should be noted that implementation of the Title 24 Part 6 building standards would also reduce GHG emissions, since energy usage is the primary source of human generated GHG emissions.

California Code of Regulations (CCR) Title 24, Part 11

The CalGreen Building standards have been developed by the CEC primarily for energy conservation and is described in more detail above in Section 5.1 under Energy Conservation Management. It should be noted that implementation of the CalGreen Building standards would also reduce GHG emissions, since energy usage is the primary source of human generated GHG emissions.

Senate Bill 100

SB 100 requires that by December 1, 2045 that 100 percent of retail sales of electricity to be generated from renewable or zero-carbon emission sources of electricity and is described in more detail above in Section 5.1 under Energy Conservation Management.

Executive Order B-48-18 and Assembly Bill 2127

Executive Order B-48-18 and AB 2127 provides measures to put at least five million zero-emission vehicles on California roads by 2030 and to install 200 hydrogen fueling stations and 250,000 electric vehicle chargers by 2025 and is described in more detail above in Section 5.1 under Energy Conservation Management.

Executive Order B-30-15, Senate Bill 32 and Assembly Bill 197

The California Governor issued Executive Order B-30-15 on April 29, 2015 that aims to reduce California's GHG emissions 40 percent below 1990 levels by 2030. This executive order aligns California's GHG reduction targets with those of other international governments, such as the European Union that set the same target for 2030 in October, 2014. This target will make it possible to reach the ultimate goal of reducing GHG emissions 80 percent under 1990 levels by 2050 that is based on scientifically established levels needed in the U.S.A to limit global warming below 2 degrees Celsius – the warming threshold at which scientists say there will likely be major climate disruptions such as super droughts and rising sea levels. Assembly Bill 197 (AB 197) (September 8, 2016) and Senate Bill 32 (SB 32) (September 8, 2016)

codified into statute the GHG emissions reduction targets of at least 40 percent below 1990 levels by 2030 as detailed in Executive Order B-30-15. AB 197 also requires additional GHG emissions reporting that is broken down to sub-county levels and requires CARB to consider the social costs of emissions impacting disadvantaged communities.

Executive Order B-29-15

The California Governor issued Executive Order B-29-15 on April 1, 2015 and directed the State Water Resources Control Board to impose restrictions to achieve a statewide 25% reduction in urban water usage and directed the Department of Water Resources to replace 50 million square feet of lawn with drought tolerant landscaping through an update to the State's Model Water Efficient Landscape Ordinance. The Ordinance also requires installation of more efficient irrigation systems, promotion of greywater usage and onsite stormwater capture, and limits the turf planted in new residential landscapes to 25 percent of the total area and restricts turf from being planted in median strips or in parkways unless the parkway is next to a parking strip and a flat surface is required to enter and exit vehicles. Executive Order B-29-15 would reduce GHG emissions associated with the energy used to transport and filter water.

Assembly Bill 341 and Senate Bills 939 and 1374

Senate Bill 939 (SB 939) requires that each jurisdiction in California to divert at least 50 percent of its waste away from landfills, whether through waste reduction, recycling or other means. Senate Bill 1374 (SB 1374) requires the California Integrated Waste Management Board to adopt a model ordinance by March 1, 2004 suitable for adoption by any local agency to require 50 to 75 percent diversion of construction and demolition of waste materials from landfills. Assembly Bill 341 (AB 341) was adopted in 2011 and builds upon the waste reduction measures of SB 939 and 1374, and sets a new target of a 75 percent reduction in solid waste generated by the year 2020.

Senate Bill 375

Senate Bill 375 (SB 375) was adopted September 2008 in order to support the State's climate action goals to reduce GHG emissions through coordinated regional transportation planning efforts, regional GHG emission reduction targets, and land use and housing allocation. SB 375 requires CARB to set regional targets for GHG emissions reductions from passenger vehicle use. In 2010, CARB established targets for 2020 and 2035 for each Metropolitan Planning Organizations (MPO) within the State. It was up to each MPO to adopt a sustainable communities strategy (SCS) that will prescribe land use allocation in that MPOs Regional Transportation Plan (RTP) to meet CARB's 2020 and 2035 GHG emission reduction targets. These reduction targets are required to be updated every eight years and the most current targets are detailed at: https://ww2.arb.ca.gov/our-work/programs/sustainable-communities-program/regional-plan-targets, which provides GHG emissions reduction targets for SCAG of 8 percent by 2020 and 19 percent by 2035.

The *2016-2040 Regional Transportation Plan/Sustainable Communities Strategy* (RTP/SCS), adopted by SCAG April, 2016 provides a 2020 GHG emission reduction target of 8 percent and a 2035 GHG emission reduction target of 18 percent. SCAG will need to develop additional strategies in its next revision of the RTP/SCS in order to meet CARB's new 19 percent GHG emission reduction target for 2035. CARB is also charged with reviewing SCAG's RTP/SCS for consistency with its assigned targets.

City and County land use policies, including General Plans, are not required to be consistent with the RTP and associated SCS. However, new provisions of CEQA incentivize, through streamlining and other

provisions, qualified projects that are consistent with an approved SCS and categorized as "transit priority projects."

Assembly Bill 1109

AB 1109 requires reductions in energy usage for lighting and is described in more detail above in Section 5.1 under Energy Conservation Management.

Executive Order S-1-07

Executive Order S-1-07 was issued in 2007 and proclaims that the transportation sector is the main source of GHG emissions in the State, since it generates more than 40 percent of the State's GHG emissions. It establishes a goal to reduce the carbon intensity of transportation fuels sold in the State by at least ten percent by 2020. This Executive Order also directs CARB to determine whether this Low Carbon Fuel Standard (LCFS) could be adopted as a discrete early-action measure as part of the effort to meet the mandates in AB 32.

In 2009 CARB approved the proposed regulation to implement the LCFS. The standard was challenged in the courts, but has been in effect since 2011 and was re-approved by the CARB in 2015. The LCFS is anticipated to reduce GHG emissions by about 16 MMT per year by 2020. The LCFS is designed to provide a framework that uses market mechanisms to spur the steady introduction of lower carbon fuels. The framework establishes performance standards that fuel producers and importers must meet annually. Reformulated gasoline mixed with corn-derived ethanol and low-sulfur diesel fuel represent the baseline fuels. Lower carbon fuels may be ethanol, biodiesel, renewable diesel, or blends of these fuels with gasoline or diesel. Compressed natural gas and liquefied natural gas also may be low-carbon fuels. Hydrogen and electricity, when used in fuel cells or electric vehicles, are also considered as low-carbon fuels.

Senate Bill 97

Senate Bill 97 (SB 97) was adopted August 2007 and acknowledges that climate change is a prominent environmental issue that requires analysis under CEQA. SB 97 directed the Governor's Office of Planning and Research (OPR), which is part of the State Natural Resources Agency, to prepare, develop, and transmit to CARB guidelines for the feasible mitigation of GHG emissions or the effects of GHG emissions, as required by CEQA, by July 1, 2009. The Natural Resources Agency was required to certify and adopt those guidelines by January 1, 2010.

Pursuant to the requirements of SB 97 as stated above, on December 30, 2009 the Natural Resources Agency adopted amendments to the State CEQA guidelines that addresses GHG emissions. The CEQA Guidelines Amendments changed 14 sections of the CEQA Guidelines and incorporated GHG language throughout the Guidelines. However, no GHG emissions thresholds of significance were provided and no specific mitigation measures were identified. The GHG emission reduction amendments went into effect on March 18, 2010 and are summarized below:

- Climate Action Plans and other greenhouse gas reduction plans can be used to determine whether a project has significant impacts, based upon its compliance with the plan.
- Local governments are encouraged to quantify the GHG emissions of proposed projects, noting that they have the freedom to select the models and methodologies that best meet their needs and circumstances. The section also recommends consideration of several qualitative factors that may be used in the determination of significance, such as the extent to which the given project

complies with state, regional, or local GHG reduction plans and policies. OPR does not set or dictate specific thresholds of significance. Consistent with existing CEQA Guidelines, OPR encourages local governments to develop and publish their own thresholds of significance for GHG impacts assessment.

- When creating their own thresholds of significance, local governments may consider the thresholds of significance adopted or recommended by other public agencies, or recommended by experts.
- New amendments include guidelines for determining methods to mitigate the effects of GHG emissions in Appendix F of the CEQA Guidelines.
- OPR is clear to state that "to qualify as mitigation, specific measures from an existing plan must be identified and incorporated into the project; general compliance with a plan, by itself, is not mitigation."
- OPR's emphasizes the advantages of analyzing GHG impacts on an institutional, programmatic level. OPR therefore approves tiering of environmental analyses and highlights some benefits of such an approach.
- Environmental impact reports must specifically consider a project's energy use and energy efficiency potential.

Assembly Bill 32

In 2006, the California State Legislature adopted AB 32, the California Global Warming Solutions Act of 2006. AB 32 requires CARB, to adopt rules and regulations that would achieve GHG emissions equivalent to statewide levels in 1990 by 2020 through an enforceable statewide emission cap which will be phased in starting in 2012. Emission reductions shall include carbon sequestration projects that would remove carbon from the atmosphere and utilize best management practices that are technologically feasible and cost effective.

In 2007 CARB released the calculated Year 1990 GHG emissions of 431 million metric tons of CO2e ($MMTCO_2e$). The 2020 target of 431 $MMTCO_2e$ requires the reduction of 78 $MMTCO_2e$, or approximately 16 percent from the State's projected 2020 business as usual emissions of 509 $MMTCO_2e$ (CARB, 2014). Under AB 32, CARB was required to adopt regulations by January 1, 2011 to achieve reductions in GHGs to meet the 1990 cap by 2020. Early measures CARB took to lower GHG emissions included requiring operators of the largest industrial facilities that emit 25,000 metric tons of CO_2 in a calendar year to submit verification of GHG emissions by December 1, 2010. The CARB Board also approved nine discrete early action measures that include regulations affecting landfills, motor vehicle fuels, refrigerants in cars, port operations and other sources, all of which became enforceable on or before January 1, 2010.

CARB's Scoping Plan that was adopted in 2009, proposes a variety of measures including: strengthening energy efficiency and building standards; targeted fees on water and energy use; a market-based cap-and-trade system; achieving a 33 percent renewable energy mix; and a fee regulation to fund the program. The 2014 update to the Scoping Plan identifies strategies moving beyond the 2020 targets to the year 2050.

The Cap and Trade Program established under the Scoping Plan sets a statewide limit on sources responsible for 85 percent of California's GHG emissions, and has established a market for long-term investment in energy efficiency and cleaner fuels since 2012.

Executive Order S-3-05

In 2005 the California Governor issued Executive Order S 3-05, GHG Emission, which established the following reduction targets:

- 2010: Reduce greenhouse gas emissions to 2000 levels;
- 2020: Reduce greenhouse gas emissions to 1990 levels;
- 2050: Reduce greenhouse gas emissions to 80 percent below 1990 levels.

The Executive Order directed the secretary of the California Environmental Protection Agency (CalEPA) to coordinate a multi-agency effort to reduce GHG emissions to the target levels. To comply with the Executive Order, the secretary of CalEPA created the California Climate Action Team (CAT), made up of members from various state agencies and commissions. The team released its first report in March 2006. The report proposed to achieve the targets by building on the voluntary actions of businesses, local governments, and communities and through State incentive and regulatory programs. The State achieved its first goal of reducing GHG emissions to 2000 levels by 2010.

Assembly Bill 1493

AB 1493 or the Pavley Bill sets tailpipe GHG emissions limits for passenger vehicles in California as well as fuel economy standards and is described in more detail above in Section 5.1 under Energy Conservation Management.

6.4 Regional – Southern California

The SCAQMD is the agency principally responsible for comprehensive air pollution control in the South Coast Air Basin. To that end, as a regional agency, the SCAQMD works directly with the Southern California Association of Governments (SCAG), county transportation commissions, and local governments and cooperates actively with all federal and state agencies.

South Coast Air Quality Management District

SCAQMD develops rules and regulations, establishes permitting requirements for stationary sources, inspects emission sources, and enforces such measures through educational programs or fines, when necessary. SCAQMD is directly responsible for reducing emissions from stationary, mobile, and indirect sources. The SCAQMD is also responsible for GHG emissions for projects where it is the lead agency. However, for other projects in the SCAB where it is not the lead agency, it is limited to providing resources to other lead agencies in order to assist them in determining GHG emission thresholds and GHG reduction measures. In order to assist local agencies with direction on GHG emissions, the SCAQMD organized a working group, which is described below.

<u>SCAQMD Working Group</u>

Since neither CARB nor the OPR has developed GHG emissions threshold, the SCAQMD formed a Working Group to develop significance thresholds related to GHG emissions. At the September 28, 2010 Working Group meeting, the SCAQMD released its most current version of the draft GHG emissions thresholds, which recommends a tiered approach that either provides a quantitative annual thresholds of 3,500 $MTCO_2e$ for residential uses, 1,400 $MTCO_2e$ for commercial uses, and 3,000 $MTCO_2e$ for mixed uses. An alternative annual threshold of 3,000 $MTCO_2e$ for all land use types is also proposed.

Southern California Association of Governments

The SCAG is the regional planning agency for Los Angeles, Orange, Ventura, Riverside, San Bernardino, and Imperial Counties and addresses regional issues relating to transportation, the economy, community development and the environment. SCAG is the federally designated Metropolitan Planning Organization (MPO) for the majority of the southern California region and is the largest MPO in the nation. With respect to air quality planning, SCAG has prepared the 2016-2040 Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS), adopted April, 2016 and the *2019 Federal Transportation Improvement* Program (FTIP), adopted September 2018, which addresses regional development and growth forecasts. Although the RTP/SCS and FTIP are primarily planning documents for future transportation projects a key component of these plans are to integrate land use planning with transportation planning that promotes higher density infill development in close proximity to existing transit service. These plans form the basis for the land use and transportation components of the AQMP, which are utilized in the preparation of air quality forecasts and in the consistency analysis included in the AQMP. The RTP/SCS, FTIP, and AQMP are based on projections originating within the City and County General Plans.

6.5 Local – City of El Segundo

Local jurisdictions, such as the City of El Segundo, have the authority and responsibility to reduce GHG emissions through their police power and decision-making authority. Specifically, the City is responsible for the assessment and mitigation of GHG emissions resulting from its land use decisions. In accordance with CEQA requirements and the CEQA review process, the City assesses the global climate change potential of new development projects, requires mitigation of potentially significant global climate change impacts by conditioning discretionary permits, and monitors and enforces implementation of such mitigation.

In 2015, the City Council set GHG emission reduction goals consistent with the State's AB 32 GHG emission reduction targets. The City's target was calculated as a 15 percent decrease from 2005 levels by 2020 as recommended in the State AB 32 Scoping Plan. A longer-term goal was established for 2035 to reduce emissions by 49% below 2005 levels. These goals put the City on a path towards helping the State meet its long-term 2050 goal to reduce emissions by 80% below 1990 levels.

The *City of El Segundo Climate Action Plan* (El Segundo CAP)*,* December 2017, has been prepared to help the City comply with the City's GHG emissions reduction goals as well as State and federal regulations that include AB 32, SB 32, and the 2017 Climate Change Scoping Plan Update GHG emission reduction goals. The El Segundo CAP advances these goals and streamlines City efforts to deploy specific initiatives and programs that target the reduction of GHG emissions, while integrating these efforts with the other priorities such as economic development, regional mobility and connectivity, and improving the local air and water quality.

7.0 ATMOSPHERIC SETTING

7.1 South Coast Air Basin

The project site is located within south coastal Los Angeles County, which is part of the South Coast Air Basin (Air Basin) that includes the non-desert portions of Riverside, San Bernardino, and Los Angeles Counties and all of Orange County. The Air Basin is located on a coastal plain with connecting broad valleys and low hills to the east. Regionally, the Air Basin is bounded by the Pacific Ocean to the southwest and high mountains to the east forming the inland perimeter.

7.2 Local Climate

The climate of southwestern Los Angeles County is characterized by hot dry summers, mild moist winters with infrequent rainfall, moderate afternoon breezes, and generally fair weather. Occasional periods of strong Santa Ana winds and winter storms interrupt the otherwise mild weather pattern. Although the Air Basin is semi-arid, the air near the surface in southwestern Los Angeles County is typically moist because of the presence of a shallow marine layer. Except for infrequent periods when dry air is brought into the Air Basin by offshore winds, the ocean effect is dominant. Periods of heavy fog are frequent and low stratus clouds, often referred to as "high fog" are a characteristic feature.

Winds are an important parameter in characterizing the air quality environment of a project site because they both determine the regional pattern of air pollution transport and control the rate of dispersion near a source. Daytime winds in southwestern Los Angeles County are usually light breezes from off the coast as air moves regionally onshore from the cool Pacific Ocean to the warm Mojave Desert interior of Southern California. These winds allow for good local mixing, but as discussed above, these coastal winds carry significant amounts of industrial and automobile air pollutants from the densely urbanized western portion of the Air Basin into the interior valleys which become trapped by the mountains that border the eastern and northern edges of the Air Basin.

In the summer, strong temperature inversions may occur that limit the vertical depth through which air pollution can be dispersed. Air pollutants concentrate because they cannot rise through the inversion layer and disperse. These inversions are more common and persistent during the summer months. Over time, sunlight produces photochemical reactions within this inversion layer that creates ozone, a particularly harmful air pollutant. Occasionally, strong thermal convections occur which allows the air pollutants to rise high enough to pass over the mountains and ultimately dilute the smog cloud.

In the winter, light nocturnal winds result mainly from the drainage of cool air off of the mountains toward the valley floor while the air aloft over the valley remains warm. This forms a type of inversion known as a radiation inversion. Such winds are characterized by stagnation and poor local mixing and trap pollutants such as automobile exhaust near their source. While these inversions may lead to air pollution "hot spots" in heavily developed coastal areas of the Air Basin, there is not enough traffic in inland valleys to cause any winter air pollution problems. Despite light wind conditions, especially at night and in the early morning, winter is generally a period of good air quality in the project vicinity.

The temperature and precipitation levels for Los Angeles International Airport Monitoring station, which is the nearest weather station to the project site with historical data are shown below in Table D. Table D shows that August is typically the warmest month and January is typically the coolest month. Rainfall in the project area varies considerably in both time and space. Almost all the annual rainfall comes from

the fringes of mid-latitude storms from late November to early April, with summers being almost completely dry.

Table D – Monthly Climate Data

Month	Average Maximum Temperature (°F)	Average Minimum Temperature (°F)	Average Total Precipitation (inches)
January	65.2	47.5	2.65
February	65.3	48.9	2.67
March	65.3	50.5	1.85
April	67.4	53.0	0.77
May	69.1	56.4	0.17
June	71.9	59.7	0.05
July	75.1	62.9	0.02
August	76.3	63.8	0.07
September	76.0	62.6	0.16
October	73.6	58.5	0.39
November	70.2	52.3	1.40
December	65.9	47.9	1.82
Annual	**70.1**	**55.3**	12.02

7.3 Monitored Local Air Quality

The air quality at any site is dependent on the regional air quality and local pollutant sources. Regional air quality is determined by the release of pollutants throughout the Air Basin. Estimates of the existing emissions in the Air Basin provided in the 2012 AQMP, indicate that collectively, mobile sources account for 59 percent of the VOC, 88 percent of the NOx emissions and 40 percent of directly emitted PM2.5, with another 10 percent of PM2.5 from road dust. The 2016 AQMP found that since 2012 AQMP projections were made stationary source VOC emissions have decreased by approximately 12 percent, but mobile VOC emissions have increased by 5 percent. The percentage of NOx emissions remain unchanged between the 2012 and 2016 projections.

SCAQMD has divided the Air Basin into 38 air-monitoring areas with a designated ambient air monitoring station representative of each area. The project site is located on the southwestern edge of air monitoring area 3, which covers the Southwest Coastal LA County. Since not all air monitoring stations measure all of the tracked pollutants, the data from the following two monitoring stations, listed in the order of proximity to the project site have been used: Los Angeles-Westchester Parkway Station (Westchester Station) and Compton Station (Compton Station).

The Westchester Station is located approximately 2.3 miles northwest of the project site at 7201 W Westchester Parkway, Los Angeles, and the Compton Station (Compton Station) is located approximately 11 miles east of the project site at 700 North Bullis Road, Compton. The monitoring data is presented in Table E and shows the most recent three years of monitoring data from CARB. Ozone, NO_2, and PM10 were measured at the Westchester Station and PM2.5 was measured at the Compton Station. CO measurements have not been provided, since CO is currently in attainment in the Air Basin and monitoring of CO within the Air Basin ended on March 31, 2013.

Table E – Local Area Air Quality Monitoring Summary

Pollutant (Standard)	Year[1] 2017	2018	2019
Ozone: [1]			
Maximum 1-Hour Concentration (ppm)	0.086	0.074	0.082
Days > CAAQS (0.09 ppm)	0	0	0
Maximum 8-Hour Concentration (ppm)	0.070	0.065	0.067
Days > NAAQS (0.070 ppm)	0	0	0
Days > CAAQs (0.070 ppm)	0	0	0
Nitrogen Dioxide: [1]			
Maximum 1-Hour Concentration (ppb)	72.2	59.6	56.6
Days > NAAQS (100 ppb)	0	0	0
Days > CAAQS (180 ppb)	0	0	0
Inhalable Particulates (PM10) :[1]			
Maximum 24-Hour National Measurement (ug/m^3)	46.5	45.3	62.1
Days > NAAQS (150 ug/m^3)	0	0	0
Days > CAAQS (50 ug/m^3)	0	0	**2**
Annual Arithmetic Mean (AAM) (ug/m^3)	20.2	17.6	19.7
Annual > NAAQS (50 ug/m^3)	No	No	No
Annual > CAAQS (20 ug/m^3)	No	No	No
Ultra-Fine Particulates (PM2.5):[2]			
Maximum 24-Hour National Measurement (ug/m^3)	66.7	49.4	39.5
Days > NAAQS (35 ug/m^3)	**5**	**2**	**1**
Annual Arithmetic Mean (AAM) (ug/m^3)	13.2	13.2	10.8
Annual > NAAQS and CAAQS (12 ug/m^3)	**Yes**	**Yes**	No

Notes: Exceedances are listed in **bold.** CAAQS = California Ambient Air Quality Standard; NAAQS = National Ambient Air Quality Standard; ppm = parts per million; ppb = parts per billion; ND = no data available.

[1] Data obtained from the Westchester Station.

[2] Data obtained from the Compton Station.

Source: http://www.arb.ca.gov/adam/

Ozone

The State 1-hour concentration standard for ozone did not record an exceedance over the past three years at the Westchester Station. The State 8-hour ozone standard did not record an exceedance over the past three years at the Westchester Station. The Federal 8-hour ozone standard did not record an exceedance over the past three years at the Westchester Station.

Ozone is a secondary pollutant as it is not directly emitted. Ozone is the result of chemical reactions between other pollutants, most importantly hydrocarbons and NO_2, which occur only in the presence of bright sunlight. Pollutants emitted from upwind cities react during transport downwind to produce the oxidant concentrations experienced in the area. Many areas of Southern California contribute to the

ozone levels experienced at this monitoring station, with the more significant areas being those directly upwind.

Nitrogen Dioxide

The Westchester Station did not record an exceedance of either the Federal or State 1-hour NO_2 standards for the last three years.

Particulate Matter

The State 24-hour concentration standard for PM10 did not record any days of exceedance in the years 2017 and 2018 and recorded an exceedance in the year 2019 for two days at the Westchester Station. Over the past three years the Federal 24-hour standard for PM10 did not record an exceedance at the Westchester Station. The annual PM10 concentration at the Westchester Station has not exceeded either the State or federal standard for the past three years.

Over the past three years the federal 24-hour concentration standard for PM2.5 has been exceeded between 1 and 5 day each year over the past three years at the Compton Station. The annual PM2.5 concentrations at the Compton Station has exceeded both the State and Federal standards for two of the past three years. Particulate levels in the area are due to natural sources, grading operations, and motor vehicles.

According to the EPA, some people are much more sensitive than others to breathing fine particles (PM10 and PM2.5). People with influenza, chronic respiratory and cardiovascular diseases, and the elderly may suffer worsening illness and premature death due to breathing these fine particles. People with bronchitis can expect aggravated symptoms from breathing in fine particles. Children may experience decline in lung function due to breathing in PM10 and PM2.5. Other groups considered sensitive are smokers and people who cannot breathe well through their noses. Exercising athletes are also considered sensitive, because many breathe through their mouths during exercise.

7.4 Toxic Air Contaminant Levels in the Air Basin

In order to determine the Air Basin-wide risks associated with major airborne carcinogens, the SCAQMD conducted the Multiple Air Toxics Exposure Study (MATES) studies. According to the SCAQMD's MATES-IV Interactive Map (found at: https://scaqmd-online.maps.arcgis.com/apps/webappviewer/index.html?id=470c30bc6daf4ef6a43f0082973ff45f), the project site has an estimated cancer risk of 1,285 per million persons chance of cancer. In comparison, the average cancer risk for the Air Basin is 991 per million persons, which is based on the use of age-sensitivity factors detailed in the OEHHA Guidelines (OEHHA, 2015). It should be noted that the cancer risks shown in the *Mates-IV Final Report,* prepared May 2015, found that the average cancer risk in the Basin is 367 per million does not align with the values shown in the Interactive Map, which has been updated since the Final Mates-IV Report was released to account for the cancer risk methodology revisions provided in the 2015 OEHHA Guidelines.

In order to provide a perspective of risk, it is often estimated that the incidence in cancer over a lifetime for the U.S. population ranges between 1 in 4 to 1 in 3, or a risk of about 300,000 per million persons. The MATES-III study referenced a Harvard Report on Cancer Prevention, which estimated that of cancers associated with known risk factors, about 30 percent were related to tobacco, about 30 percent were related to diet and obesity, and about 2 percent were associated with environmental pollution related exposures that includes hazardous air pollutants.

8.0 MODELING PARAMETERS AND ASSUMPTIONS

8.1 CalEEMod Model Input Parameters

The criteria air pollution and GHG emissions impacts created by the proposed project have been analyzed through use of CalEEMod Version 2016.3.2. CalEEMod is a computer model published by the SCAQMD for estimating air pollutant emissions. The CalEEMod program uses the EMFAC2014 computer program to calculate the emission rates specific for the South Coast Air Basin portion of Los Angeles County for employee, vendor and haul truck vehicle trips and the OFFROAD2011 computer program to calculate emission rates for heavy equipment operations. EMFAC2014 and OFFROAD2011 are computer programs generated by CARB that calculates composite emission rates for vehicles. Emission rates are reported by the program in grams per trip and grams per mile or grams per running hour.

The project characteristics in the CalEEMod model were set to a project location of South Coast Air Basin portion of Los Angeles County, a Climate Zone of 9, utility company of Southern California Edison and an opening year of 2023 was utilized in this analysis.

Land Use Parameters

The proposed project would involve the renovation and minor alteration of two existing office buildings at 650 North Pacific Coast Highway ("Building A") and 700 North Pacific Coast Highway ("Building B"). In addition, the project includes the demolition of the existing surface parking lot and construction of a new 7-story office building with an integrated parking structure ("Building C"). Although "Buildings A" and "B" would only be renovated, in order to provide a worst-case analysis, the CalEEMod model analyzed the emissions created from the development of 329,991 square feet of office buildings, which represents the gross square footage of Buildings "A", "B" and "C" combined. In addition, the proposed project would include an integrated parking structure under Building "C" that would contain 1,185 parking spaces and would maintain 71 surface parking spaces on the project site in the vicinity of Building "B", however since these parking spaces will be repaved as part of the project, they have also been analyzed in CalEEMod. According to the project applicant, the proposed project would disturb 4.45 acres of the 7.2-acre project site. The proposed project's land use parameters that were entered into the CalEEMod model are shown in Table F.

Table F – CalEEMod Land Use Parameters

Proposed Land Use	Land Use Subtype in CalEEMod	Land Use Size[1]	Lot Acreage[2]	Building/Paving[2] (square feet)
Office Buildings	General Office Building	329.991 TSF	3.31	329,991
Parking Structure	Enclosed Parking with Elevator	1,185 PS	0.5	474,000
Surface Parking Lot	Parking Lot	71 PS	0.64	28,400

Notes:
[1] TSF = Thousand Square Feet; PS = Parking Space.
[2] Lot acreage calculated based on the total area disturbed of 4.45-acres.
[2] Building/Paving square feet represent area where architectural coatings will be applied.

Construction Parameters

The proposed project construction is expected to begin in October 2021 and be completed by February 2023. The construction-related GHG emissions were based on a 30-year amortization rate as recommended in the SCAQMD GHG Working Group meeting on November 19, 2009. Although the project

applicant provided a construction schedule that consisted of many sub-phases that detailed the construction activities for each month of the 16 month construction schedule, due to the limitation of CalEEMod, these subphases were consolidated into the following five phases of construction that have been analyzed in CalEEMod: 1) Demolition/Rough Grading; 2) Grading/Foundation, 3) Building construction, 4) Application of architectural coatings, and 5) Paving/Site Improvements.

Demolition/Rough Grading

The project applicant has calculated that the renovations of the existing buildings would generate 3,800 tons of demolition debris, which was entered into the CalEEMod model. This would require a total of 367 haul truck trips (average 19 haul truck trips per day over 20 days). In order to account for the project location with no active landfills in the vicinity of the project, the average haul trip length was increased to 40 miles (80 miles roundtrip).

The demolition/rough grading phase has been modeled as starting in October 2021 and occurring over one month. The demolition activities would generate 25 worker trips per day. The onsite equipment would consist of one excavator, one water truck (off-highway truck), one rubber tired dozer, one rubber tired loader, two scrappers and three of either tractors, loaders, or backhoes, which is based on the project applicant's construction equipment schedule. The mitigation of water all exposed areas three times per day was chosen in order to account for the fugitive dust reduction that would occur through adhering to SCAQMD Rule 403, which requires that the Best Available Control Measures be utilized to reduce fugitive dust emissions.

Grading/Foundation

The grading/foundation phase was modeled as starting after the demolition/rough grading phase and would occur over two months. The proposed grading is anticipated to include the export of 26,575 cubic yards of material, which would require a total of 3,322 haul truck trips (average 83 haul truck trips per day over 40 days). In order to account for the project location with no active landfills in the vicinity of the project, the average haul trip length was increased to 40 miles (80 miles roundtrip).

The grading/foundation phase would generate 23 worker trips per day. The onsite equipment would consist of one crane, two forklifts, one rubber tired dozer, and three of either tractors, loaders, or backhoes, which is based on the project applicant's construction equipment schedule. The mitigation of water all exposed areas three times per day was chosen in order to account for the fugitive dust reduction that would occur through adhering to SCAQMD Rule 403, which requires that the Best Available Control Measures be utilized to reduce fugitive dust emissions.

Building Construction

The building construction would occur after the completion of the grading/foundation phase and was modeled as occurring over 13 months, which is based on the project applicant's construction timing. The building construction phase would generate 317 worker trips and 136 vendor trips per day. The onsite equipment would consist of the simultaneous operation of one crane, three forklifts, two concrete boom pumps (pump), and two boom lifts (aerial lifts) which is based on the project applicant's construction equipment schedule.

Architectural Coating

The architectural coating phase would occur concurrently with the building construction phase and was modeled as starting July 2022 and finishing January 2023, which is based on the project applicant's construction timing. The architectural coating phase was modeled based on covering 494,987 square feet of non-residential interior area, 164,996 square feet of non-residential exterior area, and 30,144 square feet of parking area. The architectural coating phase would generate an average of 63 worker trips per day. The onsite equipment would consist of one air compressor, which is based on the CalEEMod default equipment mix.

Paving/Site Improvements

The paving/site improvements phase would occur concurrently with the building construction and architectural coating phases and was modeled as starting in December 2022 and finishing February 2023, which is based on the project applicant's construction timing. The paving phase would generate 253 worker trips per day. The onsite equipment would consist of the simultaneous operation of two forklifts, two paving equipment, and one of either a tractor, loader or backhoe, which is based on the project applicant's construction equipment schedule.

Operational Emissions Modeling

The operations-related criteria air pollutant emissions and GHG emissions created by the proposed project have been analyzed through use of the CalEEMod model. The proposed project was analyzed in the CalEEMod model based on the land use parameters provided above.

Mobile Sources

Mobile sources include emissions generated from the additional vehicle trips that would occur through implementation of the proposed project. The vehicle trips associated with the proposed project were obtained from *Scoping Letter Agreement for Traffic Impact Study for the Proposed 650 North Pacific Coast Highway Project in the City of El Segundo* (Traffic Scoping Letter), prepared by Kimley Horn, November 25, 2020. The Traffic Scoping Letter found that the existing uses on the project site currently generate 1,642 daily vehicle trips and that the proposed project would generate 2,797 daily vehicle trips. The proposed project would generate a net increase of 1,155 daily vehicle trips over existing conditions. However, in order to provide a worst-case analysis, the proposed project's 2,797 gross daily vehicle trips were entered into the CalEEMod. No other changes were made to the CalEEMod default mobile source parameters.

The CalEEMod model provides the selection of "mitigation" to account for project conditions that would result in less emissions than a project without these conditions, however it should be noted that this "mitigation" may represent current conditions, such as development that is in close proximity to an existing transit facility, where a project built at such location would create less vehicle trips and associated emissions than a project that was not built in close proximity to an existing transit facility. The mobile source emissions analysis for the project included the CalEEMod "mitigation" of improved pedestrian network onsite and connecting offsite, and increase transit accessibility with 0.06 mile to the nearest transit to account for the existing LA Metro Bus Stop at Pacific Coast Highway/Mariposa that is located as near as 300 feet south of the project site.

Area Sources

Area sources include emissions from consumer products, landscape equipment, and architectural coatings. The area source emissions were based on the on-going use of the proposed project in the CalEEMod model. No changes were made to the default area source parameters in the CalEEMod model.

Energy Usage

Energy usage includes emissions from electricity and natural gas used onsite. The energy usage was based on the ongoing use of the proposed project in the CalEEMod Model. No changes were made to the default energy usage parameters in the CalEEMod model.

The new 2019 Title 24, Part 6 building energy efficiency standards went into effect January 1, 2020 and require new lighting energy improvements that are 30 percent more efficient than the prior 2016 building standards. In order to account for the new standards, the CalEEMod "mitigation" of 30 percent lighting energy improvement was selected. A summary of the new 2019 Title 24 standards can be found at: https://www.energy.ca.gov/title24/2019standards/documents/2018_Title_24_2019_Building_Standards_FAQ.pdf.

Solid Waste

Waste includes the GHG emissions associated with the processing of waste from the proposed project as well as the GHG emissions from the waste once it is interred into a landfill. The analysis was based on the default CalEEMod solid waste generating rate of 307 tons of solid waste per year. No changes were made to the default solid waste parameters in the CalEEMod model.

The CalEEMod "mitigation" of a 50 percent reduction in landfill waste was selected to account for implementation of AB 341 that provides strategies to reduce, recycle or compost solid waste by 75 percent by 2020. Only 50 percent was selected, since AB 341 builds upon the waste reduction measures of SB 939 and 1374 and therefore, it was assumed approximately 25 percent of the waste reduction target has already been accounted for in the CalEEMod model.

Water and Wastewater

Water includes the water used for the interior of the buildings as well as for landscaping and is based on the GHG emissions associated with the energy used to transport and filter the water. The analysis was based on the default CalEEMod water usage rate of 58,650,360 gallons per year of indoor water use and 35,946,995 gallons per year of outdoor water use. No changes were made to the default water and wastewater parameters in the CalEEMod model.

The CalEEMod "mitigation" of the use of low flow faucets, and toilets and use of smart irrigation system controllers were selected to account for the implementation of the 2016 CCR Title 24 Part 11 (CalGreen) requirements.

8.2 Energy Use Calculations

The proposed project is anticipated to consume energy during both construction and operation of the proposed project and the parameters utilized to calculate energy use from construction and operation of the proposed project are detailed separately below.

Construction-Related Energy Use

Construction of the proposed project is anticipated to use energy in the forms of petroleum fuel for both off-road equipment as well as from the transport of workers and materials to and from the project site and the calculations for each source are described below.

Off-Road Construction Equipment

The off-road construction equipment fuel usage was calculated through use of the CalEEMod model's default off-road equipment assumptions detailed above in Section 8.1. For each piece of off-road equipment, the fuel usage was calculated through use of the *2017 Off-road Diesel Emission Factors* spreadsheet, prepared by CARB (https://ww3.arb.ca.gov/msei/ordiesel.htm). The Spreadsheet provides the following formula to calculate fuel usage from off-road equipment:

Fuel Used = Load Factor x Horsepower x Total Operational Hours x BSFC / Unit Conversion

Where:

Load Factor - Obtained from CalEEMod default values

Horsepower – Obtained from CalEEMod default values

Total Operational Hours – Calculated by multiplying the daily hours by the number of working days for each phase of construction as shown on the project applicant's construction schedule.

BSFC – Brake Specific Fuel Consumption (pounds per horsepower-hour) – If less than 100 Horsepower = 0.408, if greater than 100 Horsepower = 0.367

Unit Conversion – Converts pounds to gallons = 7.109

Table G shows the off-road construction equipment fuel calculations based on the above formula.

Table G – Off-Road Equipment and Fuel Consumption from Construction of the Proposed Project

Equipment Type	Equipment Quantity	Horse-power	Load Factor	Operating Hours per Day	Total Operational Hours[1]	Fuel Used (gallons)
Demolition/Rough Grading						
Excavators	1	158	0.38	8	160	496
Water Truck (Off-Hwy Truck)	1	402	0.38	8	160	1,268
Rubber Tired Dozers	1	247	0.4	8	160	816
Rubber Tired Loader	1	203	0.36	8	160	607
Scraper	2	367	0.48	8	320	2,925
Tractors/Loaders/Backhoes	3	97	0.37	8	480	989
Grading/Foundation						
Cranes	1	231	0.29	2	80	277
Forklifts	2	89	0.2	8	640	654
Rubber Tired Dozers	1	247	0.4	8	320	1,632
Tractors/Loaders/Backhoes	3	97	0.37	7	840	1,730
Building Construction						
Crane	1	231	0.29	6	1,200	4,150
Forklift	1	89	0.20	6	1,200	1,226
Tractor/Loader/Backhoe	1	97	0.37	6	1,200	2,472

Equipment Type	Equipment Quantity	Horse-power	Load Factor	Operating Hours per Day	Total Operational Hours[1]	Fuel Used (gallons)
Welders	3	46	0.45	8	4,800	5,702
Architectural Coating						
Air Compressor	1	78	0.48	6	60	129
Paving/Site Improvements						
Forklifts	2	130	0.42	8	800	2,255
Paving Equipment	2	132	0.36	8	800	1,963
Tractors/Loaders/Backhoes	1	97	0.37	8	400	824
				Total Off-Road Equipment Fuel Used during Construction (gallons)		**43,106**

Notes:
[1] Based on: 20 days for Demolition/Rough Grading; 40 days for Grading/Foundation; 290 days for Building Construction; 140 days for architectural coating; and 50 days for Paving/Site Improvements.
Source: CalEEMod Version 2016.3.2 (see Appendix A); CARB, 2017.

Table G shows that the off-road equipment utilized during construction of the proposed project would consume 43,106 gallons of fuel.

On-Road Construction-Related Vehicle Trips

The on-road construction-related vehicle trips fuel usage was calculated through use of the construction vehicle trip assumptions from the CalEEMod model run as detailed above in Section 8.1. The calculated total construction miles was then divided by the fleet average for all of Southern California miles per gallon rates for the year 2021 calculated through use of the EMFAC2017 model (https://www.arb.ca.gov/emfac/2017/) and the EMFAC2017 model printouts are shown in Appendix B. Table H shows the on-road construction vehicle trips modeled in CalEEMod and the fuel usage calculations.

Table H – On-Road Vehicle Trips and Fuel Consumption from Construction of the Proposed Project

Vehicle Trip Types	Daily Trips	Trip Length (miles)	Total Miles per Day	Total Miles per Phase[1]	Fleet Average Miles per Gallon[2]	Fuel Used (gallons)
Demolition/Rough Grading						
Worker Trips	25	14.7	368	7,350	25.3	291
Haul Truck Trips	19	40.0	752	15,040	8.0	1,887
Grading/Foundation						
Worker Trips	23	14.7	338	13,524	25.3	536
Haul Truck Trips	83	40.0	3,322	132,880	8.0	16,674
Building Construction						
Worker Trips	317	14.7	4,660	1,351,371	25.3	53,511
Vendor Truck Trips	136	6.9	938	272,136	8.0	34,148
Architectural Coating						
Worker Trips	63	14.7	926	129,654	25.3	5,134
Paving/Site Improvements						
Worker Trips	25	14.7	368	18,375	25.3	728
				Total Fuel Used from On-Road Construction Vehicles (gallons)		**112,908**

Notes:

[1] Based on: : 20 days for Demolition/Rough Grading; 40 days for Grading/Foundation; 290 days for Building Construction; 140 days for architectural coating; and 50 days for Paving/Site Improvements. .
[2] From EMFAC 2017 model (see Appendix B). Worker Trips based on entire fleet of gasoline vehicles and Vendor Trips based on only truck fleet of diesel vehicles.
Source: CalEEMod Version 2016.3.2; CARB, 2018.

Table H shows that the on-road construction-related vehicle trips would consume 112,908 gallons of fuel and as detailed above, Table G shows that the off-road construction equipment would consume 43,106 gallons of fuel. This would result in the total consumption of 156,015 gallons of petroleum fuel from construction of the proposed project.

Operations-Related Energy Use

The operation of the proposed project is anticipated to use energy in the forms of petroleum fuel, electricity, and natural gas, and the calculations for each source are described below.

Operational Petroleum Fuel

The on-road operations-related vehicle trips fuel usage was calculated through use of the total annual vehicle miles traveled assumptions from the CalEEMod model run as detailed above in Section 8.1, which found that operation of the proposed project would generate 6,839,658 vehicle miles traveled per year. The calculated total construction miles was then divided by the Southern California fleet average rate of 26.0 miles per gallon, which was calculated through use of the EMFAC2017 model and based on the year 2022. The EMFAC2017 model printouts are shown in Appendix B. Based on the above calculation methodology, operational vehicle trips generated from the proposed project would consume 263,181 gallons per year.

Operational Electricity Use

The operations-related electricity usage was calculated in the CalEEMod model run that is detailed above in Section 8.1 that found the parking structure will consume 2,528,700 kilowatt hours (kWh) per year, the proposed office buildings will consume 3,913,300 kWh per year, and the proposed surface parking lot will consume 6,958 kWh per year. As such the proposed project will use 6,448,958 kWh per year with implementation of Title 24 part 6 requirements that require the implementation of building energy efficiency standards that include the use of LED lighting.

Operational Natural Gas Use

The operations-related natural gas usage was calculated in the CalEEMod model run that is detailed above in Section 8.1 that found the proposed project will use 3,435,210 kilo British Thermal Units (kBTU) per year, which is equivalent to 3,435 mega-British Thermal units (MBTU) per year of natural gas.

9.0 THRESHOLDS OF SIGNIFICANCE

9.1 Regional Air Quality

Many air quality impacts that derive from dispersed mobile sources, which are the dominate pollution generators in the Air Basin, often occurs hours later and miles away after photochemical processes have converted primary exhaust pollutants into secondary contaminants such as ozone. The incremental regional air quality impact of an individual project is generally very small and difficult to measure. Therefore, SCAQMD has developed significance thresholds based on the volume of pollution emitted rather than on actual ambient air quality because the direct air quality impact of a project is not quantifiable on a regional scale. The SCAQMD CEQA Handbook states that any project in the Air Basin with daily emissions that exceed any of the identified significance thresholds should be considered as having an individually and cumulatively significant air quality impact. For the purposes to this air quality impact analysis, a regional air quality impact would be considered significant if emissions exceed the SCAQMD significance thresholds identified in Table I.

Table I – SCAQMD Regional Criteria Pollutant Emission Thresholds of Significance

	Pollutant Emissions (pounds/day)						
	VOC	**NOx**	**CO**	**SOx**	**PM10**	**PM2.5**	**Lead**
Construction	75	100	550	150	150	55	3
Operation	55	55	550	150	150	55	3

Source: http://www.aqmd.gov/docs/default-source/ceqa/handbook/scaqmd-air-quality-significance-thresholds.pdf?sfvrsn=2

9.2 Local Air Quality

Project-related construction air emissions may have the potential to exceed the State and Federal air quality standards in the project vicinity, even though these pollutant emissions may not be significant enough to create a regional impact to the Air Basin. In order to assess local air quality impacts the SCAQMD has developed Localized Significant Thresholds (LSTs) to assess the project-related air emissions in the project vicinity. SCAQMD has also provided *Final Localized Significance Threshold Methodology* (LST Methodology), July 2008, which details the methodology to analyze local air emission impacts. The LST Methodology found that the primary emissions of concern are NO_2, CO, PM10, and PM2.5.

The LST Methodology provides Look-Up Tables with different thresholds based on the location and size of the project site and distance to the nearest sensitive receptors. As detailed above in Section 7.3, the project site is located in Monitoring Area 3, which covers the Southwest Coastal LA County. The Look-Up Tables provided in the LST Methodology include project site acreage sizes of 1-acre, 2-acres and 5-acres. The 5-acre project site values in the Look-Up Tables have been utilized in this analysis, since that is the nearest size available for the anticipated 4.45 acres disturbed on the 7.40-acre project site. The nearest offsite sensitive receptors are residents at the multi-family homes located as near as 270 feet (82 meters) west of the project site. As such, the 50 and 100 meter thresholds were interpolated in order to develop the threshold for 244 meters. Table J below shows the LSTs for NO_2, PM10 and PM2.5 for both construction and operational activities.

Table J – SCAQMD Local Air Quality Thresholds of Significance

Activity	Allowable Emissions (pounds/day)[1]			
	NOx	CO	PM10	PM2.5
Construction	197	1,796	15	8
Operation	197	1,796	4	2

Notes:
[1] The nearest offsite sensitive receptors are multi-family homes located as near as 270 feet (82 meters) west of the project site. As such, the 50 and 100 meter thresholds were interpolated to 82 meters
Source: Calculated from SCAQMD's Mass Rate Look-up Tables for five acres in Air Monitoring Area 3, Southwest Coastal LA County.

9.3 Toxic Air Contaminants

According to the SCAQMD CEQA Handbook, any project that has the potential to expose the public to toxic air contaminants in excess of the following thresholds would be considered to have a significant air quality impact:

- If the Maximum Incremental Cancer Risk is 10 in one million or greater; or
- Toxic air contaminants from the proposed project would result in a Hazard Index increase of 1 or greater.

In order to determine if the proposed project may have a significant impact related to toxic air contaminants (TACs), the *Health Risk Assessment Guidance for analyzing Cancer Risks from Mobile Source Diesel Idling Emissions for CEQA Air Quality Analysis*, (Diesel Analysis) prepared by SCAQMD, August 2003, recommends that if the proposed project is anticipated to create TACs through stationary sources or regular operations of diesel trucks on the project site, then the proximity of the nearest receptors to the source of the TAC and the toxicity of the hazardous air pollutant (HAP) should be analyzed through a comprehensive facility-wide health risk assessment (HRA).

9.4 Odor Impacts

The SCAQMD CEQA Handbook states that an odor impact would occur if the proposed project creates an odor nuisance pursuant to SCAQMD Rule 402, which states:

> "A person shall not discharge from any source whatsoever such quantities of air contaminants or other material which cause injury, detriment, nuisance, or annoyance to any considerable number of persons to the public, or which endanger the comfort, repose, health or safety of any such persons or the public, or which cause, or have a natural tendency to cause, injury or damage to business or property.
>
> The provisions of this rule shall not apply to odors emanating from agricultural operations necessary for the growing of crops or the raising of fowl or animals."

If the proposed project results in a violation of Rule 402 with regards to odor impacts, then the proposed project would create a significant odor impact.

9.5 Energy Conservation

The 2018 amendments and additions to the CEQA Checklist now include an Energy Section that analyzes the proposed project's energy consumption in order to avoid or reduce inefficient, wasteful or

unnecessary consumption of energy. Appendix F of the 2020 CEQA Statute and Guidelines, states the following:

> The goal of conserving energy implies the wise and efficient use of energy. The means of achieving this goal include:
>
> (1) Decreasing overall per capita energy consumption,
>
> (2) Decreasing reliance on fossil fuels such as coal, natural gas and oil, and
>
> (3) Increasing reliance on renewable energy sources.

Since the Energy Section was just added, no state or local agencies have adopted specific criteria or thresholds to be utilized in an energy impact analysis. However, the 2018 *Guidelines for the Implementation of the California Environmental Quality Act,* provide the following direction on how to analyze a project's energy consumption:

> "If analysis of the project's energy use reveals that the project may result in significant environmental effects due to wasteful, inefficient, or unnecessary use of energy, or wasteful use of energy resources, the EIR shall mitigate that energy use. This analysis should include the project's energy use for all project phases and components, including transportation-related energy, during construction and operation. In addition to building code compliance, other relevant considerations may include, among others, the project's size, location, orientation, equipment use and any renewable energy features that could be incorporated into the project. (Guidance on information that may be included in such an analysis is presented in Appendix F.) This analysis is subject to the rule of reason and shall focus on energy use that is caused by the project. This analysis may be included in related analyses of air quality, greenhouse gas emissions, transportation or utilities in the discretion of the lead agency."

If the proposed project creates inefficient, wasteful or unnecessary consumption of energy during construction or operation activities or conflicts with a state or local plan for renewable energy or energy efficiency, then the proposed project would create a significant energy impact.

9.6 Greenhouse Gas Emissions

The City of El Segundo has adopted a Climate Action Plan (El Segundo CAP) that has been prepared to assist the City comply with various local, regional, State and federal regulations that include AB 32, SB 32, and the 2017 Climate Change Scoping Plan Update GHG emission reduction goals. The El Segundo CAP advances these goals and streamlines City efforts to deploy specific initiatives and programs that target the reduction of GHG emissions, while integrating these efforts with the other priorities such as economic development, regional mobility and connectivity, and improving the local air and water quality. The El Segundo CAP states: *With the CEQA process, a qualified CAP framework offers the ability to streamline future CEQA greenhouse gas analyses by being able to tier off the climate action plan*.

Therefore, the proposed project would be considered to be consistent with the El Segundo CAP if the proposed project can demonstrate it is consistent with the applicable emissions reduction measures included in the El Segundo CAP, and the programs and standards that would be implemented as a result of the El Segundo CAP.

The GHG emissions analysis for both construction and operation of the proposed project can be found below in Sections 10.8 and 10.9.

10.0 IMPACT ANALYSIS

10.1 CEQA Thresholds of Significance

Consistent with CEQA and the State CEQA Guidelines, a significant impact related to air quality, energy, and GHG emissions would occur if the proposed project is determined to:

- Conflict with or obstruct implementation of the applicable air quality plan;
- Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is in non-attainment under an applicable federal or state ambient air quality standard;
- Expose sensitive receptors to substantial pollutant concentrations;
- Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people;
- Result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation;
- Conflict with or obstruct a state or local plan for renewable energy;
- Generate GHG emissions, either directly or indirectly, that may have a significant impact on the environment; or
- Conflict with any applicable plan, policy or regulation of an agency adopted for the purpose of reducing the emissions of GHGs.

10.2 Air Quality Compliance

The proposed project would not conflict with or obstruct implementation of the SCAQMD Air Quality Management Plan (AQMP). The following section discusses the proposed project's consistency with the SCAQMD AQMP.

SCAQMD Air Quality Management Plan

The California Environmental Quality Act (CEQA) requires a discussion of any inconsistencies between a proposed project and applicable General Plans and regional plans (CEQA Guidelines Section 15125). The regional plan that applies to the proposed project includes the SCAQMD AQMP. Therefore, this section discusses any potential inconsistencies of the proposed project with the AQMP.

The purpose of this discussion is to set forth the issues regarding consistency with the assumptions and objectives of the AQMP and discuss whether the proposed project would interfere with the region's ability to comply with Federal and State air quality standards. If the decision-makers determine that the proposed project is inconsistent, the lead agency may consider project modifications or inclusion of mitigation to eliminate the inconsistency.

The SCAQMD CEQA Handbook states that "New or amended GP Elements (including land use zoning and density amendments), Specific Plans, and significant projects must be analyzed for consistency with the AQMP." Strict consistency with all aspects of the plan is usually not required. A proposed project should be considered to be consistent with the AQMP if it furthers one or more policies and does not obstruct other policies. The SCAQMD CEQA Handbook identifies two key indicators of consistency:

(1) Whether the project will result in an increase in the frequency or severity of existing air quality violations or cause or contribute to new violations, or delay timely attainment of air quality standards or the interim emission reductions specified in the AQMP.

(2) Whether the project will exceed the assumptions in the AQMP or increments based on the year of project buildout and phase.

Both of these criteria are evaluated in the following sections.

Criterion 1 - Increase in the Frequency or Severity of Violations?

Based on the air quality modeling analysis contained in this report, short-term regional construction air emissions would not result in significant impacts based on SCAQMD regional thresholds of significance discussed above in Section 9.1 or local thresholds of significance discussed above in Section 9.2. The ongoing operation of the proposed project would generate air pollutant emissions that are inconsequential on a regional basis and would not result in significant impacts based on SCAQMD thresholds of significance discussed above in Section 9.1. The analysis for long-term local air quality impacts showed that local pollutant concentrations would not be projected to exceed the air quality standards. Therefore, a less than significant long-term impact would occur and no mitigation would be required.

Therefore, based on the information provided above, the proposed project would be consistent with the first criterion.

Criterion 2 - Exceed Assumptions in the AQMP?

Consistency with the AQMP assumptions is determined by performing an analysis of the proposed project with the assumptions in the AQMP. The emphasis of this criterion is to insure that the analyses conducted for the proposed project are based on the same forecasts as the AQMP. The AQMP is developed through use of the planning forecasts provided in the RTP/SCS and FTIP. The RTP/SCS is a major planning document for the regional transportation and land use network within Southern California. The RTP/SCS is a long-range plan that is required by federal and state requirements placed on SCAG and is updated every four years. The FTIP provides long-range planning for future transportation improvement projects that are constructed with state and/or federal funds within Southern California. Local governments are required to use these plans as the basis of their plans for the purpose of consistency with applicable regional plans under CEQA. For this project, the City of El Segundo General Plan's Land Use Plan defines the assumptions that are represented in AQMP.

The project site is currently designated as Corporate Office in the General Plan and is zoned Corporate Office (CO). The CO Zone permits a maximum floor area ratio (FAR) of 0.8:1. As such, the 7.2-acre project site is allowed a maximum 252,913.6 square feet of net floor area. Since the proposed project would result in a total of 235,057 square feet of net floor area, the project is consistent with the existing land use designation and zoning. However, since the zoning is unclear if the proposed parking structure is included in the FAR, the applicant is requesting a Zone Text Amendment to amend the definition of Floor Area Ratio within ESMC Section 15-1-6 to exempt a fully integrated parking structure within a new construction building. It should be noted that the generation of vehicle trips and associated air emissions are generated by the amount of office building square footage and not by the size of the parking lot. As such, the proposed Zone Text Amendment for the proposed parking structure would not change the AQMP assumptions for the project site. Therefore, the proposed project is not anticipated to exceed the

AQMP assumptions for the project site and is found to be consistent with the AQMP for the second criterion.

Based on the above, the proposed project will not result in an inconsistency with the SCAQMD AQMP. Therefore, a less than significant impact will occur in relation to implementation of the AQMP.

Level of Significance

Less than significant impact.

10.3 Cumulative Net Increase in Non-Attainment Pollution

The proposed project would not result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable Federal or State ambient air quality standard. The following section calculates the potential air emissions associated with the construction and operations of the proposed project and compares the emissions to the SCAQMD standards.

Construction Emissions

The construction activities for the proposed project are anticipated to include demolition and rough grading of the existing surface parking lot, grading and foundation construction, building renovation and construction, application of architectural coatings, and paving and site improvements. The construction emissions have been analyzed for both regional and local air quality impacts.

Construction-Related Regional Impacts

The CalEEMod model has been utilized to calculate the construction-related regional emissions from the proposed project and the input parameters utilized in this analysis have been detailed in Section 7.1. The worst-case summer or winter daily construction-related criteria pollutant emissions from the proposed project for each phase of construction activities are shown below in Table K and the CalEEMod daily printouts are shown in Appendix A. Since it is possible that building construction/renovation, architectural coating, and paving/site improvement activities may occur concurrently towards the end of the building construction phase, Table K shows the combined regional criteria pollutant emissions from building construction/renovation (year 2023), architectural coating, and paving/site improvement phases of construction.

Table K shows that none of the analyzed criteria pollutants would exceed the regional emissions thresholds during either demolition/rough grading, grading/foundation, building construction/ renovation, or the combined building construction/renovation, architectural coatings, and paving/site improvement phases. Therefore, a less than significant regional air quality impact would occur from construction of the proposed project.

Table K – Construction-Related Regional Criteria Pollutant Emissions

Activity	Pollutant Emissions (pounds/day)					
	VOC	NOx	CO	SO_2	PM10	PM2.5
Demolition/Rough Grading[1]						
Onsite	4.65	49.34	33.30	0.07	3.71	2.20
Offsite	0.41	8.61	3.16	0.03	0.97	0.29
Total	**5.05**	**57.95**	**36.46**	**0.10**	**4.68**	**2.48**
Grading/Foundation[1]						
Onsite	1.83	18.81	11.95	0.02	3.42	2.22
Offsite	1.38	37.73	10.63	0.12	3.30	0.99
Total	**3.21**	**56.54**	**22.58**	**0.14**	**6.72**	**3.21**
Building Construction/Renovation (Year 2022)						
Onsite	0.81	7.76	9.15	0.02	0.40	0.38
Offsite	1.83	13.46	15.05	0.07	4.47	1.24
Total	**2.63**	**21.22**	**24.19**	**0.08**	**4.87**	**1.62**
Combined Building Construction/Renovation (2023), Architectural Coatings, and Paving/Site Improvements						
Onsite	25.13	19.69	25.49	0.04	0.99	0.93
Offsite	1.99	10.55	16.70	0.07	5.33	1.47
Total	**27.12**	**30.24**	**42.19**	**0.11**	**6.32**	**2.40**
Maximum Daily Construction Emissions	**27.12**	**57.95**	**42.19**	**0.14**	**6.72**	**3.21**
SCQAMD Thresholds	75	100	550	150	150	55
Exceeds Threshold?	No	No	No	No	No	No

Notes:
[1] Demolition and Grading based on adherence to fugitive dust suppression requirements from SCAQMD Rule 403.
[2] Onsite emissions from equipment not operated on public roads.
[3] Offsite emissions from vehicles operating on public roads.
Source: CalEEMod Version 2016.3.2.

Table K shows that none of the analyzed criteria pollutants would exceed the regional emissions thresholds during either demolition/rough grading, grading/foundation, building construction/ renovation, or the combined building construction/renovation, architectural coatings, and paving/site improvement phases. Therefore, a less than significant regional air quality impact would occur from construction of the proposed project.

Construction-Related Local Impacts

Construction-related air emissions may have the potential to exceed the State and Federal air quality standards in the project vicinity, even though these pollutant emissions may not be significant enough to create a regional impact to the Air Basin.

The local air quality emissions from construction were analyzed through utilizing the methodology described in *Localized Significance Threshold Methodology* (LST Methodology), prepared by SCAQMD, revised October 2009. The LST Methodology found the primary criteria pollutant emissions of concern are NOx, CO, PM10, and PM2.5. In order to determine if any of these pollutants require a detailed analysis of the local air quality impacts, each phase of construction was screened using the SCAQMD's Mass Rate LST Look-up Tables. The Look-up Tables were developed by the SCAQMD in order to readily determine if

the daily onsite emissions of CO, NOx, PM10, and PM2.5 from the proposed project could result in a significant impact to the local air quality.

Table L shows the onsite emissions from the CalEEMod model for the different construction phases and the calculated localized emissions thresholds that have been detailed above in Section 7.2. Since it is possible that building construction/renovation, architectural coating, and paving/site improvement activities may occur concurrently, Table L shows the combined local criteria pollutant emissions from building construction, paving and architectural coating phases of construction.

Table L – Construction-Related Local Criteria Pollutant Emissions

Phase	Pollutant Emissions[1] (pounds/day)			
	NOx	CO	PM10	PM2.5
Demolition/Rough Grading[2]	50.42	33.70	3.83	2.23
Grading/Foundation[2]	23.52	13.28	3.83	2.34
Building Construction/Renovation (year 2022)	9.45	11.03	0.96	0.54
Combined Building Construction/Renovation (2023), Architectural Coatings, and Paving/Site Improvements	22.00	27.78	1.72	1.17
Maximum Daily Construction Emissions	**50.42**	**33.70**	**3.83**	**2.34**
SCAQMD Local Construction Thresholds[3]	**197**	**2,387**	**55**	**16**
Exceeds Threshold?	No	No	No	No

Notes:
[1] The Pollutant Emissions include 100% of the On-Site emissions (off-road equipment and fugitive dust) and 1/8 of the Off-Site emissions (on road trucks and worker vehicles), in order to account for the on-road emissions that occur within a ¼ mile of the project site.
[2] Demolition and Grading phases based on adherence to fugitive dust suppression requirements from SCAQMD Rule 403.
[3] The nearest offsite sensitive receptors to the project site are multi-family homes located as near as 270 feet (82 meters) west of the project site. As such, the 50 and 100 meter thresholds were interpolated to 82 meters
Source: Calculated from SCAQMD's Mass Rate Look-up Tables for five acres in Air Monitoring Area 3, Southwest Coastal LA County.

The data provided in Table L shows that none of the analyzed criteria pollutants would exceed the local emissions thresholds during either demolition/rough grading, grading/foundation, building construction/renovation, or the combined building construction/renovation, architectural coatings, and paving/site improvement phases. Therefore, a less than significant local air quality impact would occur from construction of the proposed project.

Operational Emissions

The on-going operation of the proposed project would result in a long-term increase in air quality emissions. This increase would be due to emissions from onsite area sources, energy usage, and project generated vehicle trip emissions created from the on-going use of the proposed project. The following section provides an analysis of potential long-term air quality impacts due to regional air quality and local air quality impacts with the on-going operations of the proposed project.

Operations-Related Regional Criteria Pollutant Analysis

The operations-related regional criteria air quality impacts created by the proposed project have been analyzed through use of the CalEEMod model and the input parameters utilized in this analysis have been detailed in Section 8.1. The worst-case summer or winter VOC, NOx, CO, SO_2, PM10, and PM2.5 daily emissions created from the proposed project's long-term operations have been calculated and are summarized below in Table M and the CalEEMod daily emissions printouts are shown in Appendix A.

Table M – Operational Regional Criteria Pollutant Emissions

	Pollutant Emissions (pounds/day)					
Emissions Source	**VOC**	**NOx**	**CO**	**SO_2**	**PM10**	**PM2.5**
Area Sources[1]	7.60	<0.00	0.16	<0.00	<0.00	<0.00
Energy Usage[2]	0.10	0.92	0.78	0.01	0.07	0.07
Mobile Sources[3]	4.02	16.50	48.09	0.18	14.68	4.01
Total Emissions	**11.72**	**17.42**	**49.02**	**0.18**	**14.75**	**4.08**
SCQAMD Operational Thresholds	**55**	**55**	**550**	**150**	**150**	**55**
Exceeds Threshold?	No	No	No	No	No	No

Notes:
[1] Area sources consist of emissions from consumer products, architectural coatings, and landscaping equipment.
[2] Energy usage consist of emissions from natural gas usage.
[3] Mobile sources consist of emissions from vehicles and road dust.
Source: Calculated from CalEEMod Version 2016.3.2.

The data provided in Table M shows that none of the analyzed criteria pollutants would exceed the regional emissions thresholds. Therefore, a less than significant regional air quality impact would occur from operation of the proposed project.

Friant Ranch Case

The operations-related regional criteria air quality impacts In *Sierra Club v. County of Fresno* (2018) 6 Cal.5th 502 (also referred to as "*Friant Ranch*"), the California Supreme Court held that when an EIR concluded that when a project would have significant impacts to air quality impacts, an EIR should "make a reasonable effort to substantively connect a project's air quality impacts to likely health consequences." In order to determine compliance with this Case, the Court developed a multi-part test that includes the following:

1) The air quality discussion shall describe the specific health risks created from each criteria pollutant, including diesel particulate matter.

This Analysis details the specific health risks created from each criteria pollutant above in Section 4.1 and specifically in Table B. In addition, the specific health risks created from diesel particulate matter is detailed above in Section 2.2 of this analysis. As such, this analysis meets the part 1 requirements of the Friant Ranch Case.

2) The analysis shall identify the magnitude of the health risks created from the Project. The Ruling details how to identify the magnitude of the health risks. Specifically, on page 24 of the ruling it states "The Court of Appeal identified several ways in which the EIR could have framed the analysis so as to adequately inform the public and decision makers of possible adverse health effects. The County could have, for example, identified the Project's impact on the days of nonattainment per year."

The Friant Ranch Case found that an EIR's air quality analysis must meaningfully connect the identified air quality impacts to the human health consequences of those impacts, or meaningfully explain why that analysis cannot be provided. As noted in the Brief of Amicus Curiae by the SCAQMD in the Friant Ranch case (https://www.courts.ca.gov/documents/9-s219783-ac-south-coast-air-quality-mgt-dist-041315.pdf) (Brief), SCAQMD has among the most sophisticated air quality modeling and health impact

evaluation capability of any of the air districts in the State, and thus it is uniquely situated to express an opinion on how lead agencies should correlate air quality impacts with specific health outcomes. The SCAQMD discusses that it may be infeasible to quantify health risks caused by projects similar to the proposed Project, due to many factors. It is necessary to have data regarding the sources and types of air toxic contaminants, location of emission points, velocity of emissions, the meteorology and topography of the area, and the location of receptors (worker and residence). The Brief states that it may not be feasible to perform a health risk assessment for airborne toxics that will be emitted by a generic industrial building that was built on "speculation" (i.e., without knowing the future tenant(s)). Even where a health risk assessment can be prepared, however, the resulting maximum health risk value is only a calculation of risk, it does not necessarily mean anyone will contract cancer as a result of the Project. The Brief also cites the author of the CARB methodology, which reported that a PM2.5 methodology is not suited for small projects and may yield unreliable results. Similarly, SCAQMD staff does not currently know of a way to accurately quantify ozone-related health impacts caused by NOX or VOC emissions from relatively small projects, due to photochemistry and regional model limitations. The Brief concludes, with respect to the Friant Ranch EIR, that although it may have been technically possible to plug the data into a methodology, the results would not have been reliable or meaningful.

On the other hand, for extremely large regional projects (unlike the proposed project), the SCAQMD states that it has been able to correlate potential health outcomes for very large emissions sources – as part of their rulemaking activity, specifically 6,620 pounds per day of NOx and 89,180 pounds per day of VOC were expected to result in approximately 20 premature deaths per year and 89,947 school absences due to ozone. As shown above in Table K, project-related construction activities would generate a maximum of 27.12 pounds per day of VOC and 57.95 pounds per day of NOx and as shown above in Table M, operation of the proposed project would generate 11.72 pounds per day of VOC and 17.42 pounds per day NOx. The proposed Project would not generate anywhere near these levels of 6,620 pounds per day of NOx or 89,190 pounds per day of VOC emissions. Therefore, the proposed project's emissions are not sufficiently high enough to use a regional modeling program to correlate health effects on a basin-wide level.

Notwithstanding, this analysis does evaluate the proposed project's localized impact to air quality for emissions of CO, NOX, PM10, and PM2.5 by comparing the proposed project's onsite emissions to the SCAQMD's applicable LST thresholds. As evaluated in this analysis, the proposed project would not result in emissions that exceeded the SCAQMD's LSTs. Therefore, the proposed project would not be expected to exceed the most stringent applicable federal or state ambient air quality standards for emissions of CO, NOX, PM10, and PM2.5.

Operations-Related Local Air Quality Impacts

Project-related air emissions may have the potential to exceed the State and Federal air quality standards in the project vicinity, even though these pollutant emissions may not be significant enough to create a regional impact to the Air Basin. The proposed project has been analyzed for the potential local CO emission impacts from the project-generated vehicular trips and from the potential local air quality impacts from on-site operations. The following analyzes the vehicular CO emissions and local impacts from on-site operations.

Local CO Hotspot Impacts from Project-Generated Vehicular Trips

CO is the pollutant of major concern along roadways because the most notable source of CO is motor vehicles. For this reason, CO concentrations are usually indicative of the local air quality generated by a

roadway network and are used as an indicator of potential local air quality impacts. Local air quality impacts can be assessed by comparing future without and with project CO levels to the State and Federal CO standards of 20 ppm over one hour or 9 ppm over eight hours.

At the time of the 1993 Handbook, the Air Basin was designated nonattainment under the CAAQS and NAAQS for CO. With the turnover of older vehicles, introduction of cleaner fuels, and implementation of control technology on industrial facilities, CO concentrations in the Air Basin and in the state have steadily declined. In 2007, the Air Basin was designated in attainment for CO under both the CAAQS and NAAQS. SCAQMD conducted a CO hot spot analysis for attainment at the busiest intersections in Los Angeles during the peak morning and afternoon periods and did not predict a violation of CO standards[1]. Since the nearby intersections to the proposed project are much smaller with less traffic than what was analyzed by the SCAQMD, no local CO Hotspot are anticipated to be created from the proposed project and no CO Hotspot modeling was performed. Therefore, a less than significant long-term air quality impact is anticipated to local air quality with the on-going use of the proposed project.

Local Criteria Pollutant Impacts from Onsite Operations

Project-related air emissions from onsite sources such as architectural coatings, landscaping equipment, and onsite usage of natural gas appliances may have the potential to create emissions areas that exceed the State and Federal air quality standards in the project vicinity, even though these pollutant emissions may not be significant enough to create a regional impact to the Air Basin.

The local air quality emissions from onsite operations were analyzed using the SCAQMD's Mass Rate LST Look-up Tables and the methodology described in LST Methodology. The Look-up Tables were developed by the SCAQMD in order to readily determine if the daily emissions of CO, NOx, PM10, and PM2.5 from the proposed project could result in a significant impact to the local air quality. Table P shows the onsite emissions from the CalEEMod model that includes area sources, energy usage, and vehicles operating in the immediate vicinity of the project site and the calculated emissions thresholds.

Table N – Operations-Related Local Criteria Pollutant Emissions

	Pollutant Emissions (pounds/day)			
Onsite Emission Source	**NOx**	**CO**	**PM10**	**PM2.5**
Area Sources[1]	<0.00	0.16	<0.00	<0.00
Energy Usage[2]	0.92	0.78	0.07	0.07
Mobile Sources[3]	2.06	6.01	1.83	0.50
Total Emissions	**2.99**	**6.95**	**1.90**	**0.57**
SCAQMD Local Operational Thresholds[4]	**197**	**2,387**	**14**	**4**
Exceeds Threshold?	No	No	No	No

Notes:
[1] Area sources consist of emissions from consumer products, architectural coatings, and landscaping equipment.
[2] Energy usage consist of emissions from natural gas usage.

[1] The four intersections analyzed by the SCAQMD were: Long Beach Boulevard and Imperial Highway; Wilshire Boulevard and Veteran Avenue; Sunset Boulevard and Highland Avenue; and La Cienega Boulevard and Century Boulevard. The busiest intersection evaluated (Wilshire and Veteran) had a daily traffic volume of approximately 100,000 vehicles per day with LOS E in the morning and LOS F in the evening peak hour.

[3] Mobile sources based on 1/8 of the gross vehicular emissions, which is the estimated portion of vehicle emissions occurring within a quarter mile of the project site

[4] The nearest offsite sensitive receptors to the project site are multi-family homes located as near as 270 feet (82 meters) west of the project site. As such, the 50 and 100 meter thresholds were interpolated to 82 meters

Source: Calculated from SCAQMD's Mass Rate Look-up Tables for five acres in Air Monitoring Area 3, Southwest Coastal LA County.

The data provided in Table P shows that the on-going operations of the proposed project would not exceed the local NOx, CO, PM10 and PM2.5 thresholds of significance discussed above in Section 9.2. Therefore, the on-going operations of the proposed project would create a less than significant operations-related impact to local air quality due to onsite emissions and no mitigation would be required.

Therefore, the proposed project would not result in a cumulatively considerable net increase of any criteria pollutant.

Level of Significance

Less than significant impact.

10.4 Sensitive Receptors

The proposed project would not expose sensitive receptors to substantial pollutant concentrations. The local concentrations of criteria pollutant emissions produced in the nearby vicinity of the proposed project, which may expose sensitive receptors to substantial concentrations have been calculated above in Section 10.3 for both construction and operations, which are discussed separately below. The discussion below also includes an analysis of the potential impacts from toxic air contaminant emissions. The nearest sensitive receptors to the project site are residents at the multi-family homes located as near as 270 feet west of the project site.

Construction-Related Sensitive Receptor Impacts

The construction activities for the proposed project are anticipated to include demolition and rough grading of the existing surface parking lot, grading and foundation construction, building renovation and construction, application of architectural coatings, and paving and site improvements. Construction activities may expose sensitive receptors to substantial pollutant concentrations of localized criteria pollutant concentrations and from toxic air contaminant emissions created from onsite construction equipment, which are described below.

Local Criteria Pollutant Impacts from Construction

The local air quality impacts from construction of the proposed project has been analyzed above in Section 10.3 and found that the construction of the proposed project would not exceed the local NOx, CO, PM10 and PM2.5 thresholds of significance discussed above in Section 9.2. Therefore, construction of the proposed project would create a less than significant construction-related impact to local air quality and no mitigation would be required.

Toxic Air Contaminants Impacts from Construction

The greatest potential for toxic air contaminant emissions would be related to diesel particulate matter (DPM) emissions associated with heavy equipment operations during construction of the proposed project. According to SCAQMD methodology, health effects from carcinogenic air toxics are usually described in terms of "individual cancer risk". "Individual Cancer Risk" is the likelihood that a person

exposed to concentrations of toxic air contaminants over a 70-year lifetime will contract cancer, based on the use of standard risk-assessment methodology. It should be noted that the most current cancer risk assessment methodology recommends analyzing a 30 year exposure period for the nearby sensitive receptors (OEHHA, 2015).

Construction activities for the proposed project would result in the operation of diesel-powered haul trucks and off-road equipment that would operate between 270 feet and 1,000 feet from the nearest homes to the west. As detailed in Section 8.1 above, construction activities would generate up to 83 haul truck trips per day during the grading phase of construction. According to *Health Risk Assessments for Proposed Land Use Project*, prepared by CAPCOA, July 2009, recommends that sensitive receptors should not be placed within 1,000 feet of distribution centers that generate more than 100 trucks per day or more than 40 trucks per day with transport refrigeration units (TRUs). Since construction activities would generate less than the 100 trucks per day threshold that would have the potential to create a significant TAC impact at the nearby sensitive receptors as determined by CAPCOA's screening criteria, a less than significant TAC impact would occur from construction-related haul trucks.

As detailed in Section 8.1 there would be up to nine pieces of diesel-powered off-road equipment operating simultaneously on the project site during the combined demolition and rough grading phase. All diesel-powered powered equipment would be required to adhere to California Code of Regulations Title 13, Article 4.8, Chapter 9, Section 2449 that regulates emissions from off-road diesel equipment in California. This regulation limits idling of equipment to no more than five minutes, requires equipment operators to label each piece of equipment and provide annual reports to CARB of their fleet's usage and emissions. This regulation also requires systematic upgrading of the emission Tier level of each fleet, and currently no commercial operator is allowed to purchase Tier 0 or Tier 1 equipment and by January 2023 no commercial operator is allowed to purchase Tier 2 equipment. In addition to the purchase restrictions, equipment operators need to meet fleet average emissions targets that become more stringent each year between years 2014 and 2023. As of January, 2019, 25 percent or more of all contractors' equipment fleets must be Tier 2 or higher. Given the relatively limited number of heavy-duty construction equipment, the varying distances that construction equipment would operate to the nearby sensitive receptors (i.e., 270 feet to 1,000 feet away from the nearest homes), and the short-term construction schedule, the proposed project would not result in a long-term (i.e., 30 or 70 years) substantial source of toxic air contaminant emissions and corresponding individual cancer risk. Therefore, no significant short-term toxic air contaminant impacts would occur during construction of the proposed project. As such, construction of the proposed project would result in a less than significant exposure of sensitive receptors to substantial pollutant concentrations.

Operations-Related Sensitive Receptor Impacts

The on-going operations of the proposed project may expose sensitive receptors to substantial pollutant concentrations from the potential local air quality impacts from onsite operations and from possible toxic air contaminant impacts.

Local Criteria Pollutant Impacts from Onsite Operations

The local air quality impacts from the operation of the proposed project would occur from onsite sources such as architectural coatings, landscaping equipment, and natural gas appliances, as well as from vehicle emissions on the project site and immediate vicinity of the project site. The analysis provided above in Section 10.3 found that the operation of the proposed project would not exceed the local NOx, CO, PM10 and PM2.5 thresholds of significance discussed above in Section 9.2. Therefore, the on-going operations

of the proposed project would create a less than significant operations-related impact to local air quality due to on-site emissions and no mitigation would be required.

Operations-Related Toxic Air Contaminant Impacts

Particulate matter (PM) from diesel exhaust is the predominant TAC in most areas and according to *The California Almanac of Emissions and Air Quality 2013 Edition*, prepared by CARB, about 80 percent of the outdoor TAC cancer risk is from diesel exhaust. Some chemicals in diesel exhaust, such as benzene and formaldehyde have been listed as carcinogens by State Proposition 65 and the Federal Hazardous Air Pollutants program. According to *Health Risk Assessments for Proposed Land Use Project*, prepared by CAPCOA, July 2009, recommends that sensitive receptors should not be placed within 1,000 feet of distribution centers that generate more than 100 trucks per day or more than 40 trucks per day with transport refrigeration units (TRUs).

According to the ITE Trip Generation 10th Edition Supplement, Version 2/20/20, for the ITE Land Use 710 – General Office Building, daily truck trips represent 1 percent of the overall trip generation for the proposed project. Since the Traffic Scoping Letter (Kimley-Horn, 2020) found that the proposed project would generate 2,797 gross daily trips, this would result in 28 daily truck trips per day or 14 truck deliveries per day to the project site. Since the proposed project would generate well below the 100 trucks per day threshold that would have the potential to create a significant TAC impact at the nearby sensitive receptors as determined by CAPCOA's screening criteria, a less than significant TAC impact would occur during the on-going operations of the proposed project and no mitigation would be required.

Therefore, operation of the proposed project would result in a less than significant exposure of sensitive receptors to substantial pollutant concentrations.

Level of Significance

Less than significant impact.

10.5 Odor Emissions

The proposed project would not create objectionable odors affecting a substantial number of people. Individual responses to odors are highly variable and can result in a variety of effects. Generally, the impact of an odor results from a variety of factors such as frequency, duration, offensiveness, location, and sensory perception. The frequency is a measure of how often an individual is exposed to an odor in the ambient environment. The intensity refers to an individual's or group's perception of the odor strength or concentration. The duration of an odor refers to the elapsed time over which an odor is experienced. The offensiveness of the odor is the subjective rating of the pleasantness or unpleasantness of an odor. The location accounts for the type of area in which a potentially affected person lives, works, or visits; the type of activity in which he or she is engaged; and the sensitivity of the impacted receptor.

Sensory perception has four major components: detectability, intensity, character, and hedonic tone. The detection (or threshold) of an odor is based on a panel of responses to the odor. There are two types of thresholds: the odor detection threshold and the recognition threshold. The detection threshold is the lowest concentration of an odor that will elicit a response in a percentage of the people that live and work in the immediate vicinity of the project site and is typically presented as the mean (or 50 percent of the population). The recognition threshold is the minimum concentration that is recognized as having a characteristic odor quality, this is typically represented by recognition by 50 percent of the population. The intensity refers to the perceived strength of the odor. The odor character is what the substance smells

like. The hedonic tone is a judgment of the pleasantness or unpleasantness of the odor. The hedonic tone varies in subjective experience, frequency, odor character, odor intensity, and duration. Potential odor impacts have been analyzed separately for construction and operations below.

Construction-Related Odor Impacts

Potential sources that may emit odors during construction activities include the application of coatings such as asphalt pavement, paints and solvents and from emissions from diesel equipment. Standard construction requirements that limit the time of day when construction may occur as well as SCAQMD Rule 1108 that limits VOC content in asphalt and Rule 1113 that limits the VOC content in paints and solvents would minimize odor impacts from construction. As such, the objectionable odors that may be produced during the construction process would be temporary and would not likely be noticeable for extended periods of time beyond the project site's boundaries. Through compliance with the applicable regulations that reduce odors and due to the transitory nature of construction odors, a less than significant odor impact would occur and no mitigation would be required.

Operations-Related Odor Impacts

The proposed project would consist of the renovation and minor alteration of two existing office buildings at 650 North Pacific Coast Highway ("Building A") and 700 North Pacific Coast Highway ("Building B"). In addition, the project includes the demolition of the existing surface parking lot and construction of a new 7-story office building with an integrated parking structure with 1,185 parking spaces ("Building C"). Potential sources that may emit odors during the on-going operations of the proposed project would primarily occur from the trash storage areas. Pursuant to City regulations, permanent trash enclosures that protect trash bins from rain as well as limit air circulation would be required for the trash storage areas. Due to the distance of the nearest receptors from the project site and through compliance with SCAQMD's Rule 402 and City trash storage regulations, no significant impact related to odors would occur during the on-going operations of the proposed project. Therefore, a less than significant odor impact would occur and no mitigation would be required.

Therefore, a less than significant odor impact would occur and no mitigation would be required.

Level of Significance

Less than significant impact.

10.6 Energy Consumption

The proposed project would impact energy resources during construction and operation. Energy resources that would be potentially impacted include electricity, natural gas, and petroleum based fuel supplies and distribution systems. This analysis includes a discussion of the potential energy impacts of the proposed projects, with particular emphasis on avoiding or reducing inefficient, wasteful, and unnecessary consumption of energy. A general definition of each of these energy resources are provided below.

Electricity, a consumptive utility, is a man-made resource. The production of electricity requires the consumption or conversion of energy resources, including water, wind, oil, gas, coal, solar, geothermal, and nuclear resources, into energy. The delivery of electricity involves a number of system components, including substations and transformers that lower transmission line power (voltage) to a level appropriate for on-site distribution and use. The electricity generated is distributed through a network of transmission

and distribution lines commonly called a power grid. Conveyance of electricity through transmission lines is typically responsive to market demands. According to http://www.ecdms.energy.ca.gov/elecbycounty.aspx, in 2019, Los Angeles County consumed 66,118 Gigawatt-hours per year of electricity.

Natural gas is a combustible mixture of simple hydrocarbon compounds (primarily methane) that is used as a fuel source. Natural gas consumed in California is obtained from naturally occurring reservoirs, mainly located outside the State, and delivered through high-pressure transmission pipelines. The natural gas transportation system is a nationwide network and, therefore, resource availability is typically not an issue. Natural gas satisfies almost one-third of the State's total energy requirements and is used in electricity generation, space heating, cooking, water heating, industrial processes, and as a transportation fuel. Natural gas is measured in terms of cubic feet. According to http://www.ecdms.energy.ca.gov/gasbycounty.aspx, in 2019, Los Angeles County consumed 3,048.32 Million Therms of natural gas.

Petroleum-based fuels currently account for a majority of the California's transportation energy sources and primarily consist of diesel and gasoline types of fuels. However, the state has been working on developing strategies to reduce petroleum use. Over the last decade California has implemented several policies, rules, and regulations to improve vehicle efficiency, increase the development and use of alternative fuels, reduce air pollutants and GHG emissions from the transportation sector, and reduce vehicle miles traveled (VMT). Accordingly, petroleum-based fuel consumption in California has declined. According to "2010-2017_A15_Results.xlsx" obtained from: https://ww2.energy.ca.gov/almanac/transportation_data/gasoline/, in 2017, 3,659 million gallons of gasoline and 300 million gallons of diesel was sold in Los Angeles County.

The following section calculates the potential energy consumption associated with the construction and operations of the proposed project and provides a determination if any energy utilized by the proposed project is wasteful, inefficient, or unnecessary consumption of energy resources.

Construction Energy

The construction activities for the proposed project are anticipated to include demolition and rough grading of the existing surface parking lot, grading and foundation construction, building renovation and construction, application of architectural coatings, and paving and site improvements. The proposed project would consume energy resources during construction in three (3) general forms:

1. Petroleum-based fuels used to power off-road construction vehicles and equipment on the Project Site, construction worker travel to and from the Project Site, as well as delivery and haul truck trips (e.g. hauling of demolition material to off-site reuse and disposal facilities);
2. Electricity associated with the conveyance of water that would be used during Project construction for dust control (supply and conveyance) and electricity to power any necessary lighting during construction, electronic equipment, or other construction activities necessitating electrical power; and,
3. Energy used in the production of construction materials, such as asphalt, steel, concrete, pipes, and manufactured or processed materials such as lumber and glass.

Construction-Related Electricity

During construction the proposed project would consume electricity to construct the new structures and infrastructure. Electricity would be supplied to the project site by Southern California Edison (SCE) and would be obtained from the existing electrical lines on the project site. The use of electricity from existing power lines rather than temporary diesel or gasoline powered generators would minimize impacts on energy use. Electricity consumed during project construction would vary throughout the construction period based on the construction activities being performed. Various construction activities include electricity associated with the conveyance of water that would be used during project construction for dust control (supply and conveyance) and electricity to power any necessary lighting during construction, electronic equipment, or other construction activities necessitating electrical power. Such electricity demand would be temporary, nominal, and would cease upon the completion of construction. Overall, construction activities associated with the proposed project would require limited electricity consumption that would not be expected to have an adverse impact on available electricity supplies and infrastructure. Therefore, the use of electricity during project construction would not be wasteful, inefficient, or unnecessary.

Since SCE already provides power to the project site, it is anticipated that only nominal improvements would be required to SCE distribution lines and equipment with development of the proposed project. Compliance with City's guidelines and requirements would ensure that the proposed project fulfills its responsibilities relative to infrastructure installation, coordinates any electrical infrastructure removals or relocations, and limits any impacts associated with construction of the project. Construction of the project's electrical infrastructure is not anticipated to adversely affect the electrical infrastructure serving the surrounding uses or utility system capacity.

Construction-Related Natural Gas

Construction of the proposed project typically would not involve the consumption of natural gas. Natural gas would not be supplied to support construction activities, thus there would be no demand generated by construction. Since SoCal Gas already provides natural gas to the project site, construction-related activities would be limited to installation of new natural gas connections within the project site. Development of the proposed project would not require extensive infrastructure improvements to serve the project site. Construction-related energy usage impacts associated with the installation of natural gas connections are expected to be confined to trenching in order to place the lines below surface. In addition, prior to ground disturbance, the proposed project would notify and coordinate with SoCalGas to identify the locations and depth of all existing gas lines and avoid disruption of gas service. Therefore, construction-related impacts to natural gas supply and infrastructure would be less than significant.

Construction-Related Petroleum Fuel Use

Petroleum-based fuel usage represents the highest amount of transportation energy potentially consumed during construction, which would utilized by both off-road equipment operating on the project site and on-road automobiles transporting workers to and from the project site and on-road trucks transporting equipment and supplies to the project site.

The off-road construction equipment fuel usage was calculated through use of the off-road equipment assumptions and fuel use assumptions shown above in Section 8.2, which found that the off-road equipment utilized during construction of the proposed project would consume 43,106 gallons of fuel. The on-road construction trips fuel usage was calculated through use of the construction vehicle trip

assumptions and fuel use assumptions shown above in Section 8.2, which found that the on-road trips generated from construction of the proposed project would consume 112,908 gallons of fuel. As such, the combined fuel used from off-road construction equipment and on-road construction trips for the proposed project would result in the consumption of 156,015 gallons of petroleum fuel. This equates to 0.0039 percent of the gasoline and diesel consumed in the County of Los Angeles annually. As such, the construction-related petroleum use would be nominal, when compared to current petroleum usage rates.

Construction activities associated with the proposed project would be required to adhere to all State and SCAQMD regulations for off-road equipment and on-road trucks, which provide minimum fuel efficiency standards. As such, construction activities for the proposed project would not result in the wasteful, inefficient, and unnecessary consumption of energy resources. Impacts regarding transportation energy would be less than significant. Development of the proposed project would not result in the need to manufacture construction materials or create new building material facilities specifically to supply the proposed project. It is difficult to measure the energy used in the production of construction materials such as asphalt, steel, and concrete, it is reasonable to assume that the production of building materials such as concrete, steel, etc., would employ all reasonable energy conservation practices in the interest of minimizing the cost of doing business.

Operational Energy

The on-going operation of the proposed project would require the use of energy resources for multiple purposes including, but not limited to, heating/ventilating/air conditioning (HVAC), refrigeration, lighting, appliances, and electronics. Energy would also be consumed during operations related to water usage, solid waste disposal, landscape equipment and vehicle trips.

Operations-Related Electricity

Operation of the proposed project would result in consumption of electricity at the project site. The proposed project would consume electrical energy for interior and exterior lighting, heating and cooling systems, a variety of electrical appliances and office machinery, electrical vehicle charging infrastructure, and for outdoor irrigation system controls. As detailed above in Section 8.3 the proposed project would consume 598,220 kilowatt-hours per year of electricity. This equates to 0.0098 percent of the electricity consumed annually in the County of Los Angeles. As such, the operations-related electricity use would be nominal, when compared to current electricity usage rates in the County.

It should be noted that, the proposed project would comply with all Federal, State, and City requirements related to the consumption of electricity, that includes CCR Title 24, Part 6 *Building Energy Efficiency Standards* and CCR Title 24, Part 11: *California Green Building Standards.* The CCR Title 24, Part 6 and Part 11 standards require numerous energy efficiency measures to be incorporated into the proposed office buildings, including enhanced insulation, use of energy efficient lighting and appliances, water and space heating systems, as well as requiring a variety of other energy-efficiency measures to be incorporated into the proposed office structures. Therefore, it is anticipated the proposed project will be designed and built to minimize electricity use and that existing and planned electricity capacity and electricity supplies would be sufficient to support the proposed project's electricity demand. Thus, the project would not result in the wasteful or inefficient use of electricity and no mitigation measures would be required.

Operations-Related Natural Gas

Operation of the proposed project would result in increased consumption of natural gas at the project site. As detailed above in Section 8.3 the proposed project would consume 3,435 MBTU per year of

natural gas. This equates to 0.0011 percent of the natural gas consumed annually in Los Angeles County. As such, the operations-related natural gas use would be nominal, when compared to current natural gas usage rates in the County.

It should be noted that, the proposed project would comply with all Federal, State, and City requirements related to the consumption of natural gas, that includes CCR Title 24, Part 6 *Building Energy Efficiency Standards* and CCR Title 24, Part 11: *California Green Building Standards.* The CCR Title 24, Part 6 and Part 11 standards require numerous energy efficiency measures to be incorporated into the proposed project, including enhanced insulation as well as use of efficient natural gas appliances and HVAC units. Therefore, it is anticipated the proposed project will be designed and built to minimize natural gas use and that existing and planned natural gas capacity and natural gas supplies would be sufficient to support the proposed project's natural gas demand. Thus, impacts with regard to natural gas supply and infrastructure capacity would be less than significant and no mitigation measures would be required

Therefore, the proposed project would not result in the wasteful, inefficient, or unnecessary consumption of energy resources during project construction or operation. Impacts would be less than significant.

Level of Significance

Less than significant impact.

10.7 Energy Plan Consistency

The proposed project would not conflict with or obstruct a state or local plan for renewable energy or energy efficiency. Although the City has not adopted any specific plans that address energy efficiency, the City adopted the El Segundo CAP on December 2017, that has been prepared to help the City comply with the City's GHG emissions reduction goals through implementation of many measures that also result in energy conservation and efficiency. The City's Municipal Code, Section Chapter 11 Green Building Standards Code, requires all development projects in the City to meet the California Green Building Standards Code (CalGreen) building requirements that require the proposed project to implement various energy efficiency design features into the proposed office buildings. The CalGreen building requirements have been detailed above in Section 5.1 of this Report. As such, the proposed project would be designed to meet all applicable State building energy efficiency standards as well as to meet the City's energy efficiency standards. Therefore, the proposed project would not conflict with or obstruct a state or local plan for renewable energy or energy efficiency. Impacts would be less than significant.

Level of Significance

Less than significant impact.

10.8 Generation of Greenhouse Gas Emissions

The proposed project would not generate GHG emissions, either directly or indirectly, that may have a significant impact on the environment. The proposed project would consist of the renovation and minor alteration of two existing office buildings at 650 North Pacific Coast Highway ("Building A") and 700 North Pacific Coast Highway ("Building B"). In addition, the project includes the demolition of the existing surface parking lot and construction of a new 7-story office building with an integrated parking structure with 1,185 parking spaces ("Building C").

The El Segundo CAP has been prepared to help the City comply with the City's GHG emissions reduction goals as well as State and federal regulations that include AB 32, SB 32, and the 2017 Climate Change Scoping Plan Update GHG emission reduction goals. The El Segundo CAP states "Within the CEQA process, a qualified CAP framework offers the ability to streamline future CEQA greenhouse gas analyses by being able to tier off the climate action plan."

In order to show consistency with the CAP, quantification of the proposed project's GHG emissions are not required. However, the proposed project's GHG emissions have been provided for informational purposes only. The project's GHG emissions have been calculated with the CalEEMod model based on the construction and operational parameters detailed above in Section 8.1. A summary of the results is shown below in Table O and the CalEEMod model run is provided in Appendix C.

Table O – Project Related Greenhouse Gas Annual Emissions

	Greenhouse Gas Emissions (Metric Tons per Year)			
Category	**CO_2**	**CH_4**	**N_2O**	**CO_2e**
Area Sources[1]	0.04	<0.00	<0.00	0.04
Energy Usage[2]	2,238.14	0.09	0.02	2,246.58
Mobile Sources[3]	2,866.53	0.14	<0.00	2,870.15
Solid Waste[4]	31.15	1.84	<0.00	77.17
Water and Wastewater[5]	340.56	1.63	0.04	393.39
Construction[6]	52.44	<0.00	<0.00	52.55
Total GHG Emissions	**5,528.86**	**3.70**	**0.06**	**5,639.89**

Notes:
[1] Area sources consist of GHG emissions from consumer products, architectural coatings, and landscaping equipment.
[2] Energy usage consists of GHG emissions from electricity and natural gas usage.
[3] Mobile sources consist of GHG emissions from vehicles.
[4] Waste includes the CO_2 and CH_4 emissions created from the solid waste placed in landfills.
[5] Water includes GHG emissions from electricity used for transport of water and processing of wastewater.
[6] Construction emissions amortized over 30 years as recommended in the SCAQMD GHG Working Group on November 19, 2009.
Source: CalEEMod Version 2016.3.2.

The data provided in Table O shows that the proposed project would create 5,639.89 $MTCO_2e$ per year. It should be noted that Table O is based on current emission rates from area sources, energy usage, solid waste, water and wastewater sources. Future State regulations, including SB 100 that requires 100 percent of retail sales of electricity to be generated from zero-carbon emissions sources by 2045, which along with other regulations will result in reducing these emissions sources to near zero levels. In addition, the transportation sources only incorporate previously adopted state regulations and do not account for recent state regulations, including the anticipated reductions from Executive Order N-79-20 that requires 100 percent of new passenger vehicles sold in California to be zero-emissions by 2035. The GHG emission reduction strategies provided in the El Segundo CAP would further reduce the GHG emissions shown in

Table P.

Level of Significance

Less than significant impact.

10.9 Greenhouse Gas Plan Consistency

The proposed project would not conflict with any applicable plan, policy or regulation of an agency adopted for the purpose of reducing GHG emissions. The applicable plan for the proposed project would be the CAAP. The proposed project's consistency with GHG emissions reduction strategies in the CAAP is shown in Table P.

Table P – Consistency with the El Segundo CAP

Sub-Strategies	Project Consistency
Goal LUT: A – Accelerate the Market for EV Vehicles	
LUT: A1 EV Parking Policies	**Not Applicable**. This Strategy requires the City to consider to allow reduction of parking spaces in exchange for EV or NEWV parking. The project applicant is not requesting a reduction in parking spaces.
LUT: A1.1 Offer free parking to EVs	**Not Applicable**. The project applicant is not requesting a reduction in parking spaces. However, the proposed project is providing EV parking spaces.
LUT: A1.1 Offer reduced-price EV parking	**Not Applicable**. The project applicant is not requesting a reduction in parking spaces. However, the proposed project is providing EV parking spaces.
LUT: A1.1 Lower parking minimums for developments provided EV parking	**Not Applicable**. The project applicant is not requesting a reduction in parking spaces. However, the proposed project is providing EV parking spaces.
LUT: A2 EV Charging Policies	**Not Applicable**. This action is applicable to the City to implement.
LUT: A2.1 Install level 1, 2, and DC 3 charging in city-owned parking lots	**Not Applicable**. This action is applicable to the City to implement.
LUT: A2.2 Install charging at city-owned facilities.	**Not Applicable**. This action is applicable to the City to implement.
LUT: A2.3 Provide on-street level 1 and 2 charging.	**Not Applicable**. This action is applicable to the City to implement.
LUT: A2.4 Adopt charging standards beyond CalGreen 2016 requirements.	**Not Applicable**. This action is applicable to the City to implement. However, the proposed project is required to meet CalGreen 2016 requirements.
LUT: A2.5 Create policies that encourage facility owners to provide level 1 charging.	**Not Applicable**. This action is applicable to the City to implement. However, the proposed project will include designated EV parking.
LUT: A2.6 Cooperate with regional agencies to expand charging networks.	**Not Applicable**. This action is applicable to the City to implement.
LUT: A3 Administrative Redness	**Not Applicable**. This action is applicable to the City to implement.
LUT: A3.1 Offer online permitting to streamline the application process.	**Not Applicable**. This action is applicable to the City to implement.

Sub-Strategies	Project Consistency
LUT: A3.2 Minimize time to complete inspection.	**Not Applicable**. This action is applicable to the City to implement.
LUT: A3.3 Offer inspection within 24 hours of request.	**Not Applicable**. This action is applicable to the City to implement.
LUT: A4 Public Information Projects	**Not Applicable**. This action is applicable to the City to implement.
LUT: A4.1 Publicize EV programs through a variety of media.	**Not Applicable**. This action is applicable to the City to implement.
LUT: A5 Multi-Modal Streets Complete Streets	**Not Applicable**. This action is applicable to the City to implement.
LUT: A5.1 Publicize city charging and parking policies.	**Not Applicable**. This action is applicable to the City to implement.
LUT: A5.2 Provide signage, maps, and information for slow speed vehicles.	**Not Applicable**. This action is applicable to the City to implement.
Goal LUT: B – Encourage Ride-Sharing	
LUT: B1 Facilitate Private and Public Mobility Services (Ride-Hailing, Ride-Sharing, Car-Sharing, Bike-Sharing)	**Not Applicable**. This policy is only applicable to the City to work with private and public services to provide different types of mobility services for sharing.
LUT: B1.1 Facilitate bike-sharing.	**Not Applicable**. This policy is only applicable to the City to implement. However, the proposed project provides both short-term and long-term bike parking.
LUT: B1.2 Facilitate car-sharing.	**Not Applicable**. This policy is only applicable to the City to implement. However, the proposed project is over parked and the extra parking spaces could be used for a car-sharing use in the future.
LUT: B1.3 Facilitating ride-hailing and ride-sharing.	**Not Applicable**. This policy is only applicable to the City to implement. However, the proposed project is over parked and the extra parking spaces could be used for ride-hailing and ride-sharing uses in the future.
LUT: B1.4 Remove barriers to private sector bike and car-sharing.	**Not Applicable**. This policy is only applicable to the City to implement.
LUT: B1.5 Assist private sector organizations to secure funding.	**Not Applicable**. This policy is only applicable to the City to implement.
LUT: B1.6 Conduct a ride/bike sharing study or plan.	**Not Applicable**. This policy is only applicable to the City to implement.
Goal LUT: C – Encourage Transit Usage	
LUT: C1 Provide a Bus Rapid Transit (BRT) System	**Not Applicable**. This policy is only applicable to the City to implement.
LUT: C1.1 Work with Transit Agency to implement a Bus Rapid Transit System.	**Not Applicable**. This policy is only applicable to the City to implement.
LUT: C1.2 Work with Transit Agency to add additional bus rapid transit routes.	**Not Applicable**. This policy is only applicable to the City to implement
LUT: C1.3 Collaborate with neighboring cities/SBCCOG for a regional transit system.	**Not Applicable**. This policy is only applicable to the City to implement.
LUT: C2 Expand Transit Network	**Not Applicable**. This policy is only applicable to the City to implement.

Sub-Strategies	Project Consistency
LUT: C2.1 Work with Transit Agency to expand bus and rail transit network	**Not Applicable**. This policy is only applicable to the City to implement.
LUT: C2.2 Work with Transit Agency to improve connectivity.	**Not Applicable**. This policy is only applicable to the City to implement.
LUT: C2.3 Collaborate with a range of agencies to expand funding for transit.	**Not Applicable**. This policy is only applicable to the City to implement.
LUT: C2.4 Work with Transit Agency to improve transit amenities.	**Not Applicable**. This policy is only applicable to the City to implement.
LUT: C2.5 Work with Transit Agency to better accommodate bicycles.	**Not Applicable**. This policy is only applicable to the City to implement.
LUT: C2.6 Prioritize funding around transit stations to encourage walking and biking.	**Not Applicable**. This policy is only applicable to the City to implement.
LUT: C2.7 Implement first/last mile improvements at stations/destinations.	**Not Applicable**. This policy is only applicable to the City to implement.
LUT: C2.8 Introduce a fixed-route transit service in the jurisdiction.	**Not Applicable**. This policy is only applicable to the City to implement.
LUT: C2.9 Provide/expand local shuttle services.	**Not Applicable**. This policy is only applicable to the City to implement.
LUT: C2.10 Explore programs to offer discounted transit passes.	**Not Applicable**. This policy is only applicable to the City to implement.
LUT: C2.11 Fund transit services for elderly and handicap.	**Not Applicable**. This policy is only applicable to the City to implement.
LUT: C3 Increase Transit Service Frequency and Speed	**Not Applicable**. This policy is only applicable to the City to implement.
LUT: C3.1 Work with Transit Agency to increase service frequency and speed.	**Not Applicable**. This policy is only applicable to the City to implement.
Goal LUT: D – Adopt Active Transportation Initiatives	
LUT: D1 Provide Traffic Calming Measures	**Consistent.** The proposed project meets the City's requirements to provide traffic calming measures in future developments.
LUT: D1.1 Conduct a pedestrian/bicycle study.	**Not Applicable**. This policy is only applicable to the City to implement. However, the proposed project will provide an onsite pedestrian and bicycle circulation system and facilities.
LUT: D1.2 Use traffic calming measures on streets where feasible.	**Consistent.** The proposed project meets the City's requirements to provide traffic calming measures on the project site.
LUT: D1.3 Implement traffic calming measures in future developments.	**Consistent.** The proposed project meets the City's requirements to provide traffic calming measures on the project site.
LUT: D1.4 Promote traffic calming measures in future developments.	**Consistent.** The proposed project meets the City's requirements to provide traffic calming measures in future developments.
LUT: D2 Provide Pedestrian/Bicycle Networks Improvements	**Consistent.** The proposed project provides an onsite pedestrian and bicycle circulation system and associated amenities.

Sub-Strategies	Project Consistency
LUT: D2.1 Provide pedestrian and bicycle networks.	**Consistent.** The proposed project does provide pedestrian and bicycle circulation.
LUT: D3 Improve Design of Development.	**Consistent.** The proposed project is an improvement over the existing uses on the project site that would result in promoting design development.
LUT: D3.1 Amend the Bicycle and Pedestrian Master Plan.	**Not Applicable**. This policy is only applicable to the City to implement. However, the proposed project does provide an onsite pedestrian and bicycle circulation system.
LUT: D3.2 Require bicycle parking through the Zoning Code or other implementation documents.	**Not Applicable**. This policy is only applicable to the City to implement. However, the proposed project does provide both short term and long term bicycle parking.
LUT: D3.3 Require new developments to provide pedestrian, bicycle, and transit amenities.	**Consistent.** The proposed project would provide pedestrian and bicycle amenities.
LUT: D3.4 Amend the zoning ordinance to require shower facilities and dressing areas for new developments.	**Not Applicable**. This policy is only applicable to the City to implement.
LUT: D3.5 Require commercial and multi-family residential projects to provide permanent bicycle parking facilities.	**Consistent.** The proposed project would provide permanent (long-term) bicycle parking locations.
LUT: D3.6 Provide short and long-term bicycle parking near key areas.	**Consistent.** The proposed project would provide both short and long-term bicycle parking on the project site.
LUT: D3.7 Develop appropriate bicycle infrastructure for high traffic intersections and corridors.	**Not Applicable**. This policy is only applicable to the City to implement. However, the proposed project does provide a bicycle circulation system.
LUT: D3.8 Develop appropriate infrastructure within pedestrian sheds of key areas.	**Not Applicable**. This policy is only applicable to the City to implement. However, the proposed project would provide an onsite pedestrian circulation system.
LUT: D3.9 Retrofit bicycle racks and parking facilities in underserved areas.	**Not Applicable**. This policy is only applicable to the City to implement.
LUT: D3.10 Create of bicycle lanes, routes, and shared-use paths into street systems, new subdivisions, and large developments.	**Not Applicable**. This policy is only applicable to the City to implement. However, the proposed project would provide an onsite pedestrian circulation system.
LUT: D3.11 Improve active transportation networks (Identify gaps/deficiencies and implement projects to address them)	**Not Applicable**. This policy is only applicable to the City to implement.
LUT: D3.12 Construct or improve pedestrian infrastructure around transit.	**Not Applicable**. This policy is only applicable to the City to implement. However, the proposed project would provide an onsite pedestrian circulation system.
LUT: D3.13 Develop active transportation networks for Transit-Oriented District station area plans.	**Not Applicable**. This policy is only applicable to the City to implement.
LUT: D3.14 Implement policies to minimize conflicts between pedestrians and motorists. Identify pedestrian collision hot spots.	**Not Applicable**. This policy is only applicable to the City to implement.
Goal LUT: E – Parking Strategies	
LUT: E1 Limit Parking Supply	**Not Applicable**. This policy is only applicable to the City to implement.

Sub-Strategies	Project Consistency
LUT: E1.1 Create parking benefit districts which invest meter revenue in other public amenities.	**Not Applicable**. This policy is only applicable to the City to implement.
LUT: E1.2 Reduce/eliminate parking minimums for new developments.	**Not Applicable**. This policy is only applicable to the City to implement.
LUT: E1.3 Reduce/eliminate parking minimums for mixed-use, pedestrian, and transit-oriented developments.	**Not Applicable**. This policy is only applicable to the City to implement.
LUT: E1.4 Implement parking pricing to a downtown area.	**Not Applicable**. This policy is only applicable to the City to implement.
LUT: E2 Unbundle Parking Cost from Property Costs	**Not Applicable**. This policy is only applicable to the City to implement.
LUT: E2.1 Adopt a comprehensive parking policy to unbundle the true cost of providing parking.	**Not Applicable**. This policy is only applicable to the City to implement.
LUT: E2.2 Encourage developers of new development to unbundle parking and eliminate the assignment of specific stalls.	**Consistent.** The proposed project parking structure would not assign specific stalls other than for electric and clean air vehicle spaces within the public parking areas.
LUT: E3 Implement On-Street Marking Pricing	**Not Applicable**. This policy is only applicable to the City to implement.
LUT: E3.1 Implement on-street parking pricing.	**Not Applicable**. This policy is only applicable to the City to implement.
LUT: E3.2 Change policies to disincentive parking within downtown.	**Not Applicable**. This policy is only applicable to the City to implement.
LUT: E4 Residential Area Parking Permits	**Not Applicable**. This policy is only applicable to the City to implement.
LUT: E4.1 Institute residential parking programs.	**Not Applicable**. This policy is only applicable to the City to implement.
LUT: E4.2 Institute residential permit parking.	**Not Applicable**. This policy is only applicable to the City to implement.
Goal LUT: F – Organizational Strategies	
LUT: F1 Encourage Telecommuting and Alternative Work Schedules	**Not Applicable**. This policy is only applicable to the City to implement.
LUT: F1.1 Encourage municipal telecommuting and alternative work schedules (voluntary)	**Not Applicable**. This policy is only applicable to the City to implement.
LUT: F1.2 Encourage local employers to implement and alternative work schedules.	**Not Applicable**. This policy is only applicable to the City to implement.
LUT: F2 Implement a Commute Trip Reduction Program	**Not Applicable**. This policy is only applicable to the City to implement.
LUT: F2.1 Establish a commute trip reduction marketing campaign.	**Not Applicable**. This policy is only applicable to the City to implement.
LUT: F2.2 Work with local employers encouraging subsidized or discounted transit programs.	**Not Applicable**. This policy is only applicable to the City to implement.
LUT: F2.3 Work with local employers to increase carpooling.	**Not Applicable**. This policy is only applicable to the City to implement.
LUT: F2.4 Encourage employers to provide vanpool and shuttles from major stations.	**Not Applicable**. This policy is only applicable to the City to implement.

Sub-Strategies	Project Consistency
LUT: F2.5 Implement a (voluntary) commute trip reduction program.	**Not Applicable**. This policy is only applicable to the City to implement.
LUT: F2.6 Implement an employee education program	**Not Applicable**. This policy is only applicable to the City to implement.
LUT: F3 Provide Car-Sharing Programs	**Not Applicable**. This policy is only applicable to the City to implement.
LUT: F3.1 Implement a car-sharing program	**Not Applicable**. This policy is only applicable to the City to implement.
Goal LUT: G – Land Use Strategies	
LUT: G1 Increase Density	**Consistent.** The proposed project provides higher density.
LUT: G1.1 Encourage higher density through general plan appropriately in targeted areas.	**Consistent.** The proposed project provides higher density in an area general planned appropriately.
LUT: G1.2 Encourage higher density through zoning code appropriately in targeted areas.	**Consistent.** The proposed project is consistent with zoning code for higher density.
LUT: G1.3 Increase housing density near transit.	**Consistent.** The proposed project provides housing near bus/transit routes.
LUT: G2 Increase Diversity	**Not Applicable**. This policy is only applicable to the City to implement.
LUT: G2.1 Update mixed-use policies in General Plan.	**Not Applicable**. This policy is only applicable to the City to implement.
LUT: G2.2 Encourage mixed-use policies through Zoning Code.	**Not Applicable**. This policy is only applicable to the City to implement.
LUT: G2.3 Encourage transitions from single-family to higher intensity mixed-uses.	**Not Applicable**. This policy is only applicable to the City to implement.
LUT: G2.4 Encourage mixed-use and infill development projects in key in-fill areas.	**Not Applicable**. This policy is only applicable to the City to implement.
LUT: G2.5 Revise development standards that act as barriers to mixed-use projects.	**Not Applicable**. This policy is only applicable to the City to implement.
LUT: G2.6 Conduct land use/market analysis to identify sites that could support new or expanded neighborhood centers.	**Not Applicable**. This policy is only applicable to the City to implement.
LUT: G2.7 Encourage new mixed-use development near transit.	**Not Applicable**. This policy is only applicable to the City to implement.
LUT: G3 Increase Destination Accessibility.	**Not Applicable**. This policy is only applicable to the City to implement.
LUT: G3.1 Increase destination accessibility.	**Not Applicable**. This policy is only applicable to the City to implement.
LUT: G4 Increase Transit Accessibility.	**Not Applicable**. This policy is only applicable to the City to implement.
LUT: G4.1 Encourage Transit Accessibility through general plan.	**Not Applicable**. This policy is only applicable to the City to implement.
LUT: G4.2 Encourage Transit Accessibility through zoning code.	**Not Applicable**. This policy is only applicable to the City to implement.
LUT: G4.3 Update travel demand ordinance.	**Not Applicable**. This policy is only applicable to the City to implement.

Sub-Strategies	Project Consistency
LUT: G4.4 Conduct a public transit gap study.	**Not Applicable**. This policy is only applicable to the City to implement.
LUT: G4.5 Provide a shuttle service connecting areas.	**Not Applicable**. This policy is only applicable to the City to implement.
LUT: G4.6 Establish commuter shuttles linking business districts with transit.	**Not Applicable**. This policy is only applicable to the City to implement.
LUT: G5 Integrate Affordable and Below-Market Housing.	**Not Applicable**. This policy is only applicable to the City to implement.
LUT: G5.1 Encourage policies that promote a mix of housing types.	**Not Applicable**. This policy is only applicable to the City to implement.
LUT: G6 Develop a NOD Plan	**Not Applicable**. This policy is only applicable to the City to implement.
LUT: G6.1 Amend zoning code or general plan to encourage higher density and smaller scale "Business Establishment Density."	**Consistent.** The proposed project would result in higher density general office uses, when compared to the existing conditions.
LUT: G6.2 Establish NOD centers in zoning code.	**Not Applicable**. This policy is only applicable to the City to implement.
LUT: G6.3 Support higher Business Establishment Density with NOD centers.	**Not Applicable**. This policy is only applicable to the City to implement.
LUT: G6.4 Encourage business establishment mix that promote walking.	**Not Applicable**. This policy is only applicable to the City to implement.
Goal LUT: H – Digital Technology Strategies	
LUT: H1 Collaborate on and Implement the South Bay Digital Master Plan	**Not Applicable**. This policy is only applicable to the City to implement.
LUT: H1.1 Implement the South Bay Digital Master Plan "South Bay Net."	**Not Applicable**. This policy is only applicable to the City to implement.
LUT: H1.2 Implement e-government initiatives.	**Not Applicable**. This policy is only applicable to the City to implement.
LUT: H1.3 Develop city-wide area networks to connect public facilities and other key buildings with each other and the South Bay Net.	**Not Applicable**. This policy is only applicable to the City to implement.
Goal EE: A – Increase Energy Efficiency in existing Residential Units	
EE: A1 EE Training, Education and Recognition.	**Not Applicable**. This policy is only applicable to the City to implement.
EE: A1.1 Post links on website/social media and provide materials at Public Events.	**Not Applicable**. This policy is only applicable to the City to implement.
EE: A1.2 Email list for email blasts of new information or trainings.	**Not Applicable**. This policy is only applicable to the City to implement.
EE: A1.3 Establish an annual EE Fair.	**Not Applicable**. This policy is only applicable to the City to implement.
EE: A1.4 Create a resource center.	**Not Applicable**. This policy is only applicable to the City to implement.
EE: A1.5 Hire/Designate Energy Advocate.	**Not Applicable**. This policy is only applicable to the City to implement.

Sub-Strategies	Project Consistency
EE: A1.6 Partner with South Bay Cities Council of Governments and Utilities to obtain educational content.	**Not Applicable**. This policy is only applicable to the City to implement.
EE: A2 Increase Participation in Existing EE Programs	**Not Applicable**. This policy is only applicable to the City to implement.
EE: A2.1 Partner with SBCCOG and Utilities for outreach events.	**Not Applicable**. This policy is only applicable to the City to implement.
EE: A2.2 Staff outreach to home owners associations (HOAs) and other housing groups.	**Not Applicable**. This policy is only applicable to the City to implement.
EE: A3 Establish, Promote or Require Home Energy Evaluations.	**Not Applicable**. This policy is only applicable to the City to implement.
EE: A3.1 Promote home energy audits through programs such as Energy Upgrade California or other State programs.	**Not Applicable**. This policy is only applicable to the City to implement.
EE: A3.2 Establish free "Energy Checkup" program with the assistance of the SBCCOG if funding can be obtained.	**Not Applicable**. This policy is only applicable to the City to implement.
EE: A4 Promote, Incentivize or Require Home Energy Renovations	**Not Applicable**. This policy is only applicable to the City to implement.
EE: A4.1 Promote existing incentivized programs such as Energy Upgrade California.	**Not Applicable**. This policy is only applicable to the City to implement.
EE: A4.2 Develop or promote a green building program.	**Not Applicable**. This policy is only applicable to the City to implement. However, the proposed project will be designed to meet the most current CalGreen requirements.
EE: A4.3 Promote Financing Programs such as PACE (Properly Assessed Clean Energy).	**Not Applicable**. This policy is only applicable to the City to implement.
EE: A4.4 Streamline panel upgrade when it does not involve relocation.	**Not Applicable**. This policy is only applicable to the City to implement.
EE: A4.5 Establish online permitting to facilitate permit processing.	**Not Applicable**. This policy is only applicable to the City to implement.
Goal EE: B – Increase Energy Efficiency in New Residential Developments	
EE: B1 Increase Energy Efficiency in New Residential Developments.	**Not Applicable**. The proposed project is not new residential development.
EE: B1.1 Educate City staff, developers, etc., on future Title 24 updates and the additional energy efficiency opportunities for new residential development.	**Not Applicable**. This policy is only applicable to the City to implement.
EE: B1.2 Establish online permitting to facilitate permit processing.	**Not Applicable**. This policy is only applicable to the City to implement.
EE: B1.3 Create an Energy award program for net-zero-net energy homes.	**Not Applicable**. This policy is only applicable to the City to implement.
Goal EE: C – Increase Energy Efficiency in Existing Commercial Units	
EE: C1 EE Training and Education	**Not Applicable**. This policy is only applicable to the City to implement.
EE: C1.1 Post links on websites/social media and provide materials at public events.	**Not Applicable**. This policy is only applicable to the City to implement.

Sub-Strategies	Project Consistency
EE: C1.2 Email list for e-mail blasts of new information or trainings.	**Not Applicable**. This policy is only applicable to the City to implement.
EE: C1.3 Establish an annual EE fair.	**Not Applicable**. This policy is only applicable to the City to implement.
EE: C1.4 Create a resource center.	**Not Applicable**. This policy is only applicable to the City to implement.
EE: C1.5 Hire/Designate Energy Advocate.	**Not Applicable**. This policy is only applicable to the City to implement.
EE: C1.6 Partner with SBCCOG and Utilities to obtain education content.	**Not Applicable**. This policy is only applicable to the City to implement.
EE: C2 Increase Participation in Existing EE Programs	**Not Applicable**. This policy is only applicable to the City to implement.
EE: C2.1 Partner with SBCCOG and Utilities for outreach events.	**Not Applicable**. This policy is only applicable to the City to implement.
EE: C2.2 Staff outreach to business groups.	**Not Applicable**. This policy is only applicable to the City to implement.
EE: C3 Incentivize or Required Non-Residential Energy Audits	**Not Applicable**. This policy is only applicable to the City to implement.
EE: C3.1 Promote energy audits such as through Energy Upgrade California or other state programs.	**Not Applicable**. This policy is only applicable to the City to implement.
EE: C4 Promote or Require Commercial Energy Retrofits	**Not Applicable**. This policy is only applicable to the City to implement.
EE: C4.1 Promote existing incentivized programs such as Energy Upgrade California.	**Not Applicable**. This policy is only applicable to the City to implement.
EE: C4.2 Develop or promote a green building program.	**Not Applicable**. This policy is only applicable to the City to implement.
EE: C4.3 Promote Financing Programs such as PACE (Properly Assessed Clean Energy).	**Not Applicable**. This policy is only applicable to the City to implement.
EE: C4.4 Establish online permitting to facilitate permit processing.	**Not Applicable**. This policy is only applicable to the City to implement.
Goal EE: D – Increase Energy Efficiency in New Commercial Developments	
EE: D Encourage or Require EE Standards Exceeding Title 24	**Consistent.** The proposed project will be designed to meet or exceed existing Title 24 requirements.
EE: D1.1 Educate City staff, developers, etc., on future Title 24 updates and the additional energy efficiency opportunities for new commercial development.	**Not Applicable**. This policy is only applicable to the City to implement.
EE: D1.2 Establish online permitting to facilitate permit processing.	**Not Applicable**. This policy is only applicable to the City to implement.
EE: D1.3 Create and energy award program from net-zero-net-energy businesses.	**Not Applicable**. This policy is only applicable to the City to implement.
Goal EE: E – Increase Energy Efficiency through Increased Water Efficiency (WE)	
EE: E1 Promote or Require Water Efficiency Through SB X7-7.	**Not Applicable**. This policy is only applicable to the City to implement. However, the project is required to meet Title 24 Part 11 related to water efficacy.
EE: E1.1 Post links on website/social media and provide materials at public events.	**Not Applicable**. This policy is only applicable to the City to implement.

Sub-Strategies	Project Consistency
EE: E1.2 Email list for e-mail blasts of new information or trainings.	**Not Applicable**. This policy is only applicable to the City to implement.
EE: E1.3 Require low-irrigation landscaping.	**Consistent.** The proposed project will provide low-irrigation landscaping.
EE: E1.4 Partner with SBCCOG and WBMWD to obtain educational content.	**Not Applicable**. This policy is only applicable to the City to implement.
EE: E1.5 Partner with SBCCOG and WBMWD for outreach events.	**Not Applicable**. This policy is only applicable to the City to implement.
EE: E2.1 Staff time dedicated to work with HOAs, businesses, and other groups for outreach.	**Not Applicable**. This policy is only applicable to the City to implement.
EE: E2 Promoting Water Efficiency Standards Exceeding SB X7-7	**Not Applicable**. This policy is only applicable to the City to implement.
EE: E2.2 Allow recycled or grey water uses for non-municipal uses.	**Not Applicable**. This policy is only applicable to the City to implement.
EE: E2.3 Promote rainwater rebates and demonstrations.	**Not Applicable**. This policy is only applicable to the City to implement.
Goal EE: F – Decrease Energy Demand through Reducing Urban Heat Island Effect	
EE: F1 Promote Tree Planting for Shading and EE	**Consistent.** The proposed project provides a landscape plan that provides trees for shading.
EE: F1.1 Encourage tree planting at plan check.	**Not Applicable**. This policy is only applicable to the City to implement. However, the proposed project does provide a landscape plan with planting palette.
EE: F1.2 Work with community to develop a tree-planting group.	**Not Applicable**. This policy is only applicable to the City to implement.
EE: F1.3 Develop a city tree planting program.	**Not Applicable**. This policy is only applicable to the City to implement.
EE: F2.1 Pass an ordinance requiring or incentivizing cool roofs.	**Not Applicable**. This policy is only applicable to the City to implement.
EE: F2.2 Pass an ordinance requiring or incentivizing cool pavements.	**Not Applicable**. This policy is only applicable to the City to implement.
Goal EE: G – Participate in Education, Outreach and Planning for Energy Efficiency	
No Sub-Strategies provided for this Goal.	
Goal EE: H – Increase Energy Efficiency in Municipal Buildings	
No Sub-Strategies provided for this Goal.	
Goal EE: I – Increase Energy Efficiency in City Infrastructure	
No Sub-Strategies provided for this Goal.	
Goal SW: A – Increase Diversion and Reduction of Residential Waste	
SW: A1.1 Educate residents about waste reduction and diversion – Provide information to residents about recycling, composting, and source reduction opportunities on the website, newsletters, or flyers.	**Not Applicable**. This policy is only applicable to the City to implement.
SW: A2.1 Implement collection of green waste for residents – Provide a green waste collection service for residents by expanding current services that offer drop-off site at Public Works yard.	**Not Applicable**. This policy is only applicable to the City to implement.

Sub-Strategies	Project Consistency
Goal SW: B – Increase Diversion and Reduction of Commercial Waste	
SW: B1.1 Educate businesses about waste reduction and diversion – Provide information to businesses about recycling, composting, and source reduction opportunities on the website, newsletters, or flyers.	**Not Applicable**. This policy is only applicable to the City to implement.
SW: B2.1 Implement a Food Scrap Diversion program for businesses – Provide a food waste collection service for businesses.	**Not Applicable**. This policy is only applicable to the City to implement.
SW: B3.1 Require food waste and recycling at special events – Before approving permits, investigate requiring special events' solid waste management plans to include food waste collection and recycling; note- waste planning is required for large venues and events under the CA law AB 2176.	**Not Applicable**. This policy is only applicable to the City to implement.
Goal SW: C – Increase Diversion and Reduction of Overall Community Waste	
SW: C1.1 Investigate the feasibility of setting a Zero Waste goal in a Zero Waste Strategic Plan – If found feasible, develop a comprehensive Zero Waste Plan to achieve 90% diversion of waste from landfills, including strategies to divert waste and tools to track progress.	**Not Applicable**. This policy is only applicable to the City to implement.
SW: C1.2 Investigate the feasibility of setting a goal of diverting waste from landfill by (percentage to be determined when adopting a goal) – If found feasible, develop a comprehensive Waste Plan to achieve by (percentage to be determined when adopting a plan) diversion of waste from landfills, including strategies to divert waste and tools to track progress.	**Not Applicable**. This policy is only applicable to the City to implement.
Goal SW: D – Reduce and Divert Municipal Waste	
SW: D1.1 Implement a Recycle at Work program – educate employees about the benefits of recycling and waste reduction in the work place.	**Consistent.** The proposed project will be required to meet the Cal Recycles standards related to construction and operation of the proposed project.
SW: D1.2 Reduce paper in municipal facilities – Adopt a policy to encourage paper reduction through various activities such as: Reduce margins and logos on templates, letterheads, and memos; Upload bid documents using online resources instead of printing for contractors; Require fewer or smaller-sized copies of project plans; Use electronic devices for meetings; Require double sided printing when feasible.	**Not Applicable**. This policy is only applicable to the City to implement.
SW: D1.3 Reuse materials at municipal facilities – Adopt a policy to re-use, repair, or refurbish office furniture and equipment at a cost savings compared to purchasing new materials; And if not cost saving, re-use or redistribute office items such as supplies, computers, and furniture to community non-profit groups in order to divert from landfill.	**Not Applicable**. This policy is only applicable to the City to implement.

Sub-Strategies	Project Consistency
SW: D1.4 Provide additional recycling in public places – Continue to install additional recycling containers in public places such as parks and streets.	**Not Applicable**. This policy is only applicable to the City to implement.
SW: D1.5 Adopt a Municipal Purchasing Policy – Create a purchasing policy for municipal facilities to reduce purchase of disposable items, and require environmentally preferable products to be purchased when possible and reasonable.	**Not Applicable**. This policy is only applicable to the City to implement.
SW: D1.6 Demonstrate composting at a municipal facility – Investigate composting at city facilities and possibly use the compost in environmentally friendly landscaping at facilities or community gardens.	**Not Applicable**. This policy is only applicable to the City to implement.
Goal UG: A – Increase and Maintain Urban Greening in the Community	
UG: A1.1 Establish/maintain a community garden – Create a new or maintain a current community garden.	**Not Applicable**. This policy is only applicable to the City to implement.
UG: A1.2 Promote gardening and composting – Provide resources and information regarding community gardens and composting to educate the public on how to grow organic edible plants.	**Not Applicable**. This policy is only applicable to the City to implement.
UG: A1.3 Organize tool lending program and bounty exchange – Work with community organizations or neighborhood groups to organize garden-tool lending program and/or a garden bounty exchange program to encourage more community gardens.	**Not Applicable**. This policy is only applicable to the City to implement.
UG: A2.1 Promote rooftop gardens for residential and commercial buildings - Provide informational materials to contractors, homeowners and businesses about the benefits of rooftop gardens.	**Not Applicable**. This policy is only applicable to the City to implement.
UG: A3.1 Establish a local farmers market – Work with local organizations to establish farmer markets in the community.	**Not Applicable**. This policy is only applicable to the City to implement.
UG: A3.2 Promote farmers market – Promote farmers market to the community through website, newsletters, or flyers.	**Not Applicable**. This policy is only applicable to the City to implement.
Goal UG: B – Increase and Maintain Urban Greening in Municipal Facilities	
UG: B1.1 Landscape/open space and tree maintenance – Develop a program to conserve open spaces and trees and promote the ability of such resources to remove carbon from the atmosphere.	**Not Applicable**. This policy is only applicable to the City to implement.
Goal EGS: A – Support Energy Generation and Storage in the Community	
EGS: A1.1 Investigate the feasibility of Community Choice Aggregation.	**Not Applicable**. This policy is only applicable to the City to implement.
EGS: A2.1 Accelerate implementation of renewable and alternative energy based technology through permitting process (e.g. reduced permit fees, streamlined permit approval process) – City can identify and remove regulatory barriers or procedural barriers to installing alternative energy	**Not Applicable**. This policy is only applicable to the City to implement.

Sub-Strategies	Project Consistency
technologies in building and development codes, design guidelines, and zoning ordinances; and work with related agencies, such as fire, water, health and others that may have policies or requirements that adversely impact the development or use of renewable energy technologies.	
EGS: A2.2 Encourage and support on-site installation and use of renewable and alternative energy generation systems for residential, commercial, institutional, and industrial uses.	**Not Applicable**. This policy is only applicable to the City to implement. However, the proposed project will be designed to meet Title 24 requirements related to renewable and alternative energy generation systems.
EGS: A3.1 Develop and adopt policies for generating energy from renewable and alternative sources such as solar power (includes PV and thermal), microgrids, energy storage, co-generation, wind, geothermal, biomass, and fuel cells.	**Not Applicable**. This policy is only applicable to the City to implement.
EGS: A4.1 Work with investor-owned utilities or CCAs and local, regional, and state partners to identify, implement, or promote financial tools to encourage on-site alternative and renewable energy generation projects.	**Not Applicable**. This policy is only applicable to the City to implement.
EGS: A4.2 Update the City's website to include links to information for renewable and alternative energy rebates, incentives, and case studies.	**Not Applicable**. This policy is only applicable to the City to implement.
EGS: A4.3 Promote community awareness to conserve energy in conjunction with using renewable and alternative energy.	**Not Applicable**. This policy is only applicable to the City to implement.
EGS: A5.1 Explore renewable and alternative energy technologies – Explore renewable and alternative energy technologies including solar photovoltaics (PV), solar thermal, microgrids, energy storage, wind, geothermal, wave/tidal, and fuel cells to increase capacity for municipal operated and owned facilities and properties, and evaluate their suitability.	**Not Applicable**. This policy is only applicable to the City to implement.

Source: City of El Segundo CAP, 2017.

As shown in Table P, with implementation of statewide regulatory requirements including the CalGreen building standards that have been codified in Chapter 11 of the Municipal Code, the proposed project would be consistent with all applicable strategies detailed in the El Segundo CAP. Therefore, implementation of the proposed project would not conflict with any applicable plan that reduces GHG emissions.

Level of Significance

Less than significant impact.

APPENDIX A

CalEEMod Model Daily Printouts

The 650 PCH Project

Los Angeles-South Coast County, Summer

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
General Office Building	329.99	1000sqft	3.31	329,991.00	0
Enclosed Parking with Elevator	1,185.00	Space	0.50	474,000.00	0
Parking Lot	71.00	Space	0.64	28,400.00	0

1.2 Other Project Characteristics

Urbanization	Urban	**Wind Speed (m/s)**	2.2	**Precipitation Freq (Days)**	33
Climate Zone	9			**Operational Year**	2023
Utility Company	Southern California Edison				
CO2 Intensity (lb/MWhr)	702.44	**CH4 Intensity (lb/MWhr)**	0.029	**N2O Intensity (lb/MWhr)**	0.006

1.3 User Entered Comments & Non-Default Data

Project Characteristics -

Land Use - Total acres disturbed 4.45 acres

Construction Phase - Construction Schedule provided by applicant

Off-road Equipment - Architectural Coating - 1 Air Compressor 6 hr

Off-road Equipment - Building - 2 Boom Lift (Aerial Lift) 7 hr, 1 Crane 2 hr, 3 Forklifts 7 hr, 2 Concrete Boom Pumps 4 hr

Off-road Equipment - Demo - 1 Excavator 8 hr, 1 Off-Hwy Truck (Water Truck) 8 hr, 1 Rubber-Tire Dozer 8hr, 1 Rubber-Tire Loader 8hr, 2 Scraper 8-hr, 3 Tractor/Loader/Backhoe 8hr

Off-road Equipment - Demo - 1 Excavator 8 hr, 1 Off-Hwy Truck (Water Truck) 8 hr, 1 Rubber-Tire Dozer 8hr, 1 Rubber-Tire Loader 8hr, 2 Scraper 8-hr, 3 Tractor/Loader/Backhoe 8hr

Off-road Equipment - Grading - 1 crane 2hr, 2 forklifts 8 hr, 1 Rubber Tired Dozer 8 hr, 3 Tractor/Loader/Backhoe 6 hr

Off-road Equipment - Paving - 2 Forklifts 8 hr, 2 Paving Equipment 8 hr, 1 Tractor/Loader/Backhoe, 8 hr

Trips and VMT - Haul Trip Length set to 40 miles one way (80 miles round trip)

Demolition - 3,800 tons of Debris to remove

Grading - Excavation - 26,575 cu yd of export

Vehicle Trips - 2,797 Gross Daily Trips from Traffic Study = 8.48 per TSF

Construction Off-road Equipment Mitigation - Water Exposed Area 3x per day selected to account for SCAQMD Rule 403 minimum requirements

Mobile Land Use Mitigation - 0.06 mile to nearest Transit Station and Improve Ped Network onsite and connecting offsite.

Energy Mitigation - 30% lighting energy reduction selected to account for the new 2019 Title 24 Part 6 standards.

Water Mitigation - Install low-flow fixtures and use water-efficient irrigation systems to account for Title 24 Part 11 requirements

Waste Mitigation - 50% reduction in waste disposed selected to account for AB 341.

The 650 PCH Project - Los Angeles-South Coast County, Summer

The 650 PCH Project

Los Angeles-South Coast County, Winter

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
General Office Building	329.99	1000sqft	3.31	329,991.00	0
Enclosed Parking with Elevator	1,185.00	Space	0.50	474,000.00	0
Parking Lot	71.00	Space	0.64	28,400.00	0

1.2 Other Project Characteristics

Urbanization	Urban	**Wind Speed (m/s)**	2.2	**Precipitation Freq (Days)**	33
Climate Zone	9			**Operational Year**	2023
Utility Company	Southern California Edison				
CO2 Intensity (lb/MWhr)	702.44	**CH4 Intensity (lb/MWhr)**	0.029	**N2O Intensity (lb/MWhr)**	0.006

1.3 User Entered Comments & Non-Default Data

The 650 PCH Project - Los Angeles-South Coast County, Winter

Project Characteristics -

Land Use - Total acres disturbed 4.45 acres

Construction Phase - Construction Schedule provided by applicant

Off-road Equipment - Architectural Coating - 1 Air Compressor 6 hr

Off-road Equipment - Building - 2 Boom Lift (Aerial Lift) 7 hr, 1 Crane 2 hr, 3 Forklifts 7 hr, 2 Concrete Boom Pumps 4 hr

Off-road Equipment - Demo - 1 Excavator 8 hr, 1 Off-Hwy Truck (Water Truck) 8 hr, 1 Rubber-Tire Dozer 8hr, 1 Rubber-Tire Loader 8hr, 2 Scraper 8-hr, 3 Tractor/Loader/Backhoe 8hr

Off-road Equipment - Demo - 1 Excavator 8 hr, 1 Off-Hwy Truck (Water Truck) 8 hr, 1 Rubber-Tire Dozer 8hr, 1 Rubber-Tire Loader 8hr, 2 Scraper 8-hr, 3 Tractor/Loader/Backhoe 8hr

Off-road Equipment - Grading - 1 crane 2hr, 2 forklifts 8 hr, 1 Rubber Tired Dozer 8 hr, 3 Tractor/Loader/Backhoe 6 hr

Off-road Equipment - Paving - 2 Forklifts 8 hr, 2 Paving Equipment 8 hr, 1 Tractor/Loader/Backhoe, 8 hr

Trips and VMT - Haul Trip Length set to 40 miles one way (80 miles round trip)

Demolition - 3,800 tons of Debris to remove

Grading - Excavation - 26,575 cu yd of export

Vehicle Trips - 2,797 Gross Daily Trips from Traffic Study = 8.48 per TSF

Construction Off-road Equipment Mitigation - Water Exposed Area 3x per day selected to account for SCAQMD Rule 403 minimum requirements

Mobile Land Use Mitigation - 0.06 mile to nearest Transit Station and Improve Ped Network onsite and connecting offsite.

Energy Mitigation - 30% lighting energy reduction selected to account for the new 2019 Title 24 Part 6 standards.

Water Mitigation - Install low-flow fixtures and use water-efficient irrigation systems to account for Title 24 Part 11 requirements

Waste Mitigation - 50% reduction in waste disposed selected to account for AB 341.

The 650 PCH Project - Los Angeles-South Coast County, Winter

APPENDIX C

CalEEMod Model Annual Printouts

The 650 PCH Project

Los Angeles-South Coast County, Annual

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
General Office Building	329.99	1000sqft	3.31	329,991.00	0
Enclosed Parking with Elevator	1,185.00	Space	0.50	474,000.00	0
Parking Lot	71.00	Space	0.64	28,400.00	0

1.2 Other Project Characteristics

Urbanization	Urban	**Wind Speed (m/s)**	2.2	**Precipitation Freq (Days)**	33
Climate Zone	9			**Operational Year**	2023
Utility Company	Southern California Edison				
CO2 Intensity (lb/MWhr)	702.44	**CH4 Intensity (lb/MWhr)**	0.029	**N2O Intensity (lb/MWhr)**	0.006

1.3 User Entered Comments & Non-Default Data

Project Characteristics -

Land Use - Total acres disturbed 4.45 acres

Construction Phase - Construction Schedule provided by applicant

Off-road Equipment - Architectural Coating - 1 Air Compressor 6 hr

Off-road Equipment - Building - 2 Boom Lift (Aerial Lift) 7 hr, 1 Crane 2 hr, 3 Forklifts 7 hr, 2 Concrete Boom Pumps 4 hr

Off-road Equipment - Demo - 1 Excavator 8 hr, 1 Off-Hwy Truck (Water Truck) 8 hr, 1 Rubber-Tire Dozer 8hr, 1 Rubber-Tire Loader 8hr, 2 Scraper 8-hr, 3 Tractor/Loader/Backhoe 8hr

Off-road Equipment - Demo - 1 Excavator 8 hr, 1 Off-Hwy Truck (Water Truck) 8 hr, 1 Rubber-Tire Dozer 8hr, 1 Rubber-Tire Loader 8hr, 2 Scraper 8-hr, 3 Tractor/Loader/Backhoe 8hr

Off-road Equipment - Grading - 1 crane 2hr, 2 forklifts 8 hr, 1 Rubber Tired Dozer 8 hr, 3 Tractor/Loader/Backhoe 6 hr

Off-road Equipment - Paving - 2 Forklifts 8 hr, 2 Paving Equipment 8 hr, 1 Tractor/Loader/Backhoe, 8 hr

Trips and VMT - Haul Trip Length set to 40 miles one way (80 miles round trip)

Demolition - 3,800 tons of Debris to remove

Grading - Excavation - 26,575 cu yd of export

Vehicle Trips - 2,797 Gross Daily Trips from Traffic Study = 8.48 per TSF

Construction Off-road Equipment Mitigation - Water Exposed Area 3x per day selected to account for SCAQMD Rule 403 minimum requirements

Mobile Land Use Mitigation - 0.06 mile to nearest Transit Station and Improve Ped Network onsite and connecting offsite.

Energy Mitigation - 30% lighting energy reduction selected to account for the new 2019 Title 24 Part 6 standards.

Water Mitigation - Install low-flow fixtures and use water-efficient irrigation systems to account for Title 24 Part 11 requirements

Waste Mitigation - 50% reduction in waste disposed selected to account for AB 341.

The 650 PCH Project - Los Angeles-South Coast County, Annual

APPENDIX C
Cultural Resources Assessment

Michael Baker INTERNATIONAL

We Make a Difference

January 7, 2021

Mr. Eduardo Schonborn, AICP, Principal Planner
CITY OF EL SEGUNDO
350 Main Street
El Segundo, CA 90245

RE: CULTURAL RESOURCES IDENTIFICATION MEMO FOR THE 650-700 PCH PROJECT CITY OF EL SEGUNDO, LOS ANGELES COUNTY, CALIFORNIA

Dear Mr. Schonborn:

In support of the 650-700 PCH Project (Project), Michael Baker International, Inc. (Michael Baker) staff completed a South Central Coastal Information Center (SCCIC) records search, historical map review, and evaluation for the California Register of Historical Resources (California Register) of the two buildings located at 650 and 700 North Pacific Coast Highway (PCH), in the City of El Segundo. These efforts were completed to determine whether the proposed Project could result in adverse impacts to cultural resources in accordance with the California Environmental Quality Act (CEQA). Methods, results, and recommendations are summarized below; figures are provided in **Attachment 1**.

PROJECT DESCRIPTION

The Project proposes constructing a seven-story, 122,156-gross-square-foot office building with a 1,185-space parking structure, as well as renovations and modernizations to both the exterior facades and the interiors of the existing office buildings at 650 North Pacific Coast Highway and 700 North Pacific Coast Highway in the City of El Segundo. The renovations include alterations to the building at 650 North Pacific Coast Highway and will include enhanced landscaping improvements with the addition of a large outdoor landscaped plaza with outdoor seating. The plaza will be surrounded by the two extant buildings and the new office building to create a cohesive pedestrian office campus. The Project will also return pedestrian entrances to the street-side façade of the buildings.

CULTURAL RESOURCES IDENTIFICATION

The methods and results of the SCCIC records search, historical map search, review of the existing building permitting documents and technical reports including Phase I Environmental Site Assessments and Preliminary Geotechnical Investigation, and California Register evaluation are presented below. No pedestrian survey was undertaken due to no access to the facilities as a result of the heightened security status of the current building occupant (Boeing). Instead, client-provided photos, taken May 1, 2020, were reviewed. Also due to lack of direct physical access, street-level views from Google Earth and Google Maps were utilized.

SOUTH CENTRAL COASTAL INFORMATION CENTER

SCCIC staff conducted a records search (File No. 21729.7831) on October 15, 2020. The SCCIC, as part of the California Historical Resources Information System, California State University, Fullerton, an affiliate of the California Office of Historic Preservation (OHP), is the official state repository of cultural resources

2729 Prospect Park Drive, Suite 220, Rancho Cordova, CA 95670
P: (916) 361-8384 F: (916) 361-1574

records and reports for Los Angeles County. As part of the records search, the following federal and California inventories were reviewed:

- California Inventory of Historic Resources (OHP 1976)
- California Points of Historical Interest (OHP 1992 and updates)
- California Historical Landmarks (OHP 1996)
- Directory of Properties in the Historic Property Data File (OHP 2012). The directory includes the listings of the National Register of Historic Places (National Register), National Historic Landmarks, California Register, California Historical Landmarks, and California Points of Historical Interest for Los Angeles County.

No cultural resources were identified within the Project area. Three cultural resource reports were previously completed within the Project area; six reports were within the quarter-mile search area as identified below.

LITERATURE AND HISTORICAL MAP REVIEW

The division of prehistory into temporal periods provides a framework for understanding culture change in years before present (BP). The earliest inhabitants to the Los Angeles Basin occurred in the Paleocoastal or Paleoindian Period terms, indicating proximity to the coast (Moratto 1984; Erlandson et al. 2007) and is generally dated between about 13,000 and 8,500 BP. These earliest inhabitants were highly mobile hunter-gatherers. Warren (1968) and others (Sutton and Gardner 2010) redefined the Millingstone Horizon as the Encinitas Tradition, which dates to between about 8,500 BP and 3,500 BP. Encinitas is a widespread cultural phenomenon distinguished by an abundance of manos and metates

and a dearth of vertebrate faunal remains, projectile points, and mortar and pestle groundstone tools. Definitions of the Intermediate Period and Late Prehistoric Period continue to be employed as temporal periods as Wallace (1955) defined them, though understanding of cultural practices, technology, and migrations, among other aspects, has been thoroughly deepened (as summarized by Sutton 2010).

At the beginning of the historic period, the Project location is understood to be within the ancestral territory of the Gabrieliños though no Gabrieliño villages are known to be within the vicinity of the Project site, and the place name *Waachnga* (McCawley 1996) is located approximately 3 miles to the north-northwest. This place name potentially corresponds to the location of *Gauchn*, a Gabrieliño village (Kirkman 1938). The Gabrieliño Indians are named because of their association with the Mission San Gabriel Arcángel, located approximately 20 miles northeast. Generally, their territory included all of the Los Angeles Basin, parts of the Santa Ana and Santa Monica Mountains, along the coast from Aliso Creek in the south to Topanga Canyon in the north, and San Clemente, San Nicolas, and Santa Catalina Islands. The Gabrielino spoke a dialect of the Cupan group of the Takic language family (Bean and Smith 1978: 538-549).

The Project area was once part of Rancho Sausal Redondo and remained undeveloped until 1927. Between 1928 and 1947, the land was used for agricultural purposes. No built features are depicted within the Project area until 1953 with the extant building at 737 Lairport Street. By 1964, both 650 and 700 North Pacific Coast Highway are depicted in the Project area. The Project area has remained relatively unchanged since 1965; see **Attachment 2**. (AEI Consultants 2020; BLM 1868; Historicaerials.com 2020; USGS 1924, 1930, 1948, 1950, 1957, 1964; UCSB 1952, 1956, 1965, 1971; Harper and Smith 2008; Metro 2011).

CALIFORNIA REGISTER

The buildings located at 650 and 700 North Pacific Coast Highway were evaluated for inclusion in the California Register and recommended ineligible for listing under Criteria 1, 2, 3, or 4 both individually and as contributors to a historic district due to a lack of association with a historic context. Additionally, the resources were evaluated in accordance with Section 15064.5(a)(2)–(3) of the CEQA Guidelines using the criteria outlined in Section 5024.1 of the California Public Resources Code, and they do not appear to be historic resources for the purposes of CEQA.

Refer to **Attachment 2** for the full resource descriptions and evaluations with historic context.

FINDINGS AND RECOMMENDATIONS

The SCCIC records search, literature and historical map review, and California Register evaluations identified no historic resources as defined by CEQA Section 15064.5(a) within the Project area.

There are no known archaeological resources in the Project site; however, there is potential, however slight, to uncover previously unidentified archaeological resources during excavation into native soil. Archaeological and Native American monitoring shall be conducted for ground disturbing activities within the Project site. Monitoring shall be performed under the direction of a qualified archaeologist meeting the Secretary of the Interior's Professional Qualifications Standards for archaeology (National Park Service 1983). If suspected prehistoric or historical archaeological deposits are discovered during construction, all work within the immediate area of the discovery shall be redirected and the find must be evaluated by a qualified archaeologist. Depending upon the nature of the find, if the discovery proves to be potentially significant under CEQA, as determined by the qualified archaeologist,

additional work such as such as on site monitoring by a qualified Native American Tribal representative, data recovery excavation, avoidance of the area of the find, documentation, testing, data recovery, reburial, archival review and/or transfer to the appropriate museum or educational institution, or other appropriate actions may be warranted at the discretion of the qualified archaeologist. The archaeologist shall complete a report of excavations and findings, and submit the report to the Director of Planning and Building Safety. After the find is appropriately mitigated, work in the area may resume.

Any human remains encountered during Project ground-disturbing activities shall be treated in accordance with California Health and Safety Code Section 7050.5, which states that no further disturbance shall occur until the County Coroner has made a determination of the origin and disposition pursuant to Public Resources Code Section 5097.98. In the event of an unanticipated discovery of human remains, the County Coroner shall be notified immediately. If the human remains are determined to be prehistoric, the coroner shall notify the Native American Heritage Commission (NAHC), which shall determine and notify the most likely descendant (MLD). The MLD shall complete the inspection of the site within 48 hours of notification and may recommend scientific removal and nondestructive analysis of human remains and items associated with Native American burials.

PREPARER QUALIFICATIONS

Chris Wendt, Architectural Historian, has over 12 years of experience teaching history and English. He assists senior architectural historians with a variety of tasks, including field survey and photographic documentation of historic-age resources, property research, writing architectural descriptions, and developing historic statements. He conducts National Register, California Register, and various local register evaluations for projects subject to CEQA and Section 106 of the National Historic Preservation Act. He has served as the visitor services and volunteer coordinator for the Los Angeles Museum of the Holocaust and Museum of Sonoma County. He also worked with the Petaluma Historical Museum and Library and Cotati Museum and Historical Society where he conducted archival research and aided in the identification of historic resources. He is a Secretary of the Interior Professionally Qualified historian and architectural historian.

Nicholas F. Hearth, Principal Investigator/Senior Archaeologist, is a registered professional archaeologist (#989903) and meets the Secretary of the Interior's Professional Qualification Standards for archeology and history, and the Society for California Archaeology's professional qualification standards for Principal Investigator. Mr. Hearth has 18 years of experience in cultural resources management, including project management, personnel management, Native American consultation, archival research, laboratory analysis, ethnographic and historical research, field survey, prehistoric and historical excavation, laboratory analysis, collections management, and GIS applications. He has experience with cultural and tribal cultural resources issues as they relate to CEQA and the National Environmental Policy Act. He directs the preparation of cultural resources technical studies compliant with Section 106 of the National Historic Preservation Act and CEQA, including studies documenting research, survey, testing, excavation, monitoring, and evaluation for inclusion in the National Register and California Register. He has worked in California, Nevada, Utah, New Mexico, across the Midwest, throughout New England, and in four countries in Central America.

Sincerely,

Nick Hearth, RPA
Senior Archaeologist

Chris Wendt, MA
Architectural Historian

***P3a. Description:** Building S37 (subject property), is located at 650 North Pacific Coast Highway, El Segundo, CA 92045 (alternate address 650 North Sepulveda Boulevard, El Segundo, CA 90245). Built 1961-1962, Building S37 is an example of the International Style, specifically showcasing Bauhaus and Corbusian influence. The building is separated from North Pacific Coast Highway by a flat, concrete-paved sidewalk. Building S37 is rectangular in plan, measuring approximately 256 feet by 65 feet. The building is of steel frame and concrete construction, rising from a concrete slab foundation. Building S37 rises a full eight stories in height (excluding the rooftop head house): seven stories are visible on the west (front) façade, and eight stories are visible on the east (rear) façade. Two one-story, mechanical wings extend from the east (rear) façade, flanking an asphalt-paved parking lot. The parking lot is accessible via a vehicular portal that passes through Building S37 at its southern end. Building S37 has a flat roof clad in modern synthetics and is punctuated by a one-story headhouse (60 feet by 33 feet) and a modern, irregularly shaped, one-story microwave penthouse (built 1996) diagonally situated at the building's northeastern corner. The roof of this penthouse is clad in corrugated metal. The ground level on the west (front) façade, including the building's former main entrance, has been infilled with concrete block clad in polished granite slabs (altered 1970 and 1984). The former entrance is demarcated by a cantilevered canopy and exposed aggregate concrete steps. The building's main entrance was relocated to the east (rear) façade, off the parking lot. Floors two through eight are clad in a modern, exterior insulation and finish system (EIFS) curtain wall system (applied 2000). The exterior curtain wall is punctuated by aluminum-framed, ribbon windows (installed 2000) separated by vertical concrete-clad columns. The second floor on the west (front) façade has no windows; they were likely infilled during the application of the EIFS system. The top floor on the west (front) façade prominently features recessed, open balconies; these were originally intended for use as greenspace. The east (rear) façade of Building S37 largely mirrors the configuration of the west (front) façade, except for a series of centered, uncovered balconies running from the second to the eighth story (added 2000).

B1. Historic Name: Aerospace Center
B2. Common Name: Building S37
B3. Original Use: Commercial
B4. Present Use: Commercial
***B5. Architectural Style:**
***B6. Construction History:**

Originally designed as an office building catering to the nascent aerospace industry in El Segundo, construction of the subject property began in April 1961 (LAT 1961c: 137). It was completed in 1962. The building was designed by architect Daniel L. Dworsky of Los Angeles, principal of Dworsky & Associates, and built by the Contracting Engineers Company (LAT 1961c: 137). The building's reported cost of construction was approximately $2.5 million (LAT 1961c: 137). In 1970, the building's ground floor was enclosed with concrete block, clad in granite. In 1976, the exposed aggregate concrete steps and curbs were altered due to street widening. In 1984, the second and third floors were renovated at a cost of $1.8 million. In 1985, the lobby was renovated o add an additional 636 square feet of space and a covered entrance. That same year, work was undertaken between the fourth floor and the penthouse level. This included a complete demolition and renovation of the offices and corridors. In 1994 the first floor was also renovated, enclosing the elevator lobby with security walls. In 1996, an 814-square-foot steel microwave penthouse was constructed on the roof. In 2000, Building S37 underwent substantial exterior alterations. This included removal of sunscreens and window louvers, the application of new glazing on floors three through eight, the construction of new balconies on the east (rear) façade, and the application of an EIFS system (City of El Segundo 1961-2000: 15, 34, 44, 51-52, 59, 76, 85-86, 306, 308, 341).

***B10. Significance (continued):**

Overview: Twentieth Century Development of El Segundo

Incorporated as a city on January 18, 1917, the area's local economy was historically dominated by the oil industry at the time of its founding. Throughout the 1910s and 1920s, the refinement of oil and the production of petroleum products remained central to the region's economy. However, in 1927, Mines Field opened a short distance north of the subject property. Later known as the Los Angeles Municipal Airport—eventually growing into Los Angeles International Airport (LAX)—Mines Field was the first municipal airport serving the greater Los Angeles area. The siting of the airport to the immediate north of El Segundo had a profound effect on the local and regional economies, driving the diversification of businesses. This ultimately resulted in an eclipse of the oil industry's prominence.

During the 1940s and 1950s, several aviation and defense contractors relocated to El Segundo, citing proximity to the airport. Among these companies were Douglas and Hughes Aircraft, Northrop (later Northrop Grumman), and North American Aviation (later Rockwell) (El Segundo Chamber of Commerce 2020; Harper and Smith 2008: 18). The addition of the Aerospace Company Corporation in 1960 and the establishment of the Los Angeles Air Force Base in 1964 further bolstered the region's economy (Harper and Smith 2008: 18-19). The Los Angeles Air Force Base became the only active-duty military based in the Los Angeles area and most notably housed the 61st Air Base Wing and the Space and Missile Systems Center. Growth and diversification of El Segundo continued beyond the 1950s and 1960s with aviation industry leaders like Boeing, Lockheed Martin, and Raytheon choosing to locate within the city. Corporate aerospace and satellite designers, manufacturing high-technology mechanisms to support the nation's defense and exploration efforts, continued to expand over the final decades of the twentieth century.

Today, over half of the satellites and vehicles in space are manufactured in El Segundo, with numerous aerospace industry leaders choosing to locate within the city limits (El Segundo Chamber of Commerce 2017: 30-36; Harper and Smith 2008: 18-19).

North Sepulveda/North Pacific Coast Highway Corridor Development

In 1962, the El Segundo Chamber of Commerce dubbed the stretch of Sepulveda Boulevard running within the city limits as the "International Mile." Drawing inspiration for the name from nearby LAX, the "International Mile" included what was, at the time, the tallest building in the South Bay area: the eight-story Aerospace Center at 650 North Sepulveda Boulevard (subject property).

Although the "International Mile" moniker did not endure, development continued along Sepulveda Boulevard well into the late twentieth century. Illustrating the trend in frenzied mid-twentieth-century development, in 1952, aerial photographs of the subject property depict largely undeveloped land (Photograph 2). However, by 1965, this area had been fully developed with multi-story complexes and commercial office buildings (Photograph 3) (Brighton 2014; El Segundo Chamber of Commerce 2017: 30-36: LAT 1962a: 154).

Photograph 2 (left): 1952 aerial photograph depicting the property at 650 North Pacific Coast Highway vacant (UCSB 1952).
Photograph 3 (right): 1965 aerial photograph depicting the subject property (red line) at 650 North Pacific Coast Highway (UCSB 1965).

***B10. Significance (continued):**

Property Specific Contextual History

Construction of the subject property began in early 1961. It was completed in late 1962. The building was financed and developed by Allen H. Rabin, president of the Rabin Company (later the Rabin-Winter Corporation). The Rabin Company specialized in the manufacture and distribution of drugs and other pharmaceutical products. In 1957, the Rabin Company acquired a vacant parcel at 700 North Sepulveda Boulevard in order to construct its new headquarters and distribution center (UCSB 1952, 1965; LACDPW 2020).

In the early 1960s, after observing the growing need for office space within proximity of LAX, Rabin contracted with architect Daniel L. Dworsky to design what would become known as the Aerospace Center (subject property). Rabin intended for the building to be the nation's first office building dedicated solely to serving the needs of the nascent aerospace industry. These services would include a 24-hour classified secretarial service, a reproduction center, a classified waste disposal service meeting the Department of Defense security requirements, a 24-hour travel center, and an officially designated heliport on the roof of the building (LAT 1961c: 137; 1961d: 158; 1962c: 134). Dworsky designed the building in the International Style. The Contracting Engineers Company served as the general contracting firm for the project. It was built at a reported cost of approximately $2.5 million dollars. Upon completion, the subject property was the tallest building in the City of El Segundo (Photographs 4 and 5).

OPENED—Aerospace Center Building for firms engaged in space age activity.

NEAR AIRPORT—Completed Aerospace Center at 650 N. Sepulveda Blvd. in El Segundo houses executive offices of firms in missile and aircraft fields. Design by Daniel Dworsky & Associates. Owner-builder, Contracting Engineers.

Photograph 4 (left): Newspaper photograph depicting 650 North Pacific Coast Highway shortly after completion (LAT 1962c: 134).
Photograph 5 (right): Newspaper photograph depicting 650 North Pacific Coast Highway shortly after completion (LAT 1963a: 131).

***B10. Significance (continued):**

Since its completion in 1962, the subject property has undergone extensive interior and exterior alterations. These alterations and their respective dates of completion are summarized in **Table 1** (City of El Segundo 2020: 3, 15, 34, 44, 51-52, 59, 76, 85-86, 306, 308, 341).

Table 1: Known Alterations to Subject Property

Date	Description of Work
04/17/1961	Original building permit listing architect, engineer, and contracting company.
11/17/1970	Concrete block wall faced with granite.
03/09/1976	Sawcut concrete and build concrete steps and curbs. Readjustment due to street widening.
09/21/1984	Renovate 2 and 3 floors ($1.8 million).
10/09/1984	Renovation of ground and 1st floor.
01/31/1985	Complete demolition of offices and corridors, floors 4, 5, 6, 7, and penthouse.
03/11/1994	Remodel 1st floor lobby enclosing security walls at elevator lobby.
05/28/1996	Steel structure platform on roof to support antennae enclosure.
03/06/2000	Applying glazing to existing planters at floors 3-8 (adding 600 SF to building interiors).
03/30/2000	Demolition of window louvers.
07/25/2000	Remove existing sunscreens, add new balconies on east side, new EIFS exterior finish.

Corporate Occupancy, 1961 to Present

The subject property's known corporate occupancy between 1962 and the present is identified in **Table 2** (EPA 2015; California Secretary of State 2020; LAT 1961e: 128, 1962b: 88, 1962d: 350, 1963b: 44, 1965a: 109, 1965b: 380, 1965c: 80, 1967: 67, 1968: 106; Lombardi and Eastman 2011: 45-46; Independent Press-Telegram 1962: 70).

Table 2: Corporate Occupancy

Date	Address	Business
1961-1967	650 North Sepulveda Boulevard	Automation Industries Inc.
1962-2008	650 North Sepulveda Boulevard	Computer Sciences Corporation (aka Computer Sciences Institute)
1962-1965	650 North Sepulveda Boulevard	Trans-Global Travel Bureau
1962	650 North Sepulveda Boulevard	Panelyte Industrial Division of Thiokol Chemical Corporation
1963-1967	650 North Sepulveda Boulevard Room 618	LTV-Chance Vought a division of Ling-Temco-Vought, Inc. (later LTV Aerospace Corporation)
1964-1965	650 North Sepulveda Boulevard Room 730	Thompson-Ramo-Wooldridge Electronics
1965	650 North Sepulveda Boulevard	Leonard's Department Stores
1965-68	650 North Sepulveda Boulevard	Mechanics Research Inc.
1984-2000	650 North Sepulveda Boulevard	Hughes Space & Communications Company
2015-Present	650 North Sepulveda Boulevard	The Boeing Company

***B10. Significance (continued):**

Computer Sciences Corporation
Computer Sciences Corporation (CSC) occupied the subject property between 1962 and 2008. CSC was founded in Los Angeles County in 1959 by Fletcher Jones and Roy Nutt. Over the next five decades, CSC grew rapidly to serve governments and enterprises worldwide, laying the foundation for what is known today as the information technology (IT) industry. CSC provided systems design and integration, IT and business process outsourcing, applications software development, web and application hosting, and management consulting. CSC merged with HP Enterprise Services in 2017, creating a new company, DXC Technology (Fundinguniverse.com 2020a; LAT 1962d: 350; POGO 2020).

Thiokol Chemical Corporation
Thiokol Chemical Corporation originated in the early twentieth century when, in 1926, chemists Joseph C. Patrick and Nathan Mnookin invented a synthetic rubber polymer that was discovered to be resistant to solvents. Patrick and Mnookin named the polymer "Thiokol," from the Greek words for sulfur (theion) and glue (kolla). Following the invention, the Thiokol Chemical Corporation was founded on December 5, 1929. With the financial support of salt merchant Bevis Longstreth, Thiokol opened a plant in Kansas City, Missouri, and eventually relocated to Trenton, New Jersey, in 1935. The Thiokol Chemical Corporation was propelled to prominence after the appointment of Joseph W. Crosby to the position of vice president and general manager in 1944. In speaking with scientists at the Jet Propulsion Laboratory at the California Institute of Technology, Crosby learned that the polymer Thiokol could be used as fuel (Fundinguniverse.com 2020b).

In the early 1950s, rockets were powered by liquid fuel. Due to its high flammability, liquid rocket fuel was considered exceptionally dangerous. Thiokol's polymer gained attention as a solid-fuel polymer, making it a safer solution to liquid fuel. Bolstered by contracts with the United States military, the company grew and was able to diversify. Having gained nearly 70 percent of the rocket fuel market by the 1950s, the company began to design and manufacture rocket engines. Thiokol continued its growth and, in the 1960s, expanded into the manufacture of the propulsion systems for the Minuteman 3 rocket, the Poseidon submarine, and the Sam-D missile. The company also provided pyrotechnic devices to the U.S. government for the Vietnam War (Fundinguniverse.com 2020b).

In 1962, Thiokol named Arthur P. Simard manager of its new West Coast sales office for its Panelyte Industrial Division. Panelyte is a proprietary composite material that forms an extremely strong yet lightweight composite panel, which is used extensively by the aerospace industry. The Panelyte Industrial Division of Thiokol was located in the subject property (Independent Press-Telegram 1962: 70; Transmaterial.net 2007).

LTV-Chance Vought: A Division of Ling-Temco-Vought, Inc. (later known as LTV Aerospace)
LTV-Chance Vought, and later LTV Aerospace, occupied the subject property from 1963-1967 (LAT 1963b: 44, 1967: 67). The LTV Corporation was founded in Dallas, Texas, in 1947 when founder James L. Ling of Oklahoma formed the Ling Electrical Company. In 1955, Ling formally incorporated the company. In 1956, the company acquired L.M. Electronics, and in 1959, acquired Altec Electronic. In 1960, the company merged with Temco Aircraft, a military aircraft and missile manufacturer, and acquired defense contractor Chance Vought in 1961. The new firm became known as Ling-Temco-Vought, Inc. In 1964, while retaining a majority interest, Ling established three public companies, LTV Aerospace, LTV Ling Altec, and LTV Electrosystems (later E-Systems) from his existing operations (TSHA 2020). LTV Aerospace was formed from the LTV-Chance Vought division of Ling-Temco-Vought, Inc (LAT 1963b: 44).

In 1961, company sales reached $2.7 billion, and by 1969, the company had either acquired or was involved with 33 additional corporations. The company primarily focused on the production of steel, defense contracting, and energy-related products. The LTV Corporation again began expansion in 1977 when it merged with Lykes Corporation (a petroleum-equipment company) and Youngstown Sheet and Tube. By 1980, the company was engaged in five basic industries: steel, energy production and service, meat and food products, ocean shipping through Lykes Brothers, and aerospace. In 1984, the company acquired Republic Steel, but falling steel and oil prices, coupled with other losses, put the company on financially unstable ground. In 1986, LTV filed for bankruptcy, and by 1991, the company's workforce was cut from 48,300 to 34,600. By 2002, LTV sold its last holdings, production plants in Chicago and Cleveland, to outside investors, who formed the International Steel Group, bringing LTV Corporation's commercial tenure to an end (Crawford Auto-Aviation Museum 2016; TSHA 2020).

***B10. Significance (continued):**

Thompson-Ramo-Wooldridge Electronics (later TRW, Inc.)
Thompson-Ramo-Wooldridge Electronics, and later TRW, Inc., occupied the subject property ca. 1964-1965. The exact nature of the company's operations at this site are unclear (LAT 1964: 77; 1965c: 80).

TRW Inc. was formed in 1958 by the partnership of Cleveland-based Thompson Products and the Ramo-Wooldridge Corporation. Founded in 1901, Thompson Products initially gained notoriety as an automotive and aircraft engine parts manufacturer. In the 1950s, the company was facing a decline in aircraft sales and looked to expand into the aerospace and electronics industries. The company's general manager, J. David Wright, and vice president, Horace Shepard, made an unsuccessful bid to purchase Hughes Aircraft Company. After the failed bid, two top scientist-executives from the Hughes Aircraft Company—Simon Ramo and Dean Wooldridge—elected to leave the company to form a new electronic systems company with Thompson Products. Thompson financed Ramo and Wooldridge to establish the Ramo-Wooldridge Corporation in Los Angeles. The company quickly gained a solid standing in the advanced technology business and was soon awarded the systems engineering and technical direction contracts for the Atlas, Minutemen, Titan, and Thor missile programs (Fundinguniverse.com 2020c).

By 1958, Thompson Products and Ramo-Wooldridge merged, forming Thompson-Ramo-Wooldridge Electronics. Although the companies merged, both maintained separate corporate headquarters with Wooldridge as president in Los Angeles and Wright as chairman in Cleveland. Ramo and Shepard, a former chief of production procurement for the Air Force, also played an active role in management. However, following the merger, a failed venture in semiconductors in 1961 caused tension between the Cleveland-based group and the West Coast scientists. In the first four years after the merger, profit margins dropped from more than 4 percent to an average of barely 2 percent. In 1962, Wooldridge resigned to become a professor at Caltech. Shepard took over as president of the company, and Ramo stepped in as vice president (Fundinguniverse.com 2020c).

In 1963, the company sold most of its shares in the unprofitable Bumkor-Ramo computer division to Martin Marietta. In 1964, the company sold its microwave division as well as the division responsible for producing hi-fidelity components, intercoms, and language laboratories. That same year, to shore up the company's auto parts division, Thompson-Ramo-Wooldridge Electronics purchased Ross Gear & Tool and Marlin-Rockwell, boosting the company's overall profit margin to 4 percent for the year. In 1965, the company shortened its name to TRW, Inc. By 1965, the company's investments in the aerospace and electronics industries were becoming more apparent. Aerospace and electronics sales jumped from $14 million to $200 million in ten years; however, the company's earnings still came mostly from its oldest business, auto parts (Fundinguniverse.com 2020c).

TRW continued tightening operations, purchasing United Car for $122 million and selling its one consumer business, a hi-fi manufacturer, in 1966. By the end of the year, TRW was back on track with $870 million in sales and a 4.2 percent profit margin. The company had become a conglomerate and by 1969 was operating six groups that, in turn, administered 55 divisions. TRW maintained strict management control over all operations and by the end of the decade acquired Globe Industries. In 1969, the company was awarded a contract to build a laboratory system for NASA's Viking probe to Mars. The company was charged with producing a self-contained, 33-pound black box to house complex instrument systems capable of making biological and chemical tests to detect life. The project would prove important to the company's prestige (Fundinguniverse.com 2020c).

TRW remained strong even after unsuccessful ventures into the electronic point-of-sale machines and computer-making industries. In 1983, the company had grown to $5 billion in sales spread across 47 different businesses with 300 locations in 25 countries. In 1983, Forbes called TRW one of the best-managed, most successful American companies and deemed the company "a paragon" for other conglomerates. However, growing inefficiency coupled with an over-diversification of its holdings brought the company to a low in 1985 when it lost $7 million on sales. In response, the company refocused its efforts on three main areas: automotive products, space and defense projects, and information systems and services. Staff was also reduced from 93,200 in 1985 to 73,200 in 1988. Between 1986-1989, the company experienced steady growth; however, a risky venture into the automotive airbag industry, coupled with an automotive business recession and a leveling-off in defense spending, led to a fall in sales to 3.1 percent in 1991 (Fundinguniverse.com 2020c).

***B10. Significance (continued):**

By 1994, TRW's automotive operations accounted for 63 percent of the company's total sales, a jump from 40 percent in the early 1980s. Conversely, TRW's space and defense sales dropped from 35 percent in 1992 to just 31 percent two years later. Defense operation sales to the U.S. government also fell to 28 percent, as compared to 45 percent from the late 1980s. Following 1994, the company's outlook was bleak. By that time 20 percent of the company's revenue came from airbag sales, leaving the company vulnerable to increased competition in the airbag market. The company was hit with a lawsuit brought by Talley Industries, which resulted in a $138 million judgment against TRW in 1995. Further slowdowns in its aerospace and defense divisions in 1995 led to even further turmoil. The company was eventually acquired by Northrop Grumman in 2002 (Fundinguniverse.com 2020c).

Hughes Space and Communication Company

The Hughes Space and Communications Company was located in the subject property from 1984-2000; however, the exact nature of the work performed in the building is unknown (Lombardi and Eastman 2011: 45-46). Hughes Space and Communications was formed in 1961 in El Segundo as a part of Hughes Aircraft. Initially, the company established its headquarters at the former Nash Motors plant (located at 2060 East Imperial Highway) that Hughes had purchased in 1955. Hughes Space and Communications became a leader in satellite and space technology with the launch of its first geosynchronous communications satellite, Syncom, in 1963. In 1965, the company launched Intelsat 1, the first commercial communications satellite, and the Applications Technology Satellite (ATS-1), the first geosynchronous satellite capable of meteorological observations, in 1966 (Lombardi and Eastman 2011: 45-46).

Hughes Space and Communication did not limit itself to satellite development, and in 1966, the company developed the Surveyor 1 lunar probe, which made the first fully controlled soft landing on the moon's surface. In 1978, the company manufactured the Pioneer-Venus orbiter, which performed the first extensive radar mapping of the densely clouded planet. Additionally, in the 1990s, the Hughes' Galileo probe became the first spacecraft to penetrate Jupiter's atmosphere. The Boeing Company acquired Hughes Space and Communications in October 2000, which by that time had produced nearly 300 satellites and probes (Lombardi and Eastman 2011: 45-46).

Hughes Space and Communication Company, the last of Hughes's original assets to remain independent, was purchased by The Boeing Company in 2000 (Lombardi and Eastman 2011: 45-46; Los Angeles County Recorder's Office 2017: 1-3). The building was later purchased by L&R ZAV 650 Sepulveda LLC in July 2019 (City of El Segundo 2020: 51, 341; Los Angeles County Recorder's Office 2019: 1-3)

The Boeing Company

The Boeing Company can trace its origins to 1916 when American timber merchant William E. Boeing founded Aero Products Company after he and U.S. Navy officer Conrad Westervelt developed a single-engine, two-seat seaplane, named the B&W. The company changed its name to the Boeing Airplane Company in 1917 and built "flying boats" for the Navy during World War I. Through the 1920s and 1930s, Boeing built airplanes for the U.S. military, but the company also began expanding into airmail service and designing commercial aircraft before the onset of World War II in 1939. Boeing continued its expansion in the decades following World War II, and in the 1960s and 1970s, the company established itself in the space sector, having built the Lunar Orbiters for NASA's Apollo missions and the Mariner 10 space probe in 1974-75. In 2000, Boeing purchased the Hughes Space and Communications Company and acquired one of the largest satellite development plants in the world, forming Boeing Satellite Systems, located at 2060 East Imperial Highway in El Segundo. Sometime after the purchase, Boeing leased the subject property and has had operations there since at least 2015 (EPA 2015; Lombardi and Eastman 2011: 45-46; Weiss and Amir 2020).

***B10. Significance (continued):**

Architect/Builder

Daniel L. Dworsky, AIA
Daniel Leonard Dworsky, AIA, was born in Minneapolis, Minnesota, in 1927. Dworsky lived in both Minneapolis and Sioux Falls, South Dakota, before enrolling at the University of Michigan ca. 1945. Dworsky excelled in both his architectural studies and as an All-American collegiate athlete, being named to the All-Time Rose Bowl Team for his role as a defensive captain and linebacker for Michigan's National Championship team in 1948. In 1949, Dworsky became a first-round draft pick for the Los Angeles Dons football team and played one professional season before shifting his career focus to architecture (Business Wire 2004).

Dworsky began his career in architecture in 1950, serving as an apprentice to prominent, local early modernists William Pereira, Raphael Soriano, and Charles Luckman (LAT 1988: 70, 81). He established his own practice, Dworsky & Associates, in 1953. The firm eventually grew into one of the most prominent architectural firms in California (LAT 1988: 70, 81; Business Wire 2004). Dworsky's personal design ideology draws from the "solid, resolved concepts" of influential modernists such as Le Corbusier and Marcel Breuer (LAT 1985: 175). In a 1985 interview, Dworsky indicated that he had been encouraged to experiment by such contemporary architects as Frank Gehry and Eric Owen Moss (LAT 1985: 175).

In the firm's first 14 years of existence, Dworsky & Associates completed numerous award-winning projects. This led to Dworsky's election to the American Institute of Architects (AIA) College of Fellows at age 41. In 1984, Dworsky & Associates won the Firm of the Year award from the AIA, California Council (AIACC) and, in 2001, the firm won the Presidential Design Award for its work on the U.S. Port of Entry in Calexico, California. Furthermore, in 2004, Dworsky received a Lifetime Achievement Award from the AIACC for his "outstanding contributions to the improvement of the built environment and contribution to the goals of the profession of architecture and the AIA in California" (Business Wire 2004). Dworsky merged his firm with Cannon Design in 2000. In July 2003, he officially retired from practice (AIACC 2018). Dworsky's commitment to design excellence earned him over 100 national, regional, and community awards, and he has been voted one of the top twelve most-distinguished architects in Los Angeles (Business Wire 2004).

Table 3 profiles known major projects of Daniel Dworsky, AIA and Dworsky & Associates (PCAD 2020; LAT 1961a, 1985, 1988; UM 2005).

Table 3: Major Known Works of Daniel L. Dworsky and Dworsky & Associates

Project Name	Date
Aerospace Center, El Segundo, CA	1962
University of Michigan, Crisler Arena, Ann Arbor MI	1968
University of Los Angeles, Drake Stadium, Westwood, Los Angeles, CA	1969
Angelus Plaza, Los Angeles CA	1981
Tom Bradley International Terminal, LAX, Los Angeles, CA	1984
Federal Reserve Bank of San Francisco, Branch #2, Los Angeles, CA	1985-1987
U.S. Port of Entry, Calexico, CA	1996

The Contracting Engineers Company
The Contracting Engineers Company was a general contracting company operating in Southern California between 1939-1984. The company is responsible for numerous commercial, residential, and transportation projects throughout greater Los Angeles and Orange counties (California Secretary of State 2020; LAT 1963a: 131).

***B10. Significance (continued):**

The International Style

What it commonly known as the International Style in the United States traces its origins to Europe, specifically the period immediately following the close of World War I. While American architecture continued to heavily favor eclecticism/historicism during the interwar period, French, Dutch, and German architects—Le Corbusier, Oud and Rietveld, Walter Gropius, Marcel Breuer, and Ludwig Mies van der Rohe, to name only a few—were experimenting with new architectural forms in an attempt to develop an International architecture "independent of specific materials, sites, or cultural tradition" (McAlester 2018: 620). These architects labored under the altruistic belief that a new, international architecture would dispense with the regional differences that (they felt) had contributed to and exacerbated the atrocities of World War I (McAlester 2018: 620). Of the period that spawned the modern movement—and ultimately the International Style—historian William J.R. Curtis writes, "Instead of competing in the marketplace, the frightful technical ingenuities of the great industrial nations had ended up competing on the field of battle" (Curtis 1982 [2005]: 183). This new style would draw and build upon established architectural conventions but would experiment with new and emerging materials and technologies. Above all else, the progenitors of the International Style favored functionality over ornamentation—a sentiment that is perhaps best expressed in Mies van der Rohe's aphorism, "less is more."

A nascent modern architectural movement had been forming in the United States during the late nineteenth century promulgated by such architects as Louis Sullivan and Frank Lloyd Wright. Wright, specifically, appealed to European architects seeking to develop an international, universal architectural language. Wright had "inherited the confusions of the 'historical styles' and drawn lessons from diverse cultures as well as uniquely American influences, to formulate a grammar of design which far transcended his local situation" (Curtis 1982 [2005]: 129). Wright's ideas, having found their way to Europe prior to World War I via drawings, photographs, international travelers, and the *Wasmuth Volumes*, "encourage[d] a range of emergent theories and ideals in the general quest for a modern architecture" (Curtis 1982 [2005]: 129). These ideas about modern architecture returned to the United States following World War I, brought by such immigrant architects as William Lescaze, Rudolf Schindler, and Richard Neutra, all of whom established noteworthy practices in the 1920s (McAlester 2018: 620). However, it was not until the early 1930s that European modernism became widely acknowledged in the United States.

In 1932, the New York City Metropolitan Museum of Art (MoMA) curated the first international exhibition on modern architecture, introducing the form and aesthetic vocabulary to the American public. It was during this exhibition that the moniker "International Style" was coined. Russel Hitchcock and Philip Johnson's aptly titled book *The International Style: Architecture Since 1922* accompanied the exhibition and served to further solidify the precepts of the modern movement in American architectural discourse. Whereas the MoMA exhibition and Hitchcock and Johnson's book did much to further the ideals of the modern movement, the emigration of such elite modern architects as Walter Gropius (1934), Mies van der Rohe (1937), and Marcel Breuer (1937) ultimately bolstered the International Style as one of the leading architectural movements of the mid-to-late twentieth century. The role of Gropius and the Bauhaus in developing the International Style cannot be underestimated. The Bauhaus, a German art school founded by Gropius in 1919, espoused the virtues of combining the principles of mass production, everyday function, and aesthetics. Of the school, Gropius wrote, "The Bauhaus believes the machine to be our modern medium of design and seeks to come to terms with it" (Curtis 1982 [2005]: 193). Marcel Breuer, to whom Gropius was a mentor, was among the first students to attend the Bauhaus. Mies van der Rohe assumed leadership of the Bauhaus in 1930. Shortly thereafter, however, the school came under attack as Nazi leaders depicted it as a center for communist intellectualism and declared its teachings to be "degenerate." The school was closed by its own leadership in 1933.

The ideas of Europe's displaced modernists were welcomed in the United States. In 1934, Gropius became the dean of Harvard's Graduate School of Design. In 1937, Mies van der Rohe was offered the position of dean of the Architecture Department at Illinois Institute of Technology. These positions provided the platform from which Gropius and Mies could disseminate their ideas and theories to a generation of young American architectural students, helping to usher out the precepts of historicist design and promote modernism in the architectural education (McAlester 2018: 620-621).

In practice, the fundamental differences between the International Style and earlier styles are the use of modern lightweight materials cladding equally lightweight structural skeletons, leaving unadorned walls with the sole function of enclosing a volume or space. This allowed for flexibility in the configuration of space, fenestration, and the use of the building mass itself as a three-dimensional composition, as opposed to relying upon the use of applied ornamentation (McAlester 2018: 617).

International Style: Character-Defining Features

- Flat roof, usually without coping at the roof line
- Horizontal bands of flush-mounted windows
- Expressed structural system in steel and concrete
- Lack or absence of applied ornamentation
- Unified wall cladding, generally white stucco
- Commonly asymmetrical

***B10. Significance (continued):**

Historical Integrity
The subject property is a modest example of the International Style as executed in a mid-twentieth-century office building context. It displays several hallmark character-defining features, including a flat roof without coping, an expressed structural system in steel and concrete, lack of applied ornamentation, and unified wall-cladding. However, numerous alterations over its 58-year history have detrimentally impacted its overall integrity and its ability to convey significance.

The subject property was evaluated considering the seven aspects of integrity as defined by the Secretary of the Interior in National Register Bulletin 15: How to Apply the National Register Criteria for Evaluation (National Park Service 1997).

As an individual resource, the subject property retains **low integrity.**

Location: The subject property retains **high integrity of location** as it has not been moved from its original location.

Design: The subject property retains **low integrity of design**. Since its period of significance, the building has undergone numerous alterations that have significantly and detrimentally altered the historic design intent of the building. Included in these alterations are the enclosure of the ground floor with concrete block and granite slabs, the relocation of the main entrance, the recladding of the building in an EIFS system, the removal of sunscreens from the west (front) façade, the enclosure of historically open green space on floors two through seven, the demolition and reconstruction of interior spatial configuration, the construction of incongruous balconies on the east (rear) façade, and the alteration of the roofline with the construction of a microwave penthouse.

Setting: The subject property retains **moderately low integrity of setting.** As one of the earlier buildings to be constructed along this segment of Pacific Coast Highway (Sepulveda Boulevard), the setting has changed considerably since the building's construction. These changes include the widening of Pacific Coast Highway (Sepulveda Boulevard).

Materials and Workmanship: The subject property retains **low integrity of materials and workmanship**. The alterations that have been performed since the building's initial construction are incongruous with the materials and caliber of workmanship apparent in the building historically.

Feeling: The subject property retains **low integrity of feeling**. The building's overall low- to moderately low integrity of design, setting, materials, and workmanship contribute to its inability to satisfactorily convey the associative qualities of its particular place in time.

Association: The subject property retains **high integrity of association.** The building, even in its substantially altered state, continues to serve in its historically intended capacity as a corporate office building serving the specific needs of the aerospace industry.

California Register Evaluations
Criterion 1 – The subject property was constructed in 1962 as a commercial building serving the emergent needs of the aerospace and defense industries. Although the building housed industry leaders in the aerospace and defense industries, the type of work and/or products developed in this building are unknown. To be considered eligible for listing under Criterion 1, the subject property must be associated with an event important to history. However, research failed to conclusively link the building with any of these inventions, and a property cannot be eligible if its historical associations are speculative. Therefore, the subject property does not appear eligible for inclusion in the California Register under Criterion 1 because it does not appear to be associated with an event that has made a significant contribution to the broad patterns of history at the local, state, or national level.

Criterion 2 – Research failed to identify information regarding significant individuals associated with the subject property. The building does not appear to be associated with persons significant in our past and does not appear eligible for listing in the California Register under Criterion 2.

Criterion 3 – The subject property was constructed in 1962 and is a modest example of International-Style architecture. However, it is not comparable to other local properties that represent excellent examples of the style. Furthermore, although the building was designed by Daniel L. Dworsky, an accomplished and renowned California architect, the building is not the best representative example of his work. Additionally, the building's numerous extensive alterations severely impact its historic integrity. Therefore, the subject property does not display a distinctive type, period, or method of construction and is not a superior example of the International Style. The building is therefore not eligible under California Register Criterion 3.

Criterion 4 – The subject property is not likely to yield valuable information that will contribute to our understanding of human history because the property is not—nor was it ever—the principal source of important information pertaining to subjects like mid-twentieth-century commercial architecture. Therefore, the property does not appear eligible for listing in the California Register under Criterion 4.

***B10. Significance (continued):**

In conclusion, the building at 650 North Pacific Coast Highway does not appear to be eligible for listing in the California Register under any applicable criteria. The property was evaluated in accordance with Section 15064.5(a)(2)–(3) of the CEQA Guidelines using the criteria outlined in Section 5024.1 of the California Public Resources Code, and it is not a historical resource for the purposes of CEQA.

***P3a. Description:**

Known as Building S38, the subject property is sited at 700 North Pacific Coast Highway, El Segundo, CA 90245 (alternate address: 700 North Sepulveda Boulevard, El Segundo, CA 90245). The building is separated from North Pacific Coast Highway by a flat, asphalt-paved parking lot. Building S38 is rectangular in plan, measuring approximately 325 feet by 160 feet. It is divided into two sections: a two-story section to the west and a one-story section to the east. The surrounding terrain slopes away from North Pacific Coast Highway such that the building appears to be only one story in height along its west (front) façade. The building is of steel frame construction and rises from a concrete slab foundation. The western section possesses a flat roof surrounded by a low parapet wall. The roof is clad in modern synthetics. The eastern section possesses a flat roof with a hipped perimeter, clad in both rolled asphalt and modern synthetics. The roof of the eastern section does not possess a parapet wall. The building is clad in concrete, pressed brick (running bond and stacked bond), and sandstone. Stylistically, it is utilitarian; however, the west (front) façade exhibits a restrained Corporate Modern aesthetic. The west (front) façade measures six bays in width. Reading the façade from left to right (north to south), bays one, two, three, five, and six are divided by cast concrete fins. They are infilled with pressed brick, laid in a stacked bond pattern. Bay four recedes into the building, creating a raised concrete porch with a metal pipe railing. The porch is accessed by a flight of reinforced concrete stairs. Bay four is clad in cyclopean rubble sandstone. Whereas a metal slab pedestrian door is present (off-center) within the bay, evidence of infill and alteration to the sandstone cladding suggests that this once served as the building's primary entrance. At present, the building is accessed via a door on the north (side) façade. This door is reached via a stair and accessibility ramp.

B1. Historic Name: The Rabin Company/The Rabin-Winters Corporation
B2. Common Name: Boeing
B3. Original Use: Commercial/Manufacturing
B4. Present Use: Commercial
***B5. Architectural Style:** Corporate Modernism
***B6. Construction History:**

Originally designed to house the manufacturing facility, laboratory, and corporate offices of the Rabin Company, manufacturers and purveyors of drugs and pharmaceutical supplies, construction of Building S38 began in early 1958 (LAT 1958: 9). The building was designed by architect Ted Jaehn of Los Angeles and built by the Contracting Engineers Company (LAT 1958: 9). The building's reported cost of construction exceeded $600,000.00 (LAT 1958: 9). A review of Los Angeles County Department of Public Works (LACDPW) building permits does not reveal substantial, document alterations to the building. However, field observation indicates that the building's historical entrance has been altered and relocated. The historical entrance, located within bay four of the building's west (front) façade, has been infilled. The entrance has been relocated to the north façade. A stair and accessibility ramp have been constructed to access the new entrance.

Historic Context

Incorporated as a city on January 18, 1917, the industrial history of El Segundo is reflected in its name. Translating to "the second" in Spanish, the name El Segundo reflects the city's role in the region's oil industry. In 1911, Standard Oil Company located its second West Coast oil refinery in what would become present-day El Segundo. Throughout the 1910s and 1920s, the refinement of oil and the production of petroleum products remained central to the region's economy. However, in 1927, Mines Field opened a short distance north of the subject property.

Later known as the Los Angeles Municipal Airport—eventually growing into Los Angeles International Airport (LAX)—Mines Field was the first municipal airport serving the greater Los Angeles area. The siting of the airport to the immediate north of El Segundo had a profound effect on the local and regional economies, driving the diversification of businesses. This ultimately resulted in an eclipse of the oil industry's prominence. During the 1940s and 1950s, several aviation and defense contractors relocated to El Segundo, citing proximity to the airport. Among these companies were Douglas and Hughes Aircraft, Northrop (later Northrop Grumman), and North American Aviation (later Rockwell) (El Segundo Chamber of Commerce 2020; Harper and Smith 2008: 18). The establishment of the Los Angeles Air Force Base in the 1960s further bolstered the region's economic fortune (Harper and Smith 2008: 18-19). Growth and diversification of El Segundo continued beyond the 1950s and 1960s with aviation industry leaders like Boeing, Lockheed Martin, and Raytheon choosing to locate within the city. However, the diversification of businesses during the mid-twentieth century was not limited to companies specializing in aviation and aeronautics.

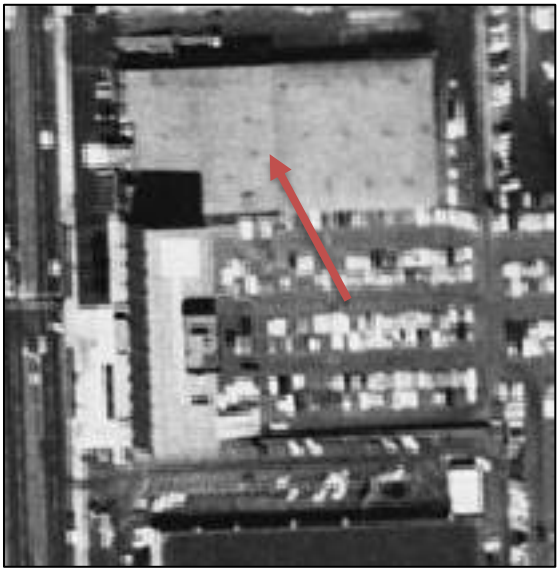
***B10. Significance (continued):**

North Sepulveda/North Pacific Coast Highway Development
In 1962, the El Segundo Chamber of Commerce dubbed the stretch of Sepulveda Boulevard running through the city as the "International Mile." Drawing inspiration for the name from nearby LAX, the "International Mile" included what was, at the time, the tallest building in the South Bay area: the eight-story Aerospace Center at 650 North Sepulveda Boulevard (now 650 North Pacific Coast Highway).

Although the moniker "International Mile" did not endure, development continued along Sepulveda Boulevard well into the late twentieth century. In 1963, the area between East Mariposa Avenue and East El Segundo Boulevard remained undeveloped. However, by 1980, the "International Mile" corridor between Imperial Highway and East El Segundo Boulevard had been fully developed with multi-story hotel and commercial office buildings, which altered the streetscape. (Brighton 2014; El Segundo Chamber of Commerce 2017: 30-36; LAT 1962: 154)

Property Specific Research
In 1957, the Rabin Company (later the Rabin-Winter Corporation) acquired a vacant parcel on North Sepulveda Boulevard and filed a building permit with LACDPW to construct the subject property (UCSB 1952, 1965; LACDPW 2020). Construction began in 1958. The Rabin Company relocated from its previous location at 4800 Dekalb Avenue in Vernon, California (LAT 1958: 9). The Rabin Company specialized in the manufacture and distribution of drugs and other pharmaceutical products. A.H. Rabin, president of the Rabin Company, enlisted Los Angeles architect and structural engineer Ted Jaehn to design its new plant and corporate offices (LAT 1958: 9). The Rabin Company occupied the building until ca. 1969 (LAT 1969: 354).

Further research failed to identify the type of work, products produced, or any additional information regarding the Rabin Company formerly located at 700 North Pacific Coast Highway (CDNC 2020; El Segundo Chamber of Commerce 2017).



Photograph 2 (left): 1952 aerial photograph depicting the property at 700 North Pacific Coast Highway, vacant (UCSB 1952).
Photograph 3 (right): 1965 aerial photograph depicting extant building at 700 North Pacific Coast Highway (UCSB 1965).

***B10. Significance (continued):**

Corporate Occupancy, 1958 to Present

Table 1 identifies known businesses located on the property based on available business research (EPA 2015; LAT 1958: 9, 1969: 354; News Pilot 1981: 35; Redondo Reflex 1973: 36; The Daily Breeze 1979: 56; SF Chronicle 1978: 47)

Table 1: Corporate Occupancy

Date	Address	Business
1958-1970	700 North Sepulveda Boulevard	The Rabin Company (aka Rabin-Winters Corporation)
1970-1973	700 North Sepulveda Boulevard	BBC Laboratories
1978	700 North Sepulveda Boulevard	Biogenetic Laboratories
1979-1981	700 North Sepulveda Boulevard	Delvin Pharmaceuticals
2015-Present	700 North Sepulveda Boulevard	The Boeing Company

The Boeing Company
The Boeing Company can trace its origins to 1916 when American timber merchant William E. Boeing founded Aero Products Company after he and U.S. Navy officer Conrad Westervelt developed a single-engine, two-seat seaplane, named the B&W. The company changed its name to the Boeing Airplane Company in 1917 and built "flying boats" for the Navy during World War I. Through the 1920s and 1930s, Boeing built airplanes for the U.S. military, but the company also began expanding into airmail service and designing commercial aircraft before the onset of World War II in 1939. Boeing continued its expansion in the decades following World War II and in the 1960s and 1970s, the company established itself in the space sector, having built the Lunar Orbiters for NASA's Apollo missions and the Mariner 10 space probe in 1974-75 (Lombardi and Eastman 2011: 45-46; Weiss and Amir 2020).

In 2000, Boeing purchased the Hughes Space and Communications Company and acquired one of the largest satellite development plants in the world, forming Boeing Satellite Systems, located at 2060 East Imperial Highway in El Segundo. Sometime after the purchase, Boeing leased the building at 700 North Pacific Coast Highway; it has performed operations out of that location since at least 2015 (EPA 2015; Lombardi and Eastman 2011: 45-46; Weiss and Amir 2020).

Further research failed to identify additional information regarding the abovementioned businesses formerly located at 700 North Pacific Coast Highway (Ancestry.com 2020; CDNC 2020; Fundinguniverse.com 2020; Newspapers.com 2020; El Segundo Chamber of Commerce 2017).

Architect/Builder
The subject property is attributed to Los Angeles architect and structural engineer Ted Jaehn (LAT 1958:9). Further research failed to identify additional information regarding Jaehn's work (Ancestry.com 2020; CDNC 2020; PCAD 2020; Newspapers.com 2020).

Architectural Style: Corporate Modernism (ca. 1955-1975)
Corporate Modernism—a subtype of the larger mid-twentieth century Modern Movement—is often broadly applicable to large-scale civic or corporate developments. This subtype is characterized by the heavy influence of aesthetic and architectural principles espoused by such twentieth century architects and architectural firms as Mies van der Rohe, Philip Johnson, and Skidmore, Owings and Merrill. Specifically, the design ideology of Corporate Modernism centers on the expression of structure applied as a module, either in steel or concrete. The entire composition often repeats patterns of steel and glass, often with virtually no ornamentation aside from advertising. The overall lack of applied ornamentation is a fundamental design principle: the structure and its material serve as both form and ornament (Whiffen and Koeper 1990: 357).

Corporate Modernism: Character-Defining Features

- Large rectangular massing
- Flat or low-pitched roofs
- Steel or concrete structure as primary expression of the building
- Horizontal bands of windows set within the structural module
- Alternate design of large concrete volume with little or no fenestration
- Building tower set back from the street in a landscaped plaza
- Tower frequently set atop a multi-story base framed by plain concrete or steel columns
- Overall absence of applied ornamentation, with the exception of corporate advertisement signs mounted directly to building

***B10. Significance (continued):**

Historical Integrity
The building located at 700 North Pacific Coast Highway is a minor example of the Corporate Modern Style and displays character-defining features of the style including an expressed structural system in steel and concrete, lack of applied ornamentation, and large rectangular massing. It was designed by structural engineer and architect Ted Jaehn; however, Jaehn does not appear to have gained particular significance during his tenure because he is not listed in the Pacific Coast Architecture Database of significant architects and architectural firms, nor was he identified in electronic database searches (PCAD 2020).

California Register Evaluations
Criterion 1 – The building located at 700 North Pacific Coast Highway was constructed in 1958, apparently as the new headquarters for the Rabin Company. It operated as the Rabin Company's headquarters until 1970 Since 1970, several pharmaceutical laboratories were located in the building. Finally, the Boeing Company utilizes the building as part of its satellite systems division. It does not appear that any of the aforementioned businesses were significant at a local level, within the community of El Segundo.

To be considered eligible for listing under Criterion 1, 700 North Pacific Coast Highway must be associated with an event important to history. However, research failed to conclusively link the building with any significant events or inventions, and a property cannot be eligible if its historical associations are speculative. As such, the resource does not appear to be associated with a significant event or theme in local, state, or national history and does not appear to be eligible for listing in the California Register under Criterion 1.

Criterion 2 – Research failed to identify information regarding significant individuals associated with the property. Therefore, the property does not appear associated with persons significant in our past and does not appear eligible for listing in the California Register under Criterion 2.

Criterion 3 – The building at 700 North Pacific Coast Highway is a minor example of Corporate Modernism and is not comparable to local resources that represent excellent examples of the style. Furthermore, 700 North Pacific Coast Highway is not known to represent the work of a master. Therefore, the building at 700 North Pacific Coast Highway does not display a distinctive type, period, or method of construction; does not represent the work of a master engineer or designer; and is not a superior example of an architectural style. The building is not eligible under California Register Criterion 3.

Criterion 4 – The property is not likely to yield valuable information which will contribute to our understanding of human history. The property is not and never was the principal source of important information pertaining to subjects such as mid-twentieth century commercial architecture. Therefore, the property does not appear eligible for listing in the California Register under Criterion 4.

In conclusion, 700 North Pacific Coast Highway appears to be ineligible for listing in the California Register under Criteria 1, 2, 3, and 4 because it lacks association with a historic context. Additionally, the resource was evaluated in accordance with Section 15064.5(a)(2)–(3) of the CEQA Guidelines using the criteria outlined in Section 5024.1 of the California Public Resources Code, and it is not a historical resource for the purposes of CEQA.

RE: **PRELIMINARY GEOTECHNICAL INVESTIGATION REPORT**
Proposed Commercial Building
650-700 North Pacific Coast Highway
El Segundo, California 90245

Dear Mr. Vela:

This letter transmits Stantec Consulting Services Inc.'s (Stantec's) preliminary geotechnical investigation report for the proposed commercial office and parking structure building located at 650-700 North Pacific Coast Highway, in the City of El Segundo, California. The purpose of this report is to evaluate the subsurface conditions and provide preliminary geotechnical recommendations for the proposed development. Final geotechnical recommendations will be necessary once the final layout of the facility and final structural loads have been established.

We appreciate the opportunity to work with you on this project. If you have any questions, please call us at the numbers below.

Respectfully submitted,

STANTEC CONSULTING SERVICES INC.

1. INTRODUCTION

This report presents the results of Stantec's preliminary geotechnical investigation for the proposed office and parking structure building at 650 -700 North Pacific Coast Highway, in El Segundo, California (the Site). The project location is shown on the Site Location Map, Figure 1 and the approximate area of the proposed development is shown on the Site Vicinity Map, Figure 2.

1.1 PROPOSED DEVELOPMENT

We understand that the proposed office and parking structure building will include construction of a 62,426 square feet (sf) seven-story building and associated pavement and landscape areas in the proposed development. The existing eight-story 120,713 sf steel building and combined single story and two-story brick buildings totaling 73,517 sf will remain. The Site is approximately 7.2 acres in size and is currently at the proposed rough grade elevation. The approximate area of the proposed structural improvements is included on the Subsurface Exploration Map, Figure 3.

1.2 PURPOSE AND SCOPE OF WORK

1.2.1 Purpose

The purpose of this report is to evaluate the subsurface conditions at the Site and provide geotechnical recommendations for design and construction of the proposed project. This report has been prepared in general accordance with accepted geotechnical engineering principles and in general conformance with the approved proposal.

1.2.2 Scope of Work

Our scope of work consisted of the following:

- Review available subsurface information for the Site and nearby locations,
- Perform a site reconnaissance to evaluate general geotechnical and site conditions,
- Perform a field subsurface exploration program consisting of drilling six hollow stem auger (HSA) borings, and converting three of the HSA borings into deep percolation wells,
- Perform geotechnical laboratory tests on selected samples,
- Perform geotechnical engineering analyses, and
- Preparation of this geotechnical investigation report for the proposed project.

2. FIELD INVESTIGATION

2.1 PRE-DRILLING PROCEDURES

DigAlert (Underground Service Alert of Southern California) was notified before commencing subsurface exploration activities to identify underground utilities that could conflict with the proposed borings. In addition, a private utility locator was retained, and the upper five feet were hand augered to clear the boring locations for potential conflicts with underground utilities.

2.2 DRILLING OPERATIONS

Six test borings (B1 through B3 and P1 through P3) were drilled using a CME-85 drill rig equipped with hollow-stem augers between May 28 and May 29, 2020 by ABC Liovin Drilling Co. (ABC). Soil borings were advanced to depths ranging from approximately 21.5 and 51.5 feet below the existing ground surface (bgs), and their approximate locations are shown on the Subsurface Exploration Map, Figure 3. Specifically, B1 through B3 were advanced to depths ranging from 21.5 to 31.5 feet bgs and P1 through P3 were advanced to 51.5 feet bgs. The borings were logged by a Stantec field geologist, who also collected samples of the materials encountered for examination and laboratory testing.

2.3 PERCOLATION TESTING

Three of the borings were converted to deep percolation wells (P1 through P3) and percolation testing was performed in the wells by a Stantec field geologist on June 1, 2020 in general accordance with Los Angeles County percolation testing guidelines.

2.4 SAMPLING

Relatively undisturbed samples were obtained using a modified California (CAL) sampler, which is a ring-lined split tube sampler with a 3-inch outer diameter and 2½-inch inner diameter. CAL sampling followed ASTM D3550 (Standard Practice for Ring-Lined Barrel Sampling of Soils) procedures. Disturbed samples were obtained using a Standard Penetration Test (SPT) sampler, which is a split tube sampler with a 2-inch outer diameter and 1⅜-inch inner diameter. SPTs were performed in general accordance with ASTM D1586 (Standard Test Method for Penetration Test and Split-Barrel Sampling of Soils), and D6066 (Standard Practice for Determining the Normalized Penetration Resistance of Sands for Evaluation of Liquefaction Potential). Disturbed bulk samples were also obtained from the drill cuttings.

The CAL and SPT samplers were driven with a 140-pound weight dropping 30 inches. The number of blows per 6-inch increment is noted on the boring logs. ABC provided a report (Earthspectives, 2019) which indicates the average hammer energy efficiency on the drill rig used at the project was 80%.

Field Investigation
June 27, 2020

Samples were classified in the field using the Unified Soil Classification System (USCS), in accordance with ASTM D2488 (Standard Practice for Description and Identification of Soils [Visual-Manual Method]) procedures. The laboratory testing confirmed or modified field classifications as necessary for presentation on the boring logs. Soil samples were removed from the samplers, placed in appropriate containers, and transported in accordance with ASTM D4220 (Standard Practice for Preserving and Transporting Soil Samples). Upon completion, borings were backfilled with grout. The boring logs are included in Appendix A.

3. LABORATORY TESTING

The following laboratory tests were performed in general accordance with ASTM and California Test procedures:

Table 1. Summary of Laboratory Tests

Type of Test	ASTM Designation	Number Performed
Materials Finer than No. 200 Sieve	ASTM D1140	1
Gradation Analysis	ASTM D422 and ASTM C136	11
Atterberg Limits	ASTM D4318	1
Direct Shear	ASTM D3080	5
Chemical Tests for Corrosion Potential	CA DOT test methods	2

The laboratory test results are presented in Appendix B.

4. GEOLOGIC SETTING AND SITE CONDITIONS

4.1 REGIONAL GEOLOGY

The site is located in the northwestern portion of the Peninsular Range geologic province which consists of a series of ranges separated by northwest trending valleys, subparallel to faults branching from the San Andreas Fault. The Peninsular Ranges extend into lower California and are bound on the east by the Colorado Desert. The Site resides in the portion of the Province drained by surface runoff toward San Pedro Bay.

Geologic mapping presented in the California Geological Survey (CGS), Geologic Map of the Long Beach 30x60' Quadrangle (CGS, 2003) indicates the site is underlain by Quaternary Old Eolian Basin deposits. Literature from the CGS indicates the site is underlain by artificial fill in the western portion of the site and old eolian deposits consisting dense to very dense sand of the late to middle Pleistocene era.

4.2 SURFACE CONDITIONS

The project Site is approximately 7.2 acres in size and is currently occupied by an eight-story 128,544 sf building, one single story and one 2-story brick building totaling 78,512 sf, paved parking, and landscape areas. The existing buildings will be repurposed as office space. The project Site is bound by North Pacific Coast Highway (PCH) (aka North Sepulveda Boulevard) followed by restaurants and paved parking lots to the west, and a mix of light industrial and commercial buildings to the north, east, and south.

The Site is generally flat and slopes to the northwest to southeast. Based on Google Earth®, the ground surface of the Site is at an approximate elevation of 110 to 130 feet (WGS84 Datum).

4.3 SUBSURFACE CONDITIONS

The materials encountered in our borings consist of Old Eolian deposits (Qoe). A brief description of the subsurface conditions is provided in this section. Detailed descriptions of the subsurface conditions are provided in the boring logs included in Appendix A.

Old Eolian Deposits (Qoe) – Old Eolian deposits were encountered below the site and may extend to depths greater than 51.5 feet bgs. The Old Eolian deposits encountered at this location primarily consist of sand with variable amounts of silt and clay (SP, SW, SP-SM, SW-SC, and SM USCS soil type) and clay with variable amounts of sand (CL USCS soil type) to the maximum depth of exploration. The sandy deposits encountered were loose to very dense and generally dry to moist. The low plasticity clays were stiff and generally moist.

Groundwater - Groundwater was not encountered during this investigation. Based on groundwater data collected at an offsite location approximately 250 feet north of the site, groundwater is expected to be encountered at a depth of approximately 121 feet below the ground surface (bgs) (CRA, 2010). Groundwater levels may fluctuate in the future due to rainfall, irrigation, broken pipes, or changes in site drainage.

5. GEOLOGIC HAZARDS

5.1 FAULTING AND SURFACE FAULT RUPTURE

As in most parts of California, the Site is located in a seismically active area. The estimated closest distance from the Site to major nearby mapped active faults is presented in the table below.

Table 2. Faults in Site Vicinity

Fault	Distance (miles) [1]	Maximum Moment Magnitude [1]
Newport – Inglewood	3.5	7.5
Palos Verdes	4.9	7.7
Puente Hills (LA)	8.1	7.0
Santa Monica	8.8	7.4
Malibu Coast	10.4	7.0
Hollywood	11.0	6.7
Anacapa - Dume	11.2	7.2
Elysian Park (Upper)	13.4	6.7
Puente Hills (Santa Fe Springs)	14.7	6.7
Raymond	16.7	6.8
Verdugo	18.5	6.9
Puente Hills (Coyote Hills)	20.3	6.9
Elsinore	20.5	7.9
Sierra Madre	24.5	7.3
Northridge	26.5	6.9

[1]Measured from 2008 National Seismic Hazard Maps – Source Parameters Website - USGS (USGS, 2008).

As noted above, the closest known active fault is the Newport-Inglewood Fault, located approximately 2.7 miles northeast of the Site. No active faults are known to underlie or project toward the Site. Therefore, the probability of surface fault rupture at the Site from a known active fault is considered low.

5.2 CALIFORNIA BUILDING CODE SEISMIC CRITERIA

A geologic hazard likely to affect the project is ground-shaking as a result of movement along an active fault zone in the vicinity of the Site. The seismic parameters in accordance with the 2019 California Building Code (CBC) are presented below:

Table 3. 2019 CBC Seismic Parameters and Peak Ground Acceleration

Parameter	Value
Site Coordinates	Latitude : 33.925021° Longitude : -118.396152°

Table 3. 2019 CBC Seismic Parameters and Peak Ground Acceleration

Parameter	Value
Mapped Spectral Acceleration Value at Short Period: S_s	1.848g
Mapped Spectral Acceleration Value at 1-Second Period: S_1	0.65g
Seismic Site Classification	D
Short Period Site Coefficient: F_a	1.0
1-Second Period Site Coefficient: F_v	2.5
Site Class Adjusted Acceleration Value at Short Period: S_{MS}	1.848g
Site Class Adjusted Acceleration Value at 1-Second Period: S_{M1}	1.625g
Design Spectral Response Acceleration at Short Periods: S_{DS}	1.232g
Design Spectral Response Acceleration at 1-Second Period: S_{D1}	1.089g
Peak Ground Acceleration adjusted for Site Class Effects: PGA_M	0.875g

ASCE 7-16 – Report generated through ASCE 7 Hazards Report website (ASCE, 2020) – accessed June 22, 2020.

A site-specific ground motion hazard analysis is recommended as part of the Final Geotechnical Investigation.

5.3 LIQUEFACTION AND DYNAMIC SETTLEMENT

Liquefaction is the transformation of a deposit of soil from a solid state to a liquefied state as a consequence of increased pore pressure and reduced effective stress. Often, this transformation results from the cyclic loading of an earthquake and the soil acquires "mobility" sufficient to permit both horizontal and vertical movements. Soils that are most susceptible to liquefaction are clean, loose, saturated (below groundwater), and uniformly graded sands. The vast majority of liquefaction hazards are associated with sandy soils and silty soils of low plasticity. Cohesive soils with a plasticity index (PI) greater than 7 are generally not considered susceptible to soil liquefaction, although they can be subject to cyclic softening if they are soft enough, and if the seismic demand is relatively high.

The Site is not located in a California Geological Survey Liquefaction Hazard Zone. This zone is defined as areas where historical occurrence of liquefaction, or local geological, geotechnical and groundwater conditions indicate a potential for permanent ground displacements such that mitigation would be required.

Given the depth to groundwater, the site is not subject to liquefaction induced settlement. However, the dry sand settlement potential was evaluated with the LiqSVs v1.3.3.1 computer program (Geologismiki, 2018) using the SPT data from soil borings P1 through P3. Liquefaction triggering methods developed by Idriss and Boulanger (2014) were used in our liquefaction evaluation. Our evaluation was based on the site class adjusted peak ground acceleration of 0.88g, as presented in Table 2, and an earthquake magnitude of 6.7, the modal earthquake magnitude from the 2014 USGS deaggregation website. The in-situ groundwater level of 121 feet bgs was used to evaluate the cyclic resistance ratio of the on-site soil, and the historical high groundwater depth of approximately 121 feet was used to evaluate the cyclic stress ratio for the design earthquake.

Loose to very dense granular soil is generally present from the ground surface to a depth of at least 26 feet at the site. Based on the denseness, most of this granular soil is generally not susceptible to seismically induced settlement. However, some of the unsaturated, loose to medium dense sand in the upper 50 feet may densify as a result of earthquake shaking, causing ground surface settlement. Ground surface total settlements due to compression in the unsaturated zone are estimated to be on the order of 1.72-inches. Differential settlement over a span of approximately 30 feet is estimated to be approximately half of the total settlement. The results of the liquefaction analyses using the LiqSVs software are provided in Appendix C - Liquefaction Analyses.

If the fundamental period (T) for the structure is greater than 0.5 seconds as determined by the project structural engineer, a site-specific ground motion hazard analysis or site response analysis may be required to determine ground motions for the proposed structures.

5.4 LIQUEFACTION-INDUCED LATERAL SPREADING

Liquefaction induced lateral spreading can occur in areas of sloping ground, or towards a free face. Given the relatively flat topography, distance to a free face, and near surface soil conditions above the water table, the potential for liquefaction-induced lateral spreading is considered low.

5.5 FLOODING, TSUNAMIS AND SEICHES

The Site is located within a FEMA flood Zone X, which is an area of minimal flood hazard (FEMA, 2008). Therefore, damage due to flooding is considered low.

The Site is not located within a Tsunami Inundation Area; therefore, damage due to tsunamis is considered low.

5.6 EXPANSIVE SOILS

The near-surface soils (upper approximate 10 feet) have a low expansion potential. Our soil classifications and laboratory test results show that the near surface (upper 10 feet) samples tested are granular with low-plasticity fines. Accordingly, mitigation for expansive soils is not considered necessary for onsite soils at this site.

If imported soils are used for earthwork, Stantec recommends that the proposed soils be tested for expansion potential prior to import. Imported soils should be approved by the Geotechnical Engineer before being imported.

6. CONCLUSIONS

Based on our field exploration, laboratory testing and engineering and geologic analyses, it is our opinion that the Site is suitable for construction of the proposed commercial building improvements from a geotechnical engineering and engineering geology viewpoint; however, there are existing geotechnical conditions associated with the Site that warrant consideration during the planning stages. The main geotechnical conclusions for the project are presented in the following paragraphs.

- No active faults are known to underlie or project toward the Site. Therefore, the probability of surface fault rupture occurring at the Site from a known active fault is considered low.

- Old Eolian deposits were encountered below the site and may extend to depths greater than 51.5 feet bgs. The Old Eolian deposits encountered at this location primarily consist of sand with variable amounts of silt and clay (SP, SW, SP-SM, SW-SC, and SM USCS soil type) and clay with variable amounts of sand (CL USCS soil type) to the maximum depth of exploration. The sandy deposits encountered were loose to very dense and generally dry to moist. The low plasticity clays were stiff and generally moist.

- Groundwater was not encountered during this investigation. Based on groundwater data collected at an offsite location approximately 250 feet north of the site, groundwater is expected to be encountered at a depth of approximately 121 feet below the ground surface (bgs) (CRA, 2010). Groundwater levels may fluctuate in the future due to rainfall, irrigation, broken pipes, or changes in site drainage.

- Loose to very dense granular soil is generally present from the ground surface to a depth of at least 26 feet at the site. Based on the denseness, most of this granular soil is generally not susceptible to seismically induced settlement. However, some of the unsaturated, loose to medium dense sand in the upper 50 feet may densify as a result of earthquake shaking, causing ground surface settlement. Ground surface total settlements due to compression in the unsaturated zone are estimated to be on the order of 1.72-inches. Differential settlement over a span of approximately 30 feet is estimated to be approximately half of the total settlement. The results of the liquefaction analyses using the LiqSVs software are provided in Appendix C - Liquefaction Analyses.

7. RECOMMENDATIONS

7.1 EARTHWORK

The following recommendations are provided regarding specific aspects of the proposed earthwork construction. These preliminary recommendations should be considered subject to revision based on Site layout, foundation loads, and additional geotechnical evaluation of the conditions observed by the Geotechnical Engineer during grading operations.

7.1.1 Site Preparation

Site preparation should begin with the removal of existing buried slabs and foundations, vegetation, highly organic soil, leach lines, septic tanks, and any other unsuitable materials, as applicable. Existing underground utilities within the proposed construction areas should be completely removed and/or rerouted. Grading should conform to the guidelines presented in the 2019 California Building Code (CBC, 2019), as well as the pertinent requirements of the City of El Segundo and Los Angeles County.

7.1.2 Remedial Grading

Building Foundations:

To provide uniform support for the proposed retaining wall, removal of the existing soils to a minimum depth of 2 feet below the bottom of the footings is recommended. The removed soils may be placed back in the excavation as compacted fill, in accordance with the recommendations of Section 7.1.3. Removal, replacement, and compaction should be completed laterally at least five feet beyond the outside edge of the footings unless constrained by existing structures.

The continuous footing along subexcavations that do not extend at least five feet beyond the outside edge of the footing should be designed as a grade beam or with sufficient rebar reinforcement to reduce the potential for differential settlement.

Retaining Wall Foundations:

To provide uniform support for the proposed retaining wall, removal of the existing soils to a minimum depth of 2 feet below the bottom of the footings is recommended. The removed soils may be placed back in the excavation as compacted fill, in accordance with the recommendations of Section 7.1.3. Removal, replacement, and compaction should be completed laterally at least five feet beyond the outside edge of the footings unless constrained by existing structures.

The continuous footing along subexcavations that do not extend at least five feet beyond the outside edge of the footing should be designed as a grade beam or with sufficient rebar reinforcement to reduce the potential for differential settlement.

Concrete Pavement and Hardscape:

Remedial grading for pavement and hardscape areas should include removal of the existing soils to a depth of at least 18 inches below the existing ground surface or subgrade elevation, whichever is deeper. Subgrade elevation is defined as the top of soil elevation provided in the grading plan. The soil exposed at the base of the excavation should be scarified to a depth of 8 inches, and moisture conditioned to within 2 percentage points of the optimum moisture content. Hardscape subgrade should be compacted to at least 90% relative compaction. Pavement subgrade should be compacted to at least 90% relative compaction.

Field Observations:

The Geotechnical Engineer should check the bottom of excavations. If soft, loose, or otherwise unsuitable soils are encountered, the depth of removal may need to be extended.

7.1.3 Fill Placement and Compaction

Excavated materials determined by the Geotechnical Engineer to be satisfactory can be reused as compacted fill. We anticipate that the majority of the excavated materials can be re-used as compacted fill soils. The Geotechnical Engineer should approve the fill material before placement.

Where large compaction equipment is used, such as sheep's foot or smooth drum compactors, fill should be placed in 6- to 8-inch thick loose, horizontal lifts, moisture conditioned to within 2 percentage points of the optimum moisture content and compacted to at least 90% relative compaction. Thinner lifts will be required for smaller compaction equipment. The maximum dry density and optimum moisture content for the evaluation of relative compaction should be determined in accordance with ASTM D1557.

7.1.4 Yielding Subgrade Conditions

The soil encountered at the bottom of the remedial grading excavations can exhibit "pumping" or yielding if they become saturated in response to periods of significant precipitation, such as during the winter rainy season. If this occurs, corrective measures should be performed with oversight from the Geotechnical Engineer.

In order to help stabilize the yielding subgrade soils within the bottom of the removal areas, the contractor can consider the placement of stabilization fabric or geo-grid over the yielding areas, depending on the relative severity of the yielding.

Mirafi 600X (or approved equivalent) stabilization fabric may be used for areas with low to moderate yielding conditions. Geo-grid such as Tensar TX-5 may be used for areas with moderate to severe yielding conditions. Uniform sized, ¾- to 2-inch crushed rock should be placed over the

stabilization fabric or geo-grid. A 6- to 12-inch thick section of crushed rock will typically be necessary to stabilize yielding ground.

If significant voids are present in the crushed gravel, a filter fabric should be placed over the crushed gravel to prevent migration of fines into the gravel and thus potential settlement of the overlying fill. Fill soils, which should be placed and compacted in accordance with the recommendations presented herein, should then be placed over the fabric or geo-grid until design grades are reached. The crushed gravel and stabilization fabric or geo-grid should extend at least 5 feet laterally beyond the limits of the yielding areas.

7.1.5 Dewatering

Groundwater was not encountered during our investigation to a maximum depth of 51.5 feet bgs. Accordingly, we do not anticipate that groundwater will be a significant consideration for this project.

7.1.6 Expansive Soil

The near-surface soils (approximately upper 10 feet) have a low expansion potential. Our soil classifications and laboratory test results show that the near surface (upper 10 feet) samples tested are granular with low-plasticity fines. Accordingly, mitigation for expansive soils is not considered necessary at this site. The grading and foundation recommendations presented in this report reflect a low expansion potential

7.1.7 Imported Material

Imported materials, if used for fill, should be predominately granular, contain no rocks or lumps greater than 3 inches in maximum dimension, and have an Expansion Index less than 20, and a Plasticity Index less than 15. Imported materials should be reviewed and approved by the Geotechnical Engineer before being brought to the Site.

7.1.8 Site Excavation Characteristics

During the recent geotechnical investigation, the soil boreholes were drilled using a truck-mounted, hollow stem auger drill rig. As the drilling was completed with moderate effort, conventional earth moving equipment should be capable of performing the excavations required for site development.

7.1.9 Oversized Material

Excavations may generate oversized material. Oversized material is defined as rocks or cemented clasts greater than 3 inches in largest dimension. Oversized material should be broken down to no greater than 3 inches in largest dimension for use in fill or be removed from the Site.

7.1.10 Temporary Excavations

The existing native soils can be considered Type C for excavation in accordance with OSHA and Cal-OSHA requirements. Temporary excavations should be shored or excavated with a slope not steeper than 1:1 (horizontal to vertical) in accordance with OSHA and Cal-OSHA requirements.

The excavations should be inspected daily by the contractor's Competent Person before personnel are allowed to enter the excavation. Any zones of potential instability, sloughing or raveling should be brought to the attention of the Geotechnical Engineer and corrective action implemented before personnel begin working in the excavation. Excavated soils should not be stockpiled behind temporary excavations within a distance equal to the depth of the excavation.

The project geotechnical engineer should be notified if other surcharge loads are anticipated so that lateral load criteria can be developed for the specific situation. If temporary slopes are to be maintained during the rainy season, berms are recommended near the tops of slopes to prevent runoff water from entering the excavation and eroding the slope faces.

7.1.11 Temporary Cantilever Shoring

Temporary excavations to depths up to approximately 10 feet bgs are anticipated for construction of the foundations. Where cantilevered shoring is used in lieu of sloping the temporary excavation sidewalls, the shoring design may be tentatively based upon an active earth pressure equal to a fluid weighing 40 pounds per cubic foot (pcf). The passive pressures above the groundwater level may be based on a fluid weighing 340 pcf.

These pressures are based on level ground conditions in front and behind the wall with no surcharge loads within 10 feet of the excavation. The earth pressures indicated above do not include a safety factor; therefore, the shoring design should include an appropriate safety factor for the overall performance of the system.

7.1.12 Braced Shoring System

For braced shoring above the groundwater level, a uniform rectangular pressure distribution should be used from top to bottom of the shoring equivalent to the following,

Bracing: 30H psf/ft

where H is the depth of the excavation, in feet.

These pressures are based on level ground conditions in front and behind the wall with no surcharge loads within 10 feet of the excavation. The earth pressures indicated above do not include a safety factor; therefore, the shoring design should include an appropriate safety factor for the overall performance of the system.

7.1.13 Pipelines

Typical pipe bedding as specified in the Standard Specifications for Public Works Construction (GREENBOOK) may be used. As a minimum, it is recommended that pipe be supported on at least 4 inches of granular bedding material, such as 3/4-inch rock or clean coarse sand with less than 5 percent fines and a sand equivalent of 40 or more as evaluated by ASTM D2419.

The bedding should extend from the bottom of the trench to at least 1 foot above the top of the pipe. Sand bedding should be mechanically compacted to at least 90 percent relative compaction. Jetting of sand bedding should not be permitted.

Onsite material, imported select material, or 2-sack cement/sand slurry may be used as backfill in trenches above the pipe bedding. The material selected should match the engineering characteristics of the soils adjacent to the trench. Utility trench backfill beneath structures and hardscape should be compacted to at least 90% relative compaction.

The modulus of soil reaction (E') is used to characterize the stiffness of soil backfill placed along the sides of buried flexible pipelines. For the purpose of evaluating deflection due to the load associated with trench backfill over the pipe, a value of 1,500 pounds per square inch (lbs/in^2) is recommended for the general site conditions assuming granular bedding material (sand or gravel) is placed around the pipe.

7.1.14 Surface Drainage

Final surface grades around structures should be designed to collect and direct surface water away from the structure and toward appropriate drainage facilities. The ground around the structure should be graded so that surface water flows rapidly away from the structure without ponding. In general, we recommend that the ground adjacent to the structure slope away at a gradient of at least 2%. Densely vegetated areas where runoff can be impaired should have a minimum gradient of at least 5% within the first 5 feet from the structure. Roof gutters with downspouts that discharge directly into a closed drainage system are recommended on structures. Drainage patterns established at the time of fine grading should be maintained throughout the life of the proposed structures. Site irrigation should be limited to the minimum necessary to sustain landscape growth. Should excessive irrigation, impaired drainage, or unusually high rainfall occur, saturated zones of perched groundwater can develop. Saturated soil zones may result in increased maintenance and could impact structure stability.

7.1.15 Grading Plan Review

Stantec should review the grading plans and earthwork specifications to ascertain whether the intent of the recommendations contained in this report have been implemented, and that no revised recommendations are needed due to changes in the development scheme.

7.2 FOUNDATIONS

7.2.1 Shallow Building Foundations

Conventional shallow foundations (spread footings/strip footings) are considered suitable for support of the proposed building provided the recommendations in this report are incorporated into the design. Ground improvement may be required and should be included if the project structural engineer determines that the settlements provided below are outside the tolerable limits for the proposed structure.

The following foundation recommendations are minimum criteria based on geotechnical considerations. They should not be considered a structural design, nor should they be considered to preclude more restrictive criteria by governing agencies or the structural engineer. The design of the foundation system should be performed by the project structural engineer.

Conventional Shallow Foundations:

An allowable bearing pressure of 6,300 pounds per square foot (psf) may be used for conventional square or rectangular shallow foundations founded in properly compacted fill prepared in accordance with the recommendations of this report. The bearing capacity can be increased by one third for transient loading conditions such as earthquake and wind.

Additional parameters for shallow foundations are provided below.

Minimum Footing Width:	24 inches for continuous footings
Maximum Footing Width:	8 feet for square/rectangular footings
Minimum Footing Depth:	7 feet below lowest adjacent soil grade
Minimum Reinforcement:	Two No. 5 bars at both top and bottom in continuous and rectangular footings

7.2.2 Mat Foundations

To accommodate loose to medium dense near surface soil conditions, we recommend the isolated building expansion areas be constructed with a stiffened foundation system in combination with a recompacted fill mat. The stiffened foundation system should consist of a rigid mat, post-tensioned slab, or a waffle foundation system tied together with grade beams.

The following foundation recommendations are minimum criteria based on geotechnical considerations. They should not be considered a structural design, nor should they be considered to preclude more restrictive criteria by governing agencies or the structural engineer. The design of the foundation system should be performed by the project structural engineer.

If a rigid mat foundation is used, the mat slab should extend at least 12 inches below the adjacent ground surface. The mat thickness should be determined by the structural engineer. The mat can be designed assuming an allowable bearing pressure of 1,500 pounds per square foot for dead plus live loads, with a one-third increase for all loads including wind or seismic. This allowable bearing pressure is a net value; therefore, the weight of the mat can be neglected for design purposes. The mat should be integrally connected to all portions of the structure, so the entire foundation system moves as a unit. The mat should be reinforced with top and bottom steel in both directions to allow the foundation to span local irregularities that may result from potential differential settlement. As a minimum, we recommend that the mat be reinforced with sufficient top and bottom steel to span as a simple beam an unsupported distance of at least 10 feet. The mat can be designed using a modulus of subgrade reaction, Kv1, of 200 pounds per cubic inch. The actual modulus of subgrade reaction would need to be adjusted for the plan dimensions of the mat.

If a waffle foundation system is used, an allowable bearing pressure of 1,500 pounds per square foot (psf) may be used for shallow spread footings with grade beams founded in properly compacted fill prepared in accordance with the recommendations of this report. The bearing capacity can be increased by one third for transient loading conditions such as earthquake and wind.

Additional parameters for shallow foundations are provided below.

Minimum Footing Width:	18 inches for continuous footings 24 inches for square/rectangular footings
Minimum Footing Depth:	18 inches below lowest adjacent soil grade
Minimum Reinforcement:	Two No. 5 bars at both top and bottom in continuous footings.

We recommend incorporating flexible utility connections to the building to accommodate the estimated total and differential settlements.

7.2.3 Foundation Settlement

The following static and seismic foundation settlements are estimated.

Static Settlement:	Less than 1-inch total settlement ½ inch differential settlement over 30 feet
Seismic Settlement:	Less than 1.7 inches total settlement 0.85 inches differential settlement over 30 feet

7.2.4 Lateral Resistance

Lateral loads will be resisted by friction between the bottoms of footings and passive pressure on the faces of footings and other structural elements below grade. An allowable coefficient of friction of 0.30 can be used.

Passive pressure can be computed using an equivalent fluid pressure of 340 lbs/ft^3 for level ground conditions. Reductions for sloping ground should be made. The upper 1 foot of soil should not be relied on for passive support unless the ground is covered with pavements or slabs. The earth pressure indicated above does not include a safety factor; therefore, the foundation design should include an appropriate safety factor for the overall performance of the system.

7.2.5 Retaining Wall Foundations

For cantilever retaining wall foundations, bearing entirely in compacted fill soils, an average allowable bearing pressure of 1,500 psf (i.e. 0 psf at the heal and 3,000 psf at the toe) may be incorporated in the design. To mitigate against potential detrimental effects of loose near surface soils the following recommendations should be incorporated into the foundation design:

1. Subgrade preparation in accordance with the recommendations in Section 7.1.3.
2. Minimum foundation embedment depth of 12 inches.
3. Design and construction of features that prevent surface water from infiltrating around the foundation including construction of hardscape extending out from the footing at least 6 feet, sloping surface and providing drainage away from the footings, and no planters or irrigation within 6 feet of the footing.
4. Weep holes or a back drain should be installed to provide positive drainage from behind wall.
5. All fill soil behind retaining wall should be non-expansive and extend at least three feet beyond the back of the wall.
6. Compaction moisture content in clay should be 2 percentage points over optimum and maintained through construction.

If the existing wall is to remain, the contractor should consider methods of soil removal that will not undermine existing footings or result in an unstable situation. The contractor may consider bracing or slot cutting for excavation and compaction near existing footings.

The following lateral earth pressures (equivalent fluid pressures with a triangular pressure distribution) may be used in the design of the cantilever retaining wall foundations, up to a wall height of 10 feet.

Active:	40H psf/ft,
Passive:	340D psf/ft,

where H is the vertical height of the wall measured from the ground surface to the heel of the footing (or base of keyway) and D is the embedment depth of the footing measured from the ground surface to the bottom of the toe in front of the retaining wall, and a coefficient of friction between the concrete footing and subsurface soils equal to 0.30. The equivalent fluid pressures

should be applied as a triangular pressure distribution and assume level backfill behind and in front of retaining wall.

The earth pressures are based on drained conditions (no hydrostatic or buoyant conditions) and the assumption that the retaining wall is vertical (no batter). For different wall geometries or loading conditions, the above lateral earth pressures will need to be reevaluated. The earth pressures indicated above do not include a safety factor, therefore the retaining wall design should include an appropriate safety factor.

For resistance to transient lateral loads, such as earthquake loads, the aforementioned allowable bearing capacity may be increased by one-third.

7.2.6 Foundation Plan Review

Stantec should review the foundation plans to ascertain that the intent of the recommendations in this report has been implemented and that revised recommendations are not necessary as a result of changes after this report was completed.

7.2.7 Foundation Excavation Observations

A representative working under direct supervision of the Geotechnical Engineer should observe the foundation excavations prior to forming or placing reinforcing steel.

7.3 SLABS-ON-GRADE

If a deep foundation system with slab-on-grade is included in the design, the top 24 inches of material below interior concrete slabs-on-grade should have an expansion index of 20 or less. The project structural engineer should design the interior concrete slabs-on-grade floor. However, we recommend a minimum thickness of 5 inches.

A vapor barrier should be placed beneath slabs where moisture sensitive floor coverings will be installed. If plastic is used, a minimum 10-mil is recommended. The plastic should comply with ASTM E1745. Installation should comply with ASTM E1643. Current construction practice typically includes placement of a 2-inch thick sand cushion between the bottom of the concrete slab and the moisture vapor retarder/barrier. This cushion can provide some protection to the vapor retarder/barrier during construction and may assist in reducing the potential for edge curling in the slab during curing. However, the sand layer also provides a source of moisture to the underside of the slab that can increase the time required to reduce vapor emissions to limits acceptable for the type of floor covering placed on top of the slab. The slab can be placed directly on the vapor retarder/barrier. The floor covering manufacturer should be contacted to determine the volume of moisture vapor allowable and any treatment needed to reduce moisture vapor emissions to acceptable limits for the particular type of floor covering installed. The project team should determine the appropriate treatment for the specific application.

In addition to the moisture vapor barrier, a capillary moisture break can be constructed below the slab to further reduce moisture transmission from the subgrade soil, if desired. The capillary moisture break should consist of at least 4-inches of clean, free-draining gravel or crushed rock placed below the moisture vapor retarder/barrier. The components of the capillary moisture break should meet the particle-size gradation presented in Table 5.

Table 4. Gradation for Capillary Moisture Break

Gradation for Capillary Moisture Break	
Sieve Size	**Percentage Passing Sieve**
1 inch	100
3/4 inch	30-75
1/2 inch	5–10
3/8 inch	0-2

7.3.1 Exterior Slabs on Grade (Sidewalks)

Exterior slabs not subject to vehicular traffic should have a minimum thickness of 4 inches and be reinforced with at least No. 3 bars at 18 inches on center each way. Slabs should be provided with crack control joints placed in accordance with the American Concrete Institute (ACI) guidelines. The project architect or civil engineer should select the final joint patterns.

7.4 SOIL CORROSIVITY

Two samples of the onsite soils were tested to provide a preliminary indication of the corrosion potential of the onsite soils. The test results are presented in Appendix B. A brief discussion of the corrosion test results is provided in the following text.

- The samples tested had soluble sulfate concentrations between 44 and 49 parts per million (ppm), which indicates the samples have a low sulfate corrosion potential relative to concrete. It should be noted that soluble sulfate in the irrigation water supply, and/or the use of fertilizer may cause the sulfate content in the surficial soils to increase with time. This may result in a higher sulfate exposure than that indicated by the test results reported herein. Studies have shown that the use of improved cements in the concrete, and a low water-cement ratio will improve the resistance of the concrete to sulfate exposure.

- The samples tested had chloride concentrations between 33 and 36 ppm, which indicates the sample has a low chloride corrosion potential relative to metal.

- The samples tested had a minimum resistivity of 9,399 to 10,101 ohm-cm, which indicates the samples are moderately corrosive.

- The samples tested had a pH ranging from 8.2 to 8.4, which indicates the samples are slightly alkaline.

Caltrans currently considers a site to be corrosive to foundation elements if one or more of the following conditions exist: Chloride concentration is greater than or equal to 500 ppm, sulfate concentration is greater than or equal to 1,500 ppm, or the pH is 5.5 or less (Caltrans, 2012).

Based on Caltrans criteria, the test results indicate the site is not considered to be a corrosive environment for concrete and steel. Other samples at the Site could yield significantly different concentrations to those described above. Therefore, additional testing may be performed to further evaluate corrosion during the planning or construction stages and to evaluate the as-graded corrosion potential of the onsite soils after site grading. We recommend evaluation by a corrosion engineer should be performed if deemed necessary.

7.5 PAVEMENT

7.5.1 Asphalt Concrete Pavement

An R-value of 25 has been assumed for preliminary design of pavement sections based on the soil classification and gradation of the on-site material in the upper 5 feet. The actual R-value of the subgrade soils should be determined after grading to provide final pavement design. Flexible pavement sections have been calculated in general conformance with Caltrans guidelines. The project civil engineer and owner should review the pavement designations to determine appropriate locations for pavement thickness. Based on an assumed R-value of 25, the following pavement structural sections have been calculated.

Table 5. Flexible Pavement Sections

Traffic Type	Traffic Index	Asphalt Concrete (inches)	Aggregate Base* (inches)
Automobile Parking	5.0	4	5
Automobile Drive Lanes	5.5	4	6
Medium Truck Traffic	6.0	4	7
Heavy Truck Traffic	7.0	5	9

*Aggregate Base should conform to Class 2 Aggregate Base in accordance with the Caltrans Standard Specifications or Crushed Miscellaneous Base in accordance with the Standard Specifications for Public Works Construction.

Prior to placing base materials, the upper 12 inches of the subgrade soil should be scarified, moisture conditioned to slightly above the optimum moisture content, and recompacted to a dry density of at least 95% of the laboratory maximum. The base material should also be compacted to slightly above the optimum moisture content and a dry density of at least 95% of the laboratory maximum. Asphalt concrete should be compacted to at least 95% of the laboratory Hveem density in accordance with ASTM D2726.

Rigid concrete pavement (described below) should be placed in driveway entrance aprons and trash bin loading/storage areas. Concrete pavement design is provided in the following section.

7.5.2 Concrete Pavement

Concrete pavements have been calculated in general conformance with the procedure recommended by the American Concrete Institute (ACI 330R-08) using the parameters presented in Table 6 and assuming a 20-year design life. The following design parameters were used in our analyses.

Table 6. Concrete Pavement Parameters

Design Parameter	Value
Modulus of Subgrade Reaction (k)	50 pci
Modulus of Concrete Rupture (M_R)	550 psi
Concrete Compressive Strength	3,700 psi
Traffic Categories (TC)	A and C
Average Daily Truck Traffic (ADTT)	10 and 100

Based on the parameters above, we recommend the following minimum concrete pavement thickness (Table 7).

Table 7. Recommended Concrete Pavement Sections

Traffic Type	Pavement Thickness (inches)	Aggregate Base (inches)
Automobile Parking and Driveways (TC = A)	6	6
Heavy Truck Traffic and Fire Lane Areas (TC = C)	8	6

The project civil engineer should confirm whether the assumed ADTT is appropriate for the anticipated traffic level. Concrete compressive strength for pavement should be at least 3,700 psi. Minimum reinforcement should consist of #3 bars on 24-inch centers. Crack control joints should be placed in accordance with the American Concrete Institute (ACI) guidelines.

Prior to placing concrete, the upper 12 inches of the subgrade soil should be scarified, moisture conditioned to slightly above the optimum moisture content, and recompacted to a dry density of at least 90% of the laboratory maximum.

7.6 PERCOLATION TESTING

Percolation testing was performed in four borings (P1 through P3) in general accordance with the guidelines described in Los Angeles County Administrative Manual (LACAM) (LA,2014).

Based on the laboratory sieve test results, the natural soils located at the bottom of the percolation well soil borings consist of sand (USCS: SP, SP-SM, SM) with variable amounts of silt. The sands were brown, dry to moist, and dense to very dense.

The percolation tests were performed in eight-inch diameter, 50-feet deep borings. Pre-soaking was performed the day of percolation testing. The stabilized percolation rate from the final tests was measured as 186 to 522 inches per hour or less than 0.3 minutes per inch which corresponds to a high percolation rate (un-factored).

Los Angeles County requirements for infiltration include converting the percolation rate to an infiltration rate (I_t) and applying a safety factor. Once the infiltration rate was calculated and a factor of safety of 4 is applied, the design infiltration rate is 12 inches per hour. Note that this infiltration rate is applicable at the locations tested. Different locations and depths may have different rates and soil compaction will reduce the infiltration rate. An appropriate factor of safety, if necessary, should be applied to the overall system design in accordance with the LA County Administrative Manual.

Soil percolation rates from in situ tests can vary significantly from one location to another due to heterogeneous characteristics of subsurface conditions. The test results from these borings should be considered a screening level value and additional testing should be performed if an on-site disposal system is to be constructed for the project. Soil compaction can decrease infiltration rates significantly. Final percolation testing should be performed in as graded conditions so that effects from soil compaction are incorporated in the test results.

7.7 POST INVESTIGATION SERVICES

Post investigation services are an important and necessary continuation of this investigation, and it is recommended that Stantec be retained as the Geotechnical Engineer to perform such services. Final project grading and foundation plans, foundation details and specifications should be reviewed by Stantec prior to construction to ascertain that the intent of the recommendations presented herein have been applied to the design. Following review of plans and specifications, observation during construction should be performed to correlate the findings of this exploration with the actual subsurface conditions exposed.

8. CLOSURE

Our conclusions, recommendations, and discussions presented herein are based upon an evaluation and interpretation of the findings from the field and laboratory programs, with interpolation and extrapolation of subsurface conditions between and beyond the exploration locations. This report contains information that is valid as of the report's date and to the extent directly known to Stantec. However, conditions can change with the passage of time or construction subsequent to this report's preparation that may invalidate, either partially or wholly, the conclusions and recommendations presented herein.

Inherent in most projects performed in the heterogeneous subsurface environment, continuing subsurface explorations and analyses may reveal conditions that are different than those described in this report. The findings and recommendations contained in this report were developed in accordance with generally accepted, current professional principles and practice ordinarily exercised, under similar circumstances, by geotechnical engineers and engineering geologists practicing in this locality. No other warranty, express or implied, is made.

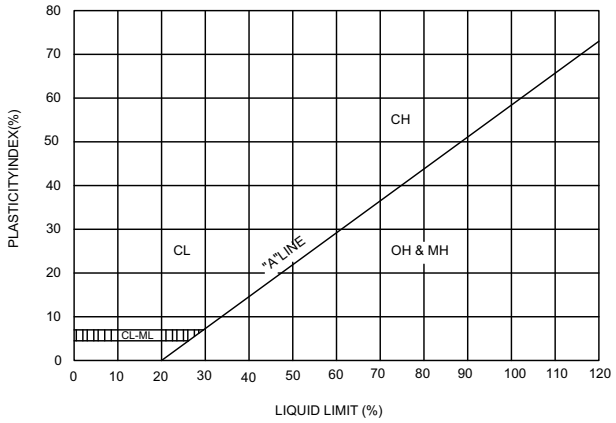
APPENDIX A
BORING LOGS

UNIFIED SOIL CLASSIFICATION (ASTM D-2487)

MATERIAL TYPES	CRITERIA FOR ASSIGNING SOIL GROUP NAMES			GROUP SYMBOL	SOIL GROUP NAMES & LEGEND
COARSE-GRAINED SOILS >50% RETAINED ON NO. 200 SIEVE	GRAVELS >50% OF COARSE FRACTION RETAINED ON NO 4. SIEVE	*CLEAN GRAVELS <5% FINES	Cu>4 AND 1<Cc<3	GW	WELL-GRADED GRAVEL
			Cu>4 AND 1>Cc>3	GP	POORLY-GRADED GRAVEL
		*GRAVELS WITH FINES >12% FINES	FINES CLASSIFY AS ML OR CL	GM	SILTY GRAVEL
			FINES CLASSIFY AS CL OR CH	GC	CLAYEY GRAVEL
	SANDS >50% OF COARSE FRACTION PASSES ON NO 4. SIEVE	*CLEAN SANDS <5% FINES	Cu>6 AND 1<Cc<3	SW	WELL-GRADED SAND
			Cu>6 AND 1>Cc>3	SP	POORLY-GRADED SAND
		*SANDS AND FINES >12% FINES	FINES CLASSIFY AS ML OR CL	SM	SILTY SAND
			FINES CLASSIFY AS CL OR CH	SC	CLAYEY SAND
FINE-GRAINED SOILS >50% PASSES NO. 200 SIEVE	SILTS AND CLAYS LIQUID LIMIT<50	INORGANIC	PI>7 AND PLOTS>"A" LINE	CL	LEAN CLAY
			PI>4 AND PLOTS<"A" LINE	ML	SILT
		ORGANIC	LL (oven dried)/LL (not dried)<0.75	OL	ORGANIC CLAY OR SILT
	SILTS AND CLAYS LIQUID LIMIT>50	INORGANIC	PI PLOTS >"A" LINE	CH	FAT CLAY
			PI PLOTS <"A" LINE	MH	ELASTIC SILT
		ORGANIC	LL (oven dried)/LL (not dried)<0.75	OH	ORGANIC CLAY OR SILT
HIGHLY ORGANIC SOILS		PRIMARILY ORGANIC MATTER, DARK IN COLOR, AND ORGANIC ODOR		PT	PEAT

* Dual symbols required for fines content between 5% and 12%

PLASTICITY CHART



SAMPLER TYPES

- SPT
- Modified California (2.5" I.D.)
- Rock Core
- Shelby Tube
- No Recovery
- Grab Sample

ADDITIONAL TESTS

COR	-	CHEMICAL ANALYSIS (CORROSIVITY)	PI	-	PLASTICITY INDEX
CD	-	CONSOLIDATED DRAINED TRIAXIAL	EI	-	EXPANSION INDEX

APPENDIX C
LIQUEFACTION ANALYSIS

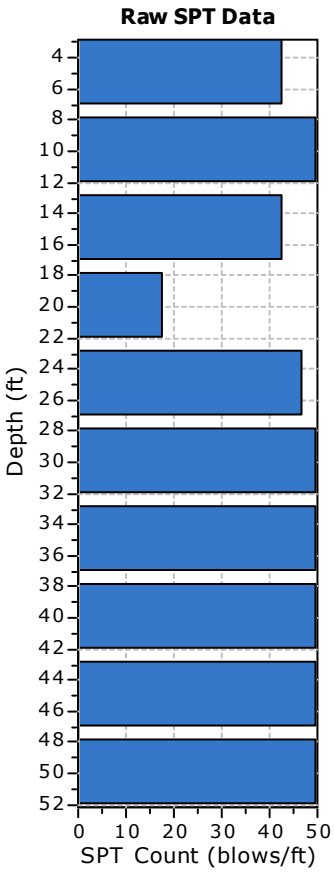
SPT BASED LIQUEFACTION ANALYSIS REPORT

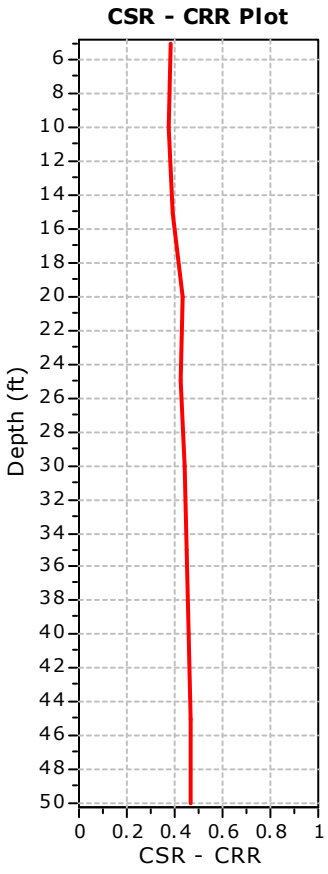
Project title : **SPT Name: P1**

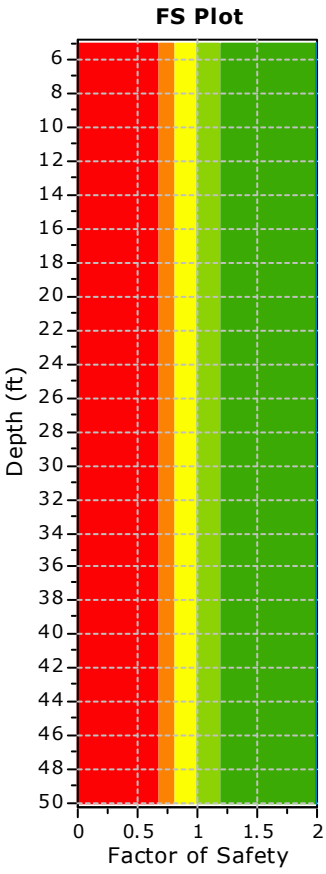
Location :

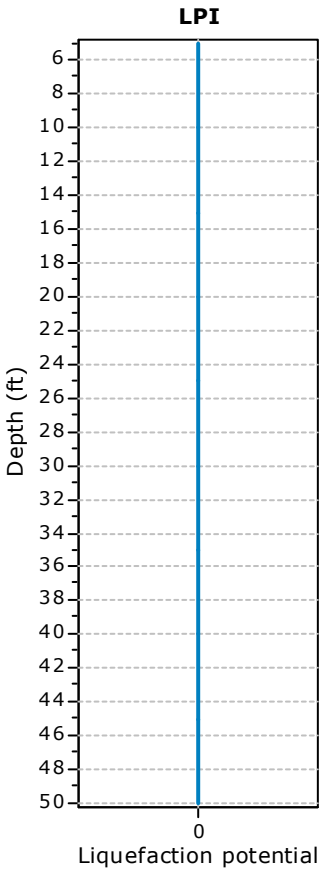
:: Input parameters and analysis properties ::

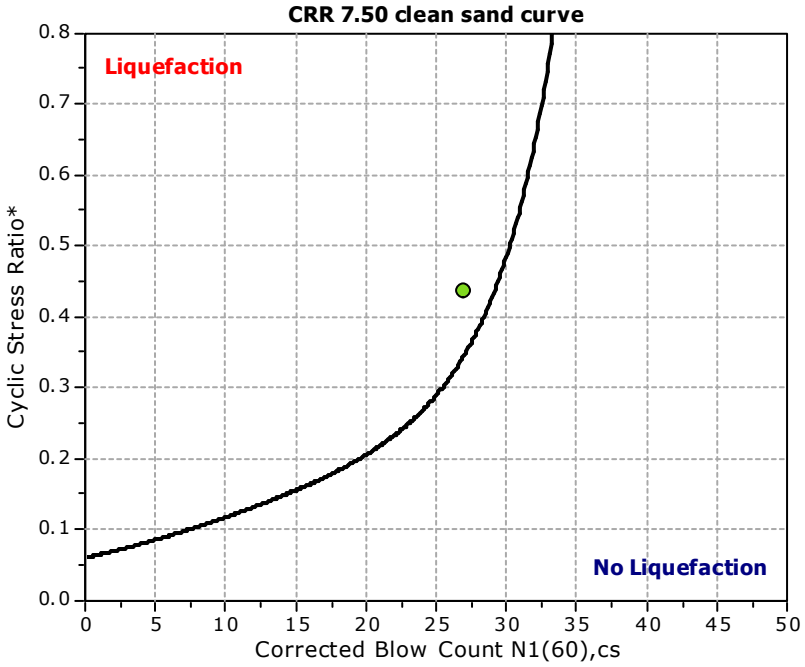
Analysis method:	Boulanger & Idriss, 2014	G.W.T. (in-situ):	121.00 ft
Fines correction method:	Boulanger & Idriss, 2014	G.W.T. (earthq.):	121.00 ft
Sampling method:	Sampler wo liners	Earthquake magnitude M_w:	6.69
Borehole diameter:	200mm	Peak ground acceleration:	0.88 g
Rod length:	3.30 ft	Eq. external load:	0.00 tsf
Hammer energy ratio:	1.20		











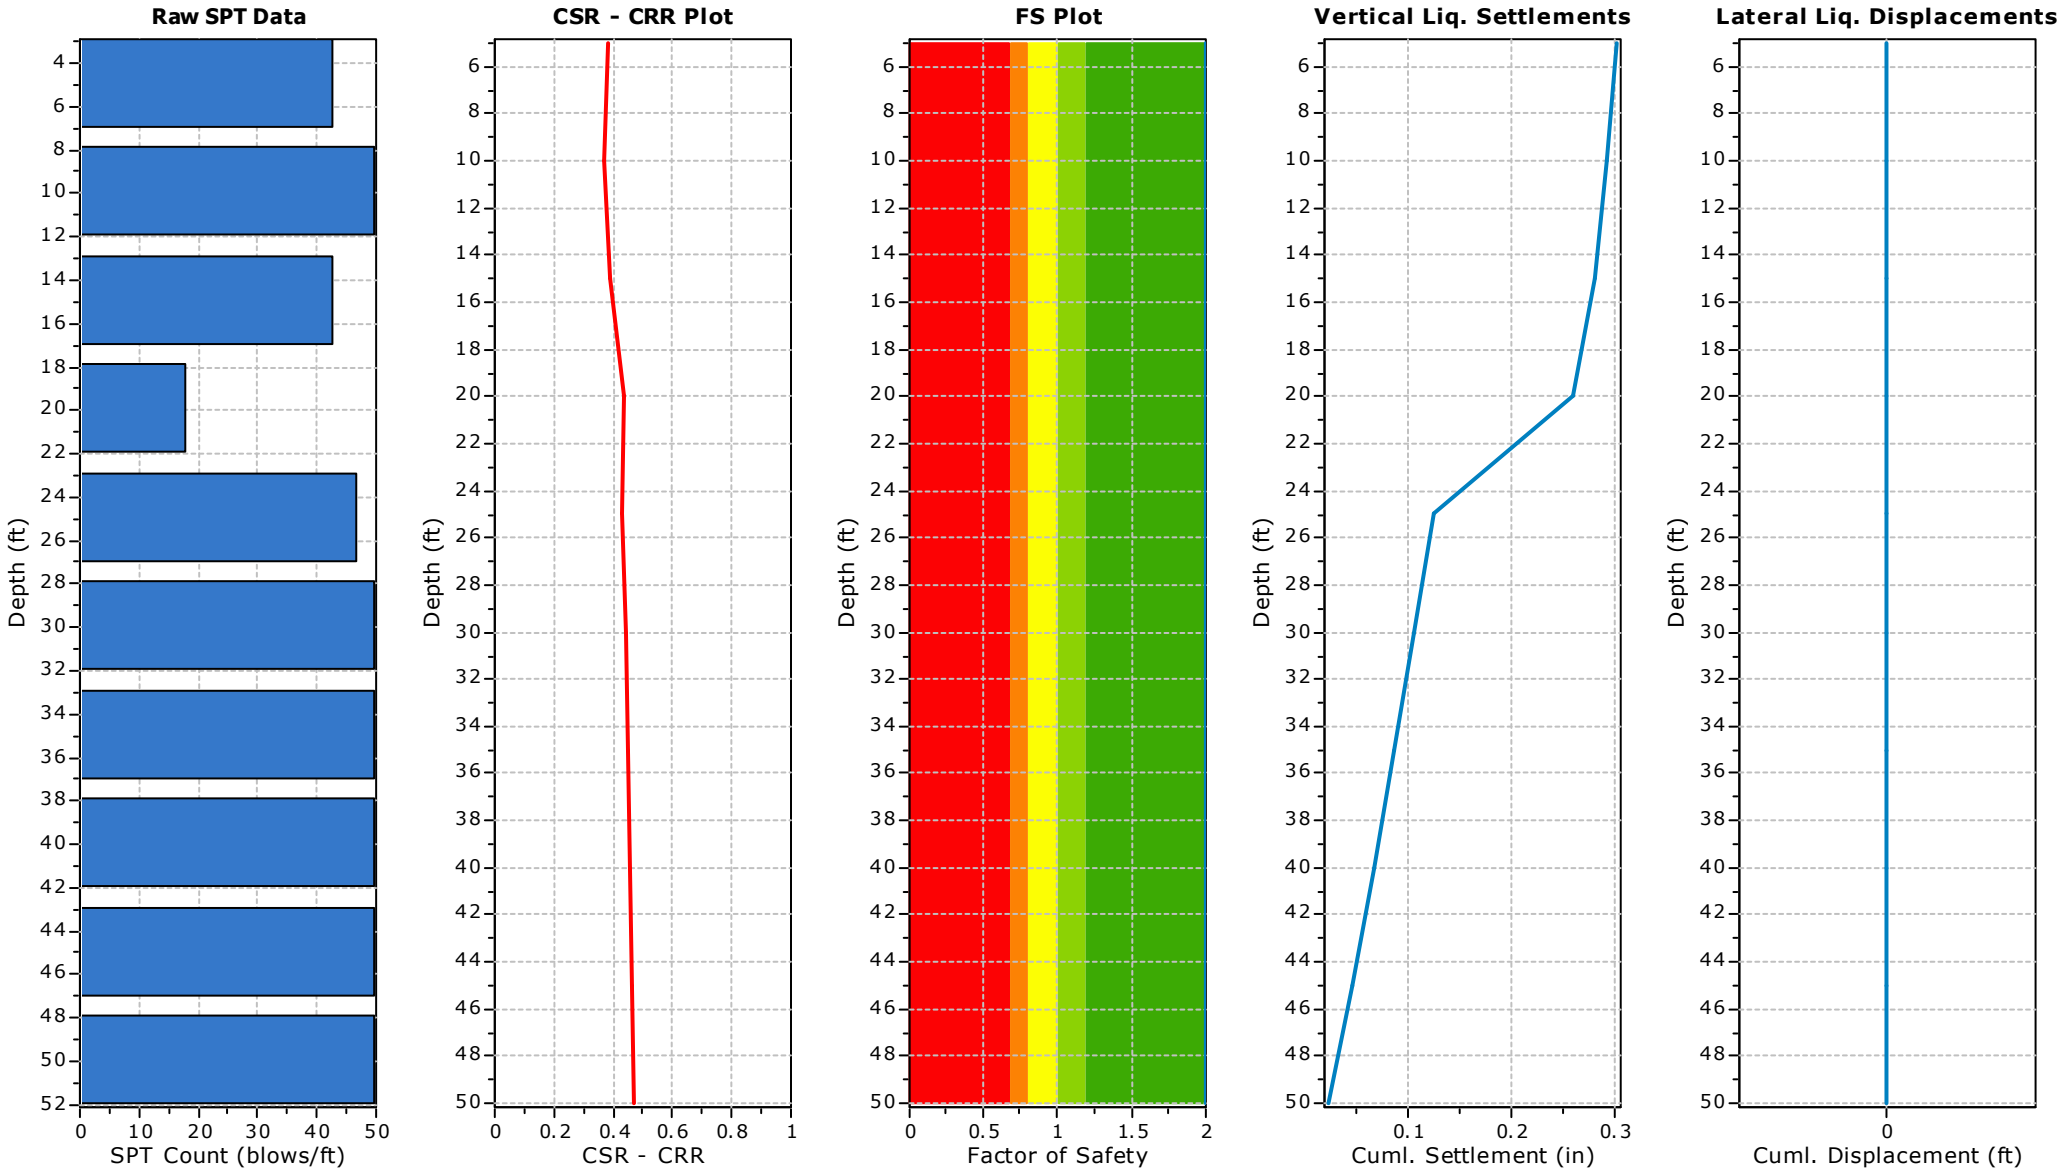
F.S. color scheme

- Almost certain it will liquefy
- Very likely to liquefy
- Liquefaction and no liq. are equally likely
- Unlike to liquefy
- Almost certain it will not liquefy

LPI color scheme

- Very high risk
- High risk
- Low risk

:: Overall Liquefaction Assessment Analysis Plots ::



:: Field input data ::

Test Depth (ft)	SPT Field Value (blows)	Fines Content (%)	Unit Weight (pcf)	Infl. Thickness (ft)	Can Liquefy

Abbreviations

σ_v: Total stress during SPT test (tsf)
u_o: Water pore pressure during SPT test (tsf)
σ'_{vo}: Effective overburden pressure during SPT test (tsf)
m: Stress exponent normalization factor
C_N: Overburden corretion factor
C_E: Energy correction factor
C_B: Borehole diameter correction factor
C_R: Rod length correction factor
C_S: Liner correction factor
$N_{1(60)}$: Corrected N_{SPT} to a 60% energy ratio
$\Delta(N_1)_{60}$ Equivalent clean sand adjustment
$N_{1(60)cs}$: Corected $N_{1(60)}$ value for fines content
$CRR_{7.5}$: Cydic resistance ratio for M=7.5

Subject: Phase I Environmental Site Assessment
650 and 700 Pacific Coast Highway
El Segundo, California 90245
AEI Project No. 422548

Dear Jacob Yi:

AEI Consultants is pleased to provide the *Phase I Environmental Site Assessment* of the above referenced property. This assessment was authorized and performed in accordance with the scope of services engaged.

We appreciate the opportunity to provide services to you. If you have any questions concerning this report, or if we can assist you in any other matter, please contact me at (949) 752-9300 or kbachrach@aeiconsultants.com.

Sincerely,

Ken Bachrach
Vice President
AEI Consultants

EXECUTIVE SUMMARY

AEI Consultants (AEI) was retained by Thorofare Capital, Inc. to conduct a Phase I ESA in conformance with AEI's contract and the scope and limitations of ASTM Standard Practice E1527-13 and the EPA Standards and Practices for All Appropriate Inquiries (40 CFR Part 312) for the property located at 650 and 700 Pacific Coast Highway, El Segundo, Los Angeles County, California (the "subject property"). Any exceptions to, or deletions from, this practice are described in Sections 1.4, 1.5, and 1.6 of this report.

Pertinent subject property information is noted below:

PROPERTY INFORMATION	
Site Address(es)	650 and 700 Pacific Coast Highway, El Segundo, Los Angeles County, California 90245 Note: the site address is also identified as 650 and 700 N Sepulveda Blvd
Property ID (APN or Block/Lot)	650 PCH – 4138006010; 4138006031 700 PCH - 4138006005
Location	East side of Pacific Coast Highway (Sepulveda Boulevard)
Property Type	Mixed-Use (Office, Retail, and/or Multifamily)
SITE AND BUILDING INFORMATION	
Approximate Site Acreage/Source	5.81/Los Angeles County Assessor
Number of Buildings	2
Building Construction Date(s)/Source	1957 and 1962/Los Angeles County Assessor
Building Square Footage (SF)/Source	200220/Client provided
Number of Floors/Stories	1 and 8
Basement or Subgrade Area(s)	None identified
Number of Units	One
Additional Improvements	Asphalt-paved parking areas and associated landscaping
On-site Occupant(s)	Boeing
Current On-site Operations/Use	Office, circuit board assembly/manufacturing, research and development, laboratory, administrative and maintenance activities
Current Use of Hazardous Substances	Yes; refer to Section 7.1
REGULATORY INFORMATION	
Regulatory Database Listing(s)	RCRA NonGen / NLR, HAZNET (listed four times), CA HWTS (listed four times), CA CERS HAZ WASTE, CA CERS TANKS, CA CERS, ICIS, FINDS (listed three times), ECHO (listed twice), CA AST, CA ENVIROSTOR, SEMS-ARCHIVE, CA SWEEPS UST, CA LOS ANGELES CO. HMS

A chronological summary of historical subject property information is as follows:

Date Range	Subject Property Description and Occupancy (Historical Addresses)	Source(s)
1896 - 1927	Undeveloped land	Previous report
1928 - 1947	Agricultural and fallow land	Aerial photographs

Date Range	Subject Property Description and Occupancy (Historical Addresses)	Source(s)
1953	Agricultural land with small agricultural structure	Aerial photographs
1957 and 1962	Current site improvements were constructed for commercial and industrial use	Agency records
1963 - 1999	Current site improvements used for commercial and industrial use.	Aerial photographs, Agency records, City directories, Interviews, Site observations
2000 - 2007	Current site improvements - Unknown occupancy	Aerial photographs, Agency records, City directories, Interviews, Site observations
2008 - present	Current site improvements used for commercial and industrial use.	Aerial photographs, Agency records, City directories, Interviews, Site observations

Based on a review of historical sources, the subject property was developed for agricultural use from at least 1928 until at least 1938. From at least 1947 until at least 1953, the subject property appeared undeveloped. Construction of the current site improvements began at the 700 North Sepulveda Boulevard address in 1955 with additional improvements at 700 in 1957. The office structure at 650 North Sepulveda Boulevard was constructed in 1962. Tenants noted at the 700 North Sepulveda Boulevard address include: Pharmaceutical Co. (1958); The Rabin Company/Pharmapak Drug Company (1960); Rabin Winters Corporation (1962-1967); Rabin Winters Division of Brunswig Drug/Bergan Brunswick (1966-1974); BBC Laboratories, Norton Products/Tannehill Pharmaceuticals (1971); Devlin Pharmaceuticals Inc. (1974-1981); Hughes Aircraft Company (1982-1999) and The Boeing Company (2008-Present). Tenants at the 650 North Sepulveda Boulevard address include: Aerospace Center (1962-1966); Computer Science Corporation (CSC) (1969-1976); Howard Hughes / Hughes Corporation / Hughes Aircraft Company (1982-1999) and The Boeing Company (2008-Present).

The immediately surrounding properties consist of the following:

Direction	Tenant/Use (Address)	Regulatory Database Listing(s)
North	Multi-tenant commercial (740 North Sepulveda Boulevard) Multi-tenant Commercial (1910 East Maple Avenue)	None identified RCRA NonGen / NLR (listed twice), CA CERS HAZ WASTE, CA HAZNET, CA CERS, CA HWTS
East	Equinix (1920 East Maple Avenue) Vanderland (607 Lairport Street) Hagemeyer (1921 East Mariposa Avenue)	CA LUST, CA HIST CORTESE, CA CERS CA SWEEPS UST, CA LOS ANGELES CO. HMS, CA UST CA SWEEPS UST, CA CERS HAZ WASTE, CA NPDES, CA CIWQS, CA CERS, CA UST, RCRA NonGen / NLR

Direction	Tenant/Use (Address)	Regulatory Database Listing(s)
South	Multi-tenant Strip Mall (600-630 North Sepulveda Boulevard)	RCRA NonGen / NLR, FINDS (listed twice), ECHO (listed twice), CA DRYCLEANERS (listed three times), EDR Hist Cleaner, RCRA-SQG, EDR Hist Auto, CA UST
West	Carl's Junior (639 North Sepulveda Boulevard) Commercial property and parking lot (703 North Sepulveda Boulevard) Parking lot (739 North Sepulveda Boulevard)	None identified None identified None identified

If the surrounding properties are listed in the regulatory database, please refer to Section 5.1 for discussion.

FINDINGS

Recognized Environmental Condition (REC) is defined by the ASTM Standard Practice E1527-13 as the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment.

- Based on a review of historical sources, eight 1,000-gallon underground storage tanks (USTs) were located on the subject property from 1958 until 1985. The USTs were constructed of concrete and reportedly contained gasoline, sulfides, organic acids, copper, zinc, mineral oils, alcohols, and solvents. The USTs were reportedly associated with the manufacturing of lighter fluid and pharmaceuticals. The exact location of the USTs was not identified. However, according to historical sources, the USTs appear to have been likely located in the northeast portion of the property. AEI identified a building permit for removal of the USTs dated May 21, 1982. Remarks on the permit indicate "Remove 8 underground tanks, fill and compact void, resurface. After the removal of the tanks, the void will be filled with clean sand compacted to 90% of ASTM standards and supervised by Western Laboratories". AEI also identified an application for closure of Hazardous Materials Underground Storage dated November 6, 1985 indicating that permanent concrete 15-year-old 1,000-gallon tank(s) containing oil & grease, sulfides, organic acids, copper and zinc. A Phase II performed by Ramboll Environ in May of 2016 indicated that sampling was performed in the suspected location of the former USTs (northeastern portion of the site). It should be noted that the previous Phase II did not include sampling at an area identified as the former gasoline pump, which was located further west of the former USTs. The soil vapor samples were collected at depths ranging from 10.5 to 12 feet bgs; as such shallow soil vapor conditions do not appear to have been assessed. Due to soil conditions, GPR penetration was 3 feet or less. The closed USTs may have been installed at depths exceeding 5 feet. Although the USTs were scheduled to be removed and backfilled with sand, based on the results of the previous Phase II (borings included concrete and asphalt), the concrete USTs may have been closed in place and/or remnants of the concrete remain

in the subsurface. Analytical results at the time revealed concentrations of constituents of concern (petroleum hydrocarbons, volatile organic compounds, metals) in soil and soil vapor below the ESLs in effect at the time. ESLs have changed in CA since 2016. Soil vapor concentrations detected at the time are above the current commercial/ industrial ESLs (from 2019) for benzene and ethylbenzene. The detected concentrations of benzene and ethylbenzene above the current commercial/industrial ESLs represents a REC.

- Based on the review of historical sources, the subject property was equipped with a concrete clarifier. The clarifier was located at the subject property addressed as 700 North Sepulveda Boulevard from at least 1966 until at least 1985. The clarifier was reportedly installed by Bergin Brunswick and used during the manufacturing of pharmaceuticals. Samples received by IT Corporation on October 16, 1985 performed on six samples of clarifier sludge submitted by Hughes Aircraft Space and Communications were analyzed and found to contain high levels of Tetrachloroethylene. Tetrachloroethylene concentrations of 2,000 micrograms per liter (µg/L) were recorded in Comp. 1&2 and 700 µg/L were recorded in Comp. 3&4. During the course of this assessment, AEI identified correspondence from the County of Los Angeles, Department of Public Works indicating that the clarifier was filled in place on October 29, 1985. The exact location of the clarifier was not identified, however, based on a review of historical permits, the clarifier was identified to be located in the "rear end of building - 700 N. Sepulveda" (which is expected to be the eastern exterior area of the 700 building). The previous Phase II conducted in 2016 (discussed in Section 6.3), did not include sampling on the eastern exterior area of the 700 building and only included a limited geophysical survey of this area. Based on the lack of location identification, the lack of testing of the clarifier during the Phase II and the levels of Tetrachloroethylene identified in the clarifier sludge samples, the former clarifier represents a REC.

- Due to the reported security-sensitive nature of operations within the subject property buildings, limited access was provided to the interiors of the buildings. Although not observed, during the site reconnaissance, AEI was informed by Mr. Paul Summers that laboratories at the 700 North Sepulveda Boulevard building engage in the manufacturing/assembly of circuit boards. Circuit board manufacturing operations typically utilize chlorinated solvents for board cleaning and surface preparation. Mr. Summers admitted the use of hazardous substances in the laboratories, however, a list of hazardous substances was not provided. AEI was not permitted to observe any laboratories or hazardous material storage areas. According to a review of DTSC HWTS records, Boeing generated various hazardous wastes including halogenated solvents. Based on the duration of on-site operations (approximately 12 years with Boeing), the assembly of circuit boards at the subject property represents a REC.

- Hughes Aircraft Co SCG at the address 690 N Sepulveda Boulevard was listed in the Statewide Environmental Evaluation and Planning System (SWEEPS UST) database. The underground storage tank listing was updated and maintained by the State Water Resources Control Board in the early 1990's. The listing is no longer updated or maintained. No information regarding the number of USTs, content, capacity or status is available in this database. This listing is also associated with a permit associated with the Los Angeles County Department of Public Works (Facility Id: 010427-010342). AEI contacted the LACDPW for additional information regarding this UST listing, however, a response is pending. It is unclear if this UST listing is associated with the former USTs located at 700 N Sepulveda Boulevard. The 690 N Sepulveda Boulevard has been historically associated with the 650 building, and as such, this listing may pertain to a UST associated with this building. The lack of information on this UST is considered a data gap. The potential presence of a UST associated with the 650 building and the lack of supporting documentation represents a REC.

Controlled Recognized Environmental Condition (CREC) is defined by the ASTM Standard Practice E1527-13 as a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority, with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls.

- AEI did not identify evidence of CRECs during the course of this assessment.

Historical Recognized Environmental Condition (HREC) is defined by the ASTM Standard Practice E1527-13 as a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls.

- AEI did not identify evidence of HRECs during the course of this assessment.

Other Environmental Considerations (OEC) warrant discussion, but do not qualify as RECs as defined by the ASTM Standard Practice E1527-13. These include, but are not limited to, de minimis conditions and/or environmental considerations such as the presence of ACMs, LBP, radon, mold, and lead in drinking water, which can affect the liabilities and financial obligations of the client, the health and safety of site occupants, and the value and marketability of the subject property.

- The subject property was historically used for agricultural purposes. There is a potential that agricultural chemicals, such as pesticides, herbicides and fertilizers, were used on site. The entire area of the subject property is either paved over or covered by improvements that make direct contact with any potential remaining concentrations in the soil unlikely. Furthermore, the subject property is developed and used for commercial/light industrial purposes and thus no further action related to the former agricultural use of the subject property is warranted at this time.
- The regulatory database indicates the presence of a dry cleaner using PERC at the adjacent site to the south of the subject property from at least 1995 until at least 2014. Based on the proximity of this site to the subject property, the potential exists that,

if a release of chlorinated solvents occurred at this site, the subsurface of the subject property may have also been impacted. This site may pose a threat for vapor-phase contaminant migration to the subject property if a release has occurred. However, no releases have been attributed to this site at this time. If the the User of this report desire a greater degree of certainty regarding the potential for vapor-phase contamination to the subject property, further investigation would be required.

- Due to the age of the subject property buildings, there is a potential that ACMs are present. The observed suspect ACMs at the subject property were in good condition at the time of the site reconnaissance and are not expected to pose a health and safety concern to the occupants of the subject property at this time. Based on the potential presence of ACMs, AEI recommends the implementation of an O&M Plan which stipulates that the repair and maintenance of damaged materials should be performed to protect the health and safety of the building occupants. In the event that building renovation or demolition activities are planned, a thorough asbestos survey to identify asbestos-containing building materials is required in accordance with the EPA NESHAP 40 CFR Part 61 prior to demolition or renovation activities that may disturb suspect ACMs.
- Due to the age of the subject property buildings, there is a potential that LBP is present. During the site reconnaissance, damaged painted surfaces were observed in throughout the interior and exterior of the subject property buildings. Based on the potential presence of LBP, AEI recommends the property owner implement an O&M Plan which stipulates that the assessment, repair and maintenance of damaged painted surfaces be performed to protect the health and safety of the building occupants. Local regulations may apply to LBP in association with building demolition/renovations and worker/occupant protection. Actual material samples would need to be collected or an x-ray fluorescence (XRF) survey performed in order to determine if LBP is present. It should be noted that construction activities that disturb materials or paints containing any amount of lead may be subject to certain requirements of the OSHA lead standard contained in 29 CFR 1910.1025 and 1926.62.

Conclusions, Opinions, and Recommendations

We have performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Standard Practice E1527-13 and the EPA Standards and Practices for All Appropriate Inquiries (40 CFR Part 312) of 650 and 700 Pacific Coast Highway, El Segundo, Los Angeles County, California, the *subject property*. Any exceptions to, or deletions from, this practice are described in Sections 1.4, 1.5, and 1.6 of this report.

AEI did not identify evidence of RECs or CRECs in connection with the property except for those previously identified in the Findings section. AEI recommends the following:

- Phase II Subsurface Investigation and Geophysical Survey
- Review of pending agency records for the UST listed at 690 North Sepulveda Boulevard

1.0 INTRODUCTION

This report documents the methods and findings of the Phase I Environmental Site Assessment performed in conformance with AEI's contract and scope and limitations of ASTM Standard Practice E1527-13 and the EPA Standards and Practices for All Appropriate Inquiries (40 CFR Part 312) for the property located at 650 and 700 Pacific Coast Highway, El Segundo, Los Angeles County, California (Appendix A: Figures and Appendix B: Property Photographs).

1.1 Scope of Work

The purpose of the Phase I ESA is to assist the client in identifying potential RECs, in accordance with ASTM E1527-13, associated with the presence of any hazardous substances or petroleum products, their use, storage, and disposal at and in the vicinity of the subject property. Property assessment activities focused on: 1) a review of federal, state, tribal, and local databases that identify and describe underground fuel tank sites, leaking underground fuel tank sites, hazardous waste generation sites, and hazardous waste storage and disposal facility sites within the ASTM approximate minimum search distance; 2) a property and surrounding site reconnaissance, and interviews with the past and present owners and current occupants and operators to identify potential environmental contamination; and 3) a review of historical sources to help ascertain previous land use at the site and in the surrounding area.

1.2 Additional Services

Other Environmental Considerations such as ACMs, LBP, lead in drinking water, radon, mold, and wetlands can result in business environmental risks for property owners which may disrupt current or planned operations or cash flow and are generally beyond the scope of a Phase I assessment as defined by ASTM E1527-13. Based upon the agreed-on scope of services this ESA did not include subsurface or other invasive assessments, business environmental risks, or other services not specifically identified and discussed herein.

1.3 Significant Assumptions

The following assumptions are made by AEI in this report. AEI relied on information derived from secondary sources including governmental agencies, the client, designated representatives of the client, property contact, property owner, property owner representatives, computer databases, and personal interviews. AEI has reviewed and evaluated the thoroughness and reliability of the information derived from secondary sources including government agencies, the client, designated representatives of the client, property contact, property owner, property owner representatives, computer databases, or personal interviews. It appears that all information obtained from outside sources and reviewed for this assessment is thorough and reliable. However, AEI cannot guarantee the thoroughness or reliability of this information.

Groundwater flow, unless otherwise specified by on-site well data or well data from the subject property or nearby sites, is inferred from contour information depicted on the USGS topographic maps. AEI assumes the property has been correctly and accurately identified by the client, designated representative of the client, property contact, property owner, and property owner's representatives.

1.4 LIMITATIONS

Property conditions, as well as local, state, tribal, and federal regulations can change significantly over time. Therefore, the recommendations and conclusions presented as a result of this assessment apply strictly to the environmental regulations and property conditions existing at the time the assessment was performed. Available information has been analyzed using currently accepted assessment techniques and it is believed that the inferences made are reasonably representative of the property. AEI makes no warranty, expressed or implied, except that the services have been performed in accordance with generally accepted environmental property assessment practices applicable at the time and location of the assessment.

Considerations identified by ASTM as beyond the scope of a Phase I ESA that may affect business environmental risk at a given property include the following: ACMs, radon, LBP, lead in drinking water, wetlands, regulatory compliance, cultural and historical resources, industrial hygiene, health and safety, ecological resources, endangered species, indoor air quality, mold, and high voltage lines. These environmental issues or conditions may warrant assessment based on the type of the property transaction; however, they are considered non-scope issues under ASTM Standard Practice E1527-13.

If requested by the client, these non-scope issues are discussed herein. Otherwise, the purpose of this assessment is solely to satisfy one of the requirements for qualification of the innocent landowner defense, contiguous property owner or bona fide prospective purchaser under CERCLA. ASTM Standard Practice E1527-13 and the United States EPA Standards and Practices for All Appropriate Inquiries (40 CFR Part 312) constitute the "all appropriate inquiry into the previous ownership and uses of the property consistent with good commercial or customary practice" as defined in:

1. 42 U.S.C. § 9601(35)(B), referenced in the ASTM Standard Practice E1527-13.
2. Sections 101(35)(B) (ii) and (iii) of CERCLA and referenced in the EPA Standards and Practices for All Appropriate Inquiries (40 CFR Part 312).
3. 42 U.S.C. § 9601(40) and 42 U.S.C. § 9607(q).

The Phase I Environmental Site Assessment is not, and should not be construed as, a warranty or guarantee about the presence or absence of environmental contaminants that may affect the property. Neither is the assessment intended to assure clear title to the property in question. The sole purpose of assessment into property title records is to ascertain a historical basis of prior land use. All findings, conclusions, and recommendations stated in this report are based upon facts, circumstances, and industry-accepted procedures for such services as they existed at the time this report was prepared (i.e., federal, state, and local laws, rules, regulations, market conditions, economic conditions, political climate, and other applicable matters). All findings, conclusions, and recommendations stated in this report are based on the data and information provided, current subject property use, and observations and conditions that existed on the date and time of the property reconnaissance.

Responses received from local, state, or federal agencies or other secondary sources of information after the issuance of this report may change certain facts, findings, conclusions, or circumstances to the report. A change in any fact, circumstance, or industry-accepted procedure upon which this report was based may adversely affect the findings, conclusions, and recommendations expressed in this report.

AEI's limited radon screening, if included, is intended to provide a preliminary screening to evaluate the potential presence of elevated radon concentrations at the site. The proposed scope is not intended to define the full extent of the presence of radon at the subject property. As such, the results should be used for lending purposes only. The recommendations and conclusions presented as a result of the limited preliminary radon screening apply strictly to the property conditions existing at the time the sampling was performed. The sample analytical results are only valid for the time, place, and condition of the site at the time of collection and AEI does not warrant that the results will be repeatable or are representative of past or future conditions.

1.5 Limiting Conditions/Deviations

The performance of this assessment was limited by the following:

- While additional assessments may have been conducted on the subject property, these documents must be provided for AEI's review in order for the information to be summarized/included in this report. Please refer to Section 6.3 for a summary of previous reports and other documentation provided to AEI during this assessment.
- The User did not complete the ASTM User Questionnaire or provide the User information to AEI. AEI assumes that qualification for the LLPs is being established by the User in documentation outside of this assessment.
- Due to the reported security-sensitive nature of operations within the subject property buildings, limited access was provided to the interiors of the buildings. AEI was allowed access to the elevator equipment room, electrical rooms, janitorial maintenance rooms and hallways. According to Mr. Paul Summers, the subject property assembles circuit boards. Mr. Summers admitted the use of hazardous substances in the laboratories, however, a list of hazardous substances was not provided. AEI was not permitted to observe any laboratories or hazardous material storage areas. This limitation is significant and may alter the overall findings of this assessment and there is a potential that features of concern may be present that were not observed by AEI during the site inspection.
- AEI requested an interview with the subject property owner; however, the subject property owner has not responded as of this report date. Based on the quality of information obtained from other sources, this limitation is not expected to alter the overall findings of this assessment.
- Records from the Los Angeles County Public Works regarding the UST listing under 690 N Sepulveda Boulevard is pending.
- On May 18, 2020, AEI contacted the Los Angeles County Public Health Investigations via email for information on the subject property. Files at this agency may contain information regarding hazardous substance storage and use, underground storage tanks, unauthorized releases of petroleum hydrocarbons or other contaminants that may affect the soil or groundwater in the area, wells and/or septic systems. As of the date of this report, LACPHI has not responded to this request.
- On May 18, 2020, AEI contacted the El Segundo Building Department via online records request for information on the subject property in order to identify historical tenants, features of concern and property use. As of the date of this report, ESBD has not responded to this request.

- On May 18, 2020, AEI contacted the El Segundo Planning Department via online records request for information on the subject property in order to identify AULs associated with the subject property. As of the date of this report, ESPD has not responded to this request.
- AEI requested documentation from DTSC-Cypress for information about the subject property and records that were referenced in the completed activities page of the Envirostor listing for Devlin Pharmaceuticals and was informed by Jone Barrio, Regional Records Coordinator, that no records were available for review. On May 28, 2020, Jone Barrio forwarded the records request to the DTSC Chatsworth office in an attempt to locate any records for the subject property.
- Due to the presence of stored products and miscellaneous features within the buildings, direct visual observation of some of the floor and wall areas of the buildings was not possible. Additionally, due to the presence of parked vehicles or other miscellaneous features, isolated portions of exterior ground areas were not available for direct visual observation. Features may be present that were not observed during AEI's site inspection.

1.6 Data Failure and Data Gaps

According to ASTM E1527-13, data gaps occur when the Environmental Professional is unable to obtain information required by the Standard, despite good faith efforts to gather such information. Pursuant to ASTM E1527-13, only significant data gaps, defined as those that affect the ability of the Environmental Professional to identify RECs, need to be documented.

Data failure is one type of data gap. According to ASTM E1527-13, data failure occurs when all of the standard historical sources that are reasonably ascertainable and likely to be useful have been reviewed and yet the objectives have not been met. Pursuant to ASTM E1527-13, historical sources are required to document property use back to the property's first developed use or back to 1940, whichever is earlier, or periods of five years or greater.

1.6.1 Data Failure

The following data failure was identified during the course of this assessment:

Data Failure	Historical sources were not obtained at five-year intervals dating back to first developed use. AEI was not able to track the history of the subject property between the years 2000 and 2007 as none of the historical sources utilized as part of this assessment covered this time period. In 1999, the subject property was occupied by Hughes Aircraft and used for aerospace offices. From 2008 to present, the subject property was occupied by Boeing and used for aerospace offices and circuit board assembly. Thus, it is assumed that during this time period the subject property would have been office, if not office and light manufacturing. Therefore, this data failure is not expected to significantly alter the findings of this assessment.
Information/Sources Consulted	City directories, Sanborn fire insurance maps, aerial photographs, agency records, previous reports, interviews

1.6.2 Significant Data Gaps

The following significant data gaps were identified during the course of this assessment:

Significant Data Gap	During the course of this assessment, location of historic subsurface features was not definitively identified. The lack of location of these features represents a significant data gap.
Information/Sources Consulted	Aerial photographs, agency records, previous reports, interviews

Significant Data Gap	Limited access to the property and limited agency records at the time of this report issuance represents a significant data gap.
Information/Sources Consulted	Aerial photographs, agency records, previous reports, interviews

1.7 Reliance

This report is for the use and benefit of, and may be relied upon by, Thorofare Asset Based Lending REIT Fund V, LLC and any of their respective affiliates, agents and advisors., the initial and subsequent holders from time to time of any debt (or any portion thereof) and/or debt securities secured, directly and indirectly, by the property which is the subject of this report, by any participation interest in any such debt (or any portion thereof), and indenture trustee, servicer or other agent acting on behalf of such holders of such debt (or any portion thereof) and/or debt securities; any rating agencies; and the institutional provider(s) from time to time of any liquidity facility or credit support for such financings, and their respective successors and assigns. In addition, this report or a reference to this report, may be included or quoted in any offering circular, registration statement, private placement memorandum, prospectus or sales brochure (in either electronic or hard copy format) in connection with a securitization or transaction involving such debt (or any portion thereof) and or debt securities.

This report has no other purpose and may not be relied upon by any other person or entity without the written consent of AEI. Either verbally or in writing, third parties may come into possession of this report or all or part of the information generated as a result of this work. In the absence of a written agreement with AEI granting such rights, no third parties shall have rights of recourse or recovery whatsoever under any course of action against AEI, its officers, employees, vendors, successors or assigns. Reliance is provided in accordance with AEI's contract and Terms and Conditions executed by Thorofare Capital, Inc. on May 15, 2020. The limitation of liability defined in the Terms and Conditions is the aggregate limit of AEI's liability to the client and all relying parties.

2.0 SITE AND VICINITY DESCRIPTION

2.1 SITE LOCATION AND DESCRIPTION

PROPERTY INFORMATION	
Site Address(es)	650 and 700 Pacific Coast Highway, El Segundo, Los Angeles County, California 90245 Note: the site address is also identified as 650 and 700 N Sepulveda Blvd
Property ID (APN or Block/Lot)	650 PCH – 4138006010; 4138006031 700 PCH - 4138006005
Location	East side of Pacific Coast Highway (Sepulveda Boulevard)
Property Type	Mixed-Use (Office, Retail, and/or Multifamily)
SITE AND BUILDING INFORMATION	
Approximate Site Acreage/Source	5.81/Los Angeles County Assessor
Number of Buildings	2
Building Construction Date(s)/Source	1957 and 1962/Los Angeles County Assessor
Building Square Footage (SF)/Source	200220/Client provided
Number of Floors/Stories	1 and 8
Basement or Subgrade Area(s)	None identified
Number of Units	One
Additional Improvements	Asphalt-paved parking areas and associated landscaping
On-site Occupant(s)	Boeing
Current On-site Operations/Use	Office, circuit board assembly/manufacturing, research and development, laboratory, administrative and maintenance activities
Current Use of Hazardous Substances	Yes; refer to Section 7.1
REGULATORY INFORMATION	
Regulatory Database Listing(s)	RCRA NonGen / NLR, HAZNET (listed four times), CA HWTS (listed four times), CA CERS HAZ WASTE, CA CERS TANKS, CA CERS, ICIS, FINDS (listed three times), ECHO (listed twice), CA AST, CA ENVIROSTOR, SEMS-ARCHIVE, CA SWEEPS UST, CA LOS ANGELES CO. HMS

2.2 ON-SITE UTILITIES

Utility	Source/System Information
Heating System	Natural gas
Cooling System	Electricity
Potable Water	El Segundo Water Division
Sewage Disposal/Treatment	City of El Segundo

Utility source/system information listed in the table above is provided by Mr. Paul Summers, unless otherwise noted above.

2.3 Site and Vicinity Characteristics

The subject property is located in a commercial, retail, industrial and residential mixed use area of El Segundo, California. The immediately surrounding properties consist of the following:

Direction	Tenant/Use (Address)	Regulatory Database Listing(s)
North	Multi-tenant commercial (740 North Sepulveda Boulevard) Multi-tenant Commercial (1910 East Maple Avenue)	None identified RCRA NonGen / NLR (listed twice), CA CERS HAZ WASTE, CA HAZNET, CA CERS, CA HWTS
East	Equinix (1920 East Maple Avenue) Vanderland (607 Lairport Street) Hagemeyer (1921 East Mariposa Avenue)	CA LUST, CA HIST CORTESE, CA CERS CA SWEEPS UST, CA LOS ANGELES CO. HMS, CA UST CA SWEEPS UST, CA CERS HAZ WASTE, CA NPDES, CA CIWQS, CA CERS, CA UST, RCRA NonGen / NLR
South	Multi-tenant Strip Mall (600-630 North Sepulveda Boulevard)	RCRA NonGen / NLR, FINDS (listed twice), ECHO (listed twice), CA DRYCLEANERS (listed three times), EDR Hist Cleaner, RCRA-SQG, EDR Hist Auto, CA UST
West	Carl's Junior (639 North Sepulveda Boulevard) Commercial property and parking lot (703 North Sepulveda Boulevard) Parking lot (739 North Sepulveda Boulevard)	None identified None identified None identified

If the surrounding properties are listed in the regulatory database, please refer to Section 5.1 for discussion.

2.4 Physical Setting

Geologic Unit: Description/Source	According to the United States Department of Agriculture's Report and General Soil Map for Los Angeles County, the area surrounding the subject property is underlain by soils of the Delhi Association from the Cenozoic era / USGS and United States Department of the Interior
Soil Series: Description/Source	Delhi soils are over 60 inches deep, are somewhat excessively drained, and have rapid hydraulic conductivity and low water holding capacity. Depth to water table is more than 6 feet. The soils consist of coarse sand, loamy sand, silt loam, sandy loam, gravelly sand and clay. / USDA Soil Survey
Groundwater Flow Direction/Source	West / Case Closure Package (CCP) for Equinix Communications 1920 East Maple Avenue (adjacent on the east of the subject property)
Estimated Depth to Groundwater/ Source	90 feet bgs / CCP

Surface waters on the subject property or adjoining sites	None
Additional notes	According to FEMA Flood Insurance Rate Map (FIRM) No. 06037C1770F, dated September 26, 2008, the subject property is located in Zone X designated as an area outside the 100 and 500-year flood zones and the flood potential for the subject property is minimal.

Note: Groundwater flow direction can be influenced locally and regionally by the presence of local wetland features, surface topography, recharge and discharge areas, horizontal and vertical inconsistencies in the types and location of subsurface soils, and proximity to water pumping wells. Depth and gradient of the water table can change seasonally in response to variation in precipitation and recharge, and over time, in response to urban development such as storm water controls, impervious surfaces, pumping wells, cleanup activities, dewatering, seawater intrusion barrier projects near the coast, and other factors.

3.0 HISTORICAL REVIEW OF SITE AND VICINITY

Reasonably ascertainable standard historical sources as outlined in ASTM Standard E1527-13 were used to determine previous uses and occupancies of the subject property that are likely to have led to RECs in connection with the subject property. A chronological summary of historical data found, including but not limited to aerial photographs, historical city directories, Sanborn fire insurance maps, and agency records, is as follows:

Date Range	Subject Property Description and Occupancy (Historical Addresses)	Source(s)
1896 - 1927	Undeveloped land	Previous report
1928 - 1947	Agricultural and fallow land	Aerial photographs
1953	Agricultural land with small agricultural structure	Aerial photographs
1957 and 1962	Current site improvements were constructed for commercial and industrial use	Agency records
1963 - 1999	Current site improvements used for commercial and industrial use.	Aerial photographs, Agency records, City directories, Interviews, Site observations
2000 - 2007	Current site improvements - Unknown occupancy	Aerial photographs, Agency records, City directories, Interviews, Site observations
2008 - present	Current site improvements used for commercial and industrial use.	Aerial photographs, Agency records, City directories, Interviews, Site observations

Based on a review of historical sources, the subject property was developed for agricultural use from at least 1928 until at least 1938. From at least 1947 until at least 1953, the subject property appeared undeveloped. Construction of the current site improvements began at the 700 North Sepulveda Boulevard address in 1955 with additional improvements at 700 in 1957. The office structure at 650 North Sepulveda Boulevard was constructed in 1962. Tenants noted at the 700 North Sepulveda Boulevard address include: Pharmaceutical Co. (1958); The Rabin Company/Pharmapak Drug Company (1960); Rabin Winters Corporation (1962-1967); Rabin Winters Division of Brunswig Drug/Bergan Brunswick (1966-1974); BBC Laboratories, Norton Products/Tannehill Pharmaceuticals (1971); Devlin Pharmaceuticals Inc. (1974-1981); Hughes Aircraft Company (1982-1999) and The Boeing Company (2008-Present). Tenants at the 650 North Sepulveda Boulevard address include: Aerospace Center (1962-1966); Computer Science Corporation (CSC) (1969-1976); Howard Hughes / Hughes Corporation / Hughes Aircraft Company (1982-1999) and The Boeing Company (2008-Present).

The following historical addresses were associated with the subject property: 650, 690 and 700 North Sepulveda Boulevard. These addresses were also researched as part of this assessment when applicable and/or reasonably ascertainable.

Based on a review of historical sources, eight 1,000-gallon underground storage tanks (USTs) were located on the subject property from 1958 until 1985. The USTs were constructed of concrete and reportedly contained gasoline, sulfides, organic acids, copper, zinc, mineral oils,

alcohols, and solvents. The USTs were reportedly associated with the manufacturing of lighter fluid and pharmaceuticals. The exact location of the USTs was not identified. However, according to historical sources, the USTs appear to have been likely located in the northeast portion of the property. AEI identified a building permit for removal of the USTs dated May 21, 1982. Remarks on the permit indicate "Remove 8 underground tanks, fill and compact void, resurface. After the removal of the tanks, the void will be filled with clean sand compacted to 90% of ASTM standards and supervised by Western Laboratories". AEI also identified an application for closure of Hazardous Materials Underground Storage dated November 6, 1985 indicating that permanent concrete 15-year-old 1,000-gallon tank(s) containing oil & grease, sulfides, organic acids, copper and zinc. A Phase II performed by Ramboll Environ in May of 2016 indicated that sampling was performed in the suspected location of the former USTs (northeastern portion of the site). It should be noted that the previous Phase II did not include sampling at an area identified as the former gasoline pump, which was located further west of the former USTs. The soil vapor samples were collected at depths ranging from 10.5 to 12 feet bgs; as such shallow soil vapor conditions do not appear to have been assessed. Due to soil conditions, GPR penetration was 3 feet or less. The closed USTs may have been installed at depths exceeding 5 feet. Although the USTs were scheduled to be removed and backfilled with sand, based on the results of the previous Phase II (borings included concrete and asphalt), the concrete USTs may have been closed in place and/or remnants of the concrete remain in the subsurface. Analytical results at the time revealed concentrations of constituents of concern (petroleum hydrocarbons, volatile organic compounds, metals) in soil and soil vapor below the ESLs in effect at the time. ESLs have changed in CA since 2016. Soil vapor concentrations detected at the time are above the current commercial/industrial ESLs (from 2019) for benzene and ethylbenzene. The detected concentrations of benzene and ethylbenzene above the current commercial/industrial ESLs represents a REC.

Based on the review of historical sources, the subject property was equipped with a concrete clarifier. The clarifier was located at the subject property addressed as 700 North Sepulveda Boulevard from at least 1966 until at least 1985. The clarifier was reportedly installed by Bergin Brunswick and used during the manufacturing of pharmaceuticals. Samples received by IT Corporation on October 16, 1985 performed on six samples of clarifier sludge submitted by Hughes Aircraft Space and Communications were analyzed and found to contain high levels of Tetrachloroethylene. Tetrachloroethylene concentrations of 2,000 micrograms per liter (µg/L) were recorded in Comp. 1&2 and 700 µg/L were recorded in Comp. 3&4. During the course of this assessment, AEI identified correspondence from the County of Los Angeles, Department of Public Works indicating that the clarifier was filled in place on October 29, 1985. The exact location of the clarifier was not identified, however, based on a review of historical permits, the clarifier was identified to be located in the "rear end of building - 700 N. Sepulveda" (which is expected to be the eastern exterior area of the 700 building). The previous Phase II conducted in 2016 (discussed in Section 6.3), did not include sampling on the eastern exterior area of the 700 building and only included a limited geophysical survey of this area. Based on the lack of location identification, the lack of testing of the clarifier during the Phase II and the levels of Tetrachloroethylene identified in the clarifier sludge samples, the former clarifier represents a REC.

If available, copies of historical sources are provided in Appendix D.

3.1 Aerial Photographs

AEI reviewed aerial photographs of the subject property and surrounding area. A search was made of the EDR - 1045033 collection of aerial photographs. Aerial photographs were reviewed for the following years:

Year(s)	Subject Property Description	Adjoining Site Descriptions
1923	Agricultural land	NORTH: Agricultural land EAST: Agricultural land SOUTH: Agricultural land WEST: Roadway followed by: Agricultural land and associated agricultural/residential structures
1928	The subject property appears as agricultural land with agricultural/residential structures along at the northwest and southwest corners of the site	NORTH: Agricultural land with additional residential/agricultural structures EAST: No significant change is noted SOUTH: No significant change is noted WEST: No significant change is noted
1938, 1947	Agricultural / fallow land (cleared land and/or earth moving is apparent in 1938)	NORTH: Agricultural fallow land EAST: Agricultural fallow land SOUTH: Agricultural fallow land with a small structure WEST: Roadway followed by: agricultural land with agricultural/residential structures and one commercial structure
1953	Agricultural / fallow land with a small agricultural structure and what appears to be an unpaved roadway	NORTH: No significant change is noted EAST: No significant change is noted SOUTH: No significant change is noted WEST: Roadway followed by: residential and commercial structures with agricultural and fallow land
1963	The subject property appears developed with the current site improvements	NORTH: Partially developed with the current commercial structures EAST: Developed with the current commercial structures SOUTH: Commercial structure WEST: Roadway followed by: Commercial structures and associated parking
1977, 1979, 1981, 1989, 1994	No significant change is noted	NORTH: Current commercial structures EAST: No significant change is noted SOUTH: No significant change is noted WEST: Roadway followed by: Commercial structures and associated parking
2002, 2005, 2009, 2012, 2016	No significant change is noted	NORTH: No significant change is noted EAST: No significant change is noted SOUTH: No significant change is noted WEST: Roadway followed by: current commercial structures and associated parking areas

AEI did not identify potential environmental concerns in association with the historical use of the subject property during the aerial photograph review.

3.2 Sanborn Fire Insurance Maps

Sanborn Fire Insurance maps were developed in the late 1800s and early 1900s for use as an assessment tool for fire insurance rates in urbanized areas. A search was made of the EDR collection of Sanborn Fire Insurance maps.

Sanborn map coverage was not available for the subject property.

3.3 City Directories

A search of historical city directories was conducted for the subject property utilizing EDR - 1045033. Please refer to the appendices for a complete list of historical subject property tenants identified by EDR - 1045033. Directories were reviewed in approximate five-year increments from 1920 to 2015. The first listing for the subject property appeared in 1962. The following table summarizes the potential tenants of concern based on AEI's review of the historical city directories.

Year(s)	Address - Occupant Listed
1920 - 1961 (non-inclusive)	No listing
1962	650 North Sepulveda Boulevard - Multiple office tenants in manufacturing and aerospace industry 690 North Sepulveda Boulevard - Multiple office tenants in manufacturing and aerospace industry 700 North Sepulveda Boulevard - Brucemore Inc Rabin Winters Corp 700 North Sepulveda Boulevard - John David Drug Company - Rabin Winters Corporation
1963	No listing
1964	650 North Sepulveda Boulevard - Multiple office tenants in manufacturing and aerospace industry (includes Aerospace Printing Center) 690 North Sepulveda Boulevard - Multiple office tenants in manufacturing and aerospace industry 700 North Sepulveda Boulevard - John David Drug Company - Rabin Winters Corporation 700 North Sepulveda Boulevard - Pharmapak Drug Company
1965, 1966	No listing
1967	650 North Sepulveda Boulevard - Multiple office tenants in manufacturing and aerospace industry (includes Aerospace Printing Center) 690 North Sepulveda Boulevard - Multiple office tenants in manufacturing and aerospace industry 700 North Sepulveda Boulevard - Brucemore Inc Rabin Winters Corp

Year(s)	Address - Occupant Listed
	700 North Sepulveda Boulevard - John David Drug Company - Rabin Winters Corporation 700 North Sepulveda Boulevard - Rabin Winters Corp
1969	No listing
1970	650 North Sepulveda Boulevard - Multiple office tenants in manufacturing and aerospace industry 690 North Sepulveda Boulevard - Multiple office tenants in manufacturing and aerospace industry 700 North Sepulveda Boulevard - Rabin Winters Division of Brunswig Drug
1971	650 North Sepulveda Boulevard - Multiple office tenants in manufacturing and aerospace industry 690 North Sepulveda Boulevard - Multiple office tenants in manufacturing and aerospace industry 700 North Sepulveda Boulevard - BBC Laboratories 700 North Sepulveda Boulevard - Norton Products 700 North Sepulveda Boulevard - Tannehill Pharmaceuticals
1972	No listing
1975	650 North Sepulveda Boulevard - Multiple office tenants in manufacturing and aerospace industry 690 North Sepulveda Boulevard - Multiple office tenants in manufacturing and aerospace industry 700 North Sepulveda Boulevard - Devlin Pharmaceuticals, Inc.
1976	No listing
1980	650 North Sepulveda Boulevard - Multiple office tenants in manufacturing and aerospace industry 690 North Sepulveda Boulevard - Multiple office tenants in manufacturing and aerospace industry 700 North Sepulveda Boulevard - Devlin Pharmaceuticals, Inc.
1981	650 North Sepulveda Boulevard - Multiple office tenants in manufacturing and aerospace industry 690 North Sepulveda Boulevard - Multiple office tenants in manufacturing and aerospace industry 700 North Sepulveda Boulevard - Devlin Pharmaceuticals, Inc.
1985	650 North Sepulveda Boulevard - Multiple office tenants in manufacturing and aerospace industry
1986, 1990, 1991, 1992, 1994, 1995, 1996, 1999, 2000	No listing
2001	650 North Sepulveda Boulevard - XXXX

Year(s)	Address - Occupant Listed
	690 North Sepulveda Boulevard - XXXX 700 North Sepulveda Boulevard - XXXX
2003, 2004, 2006, 2009, 2015	No listing

If listed above, XXXX indicates that the address is valid but there is no occupancy information available.

Based on a review of city directories, the subject property appears to have been occupied by various manufacturing tenants from at least 1962 to 1985; refer to Section 3.0 for additional information.

3.4 Historical Topographic Maps

Based on the quality of information obtained from other sources, historical topographic maps were not reviewed as a part of this assessment.

3.5 Chain of Title

Based on the quality of information obtained from other sources, a chain of title search was not performed as part of this assessment.

4.0 REGULATORY AGENCY RECORDS REVIEW

Local and state agencies, such as environmental health departments, fire prevention bureaus, and building and planning departments are contacted to identify any current or previous reports of hazardous substance use, storage, and/or unauthorized releases that may have impacted the subject property. In addition, information pertaining to AULs, defined as legal or physical restrictions, or limitations on the use of, or access to, a site or facility, is requested.

4.1 LOCAL ENVIRONMENTAL HEALTH DEPARTMENT AND/OR STATE ENVIRONMENTAL AGENCY

Agency	Date Contacted	Method of Contact	Name & Title of Contact	Agency Response
Los Angeles County Public Health Investigations (LACPHI)	May 18, 2020	Email	NA	Response pending, refer to Section 1.5

4.2 FIRE DEPARTMENT

Agency	Date Contacted	Method of Contact	Name & Title of Contact	Agency Response
El Segundo Fire Department (ESFD)	May 18, 2020	Email	Ms. Liz Lydic, Management Analyst	Records discussed below

Records Summary

Date	Occupant	Document Type	Document Notes/Violations
1994	PacTel Cellular	Hazardous Materials Disclosure Information and Business Emergency Plan	Sulfuric Acid in batteries
1998 - 1999	Airtouch Cellular	Chemical inventory	Battery Electrolyte for Cell Tower
1994 - 1999	Hughes Space And Communications	Chemical Inventory	Potassium Hydroxide, Tolyltriazole, Sodium Polyacrylate, 1-Hydroxyethylidine-1, 1-Diphophonic Acid
2000	Boeing Satellite Systems	Facility Information	Hazardous Material Inventory
2000	Boeing Satellite Systems	Notice to Comply	Minor violations due for repair by 12/8/2000
2001 - 2005	Verizon Wireless	Chemical Disclosure Inventory and permitting	Battery Electrolyte for Cell Tower and Diesel Fuel for backup generator
2002 - 2004	Verizon Wireless	Emergency and Hazardous Chemical Inventory	Sulfuric acid in batteries in battery room
2003	Boeing Satellite Systems	Hazardous Waste and Hazardous Materials Management Regulatory Program	Permit and business plan
2006	Boeing Building S-30	Inspection Report	No significant Violations
2009	Boeing Building S-37	Inspection Report	No significant Violations

Based on a review of documents provided by the El Segundo Fire Department, no releases or violations were identified for the subject property.

4.3 BUILDING DEPARTMENT

Agency	Date Contacted	Method of Contact	Name & Title of Contact	Agency Response
El Segundo Building Department (ESBD)	May 18, 2020	Online records Request	NA	Response pending, refer to Section 1.5

Records Summary

Year(s)	Owner/Applicant	Description of Permit and Building Use
1961	Aerospace Center	Building permit for 7-story building with rooftop helistop
1964	Aerospace Center	Building permit for partitions
1965	Computer Science Corporation	Building permit for HVAC
1969	Computer Science Corporation	Building permit - remodel office
1972	Aerospace Center (Computer Science Corporation)	Building permit for storage vault
1976	CSC	Building permit for a 1500-gallon water tank
1982	Bruce Rabin	Building permit for removal of 8 underground storage tanks, fill and compact void and resurface
1985	Hughes Aircraft	Plumbing permit
1983	Chevron USA, Inc.	Building permit for equipment storage and mobile phone
1984	Howard Hughes	Certificate of Occupancy - commercial facility
1984	Howard Corporation	Permit to install fire sprinklers
1986	Hughes Aircraft	Permit for warehouse renovation
1990	Hughes Aircraft	Permit to install fire sprinkler heads
1999	Hughes Aircraft	Permit to resurface parking lot

Based on a review of documents obtained from the ESBD, the subject property was equipped with 8 underground storage tanks. Based on the historical information reviewed, eight 1,000-gallon USTs were located on the subject property from 1958 until 1985. The USTs were of concrete construction, and reportedly contained gasoline, sulfides, organic acids, copper, zinc, mineral oils, alcohols, and solvents. No information pertaining to the exact location was available during the course of this assessment, although they were described as being located "north of the building, near receiving" in a memo dated November 12, 1985. A building permit dated May 21, 1982, was issued for the removal of 8 underground storage tanks, fill and compact the void and resurface under the supervision of Western Laboratories. The tanks were permitted for removal, however, no record of proper closure under regulatory oversight was identified. Further, no records regarding these USTs was identified on-file with the El Segundo Fire Department (ESFD). Refer to Sections 3.0, 5.1, and 6.3 for further discussion.

4.4 Planning Department

Agency	Date Contacted	Method of Contact	Name & Title of Contact	Agency Response
El Segundo Planning Department (ESPD)	May 18, 2020	Online records Request	NA	Response pending, refer to Section 1.5

4.5 Assessor's Office

Agency	Date Contacted	Method of Contact	Name & Title of Contact	Agency Response
Los Angeles County Assessor's Office	May 18, 2020	Website	N/A	Information obtained is discussed below

Records Summary

APN	650 PCH – 4138006010; 4138006031 700 PCH - 4138006005
Acreage	5.81 acres
Construction Date	1957 and 1962
Building Square Footage	200220 square feet
Current Owner	Not provided

4.6 Other Agencies Searched

Agency	Date Contacted	Method of Contact	Name & Title of Contact	Agency Response

California DTSC HWTS Database Summary

Occupant	Year(s)	Hazardous Waste Generated	Amount (Tons)

Hughes Space and Communication	1994	Asbestos Containing Waste	25.284
Hughes Space and Communication	1994	Polychlorinated Biphenyls & Materials	11.0299
Hughes Space and Communication	1994	Off-specification Aged, or surplus organics	0.035
Hughes Space and Communication	1994	Halogenated solvents	0.01
Hughes Space and Communication	1994	Photochemicals / Photoprocessing Waste	0.125
Hughes Space and Communication	1994	Liquids with PH <= 2	0.0025
Hughes Space and Communication	1995	Asbestos Containing Waste	8.428
Hughes Space and Communication	1995	Liquids with PH <= 2	0.9799
Hughes Space and Communication	1996	Liquids with PH <= 2	0.3753
Hughes Space and Communication	1997	Liquids with PH <= 2	0.6255
Hughes Space and Communication	1997	Liquids with PH <= 2 with metals	0.65
Hughes Space and Communication	1998	Off-specification Aged, or surplus inorganics	0.25
Hughes Space and Communication	1998	Asbestos Containing Waste	19.384
Hughes Space and Communication	1998	Off-specification Aged, or surplus organics	0.03
Hughes Space and Communication	1998	Photochemicals / Photoprocessing Waste	0.5975
Hughes Space and Communication	1999	Photochemicals / Photoprocessing Waste	0.562
Hughes Space and Communication	2000	Asbestos Containing Waste	24.2104
Hughes Space and Communication	2000	Hydrocarbon Solvents	0.2025
Hughes Space and Communication	2000	Photochemicals / Photoprocessing Waste	0.1335
The Boeing Company	2000	Asbestos Containing Waste	23.5984
The Boeing Company	2000	Hydrocarbon Solvents	0.2435
The Boeing Company	2000	Biological Waste (food processing, Etc.)	0.015
The Boeing Company	2000	Photochemicals / Photoprocessing Waste	0.4205
The Boeing Company	2000	Liquids with PH <= 2 with metals	0.5
The Boeing Company	2001	Asbestos Containing Waste	38.062
The Boeing Company	2001	Other organic Solids	0.025
The Boeing Company	2001	Photochemicals / Photoprocessing Waste	0.404
The Boeing Company	2002	Aqueous solutions (2 < PH < 12.5) with organic resideues < 10%	0.252
The Boeing Company	2002	Asbestos Containing Waste	0.497
The Boeing Company	2002	Photochemicals / Photoprocessing Waste	0.4005
The Boeing Company	2003	Asbestos Containing Waste	0.125

The Boeing Company	2003	Off-specification Aged, or surplus organics	0.0375
The Boeing Company	2004	Off-specification Aged, or surplus inorganics	0.0075
The Boeing Company	2004	Asbestos Containing Waste	12.778
The Boeing Company	2004	Off-specification Aged, or surplus organics	0.18
The Boeing Company	2005	Waste oil and mixed oil	0.143
The Boeing Company	2006	Asbestos Containing Waste	0.0375
The Boeing Company	2007	Asbestos Containing Waste	0.476
The Boeing Company	2007	Off-specification Aged, or surplus organics	0.0775
The Boeing Company	2007	Other organic solids	0.0375
The Boeing Company	2008	Aqueous solutions (2 < PH < 12.5) with organic resideues < 10%	0.1
The Boeing Company	2008	Asbestos Containing Waste	6.468
The Boeing Company	2008	Other inorganic solid waste	0.0025
The Boeing Company	2008	Halogenated solvents	0.15
The Boeing Company	2008	Other organic solids	0.0875
Southern California Edison	2009	Waste oil and Mixed oil	6.7222
The Boeing Company	2009	Asbestos Containing Waste	22.736
The Boeing Company	2010	Asbestos Containing Waste	6.272
The Boeing Company	2010	Other inorganic solid waste	0.0025
The Boeing Company	2010	Off-specification Aged, or surplus organics	0.0025
The Boeing Company	2010	Other organic solids	0.025
The Boeing Company	2011	Aqueous solutions (2 < PH < 12.5) with organic resideues < 10%	0.125
The Boeing Company	2011	Asbestos Containing Waste	6.375
The Boeing Company	2011	Other inorganic solid waste	0.095
The Boeing Company	2011	Other organic solids	0.125
The Boeing Company	2011	Liquids with PH <= 2 with metals	0.25
The Boeing Company	2012	Other inorganic solid waste	0.075
The Boeing Company	2012	Other organic solids	0.075
The Boeing Company	2013	Aqueous solutions (2 < PH < 12.5) with organic resideues < 10%	0.15
The Boeing Company	2013	Asbestos Containing Waste	0.25
The Boeing Company	2013	Other organic solids	0.125
The Boeing Company	2014	Asbestos Containing Waste	0.1
The Boeing Company	2014	Other organic solids	0.025
The Boeing Company	2016	Asbestos Containing Waste	1.61
The Boeing Company	2018	Aqueous solutions (2 < PH < 12.5) with organic resideues < 10%	0.02

Based on a review of documents available from the DTSC, records indicate the disposal of multiple waste streams, including halogenated solvents. Environmental concerns associated with the generation of hazardous waste at the subject property from at least 1994 to at least 2018 are discussed in detail in Sections 3.0 and 5.1.

CA DTSC Envirostor

The subject property was identified in the CA DTSC Envirostor database as a "historical" site and in the SEMS-ARCHIVE database as an archived site. These listings do not appear to pertain to a release case; they appear to pertain to questionnaires and assessments of the property to determine if waste streams generated at the property were considered a significant threat to the environment. No records were identified in the EnviroStor database, however, a search of the listed facility ID indicated a discovery date of April 3, 1980 identified by an industrial waste survey questionnaire. On December 1, 1985, a preliminary assessment report indicated that 8 USTs were used by Rabins for the production of lighter fluid, Devlin manufactured pharmaceuticals and vitamins, Bergen manufactured pharmaceuticals and Hughes stored office equipment. The preliminary assessment also indicated that a Clarifier was closed on October 29, 1985. On December 8, 1994, Calsites validation program confirmed NFA for the DTSC. Additional Correspondence dated March 22, 2018 for administrative file review and reduction activity was noted. AEI requested documentation from DTSC-Cypress and was informed by Jone Barrio, Regional Records Coordinator. No records were available for review. On May 28, 2020, Jone Barrio forwarded our records request to the DTSC Chatsworth office in an attempt to locate any records for the subject property. A response is pending. According to a review of documents provided in previous reports, these listings appear to pertain to the closure of the USTs and clarifier discussed in Section 3.0.

South Coast Air Quality Management District

Date	Occupant	Document Type	Document Notes/Violations
1978	Devlin Pharmaceuticals, Inc.	Permit to Operate	Oven, Industrial heating and engineering
1980	Devlin Pharmaceuticals, Inc.	Permit to Operate	Oven, Industrial heating and engineering drying photochemically reactive solvents
1981	Devlin Pharmaceuticals, Inc.	Facility Equipment List	Oven drying permits granted pharmaceutical blending application denied
1985	Computer Sciences Corp	Facility Equipment List	No equipment listed
1989	Hughes Aircraft Company	Permit to Operate	Boiler, Rite watertube type
2004	The Boeing Company	Facility Equipment List	Permits to operate boilers, emergency generator and rule 1415 plan notifications
2004	Verizon Wireless	Notice to Comply	Post copy of permit
2008	Boeing Satellite Systems, Inc.	Rule 1415 Registration Form	Use and storage of Refrigerant in cooling towers
2010	Boeing Satellite Systems, Inc.	Rule 1415 Registration Form	Use and storage of Refrigerant in cooling towers
2012	Boeing Satellite Systems, Inc.	Rule 1415 Registration Form	Use and storage of Refrigerant in cooling towers
2013	Boeing Satellite Systems, Inc.	Permit to operate	Emergency electrical generator
2014	The Boeing Company	Rule 1415 Registration Form	Use and storage of Refrigerant in cooling towers
2016	The Boeing Company	Rule 1415 Registration Form	Use and storage of Refrigerant in cooling towers

2018	The Boeing Company	Rule 1415 Registration Form	Use and storage of Refrigerant in cooling towers
2020	The Boeing Company	Facility Equipment List	Rule 1415 plan notifications

Environmental concerns associated with the drying of photochemically reactive solvents and the use of an emergency generator at the subject property are discussed in detail in Sections 3.0, 5.1 and 7.1.

Los Angeles County Sanitation District

Date	Occupant	Document Type	Document Notes/Violations
1977	Computer Sciences Corporation	Permit for Industrial Wastewater Discharge	Discharge from cooling towers into sanitary sewer system
2002	Boeing Aircraft	Letter from Los Angeles County Sanitation District	Void of discharge permit 5815, company is exempt

Based on a review of documents provided by Los Angeles County Sanitation Department, the subject property has discharged overflow from cooling tower operations to the sanitary sewer. No record of unauthorized releases and no record of increased chromium levels were reported. In 2002, the site was exempted from permitting requirements for these features.

4.7 Oil and Gas Wells

Agency	Date Referenced	Resource	Oil or gas wells located within 500 feet of the subject property
Geologic Energy Management Division The California Geologic Energy Management Division (CalGEM)	May 18, 2020	CalGEM Map	Information obtained is discussed below

According to a review of the CalGEM map, an oil well and the El Segundo oil field is located approximately 500 feet to the south of the subject property. According to a review of aerial photographs, no evidence of oil wells or oil well development activities (such as oil well development pits/ponds) were identified on the subject property. An additional issue of concern with oil wells is the potential emission of methane and hydrogen sulfide gases. These gases can migrate through geologic materials and/or through pathways such as old oil wells, and fissures and fractures in underlying geologic formations. The emitted gases have the potential to accumulate within building interiors, adversely affecting human health. If the subject property is redeveloped, groundbreaking activities are conducted, and/or land use changes are planned, a methane assessment may be deemed warranted at that time.

4.8 Oil and Gas Pipelines

Agency	Date Referenced	Resource	Pipelines located within 500 feet of the subject property
National Pipeline Mapping System (NPMS)	May 18, 2020	NPMS Public Map Viewer	Information obtained is discussed below

According to information obtained from the NPMS Public Map Viewer, several underground hazardous pipelines are located along Pacific Coast Highway. No stressed vegetation was observed near the pipeline during AEI's reconnaissance and subject property staff reported no known environmental concerns associated with the pipelines. Releases from the pipelines (other than those caused by a third party) would be the responsibility of the operator. Based on this information, and the lack of a documented release identified in the regulatory database, no further action regarding the pipelines is warranted at this time.

4.9 State Environmental Superliens

In accordance with our approved scope of services, AEI did not assess whether the subject property is subject to any state environmental superliens.

4.10 State Property Transfer Laws

In accordance with our approved scope of services, AEI did not assess whether the subject property is subject to any state property transfer laws.

5.0 REGULATORY DATABASE RECORDS REVIEW

AEI contracted EDR to conduct a search of publicly available information from federal, state, tribal, and local databases containing known and suspected sites of environmental contamination and sites of potential environmental significance. Data gathered during the current regulatory database search is compiled by EDR into one regulatory database report. Location information for listed sites is designated using geocoded information provided by federal, state, or local agencies and commonly used mapping databases with the exception of "Orphan" sites. Due to poor or inadequate address information, Orphan sites are identified but not geocoded/mapped by EDR, rather, information is provided based upon vicinity zip codes, city name, and state. The number of listed sites identified within the approximate minimum search distance from the federal and state environmental records database listings specified in ASTM Standard E1527-13 is summarized in Section 5.1, along with the total number of Orphan sites. A copy of the regulatory database report, which includes detailed descriptions of the databases noted below, is included in Appendix C of this report.

In determining if a listed site is a potential environmental concern to the subject property, AEI generally applies the following criteria to classify the site as lower potential environmental concern: 1) the site only holds an operating permit (which does not imply a release), 2) the site's distance from, and/or topographic position relative to, the subject property, and/or 3) the site has recently been granted "No Further Action" by the appropriate regulatory agency.

Regulatory database listings associated with the subject property, adjoining site(s) and/or nearby sites of concern that were determined to warrant additional discussion are identified and further discussed in Section 5.1.

5.1 RECORDS SUMMARY

Facility Name	The Boeing Company, Aero Space Center, Southern California Edison - Customer Location, Hughes Space and Communications, The Boeing Company - S37, El Segundo, Boeing Satellite Systems - S38, Devlin Pharmaceuticals, Inc., Hughes Aircraft Company SCG
Address	650 - 700 North Sepulveda Boulevard, 650 North Sepulveda Boulevard, 650 North Pacific Coast Highway S37, 700 North Sepulveda Boulevard, 690 North Sepulveda Boulevard
Distance & Direction	Subject Property
Hydrologic Position	N/A
Databases Listed	RCRA NonGen / NLR, HAZNET (listed four times), CA HWTS (listed four times), CA CERS HAZ WASTE, CA CERS TANKS, CA CERS, ICIS, FINDS (listed three times), ECHO (listed twice), CA AST, CA ENVIROSTOR, SEMS-ARCHIVE, CA SWEEPS UST, CA LOS ANGELES CO. HMS
Comments	This site was identified in the regulatory database as a Resource Conservation and Recovery Act (RCRA) NonGen/NLR database. This database includes sites which generate, transport, store, treat, and/or dispose of hazardous waste as defined by the RCRA. Non-Generators do not presently generate hazardous waste. No violations were noted in this database. This site is listed four times in the Facility and Manifest Data (HAZNET) and HWTS databases. Data is extracted from copies of manifests received by the DTSC. Complete listing of reported waste disposed of from this site is listed in section 4.6. This site is listed in the CERS-HAZ database. This database is a list of sites in the California Environmental Protection Agency (CalEPA) Regulated Site Portal which fall under the following regulatory programs: Hazardous Chemical Management, Hazardous Waste Onsite Treatment, Household Hazardous Waste Collection, Hazardous Waste Generator, RCRA LQ HW Generator. The CalEPA oversees the statewide implementation of the Unified Program which applies regulatory standards to protect Californians from hazardous waste and materials. This site is listed as a Hazardous Waste Generator. No further information was available in this database. This site is listed in the CERS-Tank database. This is a list of sites in the California Environmental Protection Agency (CalEPA) Regulated Site Portal which fall under the Aboveground Petroleum Storage and Underground Storage Tank regulatory programs. The CalEPA oversees the statewide implementation of the

	Unified Program which applies regulatory standards to protect Californians from hazardous waste and materials. This site is listed as an aboveground petroleum Storage Tank site. No further information was available in this database. This site is listed in the CERS database. The CalEPA Regulated Site Portal database combines data about environmentally regulated sites and facilities in California into a single database. It combines data from a variety of state and federal databases and provides an overview of regulated activities across the spectrum of environmental programs for any given location in California. These activities include hazardous materials and waste, state and federal cleanups, impacted ground and surface waters, and toxic materials. The site was listed as a Chemical Storage Facility. Violations were noted for Failure to complete and electronically submit a site map with all required content, Failure to include in the SPCC Plan a prediction of direction and total quantity of oil potentially discharged from the facility as a result of each type of major equipment failure. No further information was available in this database. This site is listed in the Integrated Compliance Information System (ICIS) database. The ICIS database, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit. Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring. This site is listed as a FINDS site three times and an ECHO site twice in association with the above RCRA listing. No violations or enforcement actions were identified on the EPA websites Envirofacts and ECHO. This site is listed in the Aboveground Storage Tank (AST) database. No information regarding number of ASTs, content, capacity or status is available in this database. This site is identified as an Envirostor site on the regulatory database. The Envirostor database is maintained by the Department of Toxic Substances Control (DTSC) and identifies sites that have known contamination or sites for which further investigation is warranted. The status of the site is listed as "No further Action" as of December 8, 1994. The Division responsible for this site was listed as Cleanup Cypress. AEI requested documentation from DTSC-Cypress and was informed by Jone Barrio, Regional Records Coordinator. No records were available. Information obtained from the ENVIROSTOR database are discussed in Section 4.6. This site is listed in the Superfund Enterprise Management System Archive database. This database tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015.

	EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that based upon available information, the location is not judged to be a potential NPL site. According to a review of documents provided in previous reports, this listing appears to pertain to the closure of the USTs and clarifier discussed in Section 3.0. Hughes Aircraft Co SCG at the address 690 N Sepulveda Boulevard was listed in the Statewide Environmental Evaluation and Planning System (SWEEPS UST) database. The underground storage tank listing was updated and maintained by the State Water Resources Control Board in the early 1990's. The listing is no longer updated or maintained. No information regarding the number of USTs, content, capacity or status is available in this database. This listing is also associated with a permit associated with the Los Angeles County Department of Public Works (Facility Id: 010427-010342). AEI contacted the LACDPW for additional information regarding this UST listing, however, a response is pending. It is unclear if this UST listing is associated with the former USTs located at 700 N Sepulveda Boulevard. The 690 N Sepulveda Boulevard has been historically associated with the 650 building, and as such, this listing may pertain to a UST associated with this building. The lack of information on this UST is considered a data gap. The potential presence of a UST associated with the 650 building and the lack of supporting documentation represents a REC. This site was listed in the LOS ANGELES CO. HMS database. This database lists industrial waste and UST sites listed with the Los Angeles County Department of Public Works. The site is listed as Open. No further information was available in this database. Refer to Sections 3.0, 5.1, and 6.3 for further discussion.

Facility Name	LAX Photo Lab
Address	630 North Sepulveda Boulevard
Distance & Direction	Adjoining to the South
Hydrologic Position	Cross-gradient
Databases Listed	RCRA NonGen/NLR, FINDS, ECHO
Comments	This site was identified in the regulatory database as a Resource Conservation and Recovery Act (RCRA) NonGen/NLR database. This database includes sites which generate, transport, store, treat, and/or dispose of hazardous waste as defined by the RCRA. Non-Generators do not presently generate hazardous waste. No violations were noted in this database.

	This property is listed as a FINDS and ECHO site in association with the above RCRA listing. No violations or enforcement actions were identified on the EPA websites Envirofacts and ECHO. Based on the nature of this listing and lack of violations, it is not expected to represent a significant environmental concern. Based on the non-release nature of the listing, the nature of occupancy and the inferred direction of groundwater flow, the review of regulatory files for this adjoining site was not deemed necessary and this listing is not expected to represent a significant environmental concern.

Facility Name	Tri-Cleaners
Address	630 North Sepulveda Boulevard, #11A
Distance & Direction	Adjoining to the south
Hydrologic Position	Cross-gradient
Databases Listed	CA DRYCLEANERS (listed three times), EDR Hist Cleaner, RCRA-SQG, FINDS, ECHO
Comments	This site is listed three times in the CA DRYCLEANERS database. This database lists drycleaner related facilities that have EPA ID numbers. This site is listed in the EDR Hist Cleaners database. EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. This site is identified in the regulatory database as a Resource Conservation and Recovery Act (RCRA) Small Quantity Generators (SQGs) site. No Violations were noted in this database. This property is listed as a FINDS and ECHO site in association with the above RCRA listing. No violations or enforcement actions were identified on the EPA websites Envirofacts and ECHO. The regulatory database indicates the presence of a dry cleaner using PERC at the adjacent site to the south of the subject property from at least 1995 until at least 2014. Based on the proximity of this site to the subject property, the potential exists that, if a release of chlorinated solvents occurred at this site, the subsurface of the subject property may have also been impacted. This site may pose a threat for vapor-phase contaminant migration to the subject property if a release has occurred. However, no releases have been attributed to this site at this time. If the the User of this report desire a greater degree of certainty regarding the potential for vapor-phase contamination to the subject property, further investigation would be required. Based on the lack of a documented release, the review of additional regulatory agency files for this site was not deemed necessary.

Facility Name	Equinix Operating Center
Address	1920 East Maple Avenue
Distance & Direction	Adjoining to the east

Hydrologic Position	Up-gradient
Databases Listed	CA AST, CA CERS HAZ WASTE, CA CERS TANKS, CA CERS, CA LUST, CA CERS, CA UST, RCRA NonGen / NLR, RCRA-SQG, CA HIST UST, FINDS, ECHO
Comments	This site is listed in the Aboveground Storage Tank (AST) database. No information regarding the number of tanks, installation dates or contents was provided in this database. The database does indicate a total of 33,000 gallons. This site is listed in the CERS-HAZ database. This database is a list of sites in the California Environmental Protection Agency (CalEPA) Regulated Site Portal which fall under the following regulatory programs: Hazardous Chemical Management, Hazardous Waste Onsite Treatment, Household Hazardous Waste Collection, Hazardous Waste Generator, RCRA LQ HW Generator. The CalEPA oversees the statewide implementation of the Unified Program which applies regulatory standards to protect Californians from hazardous waste and materials. This site is listed as a Hazardous Waste Generator. No further information was available in this database. This site is listed in the CERS-Tank database. This is a list of sites in the California Environmental Protection Agency (CalEPA) Regulated Site Portal which fall under the Aboveground Petroleum Storage and Underground Storage Tank regulatory programs. The CalEPA oversees the statewide implementation of the Unified Program which applies regulatory standards to protect Californians from hazardous waste and materials. This site is listed as an Aboveground Storage Tank site. No further information was available in this database. This site is listed twice in the CERS database. The CalEPA Regulated Site Portal database combines data about environmentally regulated sites and facilities in California into a single database. It combines data from a variety of state and federal databases and provides an overview of regulated activities across the spectrum of environmental programs for any given location in California. These activities include hazardous materials and waste, state and federal cleanups, impacted ground and surface waters, and toxic materials. This site is listed as a Chemical Storage Facility. Violations were noted for Failure to retain a copy of the permit to operate at the facility, Hazardous Waste Generator Program - Administration/Documentation - general, Failure to accumulate universal waste for one year or less, Failure to submit a complete and accurate application for a permit to operate a UST, or for renewal of the permit, Failure to send a legible copy of each hazardous waste manifest, Failure to label or mark each individual or container, Failure of the universal waste handler to transfer universal waste to another universal waste handler, or appropriate destination facility, Failure to use a DTSC registered hazardous waste transporter, APSA Program - Operations/ Maintenance - General, Failure to meet container management requirements. Failure to have at least one facility employee present during operating hours that has been trained in the proper operation and maintenance of the UST system by a designated operator (DO), Failure to properly label hazardous waste accumulation containers, Failure of the functional line leak detector (LLD) to monitor at least hourly with the capability of detecting a release of 3.0 gallons, Failure to have an approved UST Monitoring Plan, Failure to maintain a list of employees trained by the designated operator, Failure to send hazardous waste offsite for treatment, Failure to inspect hazardous waste storage areas at least weekly. The site has returned to compliance. No further information was available in this database.

	This site is listed in the Underground Storage Tank (UST) database. The site is listed with two listed storage tanks. No further information was available in this database. This site was identified in the regulatory database as a Resource Conservation and Recovery Act (RCRA) NonGen/NLR database. This database includes sites which generate, transport, store, treat, and/or dispose of hazardous waste as defined by the RCRA. Non-Generators do not presently generate hazardous waste. No violations were noted in this database. This site is identified in the regulatory database as a Resource Conservation and Recovery Act (RCRA) Small Quantity Generators (SQGs) site. No Violations were noted in this database. This site is listed in the Historical Underground Storage Tank (HIST UST) database with three underground storage tanks. Tank 001, installed in 1981, is a 12,000 gallon tank used for unleaded fuel. Tank 002, installed in 1981, is a 12,000 gallon tank used for regular fuel. Tank 003, installed in 1981, is a 12,000 gallon tank used for unleaded fuel. No further information was available in this database. This property is listed as a FINDS and ECHO site in association with the above RCRA listing. No violations or enforcement actions were identified on the EPA websites Envirofacts and ECHO. The adjacent site to the east is occupied by Equinix Communications. The site has been operated as an active data storage center facility since 2005. The site includes 11 generators, two 30,000-gallon diesel USTs and associated underground piping. Each generator also contains a 3,000-gallon belly tank for local storage. During underground piping replacement and upgrades, possible contamination from a previous diesel fuel spill was identified (RB Case #: R-10916A). 63 Tons of contaminated soil was excavated and removed from the site. On April 24, 2018 the Los Angeles County Regional Quality Control Board issued a Closure/No Further Action letter for the completion of the site investigation and corrective action at the site. AEI reviewed regulatory closure documentation and based on the available documents, no elevated concentrations of constituents were identified in the closest soil samples to the subject property at the time of closure. Based on these findings, the listings are not expected to represent a significant environmental concern. Based on the closure under regulatory oversight of the soils only case, the depth of groundwater and the No further action status, this site is not expected to represent a significant environmental concern. Based on the factors discussed above, the review of additional regulatory agency files for this site was not deemed necessary, and these listings are not expected to represent a significant environmental concern.

Facility Name	Hughes Aircraft - EDSG
Address	1920 Maple Street East
Distance & Direction	Adjoining to the East

Hydrologic Position	Up-gradient
Databases Listed	CA LUST, CA HIST CORTESE, CA CERS, CA SWEEPS UST, CA LOS ANGELES CO. HMS
Comments	This site is listed in the Leaking Underground Storage Tank (LUST) database. The status of this site is "Case Closed". The case was reported as a soils only case and was closed as of September 18, 1996. It should be noted that additional sampling was conducted at this site during UST upgrades (see LUST case discussion above). Based on a review of historical building permits for the subject property, it appears that the USTs were located in the same area for both LUST cases. Although documents were not provided on GeoTracker for this release, based on the more recent sampling conducted in conjunction with the more recent LUST case for this site (RB Case #: R-10916A), a review of additional agency records does not appear warranted. This site is listed in the HIST CORTESE database. Sites in this database are designated by the State Water Resource Control Board (LUST), the Integrated Waste Board (SWF/LS) and the Department of Toxic Substances Control (CALSITES). This listing is no longer updated by the state agency. No further information was provided in the database. This site is listed in the CERS database. The CalEPA Regulated Site Portal database combines data about environmentally regulated sites and facilities in California into a single database. It combines data from a variety of state and federal databases and provides an overview of regulated activities across the spectrum of environmental programs for any given location in California. These activities include hazardous materials and waste, state and federal cleanups, impacted ground and surface waters, and toxic materials. The site was listed as a Leaking Underground Storage Tank Cleanup Site. This site is listed in the Statewide Environmental Evaluation and Planning System (SWEEPS UST) database. The underground storage tank listing was updated and maintained by the State Water Resources Control Board in the early 1990's. The listing is no longer updated or maintained. The database indicates an active site with at least 3 USTs. No further information was available in this database. This site was listed in the LOS ANGELES CO. HMS database. This database lists industrial waste and UST sites listed with the Los Angeles County Department of Public Works. Dates were not available for permitting or closures listed. Based on the closure under regulatory oversight of the soils only case, the depth of groundwater, and regulatory status, these listings are not expected to represent a significant environmental concern. Based on the factors discussed above, the review of additional regulatory agency files for this site was not deemed necessary.

Facility Name	Exodus Communications
Address	1920 East Maple Avenue
Distance & Direction	Adjoining to the East
Hydrologic Position	Up-gradient

Databases Listed	RCRA-SQG
Comments	This site is identified in the regulatory database as a Resource Conservation and Recovery Act (RCRA) Small Quantity Generators (SQGs) site. No Violations were noted in this database. Based on the non-release nature of the listing, the nature of occupancy and the depth of groundwater, the review of regulatory files for this adjoining site was not deemed necessary and this listing is not expected to represent a significant environmental concern.

Facility Name	A100 US, LLC-LAX 51
Address	1920 East Maple Avenue
Distance & Direction	Adjoining to the east
Hydrologic Position	Up-gradient
Databases Listed	RCRA-VSQG
Comments	This site is identified in the regulatory database as a Resource Conservation and Recovery Act (RCRA) Very Small Quantity Generators (VSQGs) site, Formerly Conditionally Exempt Small Quantity Generators . No Violations were noted in this database. Based on the non-release nature of the listing, the nature of occupancy and the depth of groundwater, the review of regulatory files for this adjoining site was not deemed necessary and this listing is not expected to represent a significant environmental concern.

Facility Name	Hughes
Address	1921 Mariposa Avenue
Distance & Direction	Adjoining to the east
Hydrologic Position	Up-gradient
Databases Listed	CA SWEEPS UST
Comments	This site is listed in the Statewide Environmental Evaluation and Planning System (SWEEPS UST) database. The underground storage tank listing was updated and maintained by the State Water Resources Control Board in the early 1990's. The listing is no longer updated or maintained. Two tanks were listed at this active site. No information regarding content, capacity or status is available in this database. Based on the non-release nature of the listing, the nature of occupancy and the depth of groundwater, the review of regulatory files for this adjoining site was not deemed necessary and this listing is not expected to represent a significant environmental concern.

Facility Name	XPO Logistics Supply Chain
Address	1921 East Mariposa Avenue
Distance & Direction	Adjoining to the east

Hydrologic Position	Up-gradient
Databases Listed	CA CERS HAZ WASTE, CA NPDES, CA CIWQS, CA CERS
Comments	This site is listed in the CERS-HAZ database. This database is a list of sites in the California Environmental Protection Agency (CalEPA) Regulated Site Portal which fall under the following regulatory programs: Hazardous Chemical Management, Hazardous Waste Onsite Treatment, Household Hazardous Waste Collection, Hazardous Waste Generator, RCRA LQ HW Generator. The CalEPA oversees the statewide implementation of the Unified Program which applies regulatory standards to protect Californians from hazardous waste and materials. This site is listed as a Hazardous Waste Generator. No further information was available in this database. This site is listed in the National Pollutant Discharge Elimination System (NPDES) database. No violations were reported in the NPDES database. This site is listed in the California Integrated Water Quality System (CIWQS) database. The CIWQS is a computer system used by the State and Regional Water Quality Control Boards to track information about places of environmental interest, manage permits and other orders, track inspections and manage violations and enforcement activities. No enforcement actions or violations over the last 5 years were noted in this database. This site is listed in the CERS database. The CalEPA Regulated Site Portal database combines data about environmentally regulated sites and facilities in California into a single database. It combines data from a variety of state and federal databases and provides an overview of regulated activities across the spectrum of environmental programs for any given location in California. These activities include hazardous materials and waste, state and federal cleanups, impacted ground and surface waters, and toxic materials. The site is listed as an Industrial Facility Storm Water. and Chemical Storage facility. A violation for Business Plan Program - Administration/Documentation - General and Failure to inspect hazardous waste storage areas at least weekly. The site has returned to compliance. Based on the non-release nature of the listing, the nature of occupancy and the depth of groundwater, the review of regulatory files for this adjoining site was not deemed necessary and this listing is not expected to represent a significant environmental concern.

Facility Name	Raytheon Systems Company, Raytheon
Address	1917-1921 East Mariposa Avenue
Distance & Direction	Adjoining to the east
Hydrologic Position	Up-gradient
Databases Listed	CA UST, RCRA NonGen / NLR
Comments	This site is listed in the Underground Storage Tank (UST) database. The database indicates that two tanks were removed with the permanent facility closure. No further information was available in this database.

	This site was identified in the regulatory database as a Resource Conservation and Recovery Act (RCRA) NonGen/NLR database. This database includes sites which generate, transport, store, treat, and/or dispose of hazardous waste as defined by the RCRA. Non-Generators do not presently generate hazardous waste. No violations were noted in this database. Based on the non-release nature of the listing, the nature of occupancy and the depth of groundwater, the review of regulatory files for this adjoining site was not deemed necessary and this listing is not expected to represent a significant environmental concern.

Facility Name	Hughes Aircraft Company
Address	607 Lairport Street
Distance & Direction	Adjoining to the east
Hydrologic Position	Up-gradient
Databases Listed	CA SWEEPS UST, CA LOS ANGELES CO. HMS
Comments	This site is listed in the Statewide Environmental Evaluation and Planning System (SWEEPS UST) database. The underground storage tank listing was updated and maintained by the State Water Resources Control Board in the early 1990's. The listing is no longer updated or maintained. No information regarding number of USTs, content, capacity or status is available in this database. This site was listed in the LOS ANGELES CO. HMS database. This database lists industrial waste and UST sites listed with the Los Angeles County Department of Public Works. Dates were not available for permitting or closures listed. Based on the non-release nature of the listing, the nature of occupancy and the depth of groundwater, the review of regulatory files for this adjoining site was not deemed necessary and this listing is not expected to represent a significant environmental concern.

Facility Name	Popklin Realty
Address	607 Lairport Street
Distance & Direction	Adjoining to the east
Hydrologic Position	Up-gradient
Databases Listed	CA UST
Comments	This site is listed in the Underground Storage Tank (UST) database. No information regarding the number of tanks, installation dates, capacities or contents was provided in this database. Based on the non-release nature of the listing, the nature of occupancy and the depth of groundwater, the review of regulatory files for this adjoining site was not deemed necessary and this listing is not expected to represent a significant environmental concern.

Facility Name	Leonards International Distrs

Address	600 North Sepulveda Boulevard
Distance & Direction	Adjoining to the south
Hydrologic Position	Cross-gradient
Databases Listed	EDR Hist Auto
Comments	This site is listed in the EDR Hist Auto database. Small-scale auto repair operations are performed on this adjacent property. The database indicates the presence of a gasoline service station from at least 1978 until at least 1983. No further information was available in this database. Based on the non-release nature of the listing, the nature of occupancy and the depth and inferred direction of groundwater flow, the review of regulatory files for this adjoining site was not deemed necessary and this listing is not expected to represent a significant environmental concern.

Facility Name	Segundo Associates
Address	600 North Sepulveda Boulevard
Distance & Direction	Adjoining to the south
Hydrologic Position	Cross-gradient
Databases Listed	CA UST
Comments	This site is listed in the Underground Storage Tank (UST) database. No information regarding the number of tanks, installation dates, capacities or contents was provided in this database. Based on the non-release nature of the listing, the nature of occupancy and the depth and inferred direction of groundwater flow, the review of regulatory files for this adjoining site was not deemed necessary and this listing is not expected to represent a significant environmental concern.

Facility Name	ESALON.COM LLC
Address	1910 E MAPLE AVE
Distance & Direction	Adjoining to the north
Hydrologic Position	Cross-gradient
Databases Listed	RCRA NonGen / NLR, CA CERS HAZ WASTE, CA HAZNET, CA CERS, CA HWTS
Comments	This site is listed for hazardous waste generation. Based on the non-release nature of the listings and the depth and inferred direction of groundwater flow, the review of regulatory files for this adjoining site was not deemed necessary and this listing is not expected to represent a significant environmental concern.

Facility Name	UNOCAL #5866
Address	603 SEPULVEDA BLVD N
Distance & Direction	260 feet to the south-southwest
Hydrologic Position	Cross-gradient

Databases Listed	CA LUST, CA HIST CORTESE, CA CERS, CA UST, CA HIST UST, CA HAZNET, CA HWTS, CA SWEEPS UST, CA HIST UST, EDR Hist Auto, CA CERS TANKS
Comments	A closed release was identified at this site. The release obtained closure on 7/12/1996 and no groundwater impacts were reported. Based on the depth to groundwater, lack of reported groundwater impacts, distance, regulatory status, and gradient, this site is not expected to represent a significant environmental concern to the subject property at this time. Additional listings: This facility was also listed on other database(s) as noted above; however, as these listings are not associated with a release, the radii prescribed by the ASTM E5127-13 standard does not require that these listings be specifically discussed. Notwithstanding, based on our review of available information, none of these listings appears to pose a significant environmental concern in connection with the subject property at this time.

Facility Name	BOB'S UNION 76, UNOCAL #4613
Address	770 N. SEPULVEDA BLV
Distance & Direction	190 feet to the north
Hydrologic Position	Cross-gradient
Databases Listed	CA UST, CA LUST, CA SWEEPS UST, CA LOS ANGELES CO. HMS, CA CERS, CA CERS HAZ WASTE, CA HIST UST, CA CERS TANKS, RCRA NonGen / NLR, CA HIST UST, CA UST, EDR Hist Auto
Comments	A closed release was identified at this site. The release obtained closure on 2/6/1997. Based on the depth to groundwater, distance, regulatory status, and gradient, this site is not expected to represent a significant environmental concern to the subject property at this time. Additional listings: This facility was also listed on other database(s) as noted above; however, as these listings are not associated with a release, the radii prescribed by the ASTM E5127-13 standard does not require that these listings be specifically discussed. Notwithstanding, based on our review of available information, none of these listings appears to pose a significant environmental concern in connection with the subject property at this time.

Facility Name	MOTTA SHELL SERVICE, CIRCLE K STORE #2709, MOBIL OIL CO
Address	763 and 765 N SEPULVEDA BLVD
Distance & Direction	190 feet to the north-northwest
Hydrologic Position	Cross-gradient
Databases Listed	CA HIST UST, EDR Hist Auto, CA CERS HAZ WASTE, CA CERS TANKS, CA HAZNET, CA CERS, CA HWTS, RCRA NonGen / NLR, CA UST, CA SWEEPS UST, CA LOS ANGELES CO. HMS
Comments	This site is a gas station. No releases have been identified. Based on the depth to groundwater, distance, lack of a documented release, and gradient, this site is not expected to represent a significant environmental concern to the subject property at this time.

5.2 VAPOR MIGRATION

AEI reviewed reasonably ascertainable information for the subject and nearby properties, including a regulatory database, files for nearby release sites, and/or historical documentation, to determine if potential vapor-phase migration concerns may be present which could impact the subject property.

Potential vapor migration concerns for the subject property are discussed in Section 3.0.

6.0 INTERVIEWS AND USER PROVIDED INFORMATION

6.1 INTERVIEWS

Pursuant to ASTM E1527-13, the following interviews were performed during this assessment in order to obtain information indicating RECs in connection with the subject property.

6.1.1 OWNER AND KEY SITE MANAGER

Relation to Property	Name	Date Interviewed	Method of Contact	Year First Associated w/ Property	Notes
Owner/Owner Representative	Not provided	NA	N/A	NA	Contact information not provided; refer to Section 1.5
Key Site Manager	Mr. Paul Summers	May 26, 2020	In Person	2008	Interviewed; see Interview Summary table below

Interview Summary

Question	Owner (Representative) Response/ Comment	Key Site Manager Response/ Comment
Do you have any knowledge of USTs, clarifiers or oil/water separators, sumps, or other subsurface features?	N/A	No
Do you have any knowledge of previous environmental investigations conducted on site?	N/A	No
Do you have any knowledge of current or past industrial operations and/or other operations which would involve the use of hazardous substances and/or petroleum products?	N/A	No
Are you aware of any known plans for site redevelopment or change in site use?	N/A	No
Are you aware of any pending, threatened, or past litigation relevant to hazardous substances or petroleum products in, on, or from the property?	N/A	No
Are you aware of any pending, threatened or past administrative proceedings relevant to hazardous substances or petroleum products in, on, or from the property?	N/A	No
Are you aware of any notices from any governmental entity regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products?	N/A	No
Are you aware of any incidents of flooding, leaks, or other water intrusion, and/or complaints related to indoor air quality?	N/A	No

6.1.2 Past Owners, Operators, and Occupants

AEI attempted to obtain contact information for past owners, operators and occupants of the subject property in order to interview them regarding the potential for contamination at the property. AEI requested this contact information, reviewed agency records, and performed online research to obtain this information. Contact information was not found. As such, interviews with past owners, operators and occupants were not reasonably ascertainable.

6.1.3 Interview with Others

Information obtained during interviews with local government officials is incorporated into the appropriate segments of this report.

6.2 User Provided Information

User provided information is intended to help identify the possibility of RECs in connection with the subject property. According to ASTM E1527-13 and the EPA Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), certain items should be researched by the prospective landowner or grantee, and the results of such inquiries may be provided to the Environmental Professional. The responsibility for qualifying for LLPs by conducting the inquiries ultimately rests with the User, and providing the information to the Environmental Professional would be prudent if such information is available.

The User did not complete the ASTM User Questionnaire or provide the User information to AEI. AEI assumes that qualification for the LLPs is being established by the User in documentation outside of this assessment.

Question	Response/ Comment
1. Environmental liens that are filed or recorded against the property (40 CFR 312.25) Did a search of recorded land title records (or judicial records where appropriate) identify any environmental liens filed or recorded against the property under federal, tribal, state or local law?	Information not provided
2. Activity and use limitations that are in place on the property or that have been filed or recorded against the property (40 CFR 312.26(a)(1)(v) and vi)). Did a search of recorded land title records (or judicial records where appropriate) identify any AULs, such as engineering controls, land use restrictions or institutional controls that are in place at the property and/or have been filed or recorded against the property under federal, tribal, state or local law?	Information not provided
3. Specialized knowledge or experience of the person seeking to qualify for the LLP (40 CFR 312.28). Do you have any specialized knowledge or experience related to the property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the property or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business?	Information not provided
4. Relationship of the purchase price to the fair market value of the property if it were not contaminated (40 CFR 312.29).	Information not provided

Question	Response / Comment
Does the purchase price being paid for this property reasonably reflect the fair market value of the property? If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the property?	
5. Commonly known or reasonably ascertainable information about the property (40 CFR 312.30). Are you aware of commonly known or reasonably ascertainable information about the property that would help the environmental professional to identify conditions indicative of releases or threatened releases? For example: (a) Do you know the past uses of the property? (b) Do you know of specific chemicals that are present or once were present at the property? (c) Do you know of spills or other chemical releases that have taken place at the property? (d) Do you know of any environmental cleanups that have taken place at the property?	Information not provided
6. The degree of obviousness of the presence or likely presence of contamination at the property, and the ability to detect the contamination by appropriate investigation (40 CFR 312.31). Based on your knowledge and experience related to the property, are there any obvious indicators that point to the presence or likely presence of contamination at the property?	Information not provided

6.3 Previous Reports and Other Provided Documentation

Documentation was provided to AEI during this assessment. A summary of this information follows:

*Phase I Environmental Site Assessment (*Boeing Building II, 700 North Sepulveda Boulevard, El Segundo, California 92045*)*, prepared by Partner Engineering and Science (September 18, 2015)

This report describes the subject property generally consistent with current conditions.

- Based on the historical information reviewed, Partner found that eight 1,000-gallon underground storage tanks (USTs) were located on the subject property (700 North Sepulveda portion) from 1958 until 1985. The USTs were of concrete construction, and reportedly contained gasoline, sulfides, organic acids, copper, zinc, mineral oils, alcohols, and solvents. No information pertaining to the exact location was available during the course of this assessment, although they were described being located "north of the building, near receiving" in a memo dated November 12, 1985. According to a document issued by the Los Angeles County Department of Public Works (LACDPW) to Hughes Aircraft on October 29, 1985, the USTs were filled in place. In a document dated July 12, 1990, the USTs were described as "removed…without regulatory oversight and their integrity was unknown." Further, no records were identified on-file with the El Segundo Fire Department (ESFD) and the LACDPW, and no information regarding this facility was provided by subject property management. In addition, according to the Department of Toxic Substances Control (DTSC) records reviewed, the subject property was equipped with a concrete clarifier between 1966 and 1985. The exact location of

the clarifier has not been identified but the clarifier was reportedly abandoned with the regulatory oversight of the LACDPW. At that time, six sludge samples were collected from the clarifier and analyzed for SVOCs. Laboratory results indicated no potential for air contamination. As a result, the LACDPW issued a statement indicating the clarifier was in compliance to Hughes Aircraft on October 29, 1985. A dry inspection was reportedly conducted for the clarifier on November 12, 1985, which did not identify leaks and indicated no problems were observed. Although no obvious evidence of leaks was identified within the clarifier, the potential exists for small quantities of materials within the clarifier to have been released over time which may have impacted soil and/ or groundwater surrounding the clarifier. In addition, Partner has not been provided with or identified documentation pertaining to subsurface conditions surrounding the clarifier at the time of closure, and the subject property appears to have been granted no further action (NFA) status in 1994.

- Based on the inadequate information regarding the disposition of the USTs at this facility and lack of regulatory oversight regarding the UST closure, as well as the lack of subsurface investigation documentation pertaining to closure of the clarifier, the potential exists for releases of hazardous substances and/or petroleum products to have impacted soil and/or groundwater at the subject property. The historical USTs and clarifier at the subject property represent a recognized environmental condition.

Based on their assessment, Partner recommended a limited subsurface investigation should be conducted in order to determine the presence or absence of soil and/or groundwater contamination due to the historical use of USTs and a clarifier on the subject property.

*Phase I Environmental Site Assessment (*Boeing Buildings, 650 North Sepulveda Boulevard, El Segundo, California 92045*)*, prepared by Partner Engineering and Science (September 18, 2015)

This report describes the subject property generally consistent with current conditions.

- Partner did not identify any recognized environmental conditions during the course of this assessment.
- Partner did not identify any controlled recognized environmental conditions during the course of this assessment.
- Partner did not identify any historical recognized environmental conditions during the course of this assessment.
- Environmental issues for ACM and LBP were identified.

Note: Partner presumed that the UST listing for 690 was associated with the USTs at the 700 Building.

No further investigation was recommended.

Phase II Subsurface Investigation (700 North Sepulveda Boulevard, El Segundo, California 92045), prepared by Ramboll Environ (May 13, 2016)

- Based on the REC identified in Partner's 2015 PHI ESA (discussed above), a Phase II subsurface investigation was recommended to identify any potential impact of contamination/releases of hazardous substances. On May 13, 2016, a subsurface investigation was conducted in the area of the former USTs and clarifier. Based on the results of their geophysical survey, Ramblin Environ (RE) advanced 6 soil borings in the parking lot north to the northeast of the 700 building. Analytical results revealed low concentrations of constituents (petroleum hydrocarbons, volatile organic compounds, metals) detected in soil and soil vapor with the exception of arsenic in soils. Arsenic concentrations in the soils at the subject property ranged from 3.6 to 4.3 milligrams per kilogram (mg/kg). Although these concentrations exceed both residential and commercial land use limits, studies have shown that an upper-bound background concentration of 12 mg/kg of arsenic was found at school sites in Los Angeles County. Soil borings performed at the site also detected concrete or asphalt-like materials within the upper approximately 12 feet. Ramboll opined that these materials made up some of the backfill material. It should be noted that the USTs were reportedly concrete. The remaining concentrations detected in the area of the site investigated were well below the residential screening levels, the most restrictive applicable screening levels; are consistent with a no further action status for the site; are not indicative of any release or condition which has adversely impacted the environmental integrity of the site, which would require additional investigation, monitoring, or remediation or reporting to any governmental agency; are not indicative of conditions which would require special handling in connection with the redevelopment of the site. Therefore, RE concluded that no further investigation, monitoring, or remediation is recommended or warranted.

It should be noted that ESL levels were changed in January 2019. At the time of this assessment, soil vapor samples taken were below California ESLs, however, they are above the current commercial/industrial ESLs (from 2019) for benzene and ethylbenzene.

Since the soil vapor concentrations are above the current ESLs, this represents a REC.

*Phase I Environmental Site Assessment (*Commercial Site 650 and 700 North Sepulveda Boulevard, El Segundo, California 92045*)*, prepared by Partner Engineering and Science (November 26, 2019)

This report describes the subject property generally consistent with current conditions.

- Partner did not identify any recognized environmental conditions during the course of this assessment.
- Partner did not identify any controlled recognized environmental conditions during the course of this assessment.
- Partner did not identify any historical recognized environmental conditions during the course of this assessment.
- Partner identified an environmental issue based on Partner's 2015 Phase I ESA, eight 1,000-gallon underground storage tanks (USTs) were located on the subject property (700 North Sepulveda portion) from 1958 until 1985. The USTs were of concrete construction, and reportedly contained gasoline, sulfides, organic acids, copper, zinc,

mineral oils, alcohols, and solvents. No information pertaining to the exact location or status of the tanks was found during Partner's assessment. Partner also reported that the subject property was equipped with a concrete clarifier between 1966 and 1985. The exact location of the clarifier has not been identified but the clarifier was reportedly abandoned with the regulatory oversight of the Los Angeles County Department of Public Works (LACDPW). Documentation pertaining to subsurface conditions surrounding the clarifier at the time of closure was not found during Partner's assessment. Based on the findings of Partner's 2015 report, a Phase II subsurface investigation was conducted in May 2016 to address potential hazardous substance impacts from the former USTs and clarifier. Analytical results revealed low concentrations of constituents of concern (petroleum hydrocarbons, volatile organic compounds, metals) in soil and soil vapor. The concentrations detected were well below the residential screening levels, the most restrictive applicable screening levels. Based on the analytical results, the presence of the former USTs and clarifier do not represent a significant environmental concern.

- Environmental issues were also identified for ACM and LBP were identified.

No further investigation was recommended. It should be noted that the report did not discuss the change to the current California ESLs since the Phase II report was issued. The report did not address the lack of sampling in likely area of the clarifier (eastern exterior of the 700 building).

6.4 Environmental Lien Search

In accordance with our approved scope of services, an environmental lien search was not performed as part of this assessment.

7.0 SITE RECONNAISSANCE

Site Reconnaissance Date	May 26, 2020
AEI Site Assessor(s)	Jeffrey L. McNeil
Property Escort(s)/ Relationship(s) to Property	Mr. Paul Summers, TI Manager
Units/Areas Observed	Due to the reported security-sensitive nature of operations within the subject property buildings, limited access was provided to the interiors of the buildings. AEI was allowed access to the elevator equipment room, electrical rooms, janitorial maintenance rooms and hallways. According to Mr. Paul Summers, the subject property assembles circuit boards. Mr. Summers admitted the use of hazardous substances in the laboratories, however a list of hazardous substances was not provided. AEI was not permitted to observe any laboratories or hazardous material storage areas. This limitation is significant and may alter the overall findings of this assessment and there is a potential that features of concern may be present that were not observed by AEI during the site inspection.
Area(s) not accessed and reason(s)	See above Refer to Section 1.5 for discussion of limiting condition(s).
Other Physical Constraints	None

Reconnaissance Findings Summary

Feature	Observed on Subject Property (see Section 7.1)	Observed on Adjoining Property (see Section 7.2)
Regulated Hazardous Substances/Wastes and/or Petroleum Products in Connection with Property Use	✔	
Aboveground/Underground Hazardous Substance or Petroleum Product Storage Tanks (ASTs/USTs)	✔	✔
Hazardous Substance and Petroleum Product Containers Not in Connection with Property Use		
Unidentified Substance Containers		
Electrical or Mechanical Equipment Likely to Contain Fluids	✔	
Interior Stains or Corrosion		
Strong, Pungent, or Noxious Odors		
Pools of Liquid		
Drains, Sumps, and Clarifiers	✔	
Pits, Ponds, and Lagoons		
Stained Soil or Pavement	✔	
Stressed Vegetation		
Solid Waste Disposal or Evidence of Fill Materials		
Waste Water Discharges		
Wells		
Septic Systems		
Biomedical Wastes		
Other	✔	

7.1 Subject Property Reconnaissance Findings

During the site reconnaissance, AEI observed the items listed in the above Reconnaissance Findings Summary table, which are further discussed below.

7.1.1 Regulated Hazardous Substances/Wastes and/or Petroleum Products in Connection with Property Use

Due to the reported security-sensitive nature of operations within the subject property buildings, limited access was provided to the interiors of the buildings. Although not observed, during the site reconnaissance, AEI was informed by Mr. Paul Summers that laboratories at the 700 North Sepulveda Boulevard building engage in the manufacturing/assembly of circuit boards. Circuit board manufacturing operations typically utilize chlorinated solvents for board cleaning and surface preparation. Mr. Summers admitted the use of hazardous substances in the laboratories, however, a list of hazardous substances was not provided. AEI was not permitted to observe any laboratories or hazardous material storage areas. According to a review of DTSC HWTS records, Boeing generated various hazardous wastes including halogenated solvents. Based on the duration of on-site operations (approximately 12 years with Boeing), the assembly of circuit boards at the subject property represents a REC.

7.1.2 Aboveground/Underground Hazardous Substance or Petroleum Product Storage Tanks (ASTs/USTs)

AST(s)

Size (gallons)	Contents	Installation Date	AST Condition	Location	Construction/ Secondary Containment	Product Piping	Staining/ Spills
~200-gallons	Diesel	2013	Unknown	North exterior side of building	Double-walled	Aboveground	None

The subject property is equipped with an emergency generator. Approximately 200 gallons of diesel fuel are contained within the generator equipment. No evidence of leaks or spills was observed at the base of the generator. Based on the good condition of the equipment, the presence of the emergency generator and associated diesel fuel is not expected to represent a significant environmental concern.

7.1.3 Electrical or Mechanical Equipment Likely to Contain Fluids

Toxic PCBs were commonly used historically in electrical equipment such as transformers, fluorescent lamp ballasts, and capacitors. According to United States EPA regulation 40 CFR Part 761, there are three categories for classifying such equipment: <50 ppm of PCBs is considered "Non-PCB"; between 50 and 500 ppm is considered "PCB-Contaminated"; and >500 ppm is considered "PCB-Containing." Pursuant to 15 U.S.C. 2605(e)(2)(A), the manufacture, process, or distribution in commerce or use of any polychlorinated biphenyl in any manner other than in a totally enclosed manner was prohibited after January 1, 1977.

Transformers

Type	Quantity	Owner	Presumed Date of Installation	Spills or Stains Observed (Yes/No)	Non-PCB Label (Yes/ No)
Pad-Mounted	1	Southern California Edison	Unknown	No	No
Pad-Mounted	3	Subject property	Unknown	No	No
Subsurface	1	Southern California Edison	Unknown	No	No

The management of potential PCB-containing transformers is the responsibility of the local utility or the transformer owner. Actual material samples need to be collected to determine if transformers are PCB-containing.

Transformers installed prior to 1977 may be PCB containing while transformers installed after 1977 are unlikely to be PCB containing. Federal Regulations (40 CFR 761 Subpart G) require any release of material containing >50 ppm PCB and occurring after May 4, 1987, be cleaned up by the transformer owner following the United States EPA's PCB spill cleanup policy.

AEI did not observe evidence of spills, staining, or leaks on or around the transformers. Based on the good condition of the equipment, the transformers are not expected to represent a significant environmental concern.

Due to the sub-grade nature of one of the transformers, AEI was unable to observe the condition of the equipment.

Elevators

The subject property is equipped with three traction elevators. Two operate between the first floor and eighth floor and one runs from the first floor to the penthouse. Geared traction elevators are driven by alternating current (AC) or direct current (DC) electric motors. During AEI's site reconnaissance, the electrical and mechanical equipment for the traction elevators was observed at the rooftop equipment room. Based on the absence of hydraulic fluid used in association with the mechanical equipment of the elevators, the presence of these elevators is not expected to represent a significant environmental concern.

7.1.4 Drains, Sumps, and Clarifiers

Three storm drains were observed in the parking area of the subject property. AEI did not observe evidence of hazardous substances or petroleum products in the vicinity of the drains. Based on the use of the drains solely for storm water runoff, the presence of the drains is not expected to represent a significant environmental concern.

7.1.5 Stained Soil and Pavement

Minor amounts of oily surface staining were observed in the parking area. The staining appears to be from leaking vehicles and is surficial in nature. Based on the small size and the surficial nature of the staining, it is not expected to represent a significant environmental concern.

7.1.6 OTHER

Cleaning supplies and detergents are stored in janitorial closets in the subject property buildings. All chemicals were packaged in consumer quantities. Based on the nature of these materials, the presence of cleaning supplies at the subject property is not expected to represent a significant environmental concern.

7.2 ADJOINING PROPERTY RECONNAISSANCE FINDINGS

During the site reconnaissance, AEI observed the items listed in the above Reconnaissance Findings Summary table, which are further discussed below.

7.2.1 ABOVEGROUND/UNDERGROUND HAZARDOUS SUBSTANCE OR PETROLEUM PRODUCT STORAGE TANKS (ASTS/USTS)

The adjoining site to the east was observed to be occupied by a data center. Based on the nature of use, USTs and ASTs as well as other hazardous substances are likely stored on the site. This site was identified in the regulatory database and is further discussed in Section 5.1.

8.0 NON-ASTM SERVICES

8.1 ASBESTOS-CONTAINING BUILDING MATERIALS

Asbestos is the name for a group of naturally occurring silicate minerals that can be separated into fibers. The fibers are strong, durable, and resistant to heat and fire. They are also long, thin and flexible, so they can even be woven into cloth. Because of these qualities, asbestos has been used in thousands of consumer, industrial, maritime, automotive, scientific and building products. During the 20th century, some 30 million tons of asbestos have been used in industrial sites, homes, schools, shipyards and commercial buildings in the United States. Commercial use of ACM began in the early 1900s and peaked in the period between 1940 and into the 1970s. Common ACMs include pipe-covering, insulating cement, insulating block, refractory and boiler insulation materials, transite board, fireproofing spray, joint compound, vinyl floor tile, ceiling tile, mastics, roofing products, and duct insulation for HVAC applications. Inhalation of asbestos fibers can result in deleterious health effects.

The potential for ACM was evaluated based the United States EPA Guidance Document: Managing Asbestos in Place - A Building Owner's Guide to Operations and Maintenance Programs for Asbestos-Containing Materials (the Green Book). In 1973 the NESHAPS banned the use of most spray-applied surfacing ACM, specifically asbestos containing spray-on fireproofing and insulation. Subsequent revisions to this regulation in 1975 and 1978 effectively eliminated the use of friable pre-molded pipe, boiler, turbine, and duct insulation; and the spray application of friable asbestos-containing materials for all uses in buildings. In 1989 the EPA issued regulations to ban some asbestos-containing products and phase out most others over a multi-year period. The "Ban and Phase-Down" rule was challenged in court and the regulation remanded to the agency. As a result, any asbestos-containing products then "in commerce" would not be banned. Those not in commerce would be banned. Those materials "banned" could not be sold. It did not affect such materials already installed, or in use. Most US firms voluntarily ceased production of asbestos containing building materials not covered by the aforementioned Federal bans by the mid-1980s. In 1994, the OSHA determined that employers and building owners are required to treat installed thermal system installation and sprayed on and troweled-on surfacing materials, as well as vinyl or asphalt flooring material, as ACM in buildings constructed no later than 1980 until tested by laboratory analysis to prove otherwise.

The information below is for general informational purposes only and does not constitute an asbestos survey. In addition, the information is not intended to comply with federal, state or local regulations in regards to ACM.

Due to the age of the subject property buildings, there is a potential that ACMs are present. A limited list of typical suspect ACMs is included in the following table:

Material Type	Location
Plaster (acoustical and smooth)	Walls and ceilings
Ceiling tile	Ceiling systems
Thermal systems insulations, packings, and gaskets	Heating systems, cooling systems, domestic and heating and cooling piping, ductwork, and other equipment
Floor tile and associate mastics, flooring felts, and papers (under hardwood/other)	Floors
Vinyl sheet flooring and adhesives	Floors
Cove base and associated mastics	Walls
Ceramic tile adhesives and grouts	Walls, floors, and ceilings
All adhesives	Mirrors, wall coverings, construction, etc.
Grout and caulking	Windows and doors
Gypsum board, tape, and joint compound	Wall and ceiling systems
Insulation materials	Walls, ceilings, and attic spaces
Roofing materials (felts, rolled, shingle, flashings, adhesives, tar, and insulations)	Roof and parapet wall systems
Brick and block, mortars	Walls

The observed suspect ACMs at the subject property were in good condition at the time of the site reconnaissance and are not expected to pose a health and safety concern to the occupants of the subject property at this time. Based on the potential presence of ACMs, AEI recommends the implementation of an O&M Plan which stipulates that the repair and maintenance of damaged materials should be performed to protect the health and safety of the building occupants. In the event that building renovation or demolition activities are planned, a thorough asbestos survey to identify asbestos-containing building materials is required in accordance with the EPA NESHAP 40 CFR Part 61 prior to demolition or renovation activities that may disturb suspect ACMs.

8.2 Lead-Based Paint

Lead-based paint (LBP) is defined as any paint, varnish, stain, or other applied coating that has ≥1 mg/cm² (5,000 µg/g or 5,000 ppm) or more of lead by federal guidelines; state and local definitions may differ from the federal definitions in amounts ranging from 0.5 mg/cm² to 2.0 mg/cm². Section 1017 of the Housing and Urban Development (HUD) Guidelines, Residential Lead-Based Paint Hazard Reduction Act of 1992, otherwise known as "Title X," defines a LBP hazard as "any condition that causes exposure to lead that would result in adverse human health effects" resulting from lead-contaminated dust, bare, lead-contaminated soil, and/or lead-contaminated paint that is deteriorated or present on accessible, friction, or impact surfaces. Therefore, under Title X, intact LBP on most walls and ceilings would not be considered a "hazard," although the paint should be maintained and its condition monitored to ensure that it does not deteriorate and become a hazard. Additionally, Section 1018 of this law directed HUD and EPA to require the disclosure of known information on LBP and LBP hazards before the sale or lease of most housing built before 1978. Most private housing, public housing, or federally owned or subsidized housing is affected by this rule.

Under OSHA, lead-containing paint (LCP) is defined as any paint with any detectable amount of lead present in it. Therefore, all LBP is considered LCP. Conversely, LCP may not meet the criteria to be considered LBP in accordance with HUD guidelines or some states' definition of LBP.

It is important to note that LCP may create a lead hazard when being removed. The condition of these materials must be monitored when they are being disturbed. In the event LCP is subject to abrading, sanding, torching, and/or cutting during demolition or renovation activities, there may be regulatory issues that must be addressed.

The information below is for general informational purposes only and does not constitute a lead hazard evaluation. In addition, the information is not intended to comply with federal, state, or local regulations in regards to LBP.

In buildings constructed after 1978, it is unlikely that LBP is present; however, some paints utilized after 1978 will be LCP under OSHA. Structures built prior to 1978 and especially prior to the 1960s should be expected to contain LBP.

Due to the age of the subject property buildings, there is a potential that LBP is present. During the site reconnaissance, damaged painted surfaces were observed throughout the interior and exterior of the subject property buildings. Based on the potential presence of LBP, AEI recommends the property owner implement an O&M Plan which stipulates that the assessment, repair and maintenance of damaged painted surfaces be performed to protect the health and safety of the building occupants. Local regulations may apply to LBP in association with building demolition/renovations and worker/occupant protection. Actual material samples would need to be collected or an XRF survey performed in order to determine if LBP is present. It should be noted that construction activities that disturb materials or paints containing any amount of lead may be subject to certain requirements of the OSHA lead standard contained in 29 CFR 1910.1025 and 1926.62.

8.3 RADON

Radon is a naturally-occurring, odorless, and invisible gas. Natural radon levels vary and are closely related to geologic formations. Radon may enter buildings through basement sumps or other openings.

The United States EPA has prepared a map to assist National, State, and local organizations to target their resources and to implement radon-resistant building codes. The map divides the country into three radon zones, with Zone 1 being those areas with the average predicted indoor radon concentration in residential dwellings exceeding the EPA Action Limit of 4.0 pCi/L. It is important to note that the EPA has found homes with elevated levels of radon in all three zones, and the EPA recommends site specific testing in order to determine radon levels at a specific location. However, the map does give a valuable indication of the propensity of radon gas accumulation in structures.

Radon sampling was not requested as part of this assessment. According to the US EPA, the radon zone level for the area is Zone 2, which has a predicted average indoor screening level between 2 pCi/L and 4 pCi/L, equal to or below the action level of 4 pCi/L set forth by the US EPA.

8.4 MOLD

Molds are simple microscopic organisms which can often be seen in the form of discoloration, frequently green, gray, white, brown, or black. When excessive moisture or water accumulates indoors, mold growth may occur, particularly if the moisture problem remains undiscovered or unaddressed. As such, interior areas of buildings characterized by poor ventilation and high humidity are the most common locations of mold growth. Building materials, including drywall, wallpaper, baseboards, wood framing, insulation, and carpeting, often play host to such growth. Mold spores primarily cause health problems through the inhalation of spores or the toxins they emit when they are present in large numbers. This can occur when there is active mold growth within places where people live or work.

Mold, if present, may or may not visually manifest itself. Neither the individual completing this inspection, nor AEI has any liability for the identification of mold-related concerns except as defined in applicable industry standards. In short, this Phase I ESA should not be construed as a mold survey or inspection.

This activity was not designed to discover all areas which may be affected by mold growth on the subject property. Rather, it is intended to give the client an indication if significant (based on observed areas) mold growth is present at the subject property. Potential areas of mold growth, such as in pipe chases, HVAC systems, and behind enclosed walls and ceilings, were not observed as part of this limited assessment.

AEI observed interior areas of the subject property buildings to identify the potential presence of mold. AEI did not note obvious visual or olfactory indications of the presence of mold, nor did AEI observe obvious indications of significant water damage. As such, no bulk sampling of suspect surfaces was conducted as part of this assessment and no additional action with respect to suspect mold appears to be warranted at this time.

9.0 SIGNATURE OF ENVIRONMENTAL PROFESSIONALS

We declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in §312.10 of 40 CFR Part 312.

We have the specific qualifications based on education, training, and experience to assess a property of the nature, history and setting of the subject property. We have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a

given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 01/30/2020 has revealed that there are 4 SEMS-ARCHIVE sites within approximately 0.5 miles of the target property.

Federal RCRA CORRACTS facilities list

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 12/16/2019 has revealed that there are 4 CORRACTS sites within approximately 1 mile of the target property.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA)

of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

A review of the RCRA-TSDF list, as provided by EDR, and dated 12/16/2019 has revealed that there are 4 RCRA-TSDF sites within approximately 0.5 miles of the target property.

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 12/16/2019 has revealed that there are 3 RCRA-LQG sites within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 12/16/2019 has revealed that there are 7 RCRA-SQG sites within approximately 0.25 miles of the target property.

RCRA-VSQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-VSQG list, as provided by EDR, and dated 12/16/2019 has revealed that there is 1 RCRA-VSQG site within approximately 0.25 miles of the target property.

Federal institutional controls / engineering controls registries

US INST CONTROLS: A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

A review of the US INST CONTROLS list, as provided by EDR, and dated 02/13/2020 has revealed that there is 1 US INST CONTROLS site within approximately 0.5 miles of the target property.

State- and tribal - equivalent CERCLIS

CA ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the CA ENVIROSTOR list, as provided by EDR, and dated 01/27/2020 has revealed that there are 25 CA ENVIROSTOR sites within approximately 1 mile of the target property.

EXECUTIVE SUMMARY

CA CPS-SLIC: Cleanup Program Sites (CPS; also known as Site Cleanups [SC] and formerly known as Spills, Leaks, Investigations, and Cleanups [SLIC] sites) included in GeoTracker. GeoTracker is the Water Boards data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater.

A review of the CA CPS-SLIC list, as provided by EDR, has revealed that there are 7 CA CPS-SLIC sites within approximately 0.5 miles of the target property.

State and tribal registered storage tank lists

CA UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the State Water Resources Control Board's Hazardous Substance Storage Container Database.

A review of the CA UST list, as provided by EDR, has revealed that there are 16 CA UST sites within approximately 0.25 miles of the target property.

Local Lists of Registered Storage Tanks

CA SWEEPS UST: Statewide Environmental Evaluation and Planning System. This underground storage tank listing was updated and maintained by a company contacted by the SWRCB in the early 1990's. The listing is no longer updated or maintained. The local agency is the contact for more information on a site on the SWEEPS list.

A review of the CA SWEEPS UST list, as provided by EDR, and dated 06/01/1994 has revealed that there are 13 CA SWEEPS UST sites within approximately 0.25 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 12/16/2019 has revealed that there are 20 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk

Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 5 EDR Hist Auto sites within approximately 0.125 miles of the target property.

Contact country:	US
Contact telephone:	310-416-5680
Contact email:	JERROD.J.NEWLANDER@BOEING.COM
EPA Region:	09
Land type:	Facility is not located on Indian land. Additional information is not known.
Classification:	Non-Generator
Description:	Handler: Non-Generators do not presently generate hazardous waste

Owner/Operator Summary:

Owner/operator name:	THE BOEING COMPANY
Owner/operator address:	PO BOX 92919 W S01 D381 LOS ANGELES, CA 90009
Owner/operator country:	US
Owner/operator telephone:	310-416-5680
Owner/operator email:	Not reported
Owner/operator fax:	Not reported
Owner/operator extension:	Not reported
Legal status:	Private
Owner/Operator Type:	Owner
Owner/Op start date:	2000-10-06 00:00:00.
Owner/Op end date:	Not reported

Owner/operator name:	THE BOEING COMPANY
Owner/operator address:	Not reported Not reported
Owner/operator country:	US
Owner/operator telephone:	Not reported
Owner/operator email:	Not reported
Owner/operator fax:	Not reported
Owner/operator extension:	Not reported
Legal status:	Private
Owner/Operator Type:	Operator
Owner/Op start date:	2000-10-06 00:00:00.
Owner/Op end date:	Not reported

Handler Activities Summary:

U.S. importer of hazardous waste:	No
Mixed waste (haz. and radioactive):	No
Recycler of hazardous waste:	No

THE BOEING CO (Continued) **1001967613**

Transporter of hazardous waste:	No
Treater, storer or disposer of HW:	No
Underground injection activity:	No
On-site burner exemption:	No
Furnace exemption:	No
Used oil fuel burner:	No
Used oil processor:	No
User oil refiner:	No
Used oil fuel marketer to burner:	No
Used oil Specification marketer:	No
Used oil transfer facility:	No
Used oil transporter:	No

Historical Generators:

Date form received by agency: 2001-01-03 00:00:00.0
Site name: THE BOEING CO
Classification: Not a generator, verified

Date form received by agency: 2000-10-16 00:00:00.0
Site name: BOEING SATELLITE SYSTEMS INC
Classification: Small Quantity Generator

Hazardous Waste Summary:

. Waste code: 134
. Waste name: Aqueous solution with <10% total organic residues

. Waste code: 151
. Waste name: Asbestos-containing waste

. Waste code: 331
. Waste name: Off-specification, aged, or surplus organics

. Waste code: 352
. Waste name: Other organic solids

. Waste code: 792
. Waste name: Liquids with pH < 2 with metals

. Waste code: D000
. Waste name: Not Defined

. Waste code: D001
. Waste name: IGNITABLE WASTE

. Waste code: D002
. Waste name: CORROSIVE WASTE

. Waste code: D008
. Waste name: LEAD

. Waste code: D011
. Waste name: SILVER

. Waste code: F005
. Waste name: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL

THE BOEING CO (Continued) **1001967613**

KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Violation Status: No violations found

Site ID:	12979
Site Name:	The Boeing Company - S37
Violation Date:	05-14-2018
Citation:	HSC 6.67 25270.4.5(a) - California Health and Safety Code, Chapter 6.67, Section(s) 25270.4.5(a)
Violation Description:	Failure to include in the SPCC Plan a prediction of direction and total quantity of oil potentially discharged from the facility as a result of each type of major equipment failure.
Violation Notes:	Returned to compliance on 06/21/2018. Failure to include in the SPCC Plan a prediction of direction and total quantity of oil potentially discharged from the facility as a result of each type of major equipment failure. The site maps do not show the direction of flow, mostly due to the scale of the maps.The maps shall show more detail on the location of materials and the directions of drainage in the event of a release.

Environmental Interest/Information System:

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Environmental Interest/Information System:
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Citation:	23 CCR 16 2712(b)(1)(G) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2712(b)(1)(G)
Violation Description:	Failure to comply with one or more of the following overfill prevention equipment requirements: Alert the transfer operator when the tank is 90 percent full by restricting the flow into the tank or triggering an audible and visual alarm; or Restrict delivery of flow to the tank at least 30 minutes before the tank overfills, provided the restriction occurs when the tank is filled to no more than 95 percent of capacity; and activate an audible alarm at least five minutes before the tank overfills; or Provide positive shut-off of

CIRCLE K STORE #2709416 (Continued) **S113800508**

	flow to the tank when the tank is filled to no more than 95 percent of capacity; or Provide positive shut-off of flow to the tank so that none of the fittings located on the top of the tank are exposed to product due to overfilling. Install/retrofit overfill prevention equipment that does not use flow restrictors on vent piping to meet overfill prevention equipment requirements when the overfill prevention equipment is installed, repaired, or replaced on and after October 1,- 2018. For USTs installed before October 1, 2018, perform an inspection by October 13, 2018 and every 36 months thereafter. For USTs installed on and after October- 1,- 2018, perform an inspection at installation and every 36 months thereafter. Inspected within 30 days after a repair to the overfill prevention equipment. Inspected using an applicable manufacturer guidelines, industry codes, engineering standards, or a method approved by a professional engineer. Inspected by a certified UST service technician. Maintain records of overfill prevention equipment inspection for 36 months.
Violation Notes:	Returned to compliance on 03/12/2019. Owner/Operator failed to meet one or more of the requirements applicable to overfill prevention equipment. Overfill Prevention equipment consists of audible and visual alarm with flow restriction (ball floats). During routine overfill prevention equipment testing, the flow restrictors failed the test per ICC Certified Technicians Test Report (test date 2/7/19). Facility shall repair overfill prevention system to meet overfill prevention equipment requirements by replacing flow restrictors with regulatory compliant overfill prevention equipment.

Violation Description:	Failure to operate the UST system to prevent unauthorized releases including leaks, spills, and/or overfills.
Violation Notes:	Returned to compliance on 01/30/2019. Owner/Operator did not operate UST system to prevent spills and/or overfills. Facility has two types of overfill prevention systems: flow restrictors (ball floats) and audible & visual/automatic tank gauge (ATG). All ATGs passed overfill prevention inspection but ball floats were not inspected. ATG for 91 Octane UST was set to alarm above 90% of tank capacity at beginning of inspection but was corrected to alarm at or below 90% of tank capacity during inspection. Facility needs to have ball floats inspected. Facility shall have overfill prevention inspection completed on ball floats. ESFD shall witness overfill prevention inspection on ball floats. Submit verification to ESFD.

Violations:

Site ID:	384457
Site Name:	Airport 5 Star
Violation Date:	04-02-2018
Citation:	23 CCR 16 2665 - California Code of Regulations, Title 23, Chapter 16, Section(s) 2665
Violation Description:	Failure to comply with one or more of the following: Failure to install or maintain a liquid-tight spill bucket. Have a minimum capacity of five gallons. Have a functional drain valve or other method for the removal of liquid from the spill bucket/spill container. Be resistant to galvanic corrosion.
Violation Notes:	Returned to compliance on 04/06/2018. The 91 octane fill bucket failed the annual spill bucket test. Install or repair spill bucket so that it is liquid-tight, has a minimum capacity of five gallons, has a functional drain valve or other method for the removal of liquid from the spill bucket/spill container, and is resistant to galvanic corrosion. Submit verification.

Violation Description:	Failure to continuously monitor the interstitial space of a double-walled tank with an audible and visual alarm system.
Violation Notes:	Returned to compliance on 04/08/2019. Owner/Operator did not continuously monitor the interstitial space of the USTs such that the leak detection activates an audible/visual alarm when a leak is detected. The annular space sensor of the 91-fuel UST failed initial testing during annual monitoring certification. Continuously monitor the interstitial space of the USTs such that the leak detection equipment activates an audible/visual alarm when a leak is detected. The sensor for the annular space of the 91-fuel UST was replaced and passed test during inspection. No further action is required.

Violations Found:	No
Eval Type:	Other, not routine, done by local agency
Eval Notes:	The ESFD was onsite to witness Secondary Containment Testing. A failure of the secondary containment test was observed for the secondary containment piping for the 87 octane UST and UDC #1/#2. See UST routine inspection record from 7/30/19 for violations related to secondary containment failures.
Eval Division:	El Segundo City Fire Department
Eval Program:	UST
Eval Source:	CERS
Eval General Type:	Other/Unknown
Eval Date:	08-14-2019
Violations Found:	No
Eval Type:	Other, not routine, done by local agency
Eval Notes:	The ESFD was onsite to witness retesting of secondary containment test for UDC 1/2 and product piping from 87 tank (regular fuel). Both UDC 1/2 and product piping passed test. This retest clears the open violation issued during a routine inspection on 7/30/19 for failed secondary containment testing of UDC 1/2 and product piping of 87 tank.

Eval Notes:	Emergency Generators are supplied by two USTs; UST#1 and UST#2. Both USTs have pressurized underground piping and are required to have LLD. A UST Permit To Repair has been approved for installation of LLDs to both UST#1 and UST#2. The LLD has been installed on UST#1 and annual testing of the LLD on UST#1 was observed; LLD on UST#1 passed test. The LLD on UST#2 has not been installed as of the date of this inspection. Facility shall submit to the ESFD a written plan with estimated completion date for installation of the LLD on UST#2 within 60 days of this inspection report.

Hazardous Waste Summary:

. Waste code: 151
. Waste name: Asbestos-containing waste

. Waste code: 181
. Waste name: Other inorganic solid waste

. Waste code: 212
. Waste name: Oxygenated solvents (acetone, butanol, ethyl acetate, etc.)

. Waste code: 221
. Waste name: Waste oil and mixed oil

. Waste code: 223
. Waste name: Unspecified oil-containing waste

. Waste code: 331
. Waste name: Off-specification, aged, or surplus organics

. Waste code: 352
. Waste name: Other organic solids

. Waste code: 513
. Waste name: Empty containers less than 30 gallons

. Waste code: 792
. Waste name: Liquids with pH < 2 with metals

. Waste code: D001

THE BOEING CO (Continued) **1001967650**

. Waste name: IGNITABLE WASTE

. Waste code: D002
. Waste name: CORROSIVE WASTE

. Waste code: D008
. Waste name: LEAD

. Waste code: D011
. Waste name: SILVER

. Waste code: F003
. Waste name: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

. Waste code: F005
. Waste name: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

CERS Description: Chemical Storage Facilities

Violations:

Site ID: 163509
Site Name: trio manufacturing
Violation Date: 11-16-2017
Citation: HSC 6.5 25123.3(h)(1) - California Health and Safety Code, Chapter 6.5, Section(s) 25123.3(h)(1)
Violation Description: Failure to send hazardous waste offsite for treatment, storage, or disposal within 180 days (or 270 days if waste is transported over 200 miles) for a generator who generates less than 1000 kilogram per month if all of the following conditions are met: (1) The quantity of hazardous waste accumulated onsite never exceeds 6,000 kilograms. (2) The generator complies with the requirements of 40 Code of Federal Regulations section 262.34(d), (e) and (f). (3) The generator does not hold acutely hazardous waste or extremely hazardous waste in an amount greater than one kilogram for more than 90 days.
Violation Notes: Returned to compliance on 01/20/2018. The facility was storing used oil for more than 180 days in November of 2016 and June of 2017. This violation was also documented in the December 3, 2012 inspection. Trio Manufacturing is a small quantity generator and is allowed to store hazardous waste for 180 days. The facility shall ensure that hazardous waste is not stored for more than 180 days.
Violation Division: El Segundo City Fire Department
Violation Program: HW
Violation Source: CERS

Site ID: 163509
Site Name: trio manufacturing
Violation Date: 11-16-2017
Citation: HSC 6.5 25201.5(c) - California Health and Safety Code, Chapter 6.5, Section(s) 25201.5(c)
Violation Description: Failure of the generator treating hazardous wastes to comply with the requirements of the conditional exemption applicable to the treatment process.
Violation Notes: Returned to compliance on 01/20/2018. The hazardous waste in the treatment unit has been there for over one year per the label on the unit. No treatment has been conducted within the last year. The facility has not been treating waste within the 180 days allowed to store the waste before treating it. Please provide documentation on the treating of this waste.
Violation Division: El Segundo City Fire Department

Violation Source: CERS

Site ID: 163509
Site Name: trio manufacturing
Violation Date: 11-16-2017
Citation: HSC 6.5 25250.7 - California Health and Safety Code, Chapter 6.5, Section(s) 25250.7
Violation Description: Failure to prevent intentional contamination of used oil with other hazardous waste other than minimal amounts of vehicle fuel.
Violation Notes: Returned to compliance on 01/20/2018. The facility had been adding the spent mineral spirits to the used oil The facility shall not contaminate the used oils with spent cleaning solvents from the parts washer.
Violation Division: El Segundo City Fire Department
Violation Program: HW

TRIO MANUFACTURING INC (Continued) **S113114614**

Violation Source:	CERS
Site ID:	163509
Site Name:	trio manufacturing
Violation Date:	11-16-2017
Citation:	40 CFR 1 265.32 - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 265.32
Violation Description:	Failure of the facility to maintain the following emergency equipment or equivalents: 1) An internal communications or alarm system; 2) A device, such as a telephone (immediately available at the scene of Operations/ Maintenance) or a hand-held two-way radio, capable of summoning emergency assistance from local police departments, fire departments, or State or local emergency response teams; 3) Portable fire extinguishers, fire control equipment, spill control equipment, and decontamination equipment; and 4) Water at adequate volume and pressure to supply water hose streams, or foam producing equipment, or automatic sprinklers, or water spray systems.
Violation Notes:	Returned to compliance on 01/20/2018. The waste storage area did not have any emergency response equipment including a fire extinguisher. The facility shall provide the Hazardous Waste Storage Area with the materials needed in the event of an emergency. Please provide documentation of the materials that have been added to the area.

Violation Date:	12-03-2012
Citation:	22 CCR 12 66262.34(d) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(d)
Violation Description:	Failure to dispose of hazardous waste within 180 days (or 270 if waste is transported over 200 miles) for the generator who generates less than 1000 kilogram per month, but more than 100 kilograms per month.
Violation Notes:	Returned to compliance on 07/16/2013. AEO issued in July for the failure to comply with requirement.
Violation Division:	El Segundo City Fire Department
Violation Program:	HW
Violation Source:	CERS
Site ID:	163509
Site Name:	trio manufacturing
Violation Date:	11-16-2017
Citation:	22 CCR 12 66262.11 - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.11
Violation Description:	Failure to determine if wastes generated are hazardous waste by using generator knowledge or applying testing method.
Violation Notes:	Returned to compliance on 02/02/2018. The facility is polishing high grade metals and allowing the waste to blow outside the building. This material shall be collected and tested to determine the waste status of the material. The facility shall run a CAM-17 TTLC for toxic metals using a State Certified Laboratory on the polishing dust from metal polishing. Please send a copy of the test results to the ESFD.
Violation Division:	El Segundo City Fire Department

Violation Date: 11-16-2017
Citation: 40 CFR 1 262.34(d)(5)(iii) - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 262.34(d)(5)(iii)
Violation Description: Failure to ensure that all employees are thoroughly familiar with proper waste handling and emergency procedures, relevant to their responsibilities during normal facility operations and emergencies.
Violation Notes: Returned to compliance on 01/15/2018. The facility has not provided training to the employees to the point where they understand what the requirements are. Rafael de La Brana had received training for hazardous waste management, but did not understand the material in the class. George Zamora was not aware of the requirements for the hazardous wastes that were being generated at the site. The facility shall provide training to employees who handle hazardous waste such that they understand the requirements and can properly handle the Waste. The facility is a SQG and shall have adequate training for the employees who are managing hazardous waste. Please provide documentation of the training to the ESFD.

Citation:	HSC 6.5 25189.5(a),25201(a) - California Health and Safety Code, Chapter 6.5, Section(s) 25189.5(a),25201(a)
Violation Description:	Failure to dispose of hazardous waste at a facility which has a permit from DTSC or disposing of hazardous waste at any point which is not authorized according to HSC 6.5.
Violation Notes:	Returned to compliance on 01/20/2018. In April of 2015, Trio Mfg. disposed of 5 yards of EDM filters to an Arizona TSDF for proper management. The facility has not disposed of any filters since that date and there was not filters being stored at the time of the inspection. George Zamora was not aware what happened to the filters, possible municipal trash. The facility shall properly manage the used EDM filters as a hazardous waste. The sludge in the filters is a hazardous waste for copper. The facility shall not add waste solvents to the used oil and manage the waste separately.

Site Name:	trio manufacturing
Violation Date:	11-16-2017
Citation:	HSC 6.5 25201.5(d) - California Health and Safety Code, Chapter 6.5, Section(s) 25201.5(d)
Violation Description:	Failure of the generator to remove or decontaminate all waste residues, containment system components, soils and other structures or equipment contaminated with hazardous waste and provide written notification of all closure activities at the closure of the treatment unit.
Violation Notes:	Returned to compliance on 03/12/2018. George Zamora stated that they did not plan on using the treatment unit in the future and have not used it in the last year. Trio Manufacturing shall properly close out the unit if they no longer wish to treat hazardous waste and notify the CUPA of the closure of the permit.

Violation Date:	01-15-2019
Citation:	22 CCR 12 66262.34(e) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(e)
Violation Description:	Failure to meet the following conditions of satellite accumulation regulations: G Accumulate up to 55 gallons of hazardous waste or one quart of acute hazardous waste at or near the initial point of accumulation which was under the control of the operator. G Total time hazardous waste can be accumulated onsite in any generator accumulation area is one year, i.e., the combined accmulation time at a satellite accumulation point and at a 90/180/270 accumulation area (depending on size of generator and distance transported), whichever comes first. G The generator complies with section 66265.171, 66265.172, and 66265.173(a). G The container must be clearly marked with the initial date that hazardous waste is first placed in the container and labelled with the words G Hazardous WasteG including specified information G Container must be labelled with the date the satellite accumulation limit is reached and moved within three days after reaching the 55 gallon (or one quart) limit to a G 90 dayG accumulation area G 55 gallons (or one quart of acute hazardous waste) of waste per process may be accumulated
Violation Notes:	Returned to compliance on 01/29/2019. Failure of the Owner/Operator to comply with one or more satellite accumulation requirements. Facility is exceeding the 55-gallon limit per waste stream of satellite accumulation for the bondo process. The facility currently holds 3 x 55-gallon drums of hazardous waste bondo dust/debris. Ensure that all hazardous wastes being accumulated pursuant to satellite accumulation meet all applicable requirements and submit documentation of compliance to the CUPA. Facility shall limit hazardous waste satellite accumulation not to exceed a single 55-gallon amount per waste stream.

. Waste name: CORROSIVE WASTE

. Waste code: D022
. Waste name: CHLOROFORM

. Waste code: D035
. Waste name: METHYL ETHYL KETONE

. Waste code: F003
. Waste name: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

. Waste code: K061
. Waste name: EMISSION CONTROL DUST/SLUDGE FROM THE PRIMARY PRODUCTION OF STEEL IN ELECTRIC FURNACES.

Biennial Reports:

Last Biennial Reporting Year: 2017

Annual Waste Handled:
Waste code: D001

LG NANOH2O (Continued) **1015740053**

Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.
Amount (Lbs): 86926

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.
Amount (Lbs): 5

Waste code: D035
Waste name: METHYL ETHYL KETONE
Amount (Lbs): 40

Waste code: F003
Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NON-HALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS, AND, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.
Amount (Lbs): 65728

FINDS:
Registry ID: 110002651906
Facility URL: http://ofmpub.epa.gov/enviro/fii_query_detail.disp_program_facility?p_registry_id=110002651906

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Name:	RALPHS GROCERY #645
Address:	500 N. SEPULVEDA BLVD.
City,State,Zip:	EL SEGUNDO, CA 90245
Site ID:	146329
CERS ID:	10159971
CERS Description:	Chemical Storage Facilities

Violations:

Site ID:	146329
Site Name:	Ralphs Grocery #645
Violation Date:	01-29-2019
Citation:	HSC 6.95 25505(a)(4) - California Health and Safety Code, Chapter 6.95, Section(s) 25505(a)(4)
Violation Description:	Failure to provide initial and annual training to all employees in safety procedures in the event of a release or threatened release of a hazardous material or failure to document and maintain training records for a minimum of three years.
Violation Notes:	Returned to compliance on 03/10/2019. The business failed to provide initial and annual training to all employees in safety procedures in the event of a release or threatened release of a hazardous material including familiarity with the emergency response plan or failure to document and maintain training records for a minimum of three years. Training records could not be located during inspection. Facility shall provide copies of annual training records to CUPA.
Violation Division:	El Segundo City Fire Department
Violation Program:	HMRRP
Violation Source:	CERS

Site ID:	146329
Site Name:	Ralphs Grocery #645
Violation Date:	01-29-2019
Citation:	HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)
Violation Description:	Failure to complete and electronically submit a site map with all required content.
Violation Notes:	Returned to compliance on 02/05/2019. The business failed to complete and electronically submit a site map with all required content including: hazardous materials/waste storage areas. Current site map

RALPHS GROCERY #645 (Continued) **S113466417**

depicts hazardous materials in the "Produce Prep" room but this room did not have any hazardous materials during inspection. Complete and electronically submit a site map with all required content. Facility shall update site map and remove hazardous materials symbol from "Produce Prep" room.

Violation Division: El Segundo City Fire Department
Violation Program: HMRRP
Violation Source: CERS

Site ID: 146329
Site Name: Ralphs Grocery #645
Violation Date: 01-29-2019
Citation: 22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f)
Violation Description: Failure to properly label hazardous waste accumulation containers and portable tanks with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.
Violation Notes: Returned to compliance on 01/29/2019. 5 gallon container of Hazardous Waste Off-spec medicine located in the Pharmacy was observed without a hazardous waste label. Submit a photo to the CUPA demonstrating that the container listed above has been properly labeled.
Violation Division: El Segundo City Fire Department
Violation Program: HW
Violation Source: CERS

Site ID: 146329
Site Name: Ralphs Grocery #645
Violation Date: 01-29-2019
Citation: 22 CCR 12 66262.40(a) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.40(a)
Violation Description: Failure to keep a copy of each properly signed manifest for at least three years from the date the waste was accepted by the initial transporter. The manifest signed at the time the waste was accepted for transport shall be kept until receiving a signed copy from the designated facility which received the waste.
Violation Notes: Returned to compliance on 01/29/2019. A signed copy from the Treatment Storage Disposal Facility (TSDF) of the Uniform Hazardous Waste Manifests were not available at the time of inspection for the following manifests: 019620393JJK, 019623934JJK,018858287JJK, 019620379JJK, and 018858286JJK. Locate a signed copy from the TSDF of all manifests and submit copies to the CUPA for the following manifests: 019620393JJK, 019623934JJK,018858287JJK, 019620379JJK, and 018858286JJK. Facility was able to print out copies of signed manifests the end of inspection and copies were reviewed by CUPA. No further action required at this time.

Hazardous Waste Summary:

. Waste code: 122
. Waste name: Alkaline solution without metals (pH > 12.5)

. Waste code: 123
. Waste name: Unspecified alkaline solution

. Waste code: 181
. Waste name: Other inorganic solid waste

. Waste code: 212
. Waste name: Oxygenated solvents (acetone, butanol, ethyl acetate, etc.)

. Waste code: 213
. Waste name: Hydrocarbon solvents (benzene, hexane, Stoddard, etc.)

. Waste code: 214
. Waste name: Unspecified solvent mixture

. Waste code: 221
. Waste name: Waste oil and mixed oil

. Waste code: 223
. Waste name: Unspecified oil-containing waste

. Waste code: 331
. Waste name: Off-specification, aged, or surplus organics

. Waste code: 343
. Waste name: Unspecified organic liquid mixture

. Waste code: 352
. Waste name: Other organic solids

. Waste code: 461
. Waste name: Degreasing sludge

. Waste code: 513
. Waste name: Empty containers less than 30 gallons

. Waste code: 551
. Waste name: Laboratory waste chemicals

. Waste code: 791
. Waste name: Liquids with pH < 2

. Waste code: 792
. Waste name: Liquids with pH < 2 with metals

. Waste code: D000
. Waste name: Not Defined

. Waste code: D001
. Waste name: IGNITABLE WASTE

. Waste code: D002

RAYTHEON COMPANY (Continued) **1015730700**

Hazardous Waste Summary:

. Waste code: 134
. Waste name: Aqueous solution with <10% total organic residues

. Waste code: 135
. Waste name: Unspecified aqueous solution

. Waste code: 141
. Waste name: Off-specification, aged, or surplus inorganics

. Waste code: 181
. Waste name: Other inorganic solid waste

. Waste code: 211
. Waste name: Halogenated solvents (chloroform, methyl chloride, perchloroethylene, etc.)

. Waste code: 212
. Waste name: Oxygenated solvents (acetone, butanol, ethyl acetate, etc.)

MATTEL TOYS INC (Continued) **1000472823**

. Waste code: 213
. Waste name: Hydrocarbon solvents (benzene, hexane, Stoddard, etc.)

. Waste code: 331
. Waste name: Off-specification, aged, or surplus organics

. Waste code: 343
. Waste name: Unspecified organic liquid mixture

. Waste code: 352
. Waste name: Other organic solids

. Waste code: 541
. Waste name: Photochemicals / photo processing waste

. Waste code: 551
. Waste name: Laboratory waste chemicals

. Waste code: 726
. Waste name: Liquids with nickel > 134 mg/l

. Waste code: D001
. Waste name: IGNITABLE WASTE

. Waste code: D002
. Waste name: CORROSIVE WASTE

. Waste code: D003
. Waste name: REACTIVE WASTE

. Waste code: D005
. Waste name: BARIUM

. Waste code: D007
. Waste name: CHROMIUM

. Waste code: D008
. Waste name: LEAD

. Waste code: D009
. Waste name: MERCURY

. Waste code: D011
. Waste name: SILVER

. Waste code: D035
. Waste name: METHYL ETHYL KETONE

. Waste code: F002
. Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2, TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND

MATTEL TOYS INC (Continued) **1000472823**

SPENT SOLVENT MIXTURES.

. Waste code: F003
. Waste name: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

. Waste code: F005
. Waste name: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

. Waste code: U159
. Waste name: 2-BUTANONE (I,T) (OR) METHYL ETHYL KETONE (MEK) (I,T)

Environmental Interest/Information System:
AIR EMISSIONS CLASSIFICATION UNKNOWN
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.
HAZARDOUS WASTE BIENNIAL REPORTER

POTW:	The facility is not a POTW.
Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Site Name: Mattel Handler Team Center
Violation Date: 09-19-2017
Citation: HSC 6.95 25508.1(a)-(f) - California Health and Safety Code, Chapter 6.95, Section(s) 25508.1(a)-(f)
Violation Description: Failure to electronically update business plan within 30 days of any one of the following events: A 100 percent or more increase in the quantity of a previously disclosed material. Any handling of a previously undisclosed hazardous materials at or above reportable quantities. A change of business address, business ownership, or business name. A substantial change in the handler's operations that requires modification to any portion of the business plan.
Violation Notes: Returned to compliance on 10/19/2017. The business failed to update business plan within 30 days when one of the following occurs: a 100 percent or more increase in the quantity of a previously disclosed material; any handling of a previously undisclosed hazardous material;

MATTEL TOYS INC (Continued) **1000472823**

a change of business address, business ownership, or business name; or a substantial change in the handler's operations that requires modification to any portion of the business plan. Update all submittal elements effected by the change(s) and electronically submit the update within 30 days.

Violation Division: El Segundo City Fire Department
Violation Program: HMRRP
Violation Source: CERS

Site ID: 47142
Site Name: Mattel Handler Team Center
Violation Date: 09-19-2017
Citation: 40 CFR 1 265.173 - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 265.173
Violation Description: Failure to meet the following container management requirements: (a) A container holding hazardous waste must always be closed during storage, except when it is necessary to add or remove waste. (b) A container holding hazardous waste must not be opened, handled, or stored in a manner which may rupture the container or cause it to leak.
Violation Notes: One of the drums was not screwed to the drum tightly and the lid would not latch to the funnel due to damage. All funnels shall be connected to the drum securely and the lids clamped closed.

Violation Program: HW
Violation Source: CERS

Site ID: 47142
Site Name: Mattel Handler Team Center
Violation Date: 09-19-2017
Citation: 22 CCR 12 66262.40(a) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.40(a)
Violation Description: Failure to keep a copy of each properly signed manifest for at least three years from the date the waste was accepted by the initial transporter. The manifest signed at the time the waste was accepted for transport shall be kept until receiving a signed copy from the designated facility which received the waste.
Violation Notes: The facility is not maintaining the final copy of most of the manifests that were shipped in 2017. A final copy must be obtained within 30 days or an Exception Report sent to the DTSC. Locate a copy of all manifests for 001188031, 010416609, 010978266, 010394531, 010392422 and submit copies to the CUPA.

Violation Date: 09-19-2017
Citation: 22 CCR 12 66262.11 - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.11
Violation Description: Failure to determine if wastes generated are hazardous waste by using generator knowledge or applying testing method.
Violation Notes: The facility is working with metals in the grinding room and may be generating toxic metal fines. Please have a State Certified laboratory run a CAM 17 minus mercury on the material being collected in the collection unit. Send a copy of the test results to ESFD to determine if the waste is toxic and must be managed a hazardous waste. The facility has not made a waste determination for the dust collected in the metal grinding room.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Registry ID: 110002697261
Facility URL: http://ofmpub.epa.gov/enviro/fii_query_detail.disp_program_facility?p_registry_id=110002697261

Environmental Interest/Information System:
US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the

TELEDYNE CONTROLS LLC (Continued) **1000241004**

discharge does not adversely affect water quality.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
